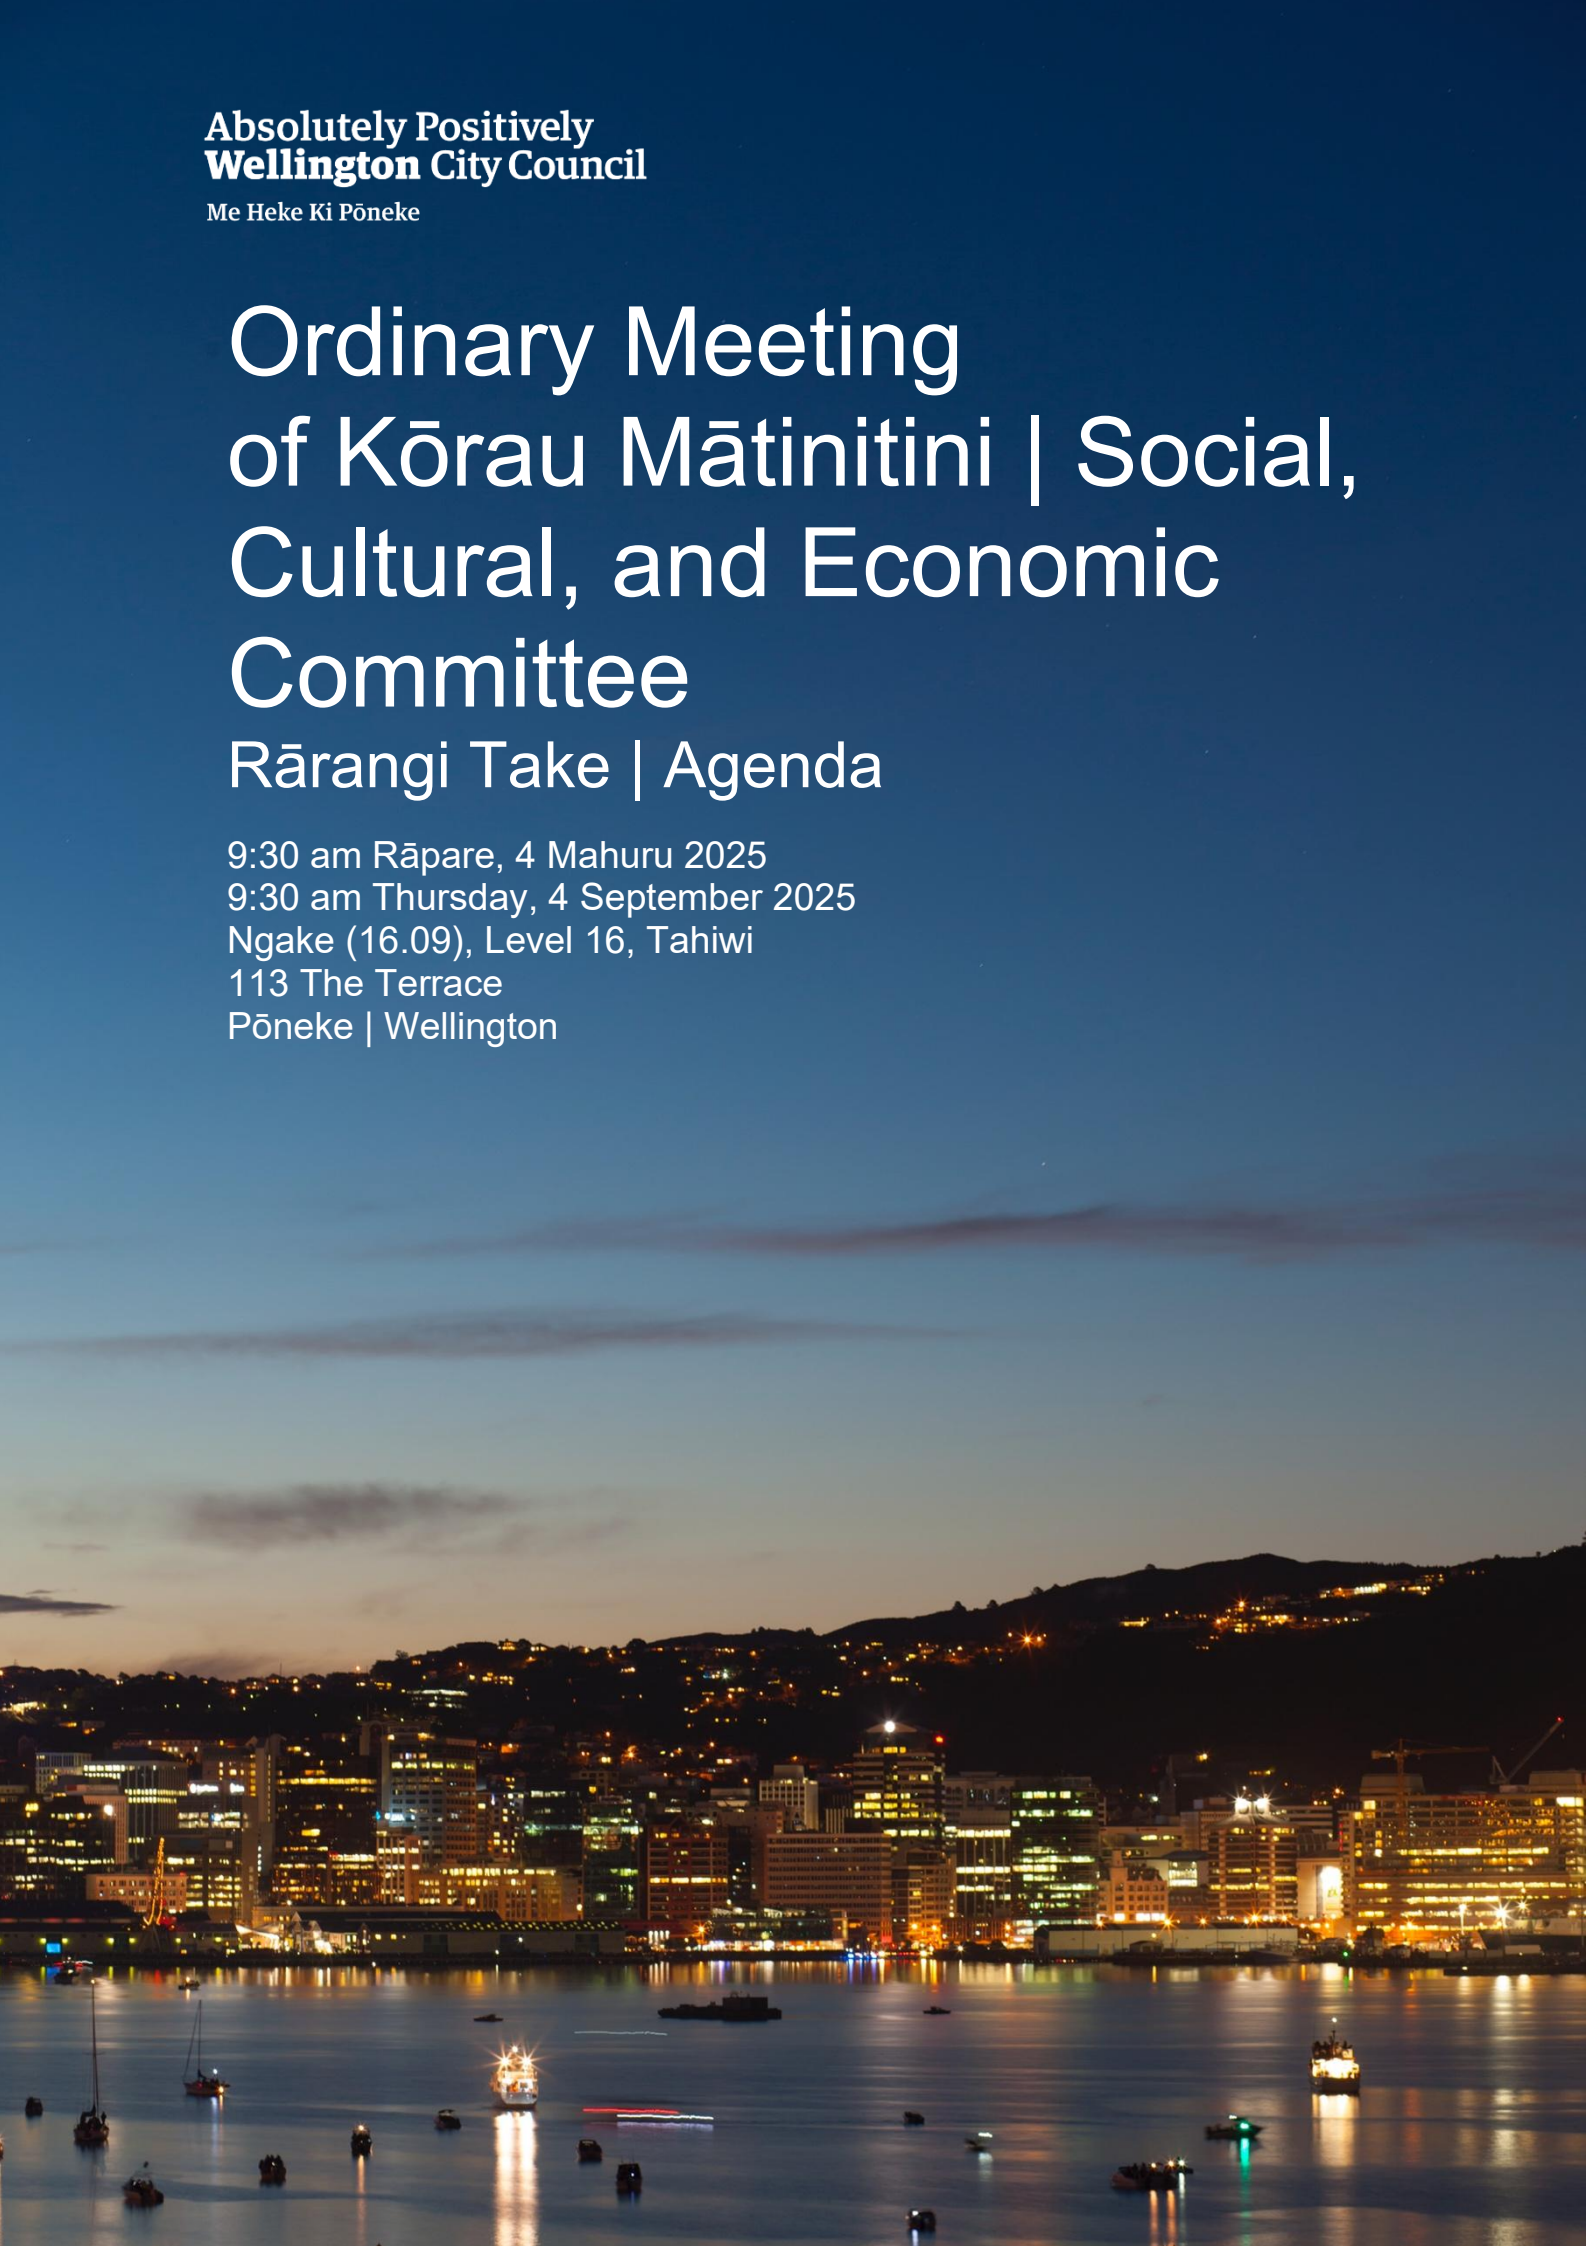
Ordinary Meeting of Kōrau Mātinitini | Social, Cultural, and Economic Committee

Rārangi Take | Agenda

9:30 am Rāpare, 4 Mahuru 2025
9:30 am Thursday, 4 September 2025
Ngake (16.09), Level 16, Tahiwi
113 The Terrace
Pōneke | Wellington



MEMBERSHIP

Councillor Abdurahman (Deputy Chair)
Councillor Apanowicz
Councillor Brown
Councillor Calvert
Councillor Chung
Deputy Mayor Foon
Councillor Free
Pouiwi Hohaia
Pouiwi Kelly
Councillor Matthews
Councillor McNulty
Councillor O'Neill (Chair)
Councillor Pannett
Councillor Randle
Councillor Rogers
Mayor Whanau
Councillor Wi Neera
Councillor Young

Have your say!
You can make a short presentation to the Councillors, Committee members, Subcommittee members or Community Board members at this meeting. Please let us know by noon the working day before the meeting. You can do this either by phoning 04-499-4444, emailing public.participation@wcc.govt.nz, or writing to Democracy Services, Wellington City Council, PO Box 2199, Wellington, giving your name, phone number, and the issue you would like to talk about. All Council and committee meetings are livestreamed on our YouTube page. This includes any public participation at the meeting.

AREA OF FOCUS

The Kōrau Mātinitini | Social, Cultural, and Economic Committee has responsibility for:

1) Māori strategic outcomes
2) Arts, culture, and community services
3) Wellington City social housing
4) Council's city events
5) Parking services
6) Parks, sport and recreation
7) Community resilience
8) Economic development.

To read the full delegations of this committee, please visit wellington.govt.nz/meetings.

Quorum: 9 members

1. Meeting Conduct

1.1 Karakia

The Chairperson will open the hui with a karakia.

Whakataka te hau ki te uru,	Cease oh winds of the west
Whakataka te hau ki te tonga.	and of the south
Kia mākinakina ki uta,	Let the bracing breezes flow,
Kia mātaratara ki tai.	over the land and the sea.
E hī ake ana te atākura.	Let the red-tipped dawn come
He tio, he huka, he hauhū.	with a sharpened edge, a touch of frost,
Tihei Mauri Ora!	a promise of a glorious day

At the appropriate time, the following karakia will be read to close the hui.

Unuhia, unuhia, unuhia ki te uru tapu nui	Draw on, draw on
Kia wātea, kia māmā, te ngākau, te tinana, te wairua	Draw on the supreme sacredness To clear, to free the heart, the body
I te ara takatū	and the spirit of mankind
Koia rā e Rongo, whakairia ake ki runga	Oh Rongo, above (symbol of peace)
Kia wātea, kia wātea	Let this all be done in unity
Āe rā, kua wātea!	

1.2 Apologies

The Chairperson invites notice from members of apologies, including apologies for lateness and early departure from the hui, where leave of absence has not previously been granted.

1.3 Conflict of Interest Declarations

Members are reminded of the need to be vigilant to stand aside from decision making when a conflict arises between their role as a member and any private or other external interest they might have.

1.4 Confirmation of Minutes

The minutes of the meeting held on 19 June 2025 will be put to the Kōrau Mātinitini | Social, Cultural, and Economic Committee for confirmation.

1.5 Items not on the Agenda

The Chairperson will give notice of items not on the agenda as follows.

Matters Requiring Urgent Attention as Determined by Resolution of the Kōrau Mātinitini | Social, Cultural, and Economic Committee.

The Chairperson shall state to the hui:

1. The reason why the item is not on the agenda; and
2. The reason why discussion of the item cannot be delayed until a subsequent hui.

The item may be allowed onto the agenda by resolution of the Kōrau Mātinitini | Social, Cultural, and Economic Committee.

Minor Matters relating to the General Business of the Kōrau Mātinitini | Social, Cultural, and Economic Committee.

The Chairperson shall state to the hui that the item will be discussed, but no resolution, decision, or recommendation may be made in respect of the item except to refer it to a subsequent hui of the Kōrau Mātinitini | Social, Cultural, and Economic Committee for further discussion.

1.6 Public Participation

A maximum of 60 minutes is set aside for public participation at the commencement of any hui of the Council or committee that is open to the public. Under Standing Order 31.2 a written, oral, or electronic application to address the hui setting forth the subject, is required to be lodged with the Chief Executive by 12.00 noon of the working day prior to the hui concerned, and subsequently approved by the Chairperson.

Requests for public participation can be sent by email to public.participation@wcc.govt.nz, by post to Democracy Services, Wellington City Council, PO Box 2199, Wellington, or by phone at 04 499 4444 and asking to speak to Democracy Services.

2. General Business

ADOPTION OF TĀTOU KI UTA - COASTAL RESERVES MANAGEMENT PLAN

Kōrero taunaki | Summary of considerations

Purpose

1. This report seeks the Committee's approval to adopt Tātou ki Uta – Coastal Reserves Management Plan, following public consultation and recommended amendments. Adoption will consolidate and replace outdated coastal plans, provide a clear strategic framework for managing Wellington's coastal reserves over the next decade, and guide future investment, ecological restoration, and partnership with mana whenua.

Strategic alignment

2. The most relevant community outcomes, strategic approaches, and priorities for this paper include:
    - Environmental Wellbeing – A city restoring and protecting nature.
    - Social Wellbeing – A city of healthy and thriving whānau and communities.
    - Cultural Wellbeing.
    - A welcoming, diverse and creative city.
    - Integrating te ao Māori.
    - Embedding climate action.
    - Engaging our community.
    - Value for money and effective delivery.
    - Invest in sustainable, connected, and accessible community and recreation facilities.
    - Collaborate with our communities to mitigate and adapt to climate change.
    - Celebrate and make visible te ao Māori across our city.

Relevant previous decisions

3. In May 2025, the Kōrau Mātinitini | Social, Cultural and Economic Committee approved the draft *Tātou ki Uta – Coastal Reserves Management Plan* for public consultation: Draft Tātou ki Uta | The Coastal Reserves Management Plan.
4. Previous Council decisions to adopt reserve management plans are also directly relevant to this paper. These include the South Coast Management Plan (2002), coastal sections of the Suburban Reserves Management Plan (2015), and the Te Kopahou coastal road section of the Outer Green Belt Management Plan (2019). *Tātou ki Uta* builds on and consolidates the coastal components of these earlier plans to provide an integrated and updated approach to managing Wellington's coastal reserves.

Significance

5. The decision is rated medium significance in accordance with Schedule 1 of the Council's Significance and Engagement Policy. The plan supports Wellington's long-term environmental resilience, public access, and recreational use of coastal reserves. While it aligns with existing policy frameworks, the coast holds public interest.
6. Some actions will require new funding to be agreed to in the future through Annual Plan and Long-term Plan processes, and this is outlined in Attachment 3, however, this funding is indicative at this point, would be staged over a 10-year plus timeframe, and does not meet the threshold for a higher significance rating.

Financial considerations

☐ Nil	☒ Budgetary provision in Annual Plan / Long-term Plan	☒ Unbudgeted $X

7. Approximately 75% of the proposed actions in the *Tātou ki Uta – Coastal Reserves Management Plan* can be delivered within existing operational and capital budgets, such as track renewals, playspace upgrades, and improvements to public toilets.
8. Some actions, however, involve new initiatives that will require additional funding. These include medium-to-long-term priorities (generally 5-10+ years), which are identified in the Plan as requiring new funding. These will need to be considered through future Annual Plan and Long-term Plan processes, alongside other Council funding priorities.
9. Adopting this Plan does not commit Council to new spending. It provides strategic direction, supports prioritisation of existing resources, and informs future investment decisions.
10. Attachment 4 outlines which actions can be funded through existing budgets and identifies those that would require new funding within the next 10 years, along with high-level indicative costs.

Risk

☒ Low	☐ Medium	☐ High	☐ Extreme

11. The risk of adopting the *Tātou ki Uta – Coastal Reserves Management Plan* is low. However, there is a risk of losing community confidence if the Council cannot deliver on the key actions and approaches identified. The Plan is aspirational, setting a framework for decision making and providing long-term direction for the next 10 years and beyond. Not all actions will be delivered immediately, but the Plan provides a framework to guide investment and priorities over time, consistent with other Council strategies and plans.

Author	Ella Hardy, Recreation and Parks Planner
Authoriser	Sherilyn Hinton, Open Space and Recreation Planning Manager Paul Andrews, Manager Parks, Sports & Rec James Roberts, Chief Operating Officer

Taunakitanga | Officers' Recommendations

Officers recommend the following motion:

That the Kōrau Mātinitini | Social, Cultural, and Economic Committee:

1. Receive the information.
2. Note the feedback provided and thank submitters for their input and ongoing commitment to improving outcomes for Wellington's coastal reserve areas.
3. Note that amendments have been recommended to the Plan to reflect consultation feedback (Attachment 5 Submission summary and Attachment 6 Submissions).
4. Agree to adopt Tātou ki Uta – Coastal Reserves Management Plan (as amended in Attachment 1 of this paper) and Appendix A – Rules for use and development of parks and reserves (as amended in Attachment 3 of this paper).
5. Delegate to the Chief Executive and the Chair or Deputy Chair of the Kōrau Mātinitini | Social, Cultural and Economic Committee (or the relevant committee) the authority to make any amendments as agreed at this meeting and any minor consequential edits as part of finalising and publishing the Plan.
6. Agree to archive the South Coast Management Plan (2002), and the coastal sections of the Suburban Reserves Management Plan (2015) and Outer Green Belt Management Plan (2019), as these are now superseded by *Tātou ki Uta*.
7. Note that officers will return to the relevant Committee in 2026 with an updated Appendix A: Rules for Use and Development of all parks and reserves, following further work to ensure alignment across the city's wider open space network.
8. Agree to the proposed name changes in this paper, as consulted on as part of *Tātou ki Uta* as per Appendix B – Proposed Name Changes.
9. Note further targeted engagement on naming for three areas and before final recommendations /decisions are made.
10. Note the minor updates to the coastal reserve land schedules within *Tātou ki Uta* from the Koata Hātepe | Regulatory Processes Committee decision of 28 August 2025
11. Note the indicative financial information provided for implementation of *Tātou ki Uta* for consideration as part of the 2027/37 LTP (Attachment 4).

Whakarāpopoto | Executive Summary

1. This report seeks approval to adopt *Tātou ki Uta – Coastal Reserves Management Plan*, a statutory management plan prepared under the Reserves Act 1977. Once adopted, it will replace and consolidate the South Coast Management Plan (2002), and coastal sections of the Suburban Reserves Management Plan (2015) and Outer Green Belt Management Plan (2019).
2. *Tātou ki Uta* (the Plan) guides how Wellington City Council cares for, protects, and uses the city's coastal reserves and open spaces over the next 10 years. The Plan aims to:
    - Meet Council's obligations under the Reserves Act 1977.
    - Provide a clear, integrated framework for use, protection, and enjoyment of coastal reserves.
    - Support consistent, strategic decision-making and prioritisation.
    - Reflect Council's partnership commitments with mana whenua.
    - Identify ecological, recreational, cultural, and operational priorities.
3. The Plan applies to coastal reserves and open space land owned or managed by Wellington City Council between Oriental Bay and Karori Stream, including beaches, platforms, escarpments, and partnership-managed sites including Taputeranga Island and Oruaiti Reserve.
4. The Plan is informed by 2024 public engagement (3,000+ feedback points) and 2025 consultation (379 formal submissions). It has been developed in partnership with Taranaki Whānui and Ngāti Toa Rangatira. Oral submissions were heard by the Social, Cultural, and Economic Hearings Panel on the 13th of August 2025.
5. Attachment 1 provides the amended, track-changed version of the Plan, with changes highlighted in orange to show recommended amendments in response to consultation. Following approval of the Plan, final design work — including maps, photos, and layout — will be completed before publication.
6. Attachment 3 provides the amended, track-changed version of Appendix A – Rules for use and development of parks and reserves.

Takenga mai | Background

7. *Tātou ki Uta – Coastal Reserves Management Plan* is a statutory management plan prepared under the Reserves Act 1977. It provides a ten-year vision and management approach for Wellington's coastal reserves and open spaces, covering much of the city's accessible coastline. It replaces earlier plans and integrates them into a single framework for consistent management.

8. The Plan is organised into four parts:

    - Introduction & Context - why the coast matters, how the Plan will be used, and how it aligns with wider strategy;
    - Values & Pathways - five underpinning values (active partnership with mana whenua; access to the coast for recreation and enjoyment; enduring connection to the landscape; protection and restoration of coastal ecosystems; and a nature-first approach to resilience) with pathways that set out how we will deliver on each value;
    - Land Administration - how we manage coastal reserve land classifications, leasing/easements, encroachments and other statutory matters; and
    - Sector Plans - under the Plan, the city's coast is divided into eight management sectors with place-specific policies and actions: Te Kopahou and Coastal Road; Southern Bays; Hue te Para; Rangitatau; Eastern Bays; Mahanga Bay to Maupuia; Ākautangi; and Oriental Bay. Each sector has associated land schedules and management maps.

9. As part of preparing *Tātou ki Uta*, the land status of Council-owned coastal land was reviewed. This identified some parcels requiring classification or reclassification under section 16 of the Reserves Act to better align with their purpose. A separate report was presented to the Koata Hātepe | Regulatory Processes Committee to approve these classifications on 28 August 2025. If the Plan is approved, the land status table can be amended consistent with the Regulatory Process Committee decision and included as part of the final published plan.

10. Consistent with the requirements of the Reserves Act, formal consultation on the draft Plan ran from June - August 2025, following early engagement in 2024. Consultation and engagement methods included workshops, surveys, drop-ins, beach pop-ups, and hui. A full engagement summary is avalible on the website.

Working with our Tākai Here partners

11. The Plan has been developed in partnership with our Tākai Here partners, Taranaki Whānui and Ngāti Toa Rangatira. As members of the Steering Group, they have shaped the direction of the Plan, contributed to its development, and ensured it reflects shared aspirations for the coast. Their mātauranga, values, and priorities are embedded throughout.

Councilllor input

12. Councillors were first briefed on the intent to review the South Coast Management Plan and commence the development of the Plan in early 2024. A workshop was held in August 2024, where councillors were presented with the engagement summary and worked through key themes, values, and priorities for Wellington's coastal reserves and open spaces. Feedback from this session informed the drafting of values, strategic pathways, and sector-based management approaches. Councillors were also invited to visit the coast and some went on a site visit to Te Kopahou on 25 August 2025.

Kōrerorero | Discussion

Formal Consultation Overview

13. Public consultation on the Draft Plan was undertaken from 5 June to 5 August 2025. A total of 379 submissions were received, following early engagement in 2024 that generated more than 3,000 feedback points. The 2025 consultation included five drop-in sessions across parts of the coast, in addition to online and written feedback channels. Further detail about the consultation methods used is provided in the engagement section of this report and in the consultation summary in Attachment 5.

14. Participants were asked in the consultation survey about their level of support for the overall direction of the Plan, the five values and pathways, and specific proposals in the Plan. Submitters were also invited to comment on the eight individual coastal management sectors, name change proposals, Appendix A: Rules for use and development of parks and reserves, and any other general comments.

15. Analysis of submissions showed broad endorsement of the overall direction of the Plan, with 62% of respondents supportive and 29% opposed. Overall support levels were notably influenced by opposition to two specific proposals - vehicle access to the Te Kopahou coastal road and the future of the Bait House - both of which attracted strong and polarised feedback. Outside of these issues, support for the Plan's five values and pathways, and for many of the sector-based proposals, was generally higher. Officers have carefully considered these topics, and amendments have been recommended to the final Plan in response. Further detail is provided below.

16. Levels of support for the five values were:

    - Active partnership with mana whenua – 57% support; 26% opposed
    - Access to the coast for recreation and enjoyment – 78% support; 14% opposed
    - Enduring connection to landscape – 60% support; 13% opposed
    - Protection and restoration of coastal ecosystems – 78% support; 9% opposed
    - Nature first approach to resilience – 73% support; 14% opposed

17. Submissions highlighted a wide range of issues. A full submissions summary is provided in Attachment 5. The following sections of this report provide an outline of the major submission themes and the changes recommended to the Plan in response. It is important to note that the submissions were wide-ranging and diverse, and not every point raised can be reflected in the below theming. Some submissions were also out of scope of the Plan.

18. Based on submissions and engagement feedback, a series of amendments are recommended to the Plan to improve clarity, reflect community priorities, and align actions with mana whenua and technical advice. These include both editorial refinements (to simplify and clarify the Plan) and substantive adjustments to policies and actions. Map, photo, and design updates will be completed before publication.

Key Themes and Officer Responses

Marine and Intertidal Zones

19. Many submitters felt the marine environment was under-emphasised, raising concerns about kina barrens, poaching, and the loss of intertidal habitat. While direct management of the marine environment sits outside of Council's responsibilities and the scope of this Plan, officers agree that stronger recognition can be included to explain how land-based management affects intertidal and marine ecosystems. The amended Plan now explicitly recognises the intertidal zone as an ecological connector, commits to avoiding removal of wrack (including logs, driftwood, and seaweed) except for safety reasons, clarifies beach grooming, and promotes collaboration with Ministry of Primary Industries (MPI) and community groups.

Dogs

20. Many submissions supported stronger restrictions on dogs in sensitive habitats, while others emphasised the importance of everyday dog-walking access. In response, amendments are recommended to strengthen the Plan's direction on protecting wildlife by explicitly committing to stricter management of dogs on the coast. Sensitive habitats will be a priority for enforcement, supported by a new action to improve dog signage (particularly around kororā and other coastal birds), and by prioritising four key areas identified as important bird habitats for targeted dog management. These measures align with the Dog Policy 2024, which includes providing for reviewing and modifying dog exercise areas with consideration of wildlife protection, community use, and consultation.

Ecology and Wildlife Protection

21. Wildlife protection for kororā, dotterels, geckos, and seals was strongly emphasised, along with calls for broader pest control (including deer, goats, and pigs). In response, officers have strengthened pest-control actions and committed to working with partners at Te Kopahou and Moa Point, introduced a specific policy for dotterel protection at Moa Point, and amended the litter management policy to recognise that a "pack it in, pack it out" approach is not practical at high-use sites such as Lyall Bay.

Stormwater, wasterwater and leachate

22. Some submitters raised concerns about the impacts of stormwater, sewage, landfill leachate, and litter on ecology, wildlife and water quality. Of these, stormwater discharges, sewage, and landfill leachate sit outside the scope of this Plan, as these are managed through separate processes led by the new regional Wellington water entity, Greater Wellington Regional Council, and other regulatory frameworks rather than through a Reserves Management Plan. The Plan does, however, note the importance of collaboration with these entities to address issues at key sites such as Houghton Bay, Princess Bay and Lyall Bay.

Amenities (toilets, changing rooms, swimming facilities)

23. Many submissions raised concerns about the condition and adequacy of amenities along the coast, particularly toilets, changing rooms, and swimming facilities. Existing infrastructure was frequently described as outdated and “not fit for purpose”, with submitters noting weak shower pressure, poor design, and changing rooms unchanged for decades. At Scorching Bay, submitters supported installation of a swimming pontoon. Across multiple sites, the existing “4 km spacing rule” for toilets was criticised as arbitrary. In response, amendments are recommended to remove the spacing rule and instead adopt a high-use, clustering approach to facilities. Improvements are signalled for Freyberg Beach and Island Bay, with new toilets planned at Rangitatau, Māhanga Bay – Maupuia, and working with WIAL on provision in Surfers’ Corner in Lyall Bay. The Plan also commits to extending opening hours at popular swimming beaches, and supporting a community-led swimming raft at Scorching Bay.

Accessibility and inclusion

24. Accessibility and inclusivity were also themes in the feedback received. Submitters noted that many people currently miss out on simple coastal experiences such as enjoying fish and chips at the beach, feeling sand underfoot, or dipping toes in the water. In response, changes have been made to add specific accessibility actions at Scorching Bay, Lyall Bay, Freyberg/Oriental Bay, and Island Bay, including reviewing accessible car parking and working with the disability community on options such as beach matting and wheelchairs. The language of the Plan has been reframed in places to avoid ableist terminology, and greater emphasis has been placed on clustering amenities together to support accessibility outcomes. At the same time, the Plan acknowledges that many parts of the coastline will remain inherently inaccessible due to their natural character and physical constraints.

Recognition of surfers, divers, and wind-powered watersports.

25. Several submissions raised concerns that some water-based recreation activities — particularly windbased-watersports, diving, and surfing — were not adequately recognised in the draft Plan. Respondents sought clearer identification of key sites and policies that acknowledge the importance of these activities, as well as recognition of potential impacts from other activities (such as vehicle access or infrastructure). In response, changes have been made to provide more explicit recognition of these sports within the sector-specific chapters and maps, and to include additional policy direction to support their ongoing use and protection.

Te Kopahou Road Access

26. Vehicle access to Te Kopahou coastal road was the single most debated issue in the Plan and the largest source of submissions. Feedback was highly polarised, with 33% of submitters strongly opposed to restricting vehicle access, while 37% strongly supported a new management approach.

27. The 4WD community, including organised groups and clubs, submitted in strong numbers in favour of keeping the road open or keeping access as is. They described the route as a valued recreation area and an important way to reach fishing and diving spots: “If you take the road away, you take the fishing away.” They argued that access should remain for responsible drivers, people with limited mobility, and clubs who contribute positively through clean-ups and predator control: “Work with the people who care – not against them.” Many opposed penalising all users for the actions of a few, calling instead for enforcement and education: “You can’t punish the many for the actions of a few bad eggs.”

28. On the other hand, many submitters called for tighter restrictions or closure to vehicles. Concerns focused on environmental damage (particularly to dunes and nesting birds), wildlife disturbance, and antisocial behaviour: “Vehicles damage dunes and disturb nesting birds — this is a Scenic Reserve, not a racetrack.” Specific issues raised included seal harassment, poaching, dumping, fires, and conflicts with walkers and cyclists. Some submitters supported complete closure to vehicles, while others proposed targeted measures such as night-time closures (“Nothing good happens down there after dark”) or gated sections (e.g. Karori Stream). Opinions were divided on the idea of a permit system to manage vehicle access, with some seeing it as a workable compromise and others rejecting it as unnecessary bureaucracy. Several respondents supported allowing the road to naturally recede over time. Stronger signage, a ranger presence, and clearer rules for all users (including cyclists, dog walkers, and dirt bikes) were also frequently requested.

29. In response, officers recommend a balanced approach to the management of vehicle access that recognises both the recreational value and the ecological importance of the area, and incorporates many of the ideas raised through submissions. This includes:

- Night-time gate closures to deter antisocial behaviour.
- Sunday vehicle-free days, and some public holiday vehicle-free days.
- Further investigation of the feasibility of a permit system, with future decisions informed by monitoring and reporting.
- Education for drivers on safe speeds and environmental impacts.
- Strategic use of barriers or boulders to protect sensitive dune and wildlife habitats.
- Withdrawal of the proposal to reclassify the road as reserve, in light of opposition.
- Retaining the policy of allowing the road to naturally recede over time, rather than committing to costly long-term maintenance.

Ākautangi water recreation precinct

30. Many submissions supported the idea of a coastal recreation hub at Evans Bay Marina and the wider Ākautangi waterfront, but concerns were raised about affordability, governance, and the risk of displacing long-standing clubs and community groups. Submitters highlighted the urgent need to upgrade the public boat ramp, recognised as Wellington’s busiest, and emphasised the historic role of the Evans Bay Yacht & Motorboat Club as a community hub. Other themes included safeguarding kororā habitat, investing in planting and greening, and managing conflicts between cycleway, parking, and trailer access.

31. Some detailed submissions from Evans Bay Marina tenants expressed long-standing frustration at the lack of visible Council action on marina renewal despite earlier planning work. These submitters highlighted escalating costs, questioned governance and financial models, and emphasised that redevelopment must remain affordable for existing users. Concerns were also raised about proposals for a master plan or new "hub," with tenants cautioning against unnecessary bureaucracy and displacement of existing clubs. Some were opposed to the idea of a precinct and wanted activities to be treated seperately.

32. In response, officers have made amendments to strengthen the precinct framework and explicitly recognise the Yacht Club's role as a community hub. The amended Plan commits to a staged, collaborative approach, with priority investment signalled for public boat ramp upgrades. Additional commitments include kororā habitat safeguards, modest greening and heritage initiatives, and improvements to manage parking and access. Officers note that options for financial models, including those raised in submissions, will require further consideration as part of detailed business case and masterplanning work.

Nature based climate resilience

33. Submissions on climate resilience highlighted the need for clearer data and practical measures, with some questioning the evidence base and others emphasising the value of flexible approaches such as Dynamic Adaptive Pathways Planning (DAPP). There was support for nature-based methods alongside calls for hybrid solutions where necessary, concern about costs, and suggestions for practical measures such as reusing local slip material. In response, officers have amended the climate change information to provide greater clarity and alignment with Council's wider framework, and have added actions to seek coastal engineering advice to inform decisions around coastal projects, review post-storm clean-up protocols to retain natural materials, and explore beach monitoring programmes to inform long-term adaptation strategies. There also continues to be specific resilience and erosion response actions in Lyall Bay, Te Kopahou Carpark, Worser Bay, Moa Point, Breaker Bay and Seatoun.

Island Bay Bait House

34. The Bait House was the second most controversial issue in the Plan, with many submissions opposing its possible removal. Submitters emphasised its unique role as a marine education centre — a hub for learning not available elsewhere in the region — as well as its strong heritage value to Island Bay. Alternatives such as earthquake strengthening, relocation, or community-led management were suggested as preferable to demolition.

35. In response, officers have recommended amendments to the Plan to acknowledge the community value placed on the Bait House and to include a commitment to work with the Marine Education Trust on a plan for future building works. This will still need to involve considering options such as strengthening, relocation, or adaptive reuse, in the context of seismic and hazard constraints, lease renewal requirements, and coastal resilience planning. The amended wording is 'Consider *the future of the Bait House in context of coastal hazards, building strengthening, and lease renewal. Work with the Marine Education Trust on a plan for future building works* 'The Plan also notes that the costs of strengthening and other works will require further investigation to assess affordability and value for money, with a subsequent report to be brought back to Council for consideration of next steps.

Tākai Here partnership

36. The draft Plan includes a value and set of pathways focused on active partnership with mana whenua, who are our Tākai Here partners — Taranaki Whānui and Ngāti Toa Rangatira:

- Pathway 1.1: Strengthening mana whenua presence and leadership on the coast.
- Pathway 1.2: Recognising treaty settlements in coastal management.
- Pathway 1.3**:** Restoring traditional Māori place names and strengthening te reo Māori.

37. Submissions reflected a range of views. Many supported strengthening partnership with mana whenua, restoring traditional names, and sharing Māori histories, though concerns were raised about a perceived prioritisation of Māori interests over the wider community. In response, and following further engagement with our Tākai Here partners, the Plan's language has been refined to more clearly reflect Te Tiriti o Waitangi, statutory acknowledgement areas, and the partnership approach taken in its development — including the use of sector names agreed with mana whenua.

Name change proposals

38. The draft Plan proposed restoring eight Māori names to coastal reserves that are significant cultural sites for mana whenua. Consultation feedback was mixed on the proposals, but overall results showed 56% support and 21% opposition for initiatives to restore Māori place names, incorporate cultural storytelling, and enhance interpretation along the coast.

39. Submissions in opposition generally expressed concern about the replacement of existing names, potential confusion for the public, or a perception that Māori interests were being prioritised over wider community views. There were also many requests for dual names. Further background on the cultural significance of each proposed name is provided in Attachment 2.

40. Officers have considered the submission feedback and recommend the following approaches to the naming proposals, detailed in this table:

Officer recommendations on naming proposals			
Current Name	**Proposed Name**	**Recommendation**	**Note/Rationale**
Melbourne Street Reserve	Uruhau Reserve	Proceed	Supported in submissions and consistent with relevant Council policy. Opposition was limited to general objections to Māori renaming.
Lyall Bay Esplanade Strips	Hue te Para Park	Proceed	Supported in submissions and consistent with policy. Wellington International Airport Limited noted that some of the land is not reserve land and may be in their ownership in the future, but they did not object to the proposed name change.
Worser Bay Lawn	Kākāriki Hūtia Reserve	Proceed	Supported in submissions and consistent with policy. Opposition related mainly to general objections to Māori naming.
Overtoun Park	Karaka Onehunga Reserve	Proceed	Supported in submissions and consistent with policy. Opposition reflected general concerns about Māori name changes and the loss of the existing reference to Overtoun (an estate in Scotland of Mr Crawford) and this history being lost. Historical context on the origin of the current name is provided in Attachment 2.
Queens Drive Reserve	Waitaha Reserve	Proceed	Supported in submissions and consistent with policy. Opposition was limited to general concerns about Māori naming or loss of familiarity.
Te Kopahou Reserve	Te Kapohau Reserve	*Defer*	Mana whenua have requested additional time to consider this change as part of the Te Kopahou Cultural Restoration Project. The Plan has been amended to include an action to revisit the naming decision within that project context.
View Road Park (Houghton Bay)	Haewai Reserve	*Defer*	Submissions were generally supportive, but some suggested the name Haewai would be more appropriately applied across a wider network of reserves in Houghton Bay. The Plan has been amended to include an action to undertake further work with mana whenua and the Houghton Bay community on the most suitable application of this name and look at other naming opportunites in Houghton Bay.

Shorland Park	Mapunga Park	*Defer decision and conduct further targeted engagement with the Southern Bays Historical Society, descendents of John Sholand and Mana Whenua before a final recommendation or decision is made.*	While there was support for the name Mapunga Park, some submissions from the Southern Bays Historic Society highlighted community attachment to the existing name, with descendants of J.O. Shorland also emphasising his contributions to Island Bay. Mana whenua identified Mapunga as a high-priority name for restoration, reflecting its history as a kāinga and association with the black shag (kawau). Officers recommend deferring this decision to allow further work with mana whenua, the Shorland family, and the Historic Society, with the aim of reaching a solution.

41. The proposed name changes have been assessed against the Council's Naming Policy – Te Māpihi Maurea, which prioritises names that reflect mana whenua significance, local heritage, and appropriate use of te reo Māori. These also support the implementation of Te Tauihu, Council's te reo Māori policy, contributing to the goal of Wellington becoming a te reo Māori capital by 2040. Councillors have the option to support the recommended name changes, which align with Council policy and reflect mana whenua aspirations; or to consider dual naming options or defer decisions where further engagement is needed.

Other

42. The amended Plan includes a number of smaller changes based on submissions and further review. These include:

    - Adding policy to support compliance with Wellington Airport's operational and safety requirements on the southern foreshore.
    - Adding policy to clarify that public art and memorials are not anticipated on the south coast where natural character is dominant, but may be considered elsewhere along the coastline and particularly along Ākautangi.
    - Expanding heritage recognition, with policies to acknowledge and manage historic bunkers and other WWII structures, and to incorporate local stories highlighted in submissions including Evans Bay Yacht Club, the Hermit's Cave and Surfers at Lyall Bay.
    - The amended Plan removes the action for a coastal walkway linking the Te Kopahou Visitor Centre to Mākara along a historic route. While the concept received strong public support during consultation, it is recomended at this stage to not be progressed due to opposition from the adjoining landowner and because much of the alignment falls outside the scope of this Plan. This idea may be better reconsidered in the future review of the Open Space Access Plan.
    - Adding a new action to work with the new water services entity and Greater Wellington Regional Council on interpreting piped stream outfalls (e.g. Paekawakawa, Haewai, Ngaroma, Waipapa), through signage and catchment information, and developing a long-term approach to improve their ecological and amenity value.

- Adding recognition of estuaries, in response to submissions on their ecological and cultural importance. The amended Plan notes that estuaries along the Wellington coast, including the Kaiwharawhara estuary and the Mākara Stream estuary, sit outside its formal scope but will be managed in line with the Plan's policies and values until more detailed frameworks are developed.
- The amended Plan also includes an additional action to work with GWRC to investigate and consider reviewing the licence agreement and coastal permit for the Tug Boat at Oriental Bay, and depending on the outcome, consider options to repurpose the site for aquatic recreation uses. This is also based on a submission requesting this.

Appendix A – Rules for use and development of parks and reserves

43. As part of public consultation, we also sought feedback on Appendix A, which sets out activity rules for the parks and reserves network. These rules explain how activities within Wellington's coastal areas are managed so the use, development, and protection of these spaces align with the values and pathways of *Tātou ki Uta*. While Appendix A is applied through this Plan now, it is intended as a stepping stone toward a single, city-wide rules framework for activities across all Wellington reserves.

44. Submissions on Appendix A resulted in minor refinements only (summarised in Attachment 3). Updates are principally in the Encroachments and Commercial Activities sections. Officers propose adopting Appendix A for the coastal reserves through this Plan and returning in 2026 with a city-wide version for further review and consultation.

Kōwhiringa | Options

45. The options available to Kōrau Mātinitini | Social, Cultural and Economic Committee are:

    a. **Option A**: Adopt *Tātou ki Uta* as outlined in this paper, with any minor amendments. (Preferred Option).

    b. **Option B**: Agree to defer the decision with direction to substantially amend *Tātou ki Uta* and ask officers to come back with proposed amendments.

    c. **Option C**: Not adopt *Tātou ki Uta* which would mean the 2002 South Coast Management plan would remain active.

46. **Option A – *Adopt Tātou ki Uta* (Preferred Option):** The Committee would adopt *Tātou ki Uta* as outlined in this paper, incorporating the tracked changes and officer recommendations which respond to consultation feedback and any other minor changes made at this meeting.

    Advantages:

    - Provides an updated, integrated management framework for Wellington's coastal reserves, replacing the outdated 2002 South Coast Management Plan.
    - Meets the Council's statutory obligations under the Reserves Act.
    - Reflects extensive community, stakeholder, and mana whenua engagement and input, ensuring decisions are well-informed and broadly supported.

- Enables implementation of the Plan to commence without further delay, maintaining momentum and certainty for partners and communities.

Disadvantages:

- Some submitters may remain dissatisfied where their feedback is not reflected in the final Plan, although this will continue be the case where there are competing views and priorities across many areas of the Plan.

47. **Option B – Defer the decision and request substantive amendments to *Tātou ki Uta*:** The Committee would agree to defer adoption of the Plan and direct officers to prepare substantial amendments before bringing it back for further consideration.

Advantages:

- Enables the Committee to refine or amend specific contentious provisions before adoption, for example to address political, technical, or community sensitivities.
- Would still ultimately meet the Council's statutory obligations under the Reserves Act, once the amended Plan is adopted.

Disadvantages:

- Delays adoption and implementation of the Plan, which may impact resourcing, linked projects, and delivery of coastal management actions.
- Risks undermining the integrity of the consultation process and the balance already achieved between diverse community feedback, mana whenua input, and technical advice.
- Creates uncertainty for mana whenua and stakeholders who have engaged and contributed extensively to the Plan over the last 18 months, with reputational risks for Council.
- Would require additional officer and mana whenua resourcing to rework and re-consult on amendments, further extending timelines, impacting resourcing and budgets, and delaying other projects.

48. **Option C – Do Not Adopt *Tātou ki Uta*:** The Committee would decline to adopt the Plan, leaving the 2002 South Coast Management Plan in effect.

Advantages:

- Avoids immediate resourcing and future implementation costs.

Disadvantages:

- Leaves Wellington with an outdated management framework for its coastal reserve areas that does not reflect current legislation, climate risks, community expectations, or mana whenua partnership.
- Fails to meet the statutory obligations for the review of management plans under the Reserves Act.
- Significant reputational risk with mana whenua, community stakeholders, and the wider public who engaged in and contributed extensively to the process over the last 18 months.
- Loss of momentum and credibility for future coastal reserves planning initiatives.

Whai whakaaro ki ngā whakataunga | Considerations for decision-making

Alignment with Council's strategies and policies

49. The *Tātou ki Uta – Coastal Reserves Management Plan* aligns with key Council strategies and legislative frameworks. A key guiding document for the Plan is Te Whai Oranga Pōneke – Open Space and Recreation Strategy 2023, which sets the strategic direction for managing Wellington's open space and recreation network. The Plan strongly aligns with the Strategy's five strategic focuses:

    - Te Whakahuamanu (Regenerating and Resilient) – by prioritising sustainable coastal management, ecological restoration, and climate adaptation.
    - Kanorau (Diverse) – by supporting a wide range of recreational opportunities while ensuring environmental protection.
    - Whakamāori anō (Re-indigenising) – by elevating te ao Māori through honouring whakapapa, mahinga kai, and partnerships with mana whenua.
    - Whai Wāhitanga (Inclusive) – by supporting coastal environments to be more accessible and welcoming for all.
    - Pāhekohekotanga (Integrated) – by ensuring coastal spaces are well-planned, connected, and aligned with wider city networks.

50. Additionally, the Plan strongly aligns and advances with:

    - Our Natural Capital – Wellington's Biodiversity Strategy and Action Plan 2015, by focusing on coastal habitat protection, ecological restoration, and biodiversity resilience, supporting Wellington's aspiration to be a leader in urban ecology.
    - Te Atakura – First to Zero (2019) – by supporting coastal climate resilience and nature-based adaptation.
    - Tūpiki Ora Māori Strategy (2022) – by giving effect to Council's commitment to better outcomes for Māori, with a strong focus on mana whenua partnerships, cultural heritage, environmental outcomes, and renaming.

Engagement and Consultation

<u>Early Engagement (2024)</u>

51. Development of *Tātou ki Uta* began with an extensive early engagement process between March and July 2024. This generated over 3,000 pieces of feedback through a wide range of activities, including: community workshops, beachside pop-ups and "chats on the sand," targeted discussions with youth and disability communities, hui with mana whenua, online surveys, and a city-wide research survey. Early engagement also included school-based activities and direct input from recreation groups and environmental organisations. This feedback was used to shape the draft Plan. A full summary of this early engagement process is provided in the Early Engagement Summary Report.

Formal Consultation (2025)

52. Public consultation on the Draft Plan was undertaken from 5 June to 5 August 2025, in line with the Reserves Act 1977 requirements. A total of 379 submissions were received from individuals, mana whenua, community groups, environmental organisations, recreation advocates, and residents. These submissions represented a broad cross-section of coastal interests — environmental and wildlife organisations; recreation and boating clubs (e.g. swimming**,** surfing, diving, yachting); historical societies**,** residents' associations; and individual residents — reflecting the breadth of community engagement with the coast.

53. The main method of consultation was an online survey hosted on the Kōrero Mai engagement platform (also available in paper form), supplemented by email submissions. Promotion and outreach activities included:

    - Signage installed along the coast to advertise the consultation.
    - A targeted social media campaign (Facebook and Instagram), featuring videos with Council staff (e.g. the coastal ranger and ecologist) explaining coastal issues, supported by paid advertising.
    - 5 in-person drop-in sessions held at the Waterfront Markets, Evans Bay Marina, Lyall Bay Surf Club, Te Awe Library, and Island Bay Community Centre.
    - Information displays in Council libraries and recreation centres across the city.
    - Email outreach to key stakeholders, including environmental, recreational, and residents' groups.
    - Coverage in Council newsletters, alongside press releases and news stories picked up by RNZ and Stuff (including stories focused on coastal birds and the Bait House).
    - Public notification in the newspaper.

54. A full consultation summary is provided in Attachment 5.

Māori Impact Statement

55. The coast holds deep significance for Māori, recognising the ancestral, cultural, and spiritual connections of mana whenua to the coast. The Plan was co-developed with our Tākai Here partners, Taranaki Whānui and Ngāti Toa Rangatira, incorporating Cultural Values Assessments, hui, site visits, and co-drafting workshops. Mana whenua attended council meetings and reviewed multiple versions of the plan.

56. Mana whenua aspirations are embedded throughout, reflected in the Plan's values, pathways, sector actions, and proposed name changes. The name *Tātou ki Uta* was bestowed by mana whenua and reflects collective responsibility to care for coastal areas. They also developed the Plan's mihi and karakia.

57. If the Plan is adopted, Council will continue to work in partnership with mana whenua through implementation.

Financial implications

58. While adopting the Plan does not commit Council to any immediate new funding, the Plan does identify a long-term programme of proposed actions that will guide future decisions on priorities and Council investment as part of Annual Plan and Long-term Plan processes.

59. Approximately 75% of the proposed actions in the Plan can be delivered within existing operational and capital budgets, aligned with asset management plans and current work programmes (e.g., biodiversity, open spaces and beaches, marinas, play spaces, public toilets) - see Attachment 4.

60. Around 25% of the actions, particularly medium- to long-term priorities, involve new or additional initiatives that will require further funding to be sought through future Annual Plan and Long-term Plan processes. These actions include cultural and partnership initiatives (such as a mana whenua ranger programme and coastal cultural interpretation), ecological restoration programmes (including kororā and seabird recovery), adaptation and resilience planning (such as erosion control and sand management), accessibility improvement projects and some new infrastructure or planning projects (e.g., coastal toilets, master planning for marinas and key sites).

61. The Plan outlines indicative cost estimates and timing for these actions (summarised in Attachment 4). These estimates are high-level and will require further detailed investigation, feasibility studies, and design work before any funding decisions are made.

Legal considerations

62. The Plan has been prepared in accordance with section 41 of the Reserves Act 1977, setting out management direction for Council-administered coastal reserves.

63. Some areas of coastal land included within the scope of the Plan are not formally classified under the Reserves Act but because of their characteristics, these are managed as public open space. The Plan establishes a consistent management approach across these areas.

Risks and mitigations

64. The risk of adopting the Plan is assessed as low.

65. There is a risk related to community confidence in Council if actions or policies identified are not delivered in a timely way. This can be mitigated by clear communication that the Plan is a strategic guiding document, with its actions being subject to further funding, feasibility, planning and budgeting processes, as well as establishing a process for regular review of the Plan’s actions and implementation progress.

Disability and accessibility impact

66. The Plan emphasises inclusive and equitable access to coastal spaces, recognising that for many disabled people and others with mobility challenges, much of Wellington’s coastline is currently inaccessible. While it is not possible to make the entire coastline accessible, the Plan commits to prioritising improvements at high-use locations where access can realistically be enhanced.

67. Engagement with disabled communities was a central part of consultation. Officers worked with dSport, Halberg Foundation, FERNZ (Foundation for Equity and Research NZ), the Make Matairangi More Accessible working group, and other partners to understand specific barriers and opportunities. This included:

    - Attending an inclusive snorkelling event run by Mountains to Sea with dSport.
    - Meetings with dSport staff, including individual conversations with tangata whaikaha whānau.
    - Targeted survey distribution through dSport and disability sport organisations.
    - Ongoing engagement with the Halberg Foundation, FERNZ's Community Action Group, and the Council's LeisureCard partners.
    - Promotion of consultation opportunities through the LeisureCard newsletter.

68. Feedback emphasised that disabled people want to enjoy the same simple coastal experiences that many take for granted - sharing fish and chips with whānau on the beach, feeling sand underfoot, or dipping toes in the water. Participants highlighted that accessibility is not only about beach entry but also about the wider "journey": accessible car parking close to the shore, accessible toilets and changing facilities, and safe and usable pathways. Importantly, they stressed that these facilities must be designed and assessed from a disabled perspective, noting that common measures such as "walking time to toilets" are often based on able-bodied assumptions.

69. In response, Pathway 2.4 of the Plan has been strengthened to explicitly commit to enhancing accessibility. Priority actions include investigating beach matting and beach wheelchairs at key sites (e.g. Lyall Bay, Island Bay, Freyberg/Oriental Bay, and Scorching Bay), reviewing accessible parking provision, and clustering amenities to improve practical access outcomes. While natural character and terrain will limit what is possible in many areas, the Plan commits to working in partnership with the disability community to design meaningful improvements at targeted locations.

Climate Change impact and considerations

70. The Plan embeds climate adaptation and nature-first resilience as a core value. It takes a landscape-scale approach across beaches, dunes, estuaries and escarpments, integrating coastal engineering/geomorphology advice with mātauranga Māori. Consistent with the National Adaptation Plan and MfE coastal guidance, the Plan applies Dynamic Adaptive Pathways Planning (DAPP) and the PARA framework (Protect, Accommodate, Relocate, Avoid), prioritises space for natural processes, avoids new development in high-risk areas, and focuses on dune/coastal habitat restoration and living shorelines.

71. The approach aligns with Te Atakura – First to Zero, favouring low-emissions, nature-based responses with co-benefits (biodiversity, carbon sequestration, recreation). Recognising that climate change will intensify storms, erosion, inundation and seasonal fire risk, the Plan uses trigger-based decisions (including relocation where needed), requires adaptable design for recreation assets, and strengthens operational protocols (e.g., returning clean storm debris to beaches).

Communications Plan

72. Following adoption of *Tātou ki Uta*, officers will coordinate public communications to ensure the community is aware of the final Plan and its outcomes. This will include a media release, a social media update, direct communication with stakeholders, and updates on the Let's Talk platform.

73. Communications will be finalised once the maps, design layouts, and visual materials for the final Plan are complete. Officers will also work with mana whenua on communication and public messaging to help get the word out to the wider community.

Health and Safety Impact considered

74. There are no direct health and safety impacts arising from the adoption of this Plan.

Ngā mahinga e whai ake nei | Next actions

75. Subject to adoption of the plan, the next steps are:

- Incorporate any final amendments agreed by the Committee into the Plan.
- Prepare the final designed version, including maps, photos, and layout, for publication.
- Communicate the finalised Plan to the public and key stakeholders.
- Begin planning for implementation, including further technical investigations, funding proposals, and operational planning for priority actions
- Report back to the Committee in 2026 on:
  - a city-wide activity rules framework for parks and reserves (Attachment 3);
  - the tidy-up and confirmation of reserve classifications under the Reserves Act 1977; and
  - progress on further naming proposals under the Wellington City Council Naming Policy (Te Māpihi Maurea).

Me mihi ka tika ki te wāhi ngaro, ki a rātou mā kua wehe atu ki te pō. Rātou hoki kua wāihongia te tukanga auahatanga mō tātou ki uta, mō tātou ki tai. nō reirā, e kui mā, e koro mā, okioki atu.

Me mihi hoki ki te remu o te paepaeroa nei, arā ki ngā wāhi tūpuna o Pōneke. Mai i ngā taukahiwi o Te Kopahou, ko te ahikāroa, me te hautapu hoki kua tahuna kētia e Taranaki Whānui ki te Upoko o Te Ika.

Heke iho rā i te maunga tīkokekoke, ka tau mai rā ki Rimurapa, ki Te Kauae o Poua, ki Mōhuia, ki Pariwhero hoki.

Matike atu rā ki Paekawakawa, tītiro iho ki Te Māpunga kāinga, ki Motu Haku, ki Taputeranga. Ko Te Uruhau ki runga. Rere atu te kawau ki Haewai ki Waitaha ki Hue te Para ki ngā pā o Rangitātau, o Poito, ā, ki te kāinga o Paewhenua.

Tau mai tō tītiro ki Ōruaiti. E tū na te aroaro o Kupe, E tū ra te turanga o Kupe.

Hoea tō waka ki Kirikiri tatangi ko Amuketi ko Maraenui tērā. Ko Kākāriki Hūtia, ko Whetu kairangi, Ko Te Māhanga, Ko Maupuia kei raro i te maru o Mātai Moana.

Whakawhiti atu rā ki Ākautangi kia tiro ake rā ki Akatarewa, ki Waihirere ki Tangi Te Keo. Heke iho ki Waitangi, ki Te Aro, Ki Pipitea ka tau..

Me mihi nui ki te iwi mana whenua o te tai hauāuru. Mai i Miria te Kakara ki Whitireia, whakawhiti te moana Raukawakawa, ki Wairau, ki Whakatū. E ngā kaihoe o te rangapū ahikaroa, e ngā uri o Ngāti Toa Rangatira, koutou kua hoe tahi mai i te taha o ngā ringa hoe o Taranaki Whānui ki te Upoko
o Te Ika. Noho tahi tonu.

Me mihi anō ki ngā tāngata katoa o te tāone o Pōneke, koutou e mahi tonu te mahi tika, te mahi pai ki ngā remu o te paepaeroa nei. Koutou hoki ngā hunga tiaki mō te taiao,mō te orangatonutanga o Te Whanganui a Tara, noho tahi mai.

Nō reirā e te iti, e te rahi, ānei te tirohanga ki muri kua heke mai nei mō tatou ki uta, mō tatou ki tai, mō tātou o nāianei, mō tatou ngā uri o āpōpō.

Tēnā koutou katoa.

Let us first acknowledge those who have passed on, those who have departed into the realm of night. They who have left behind the foundations of creation for our benefit – both inland and along the coast. To our past elders, may you rest peacefully.

We also acknowledge the sacred boundaries of this region, namely the ancestral lands of Pōneke (Wellington). From the ridgelines of Te Kopahou, with the long-standing fires and sacred offerings lit by Taranaki Whānui Ki te Upoko o Te Ika.

Descending from the high mountain, we arrive at Rimurapa (Sinclair Head), Te Kauae o Poua, Mōhuia, and Pariwhero. Looking out to Paekawakawa, we see Te Māpunga kāinga, Motu Kahu, and Taputeranga. Above them stands Te Uruhau. The cormorant then flies to Haewai, Waitaha, and Hue te Para (Lyall Bay), to the fortified settlements of Rangitātau and Poito, and to the home of Paewhenua. Let us rest our gaze upon Ōruaiti, where the figure of Kupe stands firm—his foundation enduring.

From there, we travel to Kirikiritatangi, to Amuketi, to Maraenui – where Kākāriki Hūtia

, Whetū Kairangi, Te Māhanga, and Maupuia stand beneath the protection of Mātai Moana. Crossing to Akautangi, we look toward Akatarewa, Waihirere, and Tangi Te Keo, before descending to Waitangi, Te Aro and Pipitea, where the sandy shores of Oriental Parade is formed.

We offer sincere acknowledgment to the mana whenua of the western coast – from Miria te Kakara to Whitireia, across Te Moana o Raukawakawa (Cook Strait), to Wairau and Whakatū. To the paddlers of the enduring alliance, the descendants of Ngāti Toa Rangatira, who continue to paddle alongside Taranaki Whānui ki Te Upoko O Te Ika – remain united.

We also extend thanks to all the people of Pōneke (Wellington) – those working with integrity and purpose along the sacred margins of this land. And to the environmental stewards, guardians of the wellbeing of Te Whanganui a Tara (Wellington Harbour) – stand together.

Therefore, to all, both great and small, this is the legacy handed down to us: for those inland, for those at sea, for the people of today, and for the generations of tomorrow.

Greetings and sincere thanks to you all.

He kōrero nā Taranaki Whānui me Ngāti Toa, hei tautoko i Tātou ki Uta.
Words from Taranaki Whānui and Ngāti Toa, in support of Tātou ki Uta.

1

Te Takenga

Background

Wellington City Council

Introduction

This plan guides the care and management of Wellington's coastal reserves.

It aims to:

- Fulfil obligations under the Reserves Act 1977
- Guide the day-to-day use, protection, and enjoyment of coastal reserves.
- Support consistent, integrated decision-making across Council-managed coastal land.
- Reflect our partnership commitments with mana whenua.
- Provide direction for operational, ecological, and cultural priorities along the coast.

The name Tātou ki Uta, bestowed by mana whenua, reflects the shared relationship with the coast that underpins this plan. Meaning "all of us on the coast", it is derived from the saying "Tātou ki Uta, Tātou ki Tai", which comes from the separation of Ranginui and Papatūānuku and the ongoing battle between Tāwhirimātea and Tangaroa. Some descendants of Tangaroa came ashore to dwell with Papatūānuku, while others remained in the sea.

Though separate, their whakapapa remains connected. The name reflects our relationship with the sea and our shared responsibility to care for the coast, as mana whenua and as community.

Our coast is a taonga – a treasured resource where Wellingtonians connect with the ocean, nature, and each other. Along Te Moana o Raukawakawa (Cook Strait) and Te Whanganui a Tara (Wellington Harbour), our relationship with the sea is woven into city life. The coast has long shaped – and will continue to shape– Wellington's identity, environment, way of life, and economy.

The coast marks the meeting of Tangaroa and Papatūānuku, where the ever - changing interaction continually shapes the land. This dynamic relationship, now intensified by the impacts of climate change, brings both awe-inspiring southerly waves and moments of calm. The coastline boasts dramatic landforms, fragile ecosystems, and diverse flora and fauna, all sculpted by the relentless forces of the coastal climate. Human settlement and activities namely the construction of roads quarrying and dune mining have significantly altered the landscape over time.

Wellington's coast is rich in history and legend. It is where Kupe pursued Te Wheke a Muturangi, the giant octopus, and where tupua Ngake burst from a lake, forming Te Whanganui a Tara and leaving his companion, Whātaitai. From these ancestral stories through to Māori settlement, Wakefield's land deals, quarrying, farming, wartime defence, and housing development, the coast has borne witness to layers of history.This context shapes the direction of the plan, which focuses on the future management of coastal reserves.

Ngāti Toa Rangatira, Te Ātiawa and Taranaki Whānui are mana whenua of the Wellington coast. This is a shared responsibility in the exercise of ahikā and kaitiakitanga, an inherent whakapapa responsibility to care for te taiao.

Developed together with mana whenua and through engagement[1] with the community, the plan reflects shared aspirations and carefully balances recreation, access, cultural values, climate adaptation, and environmental sustainability outcomes.

This plan updates and builds on the South Coast Management Plan (2002), reflecting over two decades of coastal restoration and investment. Since then, key achievements include dune restoration at Lyall Bay, Island Bay, and Princess Bay, the Te Kopahou Visitor Centre, and the revitalisation of Te Raekaihau Point – restoring habitats and improving access. This plan continues that legacy while addressing emerging challen

1 Community engagement in 2024 gathered extensive public feedback on Wellington's coastal reserves, with over 3,000 pieces of input received through workshops, online tools, beachside discussions, and targeted outreach. This was followed in 2025 by a formal consultation process on the draft plan, which received 379 submissions from a wide range of organisations and individuals.

Navigating the plan

The plan is structured from the broad scale to more detailed area-specific policies as follows:

Section 1:
Introduction, scope, key challenges, and roles and responsibilities in coastal management.

Section 2:
Values and pathways guiding the protection and management of coastal areas. These pathways translate values into practical policy directions that will inform day-to-day decision-making.

Section 3:
Land administration, including the Reserves Act 1977 requirements, classifications, and management frameworks.

Section 4:
Sector-specific management for the eight coastal sectors within Wellington City, including sector-based actions.

Appendix 1:
Rules governing activities in coastal reserves.

Funding and implementation

This plan informs Council's future funding and planning decisions.

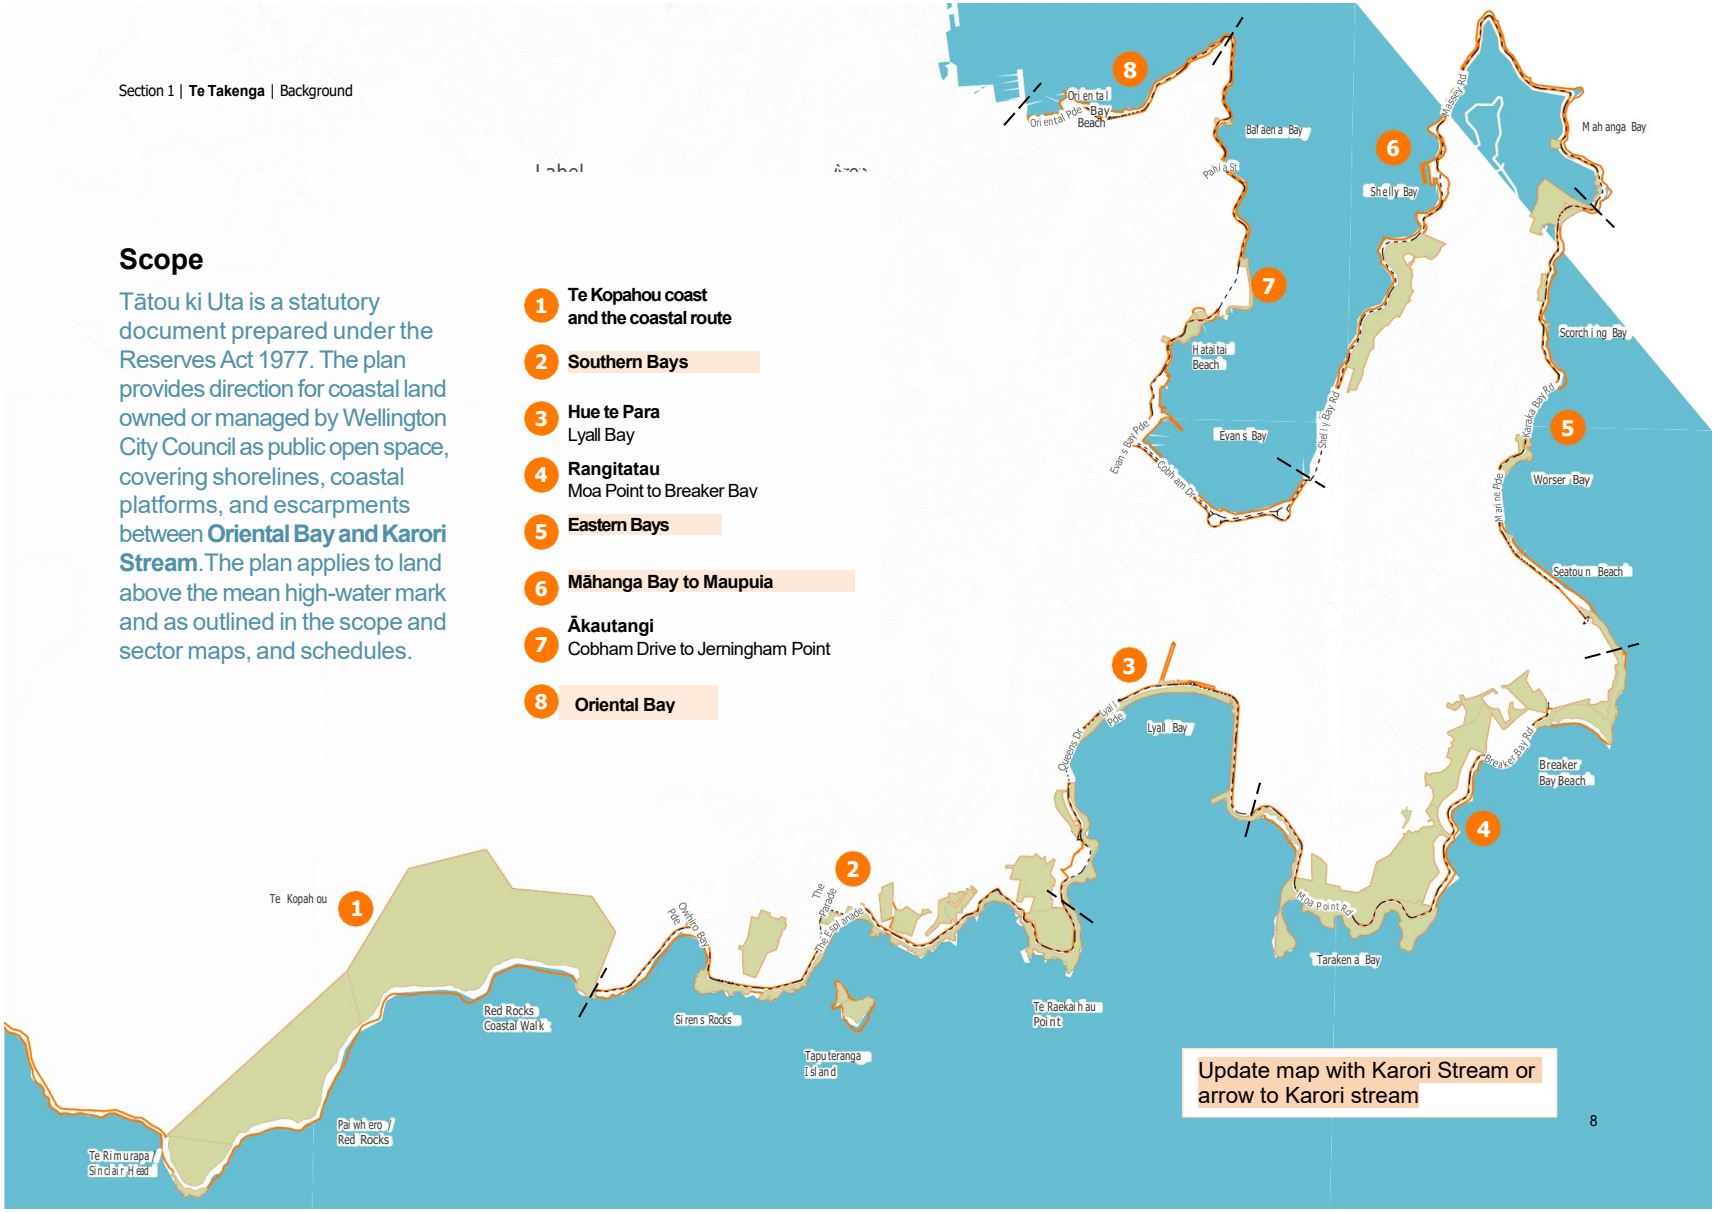
This plan informs Council's future funding and planning decisions. All actions are indicative opportunities and are not necessarily funded projects. Their implementation may depend on the outcomes of consultation, further investigation, feasibility, and budget prioritisation.

Some actions can be delivered within existing operational and capital budgets, while others will require new funding through the Long-term Plan or Annual Plan processes. Actions are embedded throughout the plan and categorised by funding status at the time of publication:

- **E** **Existing funding:** can be delivered within current budgets.
- **N** **New funding:** requires additional funding approval.
- **E/N** **Some existing funding supports** investigations, but implementation needs new funding.

It is intended this plan span a 10-year period from 2025-2035. However, progress on implementation will be reviewed every three years with mana whenua, timed to inform decisions under the Council's Long-term Plans, and will provide the opportunity to adapt implementation to changing circumstances*.

Footnote: Section 41(4) of the Reserves Act 1977 requires that management plans be kept under continuous review so they can be adapted to changing circumstances.



Section 1 | Te Takenga | Background
Scope
Tātou ki Uta is a statutory document prepared under the Reserves Act 1977. The plan provides direction for coastal land owned or managed by Wellington City Council as public open space, covering shorelines, coastal platforms, and escarpments between Oriental Bay and Karori Stream. The plan applies to land above the mean high-water mark and as outlined in the scope and sector maps, and schedules.
1 Te Kopahou coast and the coastal route
2 Southern Bays
3 Hue te Para Lyall Bay
4 Rangitatau Moa Point to Breaker Bay
5 Eastern Bays
6 Māhanga Bay to Maupuia
7 Ākautangi Cobham Drive to Jerningham Point
8 Oriental Bay
Te Kopahou
Red Rocks Coastal Walk
Pariwhero / Red Rocks
Te Rimurapa / Sinclair Head
Sirens Rocks
Taputeranga Island
Te Raekaihau Point
Lyall Bay
Taraken a Bay
Breaker Bay Beach
Seatoun Beach
Worser Bay
Scorching Bay
Shelly Bay
Mahanga Bay
Evans Bay
Hataitai Beach
Balaena Bay
Oriental Bay Beach
Update map with Karori Stream or arrow to Karori stream
8

The plan primarily applies to reserve land[2]. However, where appropriate, Council will also apply its values and pathways to other council-managed coastal land, including coastal road[3]. Additionally, Taputeranga Island, owned by Ngāti Toa, and Ōruaiti Reserve(4), owned by Taranaki Whānui is included within the plan's scope through a partnership approach.

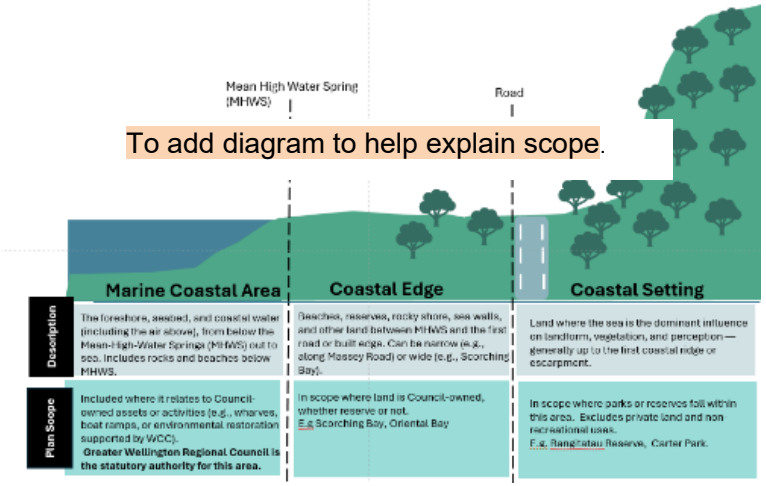
Once finalised, this plan will replace the South Coast Management Plan (2002). It also incorporates some reserves currently managed under the Suburban Reserves Management Plan (2015) and extends to some reserves and the coastal platform and unformed legal road beyond the Te Kopahou Visitor Centre, which are currently covered by the Outer Green Belt Management Plan (2019).

This scope includes:

a. **Natural ecosystems and habitats,** including dunes, beaches, coastal forests, and rocky foreshores, as well as the plants and wildlife they support.
b. **Council-managed recreation amenities and assets** such as play areas, tracks, public toilets, freedom camping areas, off-leash dog areas, leased community buildings on land and in the water, boat ramps, wharves, and swim platforms.
c. **Cultural consideration, values, and aspirations** of mana whenua which are integrated throughout.
d. **Climate adaptation and sea-level rise,** particularly the impacts on coastal reserves and recreation assets. Tātou ki Uta aligns with citywide climate efforts, including Te Atakura – First to Zero, but does not address broader adaptation strategies, transport, or water infrastructure, which are managed through separate planning processes.

This plan does not cover water pipes, wastewater discharges, stormwater systems, transport infrastructure, or road resilience. However, it acknowledges their impacts on coastal public spaces, provides guidance on reducing any negative effects, and recognises the benefits that natural systems on reserve land can play in buffering and protecting coastal infrastructure.

To add diagram to help explain scope.



1 Reserve land refers to land classified under the Reserves Act 1977, which is legally protected for specific purposes such as recreation, conservation, or scenic value.
2 The coastal road land included in this plan primarily refers to the road reserve adjacent to the carriageway, which functions as public space and holds environmental value. It also includes the unformed coastal road beyond Ōwhiro Bay, extending past Te Kopahou and is managed by Council under the Land Transport Act
3 See Section 3 on "Mana whenua–owned land with reserve functions" for further details about the management arrangements for Ōruaiti Reserve.

Strategic and legislative context

This plan fits within a broad framework of statutory, regulatory, and strategic policies. The relationships between this plan and the other documents are shown in the diagram. Key legislation and policy direction are bolded and described below.

The New Zealand Coastal Policy Statement 2010 and the Greater Wellington Natural Resources Plan, both developed under the Resource Management Act 1991, provide statutory direction for the coastal marine area. The Wellington City District Plan sets land-use rules and overlays (including Open Space zones and Significant Natural Area designations) on coastal land, which work in tandem with the Reserves Act by defining what activities are permitted or restricted, while this plan provides the Council's approach as landowner and manager. For coastal roads, relevant provisions of the Land Transport Act 1998 and the Local Government Act 1974 also apply in this plan.

Tākai Here
Partnership agreement with mana whenua

Enabling legislation	Reserves Act, Local Government Act, Land Transport Act, Resource Management Act, Treaty Settlement legislation, Wildlife Act, Heritage New Zealand Pouhere Taonga Act, etc.
City vision	**Pōneke, te wāhi auaha e whitawhita ai ōne tāngata me tōna taiao.** Pōneke, the creative capital where people and nature thrive.
Our commitment	We are committed to Te Tiriti o Waitangi and strong partnerships with mana whenua. Tākai Here and Te Tiriti o Waitangi lay the foundation for everything that the Council does.
Community outcomes	**Cultural** A welcoming, diverse and creative city **Social** A city of healthy and thriving whānau and communities **Economic** An innovative business friendly city **Urban** A liveable and accessible compact city **Environmental** A city restoring and protecting nature
Key influencing strategies	**Te Whai Oranga Pōneke Open Space and Recreation Strategy** (2023) **Our Natural Capital Biodiversity Strategy** (2015) **Te Atakura First to Zero** (Climate action plan, 2019) **Aho Tini 2030** (Arts, Culture and Creativity Strategy, 2021) **Tūpiki Ora Māori Strategy**, 2022 **Our City Tomorrow** (Spatial Plan, 2021) **Strategy for Children & Young People** (2021)
Coastal planning related plans and policies	**Reserve management plans** Tātou ki Uta **Cross council policy and bylaws** eg: Public Places Bylaw, Trading and Events in Public Places Policy, Dog Policy, Community and Recreation Leases Policy, Naming Policy Te Mapihi Maurea **Activity based plans and policies** eg: Local Climate Adaptation Pilot, Play Space Policy, Open Spaces Access Plan, Te Awe Māpara: Community Facilities Plan, District Plan, Accessibility Action Plan, Pōneke Bike Network Plan

Operational and budget allocation through:
Long-term Plan, Annual Plans and Asset Management Plan processes

National and Regional Strategy and Plan
eg: GWRC National Resources Plan, Whatua Plan, **NZ Coastal Policy Statement**

One of the key strategic documents guiding this plan is Te Whai Oranga Pōneke, the *Open Space and Recreation Strategy 2023*. This plan aligns with the strategy's five strategic focuses:

Te Whakahaumanu me te Manawaroa
Regenerating and resilient

Focusing on sustainable management and restoration of coastal spaces;

Kanorau
Diverse

Supporting a wide range of recreational activities to meet community needs;

Whakamāori mai anō
Re-indigenising

Elevating te ao Māori by honouring whakapapa, mahinga kai, and fostering strong partnerships with mana whenua;

Whai Wāhitanga
Inclusive

Making the coastal environment welcoming and more accessible; and

Pāhekohekotanga
Integrated

Focusing on coastal spaces as well-planned, connected, and integrated into the broader city networks.

Tātou ki Uta also advances the objectives of ***Our Natural Capital – Wellington's Indigenous Biodiversity Strategy and Action Plan 2015***, by prioritising the protection of coastal habitats and biodiversity, restoring ecological function and connectivity, and fostering innovation in caring for nature.

By placing nature at the heart of decision making about our coast Wellington will continue to be a leader in urban ecology and deliver on the city's vision:

Pōneke, te wāhi auaha e whitawhita ai ōne tāngata me tōna taiao.
Pōneke the creative capital where people and nature thrive.

Key issues and emerging challenges for coastal reserves

Since the 2002 South Coast Management Plan, Wellington's coastal landscape has evolved, bringing new and intensified management challenges. These issues have been identified through public engagement and research.

Inequitable public access

Use of the coast has evolved, but access remains inequitable – both in who can reach and use coastal spaces and how access is allocated through leases and infrastructure. Barriers include physical accessibility, transport limitations, accessible carparking and financial constraints. Existing lease arrangements and facility investments often prioritise certain activities over others, affecting how different groups can engage with the coast.

Increasing pressure on coastal reserves

Wellington's population has grown 27% (46,000 people) since 2002, increasing demand for public use of coastal spaces. Activities such as surfing, ocean swimming, and other coastal pursuits are placing greater pressure on facilities like boat ramps, public toilets, and transport access. Overcrowding, littering, illegal dumping, and vandalism remain ongoing challenges, affecting natural areas and cultural sites. Higher dog ownership is also adding pressure, particularly around wildlife disturbance.

Loss of natural and cultural landscape

Public appreciation of Wellington's coastline is high, but development pressures have altered its natural and cultural character. Seawalls, roads, and buildings have encroached on natural spaces, reducing ecological, cultural, and visual integrity. There is a shared concern about the loss of wāhi tapu (sites of sacred or historical significance to Māori), disconnection from traditional landscapes, and the impact of overdevelopment on the coast's identity.

Environmental degradation and ecological emergency

Wellington's coastal ecosystems have experienced significant biodiversity loss. The decline in coastal bird populations reflects a broader environmental crisis, as Peter Solomon of Ngāti Toa notes: *"The absence of seabirds is a warning sign of a broader environmental crisis."* Once-abundant species such as tītī (muttonbirds), kororā (little penguins), and tākapu (gannets) now face ongoing challenges, including habitat loss, invasive predators and disturbance by off-leash dogs and 4WD vehicles.

Around 75% of Wellington's threatened plant species are found in coastal environments, where invasive weeds, habitat loss, and land-use changes continue to degrade biodiversity. Coastal pollution, including contaminated land, untreated sewage discharges, stormwater runoff, and marine debris, impact kaimoana such as pāua, kina, and kōura (crayfish). Historical activities like quarrying, farming, and landfills have altered the coastline, leaving behind exposed rock faces and reclaimed coastal areas which are vulnerable to sea-level rise, erosion, sedimentation, and instability.

Sea-level rise and climate change impacts

Relative sea levels in Wellington rose 11cm in the 15 years to 2020, with annual increases of 2–3mm in sea level and 3–4mm of land subsidence. A further 20–30cm rise is projected over the next 25 years, threatening coastal assets, ecosystems, public access, and recreational space[4].

Coastal inundation and erosion are already affecting natural and built environments, with cultural sites and biodiversity particularly vulnerable. Hard infrastructure like seawalls and roads can amplify these effects by preventing natural coastal processes. Rising seas and stronger storms are set to reshape the coast.

4Relative sea level rise in central Wellington from 2005 to 2020 and projection to 2050 from the NZ SeaRise programme https://searise.nz/maps/

Overharvesting of coastal marine species

Since the establishment of the Taputeranga Marine Reserve in 2002, habitat conditions have improved, yet overharvesting of species such as pāua, kōura (crayfish), and shellfish remains a significant concern to many in the community, particularly outside the marine reserve. In some areas of Wellington Harbour and the wider coastline, overharvesting has contributed to ecosystem imbalances such as kina barrens and declining kelp forests. Increased urban access to the coastline has led to illegal and unsustainable harvesting putting pressure on coastal ecosystems and marine life.

Complex coastal management

Coastal management involves multiple groups with overlapping responsibilities, including mana whenua, Wellington City Council, Greater Wellington Regional Council, Department of Conservation (DOC), three waters asset owners/managers, local communities, and environmental organisations. Limited resources, fragmented decision-making, and differing priorities make coordination challenging. While this plan focuses on Council-managed reserves, it operates within a broader system of coastal governance. Improving alignment and collaboration will be an ongoing challenge, as Tātou ki Uta alone cannot fully achieve integrated coastal management

Role and responsibilities in Coastal Management

Coastal management is a shared responsibility, with multiple groups contributing to ecosystem restoration, infrastructure management, and emergency response.

Taranaki Whānui ki Te Upoko o te Ika / Port Nicholson Block Settlement

Taranaki Whānui is a collection of iwi with ancestral ties to Te Whanganui a Tara, including Te Āti Awa, Ngāti Tama, Taranaki, Ngāti Ruanui, and Ngāti Mutunga. Their post-settlement governance entity is the Port Nicholson Block Settlement Trust (PNBST), established in 2008 following the Port Nicholson Block Settlement Act 2009. This Act returned land at Ōruaiti (Point Dorset), provided statutory acknowledgements across Wellington's coastline, and formally recognised the enduring connection of Taranaki Whānui iwi to these areas.

For the purposes of this plan, Taranaki Whānui is represented by PNBST and Te Ātiawa ki Te Upoko o Te Ika a Māui Pōtiki Trust, which represent Te Āti Awa interests in fisheries, coastal, and marine matters.

Taranaki Whānui are mana whenua with kāinga, pā, māra kai (cultivation sites), urupā (burial grounds), and other sites of enduring cultural and historical significance throughout the coastal landscape of Te Whanganui a Tara: *"our fires of occupation still burn from the mountains to the sea – ki uta ki tai kia tiakina e mātou i tō tātou taiao."*

Their ongoing role as kaitiaki (guardianship) is underpinned by the ancestral presence of tūpuna, and a responsibility to uphold the legacy of those who came before: *"Our job as kaitiaki is to remember those that were here before, and to forge a path forward today for descendants of Taranaki Whānui."*

Taranaki Whānui aspirations for the coast are woven throughout this plan.

Ngāti Toa Rangatira

Ngāti Toa Rangatira established their mana whenua in the Raukawakawa Moana region through Take Raupatu and Ringa Kaha in the 1820s. The Wellington City area is an intrinsic and integral component of the Raukawakawa Moana maritime domain of Ngāti Toa Rangatira. The rights and interests of Ngāti Toa Rangatira was acknowledged by the symbolic gifting of the mere pounamu (greenstone club) Tawhito Whenua to Ngāti Toa Rangatira chief Te Rangihaeata by the previous inhabitants at Taputeranga in Island Bay. Our moemoeā is that the natural environments of te rohe o Ngāti Toa Rangatira are kept or returned to health and we continue to act as kaitiaki and leaders for our taiao and its protection for future generations.

The treaty settlement between Ngāti Toa and the Crown formally acknowledges these rights, including redress for landmarks such as Taputeranga Island.

Ngāti Toa aspirations for the coast are woven throughout this plan, reflecting their commitment to protecting taonga and honouring ancestral responsibilities.

Wellington City Council (WCC) manages public coastal land above the mean high-water mark, including reserves, roads, and recreational facilities. The Council regulates activities through bylaws (eg the Animal Bylaw), manages leases and licences, and oversees emergency management and climate adaptation planning. While WCC regulates consenting processes above the high-water mark, it does not regulate coastal development consents below the mean high-water mark, which fall under Greater Wellington Regional Council regulatory framework.

Department of Conservation (DOC) manages biodiversity protection, enforces the Wildlife Act 1953, and safeguards freshwater habitats. They also administer Taputeranga Marine Reserve and issue permits for wildlife-impacting activities in coastal reserves, such as penguin and seal conservation.

The owners and managers of three waters infrastructure play a role in stormwater, wastewater, flood management and three waters maintenance along coastal areas.

Emergency Services manage fire risk and emergency response in coastal areas, including issuing fire permits, responding to wildfires, and addressing public safety incidents. The Police enforce coastal regulations, maintain order, and respond to emergencies within public coastal areas.

Ministry for Primary Industries (MPI) regulates fisheries and marine ecosystems, enforces fishing quotas, and oversees biosecurity measures to protect marine life and prevent harmful activities.

Greater Wellington Regional Council (GWRC) oversees coastal hazard management, water quality, environmental monitoring, Key Native Ecosystems protection, and maritime safety. GWRC regulates land and water below the mean high-water mark and manages public transport access to coastal areas.

Heritage New Zealand Pouhere Taonga protects historic coastal sites and supports conservation efforts to preserve cultural and heritage values along Wellington's coastline.

Local community groups contribute to coastal restoration, predator control, biodiversity monitoring, and environmental education. They facilitate recreational activities, advocate for public access, and promote environmental stewardship to support healthy, vibrant, and well-managed coastal environments.

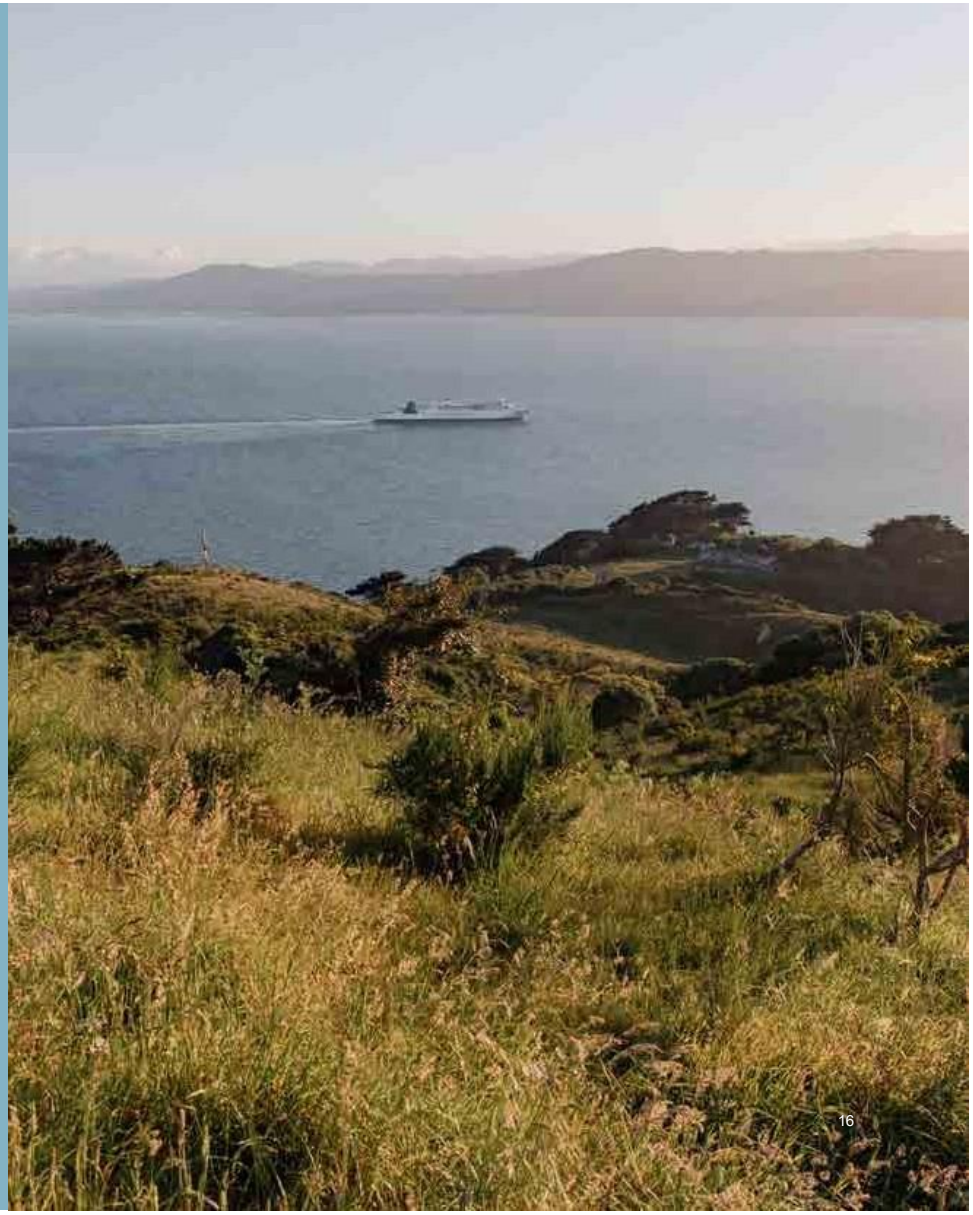
Private landowners and developers influence coastal management through development and land-use decisions affecting public access, ecosystems, and reserve health. Private landowners, including farmers and foreign investors, can play a role in protecting coastal habitats.

2

Ngā Uara me Ngā Ara

Values and pathways

The values in this section reflect what matters most to Wellington's communities in managing coastal reserves. They have been shaped in partnership with mana whenua and public input, including community engagement in 2024 to ensure a shared foundation for coastal stewardship. These values guide Tātou ki Uta and the Council's approach to caring for these spaces. Each value is paired with pathways that outline the steps needed to bring them to life.



Values

Mana whenua
Active partnership with mana whenua

Wellington's coast holds deep significance for mana whenua, who have enduring responsibilities as kaitiaki. Wellington City Council works alongside mana whenua to uphold their role in coastal management., ensuring mātauranga, tikanga, and aspirations are reflected in decision-making, restoration, and care for these spaces.

Whai wāhi
Access to the coast for recreation and enjoyment

Wellington's coast is a space of joy and relaxation, offering a variety of recreational activities, from surfing and swimming to walking, or simply enjoying the views with whānau and friends. The coast's natural beauty is highly valued, providing opportunities that enhance wellbeing and allow people to connect with nature.

Hononga Taiao
Enduring connection to the landscape

Wellington's coastal landscapes are rich in cultural, historical, and spiritual significance. There is a deep connection between people and the coast rooted in its past, present, and future. This value emphasises protecting the coast's mauri (life force), ensuring its sacred qualities are respected and preserved for future generations by maintaining the bond between the land, sea, and its people.

Tiaki Taiao
Protection and restoration of coastal ecosystems

Wellington's coastal ecosystems are taonga, essential to the health of both the environment and the community. These areas nurture diverse species and are vital to the mauri (life force) of the natural world. Protecting and enhancing biodiversity and respecting natural processes is crucial for protecting ecosystems to thrive for future generations.

Taiao Tuatahi
Nature first approach to resilience

Wellington's coast is shaped and continuously impacted by the powerful natural forces of waves, storms, and seismic activities. Climate change and sea-level-rise will exacerbate the rate of change associated with natural hazards. True resilience comes from working with, not against, these forces. By understanding, respecting, and adapting to these forces, we can enhance the coast's ability to recover from disruptions and ensure a healthy, thriving community in harmony with nature.

Value 1
Mana whenua
Active partnership with mana whenua

Contents

Taranaki Whānui and Ngāti Toa are kaitiaki (guardians) of Wellington's coastline, with enduring responsibilities to protect and restore these places for future generations.

Te Tiriti o Waitangi affirms the role of mana whenua as partners in decision-making and prioritises their active involvement in ecological restoration, protecting cultural landscapes and supporting access for customary practices.

Like the paddles of a waka working in unison, we will work together to uphold kaitiakitanga across our coastal reserves.

This commitment to active partnership is supported through three key pathways:

Pathway 1.1
Strengthening mana whenua presence and leadership on the coast

Pathway 1.2
Recognising treaty settlements in coastal management

Pathway 1.3
Restoring traditional Māori place names and strengthen te reo Māori

Pathway 1.1

Strengthening mana whenua presence and leadership on the coast

Why this matters

Active partnership is built on mutual respect and upholding mana – recognising the enduring responsibilities of mana whenua as kaitiaki and ensuring their voices, aspirations, and tikanga help guide the future of the coast. As Kuia Miriama Evans[1] reminds us, *"We're not going to be able to do this alone. Ka tū kotahi ai – we need to learn to stand and work together."*

Mana whenua hold intergenerational connection to these places, and their knowledge and practices provide valuable insight into sustainable coastal management. By embedding their leadership in decision- making and restoration efforts, we strengthen their presence on the whenua and reaffirm their role in guiding the future of these spaces.

Management policy

a. **Explore opportunities for mana whenua to lead**, partner, and collaborate in coastal planning, development, and restoration efforts.

b. **Support the direct involvement of mana whenua** in coastal management through governance roles, ranger positions, and contracting opportunities that enable a visible, ongoing presence in caring for coastal reserves.

c. **Recognise and embed mātauranga** in management practices, working to support cultural frameworks to help shape ecological restoration and land care.

d. **Support mana whenua-led coastal projects**, including, restoration, cultural projects, biodiversity protection, cultural monitoring, habitat restoration, and customary resource management.

e. **Commit to ongoing reflection with mana whenua on how we work together**, to ensure the approach stays effective, enduring, and aligned with shared goals.

Pathway 1.2

Recognising treaty settlements in coastal management

Why this matters

Treaty settlements affirm the enduring relationship of mana whenua with the coast, recognising their rights and responsibilities in coastal management. These settlements necessitate management approaches that integrate iwi values, ecological restoration, and customary practices.

The **Port Nicholson Block (Taranaki Whānui ki Te Upoko o Te Ika) Settlement Act 2009** recognises the cultural and historical connections of Taranaki Whānui to the coast, and transferred Ōruaiti (Point Dorset) into iwi ownership, with the Council having administrative responsibility for the reserve.

Under the **Ngāti Toa Rangatira Settlement Act 2014**, Taputeranga Island was returned to Ngāti Toa, with the Council retaining administrative responsibility. Statutory acknowledgements also recognise the connection Ngāti Toa Rangatira and Taranaki Whānui have to the wider Te Moana o Raukawakawa area including takahaere (Thoms Rock) Pariwhero (Red Rocks and Te Whānganui a Tara.

Management policy

a. **Recognise and support the management of Treaty settlement sites by aligning their management with mana whenua-led frameworks** and support co-management and partnership models where appropriate.

b. **Ensure that statutory acknowledgement areas are managed in a way that respect their culture and environmental significance and recognises mana whenua interest.** This includes actively involving mana whenua in decision-making, prioritising ecological restoration, protecting cultural landscapes, and supporting access for customary practices.

c. **While statutory acknowledgements do not confer ownership or management rights under the Act,** they are expressions of enduring mana and connection, and we will integrate them respectfully into management decisions where appropriate.

[1] From the Cultural Values Assessment, Taranaki Whānui.

Pathway 1.3

Restoring traditional Māori place names and strengthen te reo Māori

Why this matters

Reindigenising Māori place names acknowledges the cultural significance and historical presence of mana whenua in Wellington. As mana whenua explain, *"Our tūpuna gave names to the land and sea that reflect our history, our use of the land, and our whakapapa. These names are part of our identity and how we connect to the taiao. Restoring these names are who we are and where we come from."* Strengthening te reo Māori in coastal spaces reinforces its status as a living language, deepening cultural connections and awareness for all.

Management policy

a. Collaborate with mana whenua to **restore Māori place names and to name unnamed** coastal locations where appropriate.

b. Integrate **te reo Māori and tikanga Māori** into coastal signage, interpretation, and communications to deepen cultural connections.

Actions

Active partnership with mana whenua

#	Actions	Funding status[5]	Time frame
1	Initiate and develop a mana whenua ranger programme in direct collaboration with mana whenua.	N	Short
2	Lead joint wānanga and stewardship days with mana whenua, integrating knowledge-sharing, planting, and restoration activities.	E	Short
3	Implement and initiate te reo Māori name changes for coastal reserves in partnership with mana whenua.	E	Short
4	Collaborate with mana whenua to review and enhance signage across coastal reserves, ensuring cultural narratives and place names are accurately and visibly represented.	N	Medium

4 Funding status key

		Time frame key
E	Existing funding covers delivery	Short (0–4 years)
N	Needs new funding, subject to approval	Medium (5–7 years)
E/N	Review covered by existing funds; implementation may need new funding	Long (8+ years)

Contents

Value 2
Whai wāhi
Access to the coast for recreation and enjoyment

Wellington's coast provides diverse opportunities for joy, recreation, and connection with nature.

Through public engagement, people told us the coast is where they come to swim, surf, kayak, fish, walk, and gather with whānau and friends, and that these activities enhance their wellbeing. Research shows that access to blue spaces – coastal and marine environments – can reduce stress, improve mental wellbeing, and support physical health, offering both active and restorative recreation.

The coast supports a wide range of recreation. To support these experiences, Council provides essential recreation amenities, including walkways,accessible carparks, boat ramps, wharves, public toilets, play area, and off-leash dog areas.

This value will be supported though seven pathways:

- Pathway 2.1 **Strategic placement and provision of coastal amenities**
- Pathway 2.2 **Connected coastal paths and tracks**
- Pathway 2.3 **Support water access and recreation**
- Pathway 2.4 **Enhancing coastal accessibility and equity**
- Pathway 2.5 **Manage coastal leases and commercial use for public benefit**
- Pathway 2.6 **Providing for freedom camping that respects the coastal environment**
- Pathway 2.7 **Protecting wildlife by strictly managing dogs on the coast**

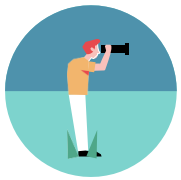
How Wellingtonians recreate on the coast

Percentage of residents engaging in coastal activities at least once a month in warmer months.[6]

47% Swimming

22% Cycling

44% Wildlife watching



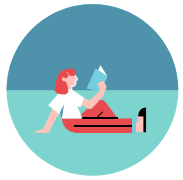
6% Boating under power or sail

8% Fishing

14% Surfing and board sports

32% Playing and kids activities

73% Relaxing and picnicking



75% Walking or running

8% Kayaking and paddleboarding

9% Snorkelling and diving

22% Dog walking

5 Statistics come from a random online Survey of Wellington Residents completed June 2024.

Pathway 2.1
Strategic placement of coastal amenities

Why this matters

Providing well-placed, well- maintained and grouped amenities in key coastal locations supports recreation, enhances visitor experiences, and protects natural environments. Amenities such as toilets, accessible parking, seating, and changing facilities make the coast welcoming for everyone, including families, older adults, and people with impairments. Grouping these amenities together reduces travel distances, improves wayfinding, and enables people—especially those with mobility challenges—to move between facilities more easily and enjoy longer, more independent visits. However, these amenities require ongoing funding and can impact ecosystems and the coastal character. Strategic placement ensures investment is focused on high- use areas, while minimising unnecessary structures in more natural locations. This pathway balances public benefit, environmental protection, and efficient resource use, so that the coast remains welcoming, functional, and adaptable to changing needs.

Management policy

a. **Primary coastal areas** (high-use coastal areas)[7] will provide a comprehensive range of grouped amenities, while other coastal areas will have lower levels of amenities to preserve their natural character.

b. **Amenities provided** and managed across coastal reserves include:

i. **Public toilets**[8] will continue to be provided at appropriate locations to support recreation, public health, and visitor comfort, with a focus on keeping coastal toilets at high-use areas open year-round to support beach use and visitor needs.

i. **Changing rooms**, and outdoor showers,-provided and maintained at high use coastal areas to support beach use and water-based activities, such as swimming and surfing.

j. **Seating and picnic areas** – Managed across coastal reserves to support both rest and social interaction, ensuring placement considers visitor demand, natural shade, landscape, and environmental impact.

k. **Shade** – Primarily provided through natural solutions, such as tree planting, with minimal reliance on built structures.

l. **Play areas** – Included at or near primary coastal areas, complementing nature play opportunities[9]. Where appropriate, integrate taonga tākaro (traditional Māori games), māra hūpara (traditional natural play spaces).

m. **Parking** – Formalised parking at high-use locations, including accessible carparks. Measures such as bollards, kerbing, and fencing will be used to protect natural landscapes.

n. **Inclusive and accessible amenities** – Prioritised at high-use coastal destinations to accommodate diverse community needs, including visitors with disabilities, families, and older adults. (see pathway 2.4).

6 Primary coastal areas are high-use coastal areas that attract visitors from across the city. They require investment in recreational infrastructure to support activities such as swimming, beach play, and marine recreation. They are further defined in the Open Space Provision Categories but include Island Bay Beach, Oriental Bay Beach, Lyall Bay Beach, Princess Bay Beach, Seatoun Beach, Scorching Bay Beach, Worser Bay Beach, and Hataitai Beach.
7 Te Awe Māpara includes information for general provision of Public Toilets across the city.
8 Almost all coastal reserve areas are available for nature play activities.

Pathway 2.2
Connected coastal paths and track

Why this matters

Walking and running are the most popular ways residents enjoy Wellington's coast, with 75% of people walking at least once a month during warmer months and 68% during colder months. Cycling is also growing in popularity, with 22% of people cycling along the coast at least monthly in warmer months. People using wheelchairs or other mobility aids also access and enjoy the coast along our paths and tracks.

Wellington's coastal reserves feature an extensive 28.6kms of track network, including major routes like the Eastern Walkway, the end of the Southern Walkway, and the track to Pariwhero (Red Rocks), alongside smaller tracks in Te Raekaihau Point, Carter Park, and Ōku Street Reserve. The Moa Point coastal walkway also links to the Wahine Memorial Reserve. While well-used and valued, feedback highlights the need for better connections, improved wayfinding, and addressing maintenance and user tensions in some areas.

Wellington's Te Aranui o Pōneke (Great Harbour Way) is a long-standing vision for a continuous 67km coastal pathway encircling Te Whanganui a Tara and continuing to Pariwhero(Red Rocks). Once realised, it will provide a route linking wild coastlines, sandy beaches, and urban spaces while offering a unique opportunity to engage with the harbour's edge.

Complementing this vision is Paneke Pōneke, the city's bike network plan, which envisions a fully connected cycleway along the coastline. Progress has been made in key areas such as Ngauranga, but significant gaps remain in pedestrian and cycle networks.

Management policy

a. Align planning for coastal paths and cycling routes with **Te Aranui o Pōneke and Paneke Pōneke**, prioritising connections that close gaps in the network.

b. **Maintain and enhance off-road coastal tracks** to provide diverse recreation opportunities for a range of abilities and interests and preserve the rugged and natural character of the coastline.

c. **Integrate wayfinding features and maps** into the design and management of coastal paths and cycling routes to improve navigation and enhance user experience.

d. **Support improvements in public transport** delivered by Greater Wellington Regional Council to enhance access to coastal areas, ensuring equitable and sustainable transport options.

e. **Prioritise widening pedestrian paths to at least 1.5m** along the coast, where practical, as part of ongoing roadway or seawall upgrades, to enhance safety, accessibility, and recreational use.

Pathway 2.3
Supporting water recreation and access

Why this matters

Wellington's coast is a hub for ocean swimming, boating, diving, and fishing, offering recreation and social connection. A public survey shows that nearly half (47%) of Wellingtonians swim at least monthly in warmer months, while 14% engage in surfing, 9% in snorkelling or diving, 8% in fishing, and 6% in boating under power or sail. Amenities such as swim rafts, boat ramps, wharves, and marinas support these activities, but public feedback highlights concern around safety, usability, and growing demand. At the same time, rising sea levels and climate change will impact these assets, requiring ongoing management, adaptation, and investment to keep them safe and usable.

The following section outlines the key coastal facilities that support these activities.

Boat ramps

Boat ramps enable motor boating, sailing, kayaking, and small craft launches. The Council provides a variety of boat ramps, which cater to various needs and conditions:

- **Dorrie Leslie** (Lyall Bay)
- **Evans Bay Public Boat Ramp** – Well-used, with associated trailer parking
- **Cog Park Boat Ramp** (exclusive use)
- **Seatoun Beach**
- **Tarakena Bay** - Maintained by Wellington International Airport for emergency use
- **Island Bay** – Launching access for small crafts
- **Ōwhiro Bay**
- **Worser Bay** – Managed by Worser Bay Yacht Club (exclusive use)

Wharves and Jetties

Wharves and jetties provide access for fishing, diving, and social gatherings, while also serving as launch points for boats and popular spots for jumping into the water. These structures are heritage assets and serve as perches for seabirds, contributing to both recreation and ecology. Public wharves include:

- **Karaka Bay Wharf**
- **Seatoun Wharf**
- **Flying Boat Jetty**
- **Evans Bay Yacht Club Jetties** (including a ramp that provides access for people with mobility impairments)
- **Greta Point Wharf** (under review for possible removal)

Swim rafts

Swim rafts provide safe and enjoyable swimming and diving experiences. They serve as focal points for water-based recreation. Current swim rafts are located at:

- **Island Bay**
- **Oriental Bay (Freyberg Beach)**

Marinas

Marinas provide essential berthing for recreational boating and small-scale commercial use, supporting Wellington's vibrant maritime culture. Within the scope of this plan are:

- **Evans Bay Marina**
- **Clyde Quay Boat Harbour**

Management policy

a. **Promote shared use of water-based amenities** to support multiple uses of recreation amenities for boaters, swimmers, divers, fishers, and other recreational users.

b. **Regularly inspect, maintain, and repair water-based amenities** to ensure they remain safe, functional, and available for public use.

c. **Plan for sea-level rise and storm resilience** in water-based asset renewal, maintenance, and upgrade works.

d. **Remove or repurpose redundant, unsafe, or obsolete water access** structures to reduce maintenance costs and safety risks while respecting environmental and heritage values.

e. **Support improvements in public information on water quality and safety** as delivered by Land Air Water Aotearoa (LAWA), Greater Wellington Regional Council, and the three waters asset owners/managers to enhance swimmer safety awareness.

f. **Provide boat ramps** for safe and sheltered access to the harbour and coastal waters, supporting both formal and informal recreational boating and fishing activities. The focus is on maintaining the existing network of boat ramps.This includes:

   i. A network of boat ramps essential for public safety, free access, and marine rescue operations.

   ii. Collaboration with Greater Wellington Regional Council to manage biosecurity risks at and around boat ramps.

   iii. Adequate trailer parking facilities to support boating activities.

   iv. Timely clearance of debris from ramps after storms to maintain accessibility and safety.

g. **Provide and maintain swim rafts** as safe focal points for ocean swimming, including:

   i. Seasonal maintenance and removal between June and August when swimming activity is lowest.

   ii. Enabling community-led initiatives to fund additional swim rafts in high-demand locations such as Hataitai Beach or Scorching Bay, while ensuring maintenance remains manageable.

h. **Provide and maintain wharves and jetties** as shared recreational use by:

   i. Maintaining them as multi-use spaces for recreation and fishing.

   ii. Enhancing usability with seating, lighting, and life ring holders where appropriate.

   iii. Recognising their heritage values.

   iv. Restrict commercial use to prioritise public recreation and keep wharves and jetties available for activities like fishing and diving.

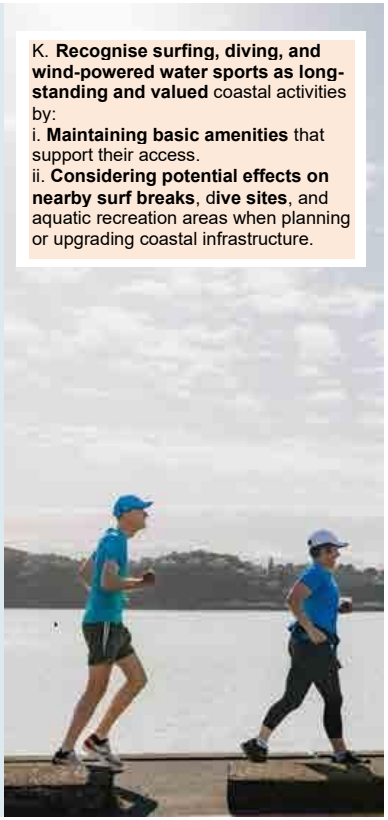
i. **Manage marinas and boat harbours** sustainably by:

   i. Balancing recreational, community, and appropriate commercial use to ensure equitable access and long-term viability.

   ii. Collaborating with Greater Wellington Regional Council to actively manage biosecurity risks to protect the coastal environment.

j. **Provide fishing amenities like bait boards, bins, and rod holders** at popular and appropriate fishing sites.

K. **Recognise surfing, diving, and wind-powered water sports as long-standing and valued** coastal activities by:
i. **Maintaining basic amenities** that support their access.
ii. **Considering potential effects on nearby surf breaks**, d**ive sites**, and aquatic recreation areas when planning or upgrading coastal infrastructure.



Pathway 2.4
Enhancing coastal accessibility and equity

Why this matters

Wellington's coast should be inclusive, welcoming, and reflective of the city's diversity. However, many coastal spaces remain physically inaccessible to many, including people with access needs, older adults, and others due to a range of barriers. Barriers include uneven paths, steep access points, lack of beach matting or ramps, inadequate seating, and limited accessible amenities or inequitable allocation of funding or facilities.

We have ramps and beach wheelchairs available in some places at some times, but the majority of our coastline remains inaccessible for people with physical impairments. We heard from our disabled community that they want to enjoy the same simple experiences many able-bodied people take for granted—sharing fish and chips with whānau on the beach or feeling the water on their feet. While it may not be possible to make every site fully accessible due to natural ecological constraints, or to make every facility suitable for all groups, we should do more.

Management policy

a. **Work with accessibility advocacy groups and people with lived experience of access barriers** to identify and address access barriers in coastal reserves to support inclusive coastal experiences.

b. **Support the provision of assistive equipment at key locations**, such as beach wheelchairs and accessible matting.

c. **Incorporate accessibility considerations** into coastal projects.

d. **Apply an equity lens to coastal recreation planning and investment** by ensuring that project prioritisation considers barriers to participation and benefits to groups with limited access to the coast.

e. **Support Māori-led recreation and cultural practices** – such as waka ama – and enable them through collaboration with mana whenua.

f. **Ensure decisions are not based solely on the loudest voices**, but reflect diverse needs, values, and aspirations.

Pathway 2.5
Managing coastal leases and commercial use for public benefit

Why this matters

Leased coastal spaces, such as surf clubs, boat clubs, and marine education centres, provide essential facilities for recreation and community connection. Commercial activities, including food vendors, guided tours, and recreational services, can enhance public enjoyment but must be carefully managed to ensure they align with coastal values. The Reserves Act 1977, Te Awe Māpara – Community Facilities Plan, and the Trading and Events in Public Places Policy guide how leases and commercial activities are managed to ensure fair access, environmental protection, and alignment with the purpose of public spaces.

Management policy

a. **Manage community leases in alignment with Te Awe Māpara and the Leases Policy for Community and Recreation Groups**, ensuring all recreation facilities have clear lease agreements under the Reserves Act 1977, with defined responsibilities.

b. **Prioritise leasing for community groups on the coast that directly support coastal use**, ensuring alignment with Te Awe Māpara.

c. **Encourage shared and multi-use arrangements** for community facilities to maximise community benefit and efficient resource use.

d. **Manage commercial use on coastal reserves in accordance** with the Trading and Events in Public Places Policy and the Reserves Act 1977, ensuring any enabled commercial activity enhances public enjoyment without compromising environmental, recreational, or cultural coastal values.

Pathway 2.6

Providing for freedom camping that respects the coastal environment

Why this matters

Freedom camping allows visitors to experience Wellington's coastal environment while supporting tourism. However, it must be managed to prevent environmental harm, antisocial behaviour, and conflicts with other coastal users. The Public Places Bylaw 2022 regulates where freedom camping is permitted, restricted, or prohibited, ensuring a balance between recreation and environmental protection.

Management policy

a. **Manage freedom camping in alignment** with the Public Places Bylaw 2022.

b. **Provide designated freedom camping sites** with appropriate amenities, including existing sites at Evans Bay Marina and Te Kopahou Reserve Visitor Centre.

c. **Assess the need for additional designated sites** if demand increases, ensuring environmental and community values are maintained.

d. **Provide clear information to guide freedom campers** on which areas are permitted or prohibited for freedom camping.

Pathway 2.7

Protecting wildlife by strictly managing dogs on the coast

Why this matters

Wellington's coast is home to precious wildlife which are at risk from off-leash dogs. Without strong protection, these species face local extinction. A recent survey found that 22% of Wellingtonians visit the coast with their dog at least once a month in warmer months, highlighting how important these areas are for recreation. But dog recreation cannot come at the expense of vulnerable species. In some places, dogs must be kept on-lead, and in the very sensitive habitats, dogs may need to be excluded altogether. Signs and education can be useful, alongside, strong rules, active patrols, and penalties that are essential to protect coastal wildlife. The Dog Policy 2024 provides the baseline rules for leash areas, off-leash zones, and wildlife protections. Our coastal areas will require strong measures to safeguard wildlife..

Management policy

a. **Manage coastal dog recreation in alignment with the Dog Policy** to ensure clear and consistent rules around leash areas, off-leash exercise zones, and wildlife protection.

b. **Provide clear and consistent signage in coastal areas** to help dog owners understand where off-leash exercise is permitted and highlight areas where wildlife protection measures apply.

c. **Prioritise wildlife-sensitive areas for stronger protections** by considering further restrictions in key habitats that may serve as better wildlife refuges. Ensure these areas are a priority for dog control enforcement and, align future protections with Dog Policy updates.

d. **Support responsible dog ownership through a combination of education**, clear communication, and enforcement, ensuring recreation is balanced with environmental protection.

Actions

Access to the coast for recreation and enjoyment

#	Actions	Funding status	Time frame
1	Assess and identify areas of Wellington's coast where freedom camping should be prohibited or permitted, and update Schedule 1 of the Public Places Bylaw (13.1) accordingly.	E	Short
2	Work with the disability community to explore improvements to beach access, such as beach mats, accessible pathways, and the availability of beach wheelchairs.	E/N	Short
3.	Review the adequacy of accessible parking at primary coastal destinations and consider increasing provision where needed.	E	Short
4.	Explore opportunities to introduce taonga tākaro (māori games) and māra hūpara (traditional nature play areas) along the coast.	E	Medium

Funding status key

E Existing funding covers delivery
N Needs new funding, subject to approval
E/N Review covered by existing funds; implementation may need new funding

Value 3
Hononga Taiao
Enduring connection to the landscape

Wellington's coastal landscapes hold deep cultural, historical, and spiritual significance, shaped by geological forces and 700 years of human settlement.

Situated at the meeting place of Te Moana o Raukawakawa and Te Whanganui a Tara, this coastline tells a story of transformation, where land, sea, and people have been intertwined for generations. Taranaki Whānui refer to this enduring relationship as ahi kā roa – the long-burning fires of occupation and connection. Sharp ridges, rugged outcrops, and shifting shorelines define its raw beauty, from storm-battered cliffs to tranquil bays – a living expression of culture, heritage, and identity.

While seawalls, roads, and reclamation have altered parts of the coast, its wild essence endures.

This value is supported through three key pathways:

Pathway 3.1
Protect the coastal character through careful design

Pathway 3.2
Enrich coastal experiences through storytelling

Pathway 3.3
Recognise and honour coastal cultural heritage

Pathway 3.1
Protect the coastal character through careful design

Why this matters

Wellington's coast is a place of reflection and connection, where built structures should complement rather than dominate the natural landscape. Public feedback has raised concerns about inconsistent design, visual clutter, and infrastructure that detracts from the coastal experience. Designing with sensitivity ensures that structures support public access, safety, and resilience while respecting the coastal landscape.[10]

Management policy

a. **Limit new structures on the seaward side of the road**, only allowing essential infrastructure that cannot be located elsewhere.

b. **Ensure structures integrate with the coastal environment** by using natural landforms, vegetation, and durable, low-impact materials suited to coastal conditions. Design should be informed by coastal processes, favouring sustainable, nature-based solutions that work with – not against – natural dynamics.

c. **Design structures to reduce visual dominance**, maintaining open sightlines and ensuring they do not detract from the natural coastal character.

d. **Use visual cohesion** across the coast to simplify the design of amenities such as bins, seats, bollards, fences, and signage, ensuring durability and consistency.

e. **Position seating to enhance connection to the coastal environment**, providing opportunities for rest, reflection, and appreciation of coastal views.

f. **Use unobtrusive barriers (eg bollards, rocks, or bunds)** to protect sensitive areas, prioritising natural delineation methods such as planting where feasible. Plan for removal of barriers, including fences, once vegetation or other natural features can provide the same protection.

g. **Minimise visual clutter by grouping signage** and wayfinding elements, support clear, concise and accessible and avoid excessive installations.

h. **Minimise artificial lighting impacts** by placing fixtures on the landward side of roads and selecting low-glare designs. Prioritise dark sky preservation in sectors with high ecological sensitivity (eg Southern Bays, Te Kopahou, and Rangitatau) and seabird nesting areas to reduce disturbance to wildlife and maintain natural coastal darkness. Coastal infrastructure projects should follow the Australian National Light Pollution Guidelines for Wildlife, as recommended by the Department of Conservation.

i. **Phase out unnecessary coastal structures** such as redundant jetties, boathouses, and other infrastructure where it no longer serves a public purpose.

j. **Minimise infrastructure impacts on coastal ecosystems** by ensuring development avoids further degradation, and where possible, incorporates nature-based approaches or soft engineering.

k. Recognise that different parts of the coast offer different experiences.

a. In natural areas such as the South Coast, protect the landscape and sense of escape; public art, bright infrastructure, and memorials will generally be discouraged.

b. In more developed areas such as Ākautangi, public art and activations may be welcomed.

9 Elements of coastal design are regulated under the District Plan, the Building Act and GWRC. The Reserves Act 1977 however provides for the preservation and management of public spaces. These management policies guide how structures within reserves should be designed and maintained to protect the coastal experience.

Pathway 3.2
Enrich coastal experiences through storytelling

Why this matters

The coast holds layers of stories – woven through its landscapes, natural features, and built heritage – that shape our connection to place. Stories of mana whenua, and other communities reflect deep ancestral ties, maritime history, and evolving relationships with the coast. Integrating storytelling into coastal spaces ensures these histories remain visible, strengthening cultural understanding and enriching public experiences.

Management policy

a. **Embed storytelling in coastal projects** by incorporating narratives of mana whenua, and local communities into interpretive elements such as signage, public art, and digital media.

b. **Use design itself as a storytelling tool**, incorporating symbolic layouts, patterns, and materials that reflect local identity and heritage.

Pathway 3.3
Recognise and honour coastal cultural heritage

Why this matters

Wāhi tapu[11] are sacred sites of spiritual and cultural significance, while wāhi tūpuna[12] connect Māori to their heritage and reinforce whakapapa. These places, such as pā, karaka groves, tauranga waka (traditional landing places), and midden, reflect the enduring presence of mana whenua and their deep relationship with the land. Recognising these sites ensures the cultural identity of the coast is not lost. As Peter Solomon of Ngāti Toa expressed, *"That's why I walk it* [coastal areas] *all the time…make sure my footprints don't disappear; they remain…our footprints are disappearing from a lot of these places."* His words highlight the urgency of recognising and valuing wāhi tapu and wāhi tūpuna so that Māori histories, traditions, and connections to the coast endure.

This includes acknowledging the iwi who came before – including Waitaha, Ngāti Mamoe, Ngāi Tara, Ngāti Ira, and others – whose kōrero and presence remain part of the layered whakapapa of the coast. As Taranaki Whānui state: *"Our job as kaitiaki is to remember those that were here before, and to forge a path forward today for descendants of Taranaki Whānui."*

Beyond Māori heritage, the Wellington coastline also holds layers of built and archaeological history, including WWII bunkers, shipwrecks, historic wharves, and remnants of early settlements. These structures, alongside less visible sites, tell the story of Wellington's past and its evolving relationship with the coast.

Management policy

a. **Engage early with mana whenua** on activities that may affect wāhi tapu and wāhi tūpuna sites, where appropriate and practical.

b. **Integrate culturally significant sites and aspirations** in coastal planning, with wāhi tapu and wāhi tūpuna acknowledged and respected in management decisions, ensuring:

   i. **Tauranga waka** (traditional landing places) are recognised and their historical importance as traditional landing sites is respected.

   ii. **Karaka groves** are acknowledged as markers of early Māori settlement, with opportunities for restoration considered where appropriate.

   iii. **Significant viewshafts are preserved** as integral markers of Māori connections to the coast.

c. **Recognise that coastal heritage is dynamic, and not all structures can or should be preserved.** Some sites may be lost due to erosion, sea-level rise, or natural degradation. Where physical protection is not viable, priority should be given to recording and interpreting these places through storytelling, mapping, and other documentation.

d. **Honour and share coastal heritage through storytelling, interpretation, and design.** Māori narratives should be embedded in coastal spaces through motifs, material choices, and other culturally responsive elements, alongside broader coastal heritage, including historical structures, shipwrecks, and maritime history.

e. **Recognise the heritage values of historic defence structures**, such as bunkers, forts, and batteries. Interventions will be carefully prioritised and may include vegetation control to reduce damage, maintenance to manage safety risks, and stabilisation or signage where hazards are likely.

10 Wāhi tapu - Sacred places with deep spiritual and cultural importance, often linked to specific events, burials, or significant activities.
11 Wāhi tupuna - Sites of ancestral importance that connect Māori to their heritage and whakapapa. These include traditional occupation sites, pā, mahinga kai, tauranga waka, and significant landscape features.

Actions

Enduring connection to the landscape

#	Actions	Funding status[13]	Time frame
1	Develop a Coastal Cultural Interpretation Project in partnership with mana whenua to display stories of wāhi tapu and wāhi tupuna across the coast.	N	Medium
2	Review and improve coastal signage to enhance visual integration with the coastal environment by: • Undertaking an audit to identify opportunities for rationalisation and improvement, reducing visual clutter while ensuring essential communication is maintained. • Developing coastal-specific design guidelines to ensure signage is consistent, context-sensitive.	E	Medium
3	Develop sector-based coastal landscape and amenity plans to guide the placement, design, and potential reduction of infrastructure such as bins, fences, signs, paths, picnic tables, seating, and carparks. These plans should: • Support access to the coast and improve connections to the coastal walking network. • Enhance visitor experience while protecting natural character and ecological values. • Evaluate the function and design of coastal carparks, including opportunities for formalisation, redesign, or removal. • Identify areas where bollards, landscaping, and other interventions are needed to prevent vehicle intrusion into sensitive ecosystems. • Respect, maintain, and reinstate nature-based solutions to manage sea-level rise and coastal erosion, supporting ecological resilience and biodiversity.	N	Short & Medium
4.	Take stock of coastal bunkers across the parks network by considering their condition, risks, and heritage values.		Medium
5.	Explore, develop and implement interpretatation at existing piped stream outfalls, including Paekawakawa, Haewai, Ngaroma (Lyall Bay) and Waipapa. This could include standard signage providing stream name, links to catchment information and a long term plan to improve the ecological and amenity value of all coastal outfalls. , alongside water infrastructure owners, GWRC and catchments groups		Medium (5–7 years)

Value 4
Tiaki Taiao
Protection and restoration of coastal ecosystems

Wellington's coastal ecosystems are taonga, vital to both the environment and community. As Taranaki Whānui kaumātua Sam Jackson put it simply:
"We only have one environment, and we need to look after it."

These areas nurture diverse species and sustain the mauri (life force) of the natural world. Enhancing biodiversity and respecting natural processes ensures these ecosystems thrive for future generations.

This value is supported through seven pathways:

- Pathway 4.1 **Targeted ecosystem restoration**
- Pathway 4.2 **Wildlife recovery**
- Pathway 4.3 **Controlling invasive species**
- Pathway 4.4 **Strong collaborative relationships for coastal restoration**
- Pathway 4.5 **Remediating and mitigating coastal infrastructure impacts**
- Pathway 4.6 **Enhancing litter management**
- Pathway 4.7 **Sustaining the coast as a storehouse**

Pathway 4.1
Targeted ecosystem restoration

Why this matters

Wellington's coastline supports diverse ecosystems that provide wildlife habitat, buffer erosion, and enhance climate resilience. However, urbanisation, invasive species, pollution, overfishing and climate change have led to habitat loss, reducing native plant cover and weakening coastal resilience. The region's coast hosts 21 of Wellington's 42 nationally threatened plant species, including ngutukākā raki (Cook Strait kōwhai), and tūmatakuru (matagouri). Protecting and restoring these ecosystems is essential to maintaining biodiversity and ensuring a resilient coastline. The following ecosystems are described to inform coastal management decisions. While the marine coastal area and intertidal zones are outside the plan's scope, their ecological connection to the coast makes them important to consider.

Dune systems

Once widespread, Wellington's dunes have been reduced by urban development, infrastructure, and invasive species like marram grass. As dynamic landscapes, they naturally shift with wind and tides, buffering erosion and providing habitat for pīngao and spinifex. However, many have been disconnected by roads and development, limiting their ability to migrate and regenerate. To remain functional, these dunes now require active management.

Shingle beaches

Naturally formed gravel and pebble beaches absorb wave energy, reduce erosion, and buffer storm surges. They support salt-tolerant plants like rauparaha and provide habitat for invertebrates. However, weed invasion, reclamation, sedimentation, and human activity have disrupted their natural function. Retaining driftwood and natural stone movement is key to their ecological health.

Rocky shores, turfs, and seepages

Wellington's rugged rocky coastlines are home to diverse marine and terrestrial species, including starfish, crabs, seabirds, and kekeno (fur seals). Tide pools and rocky outcrops provide essential habitats, while critically endangered coastal turf and seepage ecosystems play a unique role in supporting plant diversity. Coastal turfs form dense, wind-resistant mats on exposed headlands. Seepages, fed by hillside groundwater, support specialised brackish plant communities, helping to regulate moisture in fragile coastal areas. A 2024 survey of Wellington's coast identified 34 coastal turf and seepage sites, many of which are in decline due to trampling, erosion, and invasive species.

Intertidal Zone

The Intertidal zone is the area of the shore that is exposed at low tide and submerged at high tide. These dynamic environments support a wide range of marine life, including seaweeds, shellfish, crabs, starfish, and seabirds that forage along the shore. Rocky shores, tidal pools, and sandy flats each host distinct marine life in the intertidal zone. For example yellow-eyed mullet, which feed here, are a key prey species for larger marine life, including Hector's dolphins. These habitats form a critical link between marine and terrestrial ecosystems, meaning that what happens on land—from sediment run-off to pollution and removal of coastal debris—directly affects their health.

Coastal escarpments, scree, scrub and forests

Wellington's coastal escarpments and rare forest remnants provide essential habitats for birds, lizards, and unique plant species, thriving in the region's harsh, windswept conditions. Only 1% of the original coastal forests remain, with pockets surviving in protected areas. Here, native forest species such as northern rātā, kohekohe, and ngutukākā raki (Cook Strait kōwhai) persist against the odds, while resilient coastal scrub species like tauhinu (cottonwood) and whāraki (coastal flax) help stabilise slopes. Coastal cliffs also support distinct plant communities, including scree habitats where tutu and hinarepe (sand tussock) grow. These ecosystems are highly vulnerable to invasive weeds (eg rhamnus, agapanthus, and karo), pest animals, and human encroachment.

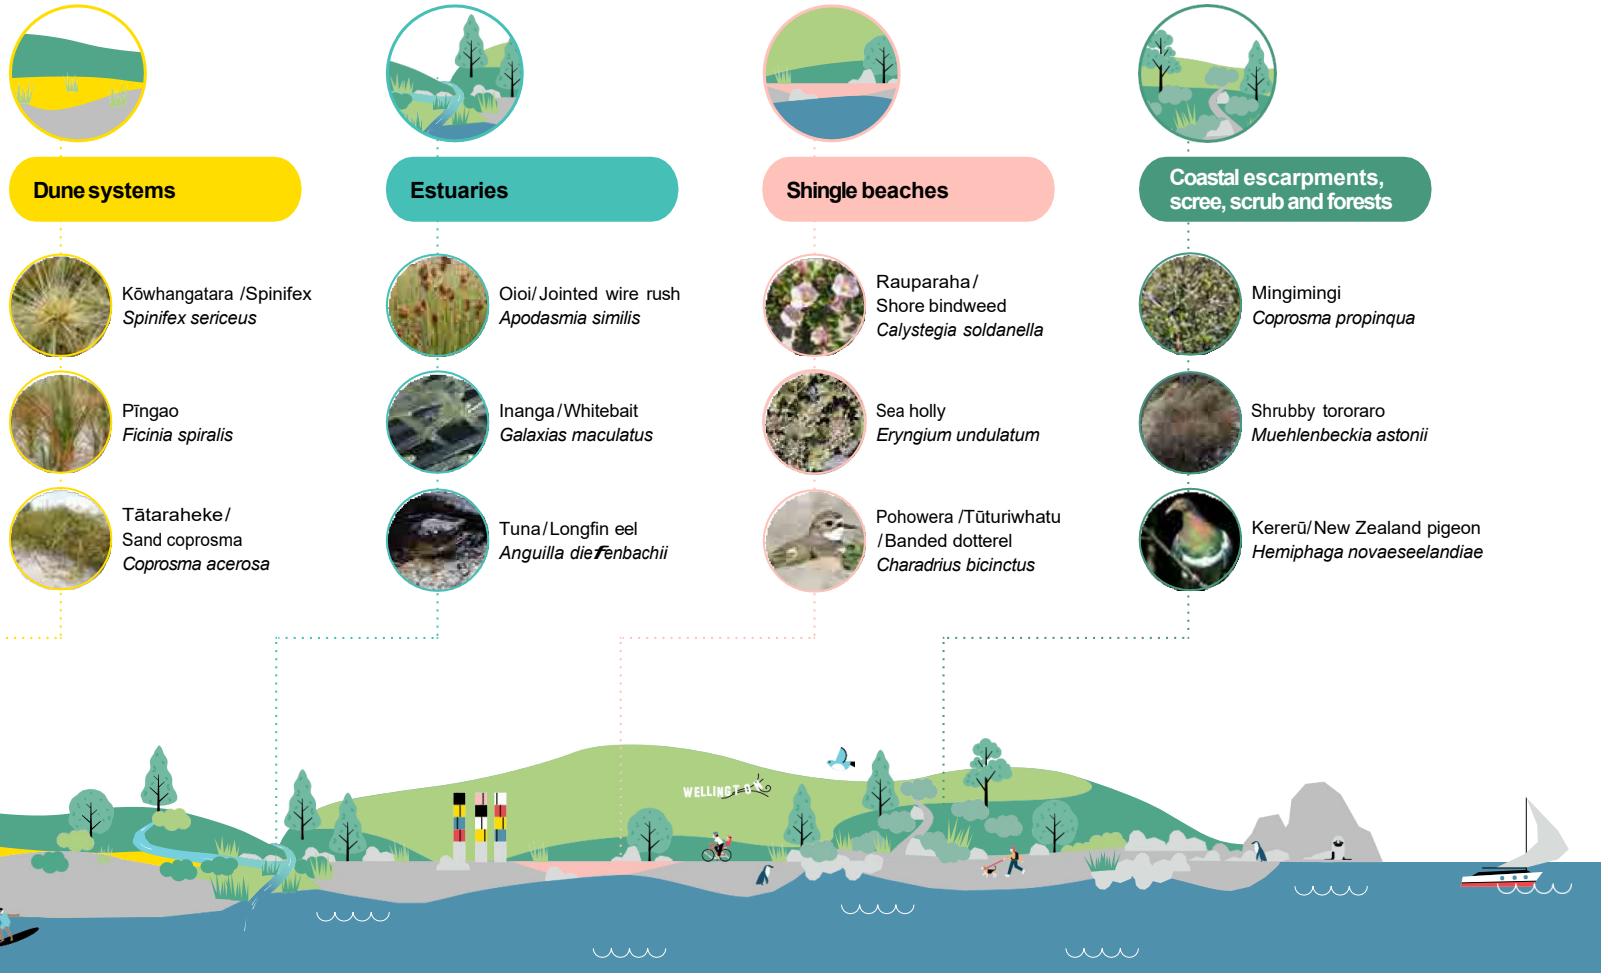
Estuaries

Most of Wellington's estuaries are highly modified and degraded due to sedimentation, pollution, and urban infrastructure. Despite this, many of them remain important ecosystems and serve as vital fish nurseries, supporting tuna (eels) and whitebait, while also buffering floods and cycling nutrients. In Te Ao Māori, wahapū (estuaries) and awa (rivers) are living entities with their own mauri (life force), deeply connected to the surrounding environment. However, culverts and other barriers disrupt natural flows and limit fish passage, further impacting their ecological function.

Marine Coastal Area

Wellington's coastal marine area hosts diverse underwater habitats, with Te Moana o Raukawakawa serves as a unique confluence of waters. Home to nearly 400 unique seaweed species, these habitats – including kelp forests, seaweed beds, and rocky reefs – support species like blue cod, butterfish, kina, pāua, and marine mammals. Te Whanganui a Tara also contains unique ecosystems, but in many areas kina barrens dominate due to the decline of natural predators. Their overgrazing removes kelp forests, reducing habitat complexity and overall biodiversity. Litter and marine debris is also a persistent threat to these habitats. These ecosystems play a vital role in maintaining biodiversity, sustaining marine food webs, and providing an important food source.

Ecosystems of Wellington's Marine Coastal Area – indicative species



Contents

Ecosystems of Wellington's Marine Coastal Area – indicative species

Rocky shores, turfs and seepages

Remuremu/ Goodenia
Goodenia radicans

Kororā / Little penguin

Kekeno/ Fur seal
Arctocephalus forsteri

Marine Coastal Area

Tīrepa huhua / Flapjack
Carpophyllum maschalocarpum

Kōura /crayfish
Jasus edwardsii

Mōki/ Blue moki
Latridopsis ciliaris

Management policy

a. **Prioritise the restoration of the 20 Significant Natural Areas (SNAs)**[13] along Wellington's coast, focusing on habitats hosting rare or threatened species.

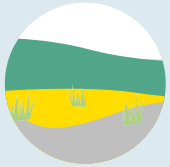
b. **Monitor ecosystem change over time** using cultural indicators alongside scientific monitoring. This includes assessing dune movement, erosion, vegetation cover, and climate impacts in collaboration with mana whenua, and ecological experts.

c. **Use locally sourced (eco-sourced) seeds** for restoration and amenity planting efforts to ensure plants are adapted to Wellington's unique coastal conditions and enhance biodiversity and resilience.

d. **Continue the *Threatened Plant Programme*** efforts to restore coastal plants, aligned with Our Natural Capital and addressing knowledge gaps in partnership with DOC and ecological experts.

e. **Engage communities in seed collection, propagation**, planting, and monitoring to strengthen resilience and awareness.

f. **Apply habitat-specific restoration approaches**, ensuring interventions align with ecosystem function and resilience needs:



Dune systems

i. **Maintain and restore dune function by supporting natural sand** movement and native sand-binding vegetation such as pīngao and spinifex, while progressively removing invasive marram grass to prevent dune steepening and erosion.

ii. **Allow dunes to migrate and grow by integrating natural dune** movement into planning and development decisions and managing infrastructure to minimise disruption to coastal processes.

iii. **Explore opportunities to reconnect foredunes and back dunes** where feasible to support coastal resilience.

Shingle beaches

i. **Restore shingle beach habitats** by removing invasive weeds (eg rhamnus) and replanting native vegetation like rauparaha (shore bindweed) to support biodiversity and protect rare invertebrates and lizards.

ii. **Reduce human interference** in natural processes where practical by allowing driftwood, stones, and other natural materials to remain undisturbed. Significant interventions, such as construction or vehicle access, should be avoided where possible to enable coastal processes.

iii. **Encourage visitors to use designated paths** to help protect these fragile habitats from erosion and trampling.

Rocky shores, turfs, and seepages

i. **Minimise human disturbance in key seepage and turf** areas by working with local communities to promote responsible access. Manage erosion and invasive species threats by directing visitors to designated paths and reducing trampling impacts.

ii. **Consider ex-situ conservation** initiatives by integrating turf species into infrastructure projects, such as road verges, to safeguard against habitat loss and promote resilience.

iii. **Support innovation in the management of coastal turfs** to enhance their ecological integrity.

13 Significant Natural Areas (SNAs) are areas of indigenous biodiversity identified in the Wellington District Plan as meeting ecological significance criteria under the Resource Management Act (RMA).

Coastal escarpments, scree, scrub and forests

i. **Support natural erosion control** by maintaining and restoring native vegetation such as tauhinu, whāraki, and silver tussock to stabilise cliffs and reduce soil erosion.

ii. **Manage karo[15] and other invasive plant species** as they pose a significant threat to indigenous coastal forests.

Estuaries

i. **Maintain and restore estuary function** by identifying opportunities to reduce flow barriers, supporting riparian planting, limit further modification, and enhance their role as natural climate buffers over time.

ii. **Support connectivity for fish passage** by considering habitat linkages between estuaries and upstream waterways, ensuring species like tuna and whitebait can migrate freely.

iii. **Encourage water quality improvements** through riparian planting and natural filtration approaches that help reduce sedimentation and pollution over time.

Marine Coastal Area

i. **Recognise the intrinsic connection between land and sea** by considering marine impacts in coastal reserves management decisions
.

ii Partner with GWRC to support delivery of the Natural Resources Plan, and the New Zealand Coastal Policy Statement.

Intertidal zone

i. Avoid routine beach grooming and the removal of beach-cast seaweed, driftwood, or other natural material, except where necessary for public safety, infrastructure protection, or to support small-scale resilience measures. Grooming can remove algae, invertebrates, and other micro-life that form the base of intertidal food webs and can disrupt natural sand movement. Beaches should generally be left to accumulate natural materials and sand, except at Oriental Bay where regular grooming is maintained.

ii. Clear stormwater outlets and pipes as needed to maintain function, avoiding the use of heavy machinery where practicable.

14 Karo (Pittosporum crassifolium) is native to northern New Zealand but not Wellington. In Wellington's coastal areas, it spreads aggressively, outcompeting native species and forming dense monocultures that limit biodiversity and hinder natural regeneration. Its dominance in harsh coastal conditions makes it a significant ecological threat, requiring active management.

Pathway 4.2
Wildlife recovery

The scarcity of tītī, kororā, pakahā, tākapu, kuaka, and kawau pāteketeke along the coast is a stark sign of habitat loss and ecosystem collapse. As mana whenua state, *"The absence of these seabirds along the south coast is a tohu of a degraded taiao."* Public feedback has reinforced the urgent need for stronger protections and restoration efforts to reverse this decline. Local successes – such as seabird recovery on Mana Island and the return of kiwi to the capital – demonstrate that restoration is possible. Strengthening protections and the expanding predator-free movement can help recover species.

Four coastal areas stand out as the most important mainland habitats for seabird breeding in Pōneke – Ōruaiti, Taputeranga Island, the Moa Point foreshore at the southern end of Wellington Airport runway, and the south coast from Te Rimurapa to Oteranga Bay. These sites support Wellington's only mainland nesting colonies for several threatened species and are prioritiesfor ongoing protection.

Tītī (Sooty Shearwaters/Mutton Bird)

Once abundant, tītī are rarely seen from Wellington's coast. As mana whenua state, *"The tītī, a taonga species, embodies the interconnectedness of our environment and whakapapa. Their return would symbolise ecological balance and the enduring kaitiaki role of mana whenua."* Supporting the conditions for tītī to return is not just about ecological restoration – it is an opportunity to restore cultural connections.

Kororā (Little penguins)

Wellington is the only capital city where penguins and other ground-nesting birds navigate an urban coastline, returning nightly to their nesting sites. Kororā are a unique part of Wellington's identity, and like other ground-nesting birds – including dotterels, oystercatchers, and terns – they face threats from dog attacks and habitat disturbance.

Kekeno (NZ Fur Seal)

Te Rimurapa (Sinclair Head) is a key haul-out site, where around 300 kekeno rest each winter. While populations seem to be rebounding, they are still vulnerable to human disturbance. Historically, mana whenua relied on kekeno as an essential food source, and they remain a taonga species today.

Manu Ngahere (Forest Birds)

Coastal forests and scrub once teemed with tūī, pīwakawaka, and kererū, and ongoing restoration is helping them return. kiwi and even takahē could one day thrive at Te Kopahou, with predator control and habitat protection.

Mokomoko (Geckos and Lizards)

These small but important species help control insect populations and support plant pollination. Wellington is home to several species, including the rare Wellington green gecko, known for its vivid lime green colour and striking blue tongue.

Hātaretare (Invertebrate)

Often overlooked but crucial, invertebrates support nutrient cycling, pollination, and ecosystem health. Wellington's coast is home to rare species like the speargrass weevil (which relies solely on speargrass) and the critically endangered smeagol slug found at Princess Bay.

Management policy

a. **Manage designated habitat areas for vulnerable species**, ensuring conservation efforts align with ecological priorities while maintaining public access and connection with wildlife. Restrictive measures, such as fencing, will only be considered in exceptional cases.

b. **Raise public awareness and education to reduce human-wildlife conflict**, using interpretation, and engagement initiatives to encourage responsible interactions.

c. **Collaborate with biosecurity agencies**, mana whenua, and ecological experts to manage biosecurity risks in coastal reserves, including risks associated with coastal marine assets and activities in the marine area.

d. **Support species recovery through targeted habitat restoration, monitoring, and reintroductions**, ensuring efforts are informed by scientific research, community involvement, mātauranga Māori, and partnership with mana whenua, including:

   i. **Monitor seabird and marine wildlife populations**, tracking trends, habitat conditions, and restoration outcomes to inform adaptive management strategies.

   ii. **Support seabird restoration efforts**, exploring methods such as decoys, sound systems, and targeted reintroductions to re-establish breeding colonies.

   iii. **Pursue the restoration of tītī populations**, working with mana whenua and conservation partners to explore long-term reintroduction opportunities.

   iv. **Support kiwi recovery, particularly in predator-free zones** in collaboration with Capital Kiwi, Predator Free and other partners on habitat restoration and pest control.

   v. **Protect kekeno habitats** by managing visitor access, providing information, and enhancing education to minimise human disturbance at key haul-out sites.

e. **Protect kororā and other ground-nesting birds.** through:

   i. **Designating kororā sanctuary areas in key locations** where nesting habitats are safe from predators.

   ii. **Supporting community-led monitoring and protection initiatives** to enhance nesting habitats, including through the provision of penguin-friendly nest boxes.

   iii. **Supporting community-initiated dog aversion training programmes** to educate dog owners on minimising risks to kororā.

   iv. **Supporting public awareness of kororā and other ground-nesting birds.**

f. **Endeavour to minimise light pollution in coastal areas to protect** wildlife, and all coastal infrastructure projects should implement the *Australian National Light Pollution Guidelines for Wildlife*, as recommended by the Department of Conservation.

Pathway 4.3
Control invasive species

Why this matters

New Zealand's coastal habitats are particularly vulnerable to invasive species due to their dynamic nature and ongoing human disturbance. In Wellington, invasive plants like boneseed, spur valerian, and rhamnus, alongside animal pests such as rabbits,deer and possums, outcompete native species and degrade habitats. Exotic plant species now outnumber indigenous ones tenfold, with emerging threats like angelica and gazania requiring rapid intervention to protect key ecological areas.

Given the scale of invasion, a prioritised approach is essential, focusing on high-value habitats where effective control is achievable. As seen in the Predator Free movement, staged eradication efforts have shown amazing success, where sustained collaboration and volunteer efforts are driving the next phase of pest removal from Motu Kairangi to all of Wellington. Supporting these efforts in weed control will support the long-term recovery of native wildlife and ecosystems.

Management policy

a. **Prioritise invasive species** control in Significant Natural Areas and where there are threatened taonga species.
b. **Monitor and respond swiftly to new weed incursions** before they establish in sensitive coastal ecosystems.
c. **Use a range of targeted, evidence-based control methods**, including selective herbicides, manual removal, aerial control for remote or hard-to-reach areas, and biological control in collaboration with research institutions, to manage invasive species effectively.
d. **Work collaboratively with DOC, GWRC, Predator Free Wellington**, and community groups to align pest control efforts, share resources, and prevent reinvasion.

Pathway 4.4
Strong collaborative relationships for coastal restoration

Why this matters

Caring for the coast is a shared responsibility, involving Wellington City Council, mana whenua, communities, and agencies. As the whakataukī *He rau ringa e oti ai reminds us – many hands make light work*. Restoration of the coast is only possible through collaboration. Across the city, dedicated community members carry out incredible work to trap predators, plant natives, monitor species, and clean beaches. But without coordination, these efforts can become fragmented or unsupported. Working together ensures that everyone's contributions are valued, connected, and able to achieve lasting impact for the coastal environment.

Management policy

a. **Continue to support community-led coastal stewardship** by partnering with local groups to carry out pest control, planting, habitat restoration, and species monitoring, and by providing tools, training, and resources to empower their mahi.
b. **Formalise key partnerships through Memoranda of Understanding** (MOUs), Memoranda of Agreement (MOAs), or other shared arrangements to clarify roles, support resource-sharing, and build long-term relationships.
c. **Enable citizen science and community-led research** by supporting training, data collection, and monitoring initiatives focused on biodiversity, coastal change, and cultural heritage.
d. **Provide easy-to-understand learning resources** such as interpretive signage, digital tools, and open-access data to support teaching, research, and public engagement.
e. **Facilitate public events and initiatives** that promote coastal restoration, community stewardship, and knowledge-sharing across diverse groups.

Pathway 4.5
Remediating and mitigating coastal infrastructure impacts

Why this matters

Coastal infrastructure – such as seawalls, stormwater outfalls, wastewater systems, roads, and reclaimed land – plays a vital role in Wellington's urban environment but can also degrade coastal ecosystems if not well managed. Historic industrial activity and land reclamation have left contaminated sites that threaten marine life and water quality. Aging infrastructure further contributes to erosion, pollution, and habitat loss. While this plan focuses on coastal reserves rather than broader infrastructure networks, managing these impacts is an essential connection for ecosystem health and resilience.

Management policy

a. **Identify and monitor environmental risks from coastal infrastructure**, prioritising areas for mitigation and long-term adaptive management.

b. **Take a staged approach to contaminated sites**, first assessing risks and mitigation options before seeking funding for remediation.

c. **Promote nature-based solutions** where possible, using approaches that work with natural coastal processes rather than relying on hard engineering.

d. **Collaborate water asset owners/managers** and other partners to minimise pollution and erosion from stormwater and wastewater infrastructure, ensuring solutions align with ecological priorities.

Pathway 4.6
Enhance litter management practices

Why this matters

Litter is a persistent issue in Wellington's coastal areas, accumulating through wind, tides, and stormwater runoff. Plastic waste, food packaging, and discarded fishing gear pose significant threats to marine life, disrupt ecosystems, and diminish the natural beauty of coastal reserves. Microplastics further threaten biodiversity and the health of marine and coastal ecosystems.

Community groups such as Lyall Bay Coast Care make a significant contribution through regular beach clean-ups and dune care, fostering local stewardship and reducing rubbish on the coast.

Management policy

a. **Adopt a waste** minimisation approach in coastal reserves by reducing reliance on bins and promoting "Pack it in, Pack it out" principles in quieter areas. In high-use and litter-prone locations (such as Lyall Bay), continue providing bins, with improvements such as larger capacity, seagull-proof design, or smart bin technologies to improve efficiency.

b. **Support community cleanups and public participation in keeping our coastal reserves clean.**

c. **Promote measures that reduce the flow of microplastics** into coastal environments, including considering improved stormwater filtration and targeted waste infrastructure, where feasible.

Pathway 4.7
Sustaining the coast as a storehouse

Why this matters

"The coast is our storehouse; it must provide again for our future generations." – Ngāti Toa & Taranaki Whānui.

For generations, the coast has sustained communities through mahinga kai (food gathering), weaving, rongoā (medicine), and mahi toi (artistic work). It provides essential materials like harakeke, pīngao, and stones, which carry whakapapa and cultural significance. As mana whenua state *"Harakeke and pīngao are taonga. They carry stories and whakapapa, and the process of weaving binds our people to the land and sea."* However, this storehouse has been diminished.

Before any cultural harvesting can return, restoration and conservation of the natural environment must come first. Sustaining biodiversity is essential to ensure culturally significant species like pīngao and harakeke can thrive for future generations. Overfishing, habitat loss, and poaching have severely impacted coastal resources. Protecting and restoring these resources is a significant aspiration for mana whenua.

Management policy

a. **Support fisheries compliance and protection measures of marine ecosystem.** While fisheries management sits with MPI, Police, DOC, and GWRC, the Council plays a supporting role in compliance efforts by enabling signage, surveillance measures, and public education initiatives to strengthen protection and awareness.

b. **Prioritise conservation and ecological recovery as a foundation for any tikanga-informed harvesting of plants like pīngao and harakeke for weaving.** Plant harvesting in coastal reserves is generally not permitted, except through tikanga-based frameworks developed in partnership with mana whenua. This may include:[16]

   i. A **tikanga-based permit system** that upholds cultural values while ensuring ecological sustainability, aligned with the Reserves Act.

   ii. **Ecological monitoring of harvesting activities,** setting limits where necessary to maintain biodiversity and habitat resilience.

   iii. **Designating specific areas for sustainable harvesting** and cultivation of culturally significant plants, such as pā harakeke and rongoā gardens.

c. **Recognise and support mana whenua authority to manage customary harvesting through rāhui[17].** While regulation of coastal marine areas sits with central government and GWRC, the Council can support rāhui efforts through advocacy, education, helping inform people when a rāhui might be in place, and signage where appropriate.

15 Plant harvesting under this framework would not include plant harvesting for commercial purposes and this is restricted under the Reserves Act.
16 Rāhui: A temporary prohibition or restriction placed on an area or resource to allow recovery or for safety reasons. Rāhui are a tikanga-based management tool used by mana whenua to ensure the sustainability of natural resources and ecosystems.

Actions

Protection and restoration of coastal ecosystems

#	Actions	Funding status	Time frame
1	Resource a wildlife work programme to deliver, coordinate and advise on efforts to retain and restore wildlife around the coast including species such as kororā, minimac geckos, kekeno and tītī, including potential reintroductions.	N	Short
2	Pilot public litter collection tools (eg beach clean-up stations) in selected locations, similar to Coromandel initiatives.	E	Short
3	Audit bin design and placement to improve effectiveness in coastal environments, considering pest proofing, smart technology, better placement, and overflow prevention.	E	Short
4	Protect the nighttime environment, cultural heritage, and coastal birdlife by investigating lighting controls, including the potential for a Dark Sky Reserve or Park on parts of the South Coast. Review current light pollution levels to assess impacts on wildlife and identify opportunities to reduce unnecessary lighting.	E	Medium
5	Develop a tikanga-based approach to the sustainable cultural harvesting of plants, such as pīngao and harakeke, in partnership with mana whenua, including consideration of designated harvesting and cultivating areas and a permissions framework aligned with the Reserves Act.	E	Medium
6	Strengthen collaboration on rāhui by: • Establishing clear processes to engage mana whenua when environmental concerns arise (eg mass bird deaths, marine die-offs). • Supporting mana whenua-led approaches to declaring, implementing, and communicating rāhui. • Providing resources, such as public education, to increase awareness and understanding of rāhui where appropriate.	E	Short
7	Investigate innovation on the management of coastal turfs to improve their ecological integrity.	E	Short
8	Establish a Coastal Coordination Group with mana whenua, agencies, and community groups supporting knowledge-sharing and coordinated management.	E	Short
9	Develop a coastal management progress reporting framework and publish regular stakeholder updates.	E	Short
10	Enhance online resources to connect people with beach clean-ups, pest control, weeding, and ecological monitoring initiatives.	E	Short

Protection and restoration of coastal ecosystems

#	Actions	Funding status	Time frame
11	Use the Wellington Dog Policy review process to investigate and prioritise future dog access changes at four critical coastal bird habitats – Ōruaiti Reserve, Taputeranga Island, Te Rimurapa / Sinclair Head to Oteranga Bay, and the southern end of Wellington Airport. These sites are hotspots for ground-nesting indigenous seabirds and require stronger protection.	E	Short
12	Collaborate with Dog Control to strengthen existing patrols in wildlife-sensitive coastal areas and ensure clear enforcement through infringement procedures where required.	E	Short
13.	Review and improve dog control/wildlife signage along the coast to protect vulnerable Kōrora habitat and other ground nesting birds (including Sirens Rocks, Seatoun, Māhanga Bay, and other known nesting areas).	E	Short

Funding status key

E Existing funding covers delivery
N Needs new funding, subject to approval
E/N Review covered by existing funds; implementation may need new funding

Time frame key

Short (0–4 years)
Medium (5–7 years)
Long (8+ years)

Value 5
Taiao Tuatahi
Nature first approach to resilience

Contents

Wellington's coast is shaped by the powerful forces of waves, storms, erosion and seismic activity.

These natural processes, now intensified by climate change, and sea-level rise, will increase storm intensity, increase erosion and inundation hazards and heighten fire risks. Coastal reserves, recreational spaces, and infrastructure face growing vulnerabilities, making it essential to adapt to these evolving challenges. Because the ocean and climate are part of one interconnected system, changes in one directly affect the other, true resilience means working with, rather than against, nature – allowing for dynamic coastal processes while supporting public safety and ecosystem health. By integrating nature-based solutions, adaptive planning, and emergency preparedness, we can protect both the coastal environment and the communities that rely on it.

This value is supported through three pathways:

Pathway 5.1
Prioritising nature-based solutions for coastal protection

Pathway 5.2
Adaptive planning for sea-level rise

Pathway 5.3
Manage the threat and impact of wildfires

Pathway 5.1
Prioritising nature-based solutions for coastal protection

Why this matters

Nature-based solutions – such as dune restoration, riparian planting, wetland protection, and supporting natural sediment movement – provide sustainable and adaptive ways to protect Wellington's coast, enhance biodiversity, and maintain its natural landscapes. These policies propose to work with natural processes to buffer against storm surges and erosion, while restoring coastal habitats and building ecosystem resilience. Nature-based solutions not only improve ecological integrity but also offer:

- Lower long-term maintenance costs compared to hard infrastructure.
- Help maintain natural sediment movement, which stabilises shorelines and reduces erosion.
- Increased recreational, cultural, and tourism benefits through enhanced coastal environments.
- Increased biodiversity through restored coastal vegetation.
- Carbon sequestration benefits through restored coastal vegetation.
- Greater public access to natural spaces, fostering community connection to the coast.

Management policy

a. **Leave space for natural processes** by reserving areas for sediment movement, dune formation, and floodplain restoration to enhance the natural resilience of the coastline.

b. **Implement nature-based coastal protection methods as a priority,** including dune restoration, native planting, and living shorelines, to stabilise sediment, reduce erosion, and strengthen resilience against storm surges.

c. **Work in partnership with mana whenua to incorporate their knowledge and perspectives** into coastal resilience planning, integrating tikanga-based approaches and mātauranga Māori into protection efforts where appropriate.

d. **Design recreational coastal infrastructure** to be flexible and adaptable to sea-level rise, erosion, and storm impacts. Encourage innovative approaches that support relocation, modularity, or natural buffering, while minimising reliance on permanent hard infrastructure where adaptive, nature-friendly alternatives are viable.

e. **Restore natural shorelines where possible,** supporting sediment movement, and allowing natural processes to shape the coastline.

f. **Actively manage beaches and dunes** by physically moving sand where human invention has restricted the space available for natural responses to storm events.

g. **Retain natural storm debris (sand, rocks, driftwood, seaweed)** on beaches (where material has not been contaminated), as these materials play a critical role in stabilising shorelines, supporting intertidal habitats, and reducing erosion. Where debris is deposited on roads or footpaths, relocate it back to the beach rather than removing it from the coastal system.

h.Seek coastal engineering advice when altering coastal environments or infrastructure, with an emphasis on resilience, ecological protection, and sustainable design

i Support the identification and progressive remediation of hazardous coastal sites, working with funding partners to protect

Pathway 5.2
Adaptive planning for a sea-level rise

Why this matters

Wellington's coastline is highly vulnerable to sea-level rise and severe storms, threatening ecosystems, infrastructure, and recreational assets. The 2013 storm demonstrated the risks, causing significant damage to Island Bay's seawalls and coastal habitats, some of which are still recovering. NIWA projections indicate relative sea levels may rise between 0.42 and 1.31m by 2100[17], with a one-metre rise impacting 29% of the coastal areas within this plan's scope, increasing to 58% when combined with storm surges. These impacts will affect public spaces, infrastructure, and community access to the coast, requiring proactive planning to reduce risks and avoid costly, unsustainable development decisions. The table on the next page shows how key coastal assets may be affected under different sea-level rise and storm surge scenarios.

However, the scale, speed, and nature of these impacts remain uncertain. Climate change is dynamic, and new information will continue to emerge, making rigid, long-term planning ineffective. Dynamic Adaptive Pathways Planning (DAPP)[18] provides a flexible approach, allowing decisions to evolve as new data emerges. The PARA framework (Protect, Accommodate, Relocate, Avoid) helps to identify adaptation strategies over time, ensuring decisions are responsive, evidence- based, and balanced between ecological, recreational, and community needs to proactively prepare for climate disruption.

17 Likely range of relative sea level rise for coastal Wellinton from 2020 to 2100 based on medium confidence projections for scenarios from SSP1-1.9 to SSP5-8.5 at NZ SeaRise https://searise.nz/maps/

18 Aotearoa's National Adaptation Strategy promotes the use of Dynamic Adaptive Planning Pathways (DAPP) as a flexible framework for addressing uncertain climate impacts. By identifying pre-emptive actions tied to specific thresholds, such as sea-level rise or storm frequency, DAPP ensures plans can evolve with new data, supporting resilience and adaptive management.

Figure: Estimated coastal recreation and environmental assets at risk from sea-level rise and storm surges[19]

Asset type	Total assets and landscape types within plan scope	Assets affected by tidal flooding due to sea level rise [19,20]					Estimated percentage of assets or landscapes affected by a 1m SLR	Assets affected by a storm surge for a 1% AEP (100-year) event with sea level rise[20]		Estimated percentage of assets or landscapes affected by storm surge with 1.0m SLR
		0.2m SLR	0.4m SLR	0.6m SLR	0.8m SLR	1.0m SLR		0.5m SLR	1.0m SLR	
Boat Ramp	11	11	11	11	11	11	100%	11	11	100%
Toilets	16	2	2	4	5	6	38%	11	13	81%
Play areas	7	0	0	0	0	0	0%	4	4	57%
Sections of track	59	3	4	4	4	5	8%	13	14	24%
Community buildings	18	6	8	10	10	14	78%	16	17	94%
Hard surfaces e.g. carpark areas	391	64	86	101	110	122	31%	263	284	73%
Landscape type										
Significant Natural Areas (000m2)	3,330	55	100	137	172	204	6%	391	401	12%
Grassy areas (m2)	118,000	6	49	112	220	880	1%	45,600	56,700	48%
Horticulture areas (m2)	20,300	0	6	17	53	260	1%	10,800	12,100	60%

19 Sea level rise levels are relative to Mean High Water Springs 10 (MHWS10), the mean high water spring tide exceeded 10 percent of the time.
20 Sea level rise and storm surge data used in this table are based on NIWA modelling for Greater Wellington Regional Council and Wellington City Council, using LiDAR-based elevation data and storm tide-wave modeling for 1% AEP (100-year) events at sea-level rise increments of 0.5m and 1.0m. More details **here**.

Management policy

a. **Align coastal reserves and recreation planning decisions** with Council's broader climate adaptation approach[20].

b. **Use Dynamic Adaptive Pathways Planning (DAPP)** to guide decision-making and adaptation responses.

Apply a flexible, trigger-based approach where action is taken in advance of thresholds. Adaptation actions will be based on the following adaptation categories:

Climate adaptation intervention categories (PARA framework)

Avoid

Prevent new risks by avoiding development in risky locations.

Avoid use or development of hazard- prone coastal reserves to minimise risk and preserve natural processes. New structures are only considered if they cannot be feasibly located elsewhere.

Do nothing

Take no immediate action but prepare for change

- **Investment in existing coastal assets is avoided unless** they will remain useful for a reasonable timeframe. Instead, prioritise resilient assets that can adapt to changing conditions and provide long-term community benefit.
- This may include reducing levels of service for coastal reserves.
- This may include reviewing lease agreements for existing buildings and structures based on cost, safety, recreational and environmental benefits.

Relocation

Relocate away from hazard-prone areas.

- **Over time relocate existing coastal recreation structures/ assets** from high-risk hazard areas to safer locations. Where feasible, allowing more space for natural coastal processes to occur to reduce long-term risks to public structures in coastal parks and reserves.

Protect

Prioritise natural solutions to shield climate hazards.

- **Implement protective measures** to support long-term resilience for coastal reserves with a focus on prioritising nature-based adaptation actions for coastal protection and erosion control wherever feasible (e.g. dune restoration, living shorelines, reduce erosion).

Accommodate

Retrofit or adjust to live with increased hazards.

- **Retrofit or upgrade existing coastal structures** to improve resilience to climate impacts where relocation is not immediately viable, with decisions guided by cost- benefit analysis.
- **Design recreational coastal infrastructure** to be adaptable to increasing sea-level rise, erosion, and storm impacts over time.

21 Council's broader climate adaptation planning adopts a 100-year perspective and is planning to involve detailed community processes to determine climate adaptation pathways for infrastructure, roads, and stormwater assets. While complementing this long-term strategy, Tātou ki Uta focuses on immediate and medium-term approaches for coastal reserve areas and recreational activities, ensuring resources are not wasted on structures that cannot be sustained in the long term.

Pathway 5.3
Manage the threat and impact of wildfires

Why this matters

Wildfires pose a threat to Wellington's coastal environment, particularly as climate change increases the likelihood of longer, hotter, and drier summers. Many coastal plant species – such as gorse, mānuka, and bracken – are highly flammable, making some areas particularly vulnerable. Te Kopahou Reserve is especially at risk due to its extensive dry vegetation, rugged terrain, and exposure to strong coastal winds, which can rapidly spread fire. A wildfire in this area could endanger natural habitats, recreational spaces, and nearby communities.

While campfires on beaches are a traditional activity in New Zealand, they contribute to fire risk if not properly managed. Other ignition sources – such as vehicles, discarded cigarettes, and sparks from equipment – also increase the likelihood of wildfires.

Management policy

a. **Collaborate with FENZ to monitor fire risk levels** and communicate seasonal restrictions and safety practices to reserve users.
b. **Raise public awareness about fire risk and safety** including current fire risk levels, seasonal restrictions, and high-risk activities (eg campfires, smoking, use of machinery near dry vegetation).
c. **Manage fire risks in accordance with Fire and Emergency New Zealand's seasonal restrictions[21] and, the Wellington City Bylaws.**

22 FENZ sets fire restrictions using a three-tiered system based on weather conditions, vegetation dryness, and fire risk levels. These restrictions are designed to reduce the likelihood of wildfires, protect communities and ecosystems, and ensure emergency services can respond effectively. The fire risk levels are:
- Open Fire Season – Fire risk is low, and fires are allowed in designated areas with standard safety precautions.
- Restricted Fire Season – Fire risk is moderate to high, and fires are only allowed with a FENZ permit. This ensures fires are monitored and managed to prevent uncontrolled wildfires.
- Prohibited Fire Season – Fire risk is extreme, and all fires, including permitted ones, are banned. This is enforced when conditions – such as prolonged dry weather and high winds – create a serious wildfire threat.

Actions

Nature first approach to resilience

#	Actions	Funding status	Time frame
1	Develop guidelines to support decisions around fire restrictions, manage fire risks on beaches and support responsible fire behaviour.	E	Short
2	Through the climate adaptation planning process, explore opportunities to reconnect front and back dune systems to enhance coastal resilience.	E/N	Long
3	Explore establishing beach monitoring programmes to track sand movement, understand coastal dynamics, and support the development of nature-based adaptation strategies.	N	Short
4	Work with Greater Wellington Regional Council to assess and develop an approach to the future of private boat sheds along the foreshore, given their exposure to sea-level rise and coastal hazards.	E	Medium
6	Work with contractors and maintenance teams to review and align post-storm clean-up protocols with ecological objectives, so that natural materials are retained or returned to the beach rather than removed from the system.	E	Short

Whakahaere Whenua

Land administration

Wellington's public coastal areas[22] (including reserves) will be managed in accordance with the values and pathways outlined in this plan and the reserves will be managed in line with their classification under the Reserves Act 1977. This section provides a framework for how coastal land owned or managed by Wellington City Council is administered, covering reserve classifications, land acquisition, leases, and encroachment management.

23 This plan includes both land classified as reserves under the Reserves Act 1977 and other Council-managed coastal land, including coastal roads. It provides direction for publicly owned coastal land between Oriental Bay and Karori Stream, encompassing shorelines, coastal platforms, and escarpments as set out in the schedule of the sector sections.

Reserve Act classifications

The plan should be read in conjunction with the **Reserves Act 1977**, which provides the legal basis for reserve management. Section 16 of the Reserves Act 1977 requires reserves to be classified under sections 17–23 according to their principal or primary purpose to reflect the values and management objectives of each reserve.

The classifications of coastal reserves have been reviewed to ensure they are still appropriate and those used are described in the table. Any proposed classification changes are documented in the land schedule section of this plan.

Reserve Act Section	Reserve classification	Primary purpose
s.17(1)	Recreation Reserve	*"for the purpose of providing areas for the recreation and sporting activities and the physical welfare and enjoyment of the public, and for the protection of the natural environment and beauty of the countryside, with emphasis on the retention of open spaces and on outdoor recreational activities, including recreational tracks in the countryside"*
s.18(1)	Local Purpose Reserve	*"for the purpose of providing and retaining areas for such local purpose or purposes as are specified in any classification of the reserve."*
s.19(1)	Scenic Reserve	*"for the purpose of protecting and preserving in perpetuity for their intrinsic worth and for the benefit, use, and enjoyment of the public, suitable areas possessing such qualities of scenic interest, beauty, or natural features or landscape"*
s.23(1)	Historic Reserve	*"for the purpose of protecting and preserving in perpetuity such places, objects, and natural features, and such things thereon or therein contained, as are of historic, archaeological, cultural, educational, and other special interest."*

Adding new land to the coastal reserve network

As Wellington's coastal environment evolves, opportunities may arise to add new land to the coastal reserve network to ensure long-term protection of public access, recreation, and conservation values. Where appropriate, this land may be classified as reserves under the Reserves Act 1977. Potential additions to the coastal reserve network include:

- **Coastal land may be integrated into reserves through climate adaptation planning**, such as landward relocation of infrastructure or shoreline changes, ensuring these areas are managed in alignment with this plan.
- **Road stopping may be considered in exceptional cases where coastal road edges primarily serve recreational or environmental** purposes, enabling their reclassification as reserves where legally and operationally appropriate.
- **Open space areas on the coastal edge that are legally road are managed under this plan** but not classified reserve due to the uncertainties such as rising sea level, infrastructure requirements, and legal and survey costs associated with the dynamic coastal edge.

Land use and encroachment

Leases, licences, and easements will be used where necessary to facilitate appropriate use and good management of reserve land.

Unauthorised encroachments will be managed through the process outlined in Appendix A of this plan.

Managing adjacent land and road reserves

Council-owned land adjacent to coastal reserves including the unformed road will be managed in alignment with this plan's policies, prioritising ecological, cultural, and recreational outcomes.

Mana whenua–owned land with reserve functions

Taputeranga Island is owned by Ngāti Toa under the Ngāti Toa Rangatira Claims Settlement Act 2014. The island remains a reserve under the Reserves Act 1977, with Wellington City Council as the administering body. Under this plan the Council continues to manage the reserve in partnership with Ngāti Toa, recognising their mana whenua status and decision-making authority while ensuring management aligns with the settlement agreement.

Part of Ōruaiti Reserve is owned by Taranaki Whānui ki Te Upoko o Te Ika under the Port Nicholson Block Settlement Act 2009. While the land is held in fee simple title by the iwi, it is administered by Council as a public reserve. This plan supports ongoing partnership management, recognising the cultural significance of the site to Taranaki Whānui and ensuring alignment with the settlement intent while upholding public access. Where there are policy conflicts, the Ōruaiti Reserve Management Plan (2011) takes precedence, or provides additional site-specific direction not covered in this plan. Options for documenting Ōruaiti's future management will be further considered when its reserve plan is next reviewed.

Coastal land exclusions

Most of the coastal area between Karori Stream and Oriental Bay is included in this plan, covering land between the high-water mark and the coastal road in public ownership. The following areas are excluded due to different ownership or legal frameworks:

- **Privately owned coastal land**, including the western end of Lyall Bay and port land along Shelly Bay Road, is not part of this plan. While public ownership may be desirable in some cases, the cost and limited public benefit mean the Council will not actively pursue acquisition at this time.
- **Crown-owned reserves**, including Pariwhero/Red Rocks Scientific Reserve and Te Rimurapa/ Sinclair Head Scientific Reserve, are managed by the Department of Conservation (DOC) and are not covered by this plan.

Estuaries

A small number of estuaries along the Wellington coast, including the Kaiwharawhara Estuary and the Mākara Stream estuary, sit outside the formal scope of this plan. For practical purposes they will be managed in line with this plan's policies and values until specific reserve management plans or other statutory frameworks are developed. This ensures continuity in protecting ecological, cultural, and recreational values while recognising that detailed direction will follow through future planning processes.

Relationship to other plans

The Coastal Reserves Management Plan takes precedence over relevant sections of the Outer Green Belt Management Plan 2019 and Suburban Reserves Management Plan 2015 where they overlap.

For Ōruaiti Reserve, the Ōruaiti Reserve Management Plan 2011 continues to apply as described under *Mana Whenua-owned land with reserves function*.

Future climate adaptation plans may require updates to this plan. The Reserves Act 1977 (Section 41(4)) provides for ongoing review to ensure the plan reflects changing circumstances.

4

Ngā Rāngai Whakahaere

Management sectors

This section outlines sector-specific policy and actions for eight geographic areas (management sectors) covered in Tātou ki Uta. Each sector describes key values, significant features, and challenges unique to that area while aligning with the broader values and pathways outlined in Section 2. Maps of each sector show the reserve land and key features, together with legal and other land administration information.

Sector 1
Te Kopahou coast and coastal route

This sector includes the reserve land on the coastal escarpment on the seaward side of Te Kopahou Reserve, as well as the shore platform and coastal road, which extends from the end of Ōwhiro Bay Road to Karori Stream. It features Pariwhero (Red Rocks).

People regularly walk, bike, and drive 4WD vehicles along this coast to experience the coastal environment, fish, and dive.

The reserves in this sector are classified as Scenic Reserve (Category B), Historic Reserve, and Local Purpose Reserve (Information Centre), as shown on the schedule map. The sector also includes the unformed legal road or coastal route and scientific reserves administered by the Department of Conservation.

1.1 Enduring connection to the landscape

The beach and coastal escarpment of Te Kopahou along Te Moana o Raukawa (Cook Strait) are steeped in cultural, historical, and landscape significance, marking the most remote and rugged part of the area covered by this plan.

The dramatic steep cliffs, rock screes, and resilient vegetation rise to nearly 300m in places, curving toward the prominent Te Rimurapa (Sinclair Head). Below lies a narrow shore platform with shingle beaches, small dunes, and rocky outcrops. Powerful tides flow through Te Moana o Raukawakawa, one of the most perilous stretches of water in the world, underscoring the ocean's dynamic energy.

This dramatic environment has been a vital route for iwi, abundant in kai and home to kekeno (seals), attracting notable figures like Te Rauparaha and serving as an important place to fill the pātaka kai. Traces of early settlements – urupā, karaka groves, and pā sites including Makure rua Pā, Wai komaru Pā, Taumata Patiti Pā– affirm the deep historical and cultural connections that anchor this area.

Key sites and stories of significance

The coastal route was essential for Ngāti Toa, serving as a pathway for both sustenance and further conquests to the south. As Maria Pomare[23] recounts about the 1819 expedition involving Te Rauparaha: *"The party carried on to Porirua, Ōhāriu, right around Te Rimurapa and Ōmere, as far as Pōneke... Te Rauparaha's party ate seals along the coast."* At Ōmere, a prominent lookout over Cook Strait, Te Rauparaha spotted a ship – an event that underscored the strategic importance of the coast. As Ngāti Toa noted: *"This not only highlighted the strategic importance of the Cook Strait as a major highway but also the importance of the southwest coast as an important vantage point and node of access."*

Pariwhero (Red Rocks), meaning Red cliffs, is a landmark deeply tied to Māori tradition. Its red rocks are said to represent either the blood of Māui or the grief of the daughters of Kupe. The unique basaltic pillow lava formations, created by underwater volcanic activity, add further geological and cultural intrigue.

Te Rimurapa (Sinclair Head) was a Māori settlement and later served as a WWII observation post, with visible bunkers marking its history.

Toka Haere (Thoms Rock) or "demon rock" is known for its deceptive nature and historical peril. It is closely tied to the story of the Three Brothers shipwreck, which claimed the life of Horomona Matakape.

Ōwhiro Bay Quarry, active for over 90 years, significantly altered the escarpment before its closure in 2000. Its rehabilitation has opened opportunities for ecological restoration, with 14,000 plants stabilising the area from Te Hape Stream to Te Rimurapa since 2000. The site is still unstable. The quarry face exposes an earthquake fault, a stark reminder of Wellington's seismic history.

Historic Baches at Mestanes Bay and Red Rocks are recognised by the Heritage New Zealand Pouhere Tāonga and offer a glimpse into early 20th-century coastal life, reflecting a period of resilience and community along the coast.

Management policy

a. Work with mana whenua to **implement cultural restoration initiatives** in Te Kopahou Reserve. A specific cultural restoration plan for Te Kopahou will consider:
   i. Naming conventions to reflect cultural heritage and significance.
   ii. Indigenous design approaches for entranceways and park elements.
   iii. Research and restoration of original indigenous vegetation.
   iv. Opportunities to reintroduce taonga species such as kiwi or tītī.
   v. Dedicated karaka restoration projects, including tikanga-based initiatives.
   vi. Enhancing cultural harvesting opportunities for harakeke and other species.
   vii. Protection to preserve former pā, middens, and archaeological sites.

b. **Protect the dark sky environment at Te Kopahou** by restricting artificial lighting, enhancing opportunities for stargazing and aurora viewing while safeguarding nocturnal wildlife habitats.

24 Maria Pomare, as quoted in the Ngāti Toa Cultural Values Assessment.

12 Access to the coast for recreation and enjoyment

The coastal edge of Te Kopahou offers diverse outdoor recreation opportunities in a rugged yet coastal setting near Wellington, attracting both locals and visitors from out of town.

Nearly half of Wellingtonians surveyed in 2024 report they visit annually for activities such as walking,surfing, mountain biking, diving, fishing, horse riding, and 4WD exploration. Visitors also enjoy educational displays, coffees from the coffee cart, and freedom camping.

The reserve's track and coastal unformed road network connect visitors to Pariwhero/Red Rocks, Te Rimurapa (Sinclair Head), cultural heritage sites, and seal colonies. Track data from 2021 indicates that a large majority of visitors access the reserve on foot, with the remainder arriving by vehicle or bicycle. The 2021 Te Kopahou Track Network Plan proposes enhancements, including new routes along Waipapa Stream and Te Rimurapa (Sinclair Head).

Through public engagement, we heard strong concerns about environmental impacts, safety issues, antisocial behaviour, and illegal poaching, alongside recognition of the coast's value for recreation such as diving, fishing, four-wheel driving, and dirt biking. Some of these activities are sometimes at odds with one another, particularly where vehicle access conflicts with the protection of Te Kopahou's unique ecology and cultural values. This plan seeks to find a middle ground by balancing recreation with long-term conservation and cultural priorities.

Historic baches at Mestanes Bay and Red Rocks, located on reserve land under council leases, provide accommodation for leaseholders and enhance park safety by ensuring a surveillance presence in remote areas.

Management policy

a. **Manage vehicle access on the unformed coastal route** to balance recreation and conservation by:

i. **Restricting public vehicle access during high-risk periods**, such as, but not limited to, prohibited fire seasons, swell events, or biosecurity outbreaks, to protect public safety and the environment.

ii. **Managing vehicle access through time-based restrictions**, including:

A. Closing the gate on Sundays and on half the public holidays (New Year's Day, Waitangi Day, Easter Monday, Matariki, Labour Day, and Christmas Day), to reduce peak-time traffic, protect the environment, and support non-vehicle recreation.

B. Night-time gate closures from October to April (9pm to 6am) and May to September(7pm to 6am) to enhance safety and deter antisocial behaviour, including poaching, fires, and unauthorised freedom camping.

.

i. **Monitoring vehicle access and** its impacts on environmental outcomes and recreational use, and adjusting the approach based on findings..

ii. Drawing on this monitoring evidence (i), **investigate a permit system** for 4WD access to promote responsible use and reduce environmental and safety risks, while ensuring the system is easy to administer**.**

iii. **Support education for vehicle** users on the impacts to the coastal environment.

iv. **Promote safe speeds,** responsible behaviour and awareness of shared use along the unformed coastal road**.**

v. **Protect biodiversity sites from vehicle damage through the strategic placement of boulders, logs,** or other physical barriers, where practical, in partnership with the community and adjacent landowners**.**

vi. **Provide gate access to the coast** for bach owners at any time between Te Kopahou Carpark and Devils' Gate.

b. **Retain current leases for historic baches at Mestanes Bay and Red Rocks** under current conditions that align with the reserve's natural character, which includes:

i. **Ownership reverts to the Council when a lease** is relinquished – either voluntarily, upon the lessee's death, or if a bach becomes uninhabitable or is destroyed.

ii. **Prohibit major alterations**, rebuilding, and permanent living in baches.

iii. Monitor bach use, encroachments, and unauthorised expansions.

c. **Continue implementing the 2021 Te Kopahou Track Network Plan** to enhance visitor access and recreation opportunities.

d. **Maintain the Te Kopahou Visitor Centre** as a significant coastal area and gateway to the wild southwest:

i. Ensuring it is an accessible destination where people with access needs can experience and enjoy the rugged coast, with comprehensive visitor information provided.

ii. Incorporate and enhance cultural and educational elements that reflect the area's unique heritage and significance.

iii. Showcase and promote horticultural gardens featuring Wellington's native coastal plants, serving as an educational and visual highlight.

iv. Providing ample car parking to support visitors stopping at the site.

v. Allowing ancillary commercial activities (such as a coffee cart) that align with the purpose of the reserve.

e. Enable **responsible freedom camping** at the Te Kopahou Visitors Centre Carpark.

1.3 Protection and restoration of coastal ecosystems

The coastal edge of Te Kopahou is a vital ecological area, identified in Wellington's District Plan and GWRC's environmental frameworks, and hosts a wide range of threatened native species and unique coastal habitats.

Its rugged terrain, harsh climate, and steep escarpments contribute to its distinctive natural character, supporting some important ecosystems, This includes regionally important sites such as the Kinnoull dunes — the largest intact dune system remaining on the south coast — and the Karori Stream estuary. These areas, alongside shingle beaches and marine mammal haul-outs, are home to regionally significant and rare plant species, including ngutukāka (Cook Strait kōwhai), tūmatakuru (speargrass), and threatened coastal birds, such as the banded dotterel. Other flora, like kohekohe, tītoki (New Zealand oak), and northern rātā, persist in limited patches due to browsing pressure. Despite these pressures, the coastal and marine habitats of Te Kopahou are of high conservation value and require ongoing habitat restoration, pest control, and protection to ensure the survival of these native ecosystems.

Management policy

a. **Collaborate with GWRC on the Key Native Ecosystem[2] (KNE) Operational Plan** for the Wellington south coast, ensuring targeted protection for threatened areas such as Kinnoull dunes and Karori Stream mouth.

b. **Support the restoration of native bird populations** such as tītī or kiwi, by working with partners, creating suitable habitat conditions, reducing predation risks, and exploring opportunities for species reintroduction where ecologically appropriate.

c. **Support native plant re-establishment** and genetic diversity through ongoing seed collection efforts.

d. Work with the DOC to provide clear guidelines and information to **minimise human interference with seal haul-outs.**

e. **Manage the former Ōwhiro Bay Quarry** in alignment with the *Ōwhiro Bay Quarry Closure Management Plan 2000*.

f. Promote public awareness and stewardship of Te Kopahou through **education initiatives and engagement activities.**

g. Continue to support MPI's efforts to **deter poaching** along the coast.

h. Collaborate with adjoining landowners to control wild animals, including pigs and deer, to reduce their adverse impacts on regenerating vegetation.

[2] A *Key Native Ecosystem (KNE)* is a habitat identified by GWRC as one of the best remaining examples of biodiversity in the region.

1.4 Nature-first approach to resilience

The coastal edge of Te Kopahou faces significant environmental challenges stemming from its steep, eroding escarpments, exposure to powerful tidal surges, and frequent southerly storms.

The rugged cliffs and shoreline are unstable, with ongoing slips and erosion complicating infrastructure maintenance. The carpark at the base of the escarpment is particularly vulnerable, as erosion continues to expose coastal fill and the construction materials used in its formation. The unformed legal road running along the beach is similarly at risk, with frequent slips and storm damage posing persistent maintenance difficulties. Te Kopahou coastline is also considered a high-risk fire area due to its flammable vegetation, including gorse, tauhini, tauhinu (cottonwood), and mānuka. Additionally, the coastal platform is critical to emergency evacuation and maritime disaster response in the hazardous Cook Strait area, necessitating careful consideration of access and preparedness.

Management policy

a. **Coordinate with Fire and Emergency New Zealand (FENZ)** to support a tactical fire management plan for Te Kopahou reducing wildfire risks while maintaining public safety and ecological values. This may include restricting road access during high-risk fire season in line with FENZ guidelines.

b. **Support and collaborate with Maritime NZ** and GWRC as they lead efforts to assess and improve emergency access protocols for disaster response in the Cook Strait area..

c. **Allow the unformed coastal route in Te Kopahou Reserve to recede naturally** as coastal processes reshape it. As sea-level rise and storms increasingly impact the route, maintain a low level of service for road upkeep, with no formal maintenance except where required for hazard management and public safety. This means:

- Clearing slips only where necessary to keep 4WD access feasible.
- Not re-forming washed-out sections, allowing those areas to transition to beach driving where possible.
- Not reinstating riprap or erosion protection, enabling natural processes to shape the road.

Te Kopahou Coast and Coastal Route | Action table

#	Actions	Funding status	Time frame
1	Continue developing the cultural restoration plan for Te Kopahou, then roll out its implementation in collaboration with mana whenua. This will include exploring the potential restoration of the name Te Kapohau Reserve.	E	Long
2	Scope a feasibility study to support mana whenua aspirations for seabird and species restoration, assessing viability, identifying suitable reintroduction sites, and guiding habitat restoration and predator control efforts.	N	Medium
~~3~~. Work with the community and adjacent landowners to identify priority biodiversity sites at risk from vehicle damage, and establish a process for placing low-impact barriers such as boulders and logs to protect biodiversity.		E	Short
4	Investigate design solutions to stabilise erosion issues at Te Kopahou Visitor Centre Entrance.	N	Short
5	Investigate establishing a permit system for 4WD access to Te Kopahou Reserve to promote responsible use and minimise environmental impacts.	E	Medium
6	Scope, renew and update the Te Kopahou Visitor Information Centre interpretation with refreshed content, improving its role as a hub for visitor education. Including looking at the earthquake fault exposure.	E	Medium
7	Implement night-time vehicle closures from October to April (9pm–6 am) and from May to September (7pm–6 am), supported by Sunday and selected public holiday closures. Apply a lock-in fee for vehicles exiting outside the stated hours. Implement through a traffic resolution.	E	Short
8. Investigate opportunities for cultural and ecological monitoring of kekeno in partnership with mana whenua and DOC		N	Medium

Funding status key

E Existing funding covers delivery
N Needs new funding, subject to approval
E/N Review covered by existing funds; implementation may need new funding

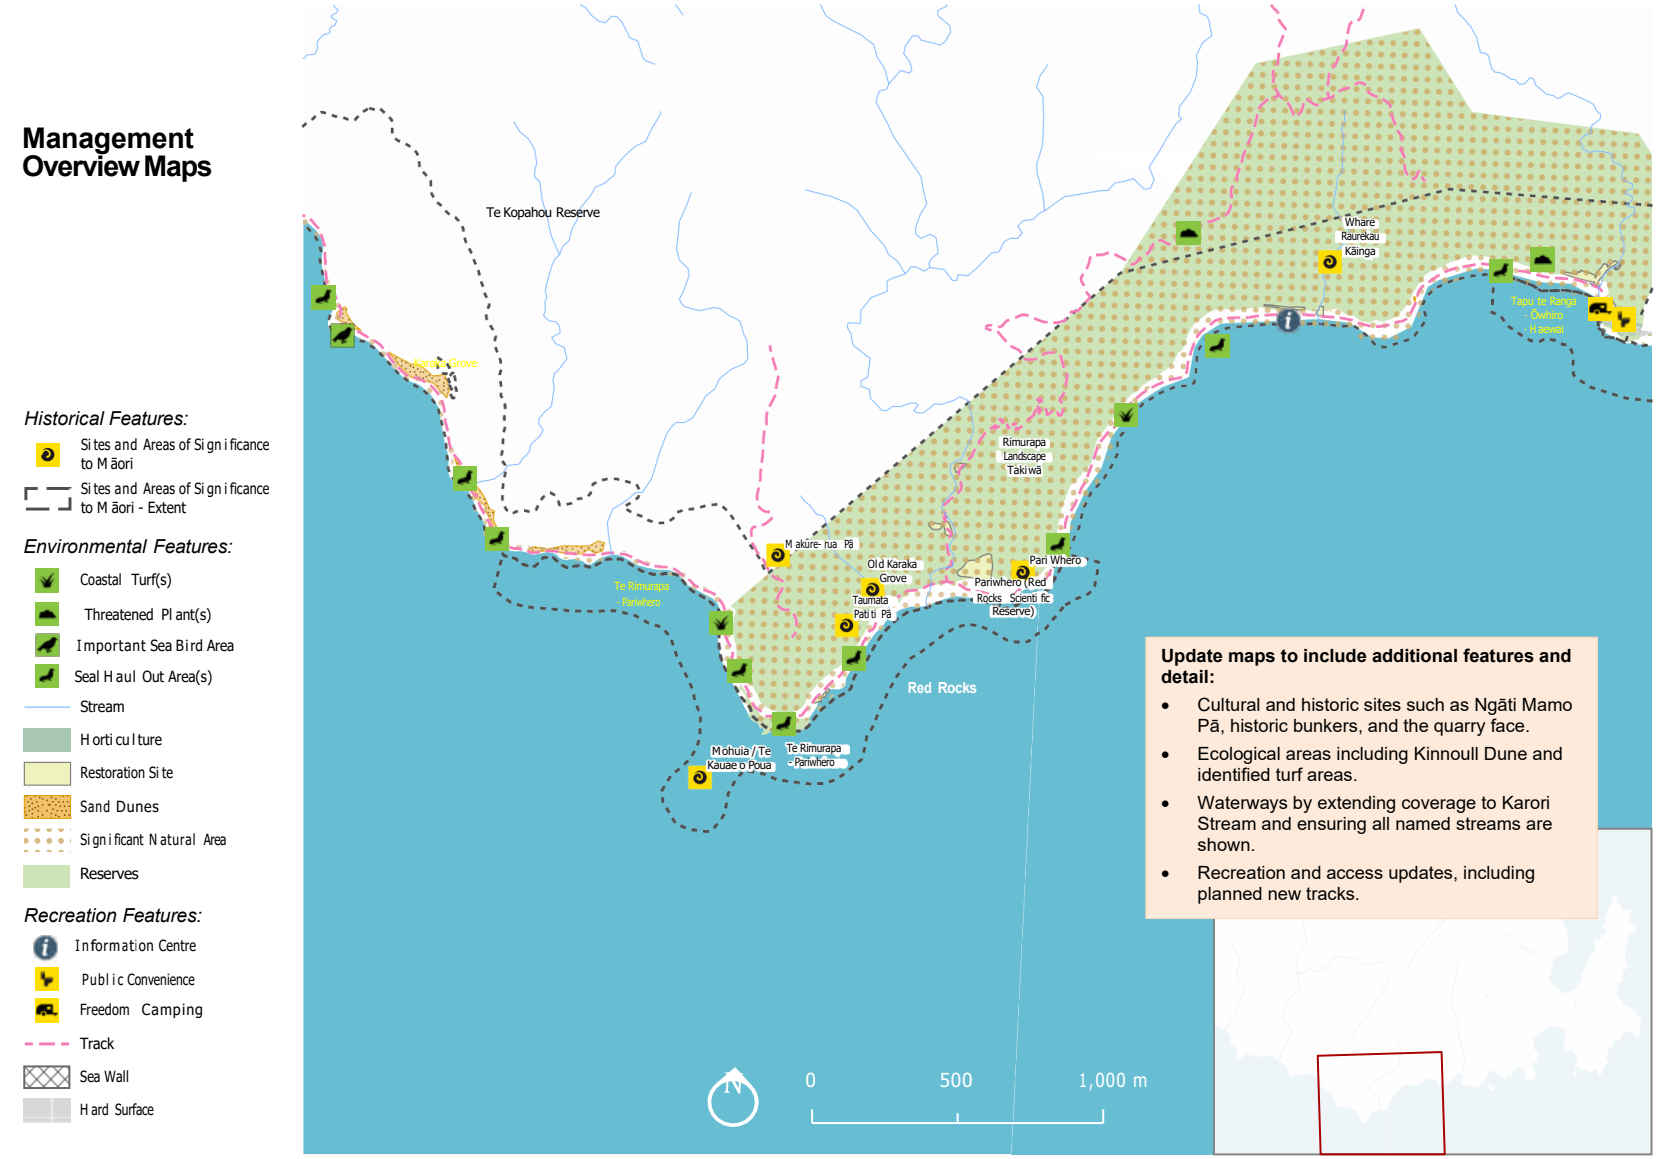
Management Overview Maps



Sector 2
Southern Bays

The Southern Bays sector spans approximately 5km of rugged coastline along Te Moana o Raukawakawa (Cook Strait) between Ōwhiro Bay and Te Raekaihau Point.

It encompasses Ōwhiro Bay, Island Bay, Houghton Bay, and Princess Bay and Taputeranga Island. It includes Recreation Reserves, Scenic Reserves, Historic Reserves and Local Purpose Reserves as detailed in the land schedules and is adjacent to the Taputeranga Marine Reserve.

2.1 Enduring connection to the landscape

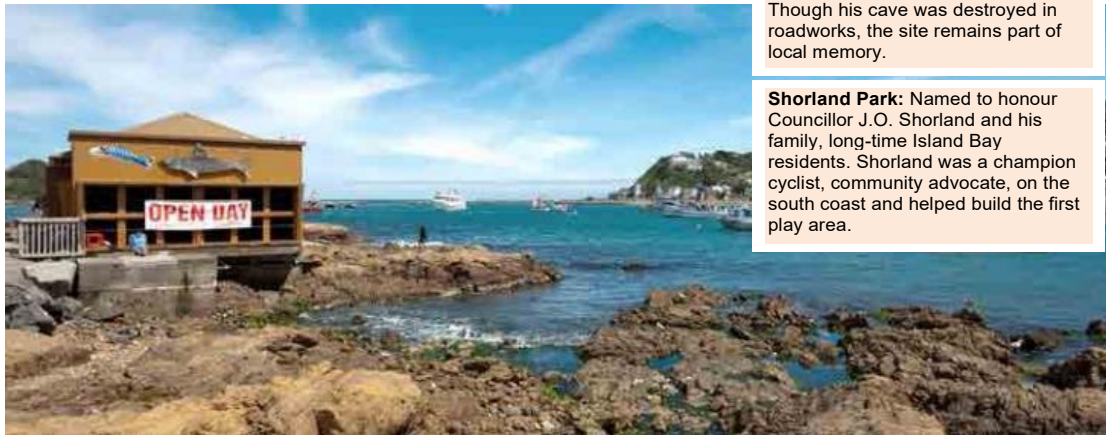
The Southern Bays sector has been shaped by the strong winds, tides, and swells of Te Moana o Raukawakawa, as well as by tectonic activity.

The headlands are characterised by narrow shore platforms uplifted during the 1855 Wairarapa earthquake, steep escarpments, rocky reefs, and relic dunes, which reflect the area's dynamic geological history. In contrast, the gravel and sandy bays of Island Bay and Princess Bay are more sheltered and, in the case of Island Bay, is the only sheltered anchorage on the south coast, protected from Taputeranga Island. The once more extensive dunes systems along this coast are now constrained by the coastal road and residential development.

Key sites and stories of significance

Historic pā and kāinga: The Southern Bays are rich in archaeological remnants of pā and kāinga, including Te Mapunga kāinga near the Island Bay foreshore, Uruhau Pā looking over Island Bay, the kumara pits near Ōwhiro Bay Stream, and Haewai kāinga at Houghton Bay. Te Mapunga, named for the black shag, reflects how seasonal bird behaviour guided fishing practices and signalled times of abundance. As mana whenua state *"The arrival of Te Mapunga in this area heralded a change in season, and better times to come as this bird was an expert fisher. It is said our people watched these birds to inform them where the fish were running, much like today."*

Italian and Shetland Fishing Communities and the blessing of the boats: A fishing village was established in Island Bay in the 1870s by newcomers from the Shetland Islands and Italy. Shetlanders introduced longline fishing and durable handmade buoys, while Italians brought Mediterranean fishing traditions. Together, they formed a vibrant community, commemorated annually through the "Blessing of the Boats" ceremony at the Island Bay Festival, which began in 1933. The boats circle Taputeranga Island for an anointing of safe passage and bountiful catches.



Memorial Band Rotunda: Built in 1930 as a war memorial, the Band Rotunda at Shorland Park serves as a venue for music and events during the Island Bay Festival.

The Hermit's Cave: In the late 19th and early 20th centuries, the 'Hermit of Island Bay' became a local character and tourist attraction. Though his cave was destroyed in roadworks, the site remains part of local memory.

Shorland Park: Named to honour Councillor J.O. Shorland and his family, long-time Island Bay residents. Shorland was a champion cyclist, community advocate, on the south coast and helped build the first play area.

Taputeranga Island

Taputeranga, translated as the “sacred gathering place” holds cultural and spiritual significance. This historic reserve, returned to Ngāti Toa under the Ngāti Toa Rangatira Claims Settlement Act 2014[24], It is an important site to Ngāti Toa Rangatira and the association with Te Moana o Raukawa (Cook Strait region).

In the 1820s, a decisive engagement occurred at Rangitātau Pā at Tarakena Bay when Ngāti Ira were defeated by a force led by Pomare of Ngāti Mutunga and also included Ngāti Toa Rangatira.At that time Pomare was married to Te Rauparaha’s niece, Tāwhiti. The survivors were taken to Taputeranga Island to await their fate and the arrival of Te Rangihaeata. The Ngāti Ira ariki tapairu (chieftainess) Tamairangi and her son Te Kekerengu were also held captive. Te Rangihaeata decided to spare the lives of the captives and Te Kekerengu presented Te Rangihaeata with the famous mere pounamu (greenstone club) named Tāwhito Whenua as a symbol of the transfer of mana whenua.

This history forms an important chapter in the story of Ngāti Toa Rangatira and the rights and interests of the iwi in the lower North Island and association with the Kaikōura coast at Kekerengu.

Taputeranga remains connected to Ngāti Toa Rangatira through whakapapa, customary use and the exercise of kaitiakitanga. The values of Taputeranga are associated with the symbolic nature of the island and as a pouwhenua, mahinga kai, ngā tohu o te moana, wāhi tapu and wāhi maumahara

Taranaki Whānui also maintain enduring connections to Taputeranga, reflected in whakapapa, ancestral use, and continued ahi kā in the surrounding area

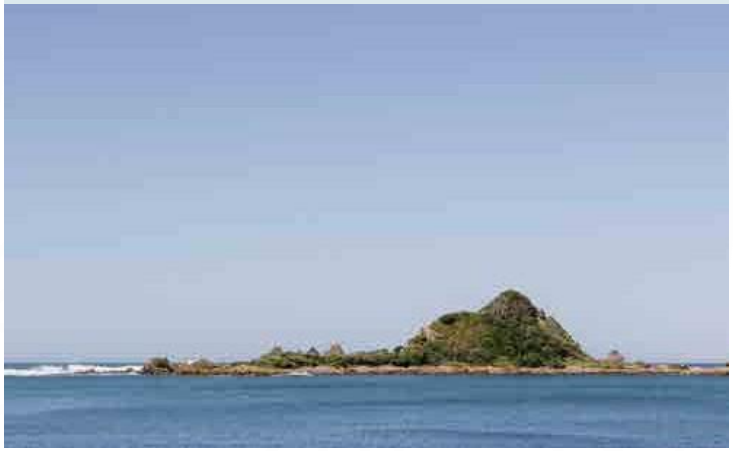
Management policy

a. **Manage Taputeranga Island in partnership with Ngāti Toa,** supporting their leadership in cultural restoration and ecological care.

b. **Support the development of a cultural and ecological restoration plan for Taputeranga Island** to replace the existing 2011 ecological restoration plan.

c. **Protect the dark sky environment in Southern Bays** by restricting artificial lighting where feasible to enhance stargazing, aurora viewing, and nocturnal wildlife habitats.

d. **Recognise and protect historic and archaeological sites across the park spaces of Southern Bays** by working with mana whenua to ensure their significance is acknowledged through appropriate renaming, interpretation, and protect



Under this legislation Wellington City Council is the administering body of the reserve.

22 Access to the coast for recreation and enjoyment

The Southern Bays sector offers a variety of recreational opportunities across its bays. Island Bay stands out as a key destination, with 73% of Wellingtonians visited it in the past year.

The beach is a favourite swimming spot, complemented by Shorland Park's popular play area, volleyball court, BBQ facilities, and the off-leash dog exercise area at Trent Street. The Bait House Marine Education Centre provides learning opportunities, while the former Surf Life Saving Building offers a bookable space for events. Visitors can explore the marine environment via a snorkelling trail in Island Bay as well as key training and recreational dive sites at Sirens Rocks and Houghton Bay. As the endpoint for the Te Araroa Trail, the Southern Walkway, and the City to Sea Walkway,. These trail areas are recognised in the Wellington Regional Trails for the Future Framework 2017 as signature trails.

Princess Bay is a well-used summer destination, with 41% of Wellingtonians visiting in the past year. Nearby, scenic walking tracks at Te Raekaihau Point and Oku Street Reserve offer coastal exploration opportunities. Houghton Bay is Wellington's second most popular surfing location and has a designated dog exercise area, while Ōwhiro Bay provides opportunities for swimming, picnicking, rock pooling, and exploring coastal features. The boat ramp at Ōwhiro Bay and launching site at Island Bay provide key launching points for boaties, supporting recreational fishing, diving, and coastal access.

Management policy

a. **Manage Island Bay as a primary coastal area and visitor destination by:**

i. Maintaining year-round public access to key amenities, including toilets and showers to support recreational use.

ii. Maintaining Shorland Park as a well-equipped destination play area that caters to a wide range of users, including accessibility needs.

iii. Managing sand accumulation around public facilities at Island Bay to enable access while minimising interference with natural coastal processes.

iv. Supporting community events, cultural activities, and recreational activations that align with the values of the coastal environment.

b. **Manage Princess Bay as a primary coastal area** and visitor destination by maintaining public facilities, including toilets, changing rooms, and parking, to meet visitor needs while ensuring environmental sensitivity.

c. **Maintain the track network by:**

i. Ensuring clear and visible signage for the City to Sea Walkway and Southern Walkway entrances and along the route to support visitor navigation at Island Bay in alignment with the Wellington Regional Trails for the Future Framework 2017.

ii. Supporting connectivity and accessibility of track networks at Oku Street Reserve and Te Raekaihau Point headland to provide recreationalopportunities.

f. Recognise Sirens Rocks and Houghton Bay as **important dive sites** for recreation and training.

g. **Recognise Houghton Bay** as Wellington's second most popular surf break, generally suited to intermediate and experienced surfers, and Island Bay/Taputeranga Island for its reef breaks for advanced surfers. Ensure land-based access and amenity needs are considered in future planning.

d. **Maintain public access to boat launching sites** at Ōwhiro Bay and Island Bay.

e. **Manage designated off-leash dog areas** at Houghton Bay Beach and Island Bay Beach to balance recreational needs with habitat

h. **Maintain the open lawn areas along Ōwhiro Bay Parade** as a neighbourhood park space for recreation.

2.3 Protection and restoration of coastal ecosystems

The Southern Bays sector supports diverse and ecologically significant habitats, including coastal wetlands, dune systems, rocky reefs, and estuarine environments.

It is also the next focus area for Predator Free Wellington, with efforts underway to make the area predator-free. Combined with its unique Cook Strait coastal environment, this makes the Southern Bays a vital ecological stronghold. The area is closely linked to the Taputeranga Marine Reserve, a marine biodiversity hotspot home to over 180 species, including pāua, kōura (crayfish), kina, and extensive kelp forests.Significant Natural Areas (SNAs) include:

Ōwhiro Bay and shore platform: This site features a coastal wetland and the Ōwhiro Stream estuary, one of Wellington's few īnanga spawning sites and a popular location for gulls. The stream supports migratory fish, shorebirds, penguins, and rare plants like pīngao and shore stonecrop.

Island Bay foreshore and dunes: Combining a rocky shore platform and dune system, this area supports native bird species, including kōrora. The dunes stabilise the coastline, support native biodiversity, and mitigate erosion. Community initiatives, led by the Island Bay Coast Care Group, have enabled the recovery of sand-binding plants like pīngao and spinifex, though visitor impacts, and infrastructure challenges persist.

Houghton Bay and Princess Bay dunes: This dynamic coastal system includes low dunes, coastal turf, and shingle beaches, providing critical habitats for skinks, geckos, reef herons, and penguins. Coastal turf at Houghton Bay and nearby rock stacks support threatened species, such as reef herons and red-billed gulls. However,

leachate from the former Houghton Valley landfill causes contaminated issues into the marine reserve.

Te Raekaihau Point: Rocky shore and reef system supporting species like kōrora and sparse vegetation. Restoration efforts focus on invasive weed control and native plant regeneration, trialling innovative methods such as light wells to support ecological recovery. A project is also underway to remove contamination from Te Raekaihau Point.

Taputeranga Island: A refuge for native seabirds, coastal vegetation, and at-risk lizard species. As an offshore island with limited human presence, it presents significant restoration opportunities, potentially enhancing biodiversity across the wider coastal ecosystem.

Management policy

a. **Maintain beaches in their natural state** by avoiding mechanical grooming, except where necessary for coastal resilience and public access.
b. **Support the long-term ecological restoration of** the inland side of the formed road at Te Raekaihau Point by controlling invasive weeds, restoring native coastal vegetation, and fostering community-led initiatives, including sustainable weed management trials by Te Ohu o Te Raekaihau.
c. **Support the protection and enhancement of Taputeranga Marine Reserve** by enabling and collaborating with relevent agencies and the community on anti-poaching measures.
d. **Continue to support efforts to mitigate water contamination** risks at Houghton Bay by collaborating with GWRC on stormwater management improvements and addressing historic landfill impacts.
e. **Support marine biodiversity initiatives** by working with partners, such as Mountains to Sea, Marine Education Centre Trust and Friends of Taputeranga Marine Reserve, to explore kelp restoration efforts and enhance natural coastal resilience.

24 Nature first approach to resilience

The Southern Bays sector faces significant challenges from rising sea levels, storm surges, and coastal erosion, with frequent and intense storms causing severe impacts on infrastructure, natural habitats, and recreational spaces.

Major storm events in 2013 and 2019 devastated sea walls, ecosystems, and public amenities, highlighting the vulnerability of this narrow coastal zone where the ocean, roads, and homes are tightly constrained. At Ōwhiro Bay beach, Council has regularly reshaped the sand to mitigate wave ramping and over topping, and reduce flooding from the modified estuary and nearby stream, but recurring flooding underscores the need for long-term solutions to restore natural hydrological functions. Similarly, the Sirens Rocks carpark remains unstable despite recent coastal armouring, with ongoing storm damage threatening its use. In Island Bay, coastal infrastructure, including public toilets and the Bait House, are increasingly exposed to storm-driven sand accumulation and erosion, raising the need for adaptive management, retreat strategies, and nature-based solutions.

Management policy

a. Enhance coastal resilience at Island Bay and Princess Bay by continuing dune restoration projects, using fencing and angled accessways where required to prevent trampling, and managing sand movement to balance infrastructure needs.

b. Monitor soft shorelines, which are most vulnerable to climate change and sea-level rise. Monitoring will improve understanding of beach processes, support predictions of shoreline response, and inform future adaptive management.

c. Plan and implement adaptive responses to manage the impacts of sea-level rise along the Southern Bays coast.

Southern Bays | **Action table**

#	Actions	Funding status	Time frame
1	Work with Ngāti Toa to develop and implement an updated cultural restoration plan for Taputeranga Island, building on the 2011 ecological restoration plan to ensure its cultural and ecological significance is actively protected and maintained.	E	Medium
2	Investigate modifications to the Island Bay Surf Life Saving Club and public toilet facilities at Island Bay Beach to improve access to public toilets and reduce sand burial impacts.	E	Medium
3	Investigate options to enhance the entranceways for the City to Sea Walkway, Southern Walkway, and Te Araroa Trail at Shorland Park, improving visibility and recognition of these key routes.	E	Medium
4	Assess and implement wayfinding, interpretation and track improvements at the Te Raekaihau Point headland, ensuring clear navigation and visitor information.	E	Medium
5. Support the restoration of historic names by: a. Restoring the name Uruhau Reserve to Melbourne Road Reserve b. Considering the name Mapunga Park to Shorland Park and naming the playground within it Shorland Play Area c. Exploring opportunities to restore other historic names in and around Houghton Bay, including View Road Park and Buckley Street Reserve.		E	Short
5	Incorporate narratives and interpretation into Shorland Park to reflect its history as the former Te Māpunga kāinga, a Māori settlement of Ngāi Tara and Ngāti Ira. Work with the historical society and descendants to also acknowledge Mr Shorland through interpretation at the site.	N	Medium
6	Investigate options to address erosion of the dune system at Princess Bay caused by the stormwater pipe and implement appropriate mitigation measures.	E	Short
7	Investigate opportunities to enhance coastal resilience at Ōwhiro Bay through coastal vegetation buffering, building on current beach management efforts and monitoring data.	E	Medium
8	Investigate long-term resilience options for the Sirens Rocks carpark to address overtopping swells and coastal hazards.	E	Medium
9	Develop a landscape and amenity plan for the Southern Bays coastline (see Value 3: Hononga Taiao – Action 3 for further scope).	N	Short
10. Consider the future of the bait house in context of coastal hazards, building strengthening, and lease renewal. Work with the Marine Education Trust on a plan for future building works.		E	Medium
11. Work with the Oku Street community group to enhance Oku Reserve and its connections by: improving entrances and connections(e.g. Severn Street), supporting community-led planting projects (including around the Sirens Rocks seawall)/		E	Short
12. Explore feasibility to improve the accessibility at Island Bay, considering pathways, entrances, and facilities are designed to accommodate people of all abilities		E/N	Long

Management Overview Maps

Sector 3
Hue te Para
Lyall Bay

The Hue te Para sector spans approximately 5km between Te Raekaihau Point (west) and the airport runway (east). It includes Lyall Bay Beach, Dorrie Leslie Park, and the adjacent coastline, featuring Wellington's most popular surf beach. The reserves in this sector are classified as Recreation Reserve, Local Purpose Reserve (Esplanade), and Scenic Reserve, as detailed in the land schedules.

3.1 Enduring connection to the landscape

Lyall Bay is a windswept, expansive coastal bay, defined by its broad sandy beach, rugged rocky headlands, and crashing waves.

Once part of a vast dune system that spanned the entire isthmus, its Māori name, Hue te Para (ripe gourd), reflects its historical role as a vital food-gathering site. Over time, significant human

modifications – including dune mining and the construction of Wellington's International Airport – have dramatically altered the natural landscape and ocean patterns.

Key sites and stories of significance

Te Awa a Tāia: This historic waterway once flowed through what is now Lyall Bay, forming a channel that served as a second entrance to Wellington Harbour. It separated Te Motu Kairangi (the Miramar Peninsula) from the mainland, making it an island. Following the Haowhenua earthquake, estimated to have occurred around 1460, the land was uplifted, transforming the peninsula into an isthmus. Over time, further geological changes and human activities contributed to the complete disappearance of the waterway.

Dune system: Post Haowhenua the Rongotai isthmus became an expansive and dynamic dune system.

Archaeological sites: Evidence of early Māori settlement includes charred moa bones found in the sands of Lyall Bay. The Waitaha kainga at the western end of Lyall Bay and the pā terraces between Lyall Bay and Houghton Bay reflect settlement patterns.

Wellington Airport: Construction beginning in the 1950s, the airport involved significant land reclamation from the bay, altering its natural landscape. This reclamation reshaped the bay's form and affected wave dynamics, leading to changes in erosion and accretion patterns that continue to influence Lyall Bay's beach and the stability of surrounding infrastructure, particularly along the eastern shoreline.

Maranui and Lyall Bay Surf Life Saving Clubs: Lyall Bay is home to two of New Zealand's oldest surf lifesaving club: Lyall Bay (1910) and Maranui (1911). Both have played a long-standing role in beach safety, volunteer patrols, and the bay's community.

Management policy

a. **Acknowledge and share the evolving nature of Lyall Bay's coastline** by incorporating interpretation and storytelling into management, highlighting past dune systems, human impacts, and ongoing adaptation efforts.

32 Access to the coast for recreation and enjoyment

Hue te Para is a vibrant recreational hub and Wellington's largest sandy beach, attracting visitors year-round for surfing, wind-powered water sports, swimming, dog walking, and coastal walks.

It is nationally significant to the sport of surfing, having been surfed by Duke Kahanamoku in 1915, one of the first demonstrations of modern surfing in Aotearoa. Today it remains the city's most popular surf venue, with a variety of breaks including the nationally recognised surf break at "The Corner." The bay is also home to two of New Zealand's oldest surf lifesaving clubs, which play a key role in beach safety and community life.

The bay is also a key site for wind-powered water sports, with windsurfing, wing foiling, and kitesurfing bringing year-round activity and reflecting Wellington's windswept coastal identity.

Hue te Para features a strong urban coastal character, shaped by residential and commercial buildings lining the beachfront. Popular cafés and eateries contribute to a lively social scene, complementing the recreational use of the beach and surrounding public spaces. Essential recreation infrastructure, including parking, toilets, a play area, and seating areas, supports diverse activities.

To the west, Dorrie Leslie Park provides open grass areas and an off-leash dog exercise zone. To the east the Wellington International Airport runway restricts some coastal access for public safety and operational reasons, with safety measures in place to manage hazards associated with aircraft operations.

Management policy

a. **Manage Lyall Bay Beach as a premier beach area** and visitor destination for a range of shared and accessible uses.

b. **Support Lyall Bay as a regionally and nationally** significant surfing destination by maintaining appropriate facilities, enabling surfing events, supporting surf lifesaving clubs, and safeguarding continued public access to the beach.

c. **Require that car parking needs at** the eastern end of Lyall Bay be taken into account in future planning, recognising the needs of surfers, dog walkers, and other users of this high-demand beach area.

d. Support and enhance the **vibrancy of Lyall Bay** by enabling appropriate ancillary activities in and around the reserve such as coffee carts, event spaces, saunas, and recreational hire services.

e. **Collaborate with stakeholders to guide future planning** for the eastern section of Lyall Bay Parade, making sure that commercial activity, climate adaptation, and coastal protection are considered in an integrated manner.

f. **Maintain the coastal walkway** so that it remains clear from obstructions such as wind blown sand and overgrown vegetation.

g. **Work with Wellington Airport to support safe, low-impact recreational use along the coastal edge of the airport seawall for activities** like fishing, plane watching, and walking – while managing environmental impacts and respecting operational constraints.

h. **Support a safe, clearly identified wind-powered water sports rigging and launch area at Lyall Bay (west) and at Dorrie Leslie Park,** enabling a space for users to set up and remove gear and designed to coexist with dune restoration and coastal resilience objectives.

i. **Enable Wellington Airport** to provide clear safety signage and other protection measures near the airport to warn of hazards associated with aircraft operations and to support public safety.

3.3 Protection and restoration of coastal ecosystems

Hue te Para encompasses diverse and ecologically significant areas that support Wellington's coastal biodiversity.

Key areas that provide vital habitats for native plants, birds, and lizards include:

Waitaha Cove: A shingle beach backed by regenerating vegetation, including taupata, ice plant, New Zealand celery, and native carrot. The cove features a small incipient dune and swale, offering potential habitat for saltmarsh plants. Indigenous bird species, such as the pied oystercatcher, inhabit the area, alongside rock platforms.

Pohowera (Dotterels) at Wellington Airport's southern foreshore: A small, threatened population nests on the inboard and seaward sides of Moa Point Road, adjacent to the airport runway. These birds are highly vulnerable to human disturbance, introduced predators, and other environmental pressures, as well as operational hazards such as bird strike.

Lyall Bay dunes: Community-led efforts since the 1990s have restored native sand-binding plants like pīngao and spinifex, which are vital for dune stabilisation. They provide nesting and foraging areas for native birds, such as variable oystercatchers and red-billed gulls, and habitat for invertebrates and reptiles like skinks and geckos.

Ngaroma Stream: Now piped, the stream comes out between Maranui Surf Saving Club and the former Plunket building. The stream is a spawning habitat for freshwater fish.

Kororā habitat at Surfers' Corner: The riprap along the Airport runway at Surfers' Corner provides a well-used nesting area for kororā. Managing disturbances in this area is crucial to supporting the local kororā population.

Management policy

a. **Support improved stormwater management along Lyall Bay,** including considering relocating outlets to discharge into the intertidal zone where feasible, avoiding discharges behind dunes to protect natural coastal processes, consolidating smaller outfalls to reduce the number of discharge points, and restoring natural hydrological functions where possible, as recommended in the Lyall Bay Coastal Remediation Report (eCoast, 2016).

b. **Continue to strengthen dune resilience** through restoration initiatives by supporting continued planting of native sand-binding species like pīngao and spinifex.

c. **Protect sensitive dune areas** from human disturbance by implementing appropriate measures, such as dune fencing and angled accessways, to balance recreation with ecosystem protection.

d. **Protect and support kororā populations** by managing nesting areas around the riprap seawall, incorporating public education efforts, and minimising disturbance.

e. **Balance dog access and wildlife protection** by managing dog restrictions near the Lyall Bay riprap seawall and other sensitive areas to prevent disturbances to nesting sites and protect coastal biodiversity.

e. Protect the southern foreshore of Wellington Airport as a **pohowera (banded dotterel) nesting site**, working with Mainland Island Restoration Operation (MIRO) and the airport on predator control, disturbance management, and public awareness, while considering Airport operational safety and bird-strike risk.

3.4 Nature first approach to resilience

Hue te Para faces ongoing challenges from storm surges, coastal erosion, and rising sea levels, which impact its beach, dunes, and infrastructure.

Surfers' Corner, where the airport's shore reclamation meets the beach, has been the focus of significant Council management efforts and will remain a persistent erosion hotspot requiring ongoing interventions such as sand push-ups and repeat planting. Due to historic modifications, Lyall Bay Beach no longer responds naturally to storm events, and active coastal management is essential to maintain dune resilience and beach function, including regular sand redistribution and stormwater maintenance. Additionally, Dorrie Leslie Park and the ex-Maranui Depot site, which operated as a landfill from 1931 to 1936, present contamination risks if erosion accelerates or the area is disturbed.

Management policy

a. **Support active and adaptive beach management at Lyall Bay** to maintain dune resilience and beach function. This includes:

- Actively managing the erosion-prone area at Surfers' Corner, where the airport reclamation meets the beach, through interventions such as sand push-up, dune wall expansion, sand redistribution, and planting to maintain a buffer between the sea and the dune wall.
- Expanding planting of spinifex to encourage wider, more resilient dune development across the bay.
- Maintaining a closed sand system by returning windblown sand from streets and adjacent areas back to the beach, preventing unnecessary sand loss during street cleaning or storm response operations.
- Supporting stormwater management practices that minimise erosion risks and direct outflows away from dune systems.

b. **Accommodate runway seawall maintenance** by enabling Wellington Airport to maintain and upgrade the seawall.

c. **Monitor and manage contamination risks** at Dorrie Leslie Park and the ex-Maranui Depot site as sea levels rise and erosion progresses, ensuring appropriate adaptive responses.

Hue te Para Lyall Bay | **Action table**

#	Actions	Funding status	Time frame
1	Develop a plan for the ex-Maranui Depot site that increases the recreation, environmental restoration, and public benefit of the site. Consider classifying it as a reserve, while also ensuring the plan addresses its closed landfill status and the old quarry face, and assesses remediation needs. Implementation of the plan should be incorporated into Asset Management Plans and considered for funding through a future LTP/Annual Plan.	E	Medium
2	Work with the transport infrastructure team to develop and implement a process for actively managing sand at Lyall Bay, including returning windblown sand to the beach system where feasible and undertaking targeted sand redistribution (eg sand push-ups) following storm events to maintain beach function, protect infrastructure, and support dune resilience.	N	Medium
3	Work with key stakeholders to develop an integrated plan for the eastern Lyall Bay Parade reserves, considering street frontage, business activity, transport, and dune restoration.	N	Short
4	Extend the Lyall Bay Parade dune wall from Tirangi Road to Surfers Corner to protect dune systems, reduce windblown sand on the footpath, and improve pedestrian access, while incorporating access points and complementary dune planting.	E/N	Medium
5	Work with Wellington Airport to improve recreational access along the western breakwater, investigating and implementing options for better pedestrian, recreation and cycling connections.	E/N	Long
6	Work with three waters asset owners/managers to investigate and plan improvements to stormwater management along Lyall Bay, including relocating or naturalising outfalls to support dune stability, reduce erosion risks, and enhance coastal resilience, consistent with recommendations in the Lyall Bay Coastal Remediation Report (eCoast, 2016).	N	Long
7.	Explore opportunities to improve accessibility at Lyall Bay beach, including consideration of car parking and accessible beach equipment ie beach wheelchairs..	E/N	Long
8	Restore historic names by renaming Lyall Bay Esplanade Reserves to Hue te Para Park and Lyall Bay West Escarpment to Waitaha Reserve.	E	Short
9	Partner with the windsports community to formalise the lawn at Lyall Bay (west) and Dorrie Leslie Park as recognised rigging/launch areas, while safeguarding dune restoration and coastal resilience efforts. Work with users to identify practical improvements, including safe walkways, safe poles and ropes, and easier access from the car park to the rigging area.	E	Short
11	Continue to work with Wellington Airport on providing toilet facilities near Surfers Corner, Lyall Bay.	E	Short

Funding status key

E Existing funding covers delivery
N Needs new funding, subject to approval
E/N Review covered by existing funds; implementation may need new funding

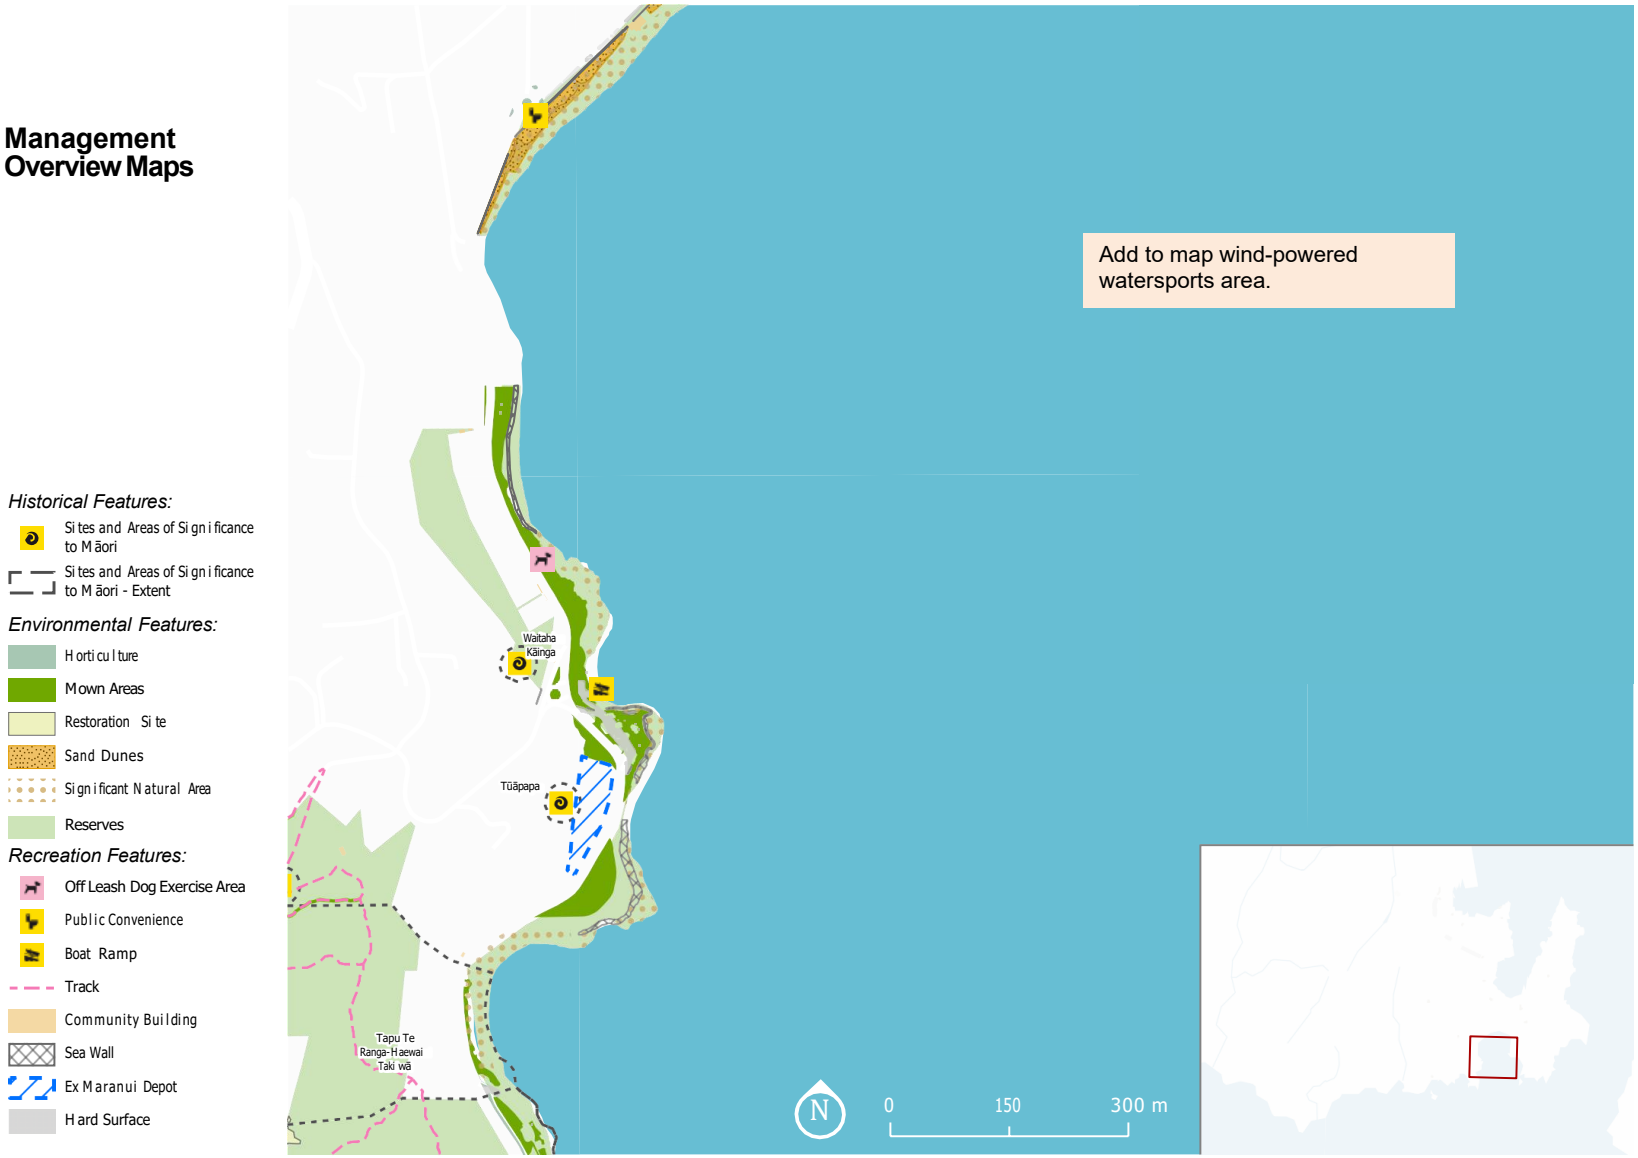
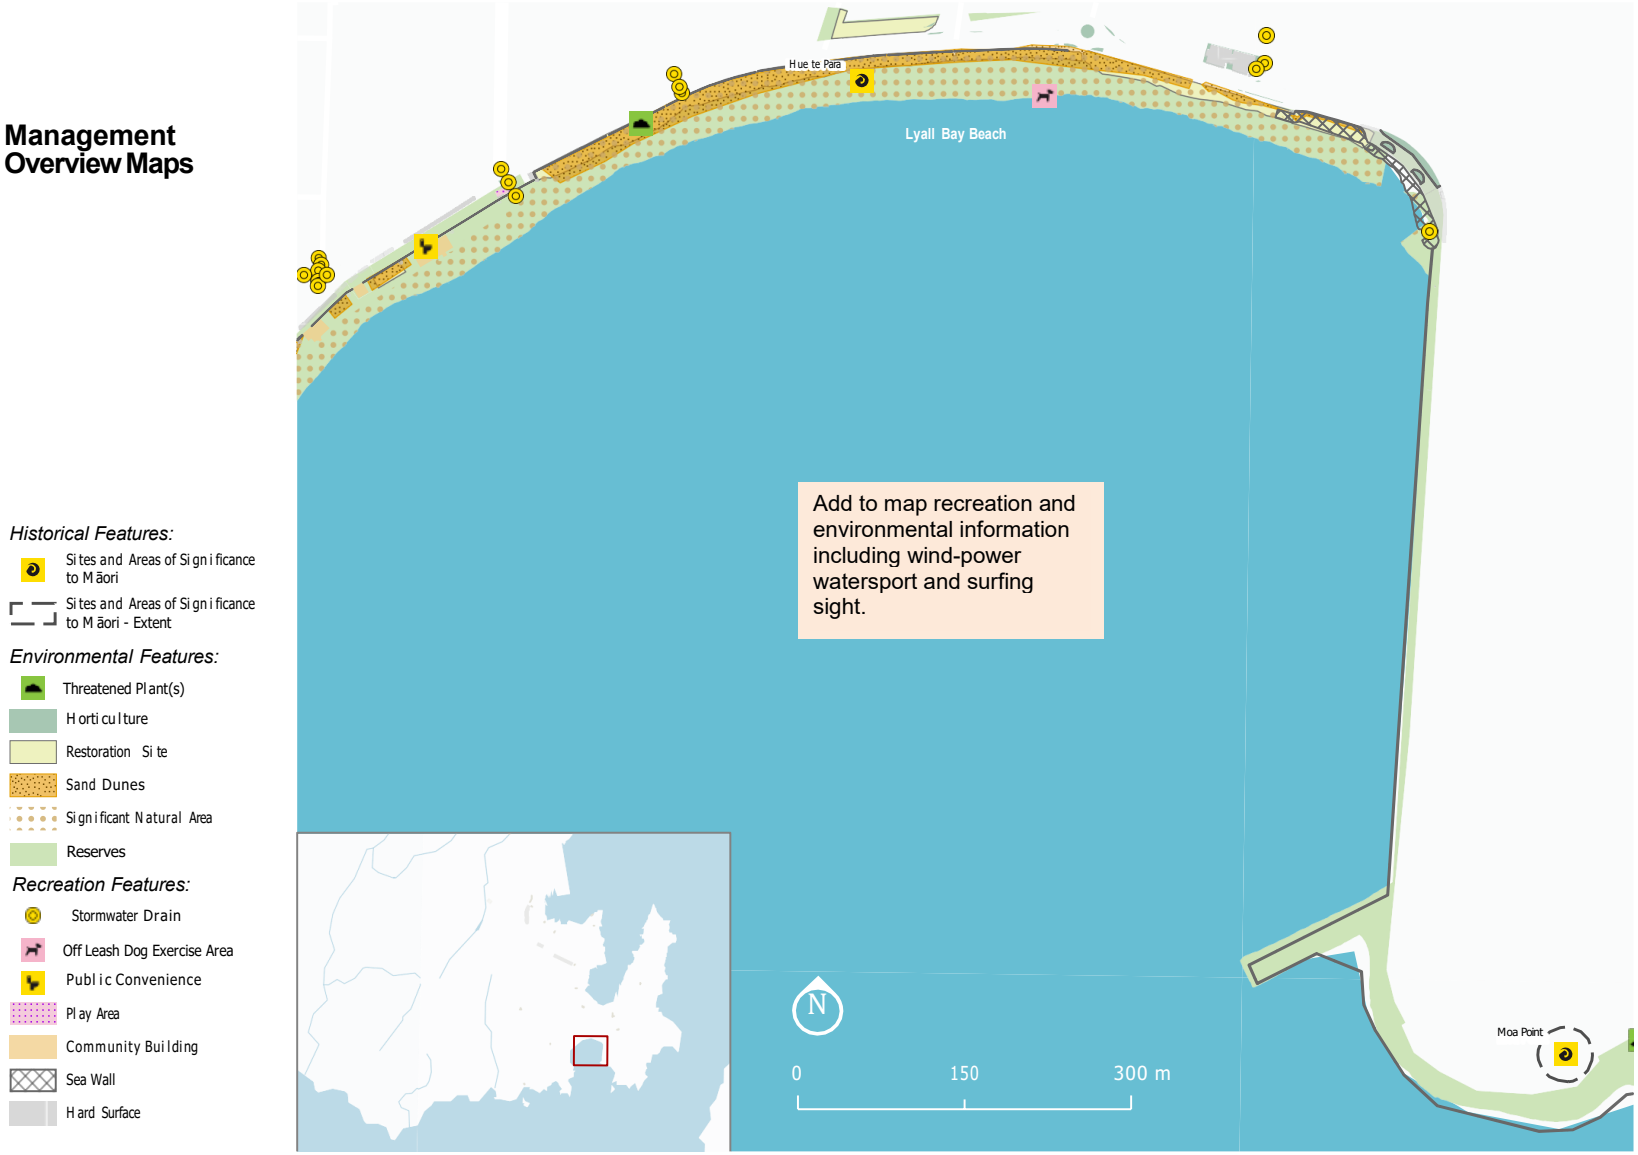
Management Overview Maps



Management Overview Maps



Sector 4 **Rangitatau** Moa Point to Breaker Bay

The Rangitatau sector spans approximately 4km along Wellington's rugged southern coastline, stretching from Moa Point to Breaker Bay.

This area features a mix of recreation reserves, local purpose reserve, historic reserves, and scenic reserves, including the bush-covered Rangitatau Reserve and the exposed coastal edge. While well-connected by a coastal road, the area retains a sense of seclusion.

This sector also contains Ōruaiti Reserve (Point Dorset), a wāhi tūpuna owned by Taranaki Whānui ki Te Upoko o Te Ika. It is a site of cultural, ecological, and historic significance, forming the eastern headland of Te Whanganui a Tara and providing a powerful vantage over the harbour and Te Moana o Raukawakawa (Cook Strait).

4.1 Enduring connection to the landscape

Rangitatau sector is characterised by its rugged, natural landscape, bush-clad hillsides, and rocky coastal edge.

This area holds significant cultural and historical value, marked by its association with key Māori pā sites, lookout points, and important archaeological features. Scenic viewshafts over the harbour entrance and Te Moana o Raukawakawa (Cook Strait) highlight its historical role as a strategic vantage point. The reserve's name, derived from Rangitatau Pā, means "Heaven's door," reflects its position as a gateway to Te Whanganui a Tara and/or its thematic alignment with sky-gazing names across Te Motu Kairangi (Miramar Peninsula).

Key sites and stories of significance

Rangitatau Pā and Poito Pā: Rangitatau Pā, situated on the western headland of Tarakena Bay, was a pivotal site for Ngāi Tara. It served as a lookout over the approaches to Te Whanganui a Tara and protected the strategic sea route to Whetu Kairangi Pā. Nearby, Poito Pā was located on a low spur above the Poito Stream, its name means "float of a net," reflecting the traditions of net fishing. The pā were central to Māori settlement in the area, with prominent Ngāi Tara rangatira Tuteremoana residing there. Rangitatau was the site of a decisive engagement during the migrations of Ngāti Toa and their allies. As Tā Matiu Rei recounts, *"Following Te Pakanga o Waiorua, further conflict occurred, including the final defeat of Ngāti Ira/Ngāi Tara at Rangitatau Pā, at Moa Point."* Both pā were destroyed in the early 19th century, resulting in the loss of many lives and rendering the area tapu as a site of bloodshed.

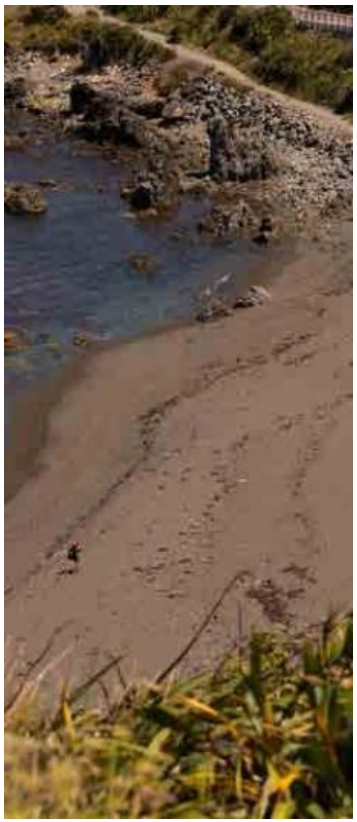
Tarakena Bay: Tarakena Bay was a traditional tauranga waka (canoe landing site) and mahinga kai (harvest site). Its sheltered waters made it ideal for waka to land and for seasonal gathering of food.

Hue tē Taka: A wāhi tupuna site near the airport. Its name reflects its unique shape, likened to a gourd (hue) fastened securely like a fish-hook (taka) to a line.

Atatürk Memorial: Opened in 1989, this memorial commemorates Mustafa Kemal Atatürk, the first president of modern Turkey and a key figure in the defence against Allied forces at Gallipoli during World War I.

Wahine Memorial: One of several memorials commemorating the Wahine disaster, this site honours the 51 lives lost when the Lyttleton–Wellington ferry Wahine struck Barrett Reef and sank during a severe storm on April 10, 1968.

Palmer Head Gun Emplacement: Built in the 1930s, this World War II coastal defence site formed part of New Zealand's military fortifications, designed to protect the entrance to Wellington Harbour.



Ōruaiti

Ōruaiti Pā: Ōruaiti Pā was established around 1625 AD as a fortified village positioned on the eastern headland of Te Whanganui a Tara. Its strategic location allowed for clear visual connections to other key pā sites, including Te Whetū Kairangi above Worser Bay and Rangitatau at Palmer Head, forming part of an integrated defense network along Te Motu Kairangi. Archaeological remnants – such as terraces, storage pits, middens, and karaka groves – reflect the depth of Māori occupation and activity in the area. As former Port Nicholson Block Settlement Trust Chairman Mahara Okeroa explains, *"Ōruaiti Pā was a palisaded village – an important lookout post guarding the entrance to Te Whanganui a Tara,"* with commanding views linking it to nearby signal pā.

Fort Dorset: In the early 20th century, the area transitioned to a military fortification known as Fort Dorset, serving as a coastal defence site from 1905 until 1991. The fort housed gun batteries, searchlight emplacements, and observation posts.

Restoration and recognition of cultural significance: In recognition of its enduring importance, the land was returned to Taranaki Whānui through the Port Nicholson Block Settlement, acknowledging longstanding grievances and affirming connection. The reserve has since undergone restoration, including the development of Te Ara o Kupe, a walkway offering panoramic views of the harbour entrance and Te Moana o Raukawakawa.

A notable feature of the restoration is a 17-meter-long landscaped waka, symbolising the site's rich heritage and its association with the explorer Kupe.

Management policy

a. **Support Taranaki Whānui** to develop a cultural restoration management plan for Oruaiti Reserve
b. **Recognise and protect the area's cultural and historical significance** by supporting interpretation, education, and storytelling initiatives that highlight key sites, including areas that have less recognition at Rangitatau Pā, Poito Pā, and Tarakena Bay.
c. **Continue to maintain and manage the remaining military structures at Ōruaiti Reserve and in Rangitatau** in partnership with Taranaki Whānui and heritage specialists, ensuring they remain safe, protected, and visible as part of the site's layered cultural heritage.
d. **Avoid placing new infrastructure on the Ōruaiti ridgeline.** Preserve open viewshafts and the site's historic lookout value.
e. **Use Māori place names in signage and interpretation** materials to reflect cultural narratives of the area.
f. **Protect the area's natural character by limiting** manmade structures, maintaining Ōruaiti and Rangitatau as places of reflection, history, and ecological restoration.
g. **Resolve encroachment issues within Ōruaiti Reserve** by removing unauthorised structures or activities and restoring affected areas.

42 Access to the coast for recreation and enjoyment

Rangitatau sector provides diverse outdoor recreational opportunities, from scenic coastal walks to water-based activities.

The coastal walkway, stretching between Moa Point and Wahine Memorial, and the Eastern Walkway, running from Rangitatau Reserve to Breaker Bay, offer spectacular coastal views. The Eastern Walkway is a pedestrian-only track that is promoted as a city-wide destination walk, attracting both Wellingtonians and visitors. The Eastern Walkway also links to Te Ara o Kupe, a culturally rich loop trail through Ōruaiti Reserve and connects key heritage and natural features through interpretation, pouwhenua, and the striking waka landscape feature.

Coastal waters are well used for kaimoana gathering, snorkelling, kayaking, and diving, including Butterfish Rock in Breaker Bay, which is recognised as a biodiversity hotspot supporting giant kelp populations and as a challenging surf break.
Tarakena Bay features a boat ramp managed by Wellington Airport for emergency access, while Breaker Bay is valued for its seclusion and has long been used as a nudist beach. The rocky shores and small play area at Breaker Bay provide additional recreational spaces for families.

Management policy

a. **Maintain and promote the coastal walkway** between Moa Point and Wahine Memorial as an important citywide recreational route, ensuring it remains well-managed while respecting its natural character.

b. **Manage the Tarakena Bay boat ramp** in collaboration with Wellington Airport to ensure continued public access.

c. **Maintain the Eastern Walkway as a premier walking experience** that highlights Wellington's coastal beauty and strengthens connections between reserves.

d. **Recognise Breaker Bay as an important site for diving and experienced surfing**, and consider access and amenity needs in future planning.

4.3 Protection and restoration of coastal ecosystems

Rangitatau sector is home to relatively intact coastal ecosystems, celebrated for its kōrora habitats and is where the Places for Penguins initiative originated. The area includes several key Significant Natural Areas (SNAs), which are described below.

The Rangitatau coast also contains two of Wellington's most significant coastal bird habitats: Point Dorset (Ōruaiti) and the southern coastline between Moa Point and Tarakena Bay. These areas support rare and regionally significant bird species such as kawau tikitiki (spotted shag), tarāpunga (red-billed gull), tara (white-fronted tern), matuku moana (reef heron), and pohowera (banded dotterel). Importantly, Ōruaiti Reserve is one of the only sites on Wellington's urban coast where seabirds can nest without crossing a road, enhancing its value as a protected breeding haven.

Strathmore coastal shrubland: A mosaic of gorse-taupata shrubland interspersed with māhoe forest and Juncus effusus. This is the only site on the western side of Wellington Harbour where matagouri, a species in regional decline, is found. It also supports native gecko species, including the Wellington green gecko and common gecko.

Moa Point coastal platform and shrubland, including Hue tē Taka Islet: Biodiversity hotspot comprising rockfields, gravels, sands, and coastal scrub. It supports rare and at-risk species such as sand coprosma, pīngao, and kāruhiruhi (pied shag). The site's partial isolation has preserved its indigenous vegetation, making it one of the last relatively undisturbed coastal habitats of its kind in Wellington. Hue tē Taka Islet is a particularly important feature, offering a lowland indigenous coastal scrub habitat that transitions into a rocky coastal platform.

Palmer Head rocky coast and Tarakena Bay duneland: This area features modified sand dunes, gravel substrates, and a rocky shore platform, providing habitat for species such as pīngao and reef heron. The Tarakena dune system has undergone significant restoration and now represents a well-established double dune system, offering protection from coastal erosion and a habitat for banded dotterels.

Breaker Bay coastal scrub and forest remnants: Coastal escarpments and karaka forest remnants provide habitat for species such as the large-leaved milk tree and Wellington green gecko. Native vegetation in this area includes whaririki (mountain flax), harakeke, and taupata, supporting biodiversity and stabilising the steep coastal slopes.

Management policy

a. **Protect and restore indigenous biodiversity in Rangitatau** sector by maintaining and enhancing Significant Natural Areas (SNAs) and minimising disturbances to sensitive coastal habitats.
b. **Manage the Moa Point to Wahine Reserve coastal area as an urban kōrora sanctuary,** prioritising habitat restoration, public awareness, and minimising human and animal disturbances.
c. **Use protective measures such as bollards, signage, and dog management** strategies to safeguard vulnerable dune systems, penguin nesting sites, and native vegetation from vehicles, people, and dogs.
d. **Maintain dark sky quality and reduce light pollution** in the sector by discouraging excessive artificial lighting, particularly near ecologically sensitive areas, to support wildlife habitats and preserve the natural ambiance.

4.4 Nature first approach to resilience

The coastal areas of Tarakena Bay, Moa Point, and Breaker Bay are exposed to ongoing coastal hazards, including erosion and coastal inundation, which are being exacerbated by climate change and sea-level rise.

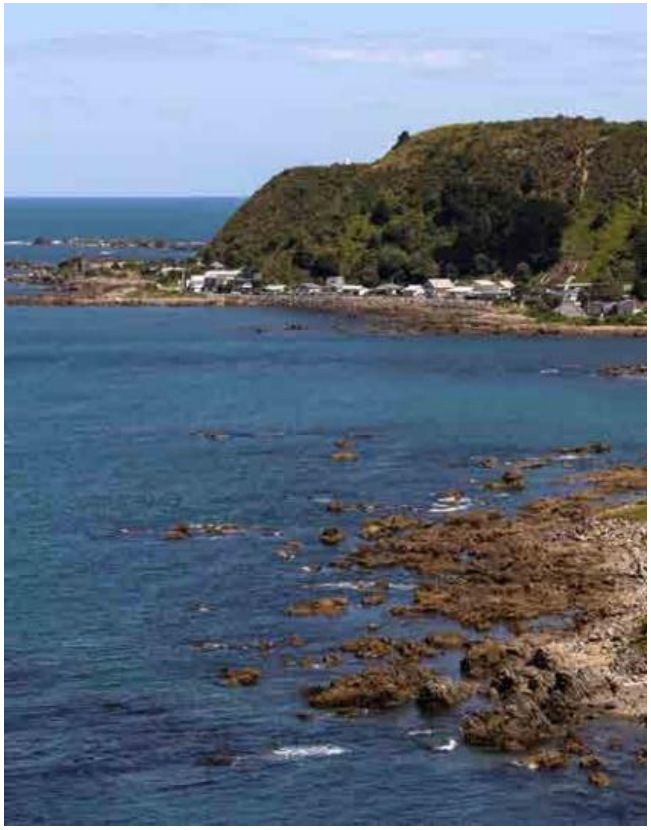
The narrow coastal road in this sector is vulnerable to storm-driven erosion, affecting access and the protection of culturally significant wāhi tapu sites. At Moa Point erosion is impacting reclaimed land, while steep escarpments contribute to slope instability. Breaker Bay faces erosion risks, particularly along Breaker Bay Road, where coastal processes continue to shape the shoreline.

Management policy

a. **Use nature-based solutions where appropriate to support coastal** resilience, including dune planting and restoration of native vegetation to buffer against erosion and maintain ecological integrity in Moa Point and Breaker Bay.

b. **Work with key stakeholders, including Wellington Airport** to support erosion management strategies at Moa Point.

c. **Maintain Rangitatau Reserve as an emergency evacuation** and access corridor for the Breaker Bay community, ensuring the central track can support emergency response during significant hazard events.



Rangitatau Moa point to Breaker Bay | **Action table**

#	Actions	Funding status	Time frame
1	Renew and upgrade sections of the Coastal Walkway to improve access and connectivity while maintaining its integrity as a recreational route.	E	Medium
2	Engage with key stakeholders to determine the future of the Moa Point dog pound site and buildings, considering opportunities for relocation as part of long-term asset management planning.	N	Long
3	Establish Rangitatau Takiwā (Moa Point to Wahine reserve) as a Kōrora Sanctuary through a range of measures, including public information, habitat protection initiatives, and penguin-friendly infrastructure, to minimise disturbance and support conservation effort.	E	Medium
4	Develop and install Māori interpretation elements to highlight the significance of Rangitatau Pā and other key cultural sites in this sector.	N	Medium
5	Work with the Transport and Climate Change teams to investigate nature-based erosion management solutions for Moa Point and Breaker Bay, including expanding coastal vegetation restoration to enhance erosion control and biodiversity.	N	Short
6	Develop a new public toilet in the Rangatitau sector.	N	Medium
7.	Continue to work with Wellington International Airport Limited to support habitat protection for little penguins (kororā) and other ground-nesting birds at Moa Point.	E	Short
8.	Investigate, monitor, and manage contamination risks from Fort Dorset, including erosion impacts on former landfill areas. Work with the Crown to identify responsibilities and seek national-level funding opportunities – such as through the Ministry for the Environment – to support mitigation efforts.	E/N	Medium
9	Support Taranaki Whānui leadership in developing a cultural restoration plan (or updated management plan) for Ōruaiti Reserve that builds on existing cultural restoration efforts.	E	Medium
10.	Review the level of service at Oruaiti Reserve, recognising its special cultural significance in partnership with Taranaki Whānui.	E	Short
11	Develop a landscape and amenity plan for the Rangitatau coastline (see Value 3: Hononga Taiao – Action 3 for further scope).	N	Medium

Funding status key

E Existing funding covers delivery
N Needs new funding, subject to approval
E/N Review covered by existing funds; implementation may need new funding

Management Overview Maps

Sector 5
Eastern Bays

The Eastern Bays sector spans 3.6 km along the eastern coastline of Te Whanganui a Tara, from Seatoun to Scorching Bay. This sector contains recreation reserves and features the dunes of Worser Bay, the shores of Karaka Bay, and the popular swimming destination of Scorching Bay.

5.1 Enduring connection to the landscape

Seatoun is said to be the first place where Kupe landed in Te Whanganui a Tara. The Seatoun foreshore, where Kupe named his landing site, later became cultivation grounds used by him and others. Surrounding the bay are significant cultural sites and pā that reflect the area's long history of settlement and enduring connection to the land.

In the late 19th century, these bays became popular beachside retreats. With improved transport in the 20th century, they evolved into thriving suburban areas. While human modifications – including seawalls, carparks, jetties, and private boat sheds – have changed the shoreline, remnants of its natural character remain. The narrow strip of beaches, rocky outcrops, and shore platforms on the seaward side of the road retain the ruggedness of the original coastline, while much of Seatoun sits on historic dune systems.

Key sites and stories of significance

Whetu Kairanga Pā and Te Puna a Tara: Located above Worser Bay, Whetu Kairangi Pā was a fortified Ngāi Tara pā that served as a strategic and spiritual hub with commanding views over Te Whanganui a Tara. Its name, meaning "stars in the heavens," reflects its lofty vantage point and the glow of cooking fires that appeared as stars from below. Nearby, Te Puna a Tara, a freshwater spring, sustained the pā until it dried up after the 1855 earthquake. The karaka grove at Overton Park remains a vital connection to this history as a mahinga kai site.

Kākāriki-Hutia Pā: Also at Worser Bay, a smaller Ngāti Ira pā named after a Rangitāne chief who ate plucked parakeets before a victorious battle, later the site was occupied by Te Atiawa.

Te Aroaro-o-Kupe: While bathing at Steeple Rock, Kupe injured himself on the jagged edges of the rocks, giving rise to the name meaning "the groin of Kupe."

The origins of Worser Bay's name: The name of Worser Bay comes from James Heberley, a weather observer working in the Pilot Office during the 1860s. When asked about the weather, he frequently replied, "It's getting worser," a phrase that left its mark on the bay's name.

Management policy

a. **Protect and manage the karaka grove at Karaka Onehunga Reserve** as a culturally significant site, incorporating opportunities for public education on its history and importance.

b. **Recognise and interpret the historic sites of the Eastern Bays sector, including at Worser Bay** by integrating cultural narratives into reserve management, signage, and storytelling initiatives.

52 Access to the coast for recreation and enjoyment

The Eastern Bays sector offers diverse recreational opportunities, with calm harbour waters ideal for swimming, sailing, windsurfing and other coastal activities.

Scorching Bay is one of Wellington's most popular beaches, attracting 59% of Wellington residents in the past year. It is valued for its sheltered sandy beach, play area, and family-friendly atmosphere. Seatoun Beach and Churchill Park, visited by 49% of residents in the past year, provides a community play area and lawn, a well-loved wharf for jumping and fishing, and a boat ramp for small boats and a wind-powered water sport launching area. Worser Bay is a hub for sailing, supported by the Worser Bay Yacht Club and Surf Life Saving Club, while also serving as a dog exercise area and a peaceful retreat. It is also used by windsurfing and kitesurfing communities, who make use of the sheltered grassed rigging area and easy beach access.

Karaka Bay provides secluded spots for relaxation, with Karaka Bay Wharf popular for jumping and fishing.

Public feedback highlighted concerns about walking access and access to beaches at Karaka Bay, suggesting opportunities to improve connectivity and inclusivity along the coastal pathways. At Worser Bay, there is a need to balance environmental restoration with recreational use, particularly in managing the dune system and ensuring space for sailing and surf life-saving activities.

I **Recognise Seatoun Beach (the Hector Street access point)** as an important local launch spot for wind-powered water sports, supported by adjacent parking and lawn areas.

Management policy

a. **Manage Scorching Bay and Churchill Park as primary coastal areas** and visitor destinations. By providing amenities, including parking, toilets, play areas, and family-friendly facilities, to support year-round visitor enjoyment.

b. **Ensure the long-term management of Churchill Park supports community use, landscape values and resilience** by putting a sinking lid on private boat shed leases and repurposing for community use or removing sheds where appropriate.

c. **Support improved pedestrian amenity along Karaka Bay** and access to the beaches in this area to enhance safety and access to coastal areas.

d. **Support long-term coastal connectivity by re-establishing track connections between Scorching Bay and Mātai Moana,** including improvements to entranceways and wayfinding as part of broader planning for Mātai Moana.

e. **Balance recreation and environmental management** at Worser Bay by enabling space for sailing, wind-powered water sports, events, and surf lifesaving activities while not making too much of an impact on long-term dune restoration and coastal resilience. The lawn at the northern end can remain lawn for boating and recreation uses.

f. **Support an integrated approach to managing the Worser Bay lease cluster,** fostering collaboration between the yacht club, surf club, scout hall, and other recreation groups, including through applying Te Awe Māpara principles to enhance collaboration. In particular:

   i. Assess opportunities for co-location, shared amenities, and integrated facility management as options become available.

   ii. Encourage partnerships that support shared recreation infrastructure and coordinated programming while maintaining flexibility for diverse recreation needs.

g. **Work alongside Te Herenga Waka o Whetūkairangi (Worser Bay Boating Club)** in exploring opportunities for storytelling, and community-driven marine restoration initiatives like the NZL Blue Belt project, and their other aspirations for this area, while ensuring alignment with council priorities and environmental policies.

h. **Manage Seatoun Wharf and Karaka Bay Wharf as recreational spaces that strengthen public connection** to the water, including for wandering, fishing, boating, jumping, and other water-based activities.

5.3 Protection and restoration of coastal ecosystems

The Eastern Bays sector contains a mix of modified and relatively intact coastal ecosystems. Its sheltered beaches, rocky outcrops, and coastal forest remnants provide habitat for diverse native species.

While this plan does not cover marine management, the adjacent waters support kelp forests that sustain species such as almost all of Te Whanganui a Tara potbellied seahorses and pipefish populations. Key ecological areas include:

Worser Bay dune system: This modified dune system, bordered by roads and housing, is undergoing restoration to replace marram grass with native plants like pīngao and spinifex.

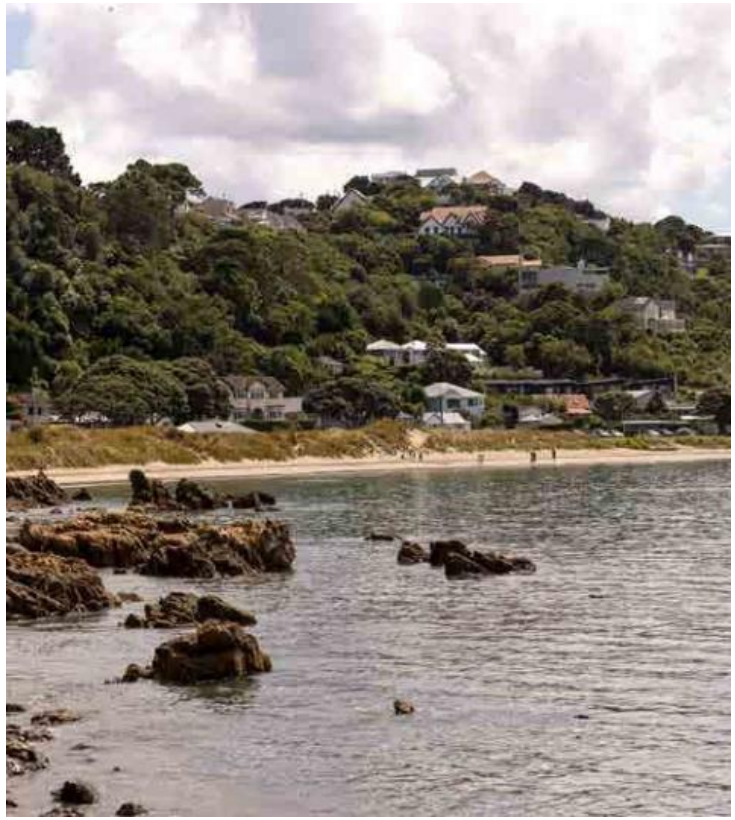
Overton Park and Karaka Bay forest: A remnant coastal forest featuring native species such as karaka, titoki, and wharangi. It provides habitat for kororā (little penguins) and korimako (bellbirds).

Scorching Bay and Point Gordon coastal platforms: These rocky outcrops and shore platforms support unique vegetation like Buchanan's orache and bird species such as the kāruhiruhi (pied shag) and tōrea pango (variable oystercatcher).

Karaka Bay rock stacks: Coastal rock stacks provide vital feeding and roosting habitats for seabirds, including at risk declining species like tarāpunga (red-billed gulls) and tara (white fronted terns), and at risk recovering species like kāruhiruhi (pied shags) and tōrea pango (variable oystercatchers).

Management policy

a. **Support the long-term resilience of the Worser Bay dune system** by continuing restoration efforts, ensuring recreational activities and infrastructure are designed to minimise impacts, and allowing space for natural dune expansion.



5.4 Nature first approach to resilience

The Eastern Bay sector faces increasing challenges from erosion, flooding, and sea-level rise. The historic removal of dunes has left Seatoun Beach highly exposed, leading to frequent flooding, sand accumulation on roads, and difficulties in access and maintenance.

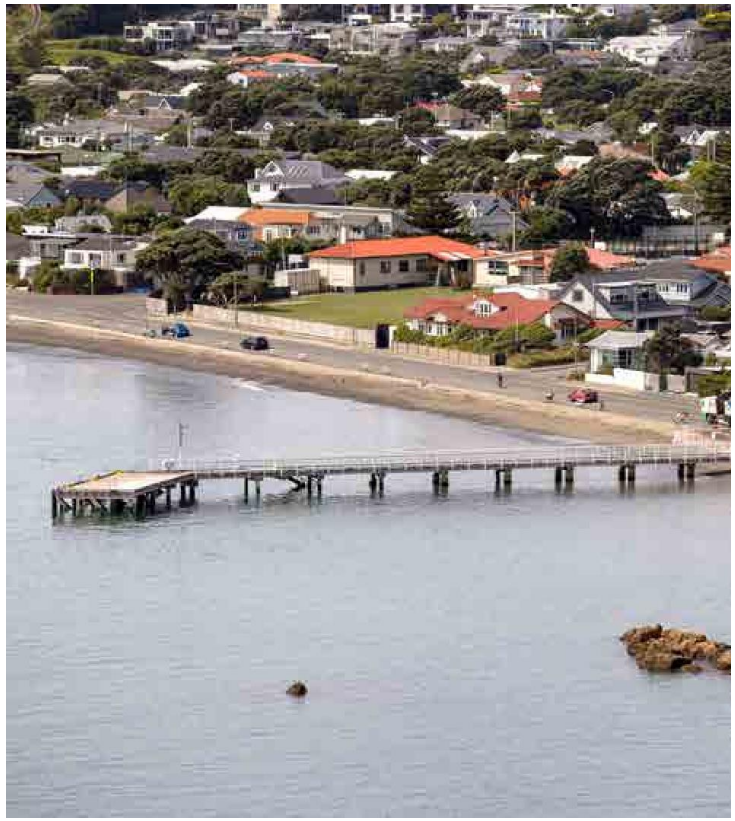
Karaka Bay's narrow coastal platform is experiencing erosion that threatens public infrastructure, including walking access, carparks, and park benches. At Worser Bay, dune restoration efforts are helping stabilise the beach, but the constrained space limits their long-term protective function.

Management policy

a. **Support sand stability at Seatoun Beach** by exploring nature-based solutions such as planting vegetation to reduce windblown sand accumulation on footpaths, roads, and nearby properties.

b. **Assess long-term adaptation options for Karaka Bay,** including engineering solutions and natural resilience measures to manage erosion and maintain safe coastal access.

c. **Monitor vulnerable shorelines across the sector** to understand erosion and flooding processes and inform future adaptive responses.



Eastern Bays | Action table

#	Actions	Funding status	Time frame
1	Investigate and implement targeted planting at parts of Seatoun Beach as a sand-trapping measure to help manage windblown sand impacts.	E	Short
2	Enhance play amenities at Scorching Bay, ensuring they remain high-quality and available year-round for families and visitors.	E	Short
3	Install interpretative signage at key cultural and ecological sites, including at Karaka Grove, Kākāriki Hūtia Pā to enhance public understanding of the sector's history and significance.	E	Medium
5	Assess car parking at Scorching Bay, including provision and location of mobility parking, safety of existing narrow parking areas, and potential additional capacity at peak times.	E	Medium
6	Restore historic names by renaming Overtoun Park to Karaka Onehunga Reserve and the unnamed Worser Bay lawn area to Kākāriki Hūtia Reserve.	E	Short
7	Develop a landscape and amenity plan for the the Eastern Bays Sector (see Value 3: Hononga Taiao – Action 3 for further scope).	N	Short
7.	Seek coastal engineering advice to assess the Te Herenga Waka o Whetūkairangi (Worser Bay Boat Club) proposals for dune restoration, ramp, and boardwalk development at Worser Bay.	E	Medium
8	Investigate restoring the historic track connection from Scorching Bay up to Mātai Moana, and consider a gateway entrance at Scorching Bay as part of the wider Mātai Moana project and in conjunction with the Mātai Moana trust.	E	Medium
9.	Support the swimming community in exploring and securing funding for a swimming platform at Scorching Bay.	E	Medium
9.	Explore opportunities to improve accessibility at Scorching Bay, ensuring pathways, entrances, and facilities cater to people of all abilities. This may include investigating beach wheelchairs, beach matting, and other inclusive design solutions..	E	Medium

Sector 6
Māhanga Bay to Maupuia

The Māhanga Bay to Maupuia sector spans 5.8 km of coastline from Māhanga Bay to the eastern edge of Cobham Drive, including Kau Bay, Shelly Bay, Shark Bay, and Carter Park. The area includes scenic reserve land (Carter Park), while other areas remain legal road land.

Note: Mātai Moana, the 74-hectare undeveloped area adjacent to this sector is Crown-owned and falls outside council management. Future plans to establish a public reserve in partnership with Tāranaki Whānui will be addressed through the development of a separate management plan.

6.1 Enduring connection to the landscape

The Māhanga Bay to Maupuia sector holds deep cultural significance for mana whenua, reflecting centuries of Māori settlement.

The area contains key sites of historical and cultural importance, including pā sites, kāinga (settlements), mahinga kai (traditional food-gathering areas), and European military landmarks. A narrow shore platform runs along the coastline, with a coastal road butting against the steep escarpments, emphasising the dramatic interface between land and sea. Although the area is close to the city, its undeveloped and natural setting fosters a sense of tranquillity.

Key sites and stories of significance

Historic Pā and settlement sites: This area contained significant pā and kāinga sites. Māhanga Pā at Māhanga Bay held a strategic position with visual links across the peninsula, while Kau-whaaua-waru at Kau Bay relied on freshwater streams flowing into the bay to sustain its kāinga. Mataki kai

Poinga, located on the Miramar ridgeline, was an important pā site associated with Ngāti Kaitangata, offering commanding views over the harbour and surrounding coast. Two stands of ancient karaka, mixed with māhoe and ngaio, hold cultural and ecological significance, reflecting the area's role as a traditional Māori food source.

Shelly Bay (Marukaikuru/Taikuru): Once the Te Ātiawa settlement of Marukaikuru, Shelly Bay played a key role in early Taranaki migrations. Following Crown acquisition in 1885, the area became a military hub.

Fort Ballance and Kau Point Battery: Constructed in response to the "Russian Scare" of the late 19th century, Fort Ballance was Wellington's principal coastal defence site and remains one of New Zealand's best-preserved fortifications from this period. These sites are reminders of New Zealand's defensive history and the Crown's military presence on the Miramar Peninsula.

Massey Memorial: A large nationally significant monument commemorating Prime Minister William Massey's death in 1925.

Management policy

a. **Protect key historic sites** by discouraging activities that could lead to environmental or cultural degradation.
b. **Recognise and interpret historic sites,** integrating cultural narratives into signage, storytelling, and reserve management.
c. **Collaborate with the Mātai Moana Trust** on planning and management for this area

62 Access to the coast for recreation and enjoyment

This Māhanga Bay to Maupuia is valued for its recreational opportunities, including fishing, kayaking, windsports at Shark Bay, diving at Kau Bay, Māhanga Bay and Shark Bay, and cycling along the coast. Visitors park along Shelly Bay Road and Massey Bay Road for secluded swimming and diving spots, and freedom campers also use these areas.

The narrow coastal road and limited track connections create challenges for recreation access. Public feedback strongly supports a safer, more pedestrian-friendly design, with improved walking and cycling options and better amenities to enhance the area's recreational experience.

Carter Park provides walking and mountain bike tracks, a dog exercise area, and a fairy village, connecting Maupuia to the coast.

Management policy

a. **Provide recreational amenities along the coast** such as picnic areas, seating, and toilets to support diverse recreation in the area.

b. **Trial temporary road closures for recreation use and events along Massey Road,** with the potential to establish a regular schedule if successful and feasible.

c. **Support planning for the future of the Shelly Bay** council-owned land, considering its role as a community recreation space/ park and a key gateway into the Mātai Moana.

d. **Maintain and enhance Carter Park as a key recreational** connector between Miramar and the coast, supporting walking, biking, and nature-based experiences.

e. **Support planning for the future of Māhanga Bay** as part of Mātai Moana, recognising its role as a coastal recreation space and potential entrance point into the wider landscape.

f. **Recognise Māhanga Bay, Kau Point, and Shark Bay as** important dive sites with high biodiversity and recreational value.

g. **Recognise Shark Bay as a wind-powered water sports** location, and ensure launch and rigging access needs are considered in planning and project works.

6.3 Protection and restoration of coastal ecosystems

The Māhanga Bay to Maupuia sector features rocky outcrops, seepages and turf fields, regenerating forests, coastal shrublands, and a rich variety of native flora and fauna, including several at-risk or threatened species.

The success of predator-free initiatives across the peninsula has allowed native wildlife to thrive, making this an ideal location for further restoration efforts. Key Significant Natural Areas (SNAs) and important habitats within this sector include:

Fort Ballance Road forest: A regenerating forest corridor divided by Fort Ballance Road, hosting diverse native vegetation – including kohekohe, wharangi, māhoe, and coastal māhoe – and habitat for kōrora, moko kākāriki (green geckos), and other indigenous wildlife.

Kau Point rocky coast and shrubland: An area renowned for some of Wellington's best rock stack vegetation, including rare species like coastal māhoe and tumatakuru (speargrass), and providing important habitat for declining species such as the kororā (little penguin), tarāpunga (red-billed gull), and tōrea pango (variable oystercatcher). Kuaka (diving petrels) have been seen near Point Halswell.

Maupuia Reserve Coastal Forest: A rare coastal mānuka treeland regenerating in former swamp valleys, supporting diverse flora (including northern rātā and whau (corkwood) and fauna like the bush falcon and moko kākāriki (green gecko). With seasonal streams and a variety of native species including rauemi (kidney fern), piupiu (crown fern), kiekie, kamahi, and kōtukutuku (tree fuchsia). This area is threatened by invasive climbing asparagus weed but remains an important ecological stronghold.

Shark Bay Coastal escarpment forest: coastal escarpment featuring māhoe and whararikī shrubland, with a rare coastal forest at its northern end, comprising ngaio, taupata, māhoe, kawakawa, karo, and pōhutukawa.

The sector faces persistent environmental challenges, including potential contamination from former military sites and habitat degradation caused by freedom camping and vehicle access, all of which threaten its ecological resilience.

Management policy

a. **Formalise parking areas** using measures such as bollards to protect sensitive ecosystems. Designated parking areas prevent vehicle intrusion into ecologically vulnerable areas.

b. **Protect native fauna and flora** through exploring the use of established conservation areas, for example safe translocation site for kororā and working with the community.

6.4 Nature first approach to resilience

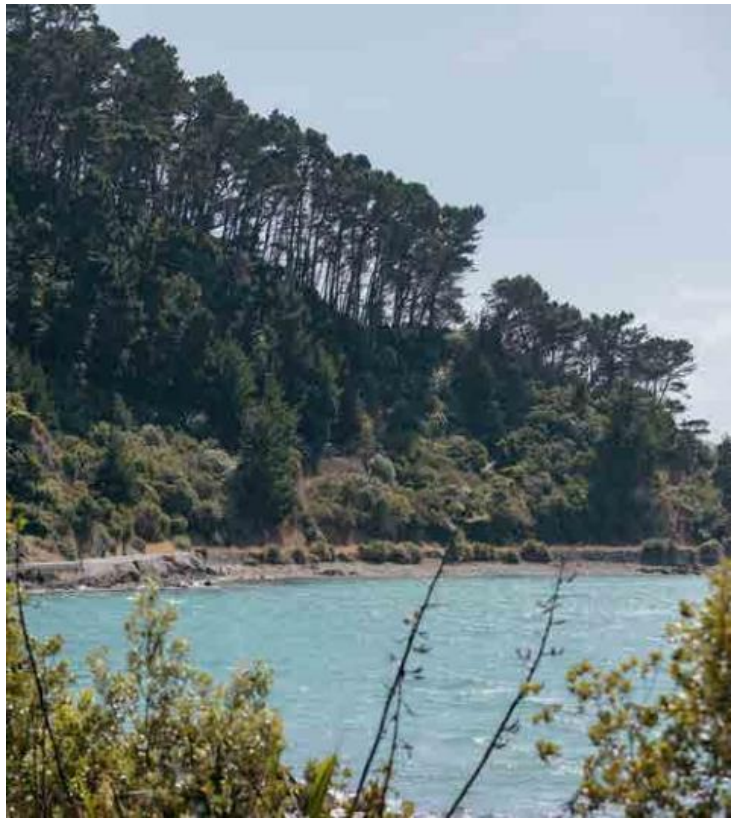
The Māhanga Bay to Maupuia Sectoris a narrow coastal corridor bordered by steep escarpments and the sea, with recent seawall upgrades attempting to mitigate erosion and storm damage.

However, the area remains vulnerable to sea-level rise and storms. Modelling shows that rising sea levels will increasingly impact this area. In some areas, ongoing armouring may be needed to sustain access to the coastal road.

A significant idea raised through community consultation is the potential **transformation of Shelly Bay Road and Massey Road** into a recreational zone. This could include reducing the road to a single lane, creating more space for nature and active recreation, and minimising the need for ongoing protection as sea levels rise. This concept requires further exploration through coastal resilience and transport planning processes.

Management policy

a. **Support planning for the potential reconfiguration** of the vulnerable coastal road into a recreation zone, considering allowing for natural coastal processes to occur while maintaining emergency access.



Māhanga Bay to Maupuia | Action table

#	Actions	Funding status	Time frame
1	Provide a new public toilet in this sector.	N	Medium
2	Investigate whether to retain or remove the old NIWA boat ramp at Māhanga Bay, considering current use, condition, and potential for future education or coastal access.	E	Short
3	Identify locations for penguin habitat restoration along the coastal road and potential safe zones	E	Short
4	Investigate traffic resolution options to allow for regular temporary closures of Massey Road for events	E	Short
5	Create a project to assess the future of Massey Road and Shelly Bay Road as a pedestrian-friendly route, including the option to reduce traffic to one lane, traffic calming, as part of progressing a continuous walking connection in this section of Te Aranui o Pōneke – Great Harbour Way. Implementation of the project should be incorporated into Asset Management Plans and considered for funding through a future LTP/Annual Plan.	N	Long
6	Investigate, and if appropriate following environmental assessment, develop a Grade 3 or 4 mountain bike track connecting Centennial Reserve to Shark Bay with Trails Wellington, within Carter Park.	E	Medium
7	Take an integrated approach to coastal access, entranceway development, and management planning at potential entrances to Mātai Moana, including future use of Council-owned land and the road corridor at Shelly Bay, Massey Memorial (Owned by the Ministry of Culture and Heritage), Māhanga Bay, and Scorching Bay in conjunction with the Mātai Moana trust.	E	Medium
8	Develop a landscape and amenity plan for the Māhanga Bay to Maupuia Sector (see Value 3: Hononga Taiao – Action 3 for further scope).	N	Short
9	Investigate reserve classification for the coastal headland between Kau Bay and Māhanga Bay to support long-term protection of its environmental and landscape values.	E	Medium

Management Overview Maps

Sector 7
Ākautangi
Evans Bay

Ākautangi sector extends approximately 5 km along the sheltered waters of Wellington Harbour, from Cobham Drive to Ōmarukaikuru (Jerningham Point). This coastline includes key recreation spaces such as Evans Bay Marina, Hataitai Beach, Cog Park, Greta Point, and Balaena Bay. These areas include recreation, historic, and local purpose reserves, as detailed in the land schedule section.

7.1 Enduring connection to landscape

Ākautangi means "The Coast That Cries" – it was the name of a pā at the head of Evans Bay and speaks to the sound and energy of the wind and waves crashing along the coastline.

The Haowhenua earthquake from around 1460 transformed a once isolated island into the connected Miramar Peninsula and shaped the U-shaped contours of Evans Bay. This coastline has now been heavily modified by reclamation, seawalls, roads and marinas, and over the past century has become a focal point for boating and water-based recreation. It was the base for New Zealand's flying boat services in the mid-20th century, now remembered through the Flying Boat Jetty at Cog Park. The Evans Bay Yacht & Motor Boat Club, founded in 1919, and the Evans Bay Marina, established in the 1960s.

The area also retains small sandy bays at Balaena Bay and Hataitai Beach, and the intensified landscaping along Cobham Drive shows how natural elements can be woven into the urban fabric to enhance the coastal experience.

Key sites and stories of significance

Maupuia Pā and Ākautangi Pā: Nearby pā sites that reflect the historic settlement of the area.

Evans Bay patent slip: New Zealand's first patent slip (1873–1980), central to Wellington's maritime industry. Though much of the original structure has been lost, interpretive displays help preserve its story.

Flying Boat Jetty: Built in 1951, this jetty supported New Zealand's first international airport, facilitating seaplane travel. Located at Cog Park, it remains a recreational facility, mainly used for fishing, diving, and jumping off into the water.

Balaena Bay maritime heritage: The name 'Balaena' could have arisen from the early whalers operating from Port Nicholson in the 1800s, who may have dragged whales onto the beach at Balaena Bay. The bay was used as a place for boatbuilding in the early 19th century.

Waipapa Awa (Waipapa Stream): Historically flowing down the valley between today's Town Belt and ridge-tops, the Waipapa stream once descended to reach the Evans Bay shoreline. Known for its 'Good Water' in early charts, hinting at the valley's natural freshwater systems prior to urban modification.

Maunga Mātairangi (Mount Victoria): Closely tied to Māori cosmology through the story of the tūpua Whātaitai and Ngāke, Mātairangi, along with the nearby peak Tangi Te Keo, forms part of a cultural landscape shaped by ancient myth. These peaks are reminders of ancestral presence and the enduring spiritual narratives associated with Wellington's natural features.

Management policy

a. **Recognise and protect the Cog Park heritage** area as a heritage reserve of Wellington's maritime history including Evans Bay Patent Slip and Flying Boat Jetty, through restoration, signage, and educational initiatives.

b. **Support greening along the coastal** edge by incorporating planting and landscape enhancements that strengthen connections to nature and complement urban design.

c. **Support the integration of public art** along Ākautangi.

Contents

72 Access to the coast for recreation and enjoyment

Ākautangi combines boating and facilities with popular swimming spots at Hataitai Beach and Balaena Bay, and Cog Park as a community park, all linked by the well-used Tahitai shared coastal pathway along the harbour edge.

These areas support a broad range of outdoor pursuits, from swimming, boating, paddling and fishing to picnics, dog recreation, cycling, community events, and freedom camping. Public feedback has highlighted the importance of Hatiatai Beach and Balaena Bay as close to the city swimming spots and desire for more on-site amenities — such as saunas, pontoons, and food trucks — alongside strong calls to invest in and improve the Evans Bay Water Recreation Precinct.

Ākautangi Water Recreation Precinct
The precinct occupies approximately 3.5 hectares of reclaimed land along Evans Bay Parade. It is home to a diverse network of clubs, affiliates, and community users, including the Evans Bay Yacht & Motor Boat Club (EBYMBC), Wellington Surf Casting & Angling Club, waka ama groups, kayaking and paddleboarding clubs, Sailability Wellington for disabled sailors, inter-school and university sailing programmes, the Coastguard, and the Council owned and run Evans Bay Marina.

Facilities include public jetties, a breakwater, boat and trailer parking, hardstand areas, a freedom camping site, and Wellington's most heavily used public boat ramp. The marina, built in the 1960s, has 141 berths, about 46 boatsheds and 40 dinghy sheds, plus extensive car parking. The EBYMBC club building is shared by multiple groups, while the Wellington Volunteer Coastguard operates from its distinctive octagonal building.

Extensive planning over the past decade — including marina demand studies, financial modelling, and design options — has highlighted both the strengths and challenges of the precinct, calling for a clear business case based on market research and a funding pathway to renew the marina and boat ramp, ensure fair and sustainable operating costs, plan for sea-level rise, and enhance wider use and visitor experience.

Management policy

a. **Manage Cog Park and Hataitai Beach** as a primary coastal area and community hub, through:
   i. Providing year-round access to ocean swimming amenities.
   ii. Accommodating large-scale events and community gatherings.
   iii. Supporting appropriate commercial activities that enhance recreational use (eg food trucks, sauna)
   iv. Allowing for an off-leash dog area at Cog Park.
   v. Integrating heritage interpretation to highlight cultural and historical significance.

b. **Protect and promote public access at Greta Point**, improving connections, considering activation and wayfinding to address concerns that the area feels closed off.

c. **Manage the Balaena Bay** car park to prioritise recreation access to the beach

d. **Manage the Ākautangi Water Recreation Precinct** (including the marina, boat ramp, car park, yacht club, and associated open spaces) as a multi-user water sports precinct by
   i. **Supporting a diverse range of water-based** recreation groups and activities, including waka ama, sailing, paddling, and community events in the precint..
   ii. **Lease arrangements and club facility** use should align with Te Awe Māpara, the Community Facilities Plan, enabling multi-use partnerships
   iii. **Work with clubs to maintain and invest in safe,** functional boating infrastructure, including jetties, boat ramps, and hardstand areas, with consideration for sea-level rise and climate resilience.
   iv. **Manage the Evans Bay boat ramp as an important public facility**, providing safe access and space for vehicles and trailers.
   v. **Supporting public access and visitor experience** across the precinct, pursuing a welcoming coastal place to spend time and enjoy the water's edge.
   vi. **Supporting the long-term financial sustainability** of the marina and precinct through appropriate operating models.
   vii. **Continue to manage the Evans Bay freedom camping are**a with appropriate amenities and clear guidelines, balancing the needs of campers with parking availability for other coastal users and recreation activities.

e. **Enable access to wharves, jetties, and breakwaters outside of the marina** for fishing activities, providing appropriate amenities such as bait stations and bins for fishing waste and materials to support responsible use.

73 Protection and restoration of coastal ecosystems

Though heavily urbanised, Ākautangi still retains important ecological values and opportunities for habitat restoration.

Kororā (little penguins) seek refuge in rock walls and fenced areas, while seabirds rely on coastal structures as perching and nesting sites. Indigenous vegetation thrives where careful restoration efforts are undertaken, and unique marine communities persist in the shallow waters along Cobham Drive. With thoughtful stewardship – through penguin sanctuaries, reducing litter and pollution, creating habitats in urban spaces, and sustainably managing marinas – these ecosystems can continue to thrive despite urban pressures.

Greta Point (north end, and south end) and Evans Bay Breakwater kororā areas: Nesting kororā benefit from fenced areas, native plantings, and nest boxes, supported by collaborations between Council, mana whenua, NIWA, and community groups such as Places for Penguins (Forest and Bird). Protective measures against off-leash dogs, along with habitat enhancements on the breakwater, help safeguard these vulnerable birds.

Cobham Drive coastal restoration: Targeted indigenous plantings, including a threatened plant seed orchard, are helping to strengthen biodiversity and build more resilient coastal habitats

Adamsiella beds and horse mussel communities (shallow waters of Evans Bay, near the Marina): These ecologically significant marine habitats, recognised in the GWRC resource plans for their high biodiversity value, serve as vital nurseries and feeding grounds. However, they face ongoing threats from sedimentation, anchoring, and declining water quality.

The Evans Bay foreshore suffers from significant litter accumulation due to stormwater drains and coastal littering as well as the tides seeming to bring litter from the harbour to Evans Bay and particularly Cobham Drive. This not only harms marine life but also diminishes the area's aesthetic and ecological value.

Management policy

a. **Manage Greta Point and Evans Bay Breakwater as urban kororā safe areas,** supporting habitat restoration through nesting sites, native vegetation, and public awareness initiatives.
b. **Convert suitable verges, traffic islands, and underutilised areas into indigenous coastal habitats** to strengthen biodiversity and ecological connectivity.
c. **Manage waste and litter management** along Cobham Drive and Evans Bay, utilising innovative solutions and effective stormwater controls to reduce pollution entering sensitive habitats.
d. **Continue to restore indigenous habitats** along Cobham Drive and protect as a threatened plant seed orchard.
e. **Maintain robust** marine biosecurity measures at marina and boat ramp structures to prevent the spread of invasive species, in collaboration with GWRC.

7.4 Nature first approach to resilience

The Ākautangi coastline faces ongoing challenges from sea-level rise, erosion, and aging infrastructure.

Recent improvements, including reinforcement of the sea wall through the Tahitai project in the 2020s, have strengthened coastal defences and protected key road corridors. Yet, the rising tide will increasingly affect reclaimed land and nearby amenities on the roadside, such as the marina, Cog Park, and diminishing beach areas, a concern echoed by the community. Given the area's heavily urbanised character, critical transport routes, and limited space, nature-based solutions or coastal retreat strategies may be impractical. Instead, a continued focus on protection, armouring, and engineered adaptations will guide the development and maintenance of coastal recreation assets and facilities in this sector.

Management policy

a. **Plan for the integration of adaptive infrastructure at Ākautangi water recreation precinct,** including floating pontoons, to enhance long-term coastal resilience and accommodate rising sea levels.

b. **Support the long-term viability of beach recreation areas** by exploring beach nourishment and other coastal adaptation measures at Hataitai Beach and Balaena Bay

Ākautangi Evans Bay | **Action table**

#	Actions	Funding status	Time frame
1	Assess whether the jetty at Greta Point should be removed due to underutilisation and ongoing maintenance costs, ensuring alignment with coastal recreation and infrastructure priorities.	E	Short
2	Investigate options to enhance waste and litter management along Cobham Drive and Evans Bay, particularly in areas where litter congregates, implementing stormwater improvements and litter reduction initiatives to protect marine habitats.	E/N	Medium
3	Upgrade the Evans Bay boat ramp to improve safety and usability at Wellington's most-used boat ramp.	E	Medium
4	Develop a master plan and business case for the Ākautangi Water Recreation Precinct for investment that takes a holistic view of the area's future. Continuing to work with existing tenants, clubs, and stakeholders. This work should:: • Enhance recreation access and landscape amenity, visitor experience and support public use, multi-use recreation, and increased greening. • Assess alternative operating models for Evans Bay Marina to support long-term financial sustainability and enable necessary infrastructure upgrades. Building on work that has been done to date. • Plan to optimise leases, licences, and the use of public space and assets across the precinct.. • Integrate protection and enhancement of kororā (little penguin) habitat in areas of the precinct where practicable. • Strengthen collaboration across the precinct's clubs, community groups, and water recreation organisations, in line with Te Awe Māpara – the Community Facilities Plan – by building on the hub model offered by the the club, that supports shared spaces, coordinated programming, and efficient use of resources, while recognising and building on the strong collaboration already happening between clubs.	E/N	Medium
	Implementation of the plan should be incorporated into Asset Management Plans and considered for funding through a future LTP/Annual Plan.		
4	Improve wayfinding improvements and access at Greta Point, addressing public concerns about its current disconnected feel.	E	Medium
5	Investigate long-term actions to maintain beach access and amenity in the face of sea level rise and coastal change, focusing on vulnerable sites such as Hataitai Beach.	E/N	Long

Sector 8 Oriental Bay

Stretching from Ōmarukaikuru (Jerningham Point) to Clyde Quay Boat Harbour, the Oriental Bay sector stands as one of Wellington's most iconic coastal destinations. This sector encompasses the Parade, Oriental Bay Beach and Freyberg Beach and does not include land classified as a reserve as shown in the schedule.

8.1 Enduring connection to the landscape

Oriental Bay is one of Wellington's most recognisable coastal landscapes,

This coastline was historically part of a Ngāi Tara defensive network, with Ōmarukaikuru (Jerningham Point) connected to Te Waihirere Pā on the Te Ranga a Hiwi ridgeline, forming a strategic landscape of lookout points and pā sites.

The area was named after the ship Oriental, which brought some of Wellington's earliest European settlers. This area developed from a natural coastal edge into the "Riviera of Wellington," renowned for its sandy beaches, generous promenade, and prominent backdrop of residential apartments. Its prominence in tourism, postcards, and popular culture underscores its importance to both the local economy and Wellington's urban waterfront identity. Significant modifications – seawalls, reclamation, and imported sand – have created a highly modified urban environment. Its transformation into a premier recreational hub began in the early 20th century, highlighted by the construction of the Band Rotunda (1919), Clyde Quay Boat Harbour (1901), Te Aro Baths (now Freyberg Pool) (1862), and the planting of the now iconic Norfolk pines in 1917.

Key places and stories of significance

Beach modifications: Oriental Bay's shoreline has changed over time. By the 1920s, a concrete seawall was constructed to protect the promenade and road, though it restricted the beach area at high tide. Efforts to enhance the bay as an attractive destination began in 1944 with the introduction of approximately 10,000 tonnes of sand. In 2004, a more extensive re-nourishment added 22,000 tonnes of Golden Bay sand.

Ōmarukaikuru (Jerningham Point): This headland was historically significant to Ngāi Tara, with Te Waihirere Pā located on the Te Ranga a Hiwi ridgeline. The area served as part of a network of defensive sites and pathways that connected the harbour to the southern coast.

Band rotunda: The original wooden rotunda served as a music venue and social focal point from 1919. By 1937, demand for changing facilities led to its replacement with a reinforced concrete pavilion. Over the years, it has functioned as a bathing space, restaurant, and arts venue, remaining a cultural and architectural landmark. It is now undergoing redevelopment, with plans including a bathhouse, day spa, restaurant, bar, and public rooftop access.

Clyde Quay Boat Harbour: Developed between 1901 and 1904 through reclamation, Clyde Quay Boat Harbour opened as New Zealand's first purpose-built private marina. Featuring heritage boatsheds, clubrooms, and WWII-era structures, it continues as a maritime precinct reflecting Wellington's nautical heritage.

Carter Fountain: Gifted to the city and installed in 1973 to honour the Carter family, this fountain's 16-meter jet and lighting installations contribute a sense of spectacle to Oriental Bay's waterfront.

Freyberg Pool and Te Aro Baths: Established as the Te Aro Baths in 1862, this seawater pool offered early Wellingtonians a place to swim and recreate by the sea. A century later, in 1963, it was transformed into the modernist Freyberg Pool, named in honour of Lord Bernard Freyberg – a national swimming champion, war hero, and Governor-General.

Management policy

a. **Maintain and manage the Carter Fountain** as a treasured waterfront feature, preserving its aesthetic and historical value while ensuring its ongoing operational integrity.

82 Access to the coast for recreation and enjoyment

Oriental Bay is Wellington's busiest coastal destination, with 86% of Wellingtonians visiting in the past year.

It offers a year-round hub for recreation and social activity, where people swim, walk, cycle, and relax along the waterfront. The bay hosts swimming events, beach volleyball, and community festivals, while its mix of urban amenities and coastal charm makes it a key space for both locals and visitors.

Oriental Bay is probably the busiest ocean swimming location in the city. It is supported by pontoons, showers, and changing facilities, which are heavily used. Community feedback highlights the need to ensure these remain fit-for-purpose and available year-round.

Management policy

a. **Manage Oriental Bay Beach and Freyberg Beach** as Wellington's premier coastal destination.

b. **Maintain the area as a multi-use space,** supporting a broad range of recreation activities and events.

c. **Ensure amenities at Oriental Bay and Freyberg Beach are welcoming, inclusive, and fit-for-purpose by applying universal design principles** that support accessibility, usability, and diverse recreational needs.

d. **Sustain the attractiveness and usability of the beach through high standards of maintenance and beach grooming** that reflect its high visitor numbers and modified coastal environment.

e. **Maintain the regular sand shifting and sand replenishment programme,** guided by monitoring reports and designed to anticipate and mitigate the effects of sea-level rise.

f. **Promote Oriental Bay as a vibrant hub for cultural and community events** by enabling appropriate commercial activities that complement its character and enhance public enjoyment of the area.

g. **Provide safe and equitable access to shared spaces on the promenade** including paths for pedestrians, cyclists, and scooters, while ensuring safe integration of transport modes.

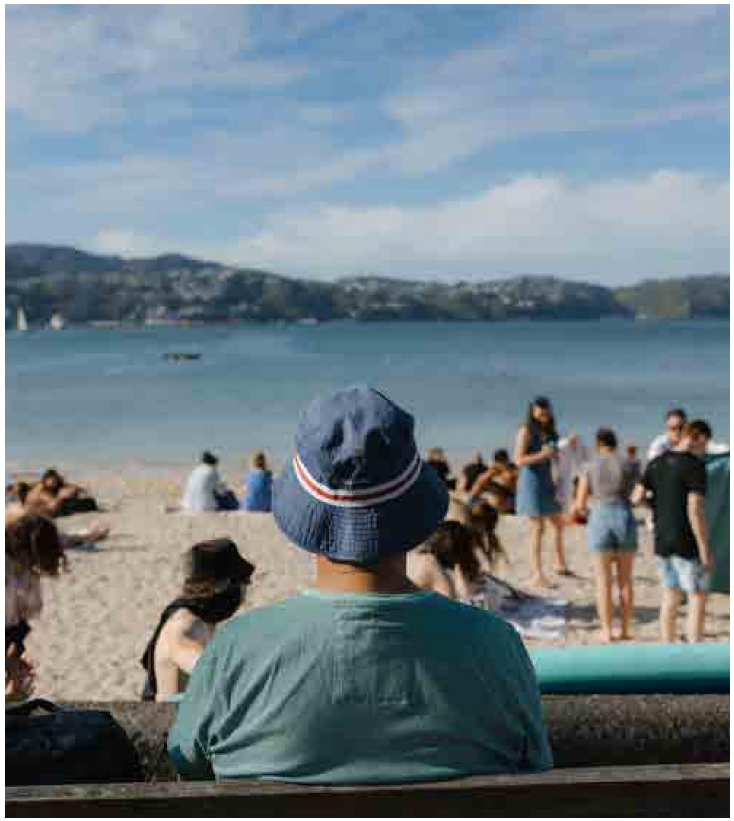
h. **Facilitate strong multimodal connections to the area through** public transport, parking, walking, and cycling infrastructure.

i. **Facilitate year-round access to swimming facilities** by supporting high-quality infrastructure, including showers, well- maintained pontoons, and changing areas. Maintenance schedules should minimise disruptions, and facilities should be designed to encourage all-season use, reflecting community demand for swimming and water-based activities.

j. **Facilitate limited use of Freyberg Beach as a boat launch site for safety and emergency response purposes,** ensuring access for agencies such as GWRC and Maritime NZ while restricting general public use to protect the beach's recreational and environmental values.

k. **Maintain recreation infrastructure** to support recreational fishing, including rod holders and other facilities that enable safe and sustainable use.

l. **Continue to support surf lifesaving services at Oriental Bay,** recognising their role in ensuring public safety at high-use coastal areas.



8.3 Protection and restoration of coastal ecosystems

While the natural environment has been heavily modified since the 1890s, Oriental Bay still offers opportunities for nature within its urban coastal setting.

Enhancements in 2004 created artificial rock pools supporting diverse marine life, including seaweed, fish, and algae, with occasional seal visits. Despite urban pressures, Oriental Bay demonstrates how engineered environments can support marine biodiversity alongside recreation and aesthetics. Given its popularity, the area offers an important nature connection for central city dwellers and visitors.

Management policy

a. **Maintain high standards of rubbish management,** including working with the community to ensure the beach and surrounding areas remain clean and free from rubbish.
b. **Integrate ecological benefits into marine structures,** supporting marine biodiversity through habitat-enhancing designs that accommodate species such as mussels, seaweed, fish, and algae.
c. **Enhance coastal greening and shade opportunities,** incorporating climbing plants, shade trees, and habitat restoration to support biodiversity and visitor comfort.
d. **Manage Norfolk Island pines as a long-term feature of the coastal landscape,** developing a succession plan for canopy continuity and ensuring ongoing care and maintenance.

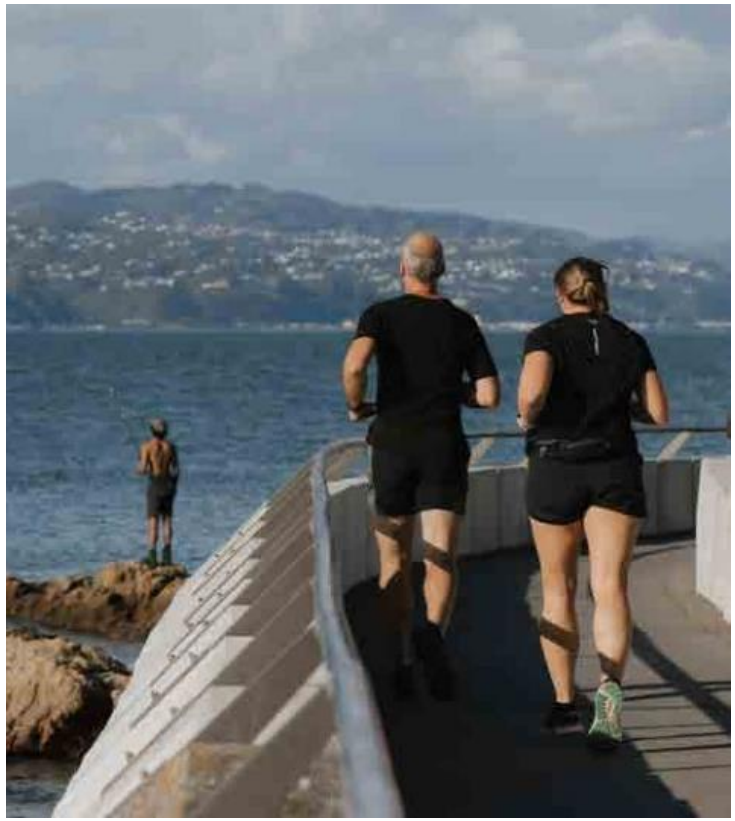
8.4 Nature first approach to resilience

Oriental Bay is a heavily urbanised coastal environment, maintained through engineered solutions like seawalls, imported sand, and artificial habitats rather than natural coastal processes.

Sand replenishment, seawall upkeep, and habitat-friendly infrastructure help counter erosion and maintain the bay's appeal. Given its urban setting, managed retreat is unlikely; instead, proactive management will address challenges posed by sea-level rise and storm surges to ensure Oriental Bay remains a premier recreational coastal destination.

Management policy

a. **Manage Clyde Quay Boat Harbour as a historic and resilient coastal asset** by maintaining and upgrading infrastructure to withstand sea-level rise and storm surges, ensuring its long-term functionality for recreation, heritage, and marine activities.



Oriental Bay | **Action table**

#	Actions	Funding status	Time frame
1	Develop a Clyde Quay Boat Harbour improvement plan, including an options assessment for extending timber decking and duplicating the existing breastwork to improve public access.	E/N	Medium
2	Develop a Norfolk Island Pine management plan, building on existing work to assess tree health, guide maintenance, and support long-term canopy cover.	N	Medium
3	Work with swimming groups to look at improving swimming safety information at Oriental Bay.	E	Short
4. Review the licence agreement and coastal permit in conjunction with GWRC to determine the future of the Tug Boat, and, depending on the outcome, consider options to repurpose the site for other aquatic recreation uses.		E	Long
5. Explore opportunities to improve accessibility at Freyberg Beach, ensuring pathways, entrances, and facilities cater to people of all abilities including looking at how people can hire the beach wheel chair more easily .		E/N	Short
6. Investigate improving the amenities at Freyberg Beach, recognising high visitor demand and community feedback, including consideration of additional amenities such as lockers.		E/N	Medium

Contents

Kuputaka
Glossary

Key terms used in this plan

Amenity planting – Planting primarily to make places pleasant for people, such as to provide shelter, shade, screening or aesthetic value.

Beach – Means the foreshore (including the intertidal zone above the mean low water spring) and any area above mean high water springs that can reasonably be considered the beach environment including areas of sand, pebbles, shingle, dunes or coastal vegetation typically found close to a marine environment.

Coastal escarpment – A steep slope or cliff along the coastline.

Coastal turf – A community of ground hugging, low plants that grows in harsh coastal conditions.

Dog exercise area – Means any designated public area where dogs are allowed off-leash under the control of their owner.

Freedom camping – The practice of camping in public areas with minimal or no facilities.

Indigenous biodiversity – Biological life, including plants, animals and micro-organisms, that naturally occur in a given area.

Intertidal zone – The area of the shoreline that is exposed at low tide and submerged at high tide, usually supporting diverse marine life.

Managed retreat – The process of relocating built features, such as buildings and infrastructure, away from hazardous areas.

Nature-based solutions – Actions to build environmental resilience by working with natural processes to protect and restore ecosystems. Examples on the coast include dune restoration, planting to stabilise exposed areas from erosion, and wetland protection to filter sediment.

Reserve classification – One of seven classes of reserve defined under the Reserves Act 1977 (recreation, historic, scenic, nature, scientific, government purpose or local purpose). Every reserve must be classified according to its primary purpose to ensure it is appropriately managed.

Sea-Level Rise (SLR) – The gradual increase in global sea levels due to climate change.

Significant Natural Area (SNA) – An area identified in the District Plan for its high ecological value and contribution to biodiversity.

Soft engineering – Environmentally friendly methods of coastal protection, such as beach nourishment or planting, that use natural materials and work with natural processes.

Storm surge – Temporary sea-level rise caused by extreme weather conditions.

Structures – Man-made constructions or facilities, including toilets, ramps, signage, fences, and buildings.

Threatened plant – A native plant species classified as at risk or threatened under the New Zealand Threat Classification System.

Wind powered water sport – Windsurfing, windfoiling and kitesurfing**.**

Kupu Māori – Māori terms used in this plan

Ahi kā – Continuous occupation or connection to place.

Atua – Ancestor or spiritual entity; often a deity associated with natural elements.

Īnanga – Whitebait; the collective term for juvenile native fish species that migrate upstream from the sea into rivers and streams during certain times of the year.

Kaimoana – Seafood or food gathered from the sea.

Kaitiaki – Guardian or caretaker, often with spiritual and ancestral responsibility.

Kāinga – Home, village or settlement.

Karaka – Native tree, valued for its fruit as a traditional food source rich in carbohydrates.

Kekeno – New Zealand fur seal.

Kōrero tuku iho – Oral traditions.

Kororā – Little penguin.

Kōura – Crayfish.

Mahinga kai – Traditional food-gathering practices and sites.

Manaakitanga – Hospitality, care for others.

Mana whenua – Authority and responsibilities held by iwi or hapū over land and resources.

Mana moana – Authority and responsibility over the sea and coastal areas.

Moana – Ocean or sea.

Māra kai – Cultivated food gardens.

Mātauranga Māori – Māori knowledge and worldview, including environmental and ecological knowledge.

Mauri – life force or essence.

Mokomoko – Lizard or gecko.

Pā – Fortified village or settlement.

Pakahā – Fluttering shearwater.

Pakanga – Conflict or battle.

Rāhui – Temporary restriction placed on an area or resource for protection or regeneration.

Rohe – Tribal boundary or area.

Rongoā – Traditional healing/ medicinal plants.

Taiao – The natural world or environment.

Tākapu – Gannet seabird.

Taonga – Treasure or something precious, including cultural and natural resources.

Tarāpunga – Red-billed gull.

Tikanga – Protocols and customs guiding correct behaviour and practices.

Tītī – Muttonbird.

Tohu – Sign or indicator, often used to refer to environmental cues.

Tupuna – Ancestor.

Tahapū – Estuary or river mouth.

Wāhi tapu – Sacred or culturally significant site.

Wāhi tūpuna – Ancestral site or place of historical significance.

Waka – Canoe.

Whakataukī – Proverbs.

Whakairo – Carving used to express identity, ancestry, and cultural stories.

Whenua – Land.

Ngā Ingoa Wāhi – Māori Place Names

Ākautangi – Evans Bay

Mātairangi – Mt Victoria

Pāriwhero – Red Rocks

Te Whanganui a Tara – Wellington Harbour

Te Moana o Raukawakawa / Te Moana o Raukawa – Cook Strait. Both names are used by mana whenua to refer to the strait between the North and South Islands, reflecting different traditions and histories.

Taputeranga – Refers to the island off Island Bay.

Tangi Te Keo – Peak on Mātairangi/ Mt Victoria.

Te Rimurapa – Sinclair head.

Overview **3**

Name change proposals **4**

Proposal 1: Shorland Park to Te Mapunga Park 4
Proposal 2: Melbourne Road Reserve to Uruhau Reserve 5
Proposal 3: Unnamed (Worser Bay Lawn inland side) to Kākāriki Hūtia Reserve 7
Proposal 4: Lyall Bay West Escarpment to Waitaha Reserve 8
Proposal 5: View Road Park to Haewai Reserve 9
Proposal 6: Te Kopahou Reserve to Te Kapohau Reserve 10
Proposal 7: Overtoun Park to Karaka Onehunga Reserve 12
Proposal 8: Lyall Bay Esplanade Reserves to Hue te Para Park 13

Overview

As part of Tātou ki Uta - the draft Coastal Reserves Management Plan, Wellington City Council (the Council) consulted on eight reserve name changes that aim to reflect the histories, identities, and cultural significance of coastal places. The proposals seek to:

- Restore traditional Māori place names
- Correct historical inaccuracies
- Provide meaningful names for currently unnamed areas

Each proposal includes the meaning of the proposed name, the origin or background of the current name, and a rationale for the change.

These proposed names have been assessed against the Council's Naming Policy – *Te Māpihi Maurea*, which provides the framework for naming and renaming open spaces, roads, and public facilities. The policy prioritises names that:

- Recognise sites of importance to mana whenua
- Reflect local cultural identity, geography, and heritage
- Promote the use of appropriate te reo Māori names, particularly where grounded in kōrero tuku iho (oral histories) and pūrākau (traditional narratives)

The proposed name changes are consistent with these principles and support the implementation of *Te Tauihu*, theCouncil's te reo Māori policy, contributing to the goal of Wellington becoming a te reo Māori capital by 2040.

All proposed name changes were subject to public consultation. Public feedback on the eight proposals was mixed from our public survey: 56% supported restoring Māori place names and strengthening te reo use, 21% opposed, and the remainder were neutral or conditional. Supporters saw restoration as the right thing to do—correcting historical inaccuracies, recognising mana whenua relationships to place, and strengthening language and local identity—while others worried about losing familiar names or confusion, often preferring dual recognition. Many asked for clear interpretation and pronunciation guidance. Further detail is in the Public Consultation Summary.

Name change proposals

Proposal 1: Shorland Park to Te Mapunga Park

The meaning of the proposed name

Te Mapunga refers to *Te Mapunga kāinga*, a pre-European Māori settlement located in the Island Bay area. The name is also associated with the black shag (kawau), a seabird once commonly seen roosting along this part of the coast. According to the Cultural Values Assessment prepared by Taranaki Whānui, the arrival of Te Mapunga – the bird – heralded a seasonal shift and was seen as a sign of better times to come. The shag's skilled fishing abilities were observed by Māori to help locate fish, reflecting an intimate relationship between people and the environment. The name Te Mapunga therefore carries both cultural and ecological significance.

Taranaki Whānui representatives have stressed that restoring this name is important to them.

The current name

Shorland Park is named after John O. Shorland, a Wellington City Councillor (1917–1921), who in in retirement helped build playground equipment in the area and was a prominent community member. The park was named posthumously in 1950.

Further information about Shorland was provided by Colin Feslier of the Wellington Southern Bays Historical Society:

> *The society has recently published material on J.O. Shorland for whom the Council named the park almost 75 years ago. Mr Shorland was a city councillor, a champion cyclist, the owner of one of the first cycle shops (1902) in Wellington, an advocate for parks, including Victory Park, the initiator of the Island Bay fish oil industry, a Justice of the Peace and a bach owner at Island Bay before the suburb developed. He and his wife Edith Sophia Shorland were leading supporters of the bowling, bowls and croquet clubs. He built the house at 159 Derwent St on the site of his bach and it was there he built the boat Rehutai which was commandeered for military use in World War ll, including, local oral history states, for the transport of internees to Matiu Island. He was the deputy chair of the committee responsible for the band rotunda war memorial and made and installed the first swings at what later became Shorland park. He was known locally, unsurprisingly, as the Mayor of Island Bay.*
>
> *His family, as Bay residents are by association also linked to the park's name. His sons, were notably successful. Brian Shorland, OBE, FRSNZ, PhD, DSc (Liverpool), DSc (VUW) brought up in the Bay, was a leading scientist for whom the Association of Science named its Shorland Medal. His other son, Hon Mr Justice (William Perry) Shorland was the father of Hon Justice (Olive Anne Gertrude) Gambrill (née Shorland) CNZM, the first woman to sit on the High Court bench in New Zealand, and the seventh woman admitted to the judiciary.*

Colin Feslier noted that Shorland Park is the only place in Island Bay named after a local.

In addition, some of Shorland's descendants still live in Island Bay and object to this name change proposal.

Rationale for change

This change was requested by Taranaki Whānui in their Cultural Values Assessment for Tātou ki Uta. It seeks to restore a traditional place name associated with a historic kāinga and reflect the ancestral connection to the area. The proposed name, e Māpunga, reaffirms mana whenua presence and acknowledges the local ecological and seasonal indicators that guided daily life. While Shorland's contribution is recognised, the proposed name acknowledges the site's layered history and enduring Māori identity, supporting Tātou ki Uta objectives of cultural restoration and place-based storytelling.

The site of *Te Mapunga kāinga* is also identified in the Wellington District Plan (SCHED7) as a Site and Area of significance to Māori, reinforcing the appropriateness of the proposed name.

This proposal is consistent with the Wellington City Council Naming Policy – *Te Māpihi Maurea*, which prioritises:

- Recognising sites of significance to mana whenua
- Supporting the use of appropriate te reo Māori names
- Telling the stories embedded in the landscape

Figure 1: Map of parks proposed to be renamed Te Mapunga Kainga

Recommendation: Defer this decision and undertake further targeted engagement before a final recommendation is made.

In Tātou ki Uta, officers recommend deferring the decision to allow further discussion with mana whenua, descendants, and the Southern Bays Historical Society. A potential middle ground could include:

- Restoring the name Te Mapunga Park to recognise the kāinga and its cultural significance.
- Retaining Shorland's contribution by naming the playground area of the park - Shorland Play Area, providing dual recognition.
- Installing on-site interpretation to tell the stories of both Te Mapunga kāinga and Councillor John O. Shorland.

Proposal 2: Melbourne Road Reserve to Uruhau Reserve

The meaning of the proposed name

Uruhau is the name of a historic pā site in this area. The name may symbolise wind, movement, and life force – with *uru* meaning heat, passion, or traditional performance, and *hau* meaning wind, breath, or vital essence. This is fitting for a prominent and windswept coastal location.

Meaning of the current name

Named after the adjacent street, Melbourne Road.

Rationale for change

This reserve sits on a recorded pā site**.** Restoring the name *Uruhau* acknowledges Māori occupation and strengthens cultural identity and connection to place, aligning with Tātou ki Uta intent to reflect traditional narratives and whakapapa in the landscape.

The site of *Uruhau Pā* is also identified in the Wellington District Plan (SCHED7) as a Site and Area of Significance to Māori, further supporting the proposed name change.

This proposal is consistent with the Wellington City Council Naming Policy – *Te Māpihi Maurea*, which prioritises:

- Recognising sites of significance to mana whenua
- Supporting the use of appropriate te reo Māori names
- Telling the stories embedded in the landscape

Submissions overview:

- Generally supportive; recognition of Uruhau Pā valued.
- Limited opposition, largely general to Māori renaming rather than site-specific.

Figure 2: Map of park proposed to be renamed Uruhau Reserve

Recommendation: Proceed with renaming to Uruhau Reserve.

Proposal 3: Unnamed (Worser Bay Lawn inland side) to Kākāriki Hūtia Reserve

The meaning of the proposed name

Kākāriki Hūtia was the name of a historic pā in this area. The name is tied to an oral tradition recounting a battle in which a chief ate an uncooked parakeet (kākāriki) before going into combat. The story reflects both the leadership and cultural symbolism of the place.

Meaning of the current name

The park itself has no formal name.

Rationale for change

This reserve sits on a known pā site. The proposed name restores a place-based story passed down through generations and directly reflects the area's Māori heritage. It acknowledges cultural identity while correcting the absence of an official name rooted in Māori history.

The pā site of *Kākāriki Hūtia* is listed in the Wellington District Plan (SCHED7) as a Site and Area of Significance to Māori, affirming the appropriateness of restoring this traditional name.

This proposal is consistent with the Wellington City Council Naming Policy – *Te Māpihi Maurea*, which prioritises:

- Recognising sites of significance to mana whenua
- Supporting the use of appropriate te reo Māori names
- Telling the stories embedded in the landscape

Submissions overview

- Support for restoring a traditional name linked to the local pā and kōrero tuku iho.
- Opposition mostly general concerns about māori names.

Figure 3: Map of park proposed to be renamed Kakariki-Hutia Pā

Recommendation: Proceed with naming as Kākāriki Hūtia Park.

Proposal 4: Lyall Bay West Escarpment to Waitaha Reserve

The meaning of the proposed name

Waitaha refers to a kāinga (settlement) once located in the Lyall Bay area. While Waitaha is also the name of an early iwi from Te Waipounamu, in this context it references a specific local settlement. Linguistically, *wai* means water and *taha* means side or edge – evoking a place beside the sea.

Meaning of the current name

This area is currently referred to using a geographic descriptor – Lyall Bay West Escarpment.

Rationale for change

Naming the escarpment Waitaha Reserve recognises the cultural and historical connection to Māori occupation of this area. The name helps restore identity, reflects both history and geography, and supports the objectives outlined in Tātou ki Uta to ensure ancestral narratives are honoured in naming decisions. This area is also identified in the Wellington District Plan (SCHED7) as a Site and Area of Significance to Māori, associated with the historic kāinga of *Waitaha*.

This proposal is consistent with the Wellington City Council Naming Policy – *Te Māpihi Maurea*, which prioritises:

- Recognising sites of significance to mana whenua
- Supporting the use of appropriate te reo Māori names
- Telling the stories embedded in the landscape

Submissions overview

- Support for a meaningful name reflecting the historic kāinga and coastal setting. Some neutral comments noting the current descriptor lacks cultural context.

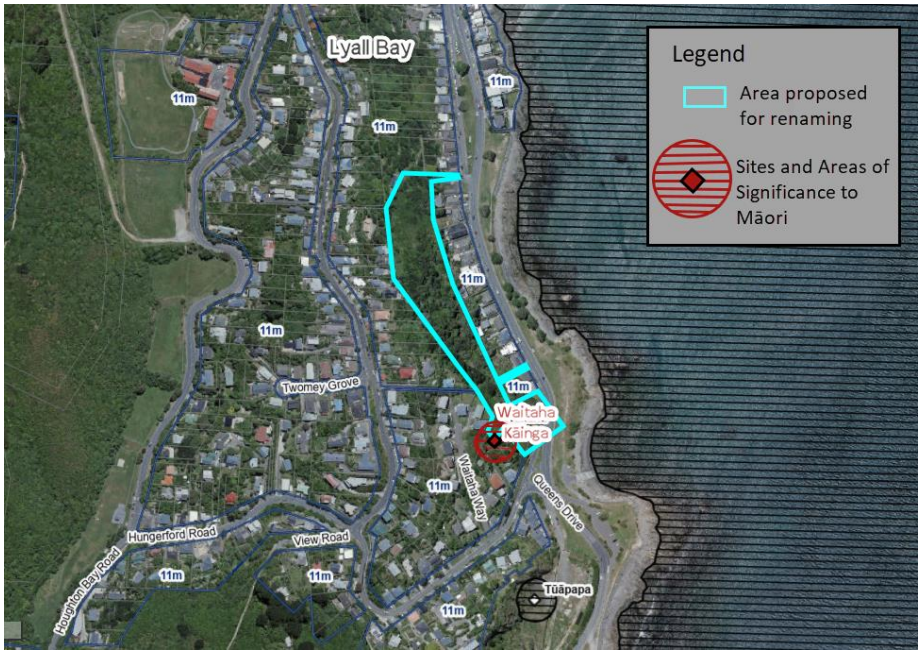

Figure 4: Map of park proposed to be renamed Waitaha Reserve

Recommendation: Proceed with renaming to Waitaha Reserve.

Proposal 5: View Road Park to Haewai Reserve

The meaning of the proposed name

Haewai refers to a traditional kāinga in the area. The name may derive from hae (to part or divide) and wai (water), possibly referencing the dividing of waters or a confluence. Haewai is also the commonly used te reo name for Houghton Bay and for the Houghton Bay creek. Haewai kāinga is recognised as a Site and Area of Significance to Māori in the Wellington District Plan (SCHED7), reinforcing the rationale for formalising this name.

Meaning of the current name

The reserve is named after the adjacent View Road. The reserve area is also commonly referred to as Te Raekaihau Point.

Submissions overview

- Submissions on this proposal were generally supportive, but some suggested that *Haewai* would be more appropriately applied across different reserves in Houghton Bay, rather than only to View Road Park. Suggested alternatives included Buckley Street Reserve and Sinclair Park. For this reason, officers recommend that renaming be deferred, and that broader naming opportunities in Houghton Bay be considered.

Figure 5: Map of park the was proposed to be renamed Haewai Reserve

Recommendation: Defer the renaming and undertake further work with mana whenua on the most suitable application of *Haewai* across Houghton Bay and related naming opportunities.

The plan has instead been amended to include an action to work with mana whenua on:

- Considering the most suitable application of the name *Haewai* across Houghton Bay reserves; and
- Identifying other naming opportunities in the area.

Proposal 6: Te Kopahou Reserve to Te Kapohau Reserve

The meaning of the proposed name

Te Kapohau is believed to be the more accurate traditional name for this area. Based on insights from mana whenua, kapo can mean to catch or snatch, while hau refers to wind, breath, or life force. Together, Te Kapohau could be interpreted as “catching the wind” – describing the exposed nature of this coastline and the way wind moves dramatically through the landscape. Kapohau may also be the name of an ancestor associated with the area.

Mana whenua have expressed the view that Te Kopahou may be a colonial-era transcription error. The correction to Te Kapohau may help restore accuracy and meaning, consistent with Taranaki Whānui kōrero tuku iho (oral traditions).

Meaning of the current name

Te Kopahou is an existing Māori name widely used for the reserve, but likely based on an incorrect or altered transcription.

Rationale for change

Correcting the spelling to Te Kapohau reflects mana whenua knowledge and respects the cultural narratives embedded in the landscape. This change honours the intent of traditional naming and supports Tātou ki Uta objectives to align official place names with accurate Māori heritage and language, as advised in the Cultural Values Assessment.

Submissions overview

- Support for correcting to *Te Kapohau* based on mana whenua kōrero.
- Mana whenua requested more time to research this name as part of the Te Kopahou Cultural Restoration Project.

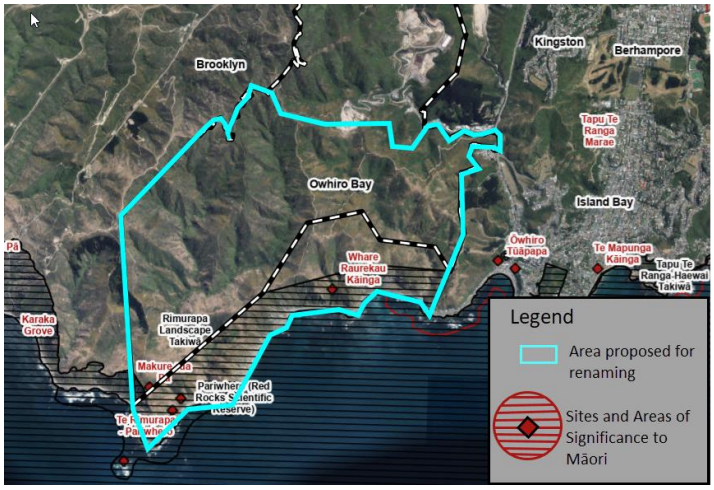

Figure 6: Map of park proposed to be renamed Te Kapohau Reserve

Recommendation: Defer the renaming and revisit within the Te Kopahou Cultural Restoration.

The plan has instead been amended to include an action to revisit the naming decision within that project context.

Proposal 7: Overtoun Park to Karaka Onehunga Reserve

The meaning of the proposed name

Karaka Onehunga was the original Māori name for this area, recorded by Elsdon Best. *Karaka* refers to the native karaka tree, and *Onehunga* generally means sandy foreshore – together translating as "place of the karaka trees on the sandy foreshore." Karaka groves were important sources of kai and cultural significance.

Meaning of the current name

Overtoun was the name early settler James Coutts Crawford gave to his 19th-century estate, referencing his Scottish hometown. The name was used on early maps of Karaka Bay as 'Overton'.

Rationale for change

The proposed name recognises the cultural landscape shaped by karaka groves. While the settler history is acknowledged, the restored name reflects deep Māori place identity and aligns with draft Tātou ki Uta objectives to prioritise indigenous place names and histories. This karaka grove area is also listed in the Wellington District Plan (SCHED7) as a Site and Area of Significance to Māori, supporting the proposal to reinstate its original name.

This proposal is consistent with the Wellington City Council Naming Policy – *Te Māpihi Maurea*, which prioritises:

- Recognising sites of significance to mana whenua
- Supporting the use of appropriate te reo Māori names
- Telling the stories embedded in the landscape

Submissions overview

- Some support for reinstating the traditional name.
- Some concern about losing the settler-era "Overtoun" reference; and the familiarity of the name.

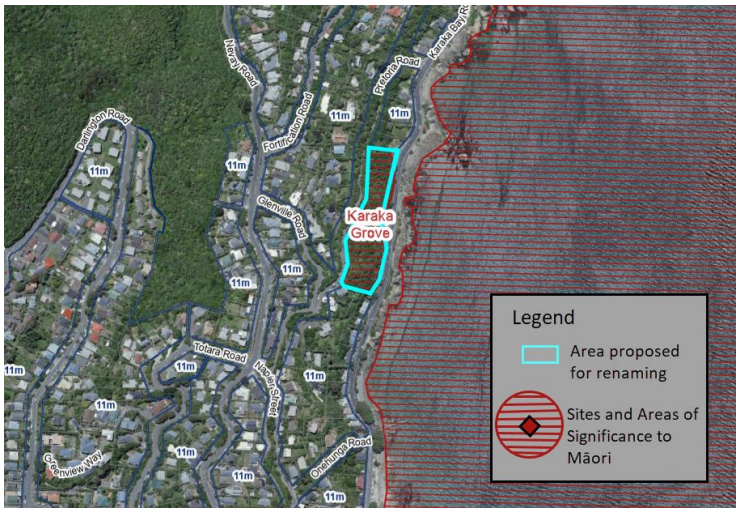

Figure 7: Map of park proposed to be renamed Karaka Onehunga Park

Recommendation: Proceed with renaming to Karaka Onehunga Park.

Proposal 8: Lyall Bay Esplanade Reserves to Hue te Para park

The meaning of the proposed name

Hue te Para is the traditional Māori name for Lyall Bay. It can be interpreted as "the ripe gourd" (*hue* = gourd, *te* = the, *para* = ripe or matured). Gourds were cultivated for use as containers, instruments, and food. The name may reference the physical shape of the bay – resembling a gourd between headlands – and symbolises seasonal abundance and mahinga kai practices.

Meaning of the current name

These esplanade reserves do not currently have a formal collective name. They are commonly referred to as the Lyall Bay Esplanade Reserve but are increasingly known as *Hue te Para* through community use.

Rationale for change

This name restores the traditional name for the bay, reinforcing cultural heritage and the deep historical relationship between mana whenua and the coast. The name aligns with Tātou ki Uta goals and reflects kai gathering traditions and ecological identity. *Hue te Para* is also recorded in the District Plan (SCHED7) as a Site and Area of Significance to Māori.

This proposal is consistent with the Wellington City Council Naming Policy – *Te Māpihi Maurea*, which prioritises:

- Recognising sites of significance to mana whenua
- Supporting the use of appropriate te reo Māori names
- Telling the stories embedded in the landscape

Submissions overview

- Some support for restoring the traditional name for Lyall Bay and its mahinga kai associations.
- Note from WIAL regarding land status/ownership in parts and they may own the land in future; no objection to the naming itself.

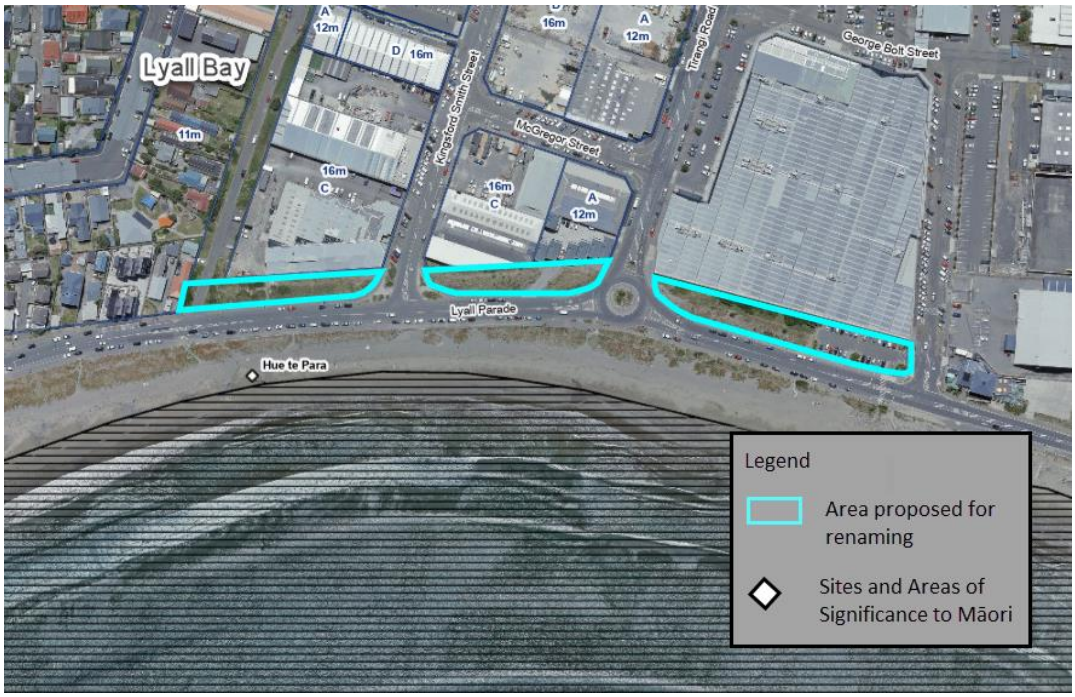

Figure 8: Map of area proposed to be renamed Hue te Para park

Recommendation: Proceed with renaming to Hue te Para Park.

Attachment 6:
Marked up- Rules for use and development of parks and reserves

As part of Tātou ki Uta – the draft Coastal Reserves Management Plan.

This colour = This has been amended.

June 2025

Absolutely Positively Wellington City Council
Me Heke Ki Pōneke

Note to readers:

These proposed rules have been prepared for consultation as part of the Tātou ki Uta - the draft Coastal Reserves Management Plan. They outline how activities within Wellington's coastal reserves are proposed to be managed to ensure that use, development, and protection of these spaces align with the values and pathways of Tātou ki Uta.

While currently focused on coastal reserves, this work represents an initial step toward a citywide approach to managing activities across all parks and open spaces. In future, Council intends to develop a single, consistent set of activity rules across all reserve management plans through a consolidated amendment process. This is why this document is an appendix to Tātou ki Uta. We welcome feedback on both the draft rules for the Tātou ki Uta and this broader intent.

Overview 4

Activity Permission Overview 5

Compliance and Enforcement 7

Activity Tables Summary 8

Activity Rules 9

Assessment of Reserve Effects 24

Overview

This appendix outlines how activities within coastal parks and reserves are managed under a four-tier framework: **Allowed**, **Managed**, **Restricted**, or **Prohibited**—depending on the activity's potential impact, compatibility with park values, and alignment with the reserve's purpose.

These rules give effect to Wellington City Council's obligations under the Reserves Act 1977, particularly Section 41, which requires management plans to ensure that the use, enjoyment, protection, and development of reserves remain consistent with their classification and statutory purpose. Activities are assessed using an impact and benefit approach, supporting balanced, transparent decision-making.

- Low-impact, informal activities that align with park values are generally **allowed**.
- Moderate or higher-impact activities are **managed** through bookings, permits, or concessions.
- Activities that are more significant in scale, duration, or potential impact—or that the Council considers require more formal approval and oversight—are classified as **restricted**. These may involve leases, licences, easements, or similar agreements.
- Activities that are inappropriate or incompatible with the reserve's purpose, values, or legislation are **prohibited**

This approach aims to:

- Enable environmentally sustainable activities that align with plan objectives
- Maintain discretion over higher-impact activities to protect park values and allocate resources fairly
- Apply consistent processes for assessing new activities and developments
- Balance competing uses while protecting environmental, cultural, and recreation qualities
- Prohibit activities with significant adverse effects or inconsistent with the reserve's purpose

These rules apply to all land covered by Tātou ki Uta, including unformed legal roads that function as part of the coastal reserve network. Over time, this framework will guide activity management across all land included in all reserve management plans across Wellington.

These rules also reflect and are shaped by the principles of Te Whai Oranga Pōneke – Wellington's Open Space and Recreation Strategy, which underpin how the Council stewards open spaces. These principles are grounded in Te Ao Māori and reflect the deep interconnectedness of people and place:

- **Tiakitanga** – Stewardship and guardianship of environmental and cultural values
- **Manaakitanga** – Respect, care, and inclusivity in how people experience public space
- **Wairuatanga** – Recognising the spiritual and life-sustaining qualities of the open space and natural world
- **Pārekareka** – Enabling play, enjoyment, and wellbeing through recreation
- **Whanaungatanga** – Strengthening social connection, relationships, and belonging.

Activity Permission Overview

Allowed Activities (A)

- "**Allowed**" activities are generally compatible with park values and typically informal, having low impact on park values and other users. They are the most compatible with park purposes and generally do not require bookings or specific approval.
- General requirements for allowed activities include that these activities must:
    - Comply with site-specific conditions or temporary restrictions, particularly where needed to protect environmental, cultural, recreational, public safety values, and the health and wellbeing of visitors.
    - Not obstruct key pathways.
    - Not unreasonably disrupt other park users or dominate shared areas.

Managed Activities (M)

- "**Managed**" activities are those with potential to affect core park values, including formal events, more intensive or regular use, or activities that may conflict with other users or values.
- Wellington City Council manages activities and development through a range of landowner approval processes and legal agreements. Including:
    - **Permit** – for one-off or small-scale activities requiring oversight
    - **Booking** – for scheduled or organised use of designated spaces
    - **Short-term licence**– for temporary activities or infrastructure that don't require long-term rights of occupation.
    - **Other formal agreement**
- The Council retains discretion to determine the most appropriate approval mechanism based on the nature, scale, duration, and potential impact of the activity and will consider applications on a case-by-case basis.
- Decisions on Managed activities are generally delegated to Council officers and do not generally require public consultation.
- Where an activity involves long-term use, exclusive occupation of land, or is significant in scale or impact, it may instead be considered a **Restricted Activity** and require a licence, lease, easement, or other legal agreement under relevant legislation.
- Some medium- to high-impact managed activities may also require an *Assessment of Reserve Effects (ARE*). Applications should be discussed with a park ranger in the first instance.
- The Council may recover costs, fees, and charges associated with activities, including those related to administration, monitoring, or remediation.
- **Note:** Some activities may also require approvals from other agencies or departments, such as, resource consent (under the Resource Management Act 1991) or archaeological authority (from Heritage New Zealand Pouhere Taonga).

Restricted Activities (R)

- "**Restricted**" activities are those that involve a higher level of impact on park values, longer-term use of land, or a greater degree of exclusivity or permanence.
- Wellington City Council manages restricted activities and development through a range of landowner approval processes and legal agreements. Including:
    - **Licence** – for short- to medium-term use of land or facilities where public access can be maintained (e.g. markets, community group activities, or temporary storage)

    - **Lease** – for longer-term or exclusive use of land or buildings where public access is typically restricted (e.g. club facilities)
    - **Easement** – for access, infrastructure, or utility rights (e.g. drainage, power lines, coastal structures)
    - **Other contractual agreements** – including long-term memoranda of understanding or joint-management arrangements where formal conditions and monitoring are required
- The Council retains discretion to determine the most appropriate approval mechanism based on the nature, scale, duration, and potential impact of the activity and will consider applications on a case-by-case basis.
- Each application is assessed on its merits and may require **public notification** or **elected member approval** where significant impacts are likely, or where the Reserves Act 1977 requires public consultation.
- *An Assessment of Reserve Effects (ARE)* is required for all Restricted Activities to identify and mitigate potential impacts on natural, cultural, or recreational values.
- Restricted activities also include those requiring more complex regulatory compliance, such as those under the Reserves Act, Conservation Act, or involving archaeological authority.
- The Council may recover costs, fees, and charges associated with activities, including those related to administration, monitoring, or remediation.

Prohibited Activities (P)

- Applications for activities identified as "**prohibited**" will not be accepted.
- Prohibited activities are those considered to be inappropriate because of their likely impact on natural, cultural or recreation values, are incompatible with the park purpose(s), characteristics or other allowed activities, or are not permitted by other policies, rules or laws.

Compliance and Enforcement

Activities that breach the following rules—may be subject to enforcement under the Reserves Act 1977, the Public Places Bylaw 2022, the Animal Bylaw 2024, or other applicable bylaws and regulations. Offences under the Reserves Act (e.g. damaging vegetation or interfering with reserve land) may result in prosecution or fines. Council officers and warranted rangers have authority to issue warnings, infringement notices, or take legal action where enforcement powers apply.

Activity Tables Summary

The table below provides a quick reference for whether different activities are generally enabled on Wellington's coastal parks and reserves. It should be read alongside the full rules.

The asterisk (*) highlights activities with important exceptions or conditions.

Activity	Permission
Access (on foot)	Allowed*
Accommodation (private cottages, baches, cabins)	Prohibited
Aircraft and helicopter landings	Managed
Animals/ pets (excluding cats, dogs & horses)	Managed*
Art (public art & sculptures)	Restricted
Beekeeping	Managed
Biking and recreation devices (on designated and shared tracks)	Allowed*
Camping (non-vehicle)	Managed*
Childcare facilities	Prohibited
Commemorative features	Managed*
Commercial activities– low impact, short term	Managed
Commercial activities -higher impact, site sensitivity, long-term	Restricted
Community gardens and orchards	Restricted
Conservation and community volunteering	Managed
Dog walking (in designated areas)	Allowed
Drones/ UAV	Managed*
Encroachments (on reserves)	Prohibited
Events and informal gatherings (non-commercial, under 50 people)	Allowed
Events (non commercial, over 50 people)	Managed
Filming (non commercial)	Allowed
Fires	Prohibited*
Firewood collection and chainsaw use	Prohibited*
Fireworks (public displays)	Managed*
Fishing	Allowed*
Freedom Camping (Self-contained vehicles in designated areas)	Allowed*

Fossicking, prospecting and metal detecting	Managed*
Grazing stock, - cattle sheep, horses other	Restricted*
Horse riding (in designated areas.)	Allowed*
Hunting and firearms	Prohibited*
Informal recreation	Allowed*
Kite flying	Allowed*
Mining, quarrying, and mineral exploration	Prohibited
Motorised Recreational Vehicles	Managed*
Natural resource harvesting	Managed*
New dwellings, buildings, structure or shelter	Restricted
New recreation activities	Managed
Non-biodegradable celebratory materials	Prohibited
Organised community sport	Managed
Orienteering/ rogaining & geocaching	Allowed
Park furniture and fixtures	Managed*
Paragliding, hang gliding, Parachute Landing	Managed*
Picnics & barbecues (gas only)	Allowed*
Renewable energy generation	Restricted*
Research and education	Managed*
Rock-climbing/ bouldering.	Allowed*
Signs	Managed*
Smoking and vaping (in areas specified in the Smokefree Wellington Policy)	Prohibited*
Sponsorship	Restricted*
Storage or laydown area (temporarily)	Managed
Swimming and informal water play	Allowed*
Track construction	Restricted
Unanticipated activities	Managed*
Utility service maintenance	Managed
Utility services (new or upgraded)	Restricted*
Vegetation management, tree felling and arboriculture work	Managed*

Activity Rules

Access (On foot) - Allowed
Walking access is generally allowed across reserves, reflecting their purpose under the Reserves Act to support public enjoyment, recreation, and connection with nature.
Exclusions*:*
• Access to some areas may be periodically restricted for events, scheduled maintenance or project works (e.g. sports field renovation, track construction), to manage risks to public safety, cultural or ecological values, natural hazards (including fire), or where rāhui are in place.
• Where access restrictions are in place, signage and/or website notices will clearly identify the change, including the reason and the expected duration. Relevant stakeholders and utility service providers will be informed prior to closure.
• Ongoing closures of parts of a park may include:
  ○ Areas with important wildlife or ecological values (e.g. dunes or breeding sites), where fencing or closure may be required to protect those values.
  ○ Storage, equipment, accommodation areas and office areas.
  ○ Wāhi tapu areas identified by mana whenua.
  ○ Leased or concession areas (unless otherwise permitted).
	A

Accommodation (private cottages, baches, cabins) - Prohibited New private accommodation is prohibited in reserves as it conflicts with public access and ecological or recreational purposes. **Exclusions** • Existing historic accommodation (e.g. baches at Te Kopahou and Te Raekaihau, former ranger houses in Botanic Gardens) may continue under agreements, recognising established use and heritage value.	P
Aircraft and helicopter landings - Managed Aircraft and helicopter landings are managed to control noise, safety risks, and impacts on biodiversity and public enjoyment. **Requirements** • Council approval and a permit are required for all landings. • Activities must minimise disturbance to wildlife, vegetation, public safety, and recreational values. • Permits may specify conditions including timing, frequency, and designated landing zones. **Exclusions** • Emergency landings for search and rescue, medical evacuation, or firefighting are allowed without a permit.	M
Animals and pets (excluding dogs, cats, and horses) – Managed Bringing animals or pets into parks and reserves requires prior written permission to protect public safety and native biodiversity. **Requirements**: • Subject to conditions set by the Animal Bylaw 2024 (or any subsequent version), written permission is required to bring animals into public areas, except where other policies apply (e.g., dogs and horses) • Applications may be declined where animals pose a risk or nuisance to wildlife, cultural values, park users, or biosecurity.	M
Art (public art and sculptures) – Managed Public artworks and sculptures are restricted activities requiring Council assessment via the *Public Art* Panel guided by the *Public Art Policy*.	R

Beekeeping – Managed Beekeeping in Council reserves is a managed activity and requires written approval from Council. **Requirements** • As set out in the *Animal Bylaw 2024*, beekeeping is only permitted within licensed community garden areas. • Existing beekeeping in reserve locations may continue with agreement, recognising established use. • Operators must comply with the "*Guidelines for Community Beekeeping on Public Land*" which set out requirements for hive placement, management, and safety.	M
Camping (for education purposes)– Managed Camping is a managed activity to protect reserve values, minimise environmental impact, and maintain public enjoyment. **Requirements** • Camping for educational purposes may be permitted with Council approval or a permit. (See freedom camping for freedom camping activity rule)	M
Childcare facilities – Prohibited New childcare facilities are prohibited in reserves as they are generally inconsistent with the purposes of the Reserves Act 1977, which prioritises conservation and recreation. **Exclusion** • Existing childcare facilities may continue only where consistent with the purpose and classification of the reserve, and subject to any other applicable policies or legal requirements.	P
Biking and recreation devices (designated and shared tracks) - Allowed Cycling, mountain biking (including e-bikes and bikes with tag-a-longs), and recreation devices (e.g. electric skateboards and scooters) are supported on shared and designated tracks. Track status is identified in the *Open Space Access Plan (2016*) (or any subsequent version). **Requirements** • Shared Tracks: Walkers have priority unless signage indicates otherwise. • Bike Priority Tracks: Riders and device users must stay on designated tracks to minimise environmental impact and avoid sensitive or prohibited areas. • Code of Conduct: Users must adhere to the Mountain Biker's Code, including yielding to pedestrians and using devices safely and respectfully. **Exclusions** • Some tracks are **prohibited** for bikes and recreation devices to protect ecological, cultural, or safety values. These are identified in the Open Space Access Plan and must be clearly signposted on site. • This activity does not include vehicles classified as Motor Vehicles, Mopeds, or Mobility Devices under the Land Transport Act 1998, or high-powered recreation devices exceeding informal use thresholds. *(See: Motorised Recreational Vehicles)*	A

Commercial activities - low impact, short term - Managed Low-impact, short-term commercial activities—such as guided tours, food trucks, and filming—are managed activities that require prior approval from Council. Short term means occupying a site for less than 6 weeks. Commercial activities mean selling or hiring goods or services in exchange for payment, reward, or otherwise. **Requirements*:*** • A permit or concession must be obtained before operating. • Activities must be temporary, low-impact, and not restrict general public access. • Activities must be compatible with park values. • Applications are assessed under the *Trading and Events in Public Places Policy* (or any subsequent version), including considerations of safety, environmental effects, public amenity, and fees or bonds. • Stationary setups (e.g., a tent or caravan remaining in one spot) may be subject to extra site-specific conditions. (If the proposal exceeds 6 weeks, requires exclusive use of space, involves significant noise, substantial infrastructure, or larger-scale operations it will fall under the **Restricted activity** classification–see "Commercial activities - higher-impact, site-sensitive, or long-term" below.)	M
Commercial activities -higher impact, site sensitivity, long-term - Restricted High-impact or long-term commercial activities are restricted activities and require detailed assessment and approval processes. Examples include permanent cafés and large-scale events. Commercial activities mean selling or hiring goods or services in exchange for payment, reward, or otherwise. **Requirements** **Preapproved pathway.** • Council publishes pre-approved locations and standard conditions under the Trading & Events in Public Places Policy (see Council website). • Under this framework activities **up to 6 months** will be processed as a managed activity and will be processed by council staff. • Proposals that match a pre-approved activity at a pre-approved location and comply with the site's standard conditions are processed under that pathway. The appropriate approval instrument is still required and permits/bookings are required for each operating period under any umbrella approval. **Outside of approved pathway location requirements, or beyond 6 months.** • A detailed application is required, including an Assessment of Reserve Effects (ARE). Applications are assessed under the *Trading and Events in Public Places Policy* (or its successor), including considerations of safety, environmental effects, public use. • Commercial activities must demonstrate clear public benefit and must be ancillary and complementary to recreation, education, or ecological restoration purposes of the reserve. • Applications may require public notification and must align with the management plan and Reserves Act 1977. • Fees and bonds may be required to cover impacts or restoration needs. • Designated event and concession zones (e.g. Botanic Garden, Cog Park, Oriental Bay) may allow streamlined approvals for specific activities as identified in the *Trading and Events in Public Places Policy*. **Exclusions** • Activities that conflict with ecological, cultural, or recreational values, or that are inconsistent with the Reserves Act, will not be approved.	R

Conservation and community volunteering – Managed Volunteering is managed to ensure it supports conservation, education, safety, or community goals, and avoids unintended ecological impacts. **Requirements** • Volunteers should consult with park rangers to identify suitable sites and tasks. • Activities must comply with Health and Safety guidelines and restrictions as per Council guidelines including requirements with regards to trapping, agrichemicals and other control methods for pests and weeds. • Groups undertaking ongoing volunteering must have a Memorandum of Understanding (MOU) with the Council, outlining roles, responsibilities, and scope of activity. (Volunteer infrastructure or events fall under other relevant rules such as events and structures)	M
Commemorative features – Managed Commemorative features such as plaques and trees, sculptures, and shelters are managed activities. These must follow the process set out in the Wellington City Council Commemorative Policy (2024) (or any subsequent version), and meet any site-specific requirements or limitations. Some areas, including the South Coast are at capacity for new commemorative elements such as seats and memorials. **Exclusions**: • New memorial sculptures are a **Restricted activity**. They are discouraged and subject to a high threshold for approval.	M
Community gardens and orchards - Restricted Community gardens and orchards may be established in appropriate locations on reserves but require formal assessment and approval. **Requirements** • Groups establishing a community garden must apply for and enter into a licence agreement with Council. • Must be not-for-profit, publicly accessible, and operated by a legally constituted group. • May require an Assessment of Reserve Effects (ARE) depending on site sensitivity. • Permitted only on Recreation reserves, local purpose reserves, historic reserve, and scenic reserve (1b) as per the Reserves Act • Must implement biosecurity measures to prevent the introduction and spread of pests • May be subject to additional agreements (e.g. MOU for Orchards), insurance, and management planning. **Exclusions** • Not permitted on coastal reserves, the Outer Green Belt, or Scenic Reserves (1a) due to environmental sensitivity and conservation focus.	R
Dog walking (in designated areas) – Allowed Dog walking is allowed in designated on-leash and off-leash areas, as defined in the Dog Policy 2024 (or its successor). **Requirements** • Signage and Council information will indicate specific rules for each location. • Some areas will be dog-prohibited due to ecological sensitivity, wildlife protection, or public safety. **Exclusions** • Guide dogs and certified disability assist dogs are allowed in all parks and public places at all times, provided they are working at the time, in accordance with the Animal Bylaw 2024 and Dog Control Act 1996 (or its successor).	A

Drones / UAV Flying – Managed Drone use is managed to ensure safety, protect natural values, and avoid conflict with other park users. Drone use in parks and reserves is subject to Civil Aviation Rule Part 101 **Requirements** • Must comply with CAA Rule Part 101 and relevant airspace authorisations (e.g. Airways NZ). • Recreational users must log flights on AirShare.nz. • Commercial operators (e.g. filming, surveying, research) require a permit or licence. **Exclusions** • Discouraged near busy trails, public events, or areas important for wildlife (e.g. nesting sites). • Drone fishing is not managed under this plan.	M
Encroachments (on reserve land) - Prohibited Encroachments onto reserve land are prohibited because the use of public land by private property owners alienates the public from its use or enjoyment of that land and can reduces its ecological values. The Council will work constructively with landowners to ensure the removal of encroachments, with the aim of regaining lost public land through: 1. Council will keep a record of all encroachments. 2. Council will require removal of all encroachments. Where practicable, the Council will notify the property owner of any encroachment and provide an opportunity to respond before initiating removal. 3. Council will require the removal of encroachments within a reasonable timeframe, taking into account the particular encroachment, the condition and safety of the encroachment, and the work that will need to be undertaken. This is a non-exclusive list and other factors may be relevant. Where appropriate, managed removal may be formalised via a letter of understanding. 4. Upon removal of the encroachment, the reserve land must be fully reinstated. Removal and reinstatement costs are the owner's responsibility. 5. Council may limit access to the encroached area or to adjoining reserve land to manage the removal process — for example, by installing gates, specifying access hours and days, or limiting the number of people and/or vehicles. 6. If the encroachment cannot be removed due to factors such as ground stability, or because the encroachment is a house~~,~~ Council may consider the issue of a licence. 7. If an application is received for a new retaining structure on a reserve boundary, the applicant will be required to provide a survey of the boundary and the completed structure. The completed structure must be built on the applicant's side of the boundary and not on the reserve. The applicant can request temporary access to build the wall. The completed structure must be contained on the applicant's property and will be the responsibility of the owner, so no encroachment licence is needed. 8. Any managed encroachment removal terms will remain in effect if the property is sold. Council may record relevant information on either the property's title or the LIM (Land Information Memorandum) to inform prospective purchasers of the encroachment and any outstanding obligations. 9. Council will not sell reserve land as a means to resolve an encroachment.	P

Events and informal gatherings (non-commercial, under 50 people) - Allowed Small, non-commercial, informal gatherings not advertised as a public event (e.g. picnics, birthdays, work social events) involving fewer than 50 people are allowed without booking or permit. **Requirements** • Activities must not restrict public access or negatively impact park values. • Noise, structures (e.g. gazebos), and activities must remain low-impact and respectful of the setting. • All waste must be removed or disposed of appropriately; littering or overfilling bins is not permitted. **Exclusions** • Council may restrict gatherings in certain areas or during specific times to protect cultural, ecological, or public safety values (e.g. following storm damage, rāhui, or restoration work).	A
Events (non-commercial, over 50 people) – Managed Non-commercial events with more than 50 people, such as weddings, community performances, or recreational events, are managed activities and require prior approval from Council. **Requirements** • A booking, permit, or concession is required. • Fees, bonds and conditions of use will apply in designated event spaces (e.g. Botanic Garden, Waitangi Park). • Event organisers may be required to submit a health and safety plan. • Event planning must take into account potential impacts on ecological, cultural, and recreational values, and may include conditions to manage these effects (e.g. waste management, location restrictions, or protection of sensitive areas). **Exclusions** • Events that are commercial in nature (e.g. ticketed events, vendor-driven) must be assessed under the Commercial activities section. • Events must not restrict public access or impact park values unless approved through the booking process.	M
Filming – non-commercial – Allowed Low-impact, non-commercial filming (e.g. educational or community projects) is allowed. General requirements for allowed activities apply. (Commercial filming is not included—see Commercial activities section for permit requirements.)	A

Fires and fire lighting
Fires (e.g. open flames, wood fires, fire pits) are prohibited in all parks and reserves due to fire risk and environmental impact.
Exclusions:
• Gas-fuelled barbecues may be used in accordance with the Picnics & Barbecues rule,
• Public events involving fire (e.g. hāngi, or ceremonial fires,) may be permitted as a **Managed** Activity with specific conditions and fire safety plans in place.
• Some designated coastal areas may allow fire use, subject to strict conditions.(*Please note Council will develop guidelines for coastal fire use*). These must comply with Fire and Emergency New Zealand (FENZ) fire season restrictions, which include:
  ○ **Open Fire Season** – Fires may be permitted in designated areas.
  ○ **Restricted Fire Season** – Fires are only allowed with a valid FENZ permit.
  ○ **Prohibited Fire Season** – All fires are banned, including those with prior permits.
• Permitted fire areas (e.g. specific beaches where fires have historically been allowed) may be identified by Council through signage and the Public Places Bylaw. Fires are only allowed in these locations during an Open Fire Season, or during a Restricted Fire Season with a valid fire permit. All fires must comply with local safety requirements.
	P

Fireworks (public displays) – Managed Public fireworks displays are only allowed as part of pre-approved events due to significant environmental and safety risks. **Requirements** • A risk management plan must be submitted. • Approval is only granted for large public events with appropriate oversight. **Exclusions** • Private fireworks or casual use are prohibited across all parks and reserves.	M
Firewood collection and chainsaw use – Prohibited Firewood collection is prohibited in all reserves to protect ecological values and prevent environmental degradation. **Exclusions** • Low-impact firewood collection (e.g. dead branches, driftwood) may be considered as a **Managed activity** • Use of chainsaws or machinery for collection is prohibited unless approved for operational purposes. • Council may also authorise limited removal of woody material for specific operational purposes—such as pest species removal, ecological restoration, reduction of fire risk or health and safety hazard clearance.	P
Fishing – Allowed Recreational fishing is generally allowed in coastal reserve areas. **Exclusions** • Prohibited in the Taputeranga marine reserves, marinas, and port zones. • Whitebaiting and fishing for longfin or shortfin eels (tuna) in streams is a *Managed* activity due to the vulnerability of these species. These activities require prior Council approval and are an offence under the *Public Places Bylaw 2022* if undertaken without permission.	A
Forestry/Plantations - Prohibited For this policy, "forestry" means establishing and managing tree crops for commercial harvest. Forestry/plantations are prohibited due to its conflict with conservation and restoration objectives. **Exclusions** • Existing exotic plantations (e.g. Tawa) may continue where restoration is not yet feasible.	P
Fossicking, Prospecting, and Metal Detecting – Managed These activities involve ground disturbance and potential impacts on cultural and ecological features, so they are managed to ensure protection of reserve values. **Requirements**: • A permit is required. • Must avoid wāhi tapu, archaeological sites, and areas with high ecological values. • Activities must cause minimal disturbance to land, vegetation, wildlife, and heritage features. **Exclusions**: • Prohibited in the Botanic Gardens and at Cemeteries	M
Freedom Camping (Self-contained vehicles in designated areas) -Allowed Freedom camping means overnight stays in certified self-contained vehicles. Freedom camping is allowed in designated areas outlined in the Public Places Bylaw and is subject to the rules set by that Bylaw (or its successor).	A

Grazing (stock, including cattle, sheep, horses) – Restricted Grazing is a high-impact activity and is only permitted to support ecological restoration, weed control, or fire risk reduction. Grazing must not compromise park values, public access, or long-term environmental outcomes. **Requirements** • A licence and a full Assessment of Reserve Effects (ARE) are required. • Public access must be maintained at all times. • Licences must accommodate recreational use (including dog walking). • Grazing for land management is allowed where consistent with a reserve management plan. • No leases will be issued; all licences must meet sustainability and fire management conditions. • Licence renewals are not guaranteed and will only be considered where outcomes have demonstrably met environmental objectives.	R
Horse riding (in designated areas) – Allowed Horse riding is allowed only in designated areas as outlined in the *Open Space Access Plan 2015 (or its successor)*. **Exclusions** • Outside of designated areas, horse riding is prohibited. • Group rides of more than 15 people/horses and horse events require ranger notification and may require a permit and fees. (Horse grazing is managed separately -see: *Grazing*).	A
Hunting and firearms – Prohibited Firearms and recreational hunting are prohibited in reserves. **Exclusions** • Approved pest control activities may involve firearms under Council direction or by authorised officers or contractors. • Police training may be permitted with Council approval	P
Informal recreation - Allowed Informal, low-impact recreation such as casual games, drawing, painting, reading, or small gatherings (e.g. picnics, birthdays under 50 people) is generally allowed in reserves. **Exclusions** • Permission is required for larger groups (50+ people) or if additional infrastructure (e.g. tent) is proposed. (see event rules)	A
Kite flying - Allowed Kite flying is a low-impact recreational activity and is generally supported in most parks and open spaces. ***Requirements*** • Users must ensure kites are flown safely, with awareness of other park users and surrounding hazards (e.g. trees, power lines). **Exclusions** Kite flying is restricted at Lyall Bay Beach due to its proximity to Wellington Airport and the associated aviation safety risk. (This activity does not include kite surfing)	A
Mining, quarrying, and mineral exploration – Prohibited Mining and quarrying are prohibited due to conflicts with reserve purposes.	P

Motorised Recreation– Managed This activity is managed to protect sensitive habitats, visitor safety, and amenity. Motorised recreation includes vehicles, quad bikes, motorbikes, LUV, petrol/other volatile fuel powered bicycle and highly powered e-bikes with power outputs exceeding that of the Land Transport Act definition of a bicycle. **Requirements** • Must comply with posted access hours such as at Te Kopahou Coastal Road (e.g., dawn to dusk, or Sunday closures). • Permits may be required in specific areas. • Events involving motor vehicles require a concession and a permit. • Signage and physical barriers may indicate restricted areas. • Vehicles must be currently registered, have a valid Warrant or Certificate of Fitness, and be driven by a licensed driver **Exclusions**: • Operational use by Council staff, contractors, emergency services, or other Council-approved persons is allowed.	M
Natural resource harvesting -Managed Harvesting of natural resources (e.g. plants, seeds, driftwood, shell, or stone) is a managed activity to protect biodiversity, ecosystems, and cultural values. **Requirements**: • A permit is required for any collection activity. • Activities may include customary harvesting such as small-scale collection for weaving, rongoā (traditional medicine), education, restoration, or scientific research. • Must align with reserve values and avoid sensitive areas. • Approval may require an Assessment of Reserve Effects (ARE) depending on scale and location. • This includes collection under research permits (e.g. seed collection for restoration or native species testing by DOC). **Exclusions**: • Commercial harvesting.	M
New recreation activities - Managed New recreation activities that are not currently anticipated in the management plan must be assessed on a case-by-case basis. ***Requirements*** • Approval is subject to alignment with the strategic values and management objectives of the specific park or reserve. • Activities must not conflict with ecological, cultural, or recreational values. • A permit or concession may be required, and an Assessment of Reserve Effects (ARE) may be requested depending on the activity's scale or impact.	M

New structures – Restricted The construction or installation of new structures in parks and reserves is a restricted activity and requires formal assessment and approval. This includes, but is not limited to, buildings, lighting, sun/shade, shelters, campground facilities, play areas, artworks, sculptures, viewing platforms, and other permanent or semi-permanent additions to the landscape. **Requirements** • Require an Assessment of Reserve Effects (ARE). • May involve public consultation where the structure is large-scale, has long-term or exclusive use, is not anticipated in the reserve's management plan, or is likely to significantly affect reserve values. Public consultation may be required under the Reserves Act 1977 or the Resource Management Act 1991. • Design and placement must minimise ecological, cultural, and visual impact. • Community-initiated proposals must follow the same assessment and approval process as other new structures. • Lighting installations should follow best-practice design, align with dark sky principles, and minimise disruption to wildlife. Design and installation should be informed by the Australian National Light Pollution Guidelines for Wildlife. **Exclusions** • Small-scale features (e.g. benches, bins, fountains, planter boxes, low signage) are managed under the Park furniture and fixtures rule.	R
Non-biodegradable Celebratory Materials – Prohibited The release or use of non-biodegradable materials (e.g. glitter, plastic confetti, balloons) is prohibited due to environmental harm. **Exclusions** • Biodegradable, non-toxic materials may be used if they leave no lasting impact and are cleaned up.	P
Nurseries (for conservation or education) – Managed Nurseries are managed to ensure they support conservation or education values. **Requirements** • A licence is required, depending on the scale and location. • Must be low-impact and support reserve values (e.g. native plant propagation). **Exclusions** • Commercial nurseries are prohibited.	M
Organised Community Sport- Managed Community organised sports, such as football, rugby, and cricket, are encouraged in parks but are managed activities that require coordination to ensure fair use and protect park values. Regular sporting league fixtures, school sports, or club trainings fall under this category. ***Requirements*** • Booking or permit is required for use of sports fields or courts to manage scheduling and field condition. • Fees apply, with community and school discounts available. Fees are set out in the Long-Term Plan. *Note: Large tournaments, races, or sport-related festivals may be considered events and assessed under Council's event and concession processes.*	M

Orienteering/ rogaining and geocaching - Allowed Orienteering, rogaining, and geocaching are supported as low-impact recreational activities. ***Requirements*** • Caches must be placed in safe, publicly accessible locations that avoid damage to ecological or cultural values. • Caches must not contain hazardous, offensive, or wildlife-attracting items. Caches that do not meet these requirements may be removed by Council without notice.	A
Paragliding, hang gliding, parachute landing – Managed These activities are managed to ensure public safety and minimise environmental impacts. ***Requirements*** • A permit is required. • Take-off and landing must comply with aviation safety regulations. **Exclusions** • Generally prohibited near airports and restricted airspace.	M
Park furniture and fixtures (small scale or temporary) – Managed Small-scale, low-impact amenity structures are managed activities and may be installed where they support park function, accessibility, and user experience. This includes, but is not limited to: fencing, bins, planter boxes, drinking fountains, and park benches. **Requirements** • Must be designed and located to align with the character and values of the reserve. • Requires approval to ensure compatibility with ecological, cultural, and recreational objectives. • Should align with relevant landscape assessments, design plans, or direction set in reserve management plans. • Installation should minimise site disturbance and avoid sensitive areas. • Temporary lighting must minimise light spill and ecological impacts, particularly in sensitive habitats. Design and installation should be follow the Australian National Light Pollution Guidelines for Wildlife. *(Note: Larger or enclosed structures (e.g. buildings, shelters, or artworks) are assessed under the New structures rule.)*	M
Picnics & barbecues (gas only) - Allowed Picnics and similar informal gatherings are supported across parks and reserves. ***Requirements*** • Only gas barbecues (e.g. LPG) may be used. • Barbecues must be used safely and away from vegetation.	A
Renewable Energy Generation – Managed Small-scale renewable energy projects (e.g. solar panels, micro wind) may be allowed where they support buildings or facilities, particularly in locations without existing services. Projects must align with the ecological, scenic, and recreational goals of the reserve and have minimal environmental and visual impact. **Requirements** • Proposals will be assessed on a case-by-case basis and will require a permit to ensure compatibility with park values. • Activities not meeting these criteria will be considered ***Restricted***, will require an ARE and may be declined. Public consultation may be required **Exclusions** • Large-scale or commercial energy generation (e.g. wind farms) is prohibited.	M

Research and organised education activities - Managed Research and education activities are encouraged where they support conservation, cultural understanding, and community learning. However, they are a managed activity to ensure they align with park values and minimise disruption. **Requirements** • A permit is required for activities involving sampling, tagging, or cultural features. • Activities must be coordinated with a ranger and must minimise disruption to other park users and the environment.	M
Recreational Rock-climbing/ bouldering - Allowed Climbing and bouldering are supported where appropriate across parks and reserves. **Requirements**: • Use safe climbing practices and appropriate equipment. • Avoid damaging rock surfaces, vegetation, disturbance to wildlife, and cultural or historical features. • Follow any site-specific guidelines and respect other park users. **Exclusions** • Commercial rock climbing is a managed activity and may require a concession.	A
Signs Signs may be enabled where they support reserve use, are required by legislation, or align with the purpose of the reserve. This includes wayfinding, safety, ecological protection, cultural recognition, and public understanding of park values. **Requirements** • Must comply with the District Plan, Reserves Act 1977, and any relevant Council or reserve-specific policies. • Signs should be designed and positioned to avoid clutter and visual intrusion. • Signs should not dominate the landscape or detract from the area's amenity. Opportunities to consolidate signage should be considered, particularly where multiple signs exist • Temporary signage (e.g. for events) may be permitted on a case-by-case basis and only if it aligns with the purpose of the reserve and meets design standards. All temporary signs must be removed promptly after the event. **Exclusions** • Advertising on Council-owned land is generally not permitted, except for sponsorship signs under strict conditions. *(see the sponsorship section)* • Election hoardings are only permitted in designated locations and must comply with the Council's Election Hoarding Guidelines. • The Council reserves the right to refuse any signage deemed offensive or unsuitable	M
Smoking and vaping (in areas specified under the Smokefree Wellington Policy) - Prohibited Smoking and vaping are prohibited in specific locations under the Smokefree Wellington Policy to protect public health, reduce fire risk, and support clean, natural environments. **Prohibited Areas**: • All sandy beaches • Play areas, skateparks and sportsfields • Entrances to recreation centres and community centres, and swimming pools **Note**: In other areas, smoking is discouraged but not formally prohibited unless otherwise signposted.	P

Sponsorship – Managed Sponsorship that supports events, ecological restoration, education, or other park-aligned initiatives may be authorised on a temporary basis, but is a managed activity due to potential impacts on the natural character and amenity of public open space. Sponsorship is managed because excessive or poorly located signs can detract from the open space experience, natural landscapes, and the mana of culturally significant places. **Requirements** • Sponsorship signage must be minimal, relevant, and non-intrusive. It should be readable only from within the area concerned and integrated unobtrusively with other signage or facilities. • Sponsorship on buildings must be incorporated into the main external signage, not as a standalone sign. • The size, design, and location of any signage must not detract from the open space character or dominate Council information signs. • In some cases (e.g. ground leases or club premises), signage may be approved where it aligns with sponsorship agreements that support the group's activities and provide income to sustain community use of the site. **Exclusions**: • Council retains discretion to decline any sponsorship that may offend or undermine community values. • Long-term or exclusive sponsorship may trigger public consultation and must include an Assessment of Reserve Effects (ARE).	M
Storage or laydown area (temporarily) - Managed Temporary storage and laydown areas in parks and reserves—such as gravel stockpiles or construction staging sites—are managed activities and require Council approval. Use must minimise disruption to public access, recreation, and reserve values. **Requirements** • A permit is required, and applicants must demonstrate that the activity cannot reasonably be undertaken elsewhere. • The condition of the site must be assessed before and after the activity to ensure any damage is identified and remediated. • All areas must be restored after use to a condition of equal or greater ecological integrity and asset condition. • Storage must support approved activities or maintenance, and avoid impacting ecological, cultural, or recreational values of the reserve. **Exceptions** • Long-term(over 6 weeks) or construction-related storage is a Restricted Activity and requires an Assessment of Reserve Effects (ARE) and an agreement with Council officers.	M
Swimming and informal water play – Allowed Swimming, splashing, and informal water play are supported where safe and appropriate, especially in coastal reserves and other areas suited to water-based recreation. **Requirements**: • Caution is advised after heavy rain due to potential water quality issues Follow the Wellington Regional Navigation Safety Bylaws 2021 and any Harbourmaster directions. **Exception** • Prohibited where signposted in accordance with the Navigation Safety Bylaws, Harbourmaster directions, or public-health advisories.	A

Track construction – Restricted
New recreation tracks are a restricted activity unless already identified in an approved Council plan. Track development must be assessed to protect ecosystems, cultural values, and ensure safe, connected access for all users.
Requirements
• Any new track proposal not included in a Council-approved plan must obtain formal approval, including:
  ○ A full Assessment of Reserve Effects (ARE)
  ○ Assessment against the Council's track network principles and track planning criteria, including environmental impact, user safety, conflict mitigation, and strategic alignment
• Proposals must go through public consultation and be approved by the relevant Council committee before proceeding.
• Proposals will be considered on a case-by-case basis and must demonstrate a positive contribution to the overall open space access network and park values.
Exclusions
• Track upgrades, realignments, or maintenance works that fall within existing plans and do not materially change use or form may be considered *Managed* rather than *Restricted*.
• Informal or unauthorised track construction is prohibited.
	R

Unanticipated activities – Managed/ Restricted Activities not specifically listed in this plan will be assessed case-by-case. **Requirements** • Activities with low impact may be treated as ***Managed*** and may require a permit or other mechanism. • High-impact or exclusive-use activities will be ***Restricted*** and require an ARE. • Public consultation may apply for significant activities or land use change	**M**
Utility service maintenance - Managed Maintenance of essential utility services is a managed activity. **Requirements** • Must minimise impact on ecological, cultural, recreational, and visual values. • All disturbed areas must be promptly restored to a condition of equal or greater ecological integrity. • Non-urgent earthworks require Council approval and must align with relevant management plans and any conditions of easements or landowner agreements. **Exclusions** • Major upgrades, replacements, or changes in scale or location are assessed under the New or upgraded utility services rule.	**M**

Utility services (new or upgrades) - Restricted
New utilities or upgrades to existing services (including increased capacity or footprint) are restricted activities and will only be considered where they are essential public services and no feasible alternative location exists.
Requirements
• Must provide an essential public service and demonstrate the location cannot reasonably be elsewhere.
• Must not significantly disrupt ecological, landscape, cultural, or recreational values.
• An Assessment of Reserve Effects (ARE) is required for all proposals to assess impacts on ecological, cultural, landscape, and recreational values.
• Public consultation may be required under the Reserves Act 1977 or RMA where the utility has long-term or exclusive use and it would significantly alter the nature, scale, or use of the reserve
• Utilities must:
  ○ Be underground where practicable
  ○ Use low-reflectance finishes and be screened where above ground. Structures will be screened from view through planting where possible.
  ○ Should be sited to minimise interference with existing features, facilities and vegetation.
  ○ Be designed to allow public access and not restrict future park use
  ○ Recorded archaeological sites are avoided and, where required, an Archaeological Authority is obtained from the Historic Places Trust
• Utilities must be sited and designed to protect the open space character, ecological integrity, and recreational value of reserves.
• Opportunities for public benefit (e.g. dual-use tracks) should be considered.
• Require a lease, licence or easement under the Reserves Act, approved by Council.
• All application costs (e.g. legal, consent, survey, public notification) must be met by the applicant.
• All decommissioned infrastructure must be removed, and the site restored to a natural condition at the applicant's expense.
Exclusions
• Utilities that are not essential public services or that conflict with the reserve's purpose will not be approved.
• Routine maintenance of existing utilities is covered under the Utility service maintenance – Managed rule.
	R

Vegetation management, tree felling and arboriculture work Tree and vegetation work is managed to support public safety, biodiversity, and ecosystem restoration. **Requirements** • Requires approval to ensure compatibility with ecological, cultural, and management objectives • Work must be carried out by Council staff, contractors, or *approved personnel*, which may include trained volunteers or community groups operating under supervision and in accordance with an approved restoration or maintenance plan. **Exclusions** • Independent felling or pruning is **prohibited**. Unauthorised removal of trees or vegetation is an offence under the *Reserves Act 1977* and may result in prosecution or infringement under Reserve Act regulations. Offenders may also be liable for restoration costs.	**M**

Assessment of Reserve Effects

What is an Assessment of Reserve Effects?

An Assessment of Reserve Effects (ARE)is a written statement that helps assess the potential impacts (positive or adverse) of a proposed activity on the values and environment of a park. It ensures that decisions on restricted or higher-impact managed activities are well informed, transparent, and in line with the purpose of the Reserves Act and Council policy. A well-prepared ARE helps minimise negative effects, supports good planning, and provides clarity to applicants, stakeholders, and the public.

When is an ARE required?

An ARE is required for:

- Restricted activities, as defined in Appendix A: Rules for Use and Development.
- Managed activities that involve moderate to high impact, or occur in sensitive areas, as determined by Council officers.
- Any proposal that triggers significant change in land use, infrastructure, or access.

The scale and detail of the ARE should be proportionate to the proposal's potential effects and the sensitivity of the site. Small-scale, low-impact proposals may require only a basic assessment; larger or long-term proposals may require detailed technical analysis.

Key Factors and Questions to Guide Your ARE

Wellington City Council uses a values-based approach to assess proposals in coastal parks and reserves. Applications are considered case-by-case for how well they align with the values of Te Whai Oranga Pōneke, the objectives of this plan, and the requirements of the Reserves Act 1977.

Considerations
General considerations • Is the activity consistent with the purpose, policies, and objectives of this management plan? • Are there permanent or temporary effects on reserve infrastructure, land use, or user experience? • What is the level of risk (e.g. biosecurity, landscape degradation, safety)? • Are there opportunities to add value for the public or environment (e.g. dual use, education, restoration)? • Could this proposal set a precedent or lead to increased cumulative effects? • Is it consistent with Reserve Act requirements?
Manaakitanga – Equity and access for all • Is public access maintained or improved? • Are there any negative impacts on other users or recreational values? • Is the activity designed to be inclusive of different ages, abilities, and needs? • Could it occur elsewhere with fewer impacts on people or place?
Pārekareka – Recreation, joy, and the public experience • Does the proposal enhance recreation, enjoyment, and connection with nature? • Is the activity complementary to reserve use, or does it dominate or exclude others? • Is it consistent with the character of the place and values of the reserve? • Can it be co-located with other facilities or uses to reduce impacts?

Tiakitanga – Care for ecosystems and environmental integrity • Will native species, habitats, or water bodies be affected? • Does the proposal involve earthworks, vegetation clearance, or increase risk of erosion, weeds, or pests? • Is the proposal on a Significant Natural Area? • Will it disturb native wildlife including nesting birds or lizards? • Will it affect any trees, including work within the dripline or root zone? If so, a tree impact assessment and mitigation plan will be required. • What are the cumulative or long-term environmental impacts? • Can the impacts be avoided, minimised, or restored? • Is this the best location, or could it happen elsewhere with fewer environmental effects?
Wairuatanga – Respect for natural character and cultural landscapes • Will the activity impact the natural character, dark skies, quiet, or sense of place? • Is the site near a wāhi tapu or culturally sensitive area? • Has engagement with mana whenua occurred, and is a Cultural Values Assessment needed? • Does it affect landscape connectivity or visual qualities? • Can existing structures be reused or the footprint reduced?
Whanaungatanga – Relationships, connection, and community benefit • Who benefits from this activity or development? • Does it support community use, shared stewardship, or mana whenua relationships? • Will it enhance inclusion, learning, or social connection? • Has engagement occurred with affected communities or neighbours, is it supported by them?

Absolutely Positively
Wellington City Council

Actions requiring new funding and estimated cost break downs

This appendix summarises the proposed actions in Tātou ki Uta – The Coastal Reserves Management Plan that would require new or additional funding for delivery. These actions are not currently funded but their identification in the reserve management plan will inform their future prioritisation and guide long-term planning and investment through Council's Long-Term Plan and Annual Plan processes.

Tātou ki Uta is a statutory policy and management plan that provides strategic direction for the use, protection, management and enhancement of Wellington's coastal reserves and open spaces. While the majority of actions identified in the plan (around 75%) are expected to be delivered using existing budgets and asset management programmes, the remaining 25% (22 actions) will be subject to future funding decisions by councillors through Long-Term Plan (LTP) and Annual Plan processes.

Any new initiatives that require new funding will start in the year 2027/2028 and will be considered as part of the 2027/37 LTP.

Funding-dependent actions in the plan have been grouped under the following implementation timeframes:

- **Short term (0–4 years)**: Actions that may be initiated within early in the plan's implementation. There is only one action and this would need to be considered in the 2027/37 LTP and would start in 2027/28.
- **Medium term (5–7 years)**: Actions aligned with the 2027/37 LTP cycles and requiring preparatory work or feasibility assessment. Starting from year 2028/2029
- **Long term (8+ years)**: Forward-looking priorities that may involve complex planning to be completed, cross-agency collaboration, or significant investment that requires further work to quantify. These actions would be considered as part of future LTP processes, likely beyond 2035.

All cost estimates provided are indicative only. Delivery will depend on feasibility, further planning, and Council prioritisation through formal budgeting processes. Some actions may also require coordination with other Council teams or external partners. *Please note 3 actions are marked TBC and excluded from the table totals, as the cost estimates are very uncertain.*

1 Document information

Breakdown of Proposed New Funding-Dependent Actions

#	Action	Capex /Opex	2027/8 $000,s	2028/9 $000,s	2029/30 $000,s	2030/31 $000,s	2031/32 $000,s	2032/33 $000,s	2033/34 $000,s	2034/35 $000,s	Total $000's	LTP Activity Area	Other comment/ relevant section of the plan.
1	Explore opportunities for a mana whenua ranger programme with mana whenua.	Opex	100	100	100	100	100	100	100	100	800	Local parks and open spaces	
		Capex	50								50		For vehicle
2	Develop a Coastal Cultural Interpretation Project in partnership with mana whenua to display stories of wāhi tapu and wāhi tupuna across the coast.	Opex		200							200	Local parks and open spaces	
		Capex			500	500					1000	Local parks and open spaces	
3	Work with the transport infrastructure team to develop and implement a process for actively managing sand at Lyall Bay, including returning windblown sand to the beach system where feasible, and undertaking targeted sand redistribution (e.g., sand push-ups) following storm events to maintain beach function, protect infrastructure, and support dune resilience.	Opex		40	40	40	40	40	40	40	280	Beaches and coast operations	
4	Resource a wildlife work programme to deliver, coordinate and advise on efforts to retain and restore wildlife around the coast including species such as kororā, minimac geckos kekeno and tītī, including potential reintroductions.	Opex		100	100	100	100	100	100	100	700	Biodiversity	
5	Scope a feasibility study to support mana whenua aspirations for seabird and species restoration, assessing viability, identifying suitable reintroduction sites, and guiding habitat restoration and predator control efforts.	Opex		100							100	Biodiversity	

6	Develop a master plan for the Ākautangi Water Recreation Precinct that takes a holistic view of the area's future. Continuing to work with existing tenants, clubs, and stakeholders.	Opex		100							100	Marinas, Local parks and open spaces	
7	Develop a Clyde Quay Boat Harbour improvement plan, including an options assessment for extending timber decking and duplicating the existing breastwork to improve public access.	Capex			400						400	Marinas, Local parks and open spaces	
8	Develop sector-based coastal landscape and amenity plans to guide the placement, design, and potential reduction of infrastructure such as bins, fences, signs, paths, picnic tables, seating, and carparks.	Opex		75	75	75	75	75	75	75	525	Local parks and open spaces	
9	Work with key stakeholders to develop an integrated plan for the eastern Lyall Bay Parade reserves, considering street frontage, business activity, transport, and dune restoration.	Opex		150							150	Local parks and open spaces	
10	Provide a new public toilet in the Rangitatau sector.	Capex				500					500	Public Toilets	
		Opex				40	40	40	40	40	200		
11	Develop a plan for the ex-Maranui Depot site that increases the recreation, environmental restoration, and public benefit of the site. Consider classifying it as a reserve, while ensuring the plan addresses its closed landfill status and the old quarry face, and assesses remediation needs.	Opex					100				100	Local parks and open spaces	TBC future capex cost for delivery. Could be part funded by Plimmer trust
12	Investigate extending the Lyall Bay Parade seawall from Tirangi Road to Surfers Corner to protect dune systems, reduce windblown sand on the footpath, and improve pedestrian	Capex										Transport/Beaches and coast operations	TBC future capex cost for delivery

DRAFT

Introduction

Public consultation on the Draft Coastal Reserves Management Plan — Tātou ki Uta — was held for a two-month period between 5 June and 5 August 2025, in line with the two month requirements under the Reserves Act 1977. The purpose of this document is to summarise the feedback received during this consultation period.

In total, 379 submissions were received from a wide range of individuals, community groups, environmental organisations, and recreational users. This followed an earlier, wide-reaching engagement phase held between March and July 2024, which generated more than 3,000 pieces of feedback through workshops, beachside chats, online tools, school engagement, targeted discussions, and a research survey. That early engagement helped shape the draft plan, while this second phase sought feedback on the draft proposals themselves. A detailed summary of the early engagement process and findings is available in the **Early Engagement Summary Report**.

Overall, feedback was mixed, with many submitters supporting the draft plan's direction and key values, while others raised specific concerns or suggested changes.

There was a wide range of complex themes in the submissions, ranging from how to manage climate change impacts and protecting wildlife, to improving facilities and accessibility, recognising Māori cultural values, balancing different types of recreation, and responding to site-specific issues across the coastal network.

The feedback received has been presented in themes and visual summaries to provide councillors, officers, stakeholders, and the community with a clear understanding of key issues and suggestions. All responses have been summarised as provided, without demographic weighting or adjustments.

This feedback has been carefully considered and used to shape the final Tātou ki Uta — the Coastal Reserves Management Plan.

Methodology

The main method of consultation was an online survey hosted on the Kōrero Mai engagement platform, accessible via Let's Talk. The survey was also available in paper form, and additional submissions were accepted via email.

The consultation ran from 5 June to 5 August 2025. The consultation was promoted widely, including:

- Signs installed along our coastal areas advertising the consultation.
- A targeted social media campaign on Facebook and Instagram featuring short videos with Tom (coastal ranger) and Anita (coastal ecologist), supported by paid promotion (including carousel ads), plus organic posts and shares in key community Facebook groups.
- Coastal drop-in sessions and market outreach, including events at the Waterfront Markets, Evans Bay Marina, Lyall Bay Surf Club, Te Awe Library, and Island Bay Community Centre.
- Posters and information displays on the draft plan in libraries and recreation centres across the city.
- Email outreach to key stakeholders, including environmental, recreational, residents' and community groups, and subscribers on Let's Talk
- Inclusion in key Council newsletters.
- Dedicated press releases. Stories were picked up by RNZ and Stuff.co.nz, including stories focused on coastal birds and the Bait House.
- Public notification in local newspapers, ensuring wider community awareness.

Participants were asked whether they supported or opposed the overall direction of the draft plan, as well as to what extent they supported or opposed each of the draft values and associated pathways. Open-ended comment sections allowed people to explain their choices and provide detailed feedback.

Submitters then could also select specific coastal sectors they wanted to comment on (e.g., Te Kopahou, Taputeranga, Lyall Bay, Rangitatau, Eastern Bays, Mātai Moana, Ākautangi, and Oriental Bay), and respond to sector-specific proposals.

In addition, submitters were asked if they supported specific proposals, including:

- A stronger commitment to nature-based adaptation, such as using dunes and wetlands rather than hard infrastructure.
- Strengthening wildlife protection, including enhanced measures for kororā (little penguins), geckos, and seals.
- Strengthening dune management, giving dunes more space to move and function as natural defences.
- Introducing new approaches to 4WD access at Te Kopahou, including night gate closures and planning for a potential permit-based system.
- Repositioning the Mātai Moana coastal road as a recreation precinct, with improved walking and cycling connections and greater ecological protection.
- Transforming the Ākautangi / Evans Bay Marina Precinct into a coastal recreation hub, with upgraded facilities and improved public access.
- A commitment to inclusive access to coastal reserves and essential facilities, including proposed new public toilets at Island Bay, Breaker Bay, and Mātai Moana.
- Future options for the former Māranui depot site at Lyall Bay, exploring recreational and public uses.
- Strengthening Māori identity on the coast through restored place names, cultural storytelling, and interpretation.
- Sector-based landscape and amenity planning to guide parking, seating, fencing, and signage design and placement.

DRAFT

- Creating a penguin protection area at Rangitatau to safeguard kororā from threats such as dogs and development.
- Planning for the future of structures in coastal reserves, including reviewing and relocating at-risk buildings and amenities in response to sea level rise.

Finally, there was a general question inviting any additional comments on the draft plan, including feedback on the appendices, proposed name changes, and activity rules.

All responses have been summarised thematically, with no weighting or adjustments by demographics.

DRAFT

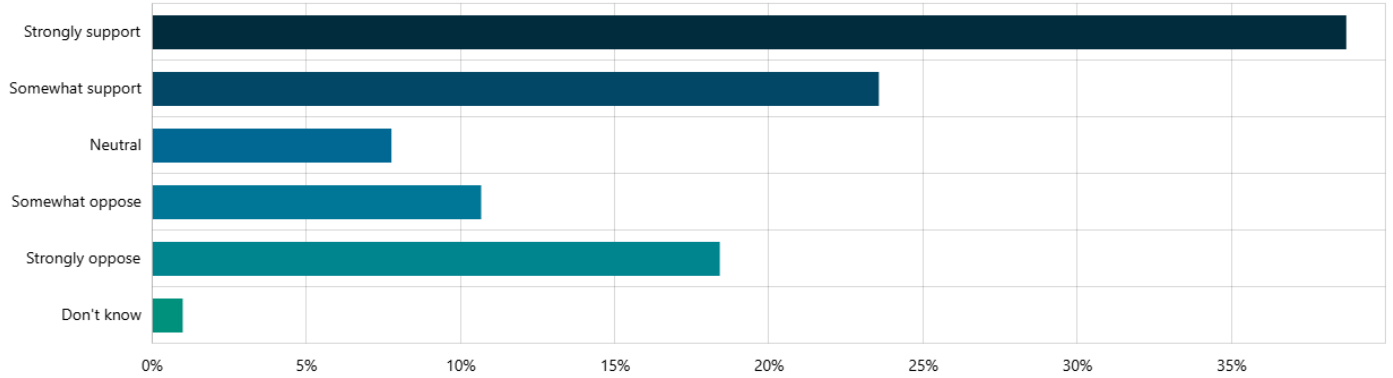
Survey Responses

Overall Direction of the Plan

This section summarises responses to the question: *"Do you support or oppose the overall direction of the plan?".*

A majority of respondents (62.26%) expressed support for the overall direction of the plan, while 29.34% opposed it. A smaller proportion were neutral or unsure (8.7%).

Q: **Do you support or oppose the overall direction of the plan?**



Ngā Uara me Ngā Ara, Values and pathways

This section summarises responses to the question: "*To what extent do you support or oppose this value and its pathways*?"

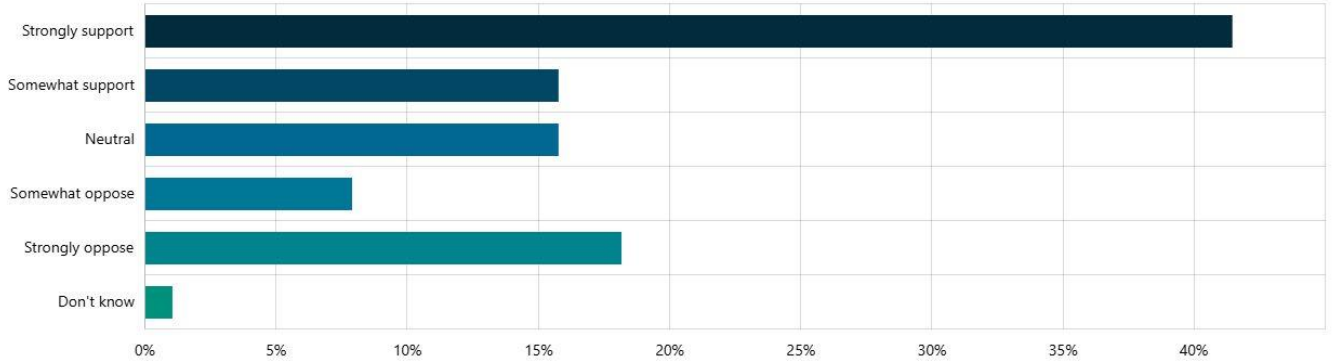
Respondents were asked to indicate their level of support for each value and its associated pathways set out in the draft plan. They were also invited to provide open-ended comments explaining their choices.

Please note that where comments made in other sections were relevant to a particular value, they have been incorporated into the appropriate value summary for thematic analysis. Comments that were location-specific have instead been included in the sector-specific sections to ensure they are considered in context.

Value One: Mana whenua, Active partnership with mana whenua

There were 292 responses to this question. Overall, the majority, 57.2% of respondents supported the value to some extent, while 26% opposed it. Of the Values it was the most contentious.

Q: - To what extent do you support or oppose this value and its pathways?



Open-ended comments

Respondents were also asked to explain their choice. Key themes from these comments are summarised below:

Themes	Comment s	Response

Survey question: **"Do you support initiatives to restore Māori place names, incorporate cultural storytelling, and enhance interpretation along the coast?"**	**Survey results showed:** 	Retain commitment to restore Māori place names, incorporate cultural storytelling, and enhance interpretation along the coast.
Support for recognising Māori cultural significance	Many submitters valued the recognition of the historical and cultural importance of the coastline to Māori, and the role of active partnership with mana whenua. They noted that active partnership with mana whenua is "essential" and that "mana whenua leadership is likely to improve ecosystem management."	Noted,
Appreciation for mana whenua partnership	Positive sentiment toward the partnership approach: "Partnership is important," "The emphasis on co-management, mātauranga Māori, and restoring traditional names is not only culturally affirming but will also support more sustainable management practices informed by deep intergenerational knowledge." "We should recognise & support mana whenua's long presence here."	Noted
Partnership as part of being a New Zealander	Some respondents expressed that respecting Māori values is integral to our identity, "Its part of being a New Zealander."	Noted
Concerns about perceived imbalance and that there should be recognition for everyone.	Many submitters felt the values prioritised Māori perspectives over others and called for a more inclusive approach. Comments included "this document seems to prioritise iwi at the expense of all other Wellingtonians" and "Wellington coast is for everyone and that should be better reflected in the plan.," to "this is highly racist and it strongly offends me." : "	Partnership with mana whenua under Te Tiriti is foundational and sits alongside Council's duty to all Wellingtonians. Coastal reserves remain open to everyone. The plan recognises diverse histories, communities, and voices.
Concerns about over-focus on cultural matters vs. practical issues	A number of submitters thought this section was a distraction and wanted emphasis on infrastructure and environmental upkeep instead of cultural recognition, e.g., "focus on fixing infrastructure" and "Central government's job not Council. Focus on infrastructure and rubbish please"	Noted.

6 Document information

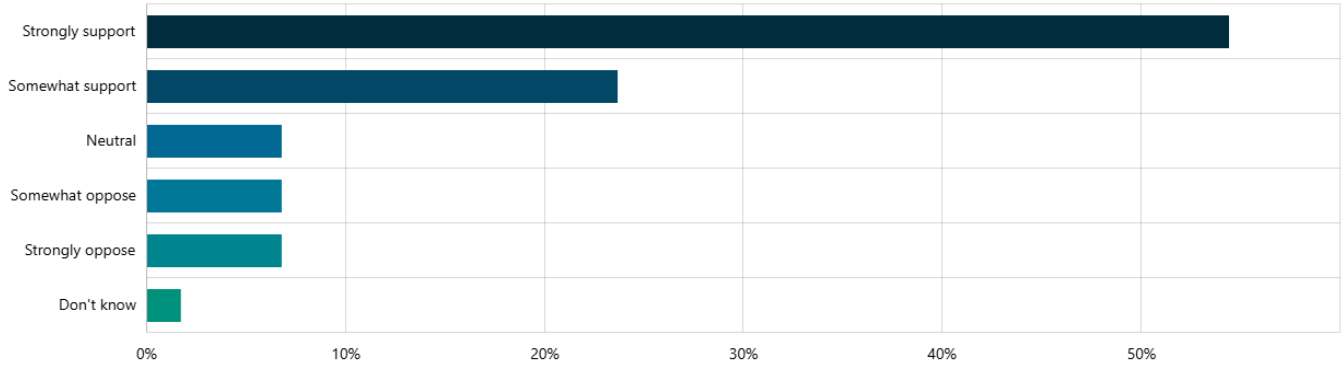
Support for place names and te reo Māori integration	Many supported restoring traditional Māori place names and strengthening the use of te reo Māori. Comments included: "I like the idea of the proposed te reo place names, they are very fitting.," "Restoring traditional Māori names is a great first step," and "I am happy for the integration of Te Reo." "excited to see some traditional Māori place names around!	Further commentary in sectors sections about specific name proposals. Name changes are still retained in the plan.
Support for restoring traditional names while maintaining existing names. They also requested dual names.	Submitters supported restoring traditional names but wanted to retain current names for familiarity and continuity. Quotes included: "introduce[d] slowly and first used in combination with established names so the majority of citizens can recognise each location."," "have both," "and name changes includes both Māori and English then its makes sense"	Noted
Opposition or concerns about name changes as they will confuse, are hard to understand or prioritise Māori.	Some were concerned that changing well-known names could cause confusion, especially for those with cognitive or comprehension difficulties. Quotes included: "Changing long standing names disadvantages the vast majority and particularly affects people with reading, comprehension and memory issues. This lowers their quality of life and creates unnecessary struggle" PLEASE… keep a current or English name… I struggle to learn Te Reo and feel overwhelmed by unfamiliar Māori words." Others emphasised preserving historical knowledge and values: By all means, name the unnamed places however you want, but leave the existing names alone…" "	Noted.
Requests for cultural art, installations, and on-site storytelling	Submitters wanted cultural narratives to be visible and engaging through physical features and interpretation, asking for "information available on site for visitors," "more multi-lingual signposting at Pariwhero/Red Rocks," "public information about indigenous history," and to "make this information more accessible"	Retain commitment for cultural storytelling.
Calls to embed mātauranga Māori in decision-making	Submitters asked to embed mātauranga Māori in decisions: "better and more sustainable outcomes" ; kororā as tohu alongside science ; "co-management, mātauranga… support sustainable practices", and "integrating mātauranga Māori into decision-making" as vital	Retain commitment for mātauranga.

Value Two: Whai wāhi Access to the coast for recreation and enjoyment

There were 296 responses to this question. Overall, 78.03% of respondents supported this value to some extent, while 13.52% opposed it. This value received high overall support, with strong recognition of the importance of coastal access for recreation and wellbeing.

Q:- To what extent do you support or oppose this value and its pathways?

DRAFT



Open-ended comments

Respondents were also asked to explain their choice. Key themes from these comments are summarised below:

Themes	Comment s	Response
Strong Overall Support for Coastal Access	Submitters consistently emphasised coastal access as central to Wellington's identity and wellbeing, citing activities such as walking, surfing, diving, wind and kite sports, fishing, and quiet enjoyment.	Retain strong emphasis on coastal access as a core value.
Intergenerational and community value	Many submissions framed the coast as a place for whānau and community connection, with references to spending time with children and passing on outdoor experiences to future generations	Noted
Balancing access with environmental protection	General support for access alongside strong safeguards, with concerns about damage in sensitive areas (e.g., dunes, wildlife sites) and calls to balance use and protection.	Noted

8 Document information

Maintaining and improving and addressing current accessible infrastructure barriers	Requests to maintain accessible facilities and address barriers for people with limited mobility, including keeping pathways in good condition, ensuring beach access points remain open, and improving accessible toilets and parking	Noted
Survey question: A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana.		Noted
Physical improvements for accessible beach and coastal access	Specific improvements suggested include installing beach matting, adding ramps, and ensuring accessible toilets and parking are near each other to enable access for more users. -	The plan includes provision for accessibility. The plan has been amended to add further actions in specific places to improve accessibility.
Co-design with disabled communities	Submitters asked Council to co-design access solutions with disabled communities and partner directly with those who use the spaces.	The plan includes a policy and actions to work with people with disabilities to improve coastal access.
Accessible information and signage	Requests to improve communication about which sites are accessible and to provide information in accessible formats (e.g., large print, braille, digital).	As above.
Convenient and equitable accessible parking	Submissions sought accessible parking that is conveniently located near amenities, not time-limited, and more evenly distributed along the coast.	The plan has been amended to include an action to look at accessible car parking at primary coastal areas..

Support for tighter dog control to protect wildlife	Some submitters supported stronger dog control to protect wildlife and reduce conflict with other users. Suggestions included: increased enforcement of dog rules in coastal reserves, more on-leash zones or seasonal restrictions in sensitive areas, prohibiting dogs from ecologically significant sites (especially where kororā nest), and clearer signage with public education on appropriate dog behaviour near wildlife.	The plan has been amended to support tighter dog controls.
Maintaining dog access in appropriate areas	Other submitters emphasised the importance of maintaining access for dogs and their owners, particularly where wildlife impacts are minimal. They called for retention and promotion of designated dog-friendly areas, including off-leash zones, avoiding blanket restrictions, and balancing wildlife protection with ongoing recreational use. Some suggested explicitly recognising dog walking as part of everyday coastal recreation, clarifying where and why dog restrictions are in place (e.g., wildlife nesting areas), and reinforcing that dog access is not being removed but will be managed based on site-specific needs.	Dog access is still supported across a number of off leash dog areas on the coast.
High value of water-based recreation	Submitters strongly emphasised the importance of water-based activities — swimming, surfing, windsurfing, diving, snorkelling, kayaking, and paddleboarding — as "iconic," and "a key part of Wellington's lifestyle." These activities were seen as contributing to wellbeing, community connection, and the city's coastal character. One noted: "The coast is vital for cultural activities, recreation, and social activities."	Noted. This value is included in the plan.
Surfing and windsurfing	Surfing and windsurfing were particularly highlighted, with repeated references to Lyall Bay as a "key surfing destination" and "dedicated windsurfing access location." Submitters called for preservation and recognition of key surf breaks and wind sports access areas, especially in Lyall Bay and Houghton Bay. (these are summarised more in the location). Submitters called for completion of a surfing assessment and inclusion of mapped surf zones in the final plan.	The plan has been amended to add reference to key surfing and windsurfing sites.
Snorkelling and diving	Requests to better recognise popular snorkelling and diving spots and to increase visibility of these areas in maps and guidance	The plan has been amended to add reference to key snorkelling and diving sites.
Swimming access and facilities	Support for maintaining swimming beaches and adding facilities such as changing rooms, steps into the water, and pontoons to improve enjoyment and safety	The plan recognises swimming amenities at beaches and has many actions to improve amenities in specific places.
Boat ramps	Concerns about the condition and safety of several boat ramps, described as "slippery," "dangerous," and in need of "frequent maintenance." These issues were seen as barriers to safe access for sailing, kayaking, and windsurfing.	Noted. The plan includes policies to maintain boat ramps.
Rigging and storage areas	Clear calls for better gear setup and storage areas near popular wind and water sports zones. One submitter noted the difficulty of "blowing up a wing on the footpath," reflecting the lack of practical space for preparation.	The plan has been amended to include reference to wind powered water sport areas.

DRAFT

Changing rooms and toilets	Multiple concerns about condition, safety, and distribution of changing rooms and toilets; opposition to a 4-km spacing standard for toilets. Requests for increasing opening hours.	The plan has been amended to remove the 4km toilet reference. The plan includes policies to support all year use of beach facilities. Opening hour comments have been passed on to the appropriate team.
Showers and washdown areas	Requests for more outdoor showers near popular beaches to support surfing, swimming, and general coastal use. Suggestions included surf-friendly infrastructure such as rinse stations and foot showers.	The plan does not provide for outdoor showers everywhere. It recognises them as useful amenities in primary coastal areas.
Wharves, piers and pontoons.	Several submitters highlighted the importance of maintaining and improving access to wharves and piers for fishing, diving, jumping, and cultural use. Others requested more swimming pontoons.	The plan includes a policy on access to wharves and piers and supports community groups to fundraise for a swimming pontoon at Scorching Bay
Parking as essential for coastal access	Many submitters emphasised that parking is essential for coastal access, particularly for families, older adults, and those transporting gear such as boats, paddleboards, or waka. "Parking is part of access."	The plan recognises parking access as important.
Concerns about loss of parking	Concern that parking could be lost due to new infrastructure (e.g., cycleways, dune restoration), with requests to protect parking near high-use areas; some noted accessible parks are too far from the beach.	The plan recognises parking access as important.
Support for designated, serviced freedom camping sites and concern about capacity.	Support for designated, well-managed freedom camping areas with appropriate facilities and, where appropriate, fees/permits, and restrictions to self-contained vehicles. Capacity concerns at Evans Bay and Te Kopahou sites (often full early), and suggestions for additional provision near the CBD or ferry terminals with supporting facilities.	The plan includes an action to review freedom camping provision.
Freedom camping - Opposition due to environmental and amenity impacts and safety concerns in remote areas.	Opposition due to litter, noise, wastewater dumping, dune damage, and conflicts with residents; safety concerns in isolated, poorly lit areas. NZ Police advised against freedom camping in isolated, poorly lit areas (e.g., Mātai Moana), citing anti-social behaviour and safety risks.	As above.
Support for improved coastal walking and cycling connections	Broad support for maintaining and enhancing pedestrian and cycling access along the coastline; connected paths seen to enhance access and experience.	The plan maintains actions or connection to supporting this amenity along the coast.
Maintenance of existing tracks	Requests to prioritise maintenance of formed tracks, including addressing erosion and weeds in high-use areas such as Te Kopahou.	Noted. The track network is an important part of recreation on the coast.

DRAFT

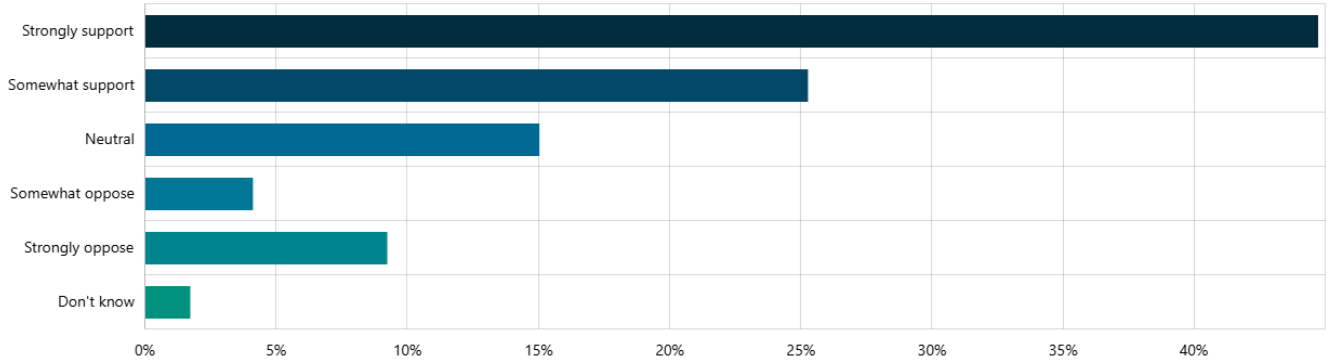
User conflict concerns	Concerns about conflicts between pedestrians, cyclists, and vehicles, with calls for separated routes or clearer signage where appropriate.	Noted. Some of this concern is out of the scope of the plan.
More and better coastal play spaces and nature play.	Requests for upgraded play spaces near beaches that are safe, shaded, and well-maintained, with interest in nature-play elements. Including the integration of taonga tākaro.	Noted. Plan includes policy on play areas.
Concerns about vehicle speed and safety and concerns about conflicts. And complaints about dangerous or reckless driving.	Concerns about speeding and dangerous driving on narrow coastal roads; reports of shared-use conflicts at locations including Breaker Bay, Lyall Bay Parade, and the Miramar coast.	Noted. Some of this concern is out of the scope of the plan. (Outside of Te Kopahou) but this has been passed on to the correct team.
Events activating the coast and commercialisation	Feedback on events and commercial activations varied; interest in activity that supports enjoyment without undermining natural values or access.. One submitter said the plan should recognise mobile, low-impact wellness services such as wood-fired coastal saunas, which are "off-grid, no-infrastructure, waste-neutral" and activate beaches in off-peak seasons. They suggested seasonal or time-limited permits, pilot zones for innovative activities, and identified Lyall Bay, Hataitai Beach, Worser Bay, Princess Bay, and Island Bay as suitable sites.	Noted. Commercial activities are regulated under the Reserves Act 1977 and the Trading in Public Places Policy provides pre-approved locations.
Public art reflecting culture and history	Support for public art and interpretation that reflects local history and Māori culture, integrating storytelling into the coastal environment.	Noted. There are actions to include interpretation in the plan.
Lease and community buildings	Comments on leased and community buildings related to use, maintenance, and balancing public access with club operations. Or extension of leases.	Noted. Comments passed on to the Lease team.
Requests for public transport	Requests to improve public transport access to coastal areas to support equitable access without relying on private vehicles	Noted. Public transport is managed by Greater Wellington Regional Council but the plan includes policies to support this discussion with Greater Wellington.

DRAFT

Value Three: Hononga Taiao Enduring connection to the landscape

There were 293 responses to this question. Overall, 59.7% of respondents supported this value to some extent, while 13.32% opposed it.

Q:- To what extent do you support or oppose this value and its pathways?



Open-ended comments

Respondents were also asked to explain their choice. Key themes from these comments are summarised below:

Themes	Comments	Response

DRAFT

Survey question: Support for: **"Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs.?"**		Noted.
Support for cultural storytelling and connection	Many supported acknowledging cultural heritage, storytelling, and design to deepen connection and educate people about coastal history (including mana whenua and wider community stories). "Knowing more about our coastal cultural heritage is crucial to strengthening our commitments and protections of the whenua we live on. I would love to see this more reflected when I am walking or exploring the coast."	Noted
Support for balance of histories	Requests to acknowledge multicultural coastal histories (European fishing, shipping heritage, other cultural stories) alongside Māori heritage. "Our coastal history and heritage is multi-cultural. We need to recognise the european history and culture fishing, navigation, shipping and sport. The Island Bay 'baitshed' is an historic record and its present use as an aquarium should be recognised by making it a cultural reserve."	Noted. A mixture of histories is included in the plan.
Caution on signage and cost	Concerns about excessive interpretive signage or expensive storytelling; suggested simpler, low-cost approaches (e.g., QR codes, limited panels). "Oppose large-scale interpretive signage projects. Extensive physical signage often fails to engage visitors and delivers poor value for money... install up to 15 simple interpretive panels with QR-codes linking to a GIS portal for optional, on-demand stories." "We would prefer signage, new structures and man-made infrastructure be kept to a minimum on the South Coast. It's a wild natural environment and any kind of artificial structure is intrusive and usually ugly."	Noted. The use of low cost QR codes is supported. The plan supports minimal infrastructure on the south coast.
Concern about restricting access	Concerns that cultural or landscape values might lead to reduced public access. "Collaboration with local communities, including mana whenua and recreational users, could help develop creative solutions that protect the coastline's character without unnecessarily limiting people's ability to enjoy and connect with these special places."	Noted. The plan supports a balanced approach.

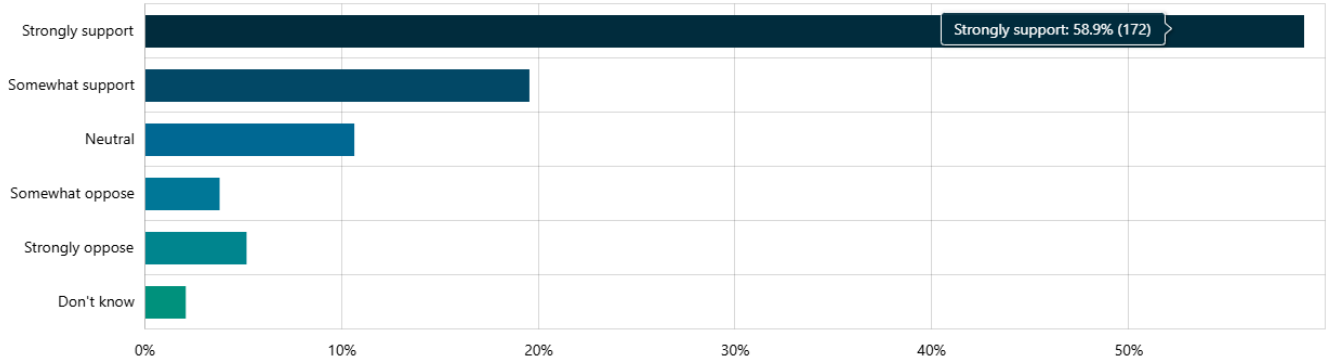
14 Document information

Prioritise other values	Some saw cultural connection work as lower priority and requested focus on environmental protection and essential infrastructure. “I like the idea, although it is vague. I think that possibly funding should prioritize the other values present here, e.g. Coastal ecosystems.”	Noted.
Interactive and alternative interpretation methods	Suggestions for visitor centres, heritage tours, and mobile digital experiences. “An education hub to teach people the origins of the coastline and the people as well as the Māori stories about the Wellington coast. This could include a place with books (exhibition spaces) local artists celebrating the coast line, the would be very empowering.” “Design a walking / driving tour around coast by doing what Heritage NZ did in the waikato with the 'waikato wars driving tour' using their app.”	Noted.
Opposition to investment in coastal storytelling	Several submissions opposed investing in coastal storytelling or interpretation, with one group calling to drop this value entirely, citing rates concerns. “Storytelling is a waste of money – rates are too high.”	Noted.

Value Four: Tiaki Taiao - Protection and restoration of coastal ecosystems

There were 292 responses to this question. Overall, 78.4% of respondents supported this value to some extent, while 8.9% opposed it.

Q:- To what extent do you support or oppose this value and its pathways?



Open-ended comments

Respondents were also asked to explain their choice. Key themes from these comments are summarised below:

Themes	Comment s	Response
General support for ecosystem protection	Strong backing for protecting and restoring coastal ecosystems; many framed it as a top value linked to wildlife and coastal identity.	Retain strong emphasis on ecosystem protection as a core value.
Survey question-support for 'Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals.'		Noted.

Survey question- support for' Strengthening dune management: Giving dunes more space to move and function as natural coastal defences.'		Noted.
Biodiversity and interconnected ecosystems	Submitters praised the plan as comprehensive and future-focused around biodiversity, and asked for stronger emphasis on managing the coastal interface as a connector and adopting integrated catchment management.	Noted.
Stormwater, runoff, and pollution	Many raised widespread concerns about stormwater and sewage pollution — including blocked outlets, post-rain discharges, and landfill runoff — and argued that delaying stormwater work is unacceptable given issues already seen in Lyall Bay and Kilbirnie. One submitter suggesting "develop a consistent approach to existing piped stream outfalls including Paekawakawa, Haewai, Ngaroma (Lyall Bay) and Waipapa"	Noted. Stormwater and runoff are mostly outside the scope of this plan but are recognised in the plan. An action has been look at working with partners around interpretation of outfalls.
Pollution prevention tools	There was support for practical devices on stormwater outlets, such as trash-capture nets and filter systems, to intercept litter before it reaches the sea.	Noted. The plan includes policy to support this.
Litter and waste management – bins	People reported overflowing, missing, or poorly located bins at popular sites and questioned the effectiveness of smart bins in coastal conditions. Several noted that weekend use leaves prominent litter accumulations in parks near the coast.	Noted. The plan includes a policy and an action to support this.
Community-led litter initiatives	Submitters valued community-led clean-ups and marine education activities, noting these efforts spread good habits and asked for continued support.	Noted. The plan includes policy around this.

Marine ecosystem – under-emphasis	Many felt the plan under-represents the marine environment and pointed to overfishing and predator loss driving underwater ecosystem decline, including the growth of kina barrens.	The plan was amended to add more detail around the marine ecosystem. However noting still that this is out side of Council's remit.
Kina barrens and predator loss	Loss of key predator species such as crayfish, moki, and snapper was highlighted as a driver of ecosystem imbalance and kina overpopulation.	As above. Added commentary on kina.
Intertidal zone importance	The intertidal zone was emphasised as highly productive and ecologically significant, with requests to reflect this in restoration targets.	The plan was amended to add more detail around the intertidal zone.
Beach grooming concerns	Submitters opposed routine beach grooming in sensitive areas, saying removal of seaweed wrack harms intertidal biodiversity and coastal processes.	The plan was amended to add more detail around beach grooming and a policy restricting beach grooming.
Seaweed restoration and wrack habitat	People stressed the value of seaweed and wrack for beach stability and habitat, and suggested restoration of kelp forests and protection of wrack lines. Volunteer divers also asked for council support for underwater clean-ups.	The plan supports these initiatives although it is mainly out of scope.
Poaching and enforcement and integration with fisheries management.	Submitters called for much stronger enforcement against poaching around marine reserves and for clearer public information on rules.	The plan supports working with MPI around poaching. It fits outside of Council's responsibility otherwise.
Marine reserves and sanctuary zones	Some supported expanding sanctuary areas and improving public education about reserve boundaries and expectations.	Marine reserves are outside of the scope of this plan.
Wildlife protection – kororā (little blue penguins)	There was strong support to better protect kororā, with priority areas identified on both coasts. Suggested measures included dog controls, nesting support, managing light and noise near colonies, predator control, and interpretation.	The plan includes wildlife protection policies for kororā, including supporting nesting boxes, predator trapping and signage.
Wildlife protection – other species	Submitters asked that other vulnerable species — such as banded dotterels, reef herons, geckos, fur seals, and certain invertebrates — be explicitly included.	These species will be included in maps. The amended version added commentary on Dotterels at the Airport.

DRAFT

18 Document information

Fence of areas to protect birds	Forest and Bird raised that we need to fence off areas to protect nesting areas and considered seasonal closures to reduce disturbance.	Fencing off areas for kororā protection is included in a few places in the plan such as at Greta Point and further work with Wellington Airport at Moa Point. Generally fencing off areas is discouraged to support public access.
Species reintroduction	Support was expressed for reintroducing species to restored habitats once predator control and habitat readiness criteria are met.	The plan supports species reintroduction investigations.
Dark sky, Light and noise pollution	Many backed initiatives to reduce light spill and noise in sensitive areas for the benefit of seabirds and other wildlife, while noting operational constraints near transport infrastructure such as the Wellington International Airport.	The plan retains commitment to Dark skies with slightly amended words so it is clear we are talking about parts of the South Coast, not the entire South Coast.
Community partnership and citizen science	People emphasised partnerships, citizen-science monitoring, and involvement of students and volunteers, noting that volunteers cannot sustain all work without support.	Noted. This is supported in the plan.
Education and awareness	Respondents reported that the draft plan improved their understanding of coastal ecosystems and taonga and asked for more interpretive material.	Noted.
Pest animal control	There was strong support for controlling animal pests — rats, stoats, possums, deer, pigs, and goats — to accelerate wildlife recovery.	Noted. The plan was amended to add some extra actions about deer and pigs at Te Kopahou.
Pest plant control	Weed species such as wandering willy, boneseed, and iceplant were identified as priorities for control, with wandering willy flagged as the top priority on the southern coast.	Noted.
Exotic tree removal	Submitters called for phased removal of pines and macrocarpas on ridgelines to allow native canopy regeneration and improve seabird habitat.	Noted. This will be considered further.
Dune restoration	Dunes were recognised as vital natural buffers and important wildlife habitats. Concerns included damage from mowing, beach grooming, trampling, and development. Submitters supported native planting (e.g., pīngao, spinifex), clear management zones, and avoiding works that reduce dune space. Some backed fencing to protect fragile areas, while others preferred balancing protection with access. Community-led planting and education were also encouraged.	Noted. Dune restoration is supported in the plan.

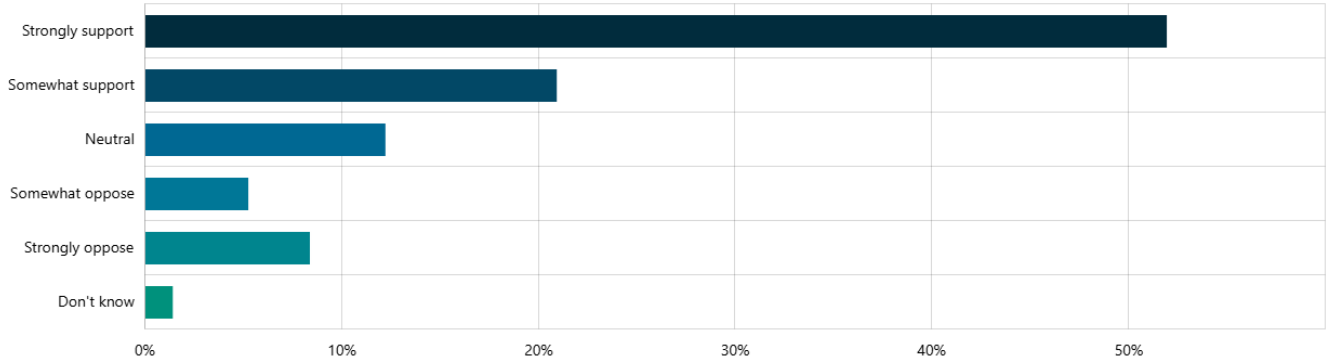
DRAFT

Monitoring, baselines, and cultural indicators	Submitters urged the development of robust biodiversity baselines to measure restoration progress, and the use of cultural indicators alongside scientific monitoring.	Noted. Monitoring is supported in the plan.
Estuaries and wetlands	The ecological importance of estuaries and wetlands was emphasised — as nurseries, habitat, and natural filters — with requests for restoration, protection, and avoidance of infill or reclamation.	Noted. Estuaries are supported in the plan.
Aquarium	Another submitter suggested a National Aquarium in the inner harbour	Noted. This has not been included in the plan at this stage and is outside the scope.

Value Five: Taiao Tuatahi - Nature first approach to resilience

There were 287 responses to this question. Overall, 72.83% of respondents supported this value to some extent, while 13.6% opposed it.

Q:- To what extent do you support or oppose this value and its pathways?



Open-ended comments

20 Document information

Respondents were also asked to explain their choice. Key themes from these comments are summarised below:

Themes	Comment s	Response
Strong support for nature-first, adaptive approaches	Many respondents expressed strong support for using nature-based solutions to manage coastal hazards and climate impacts, highlighting that working with natural processes is more sustainable and aligns with global climate adaptation goals. Comments included: "I completely agree with the approach of working with nature rather than against it," "I promote the long-term protection of the coast from climate threats," and "Resilience is important, but should not be prioritised over other values."	Noted.
Survey question- support for' A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure..'		Noted,

DRAFT

.Survey question- support for' Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise.		Noted.
Support for community education and climate literacy	Several submissions highlighted the need to educate communities about climate change risks and coastal resilience, suggesting interpretive signage, community outreach, and clearer communication on sea level rise and adaptation pathways. One submitter noted: "This could be a very good opportunity to start conversations within communities about climate change as a whole. Signage in vulnerable coastal areas explaining how sea level rise occurs and what people can do about it could be a good way to get this going, potentially with wider community outreach and education for those most impacted."	Noted. Passed this feedback on to the climate adaptation team.
Concerns about prioritising nature over people	Some respondents worried that "nature-first" might be interpreted as prioritising ecological values above community needs, including private property and access. They want to see balance and explicit recognition of human needs. Comments included: "The city is for people as well. We shouldn't value nature above the wellbeing of people in areas that people live," and "I don't support a nature-first approach, I support a people-first approach with a healthy integration of nature to allow all people to enjoy nature including 4WDs and motorcycles."	Noted.
Evidence and data concerns	A number of submissions questioned the scientific basis for certain claims in the plan (e.g., wildfire risk, sea level rise impacts) or requested clearer data to justify adaptation measures. Examples included: "Climate change? Where is the evidence for this?"; "What evidence do you have to support increased wildfire risk in Wellington?"; "Where is the evidence for sea level rise since recorded history?"; and "Change is constant — how will you stop the sea?"	Noted. The plan has been updated to improve clarity on sources.
Support for Dynamic Adaptive Pathways Planning (DAPP)	Several respondents requested a flexible, staged approach to adaptation, referencing Dynamic Adaptive Pathways Planning (DAPP). They see it as a way to avoid rigid rules and enable responsive, context-specific decisions. Comments included: "Council must adopt DAPP with clear thresholds and real-time	This is supported in the plan.

22 Document information

	monitoring," and "Trigger-based planning prevents maladaptive lock-ins and allows staged investments."	
Requests for hybrid solutions	Many respondents noted that while nature-based solutions are important, built infrastructure (e.g., seawalls, breakwaters) should still be considered where necessary to protect existing assets and communities. Suggestions included: "Nature-based solutions should be used where buffers permit — but man-made defences must be available elsewhere," "If a seawall is needed, build it. Use natural approaches where it does not cause harm," and "The sea and other natural forces will win over most hard infrastructure. However, I agree that in a few places, there will be a need for a combination of withdrawal (coastal housing) and hard infrastructure (limited number of seawalls)."	Noted. This is supported in the plan.
Cost and prioritisation concerns	Some respondents expressed concern about the financial implications of resilience measures, wanting to ensure that costs are proportionate and that resources are not diverted from more urgent infrastructure needs. Comments included: "Don't spend all our money on this" and "Sounds fine, but don't over-prioritise over other needs."	Noted.
Praise for community-led preparedness and adaptation	A few submissions positively acknowledged community resilience initiatives already in place, like local disaster groups and resident-led dune planting, and wanted these supported and built on. One submitter noted: "The south coast is already bearing the brunt of climate change/sea level rise. The council seem to be working well with communities such as Ōwhiro Bay Residents' Association re emergency preparedness etc. Difficult conversations need to be had about managed retreat as access to some areas/homes may be lost in the future. I agree with the dune restoration work, and would like to see this increase where practicable."	Noted.
Local material reuse for resilience	One suggestion was to reuse spoil or rock from local slips to reinforce nearby foreshore (e.g., Breaker Bay) rather than dumping it.	Noted. Officers will work with Breaker Bay community to explore this option.
Emergency management and disaster readiness	Some submitters called for stronger integration of emergency management into coastal planning, including evacuation routes, emergency access points, and coordination with Civil Defence. Comments included: "We need clear evacuation planning for coastal areas at tsunami risk," and "Emergency vehicle access must be maintained even if the road is damaged."	Noted. Emergency planning is managed in a separate plan.
Wildfire risk and vegetation management	A few submissions raised the risk of wildfires, particularly with hotter, drier conditions projected under climate change. Concerns included impacts on communities, wildlife, and infrastructure. One submitter noted: "Wildfire risk is increasing — we need to plan vegetation management now, not after a fire.	Noted. The plan includes policies about wildfires.

DRAFT

Ngā Rāngai Whakahaere -Sectors Comments

This section summarises feedback received on specific coastal sectors identified in the draft plan. Respondents were invited to select any sectors they wished to comment on and provide detailed, open-ended feedback.

Te Kopahou & coastal route

Themes	Comment s	Response
General support for the area's values and management direction	Many submitters expressed strong support for the values and management approach outlined in the draft plan, recognising the cultural, ecological, and recreational significance of Te Kopahou. Comments highlighted the area's unique wilderness character and importance to both locals and visitors.	Noted.
Education, interpretation, and storytelling	Desire for richer cultural, ecological and geological story telling. Suggestions included: protecting coastal karaka as evidence of early Māori cultivation; caring for the WWII memorial; retaining a portion of the quarry face to tell the story of early industry and the first surveyed road; installing interpretation on seal behaviour and seasonal haul-outs; explaining quarry-face fault lines and landscape formation; and using the area as an outdoor classroom for visitors, schools and community groups. -	Noted. The section has been amended to reference the Fault line, the plan support Karaka tree management and further work on interpretation and storytelling is being considered as part of the cultural restoration project. Further policy and actions have been incorporated about defence structures.

DRAFT

Key issue: Do you support a new approach to 4WD access at Te Kopahou, including closing gate access at night and future planning for a permit-based system?"		
Keep the coast open to all 4WD users	Opponents of tighter restrictions viewed the coast as an important recreation area for responsible 4WD users and sought education and targeted enforcement rather than broad limits. Many saw coastal driving as a distinctive Wellington activity that helps families access the outdoors.	Noted. This plan seeks to strike a balance between ongoing 4WD recreation, other uses of the area and environmental protections.
Keep the road open for Fishing and kai gathering	Vehicle access was described as important for reaching traditional fishing and diving spots. Some feared that tighter restrictions would effectively remove access to those places and reduce safety for divers carrying gear.	As above.
Keep access open for people with limited mobility.	Vehicle access was seen as enabling participation by people with disabilities or limited mobility who cannot cover long distances on foot or by bike.	As above.
4WD vehicle contribute positive to the area,	Submitters noted contributions from 4WD clubs to predator trapping, beach clean-ups and other stewardship activities, asking the Council to collaborate with active user groups rather than focus only on restrictions.	As above.
Don't punish based on a few bad drivers.	Frustration that proposed changes might punish compliant users for the behaviour of a minority. Preference for enforcing existing rules against offenders.	As above.

Support for stronger restrictions on 4WD access to protect wildlife	Supporters of tighter controls cited ecological impacts from irresponsible driving and disturbance to wildlife. Concerns included dune erosion beyond Devil's Gate, disturbance to seals and nesting birds, and incompatibility with aspirations to restore kiwi and other species.	As above.
Safety and antisocial behaviour concerns	Reports of unsafe driving, hooning, unmanaged camping, poaching and dumping, particularly at night, were raised by multiple submitters.	As above.
Improving amenity for walkers	Concerns about conflict between vehicles and pedestrians/cyclists and requests for a safer experience. Some felt that it was not nice to walk on the same path as vehicles. Some supported separated routes or a shared-use trail with clear rules; others noted the cliff-to-road pinch points leave little room for an additional walkway.	Unfortunately, due to the space between the cliff and the road, and the instability of the cliff, there is no safe and affordable option to provide a separate path.
Divided on a permit-based 4WD system	Some were open to a managed permit system as a compromise that could protect the environment while maintaining traditional use, provided it is fair, affordable and easy to obtain. Others considered permits an unnecessary barrier or a cost to locals.	Noted. The plan retains the idea to pursue a permit based system in the medium term
Mixed feedback on night-time closures	Supporters felt night closures could deter antisocial behaviour, illegal dumping and wildlife disturbance. Opponents said it would disadvantage legitimate night users such as fishers and preferred more ranger patrols.	Noted. The plan retains nighttime closures.
Public holiday closures — mixed feedback	Supporters believed public-holiday closures would ease pressure and provide opportunities for walkers and cyclists. Opponents said holidays are when families most visit.	Noted. The amended plan has suggested closing half the public holidays.
Letting the road recede naturally	Some supported allowing the coastal road to retreat naturally rather than investing in defences that may fail. Others worried about closure by neglect and asked for clear communication on which sections remain usable and future expectations.	Noted. The proposal to enable the road receded natural has been kept in the plan, with the exception of clearing some slips.
Objections to classifying the coastal road reserve.	Many submissions opposed the action around reclassifying the coastal road as a reserve as it would restrict vehicle access.	The plan has been amended to remove the action.
Physical and route-based 4WD management	Submission raised ideas about further physical barriers. Suggestions to designate specific 4WD routes to minimise damage, keep vehicles to marked tracks, and fence off dunes and sensitive habitats. Options included gates at key points (e.g., Karori Stream or Devil's Gate), limiting access to permit holders, and creating shared-use zones with clear rules to reduce conflict.	The plan added a policy and action around placing physical barriers.
Some noted that other users like dirt bikes and	Requests to manage motorbikes and e-bikes where they contribute to track damage or safety issues, alongside vehicle and pedestrian management.	The plan has been amended to mention motorbikes.

DRAFT

walker also need to be manage		
Signage, enforcement, and partnerships	Calls for clearer signage, more ranger presence, and better communication of access rules. Requests included road-user awareness for walkers en-route to the seal colony, wildlife messaging (e.g., dog behaviour around penguins and seals), and consistent information via signs, maps and websites.	Noted. The plan includes actions around signage. Increased council presence could be an outcome of an action around an iwi ranger as well as supporting animal control in wildlife sensitive areas.
Support for coastal biodiversity	General support for stronger protection of ecosystems across Te Kopahou and active protection of seal haul-outs through signage, barriers and enforcement. Some requests for stronger measures to protect and restore native species along the coastal edge, including penguins, seabirds and intertidal ecosystems. Some noted nesting sites adjacent to tracks that require protection measures.	Noted. The plan intends to support coastal biodiversity.
Recreation hubs and amenities	Suggestions for small shelters, picnic spots and rest areas to improve the experience for walkers, cyclists and fishers.	Noted. Provision of amenities is generally not supported in this area and instead aims to protect the natural landscape experience.
Walking and cycling network – support for expansion	Broad support for extending the track network, including a connection from the coast to Karori and the proposed Mākara to Ōwhiro Bay walkway, as part of a wider historic coastal route vision..	Noted. See below.
Walking and cycling network – concerns and opposition	A landowner questioned feasibility about the proposed Mākara to Ōwhiro Bay walkway as it went across their private farmland, and felt additional access was unnecessary.	The plan was amended to not include this track at this stage to respect the landowners comments.
Wildlife refuge zones and seasonal protection	A proposals to formalise wildlife refuge zones and apply temporary protection such as seasonal fencing around breeding areas. Education and interpretation on seal behaviour and seasonal sensitivities were also encouraged.	The plan proposed futher working around this area as part of the cultural interpretation project.
Pest animal control	Concerns about impacts from deer, goats and pigs on regeneration, with requests for targeted control. Some raised Portuguese millipedes and recommended management to reduce ecological impacts.	Noted. The plan was amended to include a policy around working with land owners about deer and goats.
Partnership-led ecological recovery	Suggestions to partner with mana whenua and conservation groups to progress restoration and community education.	Noted. The plan intends this to happen.
Dog impacts on wildlife	Many submitters raised issues with dogs not on leash. Reports of wildlife disturbance from uncontrolled dogs, including incidents involving seals and seabirds.	Noted. The plan includes measures to look at how we can improve dog control management

DRAFT

Stream connectivity and fish passage	A suggestion was made to improve fish passage in local streams (e.g., fish ladders) to support native species in catchments behind Te Kopahou.	Noted. This is supported in the plan.
Te Kopahou baches – heritage and cultural value and caretakers.	Baches were described as part of the coast's history with long family connections. Leaseholders presented themselves as active caretakers who observe and report issues along the coast.	Noted.
Bach access concerns	Concern that vehicle restrictions would limit bach access: "The baches are not accessible by foot for elderly or those with gear – they are effectively locked away from use without 4WD access."	Noted. The plan enables bach owners to access the gate at anytime.
Bach lease security and residency	Requests for lease certainty so families can continue caring for baches, including recognition that some occupants reside there permanently.	Noted. Bach owners are not meant to occupy the area permanently as per there lease agreement.
Mixed views on Book-a-Bach proposal –	Supporters favoured limited public use of vacated baches for accommodation or wānanga to share the area's history. Opponents viewed this as commercialisation inconsistent with the place and stressed that the buildings belong to long-standing families, not for commercial use.	Noted. The plan has been amended to remove this policy.
Fire risk and preparedness	Concerns about fire during dry periods, with links to unsafe camper behaviour. Suggestions included seasonal restrictions during peak risk and a stronger presence from emergency services, including involvement from Fire and Emergency New Zealand.	Noted. This plan includes action around fire safety in the area.
Freedom camping – concerns	Concerns about unmanaged camping and associated hygiene issues, including lack of toilets and improper waste disposal.	Noted. This plan still supports freedom camping here as one of two freedom camping sites in Wellington.

Taputeranga | Southern Bays

Themes	Comment s	Response
Strong opposition to the remove of the Bait House as a – Education and Environmental Learning	Submitters strongly opposed removing the Bait House, describing it as a region-significant, hands-on hub for marine and climate education that serves children and adults. They linked its programmes to broader climate literacy and stressed that it fills a role not available elsewhere in the region. The clear preference was to retain and grow its educational function rather than reduce it.	Noted. The action has been amended to explicitly support collaboration with the marine education centre.
Bait House – Iconic Local Identity	Submitters described the Bait House as an irreplaceable part of Island Bay's character and history—an iconic, community-defining landmark whose loss would be significant. They highlighted its 1940s construction by returned servicemen and local tradespeople and its close	Noted. As above.

	association with the suburb's fishing heritage. It is valued as a tangible link to the past, and many asked that it be recognised and treated consistently with other heritage buildings through protection and interpretation.	
Bait House – Suggested Alternative Approaches	Many submitters preferred adapting rather than removing the Bait House. Suggested options included earthquake strengthening, relocating to a nearby site if coastal risks require it, community-trust or lease management, and developing the facility as an eco-tourism and education hub. Overall, people wanted the asset retained and improved rather than lost.	Noted. As above.
Mixed support about restoring naming – Te Māpunga Park (Shorland Park)	Strong support for restoring the name Te Māpunga, linked to the black shag and seasonal fishing signals, as a culturally meaningful name that deepens connection to place. Some opposed changing existing names due to long ties to the Shorland family and local heritage, emphasising the community familiarity and identity associated with "Shorland."	Noted. Defer decision and do more consultation.
Place Naming – Uruhau Reserve (Melbourne Road Reserve)	Support for recognising Uruhau Pā to reveal lesser-known local history and bring Māori narratives to the foreground through naming and interpretation.	Noted. Continue with name change.
Place Naming – Haewai Reserve (View Road Park)	Broad support to rename View Road Park to Haewai Reserve to honour the original kāinga and strengthen Houghton Bay's cultural narrative. Some proposed that other parks in Houghton Bay should be Haewai Reserve. Many asked for interpretation and pronunciation support so meanings are understood and respected.	Noted. Suggest deferring decision so can work with the community further on Houghton Bay name proposals.
Naming – Interpretation and Storytelling	Strong support for interpretive signage and pronunciation guidance so residents can understand, use, and respect Māori place names.	Noted. This is supported in the plan.
Ecological Restoration – Dune Protection	Existing restoration at Island Bay, Houghton Bay, and Princess Bay was praised, with calls to extend protection to other vulnerable sites. Submitters favoured planting, fencing of fragile areas, and angled accessways over hard seawalls.	Noted. This is supported in the plan.
Taputeranga Marine Reserve Protection	Widely regarded as a regionally unique, "world-class" asset with major ecological, educational, and recreational value. Strong support to protect and enhance understanding through collaboration with mana whenua, local schools, dive clubs, and conservation groups.	Noted. This will be also be added to the map.
Ōwhiro Bay – Wetland and Stream	Concerns about sedimentation, illegal dumping, and stormwater pollution affecting the stream, wetland, and estuary. Strong support for fish ladders to improve native fish passage, riparian planting for bank stability, and estuary restoration to lift water quality and habitat.	Noted. This is supported in the plan.
Houghton Bay – Contamination	Submitters expressed strong concern about leachate from the former landfill entering the marine environment and degrading water quality. Many linked this to climate resilience, noting that sea-level rise and storm events could worsen contamination risks and accelerate impacts if not addressed promptly.	Noted. There is policy in the plan that supports addressing this. However, it mostly sits outside the scope of the plan.

DRAFT

Sirens Rocks – Seawall and Erosion	Concerns were raised about the poor condition of the carpark and the limited effectiveness of the existing seawall, with reports of rapid erosion and a preference for more durable, nature-based approaches.	Noted. An action has been added about planting near this seawall and an action exists about addressing erosion here.
Wildlife Protection – Penguins	Repeated reports described dogs chasing or disturbing penguins at Houghton Bay, Island Bay and along the Parade. Submitters asked for expanded signage at nesting areas (including Sirens Rocks), stronger public awareness, and more consistent enforcement of dog-control rules near sensitive habitats.	Noted. An additional action has been added to look at dog signage in these areas.
Weed and Pest Control	Submitters supported ongoing weed and pest animal control, particularly at Te Raekaihau Point. Local community-led trials received praise for their results, with respondents encouraging Council to expand and resource similar initiatives across the coast.	Noted.
Managed Retreat and Long-Term Planning	Many submitters opposed short-term, reactive fixes at high-energy shorelines and called for a proactive adaptation approach, including nature-led retreat where necessary and a long-horizon plan that realistically accounts for sea-level rise.	Noted. This is supported in the plan.
Access – Walking and Cycling	Submitters sought better links between key reserves and clearer wayfinding. Shorland Park was frequently mentioned as a logical trailhead for the City to Sea Walkway, and many found current track signage inadequate or hard to locate.	Noted. This is supported in the plan.
Facilities – Island Bay and Princess Bay	Many asked for upgraded amenities to reflect heavy use, including robust toilets, showers and changing areas designed to cope with shifting sands and storm events. Year-round use was highlighted, with calls for facilities to remain open and maintained through winter.	Noted. There is an action in the plan to look at the Island Bay Beach toilets. In addition extending opening hours has been passed on to the correct team.
Storm impacts	Multiple bays experience repeated storm damage. Submitters questioned the effectiveness of ongoing hard-engineering fixes and called for approaches that work with natural processes. Specific concerns included erosion affecting the Sirens Rocks carpark and seawall, sand loss at Princess Bay, and exposure around Ōwhiro Bay's road and stream mouth.	Noted. This is supported I the plan.
Boat ramps	Island Bay and Ōwhiro Bay ramps were described as essential community infrastructure. Submitters asked for ongoing maintenance and improvements that also support small craft and recreational users, not only commercial operations.	Noted. This is supported.
Local History and Heritage – Island Bay Identity	Island Bay's identity was framed around its coastal heritage, with anchors including the Bait House, Shorland Park, the reef and fishing traditions. There was broad support for telling both Māori and European histories. A submitter talked about Hermit Cave and the story behind that..	Noted. This is supported in the plan. It has been amended to tell the story of the Hermit Cave.

DRAFT

32 Document information

Oku Street Reserve is special	Recognised as a small but ecologically and culturally valuable space for quiet reflection and habitat within the Southern Bays network. Submitters noted the risk of its values being overlooked without formal recognition.	Noted. An action was added about Oku Street Reserve and working with the community there.
Ōwhiro Bay – resilience focus	Persistent flooding and storm damage were highlighted as long-standing issues, with concern for roads, properties and public spaces under sea-level rise and extreme weather. Submitters called for long-term adaptation planning and nature-based solutions rather than repeated repairs.	Noted. The plan propose some work in Ōwhiro Bay and recommends reviewing resilience solutions there as part of the climate adaptation project.

Hue te Para | Lyall Bay

Themes	Comment s	Response
Protection and Restoration of Lyall Bay Dunes	Strong support for dune protection and restoration, recognising their role in coastal stability, storm protection, and habitat creation. Some questioned current methods, with wind/kite surfers describing the rope-and-pole fencing as hazardous and proposing alternatives like lower posts or boardwalks.	Noted.. The plan includes actions around dunes and working with the windsurf community around this.
Opposition to land sale for airport expansion	Some submissions strongly opposed selling foreshore and back dunes at the eastern end to the airport, citing resilience concerns: "I strongly oppose selling the foreshore and back dunes at the east end of Lyall Bay to the airport company. These areas are important for the resilience of the beach and the land behind it	Noted.
Realignment of the road	Some submissions proposed shifting sections of Lyall Parade inland to create additional space for dune growth and a more natural coastal profile, particularly at surfers corner. This approach was seen as a long-term adaptation measure to improve the bay's resilience against storm surges, sea-level rise, and erosion. Supporters raised the bigger the dunes the wider the beach for recreational use.	Noted.
Opposition to Airport expansion	Others extended opposition to any further airport expansion into the bay, warning of potential surf quality impacts, wildlife disturbance, and loss of public space: "Airport expansion into the bay would destroy the surf we love and the habitat we're trying to protect."	Noted.
Support for Windsurfing and Kitesurfing	Requests for key wind-sport launch areas (e.g., Dorrie Leslie Park) to be mapped and designed to support this recreation. Concerns that dune protection measures could damage equipment and endanger users: "Treatment of the dune protection at the western end needs careful assessment with kitesurfers and windsurfers to come up with a solution that is resilient, achieves the protection goals and does not create safety and equipment damage risks." Submissions also noted disparity in facilities compared with surf sports: "Surf clubs are well-supported with infrastructure, while wind-powered sports lack even basic provisions."	Noted. The plan has been amended to recognise these spaces.

DRAFT

Key surveyed question :A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site.		Noted.
Ex-Maranui Depot Site	Seen as a significant opportunity for environmental restoration and recreation. One submission cautioned about its history as a "toxic dumping ground" with unstable cliffs and high remediation costs, questioning large-scale development feasibility. Another comment was supportive of restoration: "It would be very positive to have the ex Maranui Depot site restored for environmental and recreational purposes."	Noted. This action is retained.
Enhancing Recreation Facilities and Amenities	Calls for more toilets, particularly at the eastern end near "The Corner" break. Rubbish bins were described as "not big enough" and "overflowing by the end of the day" on sunny weekends, with requests for larger, seagull-proof bins. Suggestions for improved pedestrian and cycling access along Lyall Bay Parade, such as widened footpaths or pedestrian-priority slow zones.	Noted. This proposal is supported and an action has been added to the plan to say we will continue this work.
Dog Management at Lyall Bay	Requests for clearer dog access rules and better signage, including sand markers. One submitter wanted the airport end closed to dogs due to wildlife impacts: "I would like to see the airport end of Lyall Bay closed to dogs. Many dog walkers ignore the temporary signage which goes up at nesting times… it drives me mad seeing other owners walking in the no-dog areas."	Noted. An action has been added to review kororā signage.
Surfing and Surf Lifesaving	Lyall Bay recognised as a premier surfing venue needing protection for its surf breaks. Strong support for the Lyall Bay Surf Lifesaving Club as a vital community safety service.	The plan has been amended to talk about the history of surfing and the policy around the importance of surfing. It will also be added to the maps.

DRAFT

Wellington Airport's Role	The airport emphasised operational and safety needs, with its seawall protecting both airport and civic infrastructure. They expressed willingness to work with WCC: "the Airport's key role is to ensure that aircraft can operate safely… Functional, technical, operational and safety related constraints often influence the location of critical infrastructure which needs to be recognised." Some key concerns raised include: • Restrict public access: WIAL believes the area between Moa Point Road and the southern seawall (from Moa Point Beach to the Lyall Bay Breakwater) is unsuitable for unhindered public access due to serious safety risks due to severe aircraft jet blast, airborne objects, extreme sea conditions (waves pushing cars off the breakwater), and the instability of the large rocks. Following the reconstruction of the southern seawall, WIAL will likely seek to have the reserve status of this area revoked to prohibit public access. • Warning signage: WIAL wants the draft plan to reinstate a previous policy (from the 2002 South Coast Management Plan) that called for signs warning of aircraft hazards in the area near the airport. • Bird strike risk: WIAL notes a potential conflict between wildlife restoration and operational safety. While supporting the protection of threatened species such as pohowera at Moa Point, the airport is required to actively discourage hazardous avian species that increase bird strike risk. They encourage Council to work collaboratively, particularly in habitat restoration projects near the airport, to ensure both conservation and aviation safety objectives are met.	Noted. Added policy in the plan to enable safety signs and protection of the area at the end of the airport. for airport operations. Added commentary around birdstrikes.
Protection of Pohowera (Banded Dotterel) Nesting Sites	MIRO highlighted that pohowera, like kororā, are in decline and require urgent protection. They have successfully increased nest success rates at other coastal sites from 3% to over 50% through predator control, fencing, rāhui, signage, habitat management, and public engagement. At Wellington Airport in 2024–25, 8 nests produced 3 fledglings, with cats identified as the main predator. Human disturbance, such as plane spotters near nests, was also a threat. "The threat of human and introduced predators must be mitigated using similar methods developed over the last 10 years." They called for recognition in this plan. In contrast WIAL provides specific feedback on a statement in the draft plan regarding seabird breeding habitats, clarifying that the southern end of the airport foreshore supports only a small number of banded dotterel pairs, not 'several threatened species as the plan states.	Noted the plan has added a policy around working with MIRO and the Airport to protect the dotterels.
Public Safety and Erosion at Airport End	Concern that the airport seawall has worsened erosion further down the beach. "The airport wall has made erosion worse down the beach — it needs a rethink, not just patch-up jobs." Suggestions included trialling softer engineering or nature-based buffers next to the seawall to reduce reflected wave energy and downstream erosion. WIAL noted support for the general idea of using nature-based solutions for coastal protection, but also state that these are "impractical" in areas adjacent to the airport, where hard protection structures (seawalls) are necessary.	Noted. We will continue to work with the Airport.

DRAFT

Recreation Conflicts at Airport End	Multiple activities crammed into the same space, creating risks for both people and wildlife. "Too many activities are crammed into the airport end — it's unsafe for both people and wildlife."	Noted. It is a popular destination.
Stormwater and Runoff Impacts	Concerns about poor stormwater quality and flood risk at the eastern end of Lyall Bay, with calls for urgent action to improve stormwater management before it reaches the beach. "After heavy rain the water at the eastern end is filthy — we need better stormwater treatment before it hits the beach." The KRL submission stressed that stormwater drains into Lyall Bay, Evans Bay, and Moa Point are increasingly at risk from sand movement, debris, and rising sea levels, leading to surface flooding in Kilbirnie, Lyall Bay, and Rongotai. They described the draft plan's current long-term timeframe for addressing this as "reckless and unacceptable," urging a short-term priority to audit outlets, develop proactive clearance schedules, install real-time monitoring, improve outlet design, and integrate these measures with climate adaptation planning.	Noted. There is actions in the plan around stormwater considerations at Lyall Bay.
Maranui Surf Life Saving Club Lease	The club requested a review of its ground lease, seeking a structure that reflects significant member investment in the building.	Noted. This has been passed on to the Lease team. For consideration.

Rangitatau | Moa Point to Breaker Bay

Themes	Comments	Response
Key Issue: Penguin Protection at Rangitatau	Strong support for creating a penguin protection area to safeguard kororā (little penguins) from threats such as dogs, habitat loss, and development. Many supported a dedicated sanctuary from Rangitatau to Wahine Reserve: "I support establishing the coastal stretch from Rangitatau to Wahine Reserve as a dedicated kōrora (little penguin) sanctuary."	Noted. This is retained

DRAFT

Key issue- survey question - Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development.		Noted.
Erosion and Climate Resilience at Moa Point and Breaker Bay	One long-term Breaker Bay resident shared frustration about restrictions on placing soil to support dune restoration: "Without soil they will die… The nature-based solutions to climate resilience sadly will not work… We want to build up the surface where it is low lying so we can restore coastal vegetation to support climate change resilience." They requested streamlined planning permissions to enable local action.	Noted. The plan includes an action to work on erosion management solutions here.
Ōruaiti Reserve – Heritage, Access, and Management	Submitters emphasised the pā site's cultural value and noted poor presentation/maintenance. One submission request that the lands tatus be clarified (part WCC; part co-managed with Port Nicholson Block Settlement Trust, PNBST). Requests included removing coastal macrocarpas due to fire/ecological risks and strengthening dog controls to protect birds.	Noted. An action has been added to review the Level of service at Oruaiti. In addition land status ownership has been added to the classification tables.
Public Amenities and Infrastructure Gaps	Repeated concerns about the absence of public toilets near the boat ramp, dog park and play area; requests for additional rubbish bins at the Tarakena boat ramp and dedicated receptacles for fishers' waste.	The plan includes an action for a public toilet in this sector. And for a landscape plan to look at some of these other elements.

Moa Point Dog Pound Proposal	Submitters expressed mixed views about the dog pound, with some supporting its transformation into a use that positively contributes to the coastal environment, and others questioning whether relocation is necessary given the potential cost and the risk of creating noise issues for a different neighbourhood.	The action is retained.
Tracks, Access, and Recreation	Many people supported maintaining and formalising the walking route between Breaker Bay and Moa Point to improve access and reduce trampling of sensitive vegetation. Several requested a raised or boardwalk section in places and the rationalisation of multiple informal paths.	The action is retained.
Marine Habitat and Diving	Submitters reported concerns about reduced crayfish numbers, overfishing, and illegal take in the area, and they asked for clearer signage on legal limits and a stronger fisheries presence.	Noted. This is out of scope of this plan.
Fire Risk Management	There is concern that bonfires and fireworks on or below the escarpment present a significant wildfire risk during dry periods.	Noted.
Signage and Materials	Submitters asked Council to specify longer-lasting, corrosion-resistant materials for coastal infrastructure and signage so assets better withstand marine exposure and require less frequent replacement.	Noted. This can be considered in design guidance for signage review.
Development and Coastal Risk	Many people asked Council to place stronger limits on new development in highly exposed coastal locations and to plan proactively for sea-level rise and storm surges rather than approving buildings that will quickly face hazard pressures.	Noted. This is out of scope of this plan.
Tarakena Boat Ramp	Wellington International Airport Limited advised that the ramp is maintained primarily for emergency and airport operational access, to a standard appropriate for that purpose, even though it is also used by the public.	Noted.

Te Whanga Rāwhiti | Eastern Bays

Themes	Comment s	Response
General support for the Eastern Bays sector approach	Submitters broadly supported the proposed approach for the Eastern Bays, noting that it strikes an appropriate balance between recreation, nature, and culture and shows care for both the history and future of this coastline.	Retain the balanced approach
Scorching Bay – Play area, toilet upgrade and pontoon	Scorching Bay was widely praised as an important, family-friendly swimming and gathering place. Submitters strongly supported upgrading amenities, including replacing the public toilet and improving the play area, and some requested a seasonal swimming pontoon.	Noted. An action has been added to look at adding a swimming pontoon.

DRAFT

Karaka Bay – Access and basic facilities	Many submitters supported improving access to Karaka Bay, calling for universal-design paths, safer pedestrian connections, and clearer wayfinding. They also asked for basic facilities such as toilets and rubbish bins to support safe and accessible beach use.	Noted. The plan includes a landscape plan to look at improving amenity here.
Walking track connection – Scorching Bay to Mātai Moana	The proposed walking connection between Scorching Bay and Mātai Moana was welcomed as a valuable way to improve connectivity and everyday recreation opportunities.	Noted. This action is retained.
Dune and penguin protection – Worser Bay and Seatoun	Submitters emphasised the need to protect dunes and kororā (little penguin) habitat from disturbance, particularly from off-leash dogs, and asked for clear signage and consistent enforcement. At Worser Bay there was strong support for dune restoration, especially replacing marram grass with native pīngao and spinifex.	Noted. This is supported in the plan.
Sand drift mitigation – Seatoun Beach	Many submitters supported native planting at Seatoun Beach to reduce seasonal sand drift onto the road and to stabilise the foreshore.	Noted. This action is retained.
Heritage interpretation	There was strong support for recognising sites such as Whetu Kairangi Pā, Te Puna a Tara, and Kākāriki-Hūtia Pā through compelling, visible interpretation that engages children, visitors, and residents.	Noted. This is supported in the plan.
Restoring Māori place names	Submitters were divided on renaming parks and places. Many supported restoring names such as Karaka Onehunga Park and Kākāriki-Hūtia Park for their cultural and historical value, while others were concerned about changing long-used names as confusing and unnecessary.	Noted. The plan proposes continuing with these name changes.
Churchill Park boat sheds – mixed views	Opinions were split on phasing out private boatsheds. Some saw removal as a way to improve public access and equity, while others emphasised long-standing family use and that there was no reason to remove, that they provided shelter for the park.	Noted. The wording is changed around the proposal to support public benefits.
Shared facility cluster – Worser Bay Surf and Yacht Clubs	The proposal to support collaboration around boating facilities at Worser Bay was generally supported.	Noted.
Alternative transport and traffic issues	Submitters raised recurring issues with traffic congestion and parking at popular beaches and called for safer pedestrian routes, better cycling connections, and stronger public transport links.	Noted.
Increased coastal access	Some submitters asked for a wider programme to improve public access to the water across the Eastern Bays, including additional paths, carparking, safe crossing points, and continuous walking and cycling connections beyond the specific sites in the draft plan.	Noted. This is supported in the plan through the landscape planning, public transport policy and

DRAFT

		accessible car parking review..
Beaches protected	A number of submissions emphasised that popular beaches should not be overdeveloped and that natural character and ecological values must be protected alongside recreation.	Noted. This is supported in the plan.
Seatoun wharf and boat ramp	A small number of submissions mentioned upgrading the Seatoun wharf and boat ramp to improve functionality, safety, the use by the East-West Ferry and accessibility for users.	Noted. The Seatoun Wharf has just recently been upgraded.

Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd

Themes	Comment s	Response
Survey question – do you support: **Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections.**		Noted.
Key issue: Full or partial road closure /redesign	The most prevalent and debated topic in this sector. Most submitters supported transitioning Massey Road and Shelly Bay Road into a dedicated recreation zone, with strong calls for full closure to private vehicles on weekends or public holidays. Supporters highlighted safety for walkers, cyclists, and children ("Full closure of Massey Road to vehicles would be a bold step towards achieving these goals"), the recreational potential ("Big supporter of Massey Road becoming one way with more running, biking, walking focus!"), alignment with climate goals, and better	Retain action

40 Document information

	accessibility without needing a car ("It currently feels like you need a car to get here"). Some also linked closure to protecting penguins and other wildlife. Other suggested traffic calming.	
Timed closures and gate proposal	Several submissions supported installing gates to allow timed road closures, such as on weekends, evenings, or public holidays. This was seen as a practical, flexible approach to improve safety, reduce hooning, protect wildlife, and create a safer recreation corridor, while still allowing essential access. Submitters encouraged an incremental approach ("As this is a complex project, we encourage the implementation of a transitional approach to infrastructure implementation enabling some progress to be made sooner") and noted that gates could be an effective tool ("Gates could allow flexible closure while maintaining essential access").	Retain action
Opposition to change to the road	A number of submitters opposed closure or significant traffic restriction, citing potential congestion impacts and the value of the road for vehicle access around the harbour. Some expressed concern that a one-way system could cause "unintended downstream congestion impacts" for vehicles returning to their starting point. Others emphasised its long-standing role for drivers ("I do not support the idea – it's well suited to light traffic and has been used as a start to many a young driver's journey to a full licence").	Noted
Access for Diving	Others submitters raised we need to keep access for diving or consider access for divers tot his part of the coast if there is timed closures.	Noted. Dive spot recognition has been added to the plan.
Strong support for G4 Carters Park MTB trail	Near-unanimous support for investigating a mountain bike trail from Carters Park to Shark Bay. Submitters saw it as expanding the MTB network, providing a safe, well-maintained facility, and attracting visitors. One requested close engagement with the MTB community during planning. "We are fully supportive that the G4 Carters Park trail descending to Shelly Bay is to be investigated by WCC."	Retain Action and fix typo.
Dog management	Significant concern for kororā safety, with calls to make Shelly Bay a no-dog area and to improve signage about restrictions. Submitters stressed education and enforcement. "Shelly Bay should be a no-dogs area, due to the threat to local kororā from off-leash dogs." / "Improved signage can help educate the public about penguin presence and appropriate behaviour."	Noted. An action about signage around Kororā has been added.
Marine environment	Highlighted the ecological value of Kau Point's reef and giant kelp forest, concerns about overfishing, abandoned fishing gear, and rubbish. Urged better rubbish facilities and frequent collection, especially near fishing spots. "Kau Pt reserve is important... as the reef structure for the most significant giant kelp forest across both Te Whanga Rāwhiti and Mātai Moana sectors." / "Abandoned fishing line is a major ecological concern."	Noted. The dive sight at Kau point has been added into the plan.
Toilets / showers	Requests for a public toilet in the sector and showers at Shark Bay for sea swimmers. "Any review of future toilet facilities should be integrated with future planning around the development of Mātai Moana." / "We support the addition of a toilet in this zone."	Noted. The plan proposes a new toilet for this sector.
Support for retaining the Boat ramp	Support for retaining or replacing the NIWA boat ramp at Māhanga Bay, noting its importance for divers and kayakers, especially when south coast conditions are unsuitable. "Māhanga boat ramp provides important access… we strongly encourage WCC to keep the ramp or replace it with stairs."	Noted. Current use to be considered in the investigation.

DRAFT

Signage	Requests for interpretive signage recognising mana whenua significance and Fort Balance. "We would like to see interpretive signage with information on the significance of the sites to mana whenua."	Noted. See 6.1.b on cultural narratives.
Freedom camping	Two opposed freedom camping due to wildlife threats, describing campers as "vagrants," and suggested directing them elsewhere. One supported it to encourage tourism. "Freedom Campers should be directed to other areas." / "Extend freedom camping to support tourism."	Noted. See Pathway 2.6.
New beach proposal	Suggestion for an artificial sandy beach at Shelly Bay, like Oriental Bay, to offset reduced swimming access from cycleway changes. "I would like to see an artificial, sand beach at Shelly Bay… similar to Oriental Bay."	Noted. Consider LoS rationale in planning.
Vague language / mapping	Concern about unclear mapping and land ownership details at Shelly Bay. "Nowhere do you show or say what the Council-owned land at Shelly Bay is or how it might link… with the other land at Shelly Bay."	Noted. Changes to mapping to be included.

Ākautangi | Cobham Dr to Point Jerningham

Themes	Comments	Response
The Survey asked asked people whether they supported - **Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access.**		Noted.
Cautious Support for an Evans Bay Marina	Many submitters supported preparing a master plan to guide Evans Bay Marina's transition to a multi-use precinct that enhances recreation access, public use, and landscape amenity. Support was typically conditional on upgrades	Noted. A masterplan is still supported.

precinct/master plan	complementing, rather than displacing, existing activities and user groups. Other were opposed and cited Council's' failure to make progress in this space.	
Need for co-design and transparency	There were strong calls for the master plan to be co-designed with tenants, clubs,, sea scouts, and other stakeholders, with concerns that decisions might otherwise be made without those most affected.	Noted. A master plan would consider existing stakeholders.
Urgency for boat ramp upgrades	Submitters asked Council to prioritise upgrades to Wellington's most-used boat ramp at Evans Bay to address congestion, safety, and operational issues.	Noted. This is supported in the plan and has been separated from the wider action for a master plan.
Greening, habitat restoration, and heritage interpretation	Many welcomed new planting, habitat restoration (especially for kororā), sustainable design features, and heritage interpretation that reflects the area's cultural and historical significance.	Noted. This is supported in the plan.
Support for a shared boating hub with diverse users	Some submitters supported creating a shared hub that serves multiple groups, provided it is designed in a way that does not erode club autonomy, secure storage, or day-to-day governance. Several noted the potential to strengthen community connections if the hub is carefully managed and trust is built over time.	Noted. The plan has been amended to recognise the collaboration work that is already happening.
Recognition of Evans Bay Yacht & Motorboat Club's heritage and already operating like a hub	Submissions emphasised the club's more than century-long contribution to training, hosting regattas, providing a community hub, and supporting a network of affiliate organisations including surf-casting, Sailability, waka ama, youth sailing, university sailing, kayaking/knee boarding, and sea scouts.	Noted. The plan has been amended to recognise this.
Concerns about displacement of the club	While improvements were generally welcomed, many submitters feared the club could be displaced or subsumed into a commercial marina model that is misaligned with a volunteer-led culture and community focus.	Noted.
Parking and access issues	The cycleway and constrained kerbside space were reported to limit trailer and vehicle access, particularly during regattas and peak events.	Noted. This would be considered in the masterplan work.

DRAFT

Protection of kororā habitats	There was strong support for integrating kororā habitat protection and enhancement throughout the master plan area.	Noted. This is supported in the plan.
Marina- affordability and accessibility	The marina was widely described as one of the last affordable boating facilities and as a community asset rather than a commercial enterprise.	Noted.
Marina - Concerns about redevelopment uncertainty	The plan's reference to "reconsidering options" created anxiety that redevelopment could reduce public and club access or shift the marina toward a model that prioritises commercial outcomes over community use.	Noted.
Marina - frustration over maintenance and governance	Submitters described the marina as being in poor condition due to underinvestment and asked for regular, accountable maintenance. They also sought formal tenant representation in decision-making.	Noted. The plan supports investment in the marina.
Marina - Support for the Shearwater Plan and concerns over costs for alternative proposals.	Tenants promoted the 2018 Shearwater Plan as a cost-effective, safety-focused redevelopment that uses floating piers to address sea-level rise and operational needs. They also raised that other expensive proposals and planning work done by council were viewed as unaffordable, with calls for financially sustainable, transparent planning.	Noted. The shearwater plan can be considered amongst other options to look at in the master plan for the area. Wording was amended in the plan to reference existing work.
Impacts of the cycleway on Hataitai Beach	Loss of usable beach area was repeatedly linked to the cycleway edge and coastal dynamics, with requests for sand nourishment similar to Oriental Bay.	Noted. The project is not completed yet so it is hard to say however the plan does propose an action to investigate this in the long term.
Facilities and access at Hataitai and Balaena Bay	Submitters asked for earlier opening hours for swimmers, outdoor showers, and accessibility improvements to support high everyday use.	Noted. This is supported in the plan and has been passed on to the operations team.
Safety concerns with cycleway design	Conflicts between cyclists and pedestrians were reported, with requests for better separation and safer crossings.	Noted. This work is underway.

DRAFT

Support for commercial amenities	Light, seasonal amenities were seen as enhancing recreation at Hataitai Beach and Cog Park, with cautions about over-commercialisation and site impacts.	Noted. This is supported in the plan.
Parking shortages at Balaena Bay	Limited parking was reported to constrain access, especially for families and people carrying equipment.	Noted. The plan has been amended to reference the carparking at Balaena Bay being important for recreational purposes.
Greta Point connectivity and kororā protection	Submitters asked for clearer public access and wayfinding at Greta Point alongside strong protection for kororā habitat.	Noted. This is supported in the plan.
Heritage and arts opportunities	Submitters asked Council to better recognise and interpret key maritime heritage sites—particularly the Evans Bay Patent Slip and Flying Boat Jetty—and proposed an arts trail along Cobham Drive and in this area to celebrate the area's cultural history and coastal identity.	Noted. The heritage area is protected in the plan. The plan has been amended to support public art in this sector.
Litter and stormwater pollution	People expressed concern about plastic waste accumulating along Cobham Drive and nearby beaches and called for stronger stormwater management and clearer expectations of nearby businesses to reduce litter at the source.	Noted. Addressing litter in this area is supported in the plan.

Te Rāngai o Onemutu | Oriental Bay

Themes	Comment s	Response
Proposal for no-fishing zone and other activities banned.	One detailed submission proposed a no-fishing zone between Oriental Bay Beach and Point Jerningham to address safety risks, litter, and biodiversity loss. "Lines and hooks cast across shared paths… litter left behind… congestion and safety risks… unsustainable pressure on local marine species… I would like to see stronger protections introduced, including: A formal no-fishing zone between Oriental Bay Beach and Point Jerningham." Another submitter suggested making the whole area a Marine Reserve and not allowing Yachts parking in there. - "No fishing. Removal of kina. Make it marine reserve. More rubbish cleanups. No yachts parking in there."	Noted. Fishing recreation is still supported in this sector as a valid form of recreation. Marine areas are outside WCC scope to manage

DRAFT

General upkeep and maintenance	Suggestions included adding a boardwalk or more robust grass at Freyberg Beach to cope with high use, and maintaining tree lighting. "Oriental Bay is lovely but needs a little TLC here and there." Another person proposed a rubber mat or boardwalk between changing rooms and beach to protect grass and improve access; replace grass with more robust species due to high traffic. -	Noted. The plan supports high use amenity provision here.
Upgrading changing rooms, toilets, and showers	The most common theme. Facilities at Freyberg Beach were described as outdated, "not fit for purpose," and unchanged in 30+ years. Issues included weak shower pressure, poor design ("wind blows the water away"), small and unwelcoming changing rooms, and lack of lockers. Calls to prioritise upgrades given year-round high use. "At Freyberg Beach… the changing facilities and outdoor showers are not fit for purpose… should be prioritised for an upgrade." They said there is poor shower orientation to prevailing winds; drainage issues; women's changing room access blocked during cleaning; insufficient men's changing room size; lack of lockers encouraging more car use.	Noted. An action has been added to explore improving facility provision here for swimmer.
Pedestrian safety in carpark	Request for pedestrian markings in the Freyberg carpark to slow traffic where swimmers cross from pool to sea.	See above.
Consistency in place names	Request to use "Point Jerningham" consistently throughout the plan.	Noted the plan has been amended to ensure consistent wording.
Detail and deliverability of greening actions	Feedback that 8.3.c on greening/shade is too general, with no specific locations or actions. "Recommend deleting it or be more specific."	Noted.
Safety for swimmers	Proposal to designate the area from Freyberg Beach to the Lighthouse as a swimming zone, with return lighting, to avoid vessel collisions. "Fast vessels should only be operating well beyond the 200m buoys.". Other proposal were for buoys at stormwater outlets to mark hazards; installation of pontoon or return lighting to aid swimmer safety in low light.	Noted this is outside the scope of the plan and is managed by the Harbour Master..
Support for more community events	Desire for more events along the promenade, e.g., food markets, eco/biodiversity events.	Noted this is generally supported in the plan.
Tug Boat	A submission suggested removing the tug boat for reinstatement of sea swimming zone or underwater sculpture park which could be a unique experience that highlights the city's natural wonder and showcases artificial habitats	Noted. An action has been added to investigate the future of the tugboat..

Do you have any other feedback?

Submitters were also invited to provide additional general comments and to give feedback on Attachment A (Rules) and Attachment B (Proposed name changes). Name change feedback is summarised under the relevant sector sections. Where general or other comments related

DRAFT

clearly to a specific value or section, they have been incorporated there. The tables below present themes that were not easily coded into a specific value or section and feedback on the rules section

Appendix A: Rules for use and development of parks and reserves

Themes	Comment s	Response
Support for integrated rules framework (Appendix A)	Submitters supported creating a single, integrated set of rules to govern use and development across all reserves so expectations are clear, consistent, and easy to apply.	Noted. This approach is planning to be retained.
Clarity on forestry rule wording	Concern was raised that marking "Forestry/plantations (non-native species, production) – Prohibited" could be misread as implying native forestry for harvest might be allowed by default.	Noted. The text has been amended to clarify.
Avoid duplication of existing bylaws	One submitter agreed with most of the rule but objected to the exception language, noting it duplicates the Wellington Regional Navigation Safety Bylaws 2021 and other regional controls and could add unnecessary compliance overhead.	Noted. The wording has been amended to include reference to the Bylaw.
Consistency of track rules & environmental protection	A submitter questioned why new track construction is "Restricted" while upgrades are "Managed," citing risks of incremental degradation and asking for alignment with District Plan coastal provisions.	Noted. The construction of a new track is more impactful than maintenance and therefore requires more consideration.
Support for temporary food/coffee carts	Support was expressed for continuing to allow low-impact temporary vendors that contribute to everyday recreation experiences.	Noted
Support for light-touch, values-based approach	A submitter supported clear Allowed/Prohibited categories and asked that low-impact Managed activities face minimal permit requirements, cautioning against expanding Managed/Restricted categories in ways that burden community groups.	Noted
Change activity classification	A submitter sought tighter controls on access along unformed coastal roads to protect sensitive landforms and wildlife. They suggested that vehicle access should be a managed activity	Noted. The plan has been updated to reflect this managed approach.

Other

Themes	Comment s	Response
Scope gaps and alignment with other plans	Some submissions focused on areas outside scope, while others said the plan omits WCC-managed reserves (e.g., Pipitea Reserve, Mākara Beach, Boom Rock/Ōhāriu Valley coast reserves, Te Ara Tupua). Several asked for overlap with waterfront areas (Taranaki St Wharf, Frank Kitts Park, Shed 6) to avoid inconsistency. Another proposed adding a new "Sector 9" from Oriental Bay to the Hutt boundary to recognise ecological, recreational, and historic values, including Kaiwharawhara estuary, noting limited access for northern suburbs..	Noted. Future expansion of the scope could be considered in the future. The plan has been amended to add commentary about estuaries outside of the scope of the plan.

Factual corrections, misinformation.	Submitters requested numerous factual updates (e.g., correct statutory references such as the Heritage New Zealand Pouhere Taonga Act 2014, settlement chronology, species status like tītī presence, missing assets such as the Kārori outfall, and map/spelling errors).	Noted. Several corrections have been made.
Commercial Activities – funding approach and Revenue-raising initiatives	Concerns were raised about plan costs, with suggestions to use public–private partnerships and philanthropy to reduce ratepayer burden, including potential visitor centres, education programmes, or marine sanctuary support. One submission highlighted the commercial viability of Wellington's coastal resources.. This could include tourism-based initiatives like eco-tourism experiences or nature-based events, ensuring that the costs are not fully passed on to ratepayers	Noted. The plan supports community funding for some initiatives and does not preclude these opportunities.
Inclusive and meaningful consultation	Feedback that consultation should be more accessible, with documents provided in more accessible formats. That a large document is hard to engage on. Some submitters felt the process did not reach a wide enough audience and missed key community groups. Others expressed frustration about the value of engagement, stating "What's the point of consultation if you're not going to listen to us anyway?"	Noted.
Plan review and flexibility	Some submissions called for clear review triggers, allowing new sectors/reserves to be added in response to future challenges.	Noted. Text has been added for a 3 year review period with mana whenua
Statutory and strategic context	A few submission requested stronger links to the RMA, Civil Aviation rules, and climate adaptation strategies. Concerns were raised about the statutory authority of a reserve management plan to influence road, wildlife and other aspects inside the scope of this plan. Other suggested including the relationship to district plan rules. WIAL notes that the draft plan's scope appears to overlap with other legislation, such as the Resource Management Act (RMA) and the Wildlife Act. They request clarification on how the plan will work alongside these other statutes	Noted. How the plan sits alongside other statutes and strategies has been clarified further in the plan. The document fulfils the Council's obligations to prepare a reserve management plan under s 41 of the Reserves Act 1977, but it also operates as an integrated coastal plan for WCC. It does not replace or override other legislation.

DRAFT

Number	
Q8	**Do you support or oppose the overall direction of the plan? (Choose one option)**
Multi Choice	Neutral
Q9	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Neutral
Q10	**Please let us know a bit more about your choice.**
Long Text	I don't think anything needs to change.
Q11	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q12	**Please let us know a bit more about your choice.**
Long Text	The more people who use our coast wisely the better. I strongly support the Island Bay MARINE EDUCATION CENTRE'S mahi and consider them essential to learning aboit marine life.
Q13	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q14	**Please let us know a bit more about your choice.**
Long Text	This is exactly what the Island Bay centre does so well.
Q15	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Strongly support better ecological management - particularly marine species.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text Definitely in favour of nature based solutions.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I'm mainly concerned about Island Bay - particularly the Island Bay Marine Education Centre. I've been a very strong supporter of what they do for decades. What they achieve on a very limited budget is nothing short of astounding. When I saw that an option is to repurpose the bait house I was left wondering WHY? Leave them alone! They're not only a tourist attraction but they've educated many thousands of our Tamariki about looking after SeaLife. Climate change won't affect the Bait house for DECADES and an earthquake would have to be major to endanger such a well constructed building. Hands off the bait house.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support

water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly oppose
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

The Maranui Depot site was used as a dumping ground for a long time. May be full of dangerous chemicals.
Cliff unstable in parts.
Would require major expenditure to remediate the site.
Leave it alone. Rate payersmoney is better spent elsewhere - like supporting the Island Bay Marine Centre.

Long Text	
Q11	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Somewhat support
Q12	**Please let us know a bit more about your choice.**
Long Text	I support some of the things on the list but not all of them. Its a very wide covering list and there's no ability to agree with some of them and not others. Not a good way of obtaining valuable feedback.
Q13	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q14	**Please let us know a bit more about your choice.**
Long Text	Story telling is very important. The aquarium in Island Bay is excellent at doing this in a way, that reaches people of all ages and all ethnicities. Careful design is essential. The coast is rugged and wild - don't try to manicure it.
Q15	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text The coast is land and sea. We tend to forget about the sea part of it. Most of our focus is on land. The sea is actually just as important - education about the sea is essential. That's why the aquarium in Island Bay is worth supporting - not demolishing.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text This must be done in a sensitive way. In other places in Aotearoa the dumping of concrete and rocks to try to lessen the impact of waves has resulted in eyesores.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I love the ruggedness of the south coast. I don't want it to be ruined by insensitive "planning". Island Bay has been part of my family for many years. We like it the way it is. The WCC has not listened to what residents want. We hope this plan will make them listen. Preserve our coasts rugged ness. Don't demolish or repurpose an icon of our suburb. LEAVE THE ISLAND BAY MARINE EDUCATION CENTRE ALONE! fund them. Don't ruin it.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Not enough is being done to protect wildlife. Oppossam control is very good in most places over the last 10 years. But stoats, ferrets, rats, rabbits and feral cats is woeful. More money and resources must be implemented. Permits are a good idea but night access for hunting and fishing are essential. No fired.

Long Text:

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text:

Q28 **To what extent do you support or oppose the following proposals?**

Matrix: A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. -

Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly oppose
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

I want my rates to go towards supporting the island bay marine education centre. I have taken 1000s of people there and they've all come away raving about the experience. I've visited many times with school groups and on Sundays. I've taken overseas visitors there many times and without exception they've been very enthusiastic about the experience. This is the only facility like it in Aotearoa/NZ, Wellington should be celebrating that we have it. I don't want to lose it.
Come on WCC! Support these amazing people!

Long Text

The plan is good overall.
My major concern is the threat to the aquarium at Island Bay. My whole family's been going there for years. We always take overseas visitors there. They love it because it's an example of kiwi ingenuity and integrity. It doesn't need changing. It should be encouraged to keep operating. It will be a big mistake if the WCC threatens it. Leave it alone!

Long Text Island Bay beach. Over the years between the council and DoC, have seen the beach deteriorate because of poor management by both parties. I, and 4 of my closest friends who grew up in Island Bay in the 40's, and who are of Italian heritage going back to the early 1900s, are ex-fisherman in Island Bay from the 1950s onwards. Seeing the beach as it is now are appalled at the state it is now, to be honest it looks like a tip. In the early years every summer the sand that was blown by the wind against the wall was bulldozed back along the beach and into the sea. Also there was a fulltime custodian who cleaned the sand of seaweed and driftwood. As to leaving the sand as it is now, banked up against the seawall, the sand has been blown there by the wind. If the wall wasn't there where would the sand go? What's going to happen if its not managed, the sand over the next few years if it is not pushed back along the beach and into the sea, it will be banked up like hills against the club, over the wall. You can see what is happening now, the eastern end of the beach has been eroded down to rocks, where there once was a bathing shed. The same up by the jetty where the wall collapsed. If this is not done, at the waters edge, will be down to rock and shingle because all of the sand will be up against the wall. As it is at the moment the sand is blowing over the wall. A green solution will not fix it. Liaise with DoC before its too late.

Long Text Page 127 Action: I would like to see 2 lane traffic retained. It is an ideal place to take grandparents for a picnic.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text I am a user/tenant of the Evans Bay Marina for 35 years and past administrator of Evans Bay Yacht Motorboat Club.
- It is sustrainably and financially prudent to maintain the Evans Bay Marina in its current form pages 1370 138 for the medium term.
- I do not think that WCC should "assess alternative operator models –etc" item 3 page 138 to save our money
- The Evans Bay Marina Tenants group commissioned and paid for a survey to upgrade the marina in 2018 'Shearwater Report". At that time it was do-able but neglected by WCC.
- This amenity is fully funded.
- I understand the current financial model is uv=sable for both the current and "shearwater" model.
- I object to any further greening around the marina page 134 as we need all access possible now that so much parking has been taken for the cycleway
- The marina is accessible and affordable (just) for Wellingtonians to whom some struggle with WCC rates and other costs of living.
- This is an outlet for hobby, recreation, sport and a break from the stresses of life.
- I have met people out of our region having a picnic lunch at the marina when on a day visit for specialist consultation at the Wellington Regional Hospital. The view of the launches and yachts was something to enjoy and give pleasure to their day.
- The evans Bay Marina tenants group (EBMTG) has a charter with the WCC and their committee has nominated spokesmen who meet with WCC officers on the matters regarding the marina. They arrange annual testing of electrical wiring for owners of vessels.

In regard to the Evans Bay Yacht and Motorboat Club no new (and expensive) building is required in my view. The club is well used by various other sporting clubs/groups an art group. Some other clubs are affiliated with EBY and MBC and share the amenity.

I am concerned that illegal (and legal) diving for crayfish has resulted in their numbers depleting with a consequential increase in the number of sea urchins. With no predation by crays, sea urvchins are creating (in many parts of the hardour so fa inspected) barren areas of just rock, because they have eaten all the kelp. I would like to see a restriction on a diving for food from all the coastline untilit has been assessed. If the ban were implemented, it would be easy for members of the public to help control the situiation: ANY diver with a bag or net would be contravening th byelaw.

Long Text

"BREAKER BAY ROAD FORESHORE - What can be more suitable to help reinforce the foreshore in Breaker Bay than material from the Breaker Bay area? Slips of rock in the Pass of Branda and soil from small slips would, had they been a little nearer the foreshore simply ended up doing what we, the residents, seek; and nature paid no heed to the rules and regs regarding geckos, soil chemistry and flora when causing these.

So we seek a waiver from these well intentioned environmental hurdles when sensible actions could be taken by citing a simple case we have seen recently.

Contractors were moving spoil from a slip on the Old Army road and, despite locals' suggestions, no one from WCC at the scene 'dared' to follow the sensible route and use it to help bolster resilience on Breaker Bay Road foreshore. But instead they cited said regulations and took the material to the 'dump' at a cost. It would make absolute sense to designate soil and rock found locally, as suitable for USE locally! "

A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Nature based solutions: Very important, the best solution would like to be able to work with the council on this as a local iniative.

korora Stongly support this, would like a cat ban in coastal areas

Dunes are are best weapon against coastal erosion. Would like more information available on how to increase dune protection as a local iniatitive

Not an area used for recreation for myself, unaware of what the issues are

Would like more information, peninsula traffic is already terrible, with an hour bu ride to get to town, a more acessable rec zone could create a traffic issue

Im all for better cycle ways on the coastal road its an area enjoyed by cyclists however have had a numder of near misses with cyclists on this road.

Strongly support the restonation of Maori place names. Would like to see more information on the Pa site in our area.

Yes but needs to be realistic, and in line with council costs, without further burden on rate payers.

Introduction
The Friends of Taputeranga Marine Reserve (FoTMR) is a charitable trust dedicated to the protection, appreciation, and restoration of the marine ecosystems within and around Taputeranga Marine Reserve. We welcome the opportunity to provide feedback on the Coastal Reserves Management Plan and commend the Council for its thorough and forward-looking approach.
1. Taputeranga Marine Reserve – Context and Sensitivity
 Taputeranga Marine Reserve, established in 2008, is located on Wellington's south coast, adjacent to Island Bay and Houghton Bay.
 It is one of New Zealand's most accessible and biodiverse marine protected areas, home to over 750 documented marine species1
, including pāua, kōura (crayfish), kina, reef fish, and
extensive kelp forests.
 The reserve is managed by the Department of Conservation (DOC) under the Marine Reserves Act 1971, and coexists with a complex mix of urban pressures and rich community stewardship.
 The coastal interface and surrounding reserves are essential buffers and connectors that influence water quality, marine life, and public access. Management of these adjacent coastal lands must therefore reflect the ecological and cultural sensitivity of the marine reserve itself.
 The health of the marine reserve is influenced by the health of the marine environment in the wider region and therefore WCC's coastal reserves have to be managed with their impact on the marine environment.
2. Key Issues Identified and Mitigation Actions
1. Overharvesting & Illegal Fishing
 The plan correctly identifies illegal and unsustainable harvesting—particularly pāua and shellfish, especially outside the reserve boundaries.
 Increased urban access has led to poaching pressures, which threaten marine biodiversity.

1 https://www.inaturalist.org/projects/taputeranga-marine-reserve
 This ongoing pressure undermines conservation goals and community trust.
Recommendations:
 Strengthen collaboration with DOC and MPI on compliance.
 Improve signage and public education on marine reserve rules.
 Strengthen compliance and enforcement.
2. Stormwater & Pollution Risks
 Taputeranga Marine Reserve is vulnerable to runoff, marine debris, and historic landfill leachate (notably from Houghton Bay).
 These pollutants degrade habitat quality and threaten marine species.
Recommendations:
 Prioritise stormwater infrastructure upgrades and mitigate contamination at their sources
 Expand water quality monitoring and transparent reporting.
 Restore natural hydrological flows through daylighting streams or other nature-based solutionswetland buffers.
3. Habitat Disturbance from Recreation
 Uncontrolled recreational access (e.g. off-leash dogs, 4WDs, freedom camping) threatens kororā (little penguin) nesting areas, seabird colonies, and dune vegetation.
Recommendations:
 Formalise kororā sanctuary zones with clear boundaries and signage.
 Restrict dog access in sensitive areas and enforce leash bylaws.
 Consider seasonal closures for breeding birds.
 Restore dunes and vegetation buffers.
4. Climate Change & Sea-Level Rise
 The exposed southern coast faces increasing erosion, infrastructure damage, and habitat loss.
Recommendations:
 Expand nature-based coastal defences and solutions.
 Apply the Dynamic Adaptive Pathways Planning framework to plan for future retreat where necessary.
 Fund monitoring of shoreline change, sediment movement, and dune condition.
5. Cultural and Ecological Restoration of Taputeranga Island
 Taputeranga Island is owned by Ngāti Toa Rangatira and holds deep cultural and ecological value.
 We support the update of the 2011 restoration plan and emphasise inclusive, co-designed processes.
Recommendations:
 Include FoTMR, Island Bay Residents Association, and local conservation groups as partners in the restoration planning process.
 Recognise Taputeranga as a culturally significant site through signage and interpretation.
 Protect dark sky environments to support nocturnal wildlife like penguins and petrels.
3. Positive Contributions of the Plan and Recommendations for Strengthening Protection
 The plan shows strong alignment with ecological principles, community stewardship, and mana whenua partnership.

 Integration of tikanga Māori and mātauranga Māori is commendable and should continue to shape decision-making.
 Taputeranga is appropriately recognised as a critical ecological and cultural asset.
Recommendations for Strengthening Protection
1. Expand monitoring and enforcement around reserve boundaries.
2. Increase investment in stormwater upgrades near Houghton Bay and Island Bay.
3. Formalise kororā sanctuary zones with clear signage and community engagement.
4. Accelerate dune restoration to buffer against erosion and protect marine habitats.
5. Ensure coordination between Council, DOC, and mana whenua in managing Taputeranga Island and adjacent reserves.
Thank you for the opportunity to make a submission. We are happy to provide further details.
Nicole Miller
Chair, FoTMR
Appendix - Specific Comments
1. Weed and Pest Management
Best Practices:
 Use of selective, eco-friendly herbicides (e.g. glyphosate in gel form) only when manual removal is impractical.
 Avoid aerial spraying near sensitive coastal habitats or waterways.
 Manual removal is preferred for invasive species like boneseed, karo, agapanthus, and rhamnus in dunes and escarpments.
 Biological control (e.g. for boneseed) can be explored in collaboration with research institutions.
Integrated Pest Management:
 Combine mechanical, chemical, and biological methods.
 Prioritise Significant Natural Areas (SNAs) and penguin nesting zones.
 Coordinate with Predator Free Wellington and DOC for animal pest control (stoats, rats, possums).
2. Dune Enhancement and Shoreline Protection
Dune Restoration:
 Plant native sand-binders like:
 Pīngao (Ficinia spiralis)
 Spinifex (Spinifex sericeus)
 Sand coprosma (Coprosma acerosa)
 Use angled accessways, fencing, and signage to prevent trampling.
 Avoid planting marram grass, which steepens dunes and reduces resilience.
Shoreline Protection:
 Prioritise nature-based solutions:
 Dune buffers
 Shingle beach restoration
 Driftwood retention
 Use soft engineering (e.g. living shorelines) over hard structures like seawalls where possible.
 In urban areas (e.g. Oriental Bay), integrate habitat-friendly seawalls with textured surfaces or rock pools.
3. Wildlife Habitat Protection
Kororā (Little Penguin) Sanctuaries:
 Designate kororā-safe zones (e.g. Taputeranga, Breaker Bay, Greta Point).
 Install penguin nest boxes and fencing to reduce dog and human disturbance.
 Support dog aversion training and enforce leash rules in sensitive areas.
Seabird and Invertebrate Recovery:
 Protect banded dotterel, reef heron, and Smeagol slug habitats.
 Limit 4WD access and freedom camping near nesting zones.
 Reduce light pollution using low-glare, wildlife-friendly lighting (per DOC's light pollution guidelines).
4. Marine and Water Quality Protection
Stormwater and Pollution Control:
 Retrofit stormwater outfalls with natural filtration (e.g. swales, wetlands).
 Avoid discharges behind dunes (e.g. Lyall Bay) to protect dune integrity.
 Monitor and remediate historic landfill sites (e.g. Houghton Bay, Fort Dorset).
Marine Habitat Protection:
 Support marine biosecurity at marinas and boat ramps.
 Collaborate with DOC and MPI to:
 Monitor marine species
 Enforce fishing regulations
 Educate the public on marine reserve boundaries
5. Community Engagement and Monitoring
Citizen Science & Education:
 Expand community-led monitoring of seabirds, penguins, and dune health.
 Support school and iwi-led restoration projects.
 Use interpretive signage to share cultural and ecological stories.
 The Island Bay Education Centre and the aquarium are a cornerstone of marine education in the city and must be supported by WCC.
Monitoring and Reporting:

- Track:
- Dune movement
- Vegetation cover
- Wildlife populations
- Erosion and inundation
- Use cultural indicators alongside scientific data

Long Text

Introduction
Forest & Bird is New Zealand's largest independent conservation organisation. Our Wellington Branch has over 1000 members. We work with others to protect and restore natural ecosystems and native flora and fauna of Te Whanganui-a-Tara Wellington, and we advocate for nature at every opportunity. Our feedback focuses on governance coordination, cultural partnerships, ecosystem protection, marine management, technical assessments, and ensuring cohesive strategies across land and sea.
Fragmented Coastal Governance (Page 10)
The Tātou ki Uta plan recognises that management of our coast is currently fragmented, noting "While this plan focuses on Council-managed reserves, it operates within a broader system of coastal governance. Improving alignment and collaboration will be an ongoing challenge, as Tātou ki Uta alone cannot fully achieve integrated coastal management." However, the document lacks clear language or actions to resolve this issue.
Page 10 contains a diagram indicating where Tātou ki Uta fits relative to other strategic documents, but the plan does not explain how this suite of strategies will be coordinated for greatest effect—whether in drafting, review, or implementation. Clear guidance on roles, processes, and timelines is essential to bridge gaps between documents and agencies.
Te Ao Māori and Mana Whenua Partnership
We support the strong flavour of tikanga Māori throughout the document and the initiatives to partner and collaborate with mana whenua where it makes sense for both parties. Cultural frameworks enrich coastal management by embedding kaitiakitanga and
2
mātauranga Māori, and we encourage continuing these partnerships to deliver mutual benefits and uphold indigenous values.
Protection and Restoration of Coastal Ecosystems
We broadly support the approach suggested regarding the protection and restoration of coastal ecosystems. However, an overlooked threat, particularly in coastal escarpments, scree, scrub and forests is the burgeoning population of fallow deer, and recent release of sika deer in Wellington. Fallow deer are present on the Red Rocks coastal escarpment and widespread from Red Rocks to Colonial Knob.
Hutt City Council contributes $30k p/a to Greater Wellington for deer control on council owned reserves.1 We suggest Wellington City Council needs to work with GW and increase deer control now before their numbers undermine any other efforts that WCC undertakes, particularly on coastal escarpments which are favoured habitats of fallow deer.
We support Action 12 under Protection and Restoration of Ecosystems, which proposes strengthening patrols. Money from fines could potentially go to education and local environmental initiatives—rather than a general fund—to amplify conservation outcomes. This reinvestment would bolster community engagement and empower grassroots restoration projects along the coastline.
Marine Resource Management
The list of overharvesting natural resources in the plan does not include fish! The primary cause of kina barrens is the lack of kina predators, often resulting from overfishing of species such as rock lobster. There should be a push to expand marine reserves around the city and more done to enforce catch limits and reserve restrictions to restore ecological balance and prevent further barren expansion (recognising the limit of council powers).
Marine Impacts and Coastal Reserves Management (Pages 41–43)
We strongly support the inclusion of marine impact considerations in coastal reserves management decisions on page 41. This approach should be a core design feature when coordinating efforts between regional and local councils and aligning interrelated governance documents.
These pages talk about the ecological features and special wildlife but do not emphasise that if we want to see oystercatchers and other ground nesting birds survive and thrive, we need to keep people out of their breeding sites and increase efforts to kill off predators in these areas.
To encourage coastal and seabirds to return naturally, habitat creation is critical. Decoys and sound devices have proven ineffective, and translocation projects frequently fail and incur high costs. Expert advice we have sought indicates that restoring native shelter and food sources will yield more sustainable seabird recolonisation.
1 https://www.stuff.co.nz/national/127986566/hutt-council-boosts-eradication-spending-as-feral-deer-chew□through-native-bush
3
This is the process used by Forest & Bird Wellington's Places for Penguins project, which shows that coastal care, community involvement and advocacy, and supplementation of nestboxes where needed is proving to be a sustainable solution to encourage nesting.

Q17 **To what extent do you support or oppose this value and its pathways?**

Q18 **Please let us know a bit more about your choice.**

Long Text

Understanding Coastal Dynamics (Page 55)
Nature First Action 3 acknowledges the importance of understanding coastal dynamics as a key input into coastal strategy, infrastructure planning, and urban design. We seek assurance that advanced techniques such as regular drone LiDAR surveys are being undertaken to monitor shoreline change, inform risk assessments, and guide adaptive management.

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Track Management and Marine Environment Protection (Appendix A)
Appendix A classifies track construction as a restricted activity but treats upgrades as a managed activity with lower control. It is also not clear how this Plan gives effect to the District Plan which has rules for these activities in the coastal environment. We urge a consistent approach that prevents incremental degradation of coastal areas.
Additionally, dogs must be kept out of marine reserves to protect wildlife, and wild places should remain free from unnecessary infrastructure. We support the penguin sanctuary at Moa & Tarakena Bays and thank the council for actions taken so far to encourage and help dog owners to keep dogs under control around areas that are occupied by kororā. However more dog management is needed through better signage & enforcement especially around nesting penguins & other sea birds.
Minor Corrections
- Page 11: replace typo "ku" with "ki"
- Pages 42–43: ecological features and special wildlife sections should emphasise that protecting ground-nesting birds like oystercatchers requires restricting human access to breeding sites and increasing predator control
Summary
To achieve resilient and thriving coastal ecosystems, we must connect councils and their

plans, integrate land and sea strategies, and align coastal and marine reserves. Clear governance pathways, cultural collaboration, targeted conservation actions, and robust technical assessments will strengthen Wellington's coastline for future generations. From a practical perspective, whilst the document talks about our fauna, it only talks about making people aware and nowhere does it reserve space exclusively for the fauna. This also needs to be considered in our planning

Multi Choice:

Q16 **Please let us know a bit more about your choice.**

Long Text

Key Issues and Opportunities
1. Overharvesting & Illegal Fishing
 The plan correctly identifies illegal and unsustainable harvesting - particularly pāua and shell fish.
 Increased urban access and increased use of our marine resources are and have pushed ma rine ecosystems to tipping points – underwater forests are now kina barren due to overfish ing in many parts of the inner city. Adding to this is poaching pressures, which threaten ma rine biodiversity in areas that are just hanging on.
 This ongoing pressure undermines conservation goals and community trust.
Recommendations:
 Improve signage and public education on the impact of overfishing as well as marine reserve rules (i.e. at the Te Kopahou Reserve).
 Strengthen collaboration with DOC and MPI on compliance. This should include online infor mation of the coastal reserves, particularly close the marine reserve.
 Strengthen compliance and enforcement and support volunteer community wardens and citizen surveillance.
2. Stormwater and Land-Sea Connections
Pollution from stormwater, historic landfills, and urban runoff is a critical threat to marine ecosystems.
Recommendations:
 Prioritise upgrades to stormwater infrastructure near sensitive marine areas.
 Support integrated catchment management approaches that include riparian planting and community engagement.
 Restore natural hydrology and use visible, educational green infrastructure (e.g. swales, rain gardens).
3
2. Wildlife Protection and Public Awareness
Wellington's coastlines are home to vulnerable species like kororā (little penguins), reef herons, and migratory seabirds. However, many people remain unaware of their presence or the risks posed by dogs, vehicles, and light pollution.
Recommendations:
 Formalise and promote wildlife sanctuary zones, especially for kororā.
 Use creative signage and storytelling (digital and physical) to make wildlife and marine life visible to the public and explain how wildlife relies on a healthy harbour and marine environment.
 Work with educators and creatives to help people understand seasonal sensitivities (e.g. breeding seasons).
 Enforce leash rules.
3. Community-Led Monitoring and Stewardship
We see strong public appetite for meaningful involvement in marine protection. Communities want to be part of solutions.
Recommendations:
 Support and fund citizen science and monitoring initiatives — especially around dune systems, water quality, and wildlife.
 Include cultural indicators alongside scientific data, reflecting local knowledge and values.
 Use data to explain what the impact of actions on land are on the catchment, the coastal reserve and the adjacent marine space
 Promote co-governance and community restoration partnerships.
 Support inclusive access to coastal education — e.g. through mobile experiences, school partnerships, and pop-up science storytelling. The Island Bay Education Centre with its aquarium is a cornerstone of marine education on the South Coast and has to be valued as such.
Suggestions for Strengthening the Plan
 Boost education: Use the reserves as living classrooms and storytelling landscapes.
 Protect marine interfaces: What happens in the reserves, how people use them and how they are managed (i.e. pest and invasive species management) directly affects the health of the marine environment and should be included in management plans.
 Celebrate success: Highlight positive case studies, including marine restoration and education success stories to build momentum

Submission on Tātou ki Uta - Coastal Reserves Management Plan
About Explore Your Coast
Explore Your Coast is a group of communications, science, education and marine conservation professionals, all volunteering their time to:
 Inspire New Zealanders to connect with the ocean.
 Raise awareness and understanding of coastal ecosystems and their ecological importance.
 Empower and support communities to become active stewards of the ocean.
We support communities across New Zealand to connect to, explore and document their coast. The observations gathered contribute to research for local conservation and restoration projects, helping decision-makers better manage and protect marine life and ecosystems.
Our vision is of a future where all New Zealanders have a strong connection to the ocean. Marine ecosystems are seen, talked about, and understood as the foundation for abundant and diverse marine life. Communities are empowered to restore and care for their local coastlines and benefit from healthy oceans and sustainable land-to-sea connections.
Most of our volunteers are based in Wellington and we engage with community groups and Wellington residents at events, through presentations and other initiatives raising awareness for Wellington's coastal marine ecosystems and promoting marine restoration. Many of the community groups we connect with are active users of WCC's coastal reserves or are involved in maintenance, pest removal and weed control in coastal reserves and catchments.

Why Coastal Reserves Matter to Explore Your Coast
Wellington's coastal reserves are essential for community connection with the natural world. As noted at many recent 'Vision for Wellington' events – Wellington's natural capital provides a unique advantage for Wellington in attracting and keeping highly paid workers and talent across the tech, gaming and creative sector. Coastal reserves provide:
 Access to wild and inspiring coastlines, supporting wellbeing, identity, and creativity.
 Habitat for unique and vulnerable wildlife, including seabirds and marine mammals.
 A critical interface between land and sea — what happens on the land directly impacts the marine environment and vice versa.
 Opportunities for education, citizen science, and long-term stewardship.

During Explore Your Coast activities, we see how human activity, infrastructure, and climate change

are shaping this interface — and how important proactive, inclusive management is to preserve its values on land and beyond the surface.
Support for the Plan
We support the intent and direction of the Coastal Reserves Management Plan and commend Council for:
 Recognising the ecological and cultural importance of Wellington's coastlines.
 Elevating the role of mana whenua as kaitiaki and embedding mātauranga Māori.
 Taking a nature-first approach to shoreline protection, using dune restoration and soft engineering.
 Highlighting the need for community involvement and partnership in restoration and moni□toring.

Key Issues and Opportunities
1. Overharvesting & Illegal Fishing
 The plan correctly identifies illegal and unsustainable harvesting - particularly pāua and shell□fish.
 Increased urban access and increased use of our marine resources are and have pushed ma□rine ecosystems to tipping points – underwater forests are now kina barren due to overfish□ing in many parts of the inner city. Adding to this is poaching pressures, which threaten ma□rine biodiversity in areas that are just hanging on.
 This ongoing pressure undermines conservation goals and community trust.
Recommendations:
 Improve signage and public education on the impact of overfishing as well as marine reserve rules (i.e. at the Te Kopahou Reserve).
 Strengthen collaboration with DOC and MPI on compliance. This should include online infor□mation of the coastal reserves, particularly close the marine reserve.
 Strengthen compliance and enforcement and support volunteer community wardens and citizen surveillance.
2. Stormwater and Land-Sea Connections
Pollution from stormwater, historic landfills, and urban runoff is a critical threat to marine ecosystems.
Recommendations:
 Prioritise upgrades to stormwater infrastructure near sensitive marine areas.
 Support integrated catchment management approaches that include riparian planting and community engagement.
 Restore natural hydrology and use visible, educational green infrastructure (e.g. swales, rain gardens)

2. Wildlife Protection and Public Awareness
Wellington's coastlines are home to vulnerable species like kororā (little penguins), reef herons, and migratory seabirds. However, many people remain unaware of their presence or the risks posed by dogs, vehicles, and light pollution.
Recommendations:
 Formalise and promote wildlife sanctuary zones, especially for kororā.
 Use creative signage and storytelling (digital and physical) to make wildlife and marine life visible to the public and explain how wildlife relies on a healthy harbour and marine environment.
 Work with educators and creatives to help people understand seasonal sensitivities (e.g. breeding seasons).
 Enforce leash rules.
3. Community-Led Monitoring and Stewardship
We see strong public appetite for meaningful involvement in marine protection. Communities want to be part of solutions.
Recommendations:
 Support and fund citizen science and monitoring initiatives — especially around dune systems, water quality, and wildlife.
 Include cultural indicators alongside scientific data, reflecting local knowledge and values.
 Use data to explain what the impact of actions on land are on the catchment, the coastal reserve and the adjacent marine space
 Promote co-governance and community restoration partnerships.
 Support inclusive access to coastal education — e.g. through mobile experiences, school partnerships, and pop-up science storytelling. The Island Bay Education Centre with its aquarium is a cornerstone of marine education on the South Coast and has to be valued as such.
Suggestions for Strengthening the Plan
 Boost education: Use the reserves as living classrooms and storytelling landscapes.
 Protect marine interfaces: What happens in the reserves, how people use them and how they are managed (i.e. pest and invasive species management) directly affects the health of the marine environment and should be included in management plans.
 Celebrate success: Highlight positive case studies, including marine restoration and education success stories to build momentum.

Closing Comments
We appreciate the effort that has gone into the Coastal Reserves Management Plan and strongly support its intention to care for these places in partnership with mana whenua and the wider community.
Explore Your Coast sees this plan as a foundational step towards a more connected, resilient, and

ocean-literate city - one that recognises and takes responsibility for its impact on the surrounding marine environment. Our volunteers are already helping Wellingtonians engage with the coast and we are excited about the potential to do even more in alignment with the plan's goals.
We look forward to supporting the Council in sharing stories, building awareness, and strengthening the connection between Wellingtonians and their coastal and marine environment.
Ngā mihi nui,
Nicole Miller

Long Text

Dear Wellington City Council,

My name is Alex Gloyne, I live in Melrose, and I am writing in support of and to echo [redacted], [redacted] and [redacted] submissions regarding Protecting Safe, Dedicated Access for Windsurfing, Wingfoiling and Kitesurfing at Lyall Bay I know this sentiment is shared by the broader windsport community, who all deeply appreciate and love Lyall Bay.

Thank you for the opportunity to provide feedback on the proposed Coastal Reserves Management Plan. Wellington's weather and coastline, particularly Lyall Bay, are among the key reasons I have come to love this city. Not to mention the vibrant, unique urban life that Wellington offers. I moved here permanently in January 2023, but have been visiting Wellington since 2012 to partake in wind and surf sports at Lyall Bay, in particular windsurfing and surfing and more recently wingfoiling. There is a considerable and very active community of windsport enthusiasts that have been enjoying Lyall Bay for at least 30 years, probably closer to 45 years.

I grew up in Southport in the NW of England, a coastal town that has a very established and huge dune system. People from Southport are nick named Sandgrounders. It is a protected area but it is so well established that much of it can be explored and enjoyed. I have fond memories of walking my dogs and playing as a boy amongst the dunes. We studied the dune ecosystems at school and college. Just a minor education but it has given me an understanding and appreciation for the importance of sand dunes in the protection and stability of sandy coastlines, in addition to the unique habitats for plants and wildlife that they provide. The stabilising element and protection from ocean storms being of particular relevance to Lyall Bay and the residents that live along the waterfront, and probably the majority of the flat area extending back to Kilbirnie. So it is great to see WCC taking steps to protect the beach's dunes.

The grassy area behind the dunes at the western end of the beach, adjacent to the toilet block has long been used as a rigging area for windsurfing and wingfoiling. This area has been here as long as I've been visiting Wellington and would expect it has been here for at least the 30 or 40+ years that people have been enjoying windsurfing and rigging their gear at this spot.

I would describe this flat grassy area as a well established secondary vegetation zone - secure, stable and showing no signs of erosion over the years. If anything it has become more established over time. I understand that the foredune area in front of the grassy rigging spot is more fragile and needs some form of protection and management. There have long been a couple of walk-throughs that we as a community have kept to when accessing the beach with our sports equipment. If we can keep and cultivate these, one being more or less in the centre of the grassy area, the other leading down to the deck walkway over the drainage pipe I believe this would ensure the protection of the more fragile foredune area. See picture:

The foredunes around the walk-throughs could be fenced off similarly to the current rope barrier, but leaving access through in those two spots. This approach would help protect the dunes while maintaining beach access, ensuring both conservation and enjoyment of the natural space.

This might be similar to how beach access through the dunes is managed at Long Bay Regional Park in Auckland. See pictures below:

Ideally the posts would be lower along the path of the walk through to allow for safe movement carrying watersports equipment.

Beach access through the dunes in that area would be the main concern of the windsports community. The hazards of being forced out of that area for rigging and on to the pavement have been mentioned in the submissions of Esteban Funes, Greg Thomas and David Sweeting and again I'd like to support and echo those thoughts in addition to the development ideas they have put forward.

Other things I'd like to add that would be fantastic to develop close to that area, depending on the scope of the Management Plan would be:

· Better access through the wall surrounding that area

· Shower and rig rinsing area

· Drinking water fountain

Careful consideration should be given to preserving the size of this area, as there are many windsport enthusiasts that congregate here and a good deal of space is required for safe rigging of our equipment.

Thank you for your time and for the opportunity to give our input on what is for us a very treasured place.

Q10	**Please let us know a bit more about your choice.**
Long Text	It is pleasing to see Mana Whenua more involved in the co-management of the coastline.
Q11	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q12	**Please let us know a bit more about your choice.**
Long Text	Great investment should be considered for the protection of the Taputeranga marine reserve from terrestrial pollution from areas such as the Southern Landfill and the Owhiro Stream. It would be good to see greater signage, information and enforcement of off-leash dog walking, in areas of penguin and seal habitat. There are large off leash areas such as Tawatawa Reserve that can be used for exercising dogs rather than sensitive areas along the coast. Would be good to encourage dog owners to complete avian aversion training with their dogs.
Q13	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q14	**Please let us know a bit more about your choice.**
Long Text	Would be great to see more information about our beautiful bays! There are many special features along our coastline, and stories to tell. We would welcome investment in interpretive signage and other mechanisms to educate local communities and visitors about this special and precious area.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text: We strongly support ecosystem restoration, pest control (both plant and animal) and wildlife recovery.
The south coast is home to many rare plants and habitats, priority should be given to protect them.
Wellington has a strong base of volunteers helping in ecological restoration efforts that WCC could call upon for projects along the coastline.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text: Climate change and sea level rise cannot be ignored - the longer we leave it, the more things will cost.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice: Te Kopahou & coastal route
Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text: We agree with the proposed management approach for Te Kopahau and the coastal route.
We particularly agree with reducing traffic along the coastal route by whatever means the council deems most appropriate.
Priority should be given to nature and non-motorised vehicles.
We support the vision of the historical coastal walkway to Makara.
We would like to see greater investment to support the restoration of local native plants, and birds, and protecting seals and korora.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text: We agree with the proposed management approach.
We are concerned about the potential loss of the Bait house aquarium. This is a well-loved and highly utilised community asset. We would recommend deferring a decision on the closure of the aquarium at this time. There had been discussion about an aquarium at the ex-Maranui Depot site in Lyall Bay, is this still on the cards?

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Key Submission Point
1. Coastal Stormwater Outlets – Active Management Plans Needed
We request that Wellington City Council elevate the importance of developing and publicly communicating an active management plan for all stormwater outlets in Wellington that discharge into the sea, particularly those that affect low-lying, flood□prone suburbs like Kilbirnie, Rongotai and Lyall Bay.
• Relative sea levels in Wellington have risen 15cm since 2002, with annual increases of 2–3mm in sea level and 3–4mm of land subsidence. A further 20–30cm rise is projected over the next 30 years.
• The stormwater drains that run into Lyall Bay, Evans Bay and Moa Point are increasingly at risk of being blocked by sand movement, storm debris, and rising sea levels.
• These blocked outlets prevent proper drainage during rain events and storm surges, leading to surface flooding in Kilbirnie, Lyall Bay and Rongotai's commercial zones and disruption along key transport corridors such as Coutts Street, Onepu Road and Cobham Drive.
• Several KRL businesses, particularly in low-lying areas near the Lyall Bay foreshore and Rongotai Road, as well as the Kilbirnie commercial district on Coutts Street are highly susceptible to flooding if drains fail to discharge water effectively. The cost to business operations, property, and stock can be significant – often amounting to tens or hundreds of thousands of dollars per event.
• Flooding also leads to insurance premium increases, business interruption, and in some cases, uninsurable damage – threatening the long-term viability of affected enterprises.
• The Coastal Reserves Management Plan (CRMP) currently does not place the required importance on managing risks from poor stormwater drainage. In the draft CRMP there is no funding currently assigned to work on this key need with Wellington Water (and its new equivalent) to better plan for and manage stormwater drains running into Lyall Bay, with the timing to conduct this investigative work and planning currently prioritised as "long term" i.e. 8+years. Given the rate of sea rise/land subsidence in Lyall Bay, this timing is reckless and unacceptable.
We therefore call on Wellington City Council to:
• Undertake a full audit of all stormwater outlets in the KRL coastal zone;
• Develop a proactive maintenance schedule that includes clearance of outlets before and after high tide, storms, and king tide events;
• Monitor these outlets with real-time reporting and response systems;
• Develop a proactive plan over the next year to better manage increasing stormwater needs in Lyall Bay, including improved stormwater outlets, to prevent further losses to Kilbirnie, Lyall Bay and Rongotai businesses.
• Incorporate these plans into the city's wider Climate Adaptation and Resilience Strategy;
• Engage with local businesses to provide clear risk communication and emergency protocols;
• Advocate for co-funding with central government to address coastal infrastructure vulnerabilities.
• Collaborate with stakeholders to guide future planning, ensuring that commercial activity, climate adaptation, and coastal protection are considered in an integrated manner.
Conclusion
Destination KRL supports a forward-looking Wellington. We need assurance that Council is forward looking by actively managing flood risks where they are most critical – at the interface between land and sea. We need to see dynamic adaptive planning for sea-level rise in the stormwater system in the short term, not the long term. This is an issue causing issues for us now, not at a future date.
Failing to do so not only risks private business assets but also the integrity of some of Wellington's increasingly important commercial and recreational areas.
We welcome the opportunity to discuss this further and collaborate on practical local solutions

Overview
Destination KRL represents the collective interests of businesses across Kilbirnie, Rongotai and Lyall Bay – a strategically important commercial, industrial and recreational zone in Wellington. With hundreds of businesses, thousands of residents, daily commuters and customers, and vital infrastructure such as Wellington Airport and major retail outlets, the KRL area contributes significantly to the city's economy.
We acknowledge the growing pressure Wellington City Council faces in preparing for climate impacts. We urge greater and more immediate attention to the risks that poorly managed stormwater infrastructure, particularly at coastal outflows, pose to the KRL area.

Tātou ki Uta Coastal Reserves Management Plan – Feedback 5 August 2025
Thank you for the opportunity to read and comment on Tātou ki Uta the Coastal Reserves Management Plan. I found the nature-based solutions heart-warming and the supporting descriptions were very interesting.
The Way Forward
Tātou ki Uta covers a lot of functionality, but it does not show me the way forward. For the most part, what the Plan added in terms of natural solutions, it lacked in terms of a practical assessment of the role that climate change will play over the next 20 – 30 years. Granted, the effects of storms and sea surges are dynamic and not easily projected. Page 10 describes how Tātou ki Uta fits within a broad framework of statutory, regulatory, and strategic policies, one of which is Climate Adaptation Planning processes, this is currently in development. Page 52 provides a list of coastal assets that are at risk from sea-level rise and storm surges, tabulated based on the height of the sea level rise. We understand that the future of coastal reserves and populations is very likely to be affected by storm surges and sea-level rise. Are some sectors more at risk? Could some sectors be more sheltered from the actions of the ocean? In recent years we have already seen roads damaged by storm surge in Ōwhiro Bay.

Adaptive Decision-Making
The Dynamic Adaptive Pathways Planning (DAPP) flexible approach sounds good, with its iterative approach allowing new data to be taken on board. Hopefully DAPP will also allow for the juxtaposition between natural and hard engineering approaches.

Taputeranga Island Bay Marine Education Centre (the Bait House)
Taputeranga Island Bay Marine Education Centre provides an early opportunity to apply the PARA framework (Protect, Accommodate, Relocate, Avoid) balancing ecological, recreational, community needs, and educational merit. One assumes that this model accommodates fulsome stakeholder involvement.
The Taputeranga Island Bay Marine Education Centre is housed in The Bait House on the South Coast, the building is leased from WCC. The Bait House Aquarium tanks have sea water pumped through them continually, hence its location is literally right on the coast. The Bait House Aquarium has been running for nearly 30 years and is visited by school groups and pre-school groups from around Wellington on weekdays, when tamariki can get up-close to view the sea creatures in their tanks. On Sundays the Aquarium is open to the public for a modest entry fee. Watching pre-schoolers gain the confidence to pick up starfish and place them gently back on their rock is gratifying for parents and grandparents alike. The space is chock-full of tanks containing different marine species. The youngsters who come here absorb maramatanga about these sea creatures and can go on to learn to snorkel along the Taputeranga snorkelling trail. No doubt some of these tamariki will become our marine biologists of the future.
The Bait House building belongs to the heritage of the early Italian fishermen who settled in Taputeranga, Island Bay. The Marine Education Centre is a taonga for Te Whanganui a Tara, although it could probably be more aptly referred to as a 'Hidden Gem'.
The Marine Education Centre is not run by Wellington City Council, unlike the Zoo and most of our other museums that benefit from regular funding and marketing by Wellington City Council. Nevertheless, it is a taonga, and Wellington City Council

should promote it from time to time on their weekly What's On in Wellington email newsletter, and when there are special marine-based events taking place.
Despite the wealth of benefits that Taputeranga Island Bay Marine Education Centre provides to Wellington's coastal education and recreation offering, Action 10 in the section on Taputeranga Island Bay of Tātou ki Uta baldly states "Review options for removal or repurposing of the bait house in the context of coastal hazard issues, earthquake strengthening requirements, and lease renewal".
I urge Councillors to visit Taputeranga Island Bay Marine Education Centre and see for yourselves what a valuable marine education resource the City has here.
Eke Panuku, eke Tangaroa!
Let us act together and take inspiration from the energy of Tangaroa (Atua of the Sea).

The Costs
Given the possibility that enhancements to the coastal reserve areas could be very costly, it would be useful to see some very high-level ballpark estimates in the Plan (e.g. 10s of thousands, or 10s of millions). Cost is another facet in assessing proposals, and it is important for citizens to have an appreciation of indicative cost as well as scope.

Submission on the Draft Coastal Reserves Management Plan (2025)
From: Te Kamaru Station
1. Introduction and Context
Te Kamaru Station is a privately owned, operational hill-country farm located on the southwest coast of Wellington. We share a boundary with Terawhiti Farming Co Ltd to the west and south, and the property includes Te Ika a Maru Bay in the north. We also adjoin land west of Karori Stream, forming part of the westernmost edge of the area referenced—though not substantively covered—in the draft Coastal Reserves Management Plan.
We write to formally object to the plan's implied proposal to establish or promote a continuous public walking route between Owhiro Bay and Makara Beach, and to raise broader concerns about the lack of management focus in the draft plan for the coastal environment west of Karori Stream, which will directly impact the Station.
2. Objection to Proposed Owhiro Bay–Makara Walking Route
The draft plan repeatedly references the concept of a continuous coastal route, including the creation of a coastal walkway from the Te Kopahou Visitor Centre to Mākara (e.g., p.64).
As briefly mentioned this would require collaboration with private landowners in order to implement such a walkway. This would include access across Te Kamaru Station.
Te Kamaru Station objects to this proposal. We are already experiencing significant problems with trespass as walkers attempt this route under the false assumption that it is publicly accessible. We have experienced repeated incidents of trespass over the years. Issues we have to deal with include:
• Walkers ill-prepared for the remote terrain, with inadequate gear, clothing, or navigation tools.
• Multiple instances of people becoming lost, injured, or exhausted, requiring our staff to escort them out safely (at our cost and time).
• Repeated trespass onto active farmland, posing both human and stock safety, and stock disruption risks.
• Increased fire risk due to careless behaviour (including unauthorised camping, smoking, and lighting fires in summer).
The terrain in this area is steep, remote, and climatically harsh. There is no emergency infrastructure, no cell phone coverage in places, and high wind conditions are common. Promoting this area as a viable public walking route—without formal access agreements or a proper management framework—is deeply irresponsible and increases the burden on private landowners without support or consent.
We request that the final plan:
1. Removes any implied or explicit reference to a walking route between Owhiro Bay and Makara Beach.
2. Acknowledges that there is no public access through Te Kamaru Station, and that significant trespass and safety issues exist.
3. Concern About Lack of Management West of Karori Stream
The draft plan states that it applies to Council-managed coastal land "between Oriental Bay and Karori Stream." However, it then makes strategic recommendations that assume access and management beyond Karori Stream—into an area that is largely private farmland with no Council presence, oversight, or partnership. This is a fundamental inconsistency.
Te Kamaru Station is deeply concerned about the lack of strategic management, investment, and oversight for the landscape west of Karori Stream, despite this area experiencing some of the most pressing challenges, including:
• Unmanaged public access through remote terrain.
• Increased 4WD, illegal harvesting, and freedom camping near the boundary of public and private land.

• A rising fire risk, especially during summer, exacerbated by climate change and unauthorized public use.
• The degradation of wildlife habitat and remnant native vegetation from unmanaged recreational impacts.
While the Council cannot manage private land, it has a responsibility to develop appropriate frameworks, partnerships, and policies for interfacing with these areas.
At present, the plan:
• Ignores the challenges facing landowners like Te Kamaru Station.
• Makes access-based recommendations without consultation or agreements.
• Offers no tangible solutions for improving oversight or managing risks beyond its current network of reserves.
We urge the Council to:
• Develop a clear strategy for engagement and coordination with private landowners west of Karori Stream.
• Recognise that simply promoting access without managing the consequences creates unacceptable safety, environmental, and economic risks.
• Support fire preparedness and habitat protection by working with landowners and Fire and Emergency NZ (FENZ) to reduce fire ignition risks in unmanaged access areas.
4. Property Rights and Stewardship
Te Kamaru Station is not averse to public recreation when it is well-managed, consensual, and safe. However, the implication that private farmland can be traversed without permission or planning is inconsistent with New Zealand's property rights and undermines the goodwill of landowners who are doing significant work to protect the landscape.
We are committed to:
• Protecting biodiversity on our land, including fencing and pest control in areas of ecological significance like Te Ika a Maru Bay.
• Maintaining access tracks for operational and conservation purposes.
• Working in partnership with local iwi and neighbours when aligned values and planning processes exist.
But we cannot and will not support access proposals that jeopardize safety, conservation outcomes, or the legal integrity of private land.
5. Recommendations
We request that the final Coastal Reserves Management Plan be amended to:
1. Remove all references to a public walking route from Owhiro Bay to Makara Beach and avoid implying public access through private property west of Karori Stream.
2. Recognise the growing risk of fire, illegal access, and environmental degradation in this unmanaged area and support a proactive management response.
3. Stop all 4WD access west of Karori Stream.
6. Conclusion
The coastal landscape west of Karori Stream is one of Wellington's most beautiful and vulnerable environments. As landowners, we are already doing the work of caretakers—but we need the support of a public management framework that is coherent, respectful, and safe.
Te Kamaru Station strongly objects to the proposal of a coastal walking route crossing our land, and we urge the Council to reframe its approach to access, risk, and responsibility in the unmanaged western extent of the coastline.
Te Kamaru Station

Long Text: We fully support this core value. Active partnership with mana whenua is essential to honour our past, create a present that is equitable and build the best future we can. It is great to see growing recognition and emphasis on the important sites for tangata whenua along the Wellington coastline.
We really appreciate the information included in the draft coastal plan about the history of the coastline and the places of special significance to Maori, as well as explanations about the meanings of the names of locations around the coastline. We support restoring traditional Maori place names and strengthening the use of te reo Maori. Many Wellington residents are unaware of the history of our local environment and there is great value in making this information more accessible.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: We agree that the Wellington coastline is a valued and important recreational space for residents and those visiting Wellington. We think it is important that these opportunities are accessible to all, while at the same time protecting the ecology of the coastline.
As whanau we use a variety of spaces along the Wellington coastline for different recreational activities, including our grandchildren playing on the Lyall Bay beach playground, sailing in Whanganui a Tara and walking the coastal tracks.

More feedback on this value is provided in the additional comments section below.

Long Text Te Kopahou and coastal route
Historic baches at Mestanes Bay and Red Rocks: Last summer we spent time exploring Rangitoto Island in Auckland, which is also a location for historical baches. One of the baches there has become a bach museum run by a community trust and several can be booked for overnight stays. The baches provide a sense of history and add to the heritage values of the island. We strongly support the proposal to explore potential public use options for the remaining historic baches on the south coast if the ownership of any of them reverts to the Council. It would be sad to see them demolished,
We also strongly support the continuation (and expansion if possible) of the freedom camping area near the visitors' centre.

Long Text Akautangi – Cobham Drive to Point Jerningham
Proposal to transform Akautangi/Evans Bay Marina Precinct into a coastal recreation hub by upgrading facilities to support water-based recreation and improved public access.
Evans Bay has been and continues to be an important place for our whanau to recreate. Our (now adult) children

attended Britannia Sea Scouts which has its hall among the boat sheds between the yacht club and Cog Park and uses one of the garages at Cog Park. We were leaders at Britannia Sea Scouts and really enjoyed teaching young people to sail and respect the sea and land environments. We are expecting that our grandchildren will join Britannia Sea Scouts and have the opportunity to learn to sail in the bay.

We are members of the Evans Bay Yacht Club and keep a trailer yacht there. It is great to see that the Council is proposing to upgrade the facilities in the marina precinct to support water-based recreation and improve public access.
The public boat ramp is widely used by Club members and the public. We are always impressed by those using the ramp cooperate together in a confined space and help others when they experience difficulties. The concrete ramp can become very slippery. Some years ago I (Margaret) slipped over when we were launching our boat and sustained a significant head injury. If there is going to be greater public use of this ramp, we would encourage the Council to look at improving the surfacing of the ramp. Also, to look at what improvements can be made to enable boaties and others to use the ramp more efficiently for launching and retrieving and avoid impeding access of other ramp users.

Launching and retrieving boats (and moving boats from the Evans Bay trailer park) requires boaties to use their cars. Once the boat is in the water they need somewhere to park both their car and trailer. There is some parking for car and trailers by the boat ramp but often this is crowded and difficult to navigate. This problem is compounded when a regatta or other event is held and boats and trailers from other locations come to use the ramp. With greater use of the ramp there will be increased pressure on the limited boat and trailer parking (and you can't bring your trailer yacht or waka on the bus!!)

One facility that would be great to have near the Evans Bay public boat ramp are outdoor showers for all water users, including swimmers and boaties. This would be a great asset for water-based recreation in the precinct.

One group affiliated to the Evans Bay Yacht Club is Sailability Wellington. Sailability uses modified boats to teach disabled people to sail and enjoy the water. Our daughter was sailed with Sailability when she was younger. The yacht club has designated some of its car parking for mobility permit holders, but this is at a premium on the days when Sailability boats are on the water. Sailers and their support people need adequate parking in order to make use of this great opportunity.

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Further feedback on Value 2 – Whai Wahi
Creating access for recreational opportunities that are accessible for all requires more than pathways and ramps. Our adult daughter is a wheelchair user and so we are very aware that many spaces have difficult physical access. We appreciate that recent improvements along the coast have incorporated additional wheelchair access. This is important not just for wheelchair users but also for people with other physical disabilities, families with young children and older people. For sites along the coastline to be accessible for these groups there also needs to be

adequate parking close to recreational spaces. Without sufficient parking the sites become inaccessible for people with restricted mobility or mobility impairments. This includes families with young children. Our daughter uses a car to get around the city to those places where there is no or limited public transport. However, she is limited in the distance she can physically wheel from her car.

Recreational activities also need to be affordable in order to be accessible. Most of the clubs and organisations around the Wellington coastline are run by volunteers. They try to keep their fees low so that everyone can participate in their activities. For instance, Evans Bay Yacht Club runs learn to sail programmes and sailing for secondary school students. It also has Sailability and the local waka ama group as affiliates.

In Wellington you don't have to be a millionaire to go sailing or own a modest boat. Sailing is a recreation that is available to anyone who is enthusiastic. That is great. However to maintain this, it is important that the costs charged to community groups using Council owned land and facilities along the coastline remain reasonable. Otherwise, the costs of the recreational activities will escalate and they will become unaffordable for many Wellingtonians.

Access to the coastline is also important for visitors to Wellington. Some visitors come from around Aotearoa and others from overseas. Central government is promoting overseas tourism. Wellington is the gateway to the South Island for those travelling by road. Wellington has also increasingly become a destination location itself, including those travelling in campervans, and on cruise boats. Currently there are no commercial camping grounds in Wellington City, which means the freedom camping sites at Evans Bay and Te Kopahou Visitors Centre Carpark are critical to Wellington's tourist infrastructure. The Evans Bay freedom camping area is often full quite early in the day. There is a need for more campervan and caravan overnight parking near to the CBD and not too distant from the ferry terminals. This could include options other than freedom camping. For instance, the KiwiCamp initiative (https://kiwicamp.nz/) provides camping locations where you pay for the services you need.

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I live in Island Bay so feel qualified to comment on Taputeranga | Southern Bays.

I support renaming of Shorland Park to Te Mapunga Park.
I initially had misgivings because I was under the misapprehension that it was named after Dr Brian Shorland, the research scientist who had a strong association with the south coast. Knowing it was named after a local Councillor has overcome those feelings. If there is considerable opposition, maybe Te Mapunga/Shorland Park would be a workable compromise.

"8 Investigate long-term resilience options for the Sirens Rocks carpark to address overtopping swells and coastal hazards."
This carpark is built on the overburden from the quarry opposite (behind the Ginty's/dive shop building) that was dumped on the foreshore. Following the "Nature first approach to resilience", the carpark should be removed and the area restored. Likewise, much of the road along The Esplanade has space used as car parking between the footpath and the beach. This should be removed to allow the foreshore to be restored & then maintained. There is space for parking on the side of the road as occurs in most other places.

The bait house in Island Bay is iconic because of its appearance in known art works. On balance & in keeping with the principle of maintaining & restoring the natural environment it should probably eventually be demolished. Those art works will always be a reminder of it.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text: I STRONGLY OPPOSE 'Managing coastal leases and commercial use for public benefit'. I support the OTHER points on the 'Value 2' question, so have put 'somewhat oppose' just to ensure this note is read.

Relating to commercializing coastal leases, in particular the Baches at Red Rocks...

->> Page 64, under 'b.'
"ii. Explore potential public use options... implementing a 'book-a-bach' system"... this would be a monumental mistake!
The intention may be well meaning, but in reality it will eventually result in the RedRocks baches essentially becoming tourist holiday houses. And that contradicts what we all desire to preserve; (as reiterated by this 'Coastal Reserves Management Plan' itself.
(1) it could destroy the 'wild & barren shoreline' beauty.
- WellingtonNZ.com describes RedRocks walkway as a "wild and barren shoreline". (https://www.wellingtonnz.com/visit/trails/waimapihi-reserve-brooklyn-turbine-and-te-kopahou-reserve/red-rocks-coastal-walk). We need to be vigilant to preserve this raw, ruggedness.
(2) there is no need for them to be book-a-baches:
- There are other accommodation options close by (I can see 100+ on www.bookabach.co.nz in Wellington south area).

->> Page 64, 'b', "iii. Prohibit... permanent living in baches."
Why? It seems unnecessary and again, this Coastal Plan document itself states that having lease-holders in baches will "enhance park safety by ensuring a surveillance presence in remote areas" (page 63). For example, a few years ago a bach resident swam out to save a struggling swimmer. (was in the news)
It is clearly a GOOD thing to have the residents there.

Why can't we just keep the baches with the lease holders and their families? That would...
1. maintain the historical atmosphere and 'remote' beauty of the coast, avoiding it becoming 'touristy'.
2. maintain a LOCAL presence in the baches who are knowledgeable to the area, respectful of the local history and accountable to council.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text This reinforces my concern about commercialization of the baches (detailed in my 'Value 2' comment).

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text I agree. As part of this, let's allow our local families to educate their children and future generations through shared experiences along the coast; please think very carefully before removing any access.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I am a local who has spent hundreds of hours out at Red Rocks over the years, diving, walking, driving, observing, learning, educating, sharing, caring.
I believe some proposed changes to Red Rocks track are counterproductive &/or in conflict with those 'environmental goals'.

_____
1. BACHES; Please refer to my comments on 'Value 2' question. I have serious concerns about commercialization of the baches!

_____
2. Restrictions to VEHICLE ACCESS:

->> THE LAST OF ITS KIND;
Red Rocks is a hidden gem; how many other cities anywhere have a rugged and beautiful offroad track so close to a city, shared and enjoyed by walkers, cyclists, vehicles alike for generations?
Let's not cut off one of these visitor groups, or we may (unnecessarily) snuff out part of what makes Red Rocks so unique and special.

->> ENVIRONMENTAL IMPACT: If this is the reason for cutting back vehicle access, we should equally close the track to all humans right? By that logic, should we remove all humans' access to the entire Wellington coastline? Of course not (for many reasons outlined in the Coastal Plan).

True that vehicles have an impact like anything else, but let's remember that "90% of visitors are on foot" (page 63), and, for example, although dogs are not allowed to be off leash, there are off-leash dogs out there every day. Off-

leash dogs can scurry up the embankment, disturbing the terrain, habitat and potentially killing wildlife. Not to mention the dog poo plastic bags that are often left along the track by walkers.

I love dogs, and it is a great place to walk them. My point is just that we need to consider all visitors equally. The current Coastal Plan Draft conveys that Red Rocks vehicles are a problem to cull, whilst rule-breaking, littering walkers are left unchecked.
It comes across as biased, and hints at a lack of firsthand understanding about vehicle users; There's more to us than meets the eye.

->> EDUCATION; The majority of Red Rocks vehicle visitors are respectful, environmentally mindful people, many of which have children who get valuable education and experience on how to enjoy nature whilst respecting it, through the avenue of a somewhat 'offroad' adventure. There are aspects of this that cannot be taught on a walk.

I'm sure we all agree that education is a vital element for long term protection of our coast. We should encourage and empower the education of current and future generations of the precious and beautiful coast around our great city.

->> ACCESS; I am a passionate freediver, and having to walk for 40+ minutes with all the gear to get to the good spots is not feasible. Culling vehicle access strips us of more than just the driving itself.

...
In Summary, breathing in the ocean air and being a part of nature is invaluable to our wellbeing as individuals and community; please be aware that culling vehicle access will rob a group of Wellingtonians of family memories, generational education opportunities, community, health and wellbeing, and feeding their souls with nature's beauty.
...

->> POACHING* - Poaching is everywhere; not limited to Red Rocks. Cutting people (vehicles) off from Red Rocks simply SHIFTS the problem to other areas.
*Regarding POACHING in general, if helpful for further discussion:
To make noticeable change to pouching, we need harsher / exponential penalties (Black market Paua business is lucrative, and current penalties clearly aren't sufficient incentive to stop)

Case and point; in June this year a man was caught with 619 Paua! That's over $8,000 worth of black-market product. (math calculated from referring to another case from June involving 1,863 paua, where nzherald noted it was work approx $25,000)
https://www.nzherald.co.nz/nz/mpi-officers-seize-619-paua-during-porirua-raid-man-jailed-for-more-than-two-years/Z2C7QOGF5VA7VAYEXH43CLF33M/?fbclid=IwY2xjawL9XT1leHRuA2FlbQIxMABicmlkETFUcTBtb2JzQUo0bHI4ZnlkAR7bKXOYNRJGTQNtba7q9S5XGM7Tt_wGqh891MU4Ciw7qJubnrrGqCfIB-IIaA_aem_6eyOmBLX0gyTxd68YoCQEQ#google_vignette

That same man was arrested in 2018 for pouching, so clearly the system isn't harsh enough to stop him.
Increased penalties would be good to see; it would provide revenue to better support the fisheries officers, and fund environmental education initiatives to encourage current and future generations respect our environment, all of which cyclically feeds itself to weed out both the current and potential future poachers.

Long Text

Planning for sustainable preservation of our coastline is vital. Thank you.
However, some proposed ideas particularly for the Red Rocks coast are concerning, unnecessary and I believe there are valid reasons to refrain from making those changes. Please read my comments in the 'Value 2' question, and the 'Te Kopahou coastal road' section.
Thanks for your time.

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I am hugely in favour of "Pursue the vision of a historic coastal walkway" mentioned on page 64. This would be an exciting opportunity for residents and our local tourism industry. There could be considerable possibilities for new income streams for private landowners along this route too. I would be keen to add the option of making shorter trips via opening up the paper road/easement along the Karori Stream for consideration too. This would offer potential to link up with Makara Peak Mountain Bike Park.

I support Management Approach c on page 66 - "Allow the unformed coastal route in Te Kopahou Reserve to recede naturally". Maintaining this road at huge ratepayer expense is unnecessary, especially since it encourages poachers and causes lots of disturbance from an endless stream of vehicles.

Regarding Action 2 in the Te Kopahou Coast and Coastal Route Action table. I am really in favour of this. The eradication of pests in the Predator Free Wellington Plan could offer exciting opportunities to bring back the seabirds (e.g., black petrels, storm petrels, prions, and shearwaters) which were almost certainly once an integral part of this ecosystem (but are mostly only now seen on offshore islands).

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I personally love the option of occasionally kayaking out to Taputeranga. I hope that public access can be maintained. If human visitors are an issue for the birdlife there, would it be possible to focus on public education aimed at limiting noise and disturbance to the birdlife? I would guess most people who venture onto the island are interested in conservation and the outdoors and would be very willing to comply. Perhaps there could be a designated landing site and track up to the summit. It's certainly always a bit of a thrill to go there and experience the beauty of the south coast from this point, and it would be a shame to lose the possibility of this experience. I agree with Action #11 on page 48 about providing stronger protection for seabirds in legislation here to ensure clarity that dogs should never be brought onto the island.

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Regarding Action 5 in the Mātai Moana coast Shelly Bay Road and Massey Bay Road Action table: I'm very much in favour of this. In 10+ years of living in Wellington and visiting the area (to enjoy the views and to visit the Chocolate Fish Cafe, the Massey Memorial and bunkers above, as well as Scorcherama), I have never once driven from Scorching Bay around the coast to the Miramar cutting - I've always taken the 'clockwise' route. I suspect this action would not inconvenience many people at all, and yet make the experience much better for walkers. What I would say though, is that there are very few walkers compared to cyclists! If this plan goes ahead (which I hope it will), I would be very keen that it accommodates space for cyclists fully separated from vehicular traffic. I also enjoy cycling around here and would appreciate not having to worry about traffic approaching from behind.

5 August 2025

Dean McLaren - Private Individual Submission on the Wellington City Council draft Coastal Reserves Management Plan

1. Introduction

I am submitting this submission as a private individual. I have not submitted my submission comments through Wellington City Council's (Council) online survey or paper submission form. I do not wish to present my submission in person.

Please note that the information, research and data identified in the submission reflect my research and thoughts only. I do not pretend to be a marine biologist, ecologist or planner, so forgive me for what are inevitably a wide range of incorrect assumptions and omissions!

Congratulations on producing the Coastal Reserves Management Plan (Plan), which has specific aims (Pathways) to enhance ecosystems and biodiversity, while having a focus on specific coastal reserves and stretches of coastline.

The plan is an excellent step to achieve the enhancement of coastal ecosystems.

My submission doesn't focus on the Plan itself, but recommends how it and other strategies, plans and initiatives, could better achieve their ecosystems enhancing aims.

2. Recommendation

It is recommended that the Council consider the content of this submission, agree that a Framework approach needs to be investigated, and take the lead to seek support from key stakeholders to establish a multistakeholder & multidisciplinary Working Group.

The Working Group's terms of reference could include producing a feasibility study that reviews this submission's content and details the potential development of a Framework approach.

3. Ecosystems are deeply interconnected and don't respect artificial boundaries.

Ecosystems are deeply interconnected, and environmental research, policy and management should be too . Ecosystems do not fit within discrete human determined boundaries or jurisdictions. This means the ecosystems and biodiversity identified in the Plan's reserves and portions of coastal margin, are also dependent on the health of different ecosystems of the wider marine, coastal and inland environment. For example, many seabird species identified in the Plan and Our Natural Capital (ONC) require healthy coastal ecosystems to nest but are also dependent on the health of the wider marine ecosystem for food. This may mean the Plan's focus on restoring the health of identified reserve related ecosystems will be premised by degraded marine ecosystems that limit the abundance of marine sourced food.

There is increasing evidence of depleted coastal marine ecosystems. The stresses on our coastal-marine and inland ecosystems are clearly outlined in the Plan, ONC, many state of environment reports, and the myriad of research papers including those by Council. Our knowledge and research on the coastal marine ecosystems is extremely limited . There have been reports of mass deaths of seals, penguins and sea birds along New Zealand's coastal marine environment due to starvation - with some scientists pointing to climate change impacts such as changing fish migration patterns, more extreme weather events, and species competition for declining food sources with commercial fishing.

Collectively, marine, coastal and inland ecosystems are interconnected and interdependent on each other for their individual and collective health and resilience. This may mean management of a wide area sufficient to connect all these ecosystems.

4. An Ecosystems focused Strategic Framework and Management Arrangement

Optimising the health and resiliency of Wellington's interconnected marine, coastal and inland ecosystems could maximise the Plan's coastal ecosystems aims beyond what it could achieve in isolation. Therefore, it is recommended consideration be given to develop an overarching strategic framework and management arrangement (Framework) covering an area containing Wellington Harbour and periphery, Wellington's south coast and Council's inland territorial boundary.

Additionally, some consideration could be given on how Cook Strait, because of its unique deep-water ecosystems and marine biodiversity, could be better managed.

Currently, it is difficult to determine how the Plan's policies and implementation are integrated and coordinated with other Council and key external ecosystems focused strategies, plans and initiatives. It is suggested a Framework approach could achieve this by illustrating how they collectively operate to optimise the health, resilience and interconnectivity of Wellington's marine, coastal and inland ecosystems.

Both the Plan and ONC identify coastal marine management is a shared responsibility, and each identifies the relevant legislation, statutory and non-statutory plans, agencies and stakeholders. They also contain a significant number of goals, objectives and actions that relate to working with various partners (on different focus areas). However, the actions appear to have different funding statuses, priorities and time frames. There is no real clarity on how the Plan and ONC align with the strategies, plans and initiatives of the identified agencies and partners. For these reasons a Framework could be developed that illustrates the integration and coordinated implementation of the various ecosystems enhancing documents and initiatives.

While there is ongoing and significant work undertaken by Council with key stakeholders, partners and community groups, it is suggested that a Framework approach could also enhance this good work.

A Framework could have a range of benefits including:

- Capture an area that incorporates Wellington's marine, coastal and inland ecosystems, of a size that will ensure inter-connected collective and individual ecosystems health and resilience – identified to include Wellington Harbour and coastal periphery, Wellington's south coast and Council's inland territorial boundary.

- Create numerous co-benefits including increased economic activity, increased recreational opportunities and experience, and enhanced community well-being. Protecting marine hotspot/ecosystems can increase the number and size of snapper and crayfish that naturally predate on kina which could significantly reduce kina barren, and enhance the experience of recreational fishers who target these species.

- Provide an architecture that comprehensively integrates and aligns ecosystems focused statutory and non-statutory strategies, plans and initiatives and, relevant legislation. The plans and initiatives would include Wellington's regional plans, NZ Coastal Policy Statement, Council's District Plan, Zealandia, Predator Free Wellington, Otari, Capital Kiwi, Matiu Island, Taputeranga Marine Reserve and ONC (with a Framework providing the opportunity to review this 2015 document).

- Collate, and be a centralised information source, of the key coastal marine issues and stressors impacting on Wellington's marine, coastal and inland ecosystems.

- Provide a management arrangement and governance group that could maintain a watching brief with responsibilities including:

- liaison with key agencies, stakeholders and community groups.
- ensure strategies, plans and initiatives are better aligned
- Identify how strategies, plans and initiatives can leverage enhanced co-benefits off each other and assist coordinate their implementation to enable the efficient, effective and targeted use of resources.

- A governance arrangement based on partnership with iwi, representatives of key stakeholders, and collaboration and links to the numerous local regional and national agencies and community groups working to enhance ecosystems and biodiversity.

5. Feasibility Study

It is recommended that a Working Group is established with a terms-of-reference to include undertaking a feasibility study. The feasibility study would include evaluation and quantification of a Framework as identified in Section 4 of this Submission - and include the following.

1. An extensive review of the necessary information to provide an evidential basis to evaluate the potential for establishing a Framework approach – this could include a literature review, scientific research and draw on national and international experience and research.

2. Evaluate and identify the architecture and governance arrangements for an overarching strategic framework and management arrangement (Framework) as a vehicle to accelerate and optimise the interconnectivity, health and resilience of Wellington's marine, coastal and inland ecosystems.

3. Review and confirm the area to be embraced by the Framework.

4. Provide a comprehensive evaluation of Wellington Harbour's marine ecosystems hotspots including those for potential enhanced protection.

5. Identify the key ecosystems focused statutory and non-statutory strategies, plans and initiatives to be embraced by a Framework's ecosystems and biodiversity focus, review how well aligned they are, and any recommended changes to enhance alignment and implementation efficiencies.

6. Identify the relevant legislation, national documents and New Zealand's international commitments that support and provide the mandate for the Framework.

7. Undertake a socio-economic analysis of the potential multiple benefits generated by a Framework e.g. increased tourism and local economic activity.

8. Consider if the Framework could include a watching brief over the ecosystems of Cook Street which contain unique deep-water ecosystems and biodiversity e.g. seabirds such as albatross.

6. Wider Opportunities

The following provides a wider suite of potential opportunities that that the Working Group could be mindful of.

• High support and involvement of Wellingtonians who could be considered ecosystems knowledgeable. Jim Lynch, Zealandia founder, has estimated the number of Wellingtonian's involved in ecosystem and biodiversity enhancing related initiatives has grown from around 200 in the early 1990's to around 20,000 today

• The potential for the Framework to align with and promote wider 'natural' attractions such as:

• The Harbour periphery's numerous intimate beaches and seaside communities, Matiu Island, the eastern periphery's regenerating bush and the western boundary where Te Ara Tupua's shared walking and cycling path

connects Petone to Wellington.
• Other natural environment attractions including those located in Kapiti Coast and Hutt Valley .

• Potential to establish a research and education hub to:

• attract local, national and international research on a wide range of areas including ecosystems resilience, biodiversity, marine science and impacts of human activities – these could include identification and management of ecosystems stressors from sedimentation and stormwater to invasive coastal marine species and advancing kina barren.
• focus on climate change impacts from increasing seawater acidity and warmth to increasing weather events and intensity, with a wide range of benefits including informing ecosystems restoration, recreational and commercial fishers, and climate adaptation.
• Partner with academic institutions including universities research and academic learning.

• Investigate the range of potential economic, recreational and community well-being benefits generated by establishing healthy and resilient marine, coastal and inland ecosystems including:

• Identify tourism and recreational opportunities. For example, the UN's Second World Ocean Assessment report identifies tourism growing at 6% a year with coastal tourism a substantial proportion. Snorkelling and scuba-diving in marine areas is a significant element of an emerging tourism venture and, of significance to New Zealand, birdwatching continues to be a significant element of coastal tourism, as does whale watching.

• Potential for increased economic activity and housing development. For example, growth for the retail, entertainment, accommodation and cafe sectors, and increased patronage for Wellington Airport, inter-island and Harbour ferries. People attracted to live in Wellington due to increased job opportunities and experience healthy biodiversity.

• Consider the merits for establishing Wellington Harbour as a Marine Protected Area (MPA). While the Framework is focused on interconnected ecosystems, there may be an opportunity to establish Wellington Harbour as an MPA.

Long Text

Council submission
As a bach owner at Mestanes bay , I am concerned about several issues ,
1. access being restricted to baches and 4 wheel driving in general along the coastal route.
2. The current Coastal lease on the bach and condions in the future being altered and The right to occupy anytime
3. Guardianship of the local area around the baches.
1.
I strongly oppose Restrictions on 4wd access to the coastal route, including a permit system which would result in unnecessary expense and hassle to users to navigate the route.
It is marked as a public road and 4wd adventure area on maps and should remain open to the public, very little damage occurs to the road and area through 4wd use especially compared to the frequent storms and swells along the coastline.
It is one of the very few places in Wellington to be able to enjoy off road driving without many restrictions.

Alleged antisocial behaviour in the area is unfounded, according to council records there were 155 complaints of antisocial/ driving behaviour received last year and NONE of them were between the Te Kopahau carpark and the coastal track and none involved motorcycles or 4wds. The complaints were in other areas.

Poaching occurs all long the coastline, not just the coastal track, shutting a small section down will make very little difference to a black market trade , It won't stop boats from going past the gate.

2.
The current leases for baches at Mestanes bay and red rocks were implemented 11 years ago after generations of people and families occupying baches, some living permanently on site. We were forced to sign the lease under threat of removal of baches. At the time there was very little consultation and no discussion or compromise to the list of rules and demands made by the council. There was a promise of consultation at the end of the 33 year period of the leases, on the future of the baches and the owners retaining them, Their historical protection and generational claims to the batches that needs to be strongly recognised and considered before any decisions are made regarding the future and change of ownership.

The Lease agreement stated that the owners are not permitted to sublease , charge out, mortgage , rent or hire. their own bach.
Yet in the management approach to the plan is to gain ownership and implement a book-a-bach scheme or let Mana Whenua to control of the baches. That is just a slap in the face for bach owners who have spent years/decades/generations maintaining, repairs, reroofing and repainting and caring for their own bach, so the council can reap the rewards of our hard work and care. Taking away from the next generation of family ownership.

3.
Guardianship of the local area.
With generations of people have lived permanently in these baches, to those who just stay on occasion, it has always maintains a presence in the area.
In the Lease agreement, there is no mention of no permanent living in the baches. But in the management approach plans to prohibit permanent living.
All of the owners, sometimes on a regular basis, have helped in emergencies, such as rescuing injured or unwell people, helping people caught out in adverse weather conditions, stuck or broken down vehicles or bikes, returned people to the carpark if needed, Also rendering service to other minor occurrences in the area.
Bach owners also regularly remove hazards and rubbish from the beach area when necessary and maintain a watchful presence on the coast.

I live above Lyall Bay, and have enjoyed world class kitesurfing there since i moved to Wellington 12 years ago. We have restrictions on where we can go due to the airport , but this is reasonably self managed by the kite community, there is a recognised launch spot at the western end of the bay, which isn't perfect due to wind shadow but provides for a sense of community and safety in numbers.
Generally when the wind is good for kiting, there aren't too many other beach users, as 35km/hr Southerly winds tend to make families pack up and head home, and 65 km/hr storms mean only the hardiest dog walkers are out, but on a good 40km/hr day there can be 30 or 40 kiters riding the waves, thrilling passers by with their jumps through the course of the day.
One of the best kitesurfers in the world Marc Jacobs regularly comes down from Auckland to test new kites and ride Lyall bay in a Storm, and watching him throw huge jumps and spinning tricks 20 metres up is a sight to behold from the Maranui for kiters and diners alike.

Unfortunately without any notice or consultation at the beginning of 2025, a load of sharp edged posts and rope were haphazardly erected along this part of the beach, apparently to improve dune management. within a week i had witnessed two occasions of kites coming into contact with these posts and getting torn.
My opinion is that these posts are an accident waiting to happen, reducing available beach area for launching kites, and drastically reducing the run out area if something were to go wrong such as a kite caught on the posts, or a control line got snagged and sent the kite into an uncontrollable loop. Worse still if a kitesurfer were to stumble, or lose their footing in an unexpected gust they may get dragged along the beach and hit the posts with life changing consequences.
Kiting has some risks, but we have developed very good safety systems and practices to deal with them. But still landing and launching are the riskiest part of the activity and this is made worse if the beach space is reduced by other beach users or tide states. When you suddenly add in regularly positioned, sharp edged posts downwind (the most dangerous area) of the kiter, any incidents become more consequential and you increase the risk to participants considerably.
There was a tragic incident a few years ago in Tauranga where an experienced kitesurfer was thrown into a post in a Council reserve after he launched his kite. He unfortunately died at the scene from the trauma, and the coroner's report refers to the lack of space available being a contributing factor in the death.
To several of us in the kite community the erection of these posts scares us, and has changed the risk and appeal of kiting at lyall bay.
The draft management plan talks of promoting wind sports such as windsurfing and kitesurfing, being important to recreation on the south coast. I'm not sure this is accomplished by installing beach obstacles.

It is my opinion that these posts present an avoidable health and safety hazard, which was not considered by council when it decided to erect them . The sea has washed all of these posts away once last April , but they have since been replaced in a manner that seems to reduce the available beach area for launching even more.
We would recommend the section of Lyall Bay to the west of the Maranui to consider using another method to rebuild and protect the dunes, to avoid a foreseeable life changing accident happening in the Bay. The use of much lower round posts with rounded edges and some hessian netting could help trap blown sand and help restore the dunes without presenting such an ugly and sharp hazard.In their present form the posts do little to catch sand, or

prevent small children running into the dunes, they do catch piles of driftwood which then damages them and weakens them in a storm surge, as well as damaging expensive gear and making it harder to get onto the beach.
The current sharp edges are completely unsuitable in a beach setting, Council wouldn't build a playground in such a rough and ready manner, so why install such a rough and wonky fence?
If they remain as they are there is a likelihood that some kitesurfers will start rigging and launching from other areas on the beach, putting them nearer to the swim flags and closer to other beach users, which is not ideal for our community, our safety or the experience of others.

Tena koutou katoa
We write to commend Wellington City Council on the publication of Tātou ki Uta, the draft Coastal Reserves Management Plan. In addition to this written submission, we would like an opportunity to present an oral submission to councillors at your convenience.
Please find following the specific points we would like to raise:
1. We endorse and support the five values and pathways that reflect what matters most to Wellington's communities in managing coastal reserves. We believe we have a role to play, and things to offer, in each of the values and pathways and would like to work with council to bring this to life.
2. We note that the coast is divided into eight management areas in the draft plan and understand that Worser Bay is part of Te Whanga Rāwhiti, the Eastern Bays management area, which extends from the Southern end of Seatoun Beach to the Northern end of Scorching Bay. We have 100 years of experience in operating in the area from Seatoun Wharf to Taipakupaku Point and see this as the area where we can offer most support to council.
3. We support the management approaches that are outlined in the plan in our area and would like to explore further with council the following:
3.1. We endorse the plan to recognise and interpret the historic sites of Te Whanga Rāwhiti sector, including at Worser Bay by integrating cultural narratives into reserve management, signage, and storytelling initiatives. We draw your attention to work we have underway in this regard through Whaka Te Arawhiti our plan for reflecting and telling the stories of those who have come before us in, on, and through our place (see appendix 1). We would like to work with council on the implementation of this plan.
3.2. We endorse the plan to balance recreation and environmental management at Worser Bay by enabling space for sailing, events, and surf lifesaving activities while not making too much of an impact on long-term dune restoration and coastal resilience. We are pleased to see that the plan includes the provision for the lawn at the northern end of the beach to remain lawn for boating and recreation uses. We have specific ideas that we would like to work with council on to enhance the dune restoration and the lawn while also adding some further recreation and educational amenity value to the area (see appendix 2).
3.3. We support an integrated approach to managing the Worser Bay lease cluster, fostering collaboration between the yacht club, surf club, scout hall, and other

recreation groups, including through applying Te Awe Māpara principles to enhance collaboration. In particular:
3.3.1. We would like to discuss with council opportunities for shared amenities, and integrated facility management. Please note that when we worked with council on our clubroom rebuild project, we explored colocation, but this was ruled out as an option. We would be happy to discuss with council what we agreed to and describe some of the joint projects the three existing tenants have worked on in the past, such as shared decking and sheds.
3.3.2. We fully support the plan to encourage partnerships that support shared recreation infrastructure and coordinated programming while maintaining flexibility for diverse recreation needs at Worser Bay. We have been proactive in this regard with our collaborations with the Mountains to Sea Trust, Te Kāhui Ako o Motu Kairangi, Te Kura Kaupapa Māori o Ngā Mokopuna and the NZ Wing Foil Association. We would welcome the opportunity to bring council into these collaborations and explore how they could be further expanded and formalised.
3.3.3. We are humbled that the plan includes a specific goal to work alongside Te Herenga Waka o Whetūkairangi (Worser Bay Boating Club) in exploring opportunities for storytelling, and community-driven marine restoration initiatives like the NZL Blue Belt project, while ensuring alignment with council priorities and environmental policies.
We have already described our intentions around storytelling (see 3.1 above and appendix 1). We would also like to draw to council's attention that, in preparation for our centenary we have commissioned a history book, the first three chapters of which tell the Māori history of the area along with the early settler history leading up to the establishment of the club (see appendix 3). This material will help us as we embark on our story telling journey.
We are pleased to see that the plan supports the NZL Blue Belt project, a community-driven marine restoration initiative. Council already has two members on the working group for this project alongside representatives form Taranaki Whānui, the Wellington Regional Council, DOC, NIWA, Te Kāhui Ako o Motu Kairangi and the club. The working group currently have a community conversation underway and are collecting baseline data for Te Kahu Moana ki Kākāriki, a marine management area at Worser Bay (see appendix 4).
3.3.4. We encourage the council to push ahead with plans to support the long□term resilience of the Worser Bay dune system by continuing restoration
efforts, ensuring recreational activities and infrastructure are designed to minimise impacts, and allowing space for natural dune expansion. We support the plan to enhance dune resilience at Worser Bay through ongoing restoration efforts, including planting native sand-binding species to stabilise dunes and protect against erosion.
4. We are pleased to see that the plan includes actions points in the short, medium and long term. We fully support the development of a landscape and amenity plan for the Te Whanga Rāwhiti Sector as a short-term goal.
We endorse the intention that amenity plans:
• Support access to the coast and improve connections to the coastal walking network.
• Enhance visitor experience while protecting natural character and ecological values.
• Evaluate the function and design of coastal carparks, including opportunities for formalisation, redesign, or removal.
• Identify areas where bollards, landscaping, and other interventions are needed to prevent vehicle intrusion into sensitive ecosystems.
• Respect, maintain, and reinstate nature-based solutions to manage sea□level rise and coastal erosion, supporting ecological resilience and
biodiversity.
• Include signage at key cultural and ecological sites to enhance public understanding of the sector's history and significance.
We have ideas for Worser Bay that are ready to go to the next stage of planning. We recommend that council expedite planning for these ideas as one of the first actions arising out of the new Coastal Reserves Management Plan.
Thank you for the opportunity to make a written submission on Tātou ki Uta, the Coastal Reserves Management Plan. We look forward to the opportunity of submitting orally in due course.

Ko Worser Bay Boating Club Tōku Ingoa
Welcome to Whaka Te Arawhiti, Worser Bay Boating Club's plan for reflecting and telling the stories of those who have come before us in, on, and through our place.
We believe we are guardians of this place for the generations that will come after us, and for us to perform this kaitiaki role we need to make sure we reflect what has come before us in this place.
This document outlines the next steps we intend to take to come further across-the□bridge in our journey of understanding of what it means to be in this place.
We hope you enjoy reading about what we intend to do.
We intend to establish a bi-lingual name for our club.
We propose that the place be called Te Herenga Waka o Whetūkairangi or the mooring place of waka from the Whetūkairangi pa.
We propose that the Boat & Beach Wise Education Centre within the club be called Te Whare Mātauranga o Waka Tuaone or the place to become boat and beach wise.
Ingoa
We intend to commission five Pou to stand at the entrance to the bridge into the club.
The pou will mark the significance of this place for Te Whanganui a Tara.
The pou will represent the family, friendly and welcoming values that underpin the reputation of the club and will be arranged in a way that means they are naturally interpreted as a family, welcoming visitors into the club.
Each pou will stand for one of the five principles that underpin the Club and the Boat & Beach Wise programmes, and the stories embodied in their design will be used throughout the programmes.
Whakapono
We believe
Mahi Tahi
We work as one
Whanaungatanga
We belong
Kaha Tahi
We are strong as one
Whakaroto
We serve
Pou
Wheke
representing the
spirit of exploration
that drew Kupe to
these shores
Manaia
representing the
intermediary
between the realms
of people and spirits
Tu Tangata
representing the

people who have
come before in this
place
Tangaroa
representing the
atua of the ocean
and the creatures
that live in it
Tāwhirimātea
representing the
atua of weather with
strong connection to
the stars

Pare
We intend to give the three sheds significant names from our history and install pare in the lintels above each door to record this.
It is proposed that the three sheds be named Ngake (after the taniwha who broke through the heads to create the entrance to the harbour), Tara (after the chief
who set up Whetūkairangi pa on the hills above us and gave his name to the harbour on which we sail) and Heberley (after the first pilot who helped settler ships
through the heads and who gave the name Worser to the bay)
The pare for each shed will be the height and width of the lintel above each of the shed doors. The three elements of sea, stars and wind, the interplay of which is
so important to understand when sailing, will be represented in the design of each pare.
It is proposed that the Ngake (north) shed have the pattern associated with the sea as Ngake is a sea creature. It is proposed that the Tara (middle) shed use the
pattern associated with the stars as Tara's people were known as the star gazers. The idea is that the Heberley (south) shed have the pattern associated with the
wind as Heberley when asked 'how is the wind?' replied 'it is getting worser and worser', hence the name for Worser Bay.
Pare

Heke
We intend to install Heke to record the history of our place, including aspects of the first 100 years of our kaitiakitangaship, on the ceiling between the rafters in the classroom. The
heke will be a subtle but ever-present reminder of the past for all those that use the classroom. They will include the patterning from the pou at the entranceway to the club and the
pare above the shed doors to reinforce the interplay between the three elements of sea, stars and wind.
The six Heke will record:
1. The significant Māori history associated with the local area (incorporated into the schools' programme)
2. The names of the settlers' ships that arrived in Wellington around 1839-40 (incorporated into the schools' programme)
3. The names of the original members who set up the club in 1926
4. The names of women who have made a significant contribution to the club over the years as our honours' boards and other sources of recorded history are silent in this regard
5. The sailing boundary and the old fixed marks used in the early days of the club
6. The classes that we have sailed between 1926 and 2026
Heke

Mātaiahikā
We have collaborated with Te Kāhui Ako o Te Motu Kairangi, a cluster of schools in the Eastern Suburbs of Wellington, to establish RŪNĀ as a Mātaiahikā or local curriculum,
delivered out of Te Whare Mātauranga o Waka Tuaone – The Boat & Beach Wise Education Centre.
RŪNĀ supports kiwi kids to learn from the past to 'steer' toward a sustainable future.
RŪNĀ includes three modules:
1. Kōkōkaha – Powered by wind (Science, Technology, Engineering and Maths - focuses on designing sustainable energy solutions).
2. Kōrinorino - Our Ancestors' Wake (Te Ao Tangata Social Science and Aotearoa New Zealand Histories - focuses on understanding local settlement stories).
3. Moanamana – NZL's Blue Belt (Science and Environmental Education - focuses on restoring marine ecosystems).
Each module is made up of in-classroom learning experiences supported by a sailing or environmental experience at the club. Each module is designed for students in years 4
through to 10 but can be easily adapted for older or younger children. Each module includes opportunities to develop water skills for life and safer boating skills to ensure kiwi
kids learn and develop the knowledge and skills to safely enjoy our marine environment.

Te Rongotai
As part of our work on RŪNĀ with Te Kāhui Ako o Motu
Kairangi we are building a fleet of small sailing and
paddling waka.
Students from Rongotai College lead the building of the
first sailing waka, named Te Rongotai, which provides a
larger craft, more suitable for older students to use in

all three modules of RŪNĀ.
It also provides a means for Pacific and Māori students so see their voyaging and sailing history reflected and revitalised in our community.
Te Rongotai is based on the traditional Va'a Motu sailing waka from the Pacific Islands and is available for use by all schools who participate in the activities at Te Whare Mātauranga o Waka Tuaone.
Whakatuwheratanga
On Friday 30 January 2026, as part of Worser Bay Boating Club's centenary celebrations, the club and the trust will host a whakatuwheratanga for Ngāi Tara whānau who whakapapa back to Whetūkairangi, for mana whenua, for representatives from the Te Kāhui Ako o Te Motu Kairangi and for invited guests from Council, Government and the community to join with the club and the trust in unveiling and dedicating the Ingoa, Pou, Pare, Heke and RŪNĀ curriculum.
The protocol for the whakatuwheratanga will be as follows:
• The whakatuwheratanga will take place in the morning and will be the first event in the centenary celebrations weekend.
• Worser Bay Boating Club members and Boat & Beach Wise members will be seated in the clubrooms.
• Manuhiri will gather in the area adjacent to the start of the ramp into the club.
• A student from the Te Kāhui Ako o Te Motu Kairangi will lead a karanga to call the manuhiri into the clubrooms.
• Karakia, mihi whakatau and waiata will follow hongi with the Manuhiri, with the general committee and the trustees representing the Club and the Trust, alongside of Ray Ahipene Mercer representing Ngai Tara and Ngati Ira.
• Karakia and waiata will include Whakataka Te Hau, Toia Mai and a club waiata composed by the Venturees.
• Ray Ahipene Mercer will then be invited to lead a procession to unveil and dedicate the Ingoa, Pare, Pou, Heke and RŪNĀ.
• Kai will follow the unveiling and dedication ceremony.
Appendix 2.
Enhancing dune restoration and the lawn while also adding some further recreation and educational amenity value to Worser Bay.
Coastal Reserves Management Plan
1918
1934
1950
1970s
2004
Wellington City Council is developing a new Coastal Reserves Management Plan to provide direction for the management, protection, and enhancement of Wellington's coastal reserves, parks, and beaches.
Worser Bay became a reserve for Wellington citizens not long after settlers began arriving in Wellington. By the end of the 19th century there was a road over the hill to Worser Bay and shortly thereafter a raft of recreation facilities was in place, such as the life saving club, the beach pavilion and the boating club.
In the 1950s, a grass area was established to the north, east and south of the pavilion, greatly enhancing the recreation amenity value of Worser Bay. Keeping the sand on the beach, however, was always a challenge. In the second half of the 20th century this challenge was managed by bulldozers pushing the sand back into the harbour on regular occasions.
By the turn of the 21st century this practice was ceased and instead an initiative to create dunes at Worser Bay was underway, supported by a planting programme and a comprehensive irrigation system.
The dune creation has been very successful, so much so that, as the dunes continue to grow, they are increasingly encroaching onto the Worser Bay beach pavilion and grass reserve area, with the space available for recreation activities getting smaller and smaller every year.
As part of the Coastal Reserves Management Plan process, Worser Bay Boating Club are proposing enhancements that will continue to see the dunes grow while reinstating some of the grass area and adding additional recreational amenity value to Worser Bay.
Join in the conversation about the proposed Worser Bay Marine Management Area.

,
Pou, Aquaculture Container,
Grass and Dunes, Ramp,
Boardwalk, Waka Storage
Aquaculture container. Worser Bay Boating
Club proposes to establish a community aquaculture container with aquarium tanks for raising juvenile marine species to release into the Worser Bay marine management area. It is proposed that the aquaculture container be placed on the grass area adjacent to the underwater art gallery and snorkel trail. The container will serve as a citizen science education facility for both schools and the community.
Pou. Worser Bay Boating Club proposes to install five pou in the rock revetment near the bridge to Worser Bay Boating Club. The pou will mark the significance of this place for Te Whanganui-a-Tara. The five pou will be named Wheke, Manaia, Tu Tangata, Tangaroa and Tāwhirimātea, and the pūrākau embodied in their design will be used throughout the school and community education programmes.
Grass and Dunes. Worser Bay Boating Club proposes that the dunes be extended further so they reach the north end of Worser Bay beach. At the same time the club proposes the grass area to the west of the dunes be extended. The proposal is that the dune plants that are encroaching onto the grass area be replanted in the dune extension to the north end of the beach. The reinstated grass area can then be used for public recreation purposes as well as school and community education programmes, large national sailing regattas and the annual Worser Bay Beach Carnival.
Waka storage. Worser Bay Boating Club proposes that a covered waka storage space be created next to the south end of the pavilion for Te Rongotai, the sailing waka built by local colleges during 2024. It is intended that the space also provide covered storage for waka ama that are proposed to be purchased for use in the school and community programmes. Please note the pavilion already stores a fleet of learn-to-sail boats, wing foil boards and kayaks used across the school and community programmes.
Ramp. Worser Bay Boating Club proposes that a public walking access ramp to the beach from the grass be built about 3/4's of the way toward the north end of the grass area. The ramp should provide an erosion resistant way for people to access the beach from the grass. It is proposed that the ramp be approximately 5 metres wide to allow small sailing boats up and down it when major national sailing championships are held at Worser Bay, with hundreds of sailing boats temporarily stored on the grass.
Boardwalk. Worser Bay Boating Club proposes that a public board walk be established to the beach through the dunes from the beach pavilion. The boardwalk should be approximately 1.5 metres wide to enable access to the beach for the learn-to-sail boats, wing foils, and kayaks that are stored in the pavilion.
Join in the conversation about the proposed
Worser Bay Marine Management Area.

PROLOGUE

Tony and I came to Worser Bay in 1971 with our three boys Mark, Dean and Glenn in tow. We'd been teaching in Tangoio and Mangateretere in the Hawke's Bay and travelling across to Foxton each weekend to visit our bach on the Manawatu River estuary. The boys had grown up in the sea – sailing, rowing and fishing when the tide was in and hunting for crabs and eels when it was out.

There's always gold at the end of the rainbow. The Worser Bay Boating Club in the 1960s. Painting by Sydney Higgs of Karaka Bay. [MARGUERITE BEERE COLLECTION.]

8 9

THE WORSER WAY

Tony and I had won jobs at Lyall Bay school and came down one weekend to find a place to live. During the day we found an old cottage, high up on the hill, halfway between Seatoun Wharf and the Worser Bay Boating Club (WBBC).

It looked ideal. When we revisited it later that night, it was a perfect Wellington evening: not a breath of wind, a pancake-flat calm harbour and a full moon twinkling across the surface of the water. Worser Bay Boating Club was right in the middle of the vista. It was perfect.

We bought the cottage, moved to Wellington and settled into our new life. One of the first things we did was join the club and get involved in sailing at Worser Bay. That was the beginning of over fifty years of involvement with the club – and still counting. Like many who came before and have come after us, we found a place at the club, sailing, helping in the kitchen, serving on various committees, driving rescue boats and teaching others to sail. The club gets into all our veins and becomes an integral part of who we are.

Sailing has been the backdrop to my life as it has for everyone who lives along the hill and around the bays. I've lost count of the thousands of races I have watched out of my window. Almost every day there is someone out there on the water, mucking about in a boat of some kind. And right in the heart of it all is Worser Bay Boating Club, solid, steadfast, and welcoming all those who come through its doors.

I am proud to be writing this prologue for the club's history at it celebrates its 100th season and I am forever grateful for what the club has done for my family. Here's to the next 100 years of sailing at Worser Bay.

Jill Stanley QSM | Patron

FOREWORD

Wellington Harbour's often-challenging sailing conditions provide the backdrop to

the Worser Bay Boating Club (WBBC), a centre of excellence famed for developing character, characters and some remarkable careers. Situated close to the harbour entrance, the club marked its centenary in February 2026.
We can be proud that WBBC has helped produce America's Cup and Round the World Race winners, many National and World Champions and New Zealand Yachtspeople of the Year. However, the club's most enduring achievement is the positive impact it has had on the lives of its families and community.
Originally formed in 1926, the club and the adjoining Worser Bay and Seatoun communities have always been reflective of society and its changes. The recent rebuild of the club and the celebration of its first 100 years have prompted careful thought as to how it can continue to be relevant for the next 100.
An awareness of history helps us understand the ethos of the club as well as why and how it developed. It also influences our vision for the future. Bee Dawson has recorded the rich history of the area, interweaving stories of the club during times of depression, war and disaster with tales of the many good times – the sailing and shenanigans that have got us to where we are today.
Bee's many interviews with current and former members have uncovered rich stories, some of which date back to the 1940s. The common theme has been a deep appreciation of everything the club had done, for those interviewed personally, but also for the wider community. Bee has woven these collective memories into a lively story of the club and its people. Chris Coad, photographer and club member, has done an excellent job of embellishing the story by curating a great collection of photographs.

This book would not have been possible without the financial assistance of a group of supportive individuals who were determined that the memories were too good to be forgotten, the backing of the Beach & Boat Wise Trust and a grant from the Worser Bay Boating Club.
Enjoy the read!

CHAPTER 1
In the beginning
To know where you are you need to know
who has been there before you.
Te Upoko o te Ika a Māui
In the beginning there were no waters to sail upon at Worser Bay. This all changed when, according to ancient Māori tradition, the legendary Polynesian navigator Māui was on a fishing trip with his brothers and, to their great surprise, he pulled a giant fish out of the sea. Known as Te Ika-roa-a-Māui, or Māui's great fish, this became the North Island of New Zealand. The head of the fish, Te Upoko o Te Ika a Māui, is now known as Wellington, while the tail forms the top of the North Island. Some legends also suggest that Maui's waka (canoe) became the South Island, known as Te Waka a Māui.
Many geographical features of the Wellington region are reflected in this legend. The Red Rocks on Wellington's South Coast are said to be stained with blood from the nose of Māui – which he had used to bait his hook. When Tangaroa, the god of the sea, recognised the blood of Māui he ensured that a great fish was hooked on his line.

Ngake and Whātaitai
Pūrākau from te ao Māori suggest that Wellington harbour was once a large lake that had formed in one of the eyes of Te Ika.1 Two great taniwha, Ngake and Whātaitai, lived in the lake. They could hear deep water lapping against the shores of Te Hue a Para (Lyall Bay) and longed to be out in the deep water of Raukawa Moana (Cook Strait).
Each of them took a different approach to getting there. The impatient Ngake smashed his way through the rock and earth by Seatoun, created a wide channel out to the ocean, swam off into Raukawa Moana and disappeared. The gap that Ngake

created is now the entrance to Wellington harbour.
The more patient Whātaitai took a gentler approach and headed for the shallower water in Evans Bay. However, he got stuck and was left high and dry when the tide receded. His spirit changed into Te Keo, a bird which soared up to the top of Mount Victoria and then wept for Whātaitai. Mount Victoria therefore is also known as Tangi te Keo or 'the weeping of Te Keo', and the hill suburb below is called Hataitai in memory of the gentle taniwha.
Kupe
The first people to sail on the sea waters of Worser Bay are reputed to be the Polynesian explorer Kupe and his whānau and fellow explorers. It's hard to imagine what they would have made of the area when they arrived over a thousand years ago. After gruelling months of sailing and exploring the East Coast of Te Ika a Māui, there must have been a feeling of massive relief when they sailed past what is now known as Barrett's Reef, entered the harbour and then pulled their waka up on Kirikiri□tatangi2 or Seatoun Beach.
It is believed that they stayed in the area for at least a year as the party had to recover their strength, carry out maintenance on their sailing waka and replenish supplies. Much of their food came from the sea and surrounding land. At this time the harbour abounded with kai moana – fish, crayfish, limpets and pāua – and the forest that ran down to the shore teemed with birds, including large kākā, kererū and moa. Berries and fern root would have provided further sustenance. However, it is understood that Kupe and his people also cultivated the land and established
1 The other eye was Lake Wairarapa.
2 The name Kirikiri-tatangi refers to the rustling sound caused by waves disturbing gravel on the beach.
crops such as kūmara. It would have been a while before the seafarers could build up sufficient surplus food to continue their travels.
Placenames give the biggest clue to visit of Kupe and his whānau to the waters of Worser Bay. When the first Europeans arrived in the harbour, they learned that the name Te Tūranga-o-Kupe – the standing place of Kupe – referred to the foreshore and the stretch of water and land between Worser Bay and Steeple Rock. Although Maraenui, the name for the flat area of land where the explorers would have settled and cultivated kūmara, isn't as obviously connected to Kupe, oral tradition provides the link. The same applies to the two main islands in the harbour, which are named after two members of the whānau of Kupe, Matiu (Somes Island) and Mākaro (Ward Island).
There are other very Kupe-specific names in the area around Worser Bay. Steeple or Pinnacle Rock was known as Te Aroaro-o-Kupe or 'the lap of Kupe' in recognition of the day Kupe went swimming at high tide and banged his groin, or lap, on the rock. Oral history suggests that Barrett's Reef was called Te Tangihanga-a-Kupe or 'the mourning place of Kupe' in reference to the sorrowful sound of the surrounding waves.
It is said that after leaving Worser Bay, Kupe and his party moved up the west coast of the North Island to Hokianga – where food would have been easier to grow and gather – and eventually sailed back to Hawaiki, never to return. Once back in Hawaiki, Kupe told so many enticing stories about his journey that others wanted to see those places for themselves. This curiosity ultimately led to the great migration of Māori from Hawaiki to Aotearoa.
Te Whanganui-a-Tara
For many hundreds of years a succession of explorers, originating from Polynesia, voyaged to Aotearoa, and settled in this 'new' land of the long white cloud. In the 12th century Whatonga,3 a noted Māori navigator and paramount chief who had settled at Mahia Peninsula in Hawke's Bay, travelled south to Raukawa Moana and rediscovered the harbour that Kupe had explored many years before.
After returning to the east coast, Whatonga sent his son Tara-Ika and Tara□Ika's half-brother Tautoki to explore and settle the land around the harbour. The
descendants of Tara-Ika became the iwi known as Ngai Tara and are tangata whenua,
3 Whatonga is reputed to have been born in Hawaiki circa 1130.
16 17
THE WORSER WAY IN THE BEGINNING
the first people to settle on this land. The harbour became known as Te Whanganui□a-Tara – the great harbour of Tara, a name that persists to this day.
At the time of both Kupe's visit and the settlement of the area by Ngai Tara, the present-day Miramar Peninsula was an island called Motukairangi. There was a dra□matic change around the mid-14th century when the huge Haowhenua earthquake
raised the surrounding land by about three metres. Te Awa-a-Taia, a channel that had been used by waka for many years, dried up and the peninsula became part of the mainland.
Over many centuries fortified hilltop pā were built across Motukairangi. In the middle of the 13th century Tara and his people lived in the major pā of Te Whetū□Kairangi which was situated around where Worser Bay School now stands, on the
ridge above the bay. The smaller Kākariki-Hūtia pā was slightly to the north and further down the ridge toward Worser Bay. Much of this second pā has been removed as a result of quarrying activity associated with establishing the road around the coast.
These two pā sites provided a commanding view of the coast and hinterland of

Motukairangi and were places of refuge during times of conflict and threat. They were complemented by kāinga around the immediate coastline adjacent to and beyond Worser Bay. Kākāriki, the most notable of these, was situated on the gently sloping land at the bottom of Awa Road. Further to the north were the Onehunga kāinga, at the bottom of the Onehunga steps, and Te Karaka kāinga, which is closer to Scorching Bay. Even further to the north, Te Māhanga kāinga was positioned beneath a fortified pā on the foreshore close to where the NIWA research centre once stood.

By the 18th century, Ngai Tara were sharing their lands around Wellington Harbour and up the Kapiti coast with many other iwi Māori. These included Ngāti Ira who subsequently became the dominant group around the harbour, including at Worser Bay. Rich archaeological evidence, such as the Taipakupaku burial sites and the Maraenui middens, point to centuries of settled occupation by iwi Māori in and around Worser Bay.

Taranaki Whānui ki Te Upoko o Te Ika

During the first decades of the 19th century, Taranaki Whānui began their migra□tion to Te Whanganui-a-Tara. By this time Ngāti Ira had largely left the area around Motukairangi and were living in villages on the eastern side of the harbour. These included Waiwhetu (Eastern Hutt valley), Oruamotoro (Days Bay), Okiwi (Eastbourne) and Parāoanui (Pencarrow).

On arrival, the majority of Taranaki Whānui settled on the shores of what is now Wellington city and formed a series of villages from Te Aro to Kaiwharawhara. Members of Āti Awa (Ngati Mutunga and Te Āti Awa) branched out further and occupied sites within the northern precinct of Motukairangi including Te Māhanga kāinga and pā and Marukaikuru (Shelly Bay).

During the first half of the 19th century, the gifting of land and conquest established Taranaki Whānui as the dominant group within Te Whanganui-a-Tara. By the time of the signing of Te Tiriti o Waitangi (the Treaty of Waitangi) they were recognised as having mana whenua status across the rohe (area). This was further strengthened by the signing of the Tenth's agreement with the New Zealand Company.4 Much later this status was reaffirmed and recognised in law through the Port Nicholson Block (Taranaki Whānui ki Te Upoko o Te Ika) Claims Settlement Act which came into force on 2 September 2009.

Tauiwi arrive in Pōneke

During the late 18th and early 19th centuries, more and more people from Europe began to arrive at Te Whanganui-a-Tara. At this time the harbour also became known as Pōneke, said to be a transliteration of Port Nick which in turn was a colloquial version of Port Nicholson. By this time there were no large-scale iwi Māori occupations on the southeastern precinct of Motukairangi, but there were some small outlying groups and seasonal occupation of kāinga sites was common.

One of these kāinga, at Worser Bay, was written about by Captain James Herd when he and Thomas Shepherd visited in the ship Rosanna in 1826. Shepherd's journal entry for 26 May 1826 noted: 'In company with Captain Herd and Co, I went on shore on the left-hand side about two miles within the heads at a Bay which has a good gravelly beach adjoining which is a level plane of about 50 to 199 acres in shape of a semicircle bordered by high land on one side and the beach on the other.

'We next walked about two miles round the beach . . . until we came to a small flat

4 The origin of the Tenth is to be found in the 1839 deed of purchase concluded by William Wakefield on behalf of the New Zealand Company, which promised the chiefs of Wellington that, in addition to retaining their pā sites, kāinga, cultivations and mahinga kai: 'A portion of the land ceded by them, equal to one-tenth part of the whole, will be reserved by . . . the New Zealand Company . . . and held in trust by them for the future benefit of the said chiefs, their families, and their heirs for ever'.

piece of land at the bottom of a hill where we found some huts and a shadow bower of trees where we found good spring water and plenty of cabbages, here we had a refreshment, afterwards ascending the hill to take a view of surrounding country which looked pleasant but of no great extent.'5

Numbers of iwi and hapū Māori living in these kāinga dropped away during the 19th century as increasing pressure from the arrival of settlers saw the destruction of sites such as Parā – Roto Kura Lagoon (drained in 1847 by Crawford as he set up his cattle farm on the Miramar Peninsula), Te Māhanga Pā terraces (destroyed to make way for the construction of Fort Balance in the 1880s) and Whetūkairangi (removed to make way for Worser Bay school in 1897). By the 1910s, increasing colonisation and urbanisation had led to the end of the traditional kāinga on Motukairangi.

5 Unpublished journal, Alexander Turnbull Library.

Food and shelter

Before the arrival of the pākehā, iwi and hapū Māori cultivated crops seasonally in the more sheltered and less steep pockets of land on the slopes of the hills at the back of Seatoun and Worser Bay. Climatic and soil conditions did not favour widespread cultivation but kai moana was abundant and an important food source, especially as the forest became depleted of bird life. The swamp area known as Parā – Roto Kura in the middle of Motukairangi was a popular source of two types of eel: matamoe and haumate. Fresh water was available from springs along the base of the hill in Worser Bay.

Building materials for whare at each kāinga came from the bush that covered the hillside. Whare were carefully positioned so as to provide shelter from the worst of the strong winds, lashing rain and chilling severity of southerly winter storms.

CHAPTER 2
The first pilot station and the arrival of European settlers

They gave me the bay known as Worsers Bay to live in. They pulled down the old hut and lent me a hand to build a new house.
He went down the entrance saying that the weather was getting worser and worser and finally beaching his boat in Worser Bay.
'Worser' was the nickname he eventually assumed and from that day, the bay has also been known as Worser Bay.

When the New Zealand Company's ship Tory arrived at Te Whanganui-a-Tara or Port Nicholson (later known as Wellington Harbour) on 20 September 1839, she was piloted by whaler, James Heberley.6 Entering the harbour was straightforward in calm fine weather but, more often than not, ships had to wait for favourable conditions of wind, tide and visibility. A pilot with local knowledge was essential if voyages were to end well. Onetime whalers, including James Heberley and George
6 Many more settler ships followed, including the Cuba (4 January 1840), the Aurora (22 January 1840), the Oriental (22 January 1840), the Duke of Roxborough (8 February 1840) and the Bengal Merchant (20 February 1840).

Young, and local Māori such as Te Whare, son of prominent Māori chief Te Puni, were ideal pilots as they had an intimate knowledge of local maritime conditions.

The first pilot station

Recognising the challenges posed by the harbour entrance, Colonel William Wakefield, the New Zealand Company's Principal Agent, appointed Heberley as official pilot based at Tarakena Bay, an exposed spot which faced directly onto Cook Strait. Heberley and his Māori crew were on call, ready to guide ships into the harbour 24 hours a day. Launching their whaleboat from the open beach was always difficult, and especially so when there was a howling southerly gale.
In his autobiography7 Heberley recalled: 'Colonel Wakefield sent me to the heads as pilot. I remained there two years. There was no salary given, no pay but what I got from shipping. There were two natives, grandfather and uncle to my wife. They gave me the bay known as Worsers Bay to live in. They pulled down the old hut and lent me a hand to build a new house.' The piloting money was insufficient to pay Heberley and his crew so in June 1843 he left, started fishing to earn money and then returned to whaling during the season.8
Heberley had begun his career as a cabin boy with whaler and interpreter Dicky Barrett. In later years he spent time as a whaler and accompanied Dr Ernest Dieffenbach on several expeditions, including climbing Mount Egmont (Taranaki). He was renowned for his combination of toughness and good seamanship. In his memoir, Captain William Shilling (chief pilot at Worser Bay in 1888 and then 1889–1894) recalled Heberley as 'a real character. When times were slack, he would go over to the Sounds fishing and thought nothing of crossing the Strait in a 14-foot open dinghy. On one occasion, the Falcon, which traded from Wellington to the Sounds and Blenheim, passed old Jack in the middle of the Strait. Thinking he might need assistance, the skipper of the ship pulled alongside and offered a tow. 'Tow? Why should I want a tow?' said the old man. 'I'm all right!' At the same time a fairly stiff nor'wester was blowing but the dinghy was under sail and standing up to it very well. 'We left old Jack sitting there cosy and smoking an old black pipe with

only a dog for a companion', said the skipper of the Falcon.
9 Heberley drowned in Picton Harbour in 1899 when he was about 90 years old.
One of the pilots who succeeded Heberley was Captain Dan Dougherty, a whaler from Port Underwood at the top of the South Island. A steep decline in the whale population and the great 1848 earthquake prompted Dan, his wife Sally and their children to cross Cook Strait in an open whaleboat so that Dan could work at Tarakena Bay. Some four miles (6.5 km) from the settlement of Wellington and situated between Lyall Bay and the harbour entrance, this lonely spot looked towards treacherous Barrett's Reef in one direction and over Cook Strait in another. The family lived there for the good part of a decade.
In her family history Widow of Thorndon Quay, Sally's great-great-granddaughter Celia Manson wrote: 'the worst times were when the weather made her a grass widow for days, sometimes even weeks, on end. Dan would have been rowed out by his crew who would wait until he had climbed aboard the waiting ship before rowing back home to their huts. Just as Dan had brought the ship to the harbour mouth, the wind would sometimes make a violent change and he would be blown far out to sea; sometimes having to remain there for days or weeks, waiting for a change of wind.'10
C.R. (Charles Rooking) Carter, after whom the Wairarapa town of Carterton was named, was impressed by how Dan guided the Eden into Wellington Harbour. He

Wellington Harbour's first officially gazetted pilot, James Heberley and his wife, Te Wai Naihi Heberley, daughter of Aperahama Manukonga and Manupoinga (Matakiau) Te Owai and granddaughter of Te Irihau, circa 1870s. Taken by an unidentified photographer. [NATIONAL LIBRARY. PACOLL-5800-12]

wrote: 'At seven o'clock in the evening the pilot came on board and took charge of our ship, and at low water, against a head wind and almost in the dark, he worked our old vessel through the entrance inlet – a fine deep-water passage, over one mile in width and about four miles in length, to the anchorage in Lambton Harbour, where at half past 10 o'clock on the night of the 28th November, 1850, we dropped anchor.'11
It wasn't always so straightforward. On a stormy day at the beginning of 1852, the full rigged 400-ton ship Midlothian arrived off Tarakena Bay and ran up the signal for the pilot. The massive waves that smashed on the shore and Barrett's Reef almost swamped the pilot boat. Dan scrambled aboard, safely piloted the ship into the harbour and his crew all got home safely, but the experience had been so terrifying that he wrote to the Colonial Secretary: 'I beg to apply to have the Pilot Boat fitted as a life boat so that in the event of the boat being swamped in the surf, myself and crew will be enabled to save our lives . . . It can easily be done by forming a box under the thwarts filled with cork . . . I have been induced to make this application as my boat was nearly swamped in boarding the Midlothian . . .'12 As a result of this letter, cork shavings costing £10 were imported from Sydney and fitted in boxes under the thwarts of the pilot's boat, giving the pilot crew a slightly better chance of survival in stormy weather.
The Pencarrow ferry
One of the pilot's duties was to operate a ferry across the harbour heads to Pencarrow, which was the beginning of the old Māori route from Wellington to the Wairarapa. Lyall Bay farmer Sandy Sutherland kept a horse at Pencarrow Head and would pay Dan's Māori crew to row him across the harbour entrance whenever he wanted to ride to the Wairarapa.
As the route became more popular, travellers wanting to be ferried across the heads often turned up at the pilot house. In a piece of advice written 'By a Traveller' and titled 'How to Find the Ahuriri' [Napier], the Wellington Independent of 18 September 1852 stated 'Leave Wellington at four o'clock in the afternoon, and arrive at the Pilot's Station at the heads, at about six o'clock; here you will find a shake-down for the night; nor need you fear of getting one, for he's a jolly-good-fellow.'
However, there were times when the hospitality of the pilot and his family was

11 Ibid., p. 17.
12 Ibid., p. 23.
taken too much for granted. In his book Life and Recollections of a New Zealand Colonist, C.R. Carter gave a lively account of an overnight stay in May 1853. 'Just as it was getting dark, I arrived at the pilot station, situated near the entrance to our harbour . . . I wished to cross to the lighthouse at once, but the Māori boat crew refused to take me over on account of its being so dark. I therefore contented myself with going to the pilot's house.'
Sally Dougherty was unimpressed when Carter rose before daybreak, climbed down from the loft and banged on the crew's doors. 'Out they must come, willy-nilly, launch their boat which was high and dry up on the beach, and take him across the harbour entrance immediately. He wanted no further delay in setting his eyes on the Wairarapa.'13 Once at Pencarrow, Carter paid the 'lazy fellows' with a stick of tobacco.
By 1854 work was underway on a road which was to run up the Hutt Valley and over the Remutaka range to the Wairarapa. In 1856, the first wheeled vehicle – a wheelbarrow – passed over the Remutaka Hill and on 10 June that year the mountain road was officially opened to wheeled traffic. From this point there was a steady drop in the number of travellers who wanted to be rowed across the harbour entrance.

THE WORSER WAY THE FIRST PILOT STATION AND THE ARRIVAL OF EUROPEAN SETTLERS
26 27
Life at Tarakena Bay
Always a keen gardener, Sally brought cuttings of lavender, lemon-scented geraniums and strawberries (which originated from her home in Canada) across Cook Strait. Before long, vegetables, flowers and fruit bushes were thriving in the shelter of the glossy-leaved native taupata. Sally made her own bread, jam and preserves; eggs came from her hens, milk from her own goats and she bought butter from the Sutherlands, who farmed at neighbouring Lyall Bay. They ate a lot of fish. Tarakihi and flounder were easy to catch, and crayfish abounded among the rocks of the reef. Meat came from the Sutherlands' farm or from wild pig shot in the surrounding hills. The Dougherty and Sutherland children grew up together, riding, rowing, swimming in the surf, sharing books and sometimes tutors, picnicking and having adventures.
When a massive earthquake struck on 23 January 1855, the little pilot house collapsed on and around the family. As the ground rolled and shuddered huge waves crashed onto the beach, just metres from the front of the house. The Doughertys spent that night sheltering on the hillside. Subsequent giant high tides stranded thousands of fish among the rushes on the sandhills.
Much of Dan's life was spent in an open whaleboat. Constantly wet from spray or rain, and often freezing cold as well, he suffered from asthma and a recurring cough. When he died after a fall from his horse in 1857, it was suggested that he might have survived the accident if he'd been in better health. After his death Sally moved into town and supported herself and her family by running a boarding house.
The pilot station moves to Worser Bay
In 1866, the pilot station was moved from Tarakena Bay to the northern end of the relatively sheltered Worser Bay, inside the harbour entrance. Originally called Kākāriki, and then Young's Bay after whaler George Young, it is generally believed that the bay took its later name from James Heberley, who was popularly known as 'old Jack Worser'. It appears likely that Heberley lived at Worser Bay with his Māori wife Maata Te Wai Te Naihi during the time he operated as official pilot at Tarakena Bay, and possibly afterwards. He never lived in the present-day pilot house.
One grandson, prominent Māori carver Thomas Heberley, was emphatic about the derivation of the name. 'One time he was ordered to bring a party ashore from a man-o-war and by the time they had disembarked a north-westerly breeze had increased to a gale which prevented him from landing on the western side. He went down the entrance saying that the weather was getting worser and worser and finally beaching his boat in Worser Bay. "Worser" was the nickname he eventually assumed and from that day, the bay has also been known as Worser Bay.'14
Not everyone agrees with this story. In an article on Heberley's life, written by his great-great-grandson, Jack Thessman in the Dominion in 1989, Thessman suggested that the name originated from a European corruption of the Māori word 'Whata', meaning elevated stage for storing food.
Life at Worser Bay
Although much more sheltered than Tarakena Bay, Worser Bay was still very isolated. At the time the pilot station was established on the Ngāti Ira kāinga site at the bay, only the pilot, crew and a few Māori families lived on the peninsula. 'Pilot Town' consisted of the corrugated iron pilot's cottage, the coxswain's cottage, the boat crew cottage, cottages at the signal stations and a boatshed. Members of the community

THE WORSER WAY

Operations
The first signal station was built on Mount Albert, a peak to the south of Newtown, in 1844. Whenever a ship appeared at the harbour heads, communication would be by flags which gave the ship's code letters.
In later years a signal mast was erected on the bluff above the pilot's cottage at Worser Bay. This enabled Pencarrow lighthouse, the pilot station and Beacon Hill to communicate with the Harbour Master at Queen's Wharf via the Mount Victoria repeating station. When a ship requested a pilot during the day, the signalman on Beacon Hill would communicate by semaphore, but if the request came at night, he would light a fire. When the duty watch saw the signal, he pulled a rope which rang the bells in the cottages at the pilot station. The pilot and his five crew would then leap into action, launch the nine-metre (30-foot) whaleboat and row for the harbour heads under the command of the chief pilot on the steering oar. As soon as they arrived at the ship, the pilot would clamber aboard and start to guide the vessel into the harbour. This was a relatively straightforward process when the sun shone and there was little wind, but when storms hit the pilot could be stuck on board for more than a week. Once the ship was safely in the inner harbour, the pilot and his crew would make their way back to Worser Bay via Newtown and the Miramar peninsula. The pilot station later acquired a crude telephone, but this was more often used as a telegraph.
In addition to being professionally competent, pilots were required to be British subjects between 24 and 45 years of age, sober, of good conduct, healthy and capable of training apprentices for the requisite three years. Good order and discipline were fundamental. When William Shilling joined the pilot service as a boatman in 1871, he was paid 5s 6d a day.
The early journals of Captain Lancelot Holmes (chief pilot 1870–1888) give an invaluable insight into a pilot's life. On one occasion he boarded an immigrant ship on which there was an outbreak of dysentery, so he had to spend the next 15 days in quarantine, living in a tent on Matiu / Somes Island in the middle of Wellington Harbour. Equally memorable was the time he guided the William Tapscott, a leaking American ship, into the harbour, as the ship's captain was in chains in his cabin and the vessel was being run by its mutineer crew. At times his actions were little short of heroic. In 1883 Holmes rowed 20 kilometres out to a steamer that had lost power and then brought the ship safely into the harbour after dark.
Captain Sims was in charge on the night of 17 August 1889 when the Pleione arrived at the heads and burned blue lights to indicate that a pilot was required. Years later,
Group alongside the Pilot Station at Worser Bay, Wellington, photographed by Henry Charles Wright between 1889 and 1910. William Shilling is second from right with a child on his knee. would ride to Newtown for stores and fresh bread and kept goats for milk. From time to time, surplus goats would be liberated on nearby Mākaro / Ward Island. Crew would also sail over to Eastbourne to collect timber washed down by the flooded Hutt River.
The son of Captain William Shilling, the last pilot to live at Worser Bay, recalled that the children from Worser and Karaka Bays often played at Seatoun. 'The land there was nothing more than a windswept arm of heaped-up sandhills and tawhiri scrub, providing an ideal place for children to engage in every imaginable game, from battles-royal to digging up rabbits, hundreds of which overran the place.'15
15 In an unidentified newspaper article, dating from September 1907, reproduced in Kenneally, J.M., & Kenneally, B.M. (1981). Early Days on the Miramar Peninsula, Colonial Associates, Wellington, p. 44.
THE WORSER WAY THE FIRST PILOT STATION AND THE ARRIVAL OF EUROPEAN SETTLERS
30 31
Captain Shilling recalled, 'A southerly wind was blowing and there was a nasty jobble on the sea. Pilot Sims went out with the crew, and the whaleboat was towing behind the ship when it suddenly capsized in the trough of the waves. Pilot Thomas Sims and two of his men were drowned. Captain Henderson, who was in the boat at the time, was one of the two men saved.'16 The traumatised survivors had to walk home to break the news to Sim's wife and family.
Memorable wrecks
When a ship laden with a cargo of wines and whisky grounded on Barrett's Reef, the crew safely abandoned the vessel. They returned on a salvage mission the following day, but there was surprisingly little to be found. It appeared that some hardy
16 Quoted in Kenneally & Kenneally (1981).
fishermen from the Breaker Bay fishing huts had surreptitiously retrieved much of the cargo during the night.
By 1846, Worser's Bay was often mentioned in media reports. On 18 July the New Zealand Spectator and Cook's Strait Guardian reported, 'We are sorry to state that the Amelia, a small vessel of eight tons, parted from her anchor on Monday night, and went ashore in Worser's Bay. A part of the cargo was saved, but the vessel is a total wreck.'
When crew on the ketch Amateur spotted two whales floundering on the beach at Worser's Bay in 1870, the Otago Witness of 8 January reported that 'Captain Palmer at once anchored, hoisted out the boats, and immediately proceeded to the place with the necessary lines, and secured them to a log on the beach. One was afloat, and the other partially aground, both being alive at the time. The whales are fin-backs and

will probably turn out six tuns of oil. Captain Palmer will proceed to Worser's Bay this morning with the necessary implements to cut them in, and the blubber will be tried out in Evans Bay. Captain Palmer brought in a piece of blubber, cut off the belly, and it is from five to six inches in depth.'

Pilot Lancelot Holmes, his son Joseph (then a cadet), Bob Shilling and three other men standing alongside their whaleboat at Worser Bay, Wellington, circa 1885. After 28 years of gripping the stern oar in the pilot boat, the sinews in Holmes' hand contracted so severely that he was almost a cripple. In 1888, he took extended leave of absence, and he retired six months later. [PHOTOGRAPH TAKEN BY WILLIAM WILLIAMS. NATIONAL LIBRARY. ½-140314-G]

33
THE WORSER WAY
32

Other surprise arrivals included two coffins, one of which contain an almost complete skeleton (the skull was missing), and the other empty. The Wellington Independent of 15 March 1864 reported 'The empty one was made out of New Zealand white pine, and the other of dark red wood, very strong, and of European make. One of them had evidently been washed ashore; as it was found amongst driftwood; but the other being behind a sandstone rock had the appearance of having been buried there.'

Chief Pilots at Worser Bay, 1866–1894:

- J.A. Scott, 1866–1870
- Lancelot Holmes, 1870–1888
- William Shilling, 1888 and again 1889–1894
- Thomas Sim's eight-month tenure ended tragically in 1889 when he and two crewmen were drowned at the Heads. Sims left a wife and seven children.

Moving to Wellington

In the 1890s, the pilot and tug needs of the harbour were taken over by privately owned craft in an arrangement with the Harbour Board. In July 1894 the pilot station at Worser Bay was closed and the pilots were brought back into town.

From 1917 to 1979, the Pilot's Cottage – 229 Marine Parade, at the junction of Awa Road –had only two owners, John Gamble and Kerry Leydon. Mrs Leydon continued to live there after her husband's death until its sale in June 1979. Simon and Tami Louisson have owned the cottage since 1998.

Heritage New Zealand has given a Category II Heritage listing to the corrugated iron cottage. Its corrugated iron cladding is believed to be the oldest such iron still in existence in Wellington.

CHAPTER 3
A community develops in
Seatoun and Worser Bay

The swaying coach, the smell of lanterns, the crack of the whip and the spectacle of father and ten other men helping to push the bus up the slippery gradient of the Miramar saddle was guaranteed to make us eat a huge tea when we did arrive at the holiday house.

Quietly tucked into the eastern coastline of the outer harbour and sheltered from the worst of Wellington's winds, Worser Bay's large sandy beach provides plenty of room for swimming, sailing and playing. Small wonder, then, that it soon became one of the city's most popular picnic areas. The adjoining areas – Seatoun, Karaka Bay and Scorching Bay – all had their charms, but Worser Bay was undoubtedly the jewel in the Eastern Bays' crown.

For the European settlers of the 19th century, access to this seaside playground was largely from the sea. On 27 December 1876 the New Zealand Times reported that the Moa had taken various picnic parties to Worser Bay and the pilot station, then commented that the boat 'was patronised to the full extent of her capacity, and the excursionists appeared to thoroughly enjoy themselves'.

When the paddle steamer Manawatu was co-opted to take picnickers to the bay

THE WORSER WAY A COMMUNITY DEVELOPS IN SEATOUN AND WORSER BAY
34 35

a couple of days later, there was some unexpected excitement. 'As the steamer was entering the Heads this morning a large whale was perceived lying stranded on the beach at the south end of Worser Bay, outside the Pilot Station', reported Captain Harvey in the Evening Post of 29 December 1876. 'The monster of the deep was pointed out to the passengers, who were duly impressed with the vastness of its proportions.'

The newspaper went on to explain that the Manawatu would make two excursions to Worser's Bay on the following Monday, New Year's Day, leaving the Queen's Wharf at 9 and 11 a.m. 'After landing any passengers or picnic parties who may desire to go ashore there, the Manawatu will proceed to the Heads on a fishing excursion. The trip will be a very pleasant one, and no doubt will be largely patronised. A full band will be in attendance. The fare will be only 2s. 6d. for adults, and 1s. for children.'

Seatoun – initial development

The main European settlement of the Seatoun17 area began when James Coutts Crawford, an early pioneer who had purchased the whole of Miramar peninsula,

commissioned E. Holroyd Beere to survey and draw up subdivision plans. When the estate was put on the market in 1878, Beere was so taken with the area that he acquired sections in the vicinity of Marine Parade and Beerehaven Steps (both of which he named), built a modest cottage and settled down to a life by the sea. Beere was aware that Crawford's ambitious plans for the area included setting aside sections for future shops, hotels and churches, and hoped that his investment would pay dividends. Another early investor was Wellington dentist H.P. Rawson, who was developing a dairy farm on land at the southern end of the township.

After initial heady optimism, the excitement quietly subsided and the 'township' of Seatoun languished as a remote, sandy, windswept part of the Crawford run. However, interest intensified as the charm of the area became more widely known. Always popular with day trippers, Worser Bay became increasingly attractive to people who wanted to stay a while. Between 1895 and 1910, many houses were built between the foreshore and the steep hills behind Seatoun and the nearby bays.

17 The name derives from a place in Forfarshire (UK) which was owned by the Crawford family.

Hearn's cottages

In the 1890s local plumber Robert A. Hearn and builder, Mr Sampson Williams, acquired five acres of land opposite Worser Bay's magnificent sandy beach and built a row of 12 holiday cottages – which were later to be known as 'The Twelve Sisters'. In 1897, an entry in the Cyclopedia of New Zealand enthused, 'Here, three comfortable four-room cottages have already been erected by the enterprising proprietors, and nine more are to be ready for the season 1896–97. They are fully furnished and fitted up with every modern requisite, having each accommodation for twelve persons. 'The beach is one of the best in the neighbourhood, and the bay, for boating, fishing and swimming has no superior. Near Mr Hearn's cottages is an abundant supply of pure water, and the well-known Whangatura-a-Tara mineral springs, which are said to possess great healing virtues, are on the property.'

Readers were assured that Messrs Hearn and Williams would undertake 'to remove all rubbish and attend to the sanitation of the cottages. Boats are provided for the tenants free of charge, bathing sheds are available, and everything is done to

For many years, this line of cottages (167–199 Marine Parade), dominated the landscape between the store and pilot's

cottage and its outbuildings. The cottages were popularly known as 'The Twelve Sisters'. [HATCH COLLECTION.]

THE WORSER WAY A COMMUNITY DEVELOPS IN SEATOUN AND WORSER BAY

36 37

promote the pleasure of the visitors. There is a good dairy on the spot, and provisions are delivered at town prices. The drive is pretty and pleasant, the road being excellent for cyclists. Messrs Hearn and Williams find a great demand for their prettily situated cottages, which are let at twenty shillings per week. Three medical men have made marine houses for themselves in the locality, and Mr Hearn resides on the spot.' There wasn't yet a ferry service, but residents could hire boats which would take them into town in time for the business of the day, returning to the bay each evening at the very reasonable fare of two shillings a week.

Hearn and Williams also built a store and tearooms which they later turned into a kiosk. Located on the narrow ribbon of sand that ran between the steep cliffs and the high-water mark, this collection of buildings quickly became the focal point of the district. When the telephone line that served the pilot's base was extended a little further to the south, Hearn's became the first post and telegraph office on the peninsula. Herbert and Ada Wyatt were the storekeepers in 1911, but their tenure came to an unfortunate end in July 1915 when Herb's lack of attention when frying fish resulted in a devastating fire. By this time the stables were superfluous, and the kiosk at Seatoun tram terminus had become the preferred public and private function centre.

Jack Marshall's coach service

Local entrepreneur Jack Marshall bought sections in the bay area in about 1889. He worked as James Hearn's coachman for a while, became a storekeeper and then set up a transport business. At that time the route to Wellington from Worser Bay was over the rough track known as Awa Road and continued to Newtown via Constable Street. Marshall's stables were conveniently located in the 'Green Shed' at the end of Awa Road – a building which was later the home of the Worser Bay Boat Club. He also kept horses opposite Worser Bay School. Marshall and his family lived at 193 Marine Parade, just south of the pilot house.

Marshall started small by buying a buggy. Early Seatoun resident Cliff Perry spoke of how Marshall took his father to work every day in a little horse-drawn cart. Demand grew so rapidly that Marshall purchased a coach that could accommodate 16 inside passengers. It was never a comfortable journey – the driver used to quip, 'First-class passengers, sit still; second-class walk; third-class, get out and push. No rebate for pushing!'

It was much the same when the Jolly family travelled on the coach on the way to their weekend holiday home in Karaka Bay in the late 1890s. Their tickets stated:

'Marshall's Worser Bay–Karaka Bay Service [this was running to and from the city]
Fare 1/6 Single
Departs from Royal Oak Hotel
Men will walk all hills. Women and children only remain in bus.'

The trip could be hard work for the men of the party, but it was a great adventure for the younger generation. Doris Jolly (later Gordon) recalled, 'To juveniles the swaying coach, the smell of lanterns, the crack of the whip and the spectacle of father and ten other men helping to push the bus up the slippery gradient of the Miramar saddle was guaranteed to make us eat a huge tea when we did arrive at the holiday house.'

Marshall's coach at Karaka Bay wharf, heading towards Worser Bay, Wellington, circa 1900. Photo taken just south of 393 Karaka Bay Road. [NATIONAL LIBRARY 1/2-075734-F]

THE WORSER WAY A COMMUNITY DEVELOPS IN SEATOUN AND WORSER BAY
38 39

The ferry

By 1899 the Jollys had moved over the hill and were living full-time at Karaka Bay. Doris related that at that time, 'The residents of Karaka Bay and the adjacent bays were deciding that they had had enough of bus trips. A ferry steamer of their own, they argued, no matter how primitive, would get them into the city with half the inconvenience in half the time.'

Everything changed shortly after the Wellington Steam Ferry Company was formed. In 1901 wharves were constructed by the Seatoun Roads Board at Seatoun and Karaka. When the Miramar Ferry Company started a regular service to the city the return fare was one shilling and passengers had to accept that occasionally cir□cumstances (weather or defective machinery) would cause a cancellation of a voyage.

The Jollys were staunch patrons of the little ferry company. Doris recalled that their vessel was named Loyalty, 'and although she was a discard from one of the Sydney ferry services, she took the harbour gales valiantly and stood in close to shore with a daring that would have done credit to the men of Devon. I usually went to meet father and Frank on the 5.45 p.m. evening return, and one darkening autumn night father sprang ashore with the remark, "Why didn't you bring the lantern? The captain could hardly see the wharf tonight!" The next night I took along the family lantern. It was a spindly affair, merely a candle sheltered by a circular lampshade. But it served two winters. After my first night of lighting-in, the skipper bawled down his thanks from the bridge and added the instructions: "When you see my mast light rounding the point, put your lantern on the north-eastern bollard. Then when the ship's lights fall on the wharf, hide your lantern and stand by for the throw rope."

'My appointment was as simple as that. On rare occasions the skipper and the lantern girl [Doris] had an anxious time if Loyalty failed to berth at her first coming alongside. But berth her we always did. It was the highlight of my day, those exciting few minutes with the throw rope and hawser. Opposite me was the little Loyalty rolling some twenty feet away from the pier, and a hundred muffled passengers getting thrills from a new version of pitch and toss. The passengers were generous. Occasionally they had bets on the way across the harbour that the Karaka Bay residents would have to land at Seatoun and hike two miles home to their teas. If a southerly gale was blowing, the berthing became as exciting as a Christchurch Cup meeting, so they applauded a successful attempt with the hawser, but kept silent if I missed the throw.

'One evening I had tonsillitis, so mother lighted-in Loyalty. That night the giant Taniwha, whom Māori legend says resides in Cook Strait, was throwing in every□thing he had. Mother donned her ancient sealskin coat, but the salt spray drenched it through. At home, we dried the sealskin by the fire, but brine apparently is no treatment for antique seal. Ours disintegrated before our eyes.'

Local resident George Perry would take a boat to town every work day, leaving Seatoun at 7.00 a.m. His son Cliff recalled, 'On one occasion he slept in, the boat tooted for him, his family waved a lantern from the window to let the captain know he was on his way, and he got to the wharf in time. Such was the community spirit.'

From 1902 to 1906 Admiral and Loyalty were the stalwarts of the route. There was a change of pace in 1906 when the Wellington Steam Ferry Co., which took passengers to and from Days Bay, formed a rival company and started running boats to Seatoun and Karaka Bay.

The steamboat Admiral and passengers at Karaka Bay wharf, Wellington, circa 1900. [PHOTOGRAPHER UNIDENTIFIED.
NATIONAL LIBRARY 1/2-075725-F]

THE WORSER WAY
40

For a brief period the jostling for position and wharf space between the Miramar Ferry Company and the Wellington Steam Ferry Co. provided great entertainment for passengers but this settled down when the two companies merged their fleets and became the Wellington Harbour Ferries.

The challenge of sand

To some extent, well-established karaka trees and light bush protected Karaka Bay from the vagaries of the weather and the inconvenience of drifting sand. However, there were many areas, especially on the foreshore at Seatoun, where sand blew unimpeded from the beaches. So much sand accumulated in the ceilings of some houses that the joists sagged with the weight. Owners and tenants had little option other than to scramble into their lofts and dig it out by hand.

In the early years of the century pōhutukawa and pines were planted in an attempt to stabilise the dunes, but the problem of unwanted sand continued. A barricade of sandbags was formed to prevent sand-drift into the road and into the channels at Worser Bay, but this wasn't universally welcomed. The Evening Post of 27 March 1926 commented, 'The barricade is ugly in the extreme and spoils the beauty of the marine drive at this point. Moreover, it is not effective, as there is no appreciable difference to be noticed in the loose sand on the road. Labour has been wasted, and the nuisance is not abated as it would have been by the erection of a wall at high-water mark.' In later years a concrete wall was built to keep the sand at bay.

Ironically, the white sand of nearby Scorching Bay was in such great demand that its removal was carefully monitored. Authorised persons could remove sand at the charge of four shillings a load, but no one else was allowed to take any. As late as 1914 it was common to see horse-drawn drays at Scorching Bay being filled by a hefty man with a shovel – one of the few people permitted to do so.

The Seatoun Tunnel

Before 1907, Seatoun could only be reached from the sea or over the hill via Awa Road. This changed when a tunnel was built for electric trams. Work began on the 144-metre-long and 8.2-metre-wide tunnel between Strathmore and Seatoun in 1905 and the grand opening was held in December 1907. At this time the population of Seatoun was less than 1000 people.

THE WORSER WAY

42

The arrival of the motorcar and development of coastal roadways to Miramar and Seatoun meant that interest in travelling by sea quietly fell away. After the tramway tunnel opened, ferries progressively lost business and the regular ferry service was discontinued in 1913. A ferry service was reinstated in 2006 as part of the Days Bay service.

Life at Karaka Bay

In 1898 George Perry built a house on the face of the hill overlooking Seatoun. His son Cliff recalled that he did the building himself 'with help from my 12-year-old brother Will. There was over an acre of land and my mother Drucilla kept fowls and goats. She sold eggs to Campbell, the grocer, whose man would come every week for an order and deliver the previous week's one. Sometimes my mother had a ride to Newtown in his cart.' Cliff had the daily task of collecting milk from Rawson's dairy farm, which was situated on a tree-surrounded block of land bounded by Falkirk Ave, Burnham Street, Inglis Street and Dundas Street.

When the Manthel family moved to 375 Karaka Bay Road in 1914, horse-drawn vehicles were common. Their daughter Marie (later Perry) remembered, 'A Chinese fruiterer was a weekly caller with a cartload of fruit and vegetables. Mr and Mrs Blood, who kept fowls and ducks in Wilberforce Street, came weekly with fresh eggs, The Simmons and Osborne man was a welcome caller with his cart of stone jars of ginger beer, lemonade or creaming soda.'

Transport from Karaka and Worser Bays to Seatoun was provided by a horse□drawn tram. According to Marie Perry (née Manthel) this was soon replaced by 'a motor vehicle that was just like a box on wheels, with seats around three sides. If we couldn't get the bus to Seatoun, or walk there, we could walk over the hill to Miramar and get a tram to Courtenay Place. They left every hour, and if we missed one, we could walk across the Miramar paddocks, through the cutting and on to Kilbirnie.'

The residents of Seatoun, Worser Bay and Karaka Bay were a close-knit communi□ty. Everyone knew each other as, prior to the opening of the tunnel at the end of 1907, all of them travelled to town by the ferry steamers, Duchess or Cobar. Wives had only McFarlane's store at which to shop. Local residents often met there, and especially so on Friday nights as that was when bills were paid.

The village-like nature of the community meant that children spent much of their spare time playing in one another's homes or roaming the foreshore and hills. They also took part in various entertainments that were held in the kiosk, sports' clubrooms, school rooms or church halls. Highlights included an occasional outing in a motor vehicle, or tram rides to town.

Sports facilities were a priority – cricket and soccer were played at Seatoun from an early stage. Tennis courts and a bowling club were also built. In the 1920s most of the male youths fished, played sports, sailed and swam together. Hiking around the coast to Breaker Bay and beyond was another popular activity.

When Marie Manthel joined the swimming and lifesaving club in about 1915, she and her friends worked for certificates and bronze medallions. 'Classes were held on Worser Bay beach, and we were instructed by a Mr Collier. Tests were at Te Aro baths

A small gathering outside the Worser Surf Life Saving Club in 1912. By the time the Worser Bay Surf Life Saving Club began in 1910, trams were running through the tunnel to Seatoun, and Worser Bay had become a popular swimming and recreational area. The pilot's cottage is behind the clubhouse. [HATCH COLLECTION.]

THE WORSER WAY A COMMUNITY DEVELOPS IN SEATOUN AND WORSER BAY

44 45
and most from Worser Bay passed. During the summer there were swimming races most Saturdays and once a year there was a swim from Seatoun Wharf to the Green Shed.' As Worser Bay's popularity as a seaside resort grew, bathing sheds were erected, and members of the Scorching Bay Ladies' Life Saving Club patrolled the beach. During the First World War, dances were held either in the Seatoun Masonic Hall or in the Green Shed. Mr Rodney Panckhurst, a first-rate dance pianist, used the old Rawson home as a cabaret. The floor above the Scorching Bay shop was also used as a cabaret. Other social gatherings were held in the Seatoun Kiosk.

Fishing

During the 1880s and 1890s fish and crayfish abounded in the area. Some of the most successful fishing took place by the wreck of the Willie McLaren, a coal-laden wooden barque which sank about 300 metres off Seatoun beach in 1889. In subsequent de□cades, local fishermen would often come ashore with a useful combination of fish and the coal to cook it with. Tarakihi was reputed to be particularly abundant, but moki, kahawhai and blue cod were also plentiful, with the occasional gurnard for variety. Some fishermen supplemented their income by selling fish either on the beach or from door to door. This was a welcome additional source of income in hard times. Others distributed their surplus catch free to local residents who gathered on the beach. This tradition survived well into the 1950s when keen fishermen Ross Walker and his brother Garry used to 'feed half of Worser Bay with the butterfish (moki) that we caught in nets'. The boys' nets were mended by a local fisherman, Jack Slater, a Shetland islander who used to sling his nets between the lamp-posts.

Education

When regular ferry services were established between Karaka Bay and Seatoun, the Jolly family decided that Frank would go into town with his father each day, but that Doris, who was convalescing from illness, would have to take her chance of education at the bay. 'I had just had my eleventh birthday when we moved out, and for the next four months I was gloriously free to regain my health. I learned to swim like a fish, knew the names of all the shells on the beach and the fish found in the harbour, and the destination, nationality and cargo of every ship that passed our door on her way into or out of the harbour.

'Then at 12 I was sent to Worser Bay School where I spent the only year of unbroken education I was ever to receive in childhood. I worked at standard four arithmetic and standard five everything else.'

When Maurice Manthel bought a second-hand car in 1914, the Karaka Bay children used to line up to get a ride to school. His daughter Marie recalled, 'With the hood folded down, a whole row of them could sit across it with their legs dangling down at the back. Mr Fox, the Borough Engineer, owned a motor bike and a sidecar, and lucky ones sometimes had a ride with him.' For some, education continued at the Sunday School at Worser Bay Methodist Church. There was also an active Bible class, and for many years the young people went to Christmas and Easter camps on the foreshore across the harbour, ferried there by Mr Sam Silver of Karaka Bay in his launch.

Fort Dorset

When Colonel P.H. Scratchely, an Australian officer, came to New Zealand to advise the government on coastal defence requirements in 1880, he recommended the site of a fortified Māori pā (Oruaiti) as being ideal. Nothing happened for many years, but in 1905 Fort Dorset was established. By 1910 Fort Dorset, which was named after the surgeon-in-chief on board Captain Herd's vessel, which arrived in the harbour in 1826, had a battery of 6-inch guns and a battery of 12-pounder guns. These were manned by members of the Wellington Naval Artillery Volunteers.

At the outbreak of World War I, the 12-pounder guns were removed and placed on merchant ships for their own protection. When hostilities ended in 1918, the government disbanded the fortifications at Fort Balance and on the inner harbour area and concentrated the coastal defences at Fort Dorset. The 12-pounder guns were returned and reinstalled in 1921. Fort Dorset was gazetted as a military base in 1929.

Worser Bay is ready for a boating club

By the 1920s a strong community had developed in and around Worser Bay and across the Miramar Peninsular. Housing had been established, transport infrastructure was in place, shops and services were beginning to appear and schools were up and running. The time was right to add a boating club to further enhance the area.

Appendix 4.

Community conversation and the collecting of baseline data for Te Kahu Moana ki Kākāriki, a marine management area at Worser Bay.

Worser Bay Marine Management Area

Worser Bay Boating Club is part of Yachting New Zealand's nationwide initiative called Moanamana, which is aiming to help restore the mana of moana.

The club is working with local schools to

establish a NZL Blue Belt site to protect and restore marine biodiversity around Worser Bay. The club and the schools are using a set of tools to monitor the health of the Worser Bay marine environment, and are working on a series of projects to help restore that environment.
It is proposed that a Worser Bay Marine Management Area, including a voluntary no-take zone around the club, be put in place for the next ten years to give the restoration projects a chance to succeed.
The purpose of these information panels is to start a community conversation about the marine management area at Worser Bay.
Please read through what we propose and then join in the conversation online at wbbc.org.nz/moanamana.

Te Kahu Moana
Ki Kākāriki
It is proposed that community-initiated kahu moana, or cloaks of protection, be put in place for marine management areas at NZL Blue Belt sites around the country.
Te Kahu Moana ki Kākāriki is a cloak of protection that is proposed to be laid over the moana at Worser Bay.
Te Kahu Moana ki Kākāriki will be gifted to the community at Worser Bay by Taranaki Whānui ki Te Upoko o Te Ika who view what is proposed at Worser Bay as aligning with their vision for the harbour.
Te Kahu Moana ki Kākāriki comes with the support of the Greater Wellington Regional Council.
Ultimately, Yachting New Zealand's network of NZL Blue Belt sites will become the marine equivalent of Predator Free New Zealand, with kahu moana providing the mandate for local restoration efforts.
Each kahu moana will be guided by the moemoeā or vision of mana whenua, and will require endorsement and support of regional territorial authorities.
Cultural Narrative
Many years ago, the legendary navigator Māui hooked a giant fish that, when pulled to the surface, turned into the North Island of New Zealand, or Te Ika a Māui. Te Upoko o Te Ika a Māui, the head of the fish of Māui, is now also known as Wellington.
The harbour was once a large lake that formed in one of the eyes of Te Ika, with no entrance to the sea. Two great Taniwha lived in the lake for many years, one called Ngake and the other called Whātaitai.
After many years Ngake smashed his way through the rock and earth by Seatoun, creating a wide channel out to the ocean. The gap that Ngake created is now the entrance to the harbour through which the first sea water to enter Worser Bay flowed.
Kupe was the first explorer to visit Worser Bay and the name Te Tūranga-o-Kupe (the standing place of Kupe) refers to the foreshore and the stretch of water and land between Worser Bay and Steeple Rock.
In the 13th Century the great navigator Whatonga sent his son Tara-Ika and his half-brother Tautoki to explore and settle the land around the harbour. The descendants of Tara-Ika became the iwi known as Ngai Tara and were tangata whenua, the first people to settle on this land.
The harbour is known as Te Whanganui-a-Tara, the great harbour of Tara.
By the 18th century Ngai Tara were sharing their lands

around Wellington Harbour and up the Kapiti coast with many other Iwi Māori including Ngāti Ira who subsequently became the dominant group around the harbour, including at Worser Bay.
During the first half of the 19th century, through gifting of land and through conquest, Taranaki Whānui became established as the dominant group within Te Whanganui□a-Tara. By the time of the signing of Te Tiriti o Waitangi they were recognised as having Mana Whenua status across the rohe, a status that was further strengthened through the signing of the tenth's agreement with the New Zealand Company.
Much later this status was reaffirmed and recognised in law through The Port Nicholson Block (Taranaki Whānui ki Te Upoko o Te Ika) Claims Settlement Act which came into force on 2 September 2009.
Over many centuries fortified hilltop pā were built across Motukairangi. Notable among these around Worser Bay was the major pā of Te Whetūkairangi built by Tara and his people, which was on the ridge above the bay where Worser Bay School now stands.
Further down the ridge toward Worser Bay and slightly to the north of Whetū-Kairangi pā, was the site of the smaller Kākariki-Hūtia pā
Iwi and hapū Māori occupied these pā sites and their kainga closer to the shores of Worser Bay, with the area around the Worser Bay Boating Club being an important source of kai moana for centuries.

Biodiversity
Values
Hidden beneath the surface of the moana at Worser Bay are majestic forests of giant kelp. Their canopies are visible from the surface as their long feather-like blades are buoyed by small air-filled bladders which help them float. The forests found here in the Wellington region are the northernmost populations for this species.
These kelp-tivating giants can reach lengths of over 30 metres and are among the fastest growing organisms on the Earth! They form the basis of highly productive ecosystems by providing food and shelter for everything from wandering anemones to wheke/octopus and schools of fish.
Te Whanganui-a-Tara is known for its dramatic rocky shorelines which support diverse habitats for different species across the intertidal and subtidal zones. In our rocky shore habitats at Worser Bay, amongst the giant kelp and encrusting sponges you can find starfish, hermit crabs, sea slugs (nudibranchs), sea cucmbers, kina, pauā, eels and even our precious manaia (seahorses)!
Did you know that in Aotearoa, we only have one species of seahorse - the large-bellied or pot-bellied seahorse (Hippocampus abdominalis). They have made it into the Guiness Book of World Records as being the largest species of seahorse in the world (adults can grow to 35 cm).
Human-induced threats and stresses such as marine heatwaves, some fishing practices, and sediment and nutrient runoff are all contributing to a decline in giant kelp populations and marine species at Worser Bay.

Project 1:
Penguin Hotel
Worser Bay Boating Club has worked with Yachting New Zealand and Te Kāhui Ako o Te Motu Kairangi, a cluster of schools in the Eastern Suburbs, to create Moanamana. Moanamana is a Mataiahika, or local curriculum, that enables students to participate in learning experiences outside the classroom that involve connections and engagement with mana whenua/tangata whenua and the local community.

As Moanamana was being framed students at Wellington High School developed a vision for a series of projects that students could work on progressively across many years to restore the marine ecosystems at Worser Bay. The first of these projects was a penguin hotel. Students designed a fenced off area adjacent to the carpark at Worser Bay with a tunnel through the rock revetment to the high tide zone. In the fenced off area they installed penguin nests and planted vegetation to encourage kororā to nest.

In 2024 the first guests checked into the student's penguin hotel! Two mating pairs set up a nest in two of the nesting boxes and three kororā chicks were successfully hatched and fledged. The kororā were tagged and are now part of the NIWA monitoring programme.

RŪNĀ

Moanamana is one of three modules in RŪNĀ, Yachting New Zealand's school and kura engagement programme. RŪNĀ supports kiwi kids to learn from the past as they steer New Zealand toward a sustainable future.

Kōrinorino

Our Ancestors' Wake (Te Ao Tangata | Social Sciences and Aotearoa New Zealand Histories - focuses on understanding local settlement stories).

Kōkōkaha

Powered by Wind (Science, Technology, Engineering and Maths - focuses on designing sustainable energy solutions).

Moanamana

Building New Zealand's Blue Belt (Science, Maths and Education for Sustainability - focuses on restoring marine ecosystems).

Project 2:

Kelp Forest

In 2023 the Boat & Beach Wise Trust was awarded an MBIE 'Unlocking Curious Minds' grant for Moanamana and, as part of the grant, formed a relationship with Mountains to Sea Wellington.

Through their Love Rimurimu project, Mountains to Sea Wellington are carrying out seaweed regeneration around the Miramar peninsula and have identified Worser Bay as a site where the local kura would lead seaweed restoration. They are working with Te Kura Kaupapa Māori o Ngā Mokopuna to trial a range of different regeneration methods at Worser Bay to help identify the best way to restore seaweed across Wellington harbour.

Mountains to Sea and the Kura are entering their third season of 'kelp-ling' plant-outs and are monitoring the Worser Bay kelp forest regularly.

Students collecting and recording ocean temperature and salinity data.

The Unlocking Curious Minds grant was also used to develop and trial a set of citizen science tools that students and their communities can use to monitor ocean health at Yachting New Zealand clubs across the country. The Trust worked with the University of Otago New Zealand Marine Studies Centre to establish the following tools and processes.

•Environmental conditions measurements to record temperature, salinity and clarity of coastal water in relation to weather events.
•Marine Metre Squared surveys to monitor biodiversity in intertidal areas.
•Photogrammetry models to create digital 3D representations of the shoreline.
•Underwater transect surveys to record species along designated marine zones.
•Plankton surveys to monitor diversity of microscopic marine life.
•Baited remote underwater video (BRUV) surveys to monitor subtidal marine species communities.
•Settlement plate surveys to monitor settlement of marine larvae over time.

Project 3:

Pāua Nursery
In 2023, students from Wellington East Girls College began investigating the pāua population at Worser Bay.
They started by snorkelling at both the Taputeranga and Kāpiti Island marine reserves to see pāua populations in an environment where they were not under pressure from increased predation or destructive fishing practices.
They then snorkelled around the rocks in front of the boating club at Worser Bay and compared what they saw there to what they saw in the two marine reserves.
They noted that the size and abundance of pāua were much greater in both reserves than they were at Worser Bay. They suggested that a no-take zone be put in place at Worser Bay to see if the pāua would increase in number and size.
In 2024, the next group of students from Wellington East Girls College investigated ways in which pāua could be helped to flourish at Worser Bay. After discussions with scientists at NIWA they began testing pāua pods as a mechanism for giving juvenile pāua shelter to help them become established, and found this to be successful.
The next step for students from Wellington East Girls College is to work with the Worser Bay community to establish a voluntary no-take zone in Worser Bay, and to get the necessary consents to trial using the pods to increase the pāua populations at other reef sites around Worser Bay.
Students collecting a plankton sample and setting up an underwater video session.

Project 4:
Underwater Art
Underwater art galleries are being installed all around the world. Whether it is the Museum of Underwater Art in Australia, or the Underwater Sculpture Park in Grenada, these galleries and their artwork have two things in common.
First, underwater art galleries serve to educate communities about the pressures our oceans are under, and second, the sculptures within them are created with materials and designs that help marine life to flourish.
This sense of purpose is shared by the students at Wellington High School who have a project to establish an underwater art gallery to the north of the carpark at Worser Bay Boating Club.
The underwater art gallery will act as a snorkel trail and be part of the no-take zone within the Worser Bay Marine Management Area. The aspiration is for a high quality art installation that becomes a recreation attraction for Wellingtonians, tourists and other visitors to our city.
The project includes: establishing a baseline of what life exists in the area now; working out the size and path for the snorkel trail; researching materials to be used and methods for anchoring the sculptures; working with mana/tangata whenua to identify pūrākau that could help inform the design; and, engaging with artists to establish the initial designs for the sculptures.
Once the investigations and preliminary design work is finished students will work with Greater Wellington Regional Council to get the necessary consents to install the sculptures at Worser Bay, and with the Boat & Beach Wise Trust to find the funding to make the Underwater Art Gallery a reality.
Yachting New Zealand has joined with TEAM Cloud to create the Moanamana App which gives students the power of Oracle Technology to record and analyse ocean health data.
Peter Burling, skipper of the Black Foils Sail GP team and co-founder of Live Ocean is a Moanamana ambassador, alongside Erica

Dawson, member of the NZL Sailing Team and silver medallist at the Paris Olympics.
Project 5:
Anemone Garden
Students from schools across the Eastern Suburbs have been learning how to use Marine Metre Squared and Photogrammetry to monitor biodiversity in the rock pools and inter-tidal zone at Worser Bay.
Marine Metre Squared and Photogrammetry are tools used by Dr Sally Carson from the New Zealand Marine Studies Centre to connect communities to their local coastlines.
Marine Metre Squared involves counting the number of different species within a square metre of intertidal reef structures. Photogrammetry involves students taking multiple photos to generate a 3D digital model of the reef.
Students from Worser Bay and Seatoun Schools are now working to establish an artificial reef structure called the Anemone Garden in the intertidal zone between the Worser Bay Boating Club launching ramp, the diving board and the beach.
During 2025 they will create a design for the area that uses 3D printed marine modules as a way of creating better habitats for sea life.
It is envisaged that some of the modules will be permanently submerged underwater, while others will lie fully exposed at low tide. A set of bathyscope underwater viewers will be publicly available to encourage people to 'just look and not take' once the Anemone Garden is in place.
Once the design work is finished students will work with Greater Wellington Regional Council to get the necessary consents to install the modules at Worser Bay, and with the Boat & Beach Wise Trust to find the fu

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: As a reasonably large group of swimmers many of whom swim regularly during the week and year-round, we believe the lack of amenities, or limited access times to them in some areas reduces the usability of some beaches. We therefore support the following pathways within this value:
- Strategic placement and provision of coastal amenities, although we disagree with the seemingly arbitrary 4km distance to a toilet as that is only appropriate for those in cars, and we suggest the placement is done on local need, not distance to another toilet.
- Support for water access and recreation. We support the rafts and recommend an additional swim raft is located at Scorching Bay.
- Enhancing coastal accessibility and equity. We support this at limited key locations (Freyberg/Oriental Bay beaches and Scorching Bay), while also wishing to keep the more natural look and feel and access paths to many coastal locations and smaller beaches.
As a general comment anything that assists access, amenities & safety for all water users but particularly for ocean water swimming is strongly supported by our Harbour Madness swim group. Considerations might include - siting of life preservers & AEDs at popular swimming spots; consideration of tighter management of water craft in popular swimming areas - Oriental Bay in particular where I was hit by a large sport cruiser boat not paying attention when moving inside the 5 knot area. Swimmers in this area regularly see watercraft not paying attention & moving at speeds above 5 knots / displaying unsafe behaviour (question whether motorised craft should be excluded); greater

co-ordination of GWRC, WCC & Wellington Water (& any enhancements to Plan docs) around managing water quality in the harbour

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text As a group we support the pathway to "Protect the coastal character through careful design" as the design of the coastal areas has a significant impact on the enjoyment of the experience and the accessibility for swimmers. Supporting this pathway is one reason why we only include limited support for the Value 2 - Pathway 2.4 - Enhancing Coastal Access and Equity, as we believe it will be hard to balance the two competing values, especially at smaller beaches.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text The protection and restoration of coastal ecosystems, especially the following three pathways: Targeted ecosystem recovery; Remediating and mitigating coastal infrastructure impacts and; Enhancing Litter management will inherently provide a better, safer, environment for swimming in. Benefits we expect from this include more aquatic/marine life, less rubbish, and less water pollution.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text The group supports the use of nature-based solutions for coastal protection over hard infrastructure as this often provides for a better swim environment and experience.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays
Hue te Para
Lyall Bay
Rangitatau
Moa Point to Breaker Bay
Te Whanga Rāwhiti
Eastern Bays
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd
Ākautangi
Cobham Dr to Point Jerningham
Te Rāngai o Onemutu
Oriental Bay

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Tapu te ranga | Southern Bays: Island Bay is poorly served with changing facilities, and long overdue for the old Surf Club showers and toilets to be properly refurbished and made accessible year-round. The current setup means many children run across the busy marine parade to get to the toilets on the far side of Shorland Park and several near misses on that road have been observed. Proper toilet and changing facilities on the beach would resolve this significant safety issue.
We support the work to mitigate contamination risks at Houghton Bay but also believe this should be extended to include Owhiro Bay which should be a more popular beach but ongoing pollution issues.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text Hue te Para | Lyall Bay: Lyall Bay's Eastern end has no council provided toilets but often is the busiest part of the beach for swimming as well as surfing. The walk from the "Corner" Break to the Lyall Bay Surf Club is too far to be easily accessed by the surfers. This beach may warrant more than the prescribed 1 toilet per 4km rule and we understand (and support) that there are amenities proposed in the Wellington Airport development.

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text Rangitatau | Moa Point to Breaker Bay: This area has no public toilet despite a major boat ramp, a nearby dog-park and a children's play area. The nearest toilets are over the Pass of Branda, in Seatoun which is impractical for all beach users in this area (without using a car).

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text Te Whanga Rāwhiti | Eastern Bays: Scorching Bay, like Freyberg, may benefit from having locker facilities as well as a new swim raft.

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd: We support the addition of a toilet in this zone

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text Ākautangi | Cobham Dr to Point Jerningham:
We support the improvements at Greta point. This is an underutilized resource including for swimming.
We would like the Hataitai Beach and Balaena Bay Beach facilities to be open earlier in the mornings for swimmers to use.

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text Te Rāngai o Onemutu | Oriental Bay:
At Freyberg Beach (the busiest swim beach year-round with at least 5 regular groups and many casual swimmers) the changing facilities and outdoor showers are not fit for purpose. These should be prioritised for an upgrade given the volume and year-round nature of the beach usage in this area.
-The outdoor showers are oriented open to the North and South which allows the prevailing winds through in either direction and the shower pressure is almost non-existent so it is sometimes hard to even get wet when a Southerly is blowing.
-The changing rooms are poorly lit and poorly drained. The Men's changing room is too small while the Women's changing room is closed in the mornings (peak swim time) when the cleaners are cleaning all the toilets, as the design has the cleaner's room accessible only from the Women's changing area. This poor design means many people change in the few limited toilet cubicles, causing queues for the toilets. Ideally the lighting and drainage would be be improved and a separate side access into the cleaner's room provided.
-There is a lack of locker facilities on the beach and this often results in people driving to the carpark, instead of walking, riding, or catching public transport, as they have nowhere to place valuables while swimming.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Neutral
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from

threats like dogs and development. - Neutral
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

SCOPE
The scope of the plan is incomplete as it does not cover all of the coastline or coastal reserves that are managed by WCC (For reference please see the "Reserves in Wellington City" map https://wcc.maps.arcgis.com/apps/webappviewer/index.html?id=ecc904e99ef34dabb2401c55dc28677d). For example Pipitea Reserve (where the Kaiwharawhara Stream exits) Makara Beach and Boom Rock/Ohariu Valley Coast Reserves are all excluded from the current scope, and should be included. There is also no allowance for possible future WCC reserves in the plan, such as the area along the Te Ara Tupua shared pathway next to the railway line. We believe the plan must have sections covering the entire coastal area within WCC management, so there is a consistent set of rules and guidelines for the management of all coastal reserves for the life of the plan. Even if, for example, the sector north of Pipitea Reserve is excluded from the plan initially we suggest the plan has a review mechanism to add new sectors in the future instead of creating a separate plan for any new reserves.

In addition, the key recreation areas West and North of Oriental Bay including Taranaki Street Wharf, Frank Kitts Park and Shed 6 (all used for swimming on a daily basis, fishing, kayaking, rowing, Waka Ama and other sports) are excluded from the plan. These seem to be part of the separate Wellington Waterfront Plan, but having two plans to manage adjoining coastal areas will cause confusion. Even if the Waterfront area is not a formal reserve, the shared space there is treated like a reserve by the public and it would seem sensible to manage the areas with the same set of rules, or at least try to closely align the rules where possible. The coastal plan needs to address this gap in the sectors inconsistency, or at least include a strategy for consistently applying the rules across the Waterfront "Sector". This is "our backyard" as the Harbour Madness group swims every day in this area with the longest swim being from Queens Wharf (adjacent to Fergs Kayaks) where we all start, across to the Bronze Man at Te Papa / entrance to Chaffers Marina & back.

APPENDIX A
On Page 24 of Appendix A under "Swimming and Informal Water Play" we agree with most of the wording here but disagree with the Exception section as we believe these are already appropriately managed in the Wellington Regional Navigation Safety Bylaws 2021, Section 2.2 , or via the Regional Council and Regional Public Heath bylaws. Adding restrictions within the WCC plans just duplicates existing controls adding cost and management overhead unnecessarily.

Introduction
Thank you for the opportunity to submit on Wellington City Council's Draft Coastal Reserves Management Plan (2025). This submission focuses on ensuring the Plan explicitly protects, recognises, and safely enables access for wind-powered water sports (windsurfing, wingfoiling and kitesurfing) on the South Coast, in particular Lyall Bay.
Wellington's identity and vibrancy is tied to its wind and sea. Surfing is well acknowledged in the draft plan, yet there is a significant disparity in support and resources provided to wind-powered sports in comparison. Windsurfing, wingfoiling and kitesurfing are equally iconic and visible activities in Wellington, bringing people to the city and activating beaches year-round.
I would also like to note that my submission supports the points made in Greg Thomas' submission, which I believe reflect the broader views of our community.
Key Points for Lyall Bay
1. Recognition of Windsports in the Plan
o The plan should recognise Wellington as the windiest capital in the world, and windsports are a defining part of its coastal recreation.
o Surfing is strongly supported in the draft, yet windsurfing, wingfoiling and kitesurfing need the same level of recognition, facilities, and access protection.
Request:
o Update approach 3.2b to say:
"Support Lyall Bay as a key surfing and windsports destination by maintaining appropriate facilities at both ends of the beach, supporting surf lifesaving clubs, and ensuring continued safe access to the beach."
2. Rigging Areas and Coexistence with Dunes
o In strong Wellington winds, it is unsafe to rig gear directly on the open beach. Safe, practical grassy rigging areas adjacent to access points are essential.
o Current rope-and-pole barriers are hazardous to wind-powered sports, particularly when handling large sails or foils in high winds.
o Clear, well-defined access points are required to allow safe movement between rigging areas and the beach.
o At Lyall Bay, a similar approach could be taken as is seen at Worser Bay, where dunes are allowed to form naturally while still providing a clear, maintained grassy area directly behind them. This balance both protects the dunes and creates a safe, practical rigging space for wind-powered water sports. It demonstrates that dune preservation and active recreational use can successfully coexist when access points and grassed areas are deliberately planned and maintained.
Requests:
o Reinstate an explicitly mapped and protected windsports access / rigging / launching area for Lyall Bay (as in the 2002 Plan).
o Remove hazardous poles and ropes in front of dunes, replacing them with

better-designed walkways that protect the dunes while ensuring unobstructed access.
o Maintain the grassy section adjacent to the western toilet block as a dedicated rigging zone.
o Improve access over the wall between car park and rigging area, either by cut-throughs or adding protective rubber capping to reduce climbing hazards.
3. Facilities and Fairness of Resource Allocation
o Currently, there is a large disparity in facilities between surf and wind□powered sports. Surf clubs are well-supported with infrastructure, while wind-powered sports lack even basic provisions.
o To achieve equity across recreational users, Lyall Bay should include:
□ Improved toilet and changing facilities
□ Rinse stations or showers for saltwater gear
□ Clear signage acknowledging windsports as an official use of the beach
Request:
o Align resourcing for windsports facilities with those provided to surf users, ensuring equity and safety across recreational groups.
4. Alternative Launch Sites (Dorrie Leslie Park)
o In large southerly swells, Dorrie Leslie Park is a critical launch site as it offers shelter and safer access.
Request:
o Acknowledge and maintain Dorrie Leslie Park as a designated wingfoil/windsurf access point in southerly conditions.
Community Contribution
The wind and surf sports community at Lyall Bay has a long history of caring for the coast. For example, following the major storm in 2013, members of the community organised a beach clean-up, removing debris and restoring access to the foreshore. These efforts reflect our commitment to the health and safety of Lyall Bay beyond our sport.
We are also willing to contribute to future community events or environmental initiatives (such as dune restoration, clean-ups, or awareness days) to ensure that Lyall Bay continues to be a safe, clean, and vibrant beach for everyone.
Alignment with Draft Plan Values
The requests above align directly with the values of the Draft Plan:
• Whai wāhi – Equitable access to the coast for recreation.
• Kanorau – Diversity of supported activities.
• Pāhekohekotanga – Integration of multiple users through smart design.
Lyall Bay is one of New Zealand's most important multi-use beaches. To protect its vibrancy and ensure safety for all recreational users, the plan must explicitly recognise and support wind-powered water sports alongside surfing.
Ngā mihi nui,
Esteban Funes

Q11	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q12	**Please let us know a bit more about your choice.**
Long Text	As a large group of swimmers many of whom swim daily and year-round, we believe the lack of amenities, or limited access times to them in some areas reduces the usability of some beaches. We therefore support the following pathways within this value: - Strategic placement and provision of coastal amenities, although we disagree with the seemingly arbitrary 4km distance to a toilet as that is only appropriate for those in cars, and we suggest the placement is done on local need, not distance to another toilet. - Support for water access and recreation. We support the rafts and recommend an additional swim raft is located at Scorching Bay. - Enhancing coastal accessibility and equity. We support this at limited key locations (Freyberg/Oriental Bay beaches and Scorching Bay), while also wishing to keep the more natural look and feel and access paths to many coastal locations and smaller beaches.
Q13	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text As a group we support the pathway to "Protect the coastal character through careful design" as the design of the coastal areas has a significant impact on the enjoyment of the experience and the accessibility for swimmers. Supporting this pathway is one reason why we only include limited support for the Value 2 - Pathway 2.4 - Enhancing Coastal Access and Equity, as we believe it will be hard to balance the two competing values, especially at smaller beaches.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

Te Rāngai o Onemutu | Oriental Bay:
At Freyberg Beach (the busiest swim beach year-round with at least 5 regular groups and many casual swimmers) the changing facilities and outdoor showers are not fit for purpose. These should be prioritised for an upgrade given the volume and year-round nature of the beach usage in this area.
-The outdoor showers are oriented open to the North and South which allows the prevailing winds through in either direction and the shower pressure is almost non-existent so it is sometimes hard to even get wet when a Southerly is blowing.
-The changing rooms are poorly lit and poorly drained. The Men's changing room is too small while the Women's changing room is closed in the mornings (peak swim time) when the cleaners are cleaning all the toilets, as the design has the cleaner's room accessible only from the Women's changing area. This poor design means many people change in the few limited toilet cubicles, causing queues for the toilets. Ideally the lighting and drainage would be be improved and a separate side access into the cleaner's room provided.
-There is a lack of locker facilities on the beach and this often results in people driving to the carpark, instead of walking, riding, or catching public transport, as they have nowhere to place valuables while swimming.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Neutral
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Neutral
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

COPE
The scope of the plan is incomplete as it does not cover all of the coastline or coastal reserves that are managed by WCC (For reference please see the "Reserves in Wellington City" map https://wcc.maps.arcgis.com/apps/webappviewer/index.html?id=ecc904e99ef34dabb2401c55dc28677d). For example Pipitea Reserve (where the Kaiwharawhara Stream exits) Makara Beach and Boom Rock/Ohariu Valley Coast Reserves are all excluded from the current scope, and should be included. There is also no allowance for possible future WCC reserves in the plan, such as the area along the Te Ara Tupua shared pathway next to the railway line. We believe the plan must have sections covering the entire coastal area within WCC management, so there is a consistent set of rules and guidelines for the management of all coastal reserves for the life of the plan. Even if, for example, the sector north of Pipitea Reserve is excluded from the plan initially we suggest the plan has a review mechanism to add new sectors in the future instead of creating a separate plan for any new reserves.

In addition, the key recreation areas West and North of Oriental Bay including Taranaki Street Wharf, Frank Kitts Park and Shed 6 (all used for swimming on a daily basis, fishing, kayaking, rowing, Waka Ama and other sports) are excluded from the plan. These seem to be part of the separate Wellington Waterfront Plan, but having two plans to manage adjoining coastal areas will cause confusion. Even if the Waterfront area is not a formal reserve, the shared space there is treated like a reserve by the public and it would seem sensible to manage the areas with the same set of rules, or at least try to closely align the rules where possible. The coastal plan needs to address this gap in the sectors inconsistency, or at least include a strategy for consistently applying the rules across the Waterfront "Sector".

APPENDIX A
On Page 24 of Appendix A under "Swimming and Informal Water Play" we agree with most of the wording here but disagree with the Exception section as we believe these are already appropriately managed in the Wellington Regional Navigation Safety Bylaws 2021, Section 2.2 , or via the Regional Council and Regional Public Heath bylaws. Adding restrictions within the WCC plans just duplicates existing controls adding cost and management overhead unnecessarily.

Executive Summary
I write as a resident whose property adjoins the legal road around the south coast, and as someone with direct experience of the critical importance of 4WD access for both essential property access and emergency response. While I acknowledge and support the plan's conservation goals and cultural restoration objectives, I have serious concerns about proposed vehicle restrictions that would undermine essential access rights, emergency response capabilities, and accessibility for disabled community members.
Acknowledgment of Plan's Positive Intentions
I commend the Council for:
 Cultural Partnership: The commitment to working with mana whenua on cultural restoration and place naming
 Environmental Protection: Efforts to protect coastal ecosystems and threatened species
 Integrated Approach: Attempting to balance multiple values including recreation, conservation, and cultural significance
 Climate Adaptation: Proactive planning for sea-level rise and coastal resilience
These are important goals that deserve community support.
Critical Concerns with Proposed Vehicle Restrictions
1. Essential Property Access Rights
The Issue: The unformed legal road provides the only lawful access to multiple properties along the south coast. The plan proposes:
 Sunday and public holiday gate closures
 Nighttime gate closures
 Seasonal restrictions during high-risk periods
 Investigation of permit systems
My Experience: In March 2024, when my usual access via Hawkins Hill Road was closed for several nights, I was forced to make the arduous journey around the coast via 4WD after finishing work at midnight. This demonstrated that the coastal route is not just recreational - it's essential infrastructure.
Legal Concern: How can the Council restrict access on a legal road that provides the only lawful access to private properties? This appears to conflict with fundamental property rights and access obligations.
2. Emergency Response Capabilities
Critical Role in Maritime Emergencies: During the Kaitaki power loss incident (28 January 2023), I was among many volunteers standing by with 4WD vehicles ready to assist in potential ship evacuation. A large fleet of 4WD vehicles was positioned for emergency response.
Plan Contradiction: The plan acknowledges that "the coastal platform is critical to emergency evacuation and maritime disaster response in the hazardous Cook Strait area," yet proposes restrictions that would limit this capability.
Question: How will maritime emergency response be maintained if 4WD access is restricted, particularly during nighttime when many incidents occur?
3. Accessibility and Equity Failure
The Reality: While able-bodied walkers can reach Red Rocks and the seal colony (though rarely venture beyond due to distance), disabled and mobility-impaired visitors cannot access these areas at all without motorized transport.
Current Services: Local 4WD clubs provide valuable services including:
 Transporting elderly, disabled, and handicapped visitors to experience the seal colony and Red Rocks
 Enabling people with mobility limitations to access remote cultural and natural sites
 Providing the only practical means for inclusive coastal access beyond walking range

Plan Contradiction: The plan commits to "enhancing coastal accessibility and equity" and "making the coastal environment welcoming and accessible to all," yet the proposed restrictions would eliminate access for those who need it most.
4. Conservation Partnership Opportunities Missed
Positive Contributions Being Overlooked: Local 4WD clubs actively contribute to conservation through:
 Erosion stabilization planting programs
 Regular beach clean-ups
 Environmental maintenance work
 Responsible user education
Better Approach: Rather than broad restrictions, the plan should recognize and build partnerships with responsible user groups who are already delivering conservation outcomes.
Enforcement vs. Collective Punishment
The Real Problem: The plan acknowledges issues with "antisocial behaviour, including poaching, fires, and unauthorised freedom camping" but proposes broad restrictions rather than targeted enforcement.
Better Solution: Enhanced enforcement against specific rule violations would:
 Address the actual problems without penalizing responsible users
 Maintain essential access for residents, emergency services, and disabled visitors
 Preserve the valuable conservation work being done by responsible groups
 Align with principles of fairness and proportionate response
Recommended Changes
1. Maintain Essential Access
 Guarantee access rights for residents whose only lawful access is via the coastal route
 Exempt emergency services and registered emergency response volunteers from restrictions
 Ensure 24/7 access for essential property access and emergency response
2. Support Inclusive Access
 Recognize motorized transport services for disabled and mobility-impaired visitors as essential accessibility provision
 Partner with 4WD clubs providing accessibility services rather than restricting them
 Develop permit systems that enable rather than hinder accessibility services
3. Partner with Conservation-Minded Users
 Formalize partnerships with 4WD clubs doing conservation work
 Support and expand existing planting and clean-up programs
 Use education and engagement rather than blanket restrictions
4. Focus Enforcement on Actual Problems
 Target specific violations (poaching, illegal camping, fires) rather than all motorized use
 Increase ranger presence and enforcement of existing rules
 Implement graduated penalties for rule violations
Proposed Alternative Approach
Instead of broad vehicle restrictions, consider:
1. Enhanced enforcement of existing rules against poaching, illegal fires, and unauthorized camping
2. Permit system that enables legitimate users (residents, emergency services, accessibility providers, conservation groups) while controlling problematic use
3. Partnership agreements with responsible 4WD clubs for conservation work and accessibility services
4. Targeted closures only when specific risks (extreme fire danger, emergency operations) require them
5. Community education programs to promote responsible use
Conclusion
The draft plan's conservation and cultural goals are admirable and deserve support. However, the proposed approach to vehicle access creates serious conflicts with:
 Essential property access rights
 Emergency response capabilities
 Accessibility commitments for disabled community members
 Existing successful conservation partnerships
A more nuanced approach focusing on enforcement of existing rules and partnership with responsible users would better serve all the plan's stated objectives while protecting essential access rights.
I urge the Council to reconsider the vehicle restriction proposals and develop an approach that achieves conservation goals without undermining essential access, emergency response capability, and inclusive community access to these important coastal areas.

Long Text: Value 1 – Mana whenua – Active partnership with mana whenua

EBYMBC strongly support this value.

· EBYMBC will continue to consider traditional Māori place names when naming our boats, and learning and using traditional Māori place names when referring to land and water locations.

Further information:

We understand that the land EBYMBC occupy is predominantly reclaimed land. We would be interested to understand more about the cultural and ancestral significance of the wider area. We also support the restoring or bringing into use traditional Māori place names and strengthening the use of te reo Māori in club operations.

Our support boats, including Kokotahi (in operation since 1976) and Te Ākautangi are both named after the area. We can see further opportunities to refer to land and water locations that recognise traditional names and look forward to bringing these into our everyday operational language.

The EBYMBC Te Ākautangi Matariki Festival, is an annual event, held over Matariki weekend. This event attracts participants from all over NZ in sailing, waka ama, and wider activities on and off the water. This year's event included the Kōrero series, jointly hosted by EBYMBC and Tai Tonga 41 Waka Ama Club, covering talks about the Matariki Stars; Club histories; History of Te-Whanganui-a-Tara; and a Waiata & Quiz evening. The weekend events included Ngā Mata o Te Ariki Tāwhirimātea Marathon (Waka Ama); Matariki Yachting Regatta, and the Matariki Classic, along with food and socialising based out of the EBYMBC club rooms. See the Matariki Festival page for more information about this very special event.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text Value 2 – Whai Wāhi – Access to the coast for recreation and enjoyment

EBYMBC strongly support this value.

· EBYMBC will continue to maintain our accessible facilities and boat storage for club members and affiliates.

· EBYMBC support plans to enable a continuous harbour path, while keeping pedestrian and vehicle movement separated or well controlled to ensure safety, and support responsible dog recreation in club areas

· EBYMBC recommend that the provision of outdoor showers, available to all water users, be included in the plan for this area of the coast, along with the development of an effective method for minimising slippery growth on the boat ramps to ensure safe access for all users, including users with disabilities.

· EBYMBC club and affiliate activities require access to the area the club occupies for vehicles, particularly those with trailers, and sufficient parking for club users and regatta visitors in or adjacent to the club areas.

Further information:

EBYMBC are very aware of the positive impacts of club activities on mental and physical health. We have a wide range of age groups, from juniors right through to active sailors in their 80's. These strong, intergenerational connections are a protective factor for club members mental health and physical health. The collaborative nature of club activities allows many opportunities for club members to share their knowledge and experience, support people new to sailing, contribute to voluntary tasks related to running race day activities, along with maintenance activities and club management.

The community spirit is evident in that, even on race days when the weather is definitely not cooperating, club members will still gather to talk, socialise, and work together on maintenance tasks. As Ratty famously tells Mole in Kenneth Grahame's The Wind in the Willows, "Believe me, my young friend, there is nothing — absolutely nothing — half so much worth doing as simply messing about in boats,"

The Evans Bay Yacht and Motor Boat Club was founded in 1919 by a group of enthusiasts who recognised that the location was ideal for sailing and boating. At that time the shoreline was about where the road is now. Three years later, in 1921, piles were driven into the sea for the first clubhouse in the area now covered by the dance floor of the downstairs hall area. Our 106th sailing season will kick off at the beginning of October 2025.

EBYMBC is the only yacht club in Wellington which accommodates sailing for all ages, groups and abilities. A member of EBYMBC can stay at the club from their junior days right through until their retirement from the sport while completing all the different stages of sailing in between. The age range of our active members is 6 years old through to 80+ years. Our Senior members have a wide geographical reach with regular sailing members coming from as far as Otaki and Carterton.

The facilities at EBYMBC, which have been built up and maintained by club members over the past 100 and more years, are also accessed and appreciated by the general public. The club does not restrict entry to the land we occupy, other than for safety sensitive areas/times. We support plans to enable a continuous harbour path, while keeping pedestrian and vehicle

movement separated or well controlled. The club has ideas on how this could be achieved and welcome the opportunity to discuss this at the appropriate time.

EBYMBC support water access and recreation by promoting shared use of club amenities, particularly through our affiliate clubs, which are:

· Wellington Surf Casting & Angling Club

· Sailability Wellington Trust

· Tai Tonga 41 Outrigger Canoe Club

· Tup Radford Intercollegiate Yachting Academy

· Victoria University of Wellington Sailing Club

· Wellington Kayak & Knee Boarding Club

· Britannia Sea Scouts (not actually home base but used regularly for activities)

In recent years, EBYMBC has also helped the following groups with the use of facilities while they rebuilt/established

their own homes:

· Wellington Deerstalkers Association

· Wellington Aero Club

· Lyall Bay Surf Life Saving Club.

EBYMBC runs a number of significant yachting events including the following in the past 3 years:

· 6 National Championship Events

· 2 North Island Championships

· 3 Lower North Island Championships

· 6 Regional Regattas

This has involved participants coming from as far south as Invercargill and as far north as Kerikeri. Participants during this period have also travelled from as far away as Sydney, Perth and Japan to attend regattas hosted at EBYMBC.

The above events involved over 500 boats (approximately 850 participants) of which nearly 50% were from outside the Greater Wellington area. Many of the participants travelling from outside of Wellington also bring family along with them for the duration of the event, which can be up to a week.

The club does not exclude casual users, such as people who have their own boats but are not connected with club or affiliate activity, dog and other recreational walkers, and young people who just want to 'bomb' off the end of the wharfs. An enhancement to this wider recreational use would be the provision of outside showers, similar to other beach areas, which would be available to all water users.

We continue to develop coastal accessibility and equity through the facilities built up for club members with accessibility needs, facilities specifically for Sailability, and support for Waka Ama boat storage and activities.

In talking with our members and affiliates, we would like a more effective method for minimising growth on the ramps, particularly the ones in front of the clubs that are widely used by our dinghy sailors, Sailability and Waka Ama. Reducing the slipping risk would make this space more accessible and safer for all community users.

EBYMBC see the opportunity to support WCC actions in relation to responsible dog recreation in club areas through education posters, delivery of penguin aversion training, and other communication. We are open to exploring this further with WCC.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text Value 3 – Hononga Taiao – Enduring connection to the landscape

EBYMBC strongly support this value.

· EBYMBC support the proposal for planting and landscaping through the club areas and improving visual aspects of the area we occupy.

Further information

EBYMBC are interested in supporting appropriate planting and landscaping through the area the club occupies to enhance the environmental and visual aspect of this part of the coast.

Within our club members and our archives, there is a wealth of recreational and maritime history. We already hold and continue to collect and share stories of club and wider Evans Bay maritime history, including the operation of the flying boat service from this area and the restoration of historic yachts in the boat maintenance yard.

We are not aware of any wāhi tapu and wāhi tupuna within club boundaries due to the nature of the reclaimed land but would support the recognition and valuing of these should they become known.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

Value 4 – Tiaki Taiao – Protection & restoration of coastal ecosystems

EBYMBC strongly support this value.

EBYMBC can see the potential to support WCC action through:

· targeted ecosystem protection around ramps and jetties

· placement of wind netting or similar at strategic points to capture community waste before it gets into the water

· promote efforts to control invasive species on land and in the water

· collaboration with other coastal restoration activities.

Further information:

For sailing activities, there is a strongly enforced rule that no waste is discharged into the water, this would result in disqualification from the race. This ethos continues for our activities on land.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice

Strongly support

Q18 **Please let us know a bit more about your choice.**

Value 5 – Taiao Tuatahi – Nature-first approach to resilience

EBYMBC strongly support this value.

· EBYMBC recommend that WCC provide further information on climate change impacts so the club can better understand how these may affect club activity and assets.

Further information:

We already notice the tidal/storm flooding of the hardstand area in front of the club rooms and would like to better understand the natural processes and climate change impacts that may affect club activity. This would assist us to work with WCC to identify the adaptive planning requirements for club infrastructure impacted by sea-level rise. As the club has been active for over 100 years, we would like to manage the risk and reality to ensure the facilities are available to future generations.

Sector Specific Plans - Transforming Ākautangi / Evans Bay Marina Precinct into a coastal recreation hub

EBYMBC support the upgrading facilities to support water-based recreation and improve public access, particularly the upgrade of the Evans Bay boat ramp to improve safety and usability.

EBYMBC share a commitment to inclusive access and maximising the use of facilities to support recreation in the Evans Bay area.

EBYMBC recommend that WCC continue to develop their understanding of the activities and relationships already in place, and to cooperatively explore the development of a boat and water recreation hub with EBYMBC.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: We need to protect the cultural, historical and spiritual significance of the land. This shows respect for the land. Plus it is beautiful to look at and it would be very sad if it were to erode further into developments or human-made structures.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text: Protecting and restoring eco-systems is vital at this point in history. Healthy coastlines will have very positive feedback effects on to the rest of the eco-system of earth and we need all the marine wildlife that is currently there to flourish and play it's part in the whole picture. We are already losing so many plants and wildlife species at incredible rates so we really need to be focusing on this area of protection and restoration. In my opinion, none of the other values/sections will work without this one alongside them.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text: There is clear scientific evidence for the changes that are coming to the coastlines (and the rest of the planet). We need to be listening to this and taking effective action to prevent significant damage. Sea level rise is only going to increase, stronger storms and waves will only increase. Putting things in place now to address these changes as best we can will mean we can hopefully mitigate the damage somewhat. Nature has the answers and looking to nature to find solutions is an excellent idea. If we can support nature to repair itself in these areas it will have positive flow-on effects to other areas of Wellington.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Don't know
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

In general the draft plan seems devoid of any commercial thinking. The coastal strip is a wonderful asset for the ratepayer of Wellington, the coastal drive is unique for a capital city in the world and should be exploited sensitively but commercially for the ratepayers of Wellington. Develop revenue-raising strategies or initiate public private partnerships to reduce cost of ratepayers. Lobby philanthropists to fund exciting coastal projects e.g. world class aquarium, wind festival, wind surfing academy.

Values
Value 2
The Wellington Underwater Club wishes to note our strong support for all the values expressed in the proposed plan; there are several pathways about which we will provide specific feedback. However we do wish to note that the map illustrating Value 2 is missing some important and unique dive and snorkel sites. Given much diving and snorkelling is largely invisible to much of the community, we propose that the map should highlight more of these diverse and precious dive sites in order to make their importance visible within the document. The additional sites we wish to highlight are as follows;
 Sirens Rocks (variously known to divers as “The Sirens”, “Mermaid’s Kitchen" and “Brass Monkey”.) This site supports a wide variety of invertebrates, crustaceans, fish and cnidaria within the protection of its narrow rocky north-south channels. The site is an important one for dive training in the region and is one of our most easily accessible sites for diving night and day.
 Houghton Bay (both the eastern side bay and reef and the rocky reefs of the western side around Elsdon pipe). The bay features several dive sites, and supports large fish populations and occasional locally rare species such as John Dory and red gurnard in the bay itself, as well as rich and diverse reef ecosystems on either side of the bay. The

extensive reef system extending around from Houghton Bay to Princess Bay reaches 18m in depth, and as such, provides our most accessible subtidal reef system, as well as providing another important location for dive training requiring depth beyond that of most of our coastal sites.
 Breaker Bay, in particular Butterfish Rock, supports a wider variety of invertebrates than most local dive sites in the narrow crack that bisects the rock along its length, while the bay itself has a significant giant kelp population. Although less frequently dived than other south coast sites, this relates to the challenges of access outside of high tide, and the tendency for significant surge in and around Butterfish Rock; these challenges add to the preciousness of the site, which is much less disturbed by human activity than more accessible sites on the south coast.
 Māhanga Bay and the south side of Kau Pt provide various dive sites in a small area. These include the purpose-built tyre reef at the northern end of Māhanga Bay (accessible from Kau Pt) and the remaining mussel ropes and fish farm accessed from the boat ramp. These both support rich crustacean and invertebrate diversity in Māhanga Bay, and are frequently dived with the weed line extending along the sea wall. The now decades-old tyre reef has become home to numerous fish species such as sweep and sea perch not often found in our south coast sites, as well as a wide array of invertebrates including soft corals. Night divers will find that the bay provides an important nursery area for juvenile gurnard, blue cod, tarakihi and leatherjackets, large numbers of Wellington nudibranchs, pipefish and seahorses, none of which are common at the better-known south coast dive sites. Southern reef squid and bobtail squid are common sightings at night, as is our native pygmy octopus. The area is significantly fished, with large amounts of fishing line left to pose a danger to divers and our environment, and marking the area as being important for diving may help to highlight this concern.
 Shark Bay supports populations of fish not found elsewhere in the harbour in such number, particularly Pipefish and Ocellate Triplefin. A popular site for night dives due to its easy accessibility, it is also dived for scallops, or when other sites are unsuitable due to high winds and swells

Value 4
"Tiaki Taiao - Protection and restoration of coastal ecosystems" is of particular relevance to Wellington Underwater Club. In particular we wish to provide some feedback on Pathways 4.1-3, 4.4 and 4.7.
Pathway 4.1 Targeted ecosystem restoration - Marine Coastal Area
Pathway 4.2 Wildlife recovery
Pathway 4.3 Control invasive species
While we recognise that marine protection is not the focus of this plan, we wish to express concern about deteriorating intertidal and subtidal ecosystems as a result of overfishing and rubbish and highlight that these are intrinsically connected with how we manage our coastal margins. We also wish to highlight the invasive nature of kina locally; while kina are a native species, the developing kina barrens both within the harbour, and on the south coast, particularly at the eastern end of Taputeranga Marine Reserve, reflect the insufficient populations of kōura and large fish species such as moki and snapper to control kina numbers. Extensive litter is found in our marine coastal areas. This results from deliberate abandonment of rubbish as well as litter blown from bins, throwing/dumping of glass bottles, and abandoned fishing line (particularly in the harbour in the case of the latter.) Currently much of the restoration of these areas in the form of underwater clean-ups and invasive species culls is the work of volunteers and not-for-profit organisations. Restoration should not purely be the work of those who explore the underwater environment, given most of the causes of harm are land-based. We strongly support council-lead measures such as dedicated funding for underwater clean-up activities and invasive species culls, support for periodic rāhui to support regeneration of our marine ecosystems, and strong measures to prevent water contamination and litter aggregation. In addition we encourage the council to take robust measures to ensure the safety of our seabirds, including completely dog-free areas; we recognise that dogs are important to a great many whānau in the Wellington region, however this need not require dogs to have free range of all our coastal areas; we support numerous dog-free zones in our coastal areas, clear marking/fencing in sensitive areas and robust measures to ensure dog-owners respect the need

to protect our vulnerable species and support their roles in our ecosystems.
Pathway 4.4 Strong collaborative relationships for coastal restoration
We identify ourselves as a small community group with an interest in working collaboratively to restore our Marine Coastal Areas. We also wish to note that like many of our local organisations, our members engage in restoration activities entirely voluntarily, and it is beyond the capacity of such volunteers to take responsibility for all the required restoration work to enable our marine coastal ecosystems to thrive. WCC has a valuable role to play in coordinating clean-up activities and supporting volunteers in keeping our Marine Coastal Areas in good health, but should not view these as an alternative to active funding of professional clean-ups.
Pathway 4.7 Sustaining the Coast as a storehouse
We wish to strongly express our support for Action #3, audit of bin design and placement. Salt-related damage to rubbish bins in coastal locations causes failed containment of litter, particularly along the wind and swell-beaten south coast. Much of the rubbish littering our marine coastal areas appears to relate to these failures of containment and irregular emptying of bins in our coastal reserves. Bins must be plentiful, secure, but also frequently emptied to be effective. WUC sees this as an urgent and relatively easily-sorted problem, but also wishes to highlight the importance of targeted education in our coastal reserves about the dangers of litter to our ecosystems.

Rangitatau
Moa Point to Breaker Bay
Te Whanga Rāwhiti
Eastern Bays
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Sector 1 - Te Kopahou (Red Rocks and beyond) -
1.4 Nature-first approach to resilience - Allow unformed coastal route to recede naturally back towards beach driving
Wellington Underwater Club supports this proposal; Parawhero/Red Rocks is a popular dive site, particularly for free divers, but we believe the benefits to the environment of this proposal outweigh the harms, particularly given beach access will be possible with 4WD as at present. In addition we strongly encourage WCC to strengthen wildlife protections by considering dog-free zones along this section of coast.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Sector 2 - Taputeranga
2.3 Protection and restoration of coastal ecosystems
c. Support the protection and enhancement of Taputeranga Marine Reserve by enabling and collaborating with relevant agencies and the community on anti-poaching measures
d. Continue to support efforts to mitigate water contamination risks at Houghton Bay by collaborating with GWRC on stormwater management improvements and addressing historic landfill impacts.
e. Support marine biodiversity initiatives by working with partners such as Mountains to Sea Wellington and Friends of Taputeranga Marine Reserve to explore kelp restoration efforts and enhance natural coastal resilience.
Wellington Underwater Club strongly supports points c, d and e, pertaining to protection of the underwater environment of our taonga, Taputeranga Marine Reserve. Though not within the remit of this plan, we wish to advocate for kina control, bearing in mind that despite its increasingly flourishing ecosystems, Taputeranga Marine Reserve still lacks sufficient numbers of kina predators such as snapper able to control the burgeoning kina population, particularly on the reef between Princess and Houghton Bay.
In addition, we encourage the council to prioritise the Taputeranga Marine Reserve area for improved litter bins and more frequent rubbish collection, as all areas of the reserve are marred by litter to a degree that is beyond the capacity of divers to control, with microplastic debris a particular cause for concern due to being too small for divers to collect and transport back to

shore.

Action 10 - Review options for removal or repurposing of the bait house in the context of coastal hazard issues, eq strengthening requirements and lease renewal (medium term 5-7y)
While we recognise that the aquarium in the Bait House is not run or owned by WCC, we wish to register our concern at the possibility of losing this valuable education and storytelling facility should the trust that runs it be unable to find another location. We are not in the position as a club to assess the validity of the claim that there is significant potential harm involved in the Bait House location being retained, but we urge the WCC to consider whether there is benefit in completing earthquake remediation, and/or to WCC providing active support to the aquarium to find an appropriate alternative location, including but not limited to favourable building or land lease conditions. The aquarium is invaluable in terms of building population knowledge, understanding and empathy that is widely lacking for the coastal environment. We cannot protect what we don't know. As such, we believe that supporting the continuing work of the Island Bay Bait House aquarium is key to the success of the Coastal Reserves Plan, in particular Pathway 3.2 "Enrich coastal experiences through storytelling" and 4.2 Wildlife Recovery Management "Raise public awareness and education to reduce human-wildlife conflict."

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text Sector 4 - Rangitatau (Moa Pt to Breaker Bay)
We are entirely in support of the action points for Rangitatau and have no feedback other than to reemphasise the delicate and valuable underwater ecosystem of Butterfish Rock with its healthy kelp forest (including Giant Kelp), invertebrate and sponge-encrusted walls, and locally uncommon nudibranchs. We believe improved facilities in the form of a toilet block in this sector would be advantageous to those making the most of this special area.

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text Sector 5 - Te Whanga Rāwhiti (Breaker Bay to Scorching Bay)
Kelp forests in this area and Sector 6 support almost all of Te Whanganui-a-Tara's native seahorse population, and we would like to see that emphasised, as a point of difference from other parts of Wellington, rather than reemphasising paua and kōura. Our Potbellied Seahorses and pipefishes are uncommon along the south coast, making these harbour kelp forest areas critical to their local survival. Local divers note a substantial decrease in seahorse numbers over the past decade as a result of kina barren in Sectors 5 and 6.

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Sector 6 - Mātai Moana Coast - Scorching to Evans Bay
As for Sector 5. The western side of this peninsula also has notable differences in underwater life to the peninsula's eastern sid

Action 1 - Provide a new public toilet in this sector
Wellington Underwater Club is entirely supportive of this proposal and believe it will improve accessibility for all Wellingtonians to this stretch of coast.
Action 2 - Investigate whether to retain or remove the old NIWA boat ramp at Māhanga Bay, considering current use, condition, and potential for future education or coastal access.
Māhanga boat ramp provides important access to this water for divers and kayakers who use the area extensively, particularly when Cook Strait conditions make diving on the south coast unfeasible. We strongly encourage WCC to keep the ramp, or at least replace it with stairs down the seawall; the latter option is fine for divers but is limiting for the many kayakers who access our harbour from the Mātai Moana Coast.

Action 4 - Install a mechanism to allow for temporary closures of Massey Road for events and reducing traffic management costs
While we recognise that traffic closures in this area may support the safety of bike and running races, we wish to point out that there are many times in the year where due to sea conditions, Massey Road provides the only option for access to the only diveable locations in the Wellington region. Wellington Underwater Club believes that road closures should not prevent other users of this area from accessing this valuable area and provisions should be put in place to ensure that those wishing to access the coast itself are not restricted from doing so by those simply using coast-adjacent roads. We consider that all closures should be extensively advertised in advance, not only in Wellington City but within the region, and should not prevent all access to the entire peninsula from Shelley Bay to Scorching Bay, as has sometimes been the case. The

needs of road users should not entirely prevent access from those trying to access the coast itself.
Action 9 - Investigate reserve classification for the coastal headland between Kau Bay and Mahanga Bay to support long-term protection of its environmental and landscape values.
Wellington Underwater Club supports this proposal, and wishes to note that Kau Pt reserve is important not only as a coastal headland but as the reef structure for the most significant giant kelp forest across both Te Whanga Rāwhiti and Mātai Moana coastal sectors. With this in mind, we believe that the area should also be seen as a valuable area in terms of regeneration of the Marine Coastal Area within the harbour. The area is extensively fished for squid and blue moki. The latter are common to catch in this area but almost never seen by divers, suggesting that the area may be significantly overfished. Abandoned fishing line is a major ecological concern in the sea around the headland, as is rubbish, in particular glass bottles, so adequate rubbish facilities with appropriately frequent rubbish collection should be a priority in this area.

Long Text

In summary Wellington Underwater Club supports the values and pathways underpinning the proposed Coastal Reserve Management Plan. We support the extensive work consultation underpinning the document and the way it upholds the environment of our Te Whanganui-a-Tara's taonga, our coastal environment, and the centrality of Mana Whenua to its protection. We also believe that the suggestions of our club can further strengthen the plan and highlight the incredible preciousness of our underwater environment, and urge WCC to consider that although that environment is not strictly within your remit, the health of our intertidal and subtidal environments are completely enmeshed with the health of our coastal reserves. This plan is an opportunity to acknowledge that enmeshment, as well as to educate our population about the intertidal and subtidal environments that are invisible to many of them

Long Text: 9) Interpretive signage I know from my local history work that there is a great deal of interest in the coastal area and its history. In my view interpretive signs, or at least QR codes to online resources enhance people's experiences. Nelson City Council has excellent historical signage (by way of example). Such signs should draw attention not only to land on our coast but to the visible parts of the South Island, their names and importance to both Māori and Pākehā history. My recommendation is that a plan for more signage and the maintenance of the signs be agreed in principle and that there then be consultation on what signs, where, would be appropriate. I am very happy to provide a list of potential signs.

10) Kāraka Groves There should be provision for the signposting and protection of karaka trees that previously formed parts of 'orchards' planted and maintained by Māori along the coast. These are living taonga tuku iho. Concerns that in this area karaka are invasive and not locally native are easily addressed by simply picking up the ripe fruits once a year. I also doubt that the trees are any sort of long-term threat to locally indigenous flora

7) Red Rocks. Council moved, I think in the early 70s, to restrict quarrying of Red Rocks. This formation is important historically as a navigation aid for the waka traffic that formed the basis of Māori trade and commerce. It is important in Māori history and mythology. The quarrying that was undertaken resulted in large pieces of red rocks being used in public and private spaces. I think the western airport breakwater and the gardens outside the Embassy theatre are examples. There are many rocks in private gardens. I suggest the council facilitate the return of rocks as transport is available within existing budgets so that over time some of the damage may be remedied. As an interim step rocks could be accumulated at the entrance to the reserve.

8) The earthquake fault. The earthquake fault which causes us so much worry or one of them) is visible in the quarried cliff just past the Te Kopuhau information centre. A long-

term option when funding (possibly from sponsorship) became available would be to polish the cliff face to the fault could be clearly seen. I understand that this is technically feasible at a reasonable cost. It would provide an attraction and a way of educating us all about the reality of the risks we face.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

I am a resident of Island Bay. I have lived here since 1985. As a child I lived briefly in Berhampore in my grandparents' house. My mother was brought up there and made extensive use of the coastal area for recreation. She, and my grandmother, were members of the Island Bay Surf Club. I am the President of the Southern Bays Historical Society and the editor of its magazine. This submission is in a personal capacity.

1) I support the plan as a whole.

2) Mana whenua I support the involvement of mana whenua not only in the formulation of plans but in active administration. While I respect indigenous rights to such involvement my principal reason for this support is practical. Mana whenua have a culturally-determined multi-generational outlook. While Pākehā companies and public bodies see the need to have an annual impact, and see 5-year plans as 'long-term', Māori iwi and hapū look forward for at least a thousand years or 20-30 generations. This outlook is essential for proper planning for ecological restoration, species conservation, and balanced economic development. Keynes, the famous economist, said many correct things but he was wrong to say that 'in the long run we are all dead'. Any hapū will tell you this is not so. The interests of the current generation need to be managed within the context of future generations and in the light of past generations' actions, beliefs, achievements and errors.

3) Names: I support the restoration of Māori names for places and the adoption of Māori names where no original name is known. However, I do not support the elimination of names associated with people who had a significant impact on the local area. I suggest renaming the suburb with a dual name: Taputeranga | Island Bay.

I oppose the changing of the name of Shorland Park to Māpunga. Here are my reasons:

(a) I accept that an area of habitation called Māpunga was close to the area no occupied by the park. But such sparse records as exist suggest that this was further north, sensibly and strategically placed around Trent St and sheltered from the nor-westerly wind. My hypothesis is that it would have been rare for this to be occupied year-round and it may be stretching things to call it a permanent kāinga, The area proposed to have the name Māpunga was part of the dumelands of Island Bay. My expertise in such things is limited but I do not think permanent kāinga were established in the first rows of dunes, especially in areas exposed to the southerly blasts we all know.

(b) The eponymous Shorland was an important early resident of the suburb of Island Bay. He promoted the park, its children's play equipment and the War Memorial Band Rotunda. He was a City Councillor. He has descendants. He was also the holder of a world record for distance cycling. He had a cycle shop. Commemoration of him at the termination of the North islands cycleways is very appropriate. There should be some interpretive signage noting all this on the park.

(c) There is a far more appropriate way to restore the name Māpunga - for example, change the name of Reef St which adjoins the Park to Te Ara Māpunga.

The Hermit's Cave. The 'Hermit of Island Bay' was a local character and tourist attraction in the late 1890s and early 1900s. A great deal is known about him now. He lived by choice in a cave at the junction of Island and Houghton Bays. He remains a famous part of our local history and mythology. His cave was destroyed by blasting for the creation of the road and only a small indentation remains. In some safe place (the corner is dangerous) there should be some signage erected making the spot. And I suggest the presently nameless point (below Cave Road) be formally named 'Te Ana Moke | Hermit's Point.

4) The bait house. The bait house has two local functions. 1) It is a part of Island Bay's fishing history and despite, or maybe because of, its plain an utilitarian form, it is an accepted part of the local landscape. People like it. 2) Secondly through charitable, voluntary and community work it has been transformed into a space that educates people about the sea around us.

In the light of the well-expressed purposes of the plan to manage the interface between the things ki tai and the things ki uta it seems to me important to make permanent the presence of an educational facility on land to talk about the sea around us. Clearly the bait house cannot last for centuries. But programmed maintenance without huge capital expenditure should keep the building for at least one or two future generations and a relatively small investment from Council could keep the education facility going.

5) The diving platform. I do not know the circumstances which led to the diving platform being removed many decades ago but in my view it should be restored. This is the structure that was known locally as 'the pier' and featured in hundreds of photos of Island Bay. I can think of no insurmountable safety issues.

6) The boats. The fishing boats of Island Bay have formed a part of the aesthetics of the bay since before the suburb was built. Their number has been reducing. I am unsure if there is a single cause but council should make it as attractive as possible for fishing vessels to moor there to preserve the continuity of this attractive view. So many homes in Island Bay have Rita Angus' painting of Island Bay on their walls. The boats symbolise the suburb.

Long Text:

Hi WCC,
I'm writing to provide feedback on the draft plan, particularly around access and recognition for wind-powered water sports like windsurfing and wingfoiling. I've lived in Wellington for over 15 years and regularly use the city's coastline for these activities — especially Lyall Bay. I am based in Oriental Bay.
Wellington's consistent winds and accessible coastline make it one of the best places in the world for wind sports. These are year-round activities that are part of everyday life for many locals and should be better reflected in the plan.
At present, the draft plan highlights surfing as a priority activity but doesn't adequately acknowledge the long history and growing popularity of windsurfing, wingfoiling, and kitesurfing in the region. These sports are a major part of how people use the coast — particularly at sites like Lyall Bay, Evans Bay, Seatoun, and Worser Bay — and should be recognised and supported equally.

Q13 **To what extent do you support or oppose this value and its pathways?**

Long Text
One of the key areas that needs attention is the western end of Lyall Bay. This is the most commonly used launch site for wind sports in Wellington, but recent changes have made it harder and more hazardous to access. The row of poles, fencing, and carpark barriers now restrict safe movement and rigging. These features create safety issues and make it unnecessarily difficult to carry or roll gear down to the water.
There are some easy and low-cost changes that could fix this. A designated wind sport rigging and launch zone should be reinstated at the western corner, as it was in the 2002 plan. A break in the pole line — for example, a rope gate — would allow safe access without damaging dunes. The carpark barrier could be removed to let users walk gear across to the grass, and a boardwalk over the dune would both protect vegetation and improve usability. That grassed area should also be maintained for rigging.
Another important location to recognise is Dorrie Leslie Park. In large southerly conditions, Lyall Bay becomes too rough to safely launch or land. Dorrie Leslie offers a more sheltered option and is widely used by wingfoilers when conditions demand it. It should be marked in the plan.
These changes support what the plan already aims to do — enable access, reflect a wide range of recreation, and design coastal spaces that work for everyone. Windsports are not a niche activity — they're visible, growing, and one of the best uses of Wellington's coastal conditions. Supporting this community through better infrastructure and recognition is a practical and meaningful way to strengthen the city's connection to the sea.
Thanks for considering this submission.

Submission: Response to Section 1.2 - Management Approach
a.i – Public Vehicle Access Restrictions
I support restrictions on public vehicle access during high-risk periods. However, I strongly submit that bach owners must not be classified as 'the public' in this context. Bach owners possess significantly greater familiarity with the coastal environment, weather conditions, and access routes. In many cases, bach owners have proactively addressed risks such as extinguishing unattended public fires. We are responsible stewards of the coast and should retain discretionary access to manage and protect our properties safely.

a.ii.A – Gate Closures on Sundays and Public Holidays
I have no objection to the current Sunday gate closure continuing.
I oppose the proposal to close the gate on public holidays. These days represent key opportunities for bach owners and their families to visit. Public holiday Mondays, in particular, would result in two consecutive days of restricted access, which would significantly limit our use and enjoyment. This would be especially restrictive during long weekends when visitation is likely to increase.

a.ii.B – Night-time Gate Closures
I object to night-time gate closures unless bach owners retain access through alternative means (e.g., key, permit, access code). Otherwise, a typical weekend could become inaccessible from Saturday night through Tuesday morning during long weekends – an unacceptable constraint.

I support the idea of differentiated vehicle access rules for the public and bach owners. Our purposes, responsibilities, and timeframes are not the same.

a.ii.B.i – Permit System for 4WD Access
I would be surprised if a permit system for 4WD access can be "easy to administer," particularly if it attempts to manage both public and bach owner access under a single system. However, I would be open to the idea if bach owners are provided with extended access through a dedicated or exempted permit, allowing for access during public holidays and night-time hours. Any system implemented should reflect the distinct needs and responsibilities of bach owners compared to the general public.

a.ii.B.ii – Vehicle Use Monitoring
Monitoring vehicle use must clearly distinguish bach owner activity from public behaviour. Bach owners moving between the formed road and their baches should not be conflated with public 4WD activity, off-road driving, or misuse of sensitive areas.

a.ii.B.iii – Extended Access for Bach Owners
Bach owners should retain the right to access their properties regardless of any limitations imposed on the public, including after-hours or public holiday closures.

b – Leases
I strongly support the continuation and renewal of bach leases. These places hold generational significance and contribute to the cultural and custodial care of the area.

b.i – Lease Expiry and Succession
I do not support automatic reversion of baches to Council ownership upon lease expiry. These timeframes span generations, and decisions made today will almost certainly be reviewed again before lease expiration. Families should have the opportunity to renew their leases, and I expect future processes to reflect that.

If a lease is voluntarily relinquished, I have no objection to the Council assuming ownership—provided this does not negatively impact remaining bach owners.

b.ii – Public Use of Vacant Baches
Using vacated baches as public facilities (e.g., shelters or rentals) risks undermining the care and contribution that current bach owners provide. It would likely lead to increased traffic, reduced stewardship, and rapid deterioration.

Currently, bach owners are prohibited from leasing their baches (e.g., Book-a-Bach). If the Council were to start doing so, it should open a fair discussion around bach owners having equal rights to do the same.

b.iii – Rebuilding Permissions
I have no objection to maintenance or rebuilding conditions, but like-for-like rebuilding should be permitted as part of ongoing preservation—particularly for historical restoration purposes.

b.iv – Leaseholder Responsibilities
I have no objections to the expectations outlined for leaseholders.

c–f – Broader Management Approaches
c – I fully support this point.

d – No objection, as long as the outcomes do not negatively impact bach owners.

e – Supportive of all points.

f – Supportive in principle, pending ongoing protection of the coastal environment.

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Neutral
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Neutral
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Neutral
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral

Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Neutral
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Long Text: The history and context of Te Whanganui a Tara is fascinating and very important to be widely-known and shared. I very much support the appropriate naming and history telling of Te Whanganui a Tara's past, from those from the east coast linked to iwi now known as Ngāti Porou, Ngāti Kahungunu and Ngāi Tahu through to more recent iwi, particularly Taranaki Whānui and to settler communities through to our shared Wellington home today. Most of our ancestors can by sea and the harbour and coast has been and remains a crucial pathway for migrating into and living around our beautiful harbour and its extensive and resource rich coast

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text I would wish for us to be more ambitious in seeking to rebalance our biodiversity and protect our taonga species; there are many invasive plants that are not being dealt with (eg old man's beard, as well as nasturtium, Angelicus, and many other invasive weeds) and are encroaching further and further in our native biodiversity on motukairangi, as well as inadequate protection for native birds, lizard and insect species. I regularly see cats prowling on the south coast where dotterels nest, let along the large number of dogs off lead every day even in no dog zones and with no consequence. I realise and applaud the intention to make clearer signage but believe patrols and fines must be very significantly stepped up as far too many people think their cats and dogs have much more rights than native species.

Q17 **To what extent do you support or oppose this value and its pathways?**

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text Lyall Bay is a treasured gem for our surf mad family; we really love the plans for the landscaping and applaud that moving forward.
But there is so much rubbish (plastic and polystyrene which we've seen in numerous occasions) coming out of the big Bunnings I. Lyall Bay and they need to be made aware that is it not acceptable and they must rescue their packaging and impact on a precious space that is not theirs

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text The main issues here are that there is insufficient signage re dogs needing to be on leash at all times and the footpath is totally inadequate. We see people running in the road around here all the time and worry so much about a pedestrian or cyclist being hit

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text The lack of a footpath or cycle way along Shelly Bay and Massey roads is a huge risk and a plan to address this (ie simplest being to make the road one way only) is way over due and remains urgently needed

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text Love this cycle way and walk - it's quickly become one of our favourites, but the amount of rubbish compiling both on the beach side and from commercial operations along Cobham drive is really distressing, and feel businesses in

Kilbirnie, particularly those producing plastic waste, need to become far more involved in beach clean ups and also in taking responsibility for preventing waste in the first place

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text As a bach owner at Mestanes bay , I am concerned about several issues ,
1. access being restricted to baches and 4 wheel driving in general along the coastal route.
2. The current Coastal lease on the bach and condions in the future being altered and The right to occupy anytime
3. Guardianship of the local area around the baches.

1.
I strongly oppose Restrictions on 4wd access to the coastal route, including a permit system which would result in unnecessary expense and hassle to users to navigate the route.
It is marked as a public road and 4wd adventure area on maps and should remain open to the public, very little damage occurs to the road and area through 4wd use, especially compared to the frequent storms and swells along the coastline.
It is one of the very few places in Wellington to be able to enjoy off road driving without many restrictions.

Alleged antisocial behaviour in the area is unfounded, according to council records there were 155 complaints of antisocial/ driving behaviour received last year and NONE of them were between the Te Kopahau carpark and the coastal track and none involved motorcycles or 4wds. The complaints were in other areas.

Poaching occurs all long the coastline, not just the coastal track, shutting a small section down will make very little difference to a black market trade , It won't stop boats from going past the gate.

2.
The current leases for baches at Mestanes bay and red rocks were implemented 11 years ago after generations of people and families occupying baches, some living permanently on site. We were forced to sign the lease under threat of removal of baches. At the time there was very little consultation and no discussion or compromise to the list of rules and demands made by the council. There was a promise of consultation at the end of the 33 year period of the leases, on the future of the baches and the owners retaining them, this of course was not put in writing.

The Lease agreement stated that the owners are not permitted to sublease , charge out, mortgage , rent or hire. their own bach.
Yet in the management approach to the plan is to gain ownership and implement a book-a-bach scheme or let Mana Whenua to control of the baches. That is just a slap in the face for bach owners who have spent years/decades/generations maintaining, repairs, reroofing and repainting and caring for their own bach, so the council can reap the rewards of our years of hard work and care and taking away from the next generation of family ownership.

3.
Guardianship of the local area.
With generations of people have lived permanently in these baches, to those who just stay on occasion, it has always maintains a presence in the area.
In the Lease agreement, there is no mention of no permanent living in the baches. But in the management approach plans to prohibit permanent living.
All of the owners, sometimes on a regular basis, have helped in emergencies, such as rescuing injured or unwell people, helping people caught out in adverse weather conditions, stuck or broken down vehicles or bikes, returned people to the carpark if needed, Also rendering service to other minor occurrences in the area.
Bach owners also regularly remove hazards and rubbish from the beach area when necessary and maintain a watchful presence on the coast.

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Strongly support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: Not necessary to comment further. OF COURSE the partnership and pathways should be supported.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: I'm always grateful for the fabulous access we Wellingtonians have to the south/east coast, and it has been made far more attractive by Council's actions/work over the years. Today I walked my dog from Lyall Bay to Princess Bay and SO enjoyed the opportunity to do so. It's such a beautiful area and we are so lucky to have that access!

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text: While supportive of the values/pathways, am not sure how effective the storytelling will be or how it will be delivered. Ditto recognising/honouring coastal cultural heritage.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q10 **Please let us know a bit more about your choice.**

Long Text: I fully support the Council's commitment to honouring the cultural and ancestral significance of Wellington's coastline for mana whenua. Strengthening the partnership through the Tākai Here agreement, recognising Treaty settlements, and restoring traditional Māori place names are essential steps towards meaningful co-management and protection of these taonga. I agree that integrating mātauranga Māori into decision-making is vital for the future wellbeing of the coastal environment and the community.

Thank you for prioritising these values in your coastal management plans.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: I support the Council's focus on protecting marine life and putting more restrictions on fishing to ensure the health of our coastal ecosystem.

However, I am concerned that placing restrictions on 4WD use along the south coast could negatively impact the mental wellbeing of many people, including myself. I regularly go 4WDing around the south coast—about once a month—as it provides a peaceful, restorative way to connect with nature. It's also a social activity where I meet friends, share meals, and enjoy the outdoors.

Many of us who use the 4WD tracks are responsible users. We pick up rubbish and make use of the bins at the entrances to help keep the environment clean. In many ways, 4WDing is similar to cycling or mountain biking, which also support mental and physical wellbeing while encouraging people to engage with nature and navigate challenging terrain.

I urge the Council to consider the positive mental health benefits of 4WD recreation and look for balanced solutions that protect wildlife while still allowing people to enjoy this important coastal experience.

Thank you for considering my views.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q14 **Please let us know a bit more about your choice.**

Long Text I agree that protecting the natural environment and ensuring the coastline remains accessible and meaningful for many generations is very important. However, I believe there may be alternative ways to achieve these goals beyond the current proposals outlined by the Council.

I encourage the Council to consider a range of options that balance environmental protection with practical and inclusive access, while also respecting cultural heritage. Collaboration with local communities, including mana whenua and recreational users, could help develop creative solutions that protect the coastline's character without unnecessarily limiting people's ability to enjoy and connect with these special places.

Thank you for considering a flexible approach that supports both conservation and community use.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text I believe the Council needs to take a more proactive role in protecting wildlife along the coast. As a responsible pet owner, I have trained my dog in both kiwi-safe and penguin-safe practices to ensure he poses no threat to native wildlife. Before moving to Makara, I completed the kiwi training, and when I saw the penguin training was available, I enrolled immediately because my dog often accompanies me on 4WD trips along the coast.

In addition to protecting wildlife, I am concerned about the significant amount of litter entering our waterways. Over the past four months, I have personally collected more than 30 balls—from soccer balls to tennis balls—from the Karori Stream before it reaches the ocean. This is only what I can physically access; there are an estimated 10-20 more balls visible in parts of the stream that are too dangerous for me to reach safely.

The volume of litter coming from the Karori area alone is alarming and highlights the urgent need for the Council to implement stronger measures to prevent waste entering our waterways and, ultimately, our coast. I encourage the Council to increase efforts in litter prevention, community education, and stream clean-ups to better protect our coastal ecosystems.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text I fully support the Council's nature-first approach to coastal resilience, which recognises the increasing impacts of climate change such as rising sea levels, storms, and fire risks. Prioritising nature-based solutions and adaptive planning is essential for protecting both the environment and coastal communities.

This approach aligns with my views on the importance of protecting wildlife and ecosystems through proactive and respectful management. By working with natural processes rather than against them, we can ensure the coast remains healthy and accessible for future generations.

Additionally, managing wildfire risks is crucial, especially in areas like Makara where I live and regularly visit the coast for recreation. I encourage the Council to continue investing in emergency preparedness alongside ecological restoration to build a truly resilient coastline.

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text I am writing to formally oppose Item 5.2.B of the proposed management plan, which states:

"Support the gradual transition of the privately leased boat sheds at Churchill Park, exploring opportunities for better community use or removal to allow space for nature."

As a local resident, I believe this proposal overlooks the historical, cultural, and community value of the existing boat sheds and risks undermining the character of Churchill Park and the wider Te Whanga Rāwhiti Eastern Bays coastline.

Key Points of Opposition:

1. Heritage and Identity
The boat sheds have been part of the Seatoun and Churchill Park landscape for almost 100 years. Their presence contributes to the unique coastal identity of the area and reflects a long-standing tradition of recreational and maritime use.

2. Community Connection
While some shed owners may reside outside the immediate area, many have strong ties to the community. The sheds are not just storage spaces—they are part of a shared coastal experience that fosters connection and stewardship.

3. Alternative Solutions
Rather than removal, I urge the Council to consider:
- Upgrading sheds for mixed-use, provide incentives for current owners
-Study and understand the current use of the boatsheds
- Introducing lease conditions that prioritise community benefit and environmental integration.
- Exploring shared-use models that allow broader public access without dismantling existing structures.

4. Legal and Procedural Complexity
The sheds are currently held under encroachment licences, and their removal or reclassification may require significant regulatory oversight under the Reserves Act 1977. A blanket removal policy may oversimplify this process and create unnecessary conflict amongst the community who have maintained the boatsheds for many years.

5. Environmental Balance
Enhancing natural space is a worthy goal, but it should not come at the cost of erasing community assets. A

balanced approach that integrates nature with heritage structures is both achievable and preferable.

6. The Boatsheds currently provide protection to the park to the rear of the building where families often picnic and is a place of passive recreation.

I respectfully request that the Council reconsider this item and engage with local stakeholders to explore more inclusive and sustainable alternatives.

Sincerely,
Shane Binnie

Long Text: This is not for all the people of Wellington. This is diminishing local democracy and giving undue power to tribal elites. We need to recognise all ratepayers and their property rights. Many Wellingtonians and tourists understand English, so there should be signage in English.

Q11 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**
Long Text: Wellington should be for the people. We need to acknowledge all ratepayers.

Q13 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Strongly oppose

Q14 **Please let us know a bit more about your choice.**
Long Text: We have gone to extremes with ecosocialism, high rates and worshipping cultural artifacts. Unfortunately, careful design could mean spending an additional $2.3 million on a public toilets project, that should cost significantly less than this. Extravagant projects means that Wellington rates will continue to increase by more than 10% each year. Wellington would have saved tens of millions of dollars if there had been a demolition of parts of our worshipped town hall.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat oppose

Q16 **Please let us know a bit more about your choice.**

Long Text We need to look after our coasts. However, Wellington Council will spend too much of ratepayers' money on ecosocialist monuments.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat oppose

Q18 **Please let us know a bit more about your choice.**

Long Text We could adapt to threats of flooding as seen in other parts of New Zealand. However, Wellington Council will spend too much of ratepayers' money on ecosocialist monuments.

Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat oppose
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat oppose
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Neutral
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat oppose
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

We should allow all people to use our parks and reserves. We need to consider the rights of all people. We should not be giving ownership rights of our natural resources to members of one ethnic tribal elite.
I am against all the proposed name changes. Our place names should reflect the names of all the people who have helped to build and maintain our country. All of our country's different cultures and their words should be seen in our landmarks. It is the destruction of Wellington's cultural heritage to rename everything.

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Strongly oppose

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: The area should be available for all respectful & conscientious New Zealanders and their guests to enjoy without prejudice or interference.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Access to the coastline must be free for all conscientious and respectful users. In particular, free, sensible and legal vehicular access around the south coast must be maintained for all who use it carefully.
The assertion in the draft that the area is being abused is contrary to WCC's response to an inquiry about these fictitious reports was of 155 complaints "none related specifically to Te Kopahou carpark or the coastal track." and "no complaints under 'anti-social behaviour' included any mention of 4WD driving or trial bikes."

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q14 **Please let us know a bit more about your choice.**

Q7	**Please provide your phone number so you can be contacted to arrange your oral submission time.**
Number	
Q8	**Do you support or oppose the overall direction of the plan? (Choose one option)**
Multi Choice	Strongly support
Q9	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q10	**Please let us know a bit more about your choice.**
Long Text	I totally support this value and the pathways so long as Māori have a truly representative voice throughout policy conception, design, development and implementation. I also support mana whenua leadership on the coast.
Q11	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q12	**Please let us know a bit more about your choice.**
Long Text	While I support this value, I support protecting the environment over unfettered access. Access should be restricted and denied where sensitive ecosystems and threatened or endangered species are likely to suffer harm from human activity. Many parts of the coast have fragile ecosystems that need to be protected for future generations.
Q13	**To what extent do you support or oppose this value and its pathways?**
Multi Choice	Strongly support
Q14	**Please let us know a bit more about your choice.**
Long Text	

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Our environment is our greatest asset. To the greatest possible extent, we should do everything we can to protect it from human activity and damage.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I support nature-based solutions for coastal protection, but only when these solutions are protecting natural environments not when they are being implemented to protect human environments.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I support radically reducing the volume and hours of access by traffic on the 4WD track out to Te Rimurapa. I believe access should be by paid permit only and even then restricted to daylight hours on only a few days a week. I also don't see any reason for vehicles to be permitted to travel beyond the furthest bach on that track.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Te Kopahou Reserve is about the only place in Wellington where you can four-wheel drive and go fishing and diving. It's a great place for families to experience, and it would be a shame to close the gate on Public Holidays, as a family experience might be long. Permits may also exclude people with children just because of the cost. I'm for free access to Coast, closing the gate on Sunday is far enough, 9 am -6 pm for Walkers.

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

It's extremely wordy. Much - including the questions - is at a high level of generality that would put a lot of people off and where simple degrees of support may not convey views accurately.
A straightforward list with actual details of changes would be useful as the plan is implemented.

Long Text

Dear Ella,
Congratulations on this new Coastal Reserves Management Plan. Thank you for the opportunity to comment. Great to meet you briefly at the Lyall Bay Surf Club drop-in in early July.
It's excellent to see the three Mana Whenua groupings acknowledged.
Noting Tangaroa and Papatūānuku is excellent. Don't forgot Hinemoana, the deity of the marine environment, and also marine flora (seaweeds, seagrasses).
It's good to see a new, single, integrated plan replacing separate, older ones.
Iti s good to understand, and I strongly support the alignment with the 5 strategic focusses of Te Whai Oranga Pōneke, the Open Space and Recreation Strategy 2023, especially whakamāori mai anō as Māori-led care of Te Taiao is crucial to make meaningful, sustained progress in caring for Te Taiao, and enabling tangata te Tiriti to uphold Te Tiriti through working together to care for Te Taiao.
The Emerging Challenges noted on page 12-13 are useful, honest, and clear. This

section is missing the unknown status of the health of the harbour, water quality and marine ecosystems to support coastal species such as Kororā, and other seabirds. We focus a lot on Kororā as icons, and care for their nesting sites, but we're not caring for the food they eat. From my own Professional work (marine management and conservation), I am aware that technically that is a Fisheries NZ responsibility, but there is no commercial fishing in Wellington harbour, a lot of shore and freedive-based recreational Fishing, yet very little attention is given to the health of the marine ecosystems in the CRMP.
It is good to note that overharvesting of marine life referred to. As you'll be aware, recreational fishing is managed through bag limits, but there are no limits on the
2
numbers of people that can take the bag limit in space or time. There is also very poor education of recreational fishers, and few signs in the harbour at least. Recreational Fishing signage and fisher education needs to be improved, and in other languages, and outreach done to the variety of communities that are recreational fishing. I ama ware that that recreational catch is often an important food supplement, and that iti s good for people's well-being to fish recreationally, but we need to know the catch levels are sustainable. As at least Nicole Miller's Seaweed, A Love Story film shows that marine ecosystems are out of balance. The mentions of Fisheries NZ and MPI in the document are extremely cursory. Was any engagement undertaken with them in the development of this plan at all?
Good to see the complex coastal governance acknowledged too. Fundamentally at least Te Whanganui-a-Tara needs a mana whenua-led 'voice of the harbour' kaupapa to develop a vision, strategy, and as a first product, an integrated harbour status report. Please support the creation and delivery of this.
Iti s good to see also the descriptions of mana whenua on page 15, although the Taranaki Whānui and Te Ātiawa blocks are confusing in how they reference each other. It would be helpful if this could be further elaborated and clarified.
I strongly support the values and Pathways 1.1, 1.2 and 1.3. E.g. 1.1c. WCC could contribute to the development of Harbour Cultural Health programme along the lines of the one in Ahuriri/Napier in partnership with GWRC as the Napier one was paid for by their Port..
Re. 2.1: really appreciate the amenities, and their care. Thank you.
Re. 2.2: I did the Tip Track to Haape Stream, to Te Kopahou carpark walk recently and the last section from the top of the quarry down the extremely narrow, gorse lined and steep, gravel track needs some work and care. It is not safe.
Re. 2.3: Please significantly increase the signage, and recreational fisher education at access points, about caring for the marine environment. Work with MPI to design and deliver educational materials. Consider using the Fish4all app, as a test to track recreational catch, educate in the most common languages of recreational fishers, and sustainably finance such work.
I love the provision for swimmers, (pg 27). A number of my friends, and one close friend, are regular harbour swimmers.
Harbour swimming, marinelife, aesthetics, upholding Te Tiriti, and just plain taking care are all really important connected aspects to cleaning up the waterpipes, but also working with the construction, roadbuilding, housing, real-estate, and other sectors which can create sediment risks. With all the riparian replanting now, and aspirations to make NZ Nature Positive (e.g. NEXT Foundation v2), there is so much momentum, and
3
ability to dovetail, and stack effective interventions. As the plan to remediate the old Chaffers area gasworks, over the long term with reeds etc shows, we can remediate over the long term….and we can, and must clean up the harbour, and support the restoration and regeneration of harbour marine ecosystem health – for people and nature.
With respect to boat ramps and the marinas, please work with the yacht clubs and users to co-fund and install Seabins to collect rubbish.
Re. 2.7: I strongly support all the proposed actions (a-d) to guide and supporte dog□owners to prevent seabird, including Kororā, seal and other marinelife attacks.
Re. 3.1: Thank you for keeping the coast accessible, and limiting building on the coast side of the road.
Re. Pathways 3.1, 3.2, 3.3: I propose the WCC support a feasibility study into having a new National Aquarium of New Zealand, fitting of the national name, in the inner harbour e.g. on the wharves (rebuilding them), between where the Bluebridge Ferry and Lady Liz/Police station is. I recommend reviewing Project Shapeshifter, the national aquarium reimagination done for Napier City Council just before covid. With other planned visitor attractions (Peter Jackon's film museum), and Zelandia and Te Papa, this would turn Wellington into a two night stay tourism city.
I strongly support Value 4. Note there's a typo on 4.7, currently written as 2.7, page 35. It is excellent to see all the detail under 4.1. (pgs 36-37), and I strongly support the use of the term and concept of Mauri! The infographics, classifications and mapping pgs 38-39 are great. Well done! I strongly support the actions listed on pg 41. Note, there are important links here to the cultural health monitoring approach mentioned above….and YES re. the intrinsic connection to the marine coastal area.
I strongly support the approach of enabling coastal ecosystems to help us with climate

resilience, adaptation and mitigation. The restoration of these 'teal' and 'blue' spaces are crucially important for that given how much carbon these ecosystems can sequestre, and hold, including in benthic sediments. It is important to acknowledge, and the revised Plan could state how interconnected the ocean and climate are – it's one big system.
I love the species focus on pg 42, including the small stuff.
Re. Kororā (e). pg 43 – needs a new "v." that is about working with FNZ to ensure there is enough forage fish for them…and therefore other coastal marine life, to eat. This is likely to not a problem on the south coast with the marine reserve replenishing fish numbers, but is likely to be in the harbour. There are instances of Kororā starving elsewhere in the country and in Te Whanganui-a-Tara in 2020-2021 when warm water and sediment were also thought to be compounding factors.
4
Re. 4.3. I strongly support this. Re. d. it is important to note that Predator Free has had enormous success because it has stacked interventions in the same places and also resourced the collaboration between each intervention in those places. The same hasn't occurred systematically for marine care initiatives nationally which consequently are fragmented, uncoordinated, and unfortunately, occasionally competitive. WCC could encourage Predator Free to offer to extend their experience and relevant expertise, to support the design of tailored, stacked interventions in the adjacent marine areas in Te Whanganui-a-Tara.
I strongly support 4.4. and all proposed actions. Under a. regarding resources: WCC needs to offer to support mana whenua led kaitiakitanga of Te Whanganui-a-Tara. Any resource WCC can offer is important and can also be leveraged by Iwi/Māori funds, GWRC, targeted philanthropies such as The Clare Foundation, and also by Fundsorter.com, the new generative AI fundraising platform (developed by Wellingtonian Lani Evans).
I strongly support 4.5. and 4.6. This is great detail. Regarding 4.6 c: I support supporting community groups to identify sources of plastics and work with those responsible, moving to institute penalties where necessary to drive changed behaviour. This is also where the use of Seabins could be useful. I recommend working with Lower Hutt CC to install them in Seaview marina also.
Re. 4.7. an important opportunity to trial the use of the Fish4all app in point i., or at least use it's experience as a basis for designing such a permitting system. I strongly support a tikanga-based permit, and the option to use rāhui. I support the harbour having an overall rāhui if that is what Mana Whenua wish to do, to give the marine ecosystems a rest and the opportunity to begin recovering – especially in relation to kina barrens and the need to reinstate bigger fish and crayfish, the natural predators of kina – which themselves are an important taonga species.
Relatedly, WCC could support investigation of mana whenua led sustainable finance and blue economy business opportunities that could make use of the excess kina e.g. the Kinanomics Project or a local version thereof. Note the author of this submission was the lead author of the Sustainable Seas Science Challenge Blue Economy Principles for Aotearoa. I recommend WCC adopt them to guide its management of any coastal and harbour associated businesses. They need 'unpacking' place by place, sector by sector, which is a leadership opportunity for WCC, and GWRC in tandem, and partnership with mana whenua and the blue economy sectors that use the harbour e.g. shipping, transport etc.
Relatedly, note all Sustainable Seas Science Challenge research is available through it's generative AI platform tohora.org. I recommend WCC mine this for relevant science and research for the harbour. The plan is silent on the synthesis, tracking and application of
5
the findings of research relevant to the coastal reserves or harbour. This could be addressed through WCC supporting and contributing to a mana whenua-led harbour status report process.
I LOVE and strongly support the detail and propoesd actions on pages 47-48!
I strongly agree with 5.1.
I love and strongly support the Management Approach on pg 62.
Re. 1.2 pg 63 – I strongly support the restrictions on 4WD. It needs a deep education approach however to preven vandalism and reckless endangerment of wildlife and Te Taiao.
I support b.ii. pg 64 – at a small profit cost only. It would be amazing if these baches could be more accessible once their leases expire. They are ridiculously expensive to hire at the moment.
I love 1.3. pg 65, and pg 67.
Re. pg 74 – keep The Bait House open for as long as Dr Victor Anderlini and Judy Hutt want to steward it. When they no longer can/or want to, I recommend assessing it's uses and consulting with the community. Hopefully we'll have an inner harbour National Aquarium of NZ development well underway by then and anyone associated with the Bait Shed can share and deploy their passions there!
All the maps and sites of significance to mana whenua, nature, classifications are awesome.
I didn't see any reference to daylighting streams. Can this be considered please, and one project undertaken in the next 24 months to daylight and restore at least one

stream?
I wish to be heard to speak to my submission.
Thank you in advance. Please feel free to contact me to discuss any matters by email or phone.

Kind regards

Q10 **Please let us know a bit more about your choice.**

Long Text: I strongly support this value. But after having worked for Māori organisations and within the Māori rights and interests space for two and a half decades, I know that consultation comes at a cost for Māori. In the past, Māori have been expected to provide advice and support to council and business on their own time and at their own expense with little or no compensation or remuneration for their efforts beyond a couple of petrol vouchers. Organisations have attempted to ameliorate this situation and to make their lives easier by directly employing Māori staff to establish in-house consultation processes and avoid external consultation. While I'm not an expert, I'm not Māori, I don't speak on behalf of Māori, and these suggestions do not comprise an exhaustive list, key points to consider are:
* to fully respect and unconditionally accept Māori points of view, beliefs and wishes rather than challenging them from a Pākehā bureaucracy and cultural perspective
* to ensure you're speaking to the right people rather than the most convenient and accessible people
* to honour Māori processes as they consult among themselves to resolve issues
* to ensure participants are compensated and actively supported financially and otherwise to consult more broadly
* to build, maintain, value and honour strong a relationships with Māori and to do your very best to prevent trampling on those relationships
* to provide space for Māori to speak for themselves rather than consulting, interpreting and speaking on their behalf
* to honour Māori processes and to provide space for and support those processes with silent and respectful presence, watchful and ready to assist when asked

As I say, this is not an exhaustive list and although it might seems like stating the bleeding obvious, I've observed extreme failure to meet these very basic requirements of decency and respect in the NZ Police, a local council, and the health system within the past ten days. We can do better!

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text While I 'somewhat support' Value 2, I believe that delivering access should be tempered by a strong emphasis particularly on environmental concerns but also on respect for wāhi tapu. Our environment is currently under attack and in serious decline across the board. Our coastal environments are being rapidly degraded by people, plastic, erosion runoff, toxicity, rising sea levels, increasing water temperatures from marine heat waves and so much more. Personally, whenever I see 'access' rated highly in a list of values, I worry that this comes at a price to the environment.

I definitely DO NOT agree that all people should demand access to all places by all means at all times. I believe that particularly vulnerable and sensitive ecosystems (that is any ecosystem that's significantly negatively impacted by human activity) should have access severely limited or denied, particularly when that access is unnecessary.

As an example, we live in Ōwhiro Bay and regularly watch vehicles joy riding out to Te Rimurapa (Sinclair Head) and back after dark. There is absolutely no reason for anyone to be travelling this road after dark, disrupting birds, seals and other animals, subjecting them to the constant and unnecessary onslaught of humanity 24 hours a day, six days a week. (They only get one day's respite each week.) I believe vehicle access should be limited to one day per week (if this absolutely necessary), probably a Saturday and only during daylight hours. The access gate should be locked at all other times.

I also believe that vehicle access past the last bach heading out towards Te Rimurapa should be prevented with the positioning of large boulders from the cliffs to the low tide mark. In particular, access should be prevented to Te Rimurapa/Devil's Gate. In addition to being a home for seals and birds, this is one of the very first landing points for the firsts humans to set foot in Aotearoa. Currently, we allow pointless and unnecessary access to this sacred place by 4x4 vehicles. There's absolutely no need for people to be driving over this place. It deserves to be treated with huge respect rather than trampled ignorantly. Yes, people can have access to these places, but let it be on foot. Laziness should not be an excuse for destroying our sensitive coastal environment and the very long standing history of these places of significant cultural value.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text While I fully support enriching the coastal experience through storytelling, I do not place any value on protecting the remains of human occupation that scar our landscape. On the contrary, I believe we should be seeking to actively remove these remnants of our colonial history - usually concrete monstrosities - and allow the environment to fully recover its pre-colonial beauty. There's little to be proud of in our treatment of our coast, and we have photos to remind us of our destructive ways.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text I absolutely support this value and believe it should be Value 1. I fully support the seven pathways, but believe we need to add two additional pathways to the list. They are:
* Limiting access to sensitive and vulnerable ecosystems
* Funding ecological and historical research into coastal ecosystems

I spoke about limiting access in my response to Value 3. Regarding research, we have the Victoria University Coastal Ecology Lab right on the coast at Island Bay. I have no idea how much connection the council has with the lab, but it would seem to make sense for council to create an extensive list of coastal restoration projects and to actively engage in recruiting university students and staff to start gathering data, researching existing solutions and developing new solutions to restore our coastal environment. We have the added benefit of a marine reserve right in front of the lab with research opportunities available to explore the impact of the marine reserve but also the potential impacts of urban environments on marine reserves. Let's collaborate to make the best use of our existing assets!

Adjacent to the coastal environment, I have heard anecdotal evidence of rising populations of pigs, goats and deer in bush behind the shoreline all of which have the potential to impact nesting endangered bird species (not to mention the hundreds of kiwi that have been released) and reduce their breeding success rates. Something needs to be done to protect vulnerable native species from these introduced interlopers.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I strongly support all of these pathways, but with solutions that prioritise the environment ahead of human needs. Humans can move out of the way. Our wildlife is not always so willing or able to relinquish its habitats.

Re: nature-based solutions, Te Tira Whakamātaki seems to be an appropriate ally.
Re: adaptation, the council needs a plan for an orderly retreat rather than defence to ensure we aren't left with a rubbish strewn coast as the ocean advances.
Re: wildfires, eliminating pines and non native species and replacing them with more resilient and less flammable natives is essential. Starting now! Not leaving it until the fires start.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text While I have already given feedback on this sector in the values sections, I include a summary of key points here:
* Remove the paper road designation of the four wheel drive coastal beach track to Te Rimurapa. This is never going to be a road giving sea level rise from climate change.
* Limit access to the track to no more than one day per week.
* Limit access to the track to daylight hours only.
* Place boulders from the cliffs to the low tide line just past the last bach to prevent access beyond this point.
* Conduct historical research on the seals in the area prior to the colonial slaughter and seek to restore the environment to rebuild seal numbers to pre-colonial times.
* Conduct pest control for pigs, deer and goats in Te Kopahau Reserve to protect endangered and threatened coastal birds species, as well as the recently release kiwi, from these introduced pests.
* Work with central government to increase the size of the marine reserve to protect threatened species that may be threatened by human activity.
* Work with tangata whenua to identify wāhi tapu.
* Work with tangata whenua to restore ingoa Māori as the official names for all places that previously had these names
* Organise regular removal of demolition debris from the beach in front of Te Kopahau Visitor Centre as the bank is slowly eroded by the ocean. The campervan park at the visitor centre makes this a tourist hotspot for Wellington. It regularly looks like a rubbish tip that we don't care about.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Te Araroa and Oku Reserve
The Scope Map shows Oku Reserve as being within scope for this plan. A friend and I have been involved with planting in this reserve for the past two years and know of its stunning beauty. We've been discussing the possibility of extending Te Araroa (which currently starts in Shorland Park in Island Bay) out to Te Rimurapa (Sinclair Head). This point is of particular significance to Aotearoa New Zealand, being one of the first landing places of our earliest explorer Kupe (the first human to set foot in our country). I believe this highly significant landmark would add some purposeful gravitas to the start/finish of Te Araroa in the North Island maybe approaching the significance of Cape Reinga at the other end of trail across Te Ika ā Maui. At the moment the starting/ending point is a kids' playground.

From Te Rimurapa, the reformed Te Araroa trail would progress along Ōwhiro Bay Parade, up Happy Valley Road and Robertson Street, into Severn Street and up through Oku Reserve where there is a stunning viewpoint of Te Waipounamu from which pre-colonial fishers monitored their fishing grounds. This view affords walkers travelling north a final view of Te Waipounamu (the place from which they've come) and walkers travelling south a view of the place they're going to next.

This year we have started the job of beautifying the Severn Street entrance to Oku Reserve and this work will continue in coming years. We also hope to add a range of cost-free informal facilities for the public to enjoy this stunning reserve. We're more than happy to discuss further how this might be achieved.

Seawall weedy wasteland
Last year, I was involved in planting in front of the seawall across the road from Vic Uni Coastal Ecology Lab. We planted fifty? trees that were later mowed by the council. This area is permanently covered in weeds and could be so much more beautiful than it is a present, particularly as it's more protected (by the seawall) than any other part of the coast. I'm happy to replant this for free but only after the council places a solid barrier fence here to protect future plantings for council mowers and from the general public trampling the plants. This is the story I tell about the council and this space each time I get an opportunity. Let's talk! :)

Slashing

And while we're on the subject of mowing. Each year, the council sends a slasher up Severn Street indiscriminately slashing roadside trees and vegetation. In the process, the slasher brutalises pohutukawa and other native trees in its path leaving torn and bleeding limbs that weaken the trees but are also an eyesore. These trees not only beautify our environment, but also provide food and shelter for our native birds. Last year, a friend was forced to run out and protect a year-old planting from the slasher. Surely we have grown beyond the slash and burn mentality of yesteryear when every native tree was seen as an obstacle standing in the way of profit. Let's grow up a bit and treat our environment with more respect. At the very least, can the council create a 'NO MOW' pillar that can be placed on the verge to prevent this carnage.

Road safety
Apparently, there was once an informal path from in front of 174 Severn Street down to Great Harbour Way providing an alternative walking route to the dangerous, footpath-free, single lane section of Severn Street above the Ōwhiro boat ramp. Restoring this footpath would deliver an alternative safe route for the newly extended Te Araroa route while also providing a safer route for locals who currently take their lives into their hands every time they walk this unprotected section of the road.

Access
I suggest that the council investigate starting a bus service to enable travel from Te Kopahau to Lyall Bay. At present, this journey travels inland and takes 55 minutes by public transport - a journey that takes 10 minutes by car. This service would provide public transport access to all South Coast beaches from Ōwhiro Bay to Lyall Bay, enhance opportunities for walkers to make return from a walk around the coast as well as providing visitors with a return scenic trip around the coast. In would also connect cafes and restaurants in Lyall Bay with the aquarium in Island Bay, Beach house cafe and Te Kopahau Visitor Centre in addition to walking tracks in reserves along the coast. Maybe this route might be limited to weekends and public holidays or similar and publicised by Metrolink.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support

Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Names
Re: Appendix B. I'm wondering why you've used the English word 'park' in the restored Māori names, e.g. Shorland Park will become Te Mapunga 'Park'. Surely we'd like the new/old name to be fully in te reo Māori? And while we're at it, let's not use a tokenistic transliterations. There are so many stunning words in the Māori language. Let's invest in asking a kaumātua to provide a symbolic and beautiful name that reflects the history, the significance and/or the future nature of this place - what we want it to become. Having a half Māori/half English name seems to be missing the point. With love... :)

Additional info
This plan is looking very promising, and I'm very excited to see positive action at a time when our world often seems to be descending into chaos. Please feel free to contact me if you'd like me to expand on anything in this submission. The information I've included is completely off the top of my head, hurriedly bringing together things I've discussed with others over the past few years. I love living on our stunning South Coast with its ever changing moods and I'd love to be involved in creating the future direction of our beautiful home. Thanks for the opportunity to submit on the plan! :)

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text The Wellington Jeep Club strongly opposes any changes to recreational access to Te Kopahu and suggests that the status quo remains.
We suggest that the Council makes some “Measures of Success” and starts to compile data about the public use of the South Coast to be able to properly make decisions about restricting access. The number of people using the coast would be the most obvious measure of success. We see no proof of antisocial behaviour or poaching and think that there are other agencies whose task is to enforce these issues rather than the Council.

4wd clubs like Wellington Jeep and Cross Country Vehicles have done a large amount of community work over the last twenty years including beach cleanups and separately dune replanting and currently assisting Capital Kiwi over the last four years to maintain trap lines throughout Te Kopahu. Maintaining 4wd access has secondary roles in providing support and rescue for other sports events like running and mountain biking. The best example of support from the 4wd clubs came in January 2023 when the Kaitaki ferry ran into engine difficulties and vehicles were called out in case

Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Don't know

Q29 **Please provide any additional feedback on the draft plan.**

Lyall Bay
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text Great to see the improvement of the Lyall Bay area with several projects.
We would love to see a move for Lyall Bay Parade to be developed with walkers and bikers in mind. Either bay widening the footpath and making this a slow shared (walkers and bikers) space or for the road design to be changed to a pedestrian priority slow zone (using pavers and traffic calming measures etc).

For visitors to Wellington, this area is in need of better way-finding back to the city so people know how to easily access the newly installed bike lanes.

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text This is a key recreational route for locals and visitors to Wellington. We support a plan to implement high-quality walking and cycling infrastructure to enable more people to access the area safely. As this is a complex project, we encourage the implementation of a transitional approach to infrastructure implementation enabling some progress to be made sooner.

We support the investigation of prioritising this area as a recreational area, including looking into making the road one way. Can the road be one way in different directions and different times of the day, to enable residents?

Can 'Main Rd' from Shelly Bay Rd to the old Crawford Prison be open and accessible to cyclists?

We would like to see interpretive signage with information of the significance of the sites to mana whenua.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text Oriental Bay and especially Freyberg Beach is used all year around by recreational and sports people. There are large community groups of runners, triathletes, paddlers and ocean swimmers that congregate and use the beach for a range of activities. Ocean swimming (and ocean dipping) has increased expotentially in the last 5 years as people see the benefits mentally and physically of this past time.
The showers, changing room, and public facilities at the council Freyberg Beach building have not changed since the build was built over 30 years ago. The wood exterior of the building recently had it's first ever treatment and re-staining since it's construction. It's exterior appearance has been transformed from neglected, rusty and mouldy to looking like a building that is welcoming and belongs.

However the interior, especially the changing room facility is dark, murky and unwelcoming, even in summer and especially in winter. Better lighting and and a coat of light paint on the walls of the changing rooms would lift it's presentation and make it feel much safer. Many people avoid using the changing room because of it's current unpleasant ambience and feel safer changing in the public carpark instead.

There are two external showers for beach users to wash off sea water and sand. Again, these showers are as old as the building and past their useful life. The water flow pressure from the showers are so low and weak they dribble out and are incapable of providing any useful rinsing facilities even if you stand there for five minutes. With even a gentle breeze, what water that does come out gets blown horizontally away from the user so standing under them is a waste of time.

The now much higher number of year round sea swimmers and beach users need to be serviced much better and showers with a reasonable pressure and flow rate (or lack of) is one of the key complaints about the facilities. I

recently visited both Auckland Mission Bay and Mt Maunganui Beach and used their beach showers. Both cities provided beach showers with excellent pressure which meant I could get a decent rinse in about 10-15 seconds. By contrast, my almost daily rinse at Freyberg Beach requires me to stand under chasing water drips for at least 3 minutes if I hoped to achieve the same level of rinse.

WCC needs to change the user facilities installed 30 years ago bring it up to a standard that meets what users have needed for the past 5+ years to enjoy the beach and inner harbour.

I have read the plan however I do not see any action items that these specific needs would be actioned under, nor do I see and allocation or assignment against existing or new funding for this part of the coastline. There is mention of apparently already existing solar-powered showers, however there actually are none in this area that I know of that currently exist for Oriental and Freyberg Beach users. In addition there is no mention of any action item in the plan to allocate funding for the installation of solar-powered showers. I would counter that solar powered showers are not required for beach go-ers and that any funding for solar-powered showers would be much better used to provide vastly improved cold shower facilities. The cost would also be significantly lower, and provide a much more beneficial and appreciated facility for all beach users.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support

Long Text SUBMISSION ON DCRMP from CROSS COUNTRY VEHICLE CLUB Inc.
SUMMARY
The Cross Country Vehicle Club (CCVC) is an Incorporated Society established 53 years ago that has been using the South Coast for recreation and conservation purposes for many decades.
The Club submits that management approaches should be based on tangible and published information, giving a defendable, evidence based, approach. Anecdotal and hearsay information should be largely discounted.
CCVC's primary interest is in Sector 1, the area beyond the Visitor Centre. This land area is essentially of three types:
1. The Coastal cliff escarpment, owned by Council as Reserve until shortly after Sinclair Head, then privately owned;
2. The Legal Road;
3. Hydro Parcels which directly abut the legal road.
As a formal Consultation under the Reserves Act is far from clear what powers might be sought to be exercised over the legal road or hydro parcels in Sector 1. Both of these areas have strong legal rights of public access outside of the Reserves Act. The RMA for example makes "The maintenance and enhancement of public access to and along the coastal marine area, lakes, and rivers" a Matter of National Importance
Management Approach (Page 64)
This section immediately takes a "limit and closure" perspective and does not recognise that ongoing and improved information, education and enforcement should be the first approach. The approach does not reflect the published draft engagement undertaken by Council. CCVC does not support the "limit/closure" approach and related Actions 3, 5, 7 proposed on Page 67. The ULR should be managed in accord with the Walking Access Commission guidelines. As an example, "concerns" about vehicle speeds (as a road a limit of 50 km is applicable) are identified, but 4WD's typically travel at 30 kph or less. No signage is in place, but it may be better to use the process (under the Transport Act) to define a lower speed limit (the Club recognises that 30 kmph would be suitable), providing appropriate signage and Police enforcement.
Walkers also need to recognise that they are generally using a legal road and should not impede vehicles by walking in the middle of the track in presence of vehicles (they don't do it at Oriental Bay!).
There are significant omissions in that "dirt bikes" which can be fast and intrusive are not mentioned in the draft. Likewise, the adverse effects of browsing wild animals (pigs, goats) on regeneration are not mentioned, but are far worse than 4WD use. There is little coverage of the heritage at Sinclair Head, on Council land.
Specific comments are given in the following sections of our submission
ABOUT CCVC
The Club has used the "South Coast" for recreational and "community good" 4WD activities use over many decades.
• In November 2025 the Club will undertake a "clean up" of the area which will be the 25th year that this annual activity has taken place.
• In July 2025 the Club, in conjunction with supply of plants from Council, undertook its 16th annual planting for coastal vegetation. Other groups such as Forest and Bird have participated in our work in past years.
• CCVC has managed a string of predator traps for some 6 years around the coast as a part of a MOU with WCC and Capital Kiwi. (other trapping activity is within the upper Te Kopahou area)
The Club has transported various groups around the Coast including
• International Students from St Pats College
• Friends of Otari
• Wellington Botanical Society
The Club also assists when requested in other activities, for example"
• in the recent incident involving the Interislander ferry, the Club assembled a couple of dozen 4WD's at short notice to assist Police in transport of rescuers and possibly passengers. More vehicles were available if required.
• Removal of abandoned vehicles (typically at request of Council) to avoid potential adverse outcomes
All of these activities rely on ongoing use of the legal road corridor around the coast from the Visitor centre to Karori Stream mouth (and beyond).
This demonstrates that 4WD use is not adverse to good environmental management, but can be complementary. Indeed, ongoing access is essential for such activities.
CCVC remains open to further support of Council improvements to the area, for example in limiting access to private land, better signage, potential fencing etc.
CCVC is a member of the NZ4WDA who support these submissions. The Club has a MOU with Council about the South Coast which seems to have been ignored in the DCRMP process. The Club wishes to be heard in support of its submission.

THE CURRENT POSITION
The coastal track used by 4WD, motor bikes, e-bikes and walkers is a gazetted legal road from the Visitor Centre to well beyond the physical scope of the DCRMP.
The track deviates from the Gazetted road to the hydro parcels to avoid areas of planting and revegetation, but otherwise largely follows legal road.
Council own the steep cliff escarpment from the Visitor Centre through to a little beyond Devils Gate, when it becomes private land.
The Hydro parcels of land are relatively narrow and immediately abut the Legal Road on the seaward side except for small portions of specific Reserves such as the DoC managed area at Red Rocks. Obviously parcels have varied over the year with tidal action.
The public has a statutory right of access to the common marine and coastal area whilst the legal road is managed under the Transport Act, not the Reserves Act. 4WD access to the track is limited on Sundays (9am - 6pm, but not otherwise.
Council has stated that the DCRMP is a consultation under the Reserves Act.
It is clear that the Reserves Act does not provide any powers to manage or alter the status of legally gazetted roads. Different legislation applies. On that basis much of the proposed restrictions or limitations on access to the legal road fall away and should be removed from the DCRMP.
DCRMP DEVELOPMENT
The differing views on some topics as discerned through the Draft Engagement have unfortunately not been reflected in the DCRMP. Only views adverse to 4WD use have been given, despite the draft engagement including the view that the present position should remain as is. The Draft Engagement states:
"4WD access and management:
Concerns include environmental damage and safety issues. Suggestions: restrict or ban access, reduce hours, close gates, better enforcement, permits, and controlled entry points, ensuring access for bach owners and emergency services. Others say leave as is."

This balance is not reflected in the DCRMP which focusses purely on closures based on potential, non-specific, adverse effects.

Interestingly in the Snapshot published on your web site, the comment seeking restricted access got 2 "Likes" while the comment about continued 4WD access gained 3 "Likes": If anything, this suggests the status quo is appropriate.
The current DCRMP contains little tangible information, and some key assertions are now agreed by Council as not accurate, and seemingly more of a guess than real data, for example the 90% figure of visitors access on foot on page 63 is not supportable by any Council information and is now has been described as "likely to be approximately 80 – 95%". It is unclear what the data is based on and frankly we suspect it is largely unsupportable. Recent CCVC data supports a 60 % value, but samples are limited. In any event it is unreasonable to restrict vehicles unless significant adverse effects are present. Is it not more important to protect the rights of all users including the (significant) minority against anecdotal information?
To the Clubs knowledge there have been no complaints to Council or Police about specific 4WD vehicle use (for example citing a Registration Plate) that have led to prosecution actions by authorities. Certainly, Council cannot provide any such data.

PROPOSED MANAGEMENT APPROACH P.64
It is unclear how "recreation" and "conservation" can be managed by adopting changes to vehicle access, given that other access will remain via bike, and walking. Access via 4WD is certainly "Recreation" and is not inherently contradictory to conservation and, as identified by Club activities above, can be complementary.
Certainly, as in any activity, in any location, irresponsible use can be detrimental, but there are realistically few opportunities for adverse actions affecting Council reserve lands (as given in the Table on P.68).
"Restricting vehicle access during "high risk" periods". This is a bit of a grab bag of excuses which cannot be logically sustained and are typically not a Council responsibility. The Club disagrees with this provision and comments of the "grab bag" of examples". Council does not have the expertise to second guess or use different interpretations of other authorities.
Prohibited Fire Seasons – All fires are already prohibited (Council notice), Why just 4WD?
Swell Events – Prediction is typically worst case and overly cautious. Council's role should be limited to information at appropriate times. Why just 4WD?
Biosecurity outbreaks – These are not a Council responsibility, but why for 4WD only and not general access, and why on the coast? Any restrictions should be across the city.
Protecting Public Safety and the environment – these are far to loose to be formally adopted. What is the Public Safety Risk? – it's not identified in the DCRMP!
"Managing vehicle access through seasonal and time-based restrictions".
Enhancing Safety of whom?
Anti-Social behaviour – What is this?
Poaching – This is not a Council responsibility and MPI do periodic enforcement of their Regulations.
Fires – Already prohibited
Freedom Camping – Already prohibited
The Club supports monitoring vehicle access impacts as it is a pre-requisite to considering potential responses. The DCRMP seems to support significant vehicle restrictions BEFORE monitoring of use and potential impacts. This is reverse logic.
There are baches well beyond Devils Gate. Are these simply ignored?
D) historic coastal walkway – This does not require any action on land within the scope of the Draft Plan. There is ample scope for walking along the legal road an adjacent beach. If such a walkway is established some signage could be considered.
DCRMP OMISSIONS
The DCRMP does not mention "dirt bikes" which are capable of faster speeds that a 4WD, are noisier and can pass

close to walkers.
The Club supports signage (presently none) about dirt bikes using the legal road, covering warrant/registration/licences and speeds to inform and educate users, and assist any Police enforcement. (can be done without DCRMP finality).
A further significant omission is the management of wild animals. Smaller animals can be managed by continual trapping as CCVC has undertaken for the last 6 years, but larger pigs, goats etc can cause significant destruction of regenerating vegetation. CCVC acknowledge it may not be a simple issue but agreements with landowners should enable shooting on a regular basis (with or without the DCRMP!)
While the plan does discuss MaorI heritage it fails to deal with the WWII heritage at Sinclair Head on Council land which has a specific Historic Reserve status
SPECIFIC CHANGES
There are differing views on 4WD use along the coastal strip. The draft engagement stated “Concerns include environmental damage and safety issues. Suggestions: restrict or ban access, reduce hours, close gates, better enforcement, permits, and controlled entry points, ensuring access for bach owners and emergency services. Others say leave as is”.
This needs to reflected in the DCRMP.
P 64 Management approach
This section takes a regulation and control perspective and does not recognise that ongoing education and enforcement should be the first approach.
As an example, concerns about vehicle speeds (as a road a limit of 50 km is applicable) are better managed by (using appropriate process under the Transport Act) defining a speed limit (the Club recognises that 30 kmph may be suitable), providing appropriate signage and enforcement.
However, walkers also need to recognise that they are generally using a legal road and should not impede vehicles by walking in the middle of the track in presence of vehicles (they don’t do it at Oriental Bay!).
Use guidelines similar to those of the NZ4WDA could be promoted.
Whilst it is unclear what form Council adoption may take the Club proposes changes to the published draft as follows
P 9 Delete the words “unformed legal road” from the second paragraph. (ULR should be managed under the Walking Access Commission guidelines and cannot be managed under the Reserves Act).
Fix the reference to Appendix C or make one up. Not clear what is referred to!
Delete the second sentence of Note 3
P 62 Under the Coastal Route
Add text such as “The route continues to be an important part of access for recreation, fishing, diving and conservation activities using both 4WD and foot access (typically for short walks).
P 63 Amend the last paragraph to read “Better management of any adverse effects of 4WD use is important ..... These changes recognise it is not 4WD use per se, but any adverse effects they may have that are the concern. CCVC has successfully managed access and conservation for decades.
P63 Delete the sentence about 90% of visitors. (Council agrees it is likely wrong and if it is based on a ratio of 4WD to walkers then it needs to recognise that many 4WD carry more than just the driver. A recent sample by the Club suggests a visitor ratio of 40/60%, but better to delete as no long term data is available).
Delete the current last sentence in paragraph 2. (It is unsubstantiated – what are the “public calls” and by who?). Add two new sentences, one with the privately expressed views of mana whenua, and one with the balance from the public engagement, such as “The public engagement identified concerns with 4WD use (safety, antisocial activity, poaching) as well as the desirability of leaving present access without changes.
Delete the words at the beginning of the last paragraph “Better vehicle management is important and replace with “Better information on usage and any adverse effects is important so as ....to balance etc
P 64
Management approach Delete text under a), I, iii, and A and B and insert:
a) Manage any adverse effects of 4WD use of the Unformed Legal Road (ULR) (add this to glossary) to balance access for recreation and conservation by:
i) Use of the Herenga ā Nuku Aotearoa, the Outdoor Access Commission, guidelines on ULR;
ii) Improving signage to cover speed limits and use of “dirt bikes” on portions of ULR;
iii) Gathering information on usage and any potential adverse effects;
iv) Promoting and cooperating in enforcement of current restrictions by appropriate authorities including:
a. Driving on legal road by Police (Licences, Registration, Warrants, RUC);
b. Potential fisheries violations by MPI (Fisheries);
c. Fires, freedom camping, dogs on leashes, by WCC Rangers.
P.66 Nature first approach to resilience
Delete the entire sentence “Te Kopahou coastline is also classified as a hire fire risk area ....” There is no published classification system of land types for fire risk on FENZ, WCC, or WRC web sites that identifies this “classification” and the sentence should be therefore deleted. A replacement could be similar to “Fires on coastal escarpments throughout Wellington, including in the Te Kopahou reserve, are difficult to fight because of access and the types of vegetation present”
Management Approach
Section a) is vague. It is unclear who is creating what plan and how user interests are included. Recommend rewording to clarify. . The last sentence should be deleted as it pre-judges any plan, and is unclear to whom it applies. The “FENZ guidelines” do not appear evident on searching their web site.
Council will (or should) be aware that the FENZ wildfire reports do not indicate that 4WD (or vehicle) use is a significant contributor to wildfires. Restriction on 4WD use on wildfire grounds are therefore difficult to support.
Section b) should include Police as they are the immediate land response agency.
Add sentence “Maintenance of effective 4WD access to the coastal area is an important part of emergency access.
Section c) Delete entirely. It is inconsistent with access desired in Section b) and suggests beach driving is a preferable long term outcome. This is incorrect as effective public access over a formed (roughly) formed route tends to contain both walkers and motorised use away from regenerating or vegetated areas.

P 67 Action Table
Action3 Delete and replace with “Manage the ULR and coastal track in accordance with the guidelines of the Walking Access Commission”
The legal road has existed for decades without undue management difficulty. See other comments for fire issues.
Action 5 Delete and replace with “Gather information on usage of the ULR and coastal track, along with any adverse effects, as a basis for future policy changes”
Given there are no identified complaints (i.e. with Registration numbers) warranting further action a permit system is unwarranted.
Action 7 Delete. Council should support all recreational access modes, and not discriminate against 4WD access in this area as it is one of the few such places available. There are abundant exclusive areas available where walkers and dog exercise can be undertaken.
It is inappropriate to expect 4WD access through a Reserve to substitute for users present legal rights. Council should use the ULR access protocols if changes are justified.
How do closures improve safety (whose safety?)
Substantive data should be gathered first before “random” closures
Action 9 – Delete as a Council action. Replace with “Council may alter the reserve name if the formal name of the Trig point is amended”. The public and indeed Council is unable to judge the suggestion from mana whenua. The reserve takes its name from the longstanding Trig point name and if a name change is justified it should be first by a name change to the Trig point (initiated by mana whenua as the party who think it may be incorrect, to the Geographic Board) and Council can then follow with consequent actions.
Add new Action – “Cooperate with adjoining landowners to cull wild animals to reduce their adverse effects on regenerating vegetation”

EXCERPTS from the Draft Engagement and comments

Coastal road: Balance recreation access
and environmental preservation. Mixed
opinions on where the road should
be maintained, and others suggested
removing legal status of the road.

In balancing recreation access (Value 2 of the draft plan) against environmental protection, it is not clear what is unbalanced under the present position. Improvements should be through education and enforcement, not regulatory changes which cannot be effected be the present consultation.

Safety: Concerns about safety and
anti-social behaviour. Suggestions:
emergency call boxes, low-impact
lighting,, and better monitoring.
Whilst the behaviour and safety issues are not explicit, the suggestions clearly cover options which may be applicable in “urban” areas, but are clearly totally impractical in the coastal track area. On that basis they are more likely to be related to the car parking area at the Visitor Centre, not the coastal track.
Poaching: Concerns about
illegal poaching disrupting
marine biodiversity. Suggestions:
stricter monitoring, harsher
penalties, surveillance, and
educational programmes
Poaching is, of course, not a responsibility of Council as legislation gives such powers to MPI/Fisheries. Council may wish to assist by installing MPI signage but it is not a primary Council function. The suggestions will (or have) no doubt been passed onto MPI.

EXTRACTS and comments
Council has also provided copies of other comments received at some stage and it is worthwhile to comments on these.
The amount of 4wd traffic to red rocks on Saturdays. There is a chat group on which huge numbers organise convoys it makes it impossible for walkers to enjoy on Saturdays. I agree with letting the Track revert to beach and not maintaining.
Everybody has to organise their own priorities, but if a walker wants exclusive access they prioritise their activities and go on Sundays. However, many are clearly not concerned and choose to walk on Saturdays. Organised groups are perhaps a dozen vehicles are generally pass others in perhaps a 5 – 10 minute period.
Ideally limit vehicle access before this, but at a minimum block everyone but people on foot from going past Devil's Gate into the seal colony area. It's not only dangerous (and crazy when we're talking about 4WDs in an area with endangered sealife) but people should be free to enjoy that area and the seals undisturbed.
Seals (Kokeno) are typically on the rocks, occasionally on the shingle and almost never near the vehicle track. There is no conflict! The term endangered is not appropriate as populations are recovering (DoC).
Restrict vehicle access or manage it better. Even if its just flipping the current setup of locking the gate one day a week to only having it unlocked one day a week. Vehicles are so damaging to the flora and fauna there, not to mention a nuisance to people who just want to enjoy a coastal walk without diesel fumes, having stones flicked up at them by aggressive drivers and having to jump out of the way every time a vehicle wants to get through. A walk along the coast should be pleasant and enjoyable, not like a walk down Lambton Quay.
Walkers have exclusive access on Sundays! Comments on diesel fumes and kicked up stones are simply wrong, but folk can walk away from the road!
Vehicle speed an issue

Enforce requirements that motor vehicle stay on "road" and do NOT go on "beaches"
4WD speeds are within legal limits. See below.
To many cars on the road on red rock beach
The flora and fauna at Tongue Point has been severely degraded by the intensity of 4WD and motorbike movements through the area.
Outside scope of DCRMP
Recommend stopping vehicles at Karori Stream so walkers can enjoy the area without vehicles.
Unclear. Few walkers go beyond Karori Stream.
4wds too fast and too rude - keep the gate shut
Strictly it is a 50 kph area.
Considerable damage has been caused at the Waiariki Stream mouth by uncontrolled 4WDs. The loss of top soil has created significant scarring and erosion.
Recommend stopping vehicles from accessing this area in the future.
Area is either legal road or private land and out of scope, but Council could coordinate an improvement with the landowner (with or without the DCRMP).
Restrict more the vehicle access on the coast (especially motorbikes). Car access is fine, but not for driving fast - it is a shared path. It is annoying to have these guys driving fast, throwing rocks everywhere, and dust especially when it's windy. Or educate a bit more people, with more rangers controlling the access and the track during rush hours. Also control the access to dog owners, with mandatory leash. Dogs running everywhere and chasing birds have nothing to do in coastal reserves.
Typical vehicle speeds do not “throw rocks everywhere”. It is also a Legal (50 kph) Road. Dogs are currently required to be on leash. Not a 4WD issue.

Long Text: WCC is actioning rather than talking about, how to honour Te Tiriti. This is the simplest and most practical way to do it. It's not rocket science, and it goes beyond superficial flexing. I encourage WCC to continue to take more pragmatic action in strengthening relationships with Mana Whenua, be the role model that this city and nation needs to show that our future is hopeful, and we are united in our vision.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: We need to continue updating our infrastructure, as our people absolutely love being in the outdoors. We are city embraced by the sea and our proximity to nature should not be taken for granted. It is good to see WCC in action, rather than councillors spending their time having toxic conversations with and about each other. You are elected into the positions you hold, and some of you have been there for an incredibly long amount of time with nothing to show for it. In terms of how has our city developed, grown and benefitted from your years of service?

This also increases our appeal to international visitors, it shows that we care about something other than ourselves, and that we care about the legacy of our environment, as it should be as shown to us by our indigenous people.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

WCC needs to put more pressure on central government to fund monitoring of our marine ecolife i.e. poaching in Tapu Te Ranga, and the coast period.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice

Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

Sustaining the coast as a storehouse - Central government funding to employ more people to monitor poaching of our marine life in and outside of reserves.

Enhancing litter management - This includes more regular emptying of overflowing rubbish bins, fines for dog owners who do not dispose of their dog poop bags responsibly, FINE for people who litter on the coast period. There is far too much rubbish on our local seashores, and it can all be prevented.

SERIOUS FINES for littering on the spot, improper disposal of litter.

Long Text

Thank you for providing the opportunity to offer feedback about this commendable coastal management plan. The only aspect that I wish to raise is that it does not deal with the impacts and threats associated with overhead powerlines that cross the reserve land.

Although the number of such lines is limited they compromise the coastal landscape and detract from the coastal experience (Value 3, Pathway 3.1). They are also incompatible with Maori cultural connections to the coast (Pathway 3.3).

Action 3 for Value 3 should therefore include a plan to identify and remove any overhead powerlines crossing the reserve land through undergrounding.

In relation to managing the threat and impact of wildfires (Value 5, Pathway 5.3) the contribution of power line failures to fire risk should be included. This threat is set to grow with the projected increase in extreme wind gusts and long dry periods associated with climate change. Many instances of wildland fires attributed to power line

failures under extreme wind conditions have been reported in recent history (e.g. Black Saturday Fires 2009 Australia, Thomas Fire 2017 and Camp Fire 2018 California, , Lahaina Fire 2023 Hawaii).

An action to assess fire risk from powerlines where they cross reserve land containing forest or scrub ecosystems and to undertake undergrounding where appropriate should be included in Value 5 and the sector actions.

My motivation for making this submission is in part because I live in [redacted] Strathmore Park (Rangitatau sector) which borders reserve land forest with powerlines. The neighbourhood has some of the strongest wind gusts in the Wellington region. Many properties here adjoin the forest land and are at high risk from wildfires.

Thank you,

Mark von Veh (Dr)

Long Text 1.2 Access to the coast for recreation and enjoyment

Specific issues:

Management approach: Manage vehicle Access on the unformed coastal route to balance recreation and conservation by:

 We support restricting vehicle access during high-risk periods eg high fire risk.

 We support Sunday and public holiday gate closures to reduce peak time traffic, protect the environment and support non-vehicle recreation.

 We support nighttime gate closures to enhance safety and deter antisocial behaviour, including poaching, fires, and unauthorised freedom camping.

 We support investigation of a permit system for four-wheel drive access but note:

o As earlier in our submission we are concerned about the enforcement of any kind of permit system.

o Questions remain about the effectiveness of a permit system and whether the permit would apply to an individual driver or to each vehicle.

 We support the vision of an historic coastal walkway from the Te Kopahou Visitor Centre to Mākara along the historic route once walked by Te Rauparaha.

 We support the identified actions to maintain Te Kopahou Visitor Centre as a significant coastal area and gateway to the wild southwest.

 We have reservations about the proposal to enable responsible freedom camping at the Te Kopahou Visitor Centre Carpark. Our concerns are largely around Council capability to enforce any restrictions imposed on freedom campers such as the requirement to be self-contained, requirements to not litter/foul, limited stay nights and the number of people present at the freedom camping site.

Section 1.3 Protection and restoration of coastal ecosystems.

 We support the management approach detailed in points a, b, c, d, e, and f.

 We fully support efforts to deter poaching along the coast, however:

o We are uncertain about the ways in which WCC currently supports MPI in this work, as documented in the Plan.

o We do not understand the mechanisms WCC has to support MPI in this work.

o We are concerned about the available and applicable enforcement mechanisms Council has to hand.

 Would like to see this section of the Plan provide detail for improved and enhanced dog control, supported by the fining and prosecution of dog owners who continue to flout dog control laws.

Section 1.4 Nature-first approach to resilience.

 We support the management approach points a and b in this section.

 We have questions about point c. Specifically:

o Clearing slips only where necessary to keep 4WD access feasible.

 Does this mean for recreational 4WD or for emergency vehicles?

o No reforming washed out sections, allowing those areas to transition to beach driving where possible.

 We are concerned about the public safety aspects of moving vehicles from the unformed road to the beach. We think this makes pedestrians unsafe as they may not be highly visible to

vehicle drivers. We have witnessed beach driving at speeds that would make this a very unsafe practice.

 It is unclear to us what the intent of this piece of the Plan. If the intention is to increasingly stop 4WD vehicle access to the unformed road, and we would support that move, then the Plan should be explicit in that statement.

o The Plan notes that riprap or erosion protection won't be reinstated, enabling natural processes to shape the road.

 We are seeking confirmation that this management approach only applies to the unformed road and the riprap and erosion protection elsewhere in Ōwhiro Bay won't be impacted by this decision.

o We note that existing funding to cover delivery is available as per item 7 in the action table.

o We further note this item has a short time frame for delivery.

Te Kopahou Cost and Coastal Route | Action table

We note item 3 in the action table: Investigate reclassifying the coastal road as a reserve under the Reserve Act, enabling improved management and targeted closures during high-fire risk periods.

We have the following questions:

 What are the implications of reclassifying the coastal road as a reserve?

 Does this give Council more tools to act and protect the area?

 We note this work requires new funding and has a 5 to 7 year time frame.

o Can you provide more details of your intention to make this application?

o Can you confirm whether the application would be for a scenic, recreation or historic reserve and why?

 We support the intention to rename Te Kopahou to Te Kapohou in partnership with mana whenua.

 Generally, we are pleased to see a number of items in this action table with existing funding to cover delivery.

Q21 Please provide your comments on Taputeranga | Southern Bays.

Long Text Section 2.2 Access to the coast for recreation and enjoyment

We generally support the items outlined in the Management Approach to manage Island Bay as a primary coastal area and visitor destination. Our neighbours in Island Bay are better placed to represent the views of their community on these issues.

We would note point e: Manage designated off-leash dog areas at Houghton Bay Beach and Island Bay Beach to balance recreational needs with habitat protection and other recreational uses.

 Dog control is a significant issue in Ōwhiro Bay with dogs off lead a problem for many. We have pasted below two photos taken from our trail camera at one of the monitored penguin nest box sites which shows two off lead dogs at the penguin boxes.

Section 2.3 Protection and restoration of coastal ecosystems

Ōwhiro Bay and shore platform and Ōwhiro Stream are referenced in the Plan. However, the Plan makes no reference to the pollution in Ōwhiro Stream nor any efforts to manage/enforce resource consents designed to mitigate pollution issues. We would note in the management approach (item d) that there is specific reference to Houghton Bay. It is our view that Ōwhiro Bay should be similarly referenced and treated.

We want to specifically reference the grading that has been done in Ōwhiro Bay in line with the recommendations of the Dr Shaw Mead report which followed the weather event of April 2020. We note the Plan erroneously describes this event as 2019. Council has not "regularly reshaped the sand". Rather there have been three beach gradings undertaken since the 2020 event, as recommended by Dr Mead. We are unaware of any further or ongoing intention for beach grading in Ōwhiro Bay and would hope to discuss this with Council more fully.

We note in the Taputeranga Southern Bay | Action table item 7: Investigate opportunities to enhance coastal resilience at Ōwhiro Bay through coastal vegetation buffering, building on current beach management efforts and monitoring data. Existing funding – medium time frame. We do not believe there is sufficient detail in this item to be able to comment further.

Matrix

Q29 **Please provide any additional feedback on the draft plan.**

Long Text This submission is focussed on the areas of the Coastal Reserves Management Plan focussed on Ōwhiro Bay and the broader Te Kopahou Reserve.

We would like to thank Council officials for the work they have done to develop this plan and the community consultation they have undertaken across this process.

General comments:

There is concern within our community which echoes the concerns articulated in the plan about the environmental impacts of four-wheel drive vehicles, general safety issues, antisocial behaviour, and illegal poaching operations. We support calls for stricter management, including vehicle restrictions, permits and nighttime closures.

We would further note the plan indicates around 90% of visitors to the unformed road are travelling by foot. We understand that, while Council officers have some caution about the accuracy of this figure, they believe more than 85% of visitors to the area travel on foot. These pedestrians must be given priority in this plan and their safety must

be protected.

As with other areas of the Plan, we are concerned that issues of enforcement are not covered in sufficient detail to give us confidence that WCC will apply the necessary resources to ensure effective enforcement. We want to be very clear that this statement is not a criticism of Council staff, particularly not of our Park Ranger Tom Mayo. It is reflective of a concern that the Council isn't availing itself of the mitigations it has to give effective implementation to the Plan.

We support the emphasis on pedestrian and cyclist safety, traffic calming, and low speed environment but would also note the need to access points at The Esplanade and Happy Valley Road. We would like to see a shared pedestrian cycle path on Happy Valley Road to connect with the Reserve and the Te Aranui o Pōneke (Great Harbour Way) coastal pathway to provide a seamless and safe route for recreational users.

Finally, we note that while outside the scope of this plan, the proposed bus depot in Landfill Road and increased waste truck operations, conflict with the Plan's core values - in particular environmental protection and community enjoyment.

Conclusion:

The comments above are made on the basis there may be further refinement to the Plan in those affected parts. We consider this document provides broad scope to make submissions on the issues canvassed above.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Neutral

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Long Text:

Thank you for the opportunity to submit on Wellington City Council's Draft Coastal Reserves Management Plan (2025). This submission focuses on ensuring the Plan explicitly protects, recognises and safely enables access for wind-water sports (windsurfing, wingfoiling and kitesurfing) on the South Coast — in particular Lyall Bay.
Wellington windsports including, windsurfing, kiting and wingfoiling, are one of the strongest in the Southern Hemisphere due to the City's frequent and consistent strong winds combined with unrestricted access to the coast. It is one of the key reasons people choose to live and play in Wellington.
Greg Thomas has surfed, windsurfed and wingfoiled in Wellington for around 30 years and it is one of the reasons I choose to live in Wellington. I also used to work for Wellington Airport so am very familiar with many of the coastal issues and road protection that is required. David Sweeting is an experienced windsurfer, kiter and wingfoiler both locally and overseas.
It is worth noting while this submission has two signatories from the windsports community there are hundreds of others who would agree with this. But as it is not a club as such, and just individuals who enjoy a recreational sport (like cycling or walking) and people are busy living their lives, it is hard to get everyone to adequately engage with the 100+ page documents and know how to submit. We are confident that most of the windsports community would however be behind this submission.
Importance of Lyall Bay for wind based water sports
Lyall Bay is an extremely popular 'windsurfing' location and is the only easily accessible wave sailing location in central Wellington. Characteristics of the Bay that make it a regionally and nationally recognised for windsurfing

location include:
- Exposure of the beach to strong southerly swells and southerly and northerly winds.
- The pitching nature of the wave providing high jumps and challenging wave riding
- The deep bay holds waves up for longer and smooths out choppy swell
- The curved shape of the beach, which allows sailors to easily penetrate the shore break, even during onshore winds
- Good parking, especially during winter southerlies, and grassy rigging areas adjacent to the western toilet block.
Wind sports enthusiasts can use Lyall Bay 80 to 180 days a year. Some photos taken at Lyall Bay are shown below.

Photos by Richard De Groen

In addition to windsurfing, wingfoiling and kiting, Lyall Bay is also the most popular beach in Wellington for surfing, paddle boarding and hosts both the Lyall Bay and Maranui Surf Life Saving Clubs. The surf clubs regularly host carnivals along with weekend club sessions. While this submission is from us in relation to wind based water sports, it is as relevant for the other thousands of recreational users of the Bay.

Wellington City
Wellington has also been previously rated as the most liveable city in the World by Deutsche Bank twice. The rankings look at purchasing power, safety, health care, cost of living, property price to income ratios, traffic commutes and pollution.
Wellington's promotional website (www.wellingtonnz.com) has previously described the city's as:
Our sparkling harbour is popular for getting on, under and next to. You may be surprised at the number of golden sand beaches close to the city. In summer Wellingtonians flock to Scorching Bay, Island Bay, Days Bay and Oriental Bay (just a short walk from the waterfront), but there are many other smaller, secluded beaches dotted around the coastline.
Watersports of all kinds, from surfing, windsurfing and kitesurfing to kayaking, scuba diving and more are all easily accessible.
Boaties can enjoy sailing, fishing or cruising from one of the four marinas on the harbour, or the many boatramps around the harbour and southern coast.
It has then described some of the key beaches and bays, including Lyall Bay:
Located on the south coast, just 10 minutes drive from the city, Lyall Bay beach is Wellington's most popular surf beach. Although great for surfing, it's still a safe beach for swimming and is patrolled by lifeguards during summer. It's also the best place to watch windsurfers and kitesurfers make the most of the wind that sometimes breezes through Wellington. You'll find a range of tasty cafes, including the Maranui Cafe, and one of Wellington's flagship vegetatian cafes, The Botanist.
Wind based water sports are highly visible, year round activities that contribute to the vibrancy and identity of Lyall Bay and Wellington's wider coastal culture. These users support local businesses (cafés, surf/wind shops, schools and instructors) and activate the beach outside traditional peak swimming periods.
The points above are all made to show that is important for the vibrancy and recreational enjoyment of the city that safe and easy access for windsports is enabled by Tātou ki Uta at:
1. Lyall Bay
2. Evans Bay – accessed at Shark Bay or Kio Bay
3. Worser Bay
4. Seatoun – accessed at Hector St
5. Dorrie Leslie Park

With the context and background above, we would like to submit:

1. Better recognise windsports in the plan especially at Lyall Bay
The plan refers to surfing a lot, but let's not forget Wellington is the windiest capital in the world and there are many great spots for wingfoiling, windsurfing and kiting. Wingfoiling is one of the fastest growing wind watersports in the world. There are a significant number of windsports users across all the disciplines. The map in the plan does not show these and good spots around wellington harbour include:

- Evans Bay – best accessed from Shark Bay but also Kio Bay opposite
- Worser Bay
- Seatoun Beach – best accessed from Hector Street
- Lyall Bay
- Dorrie Leslie Park access to Lyall Bay
It is arguable that Wellington is a better wind water sport location than it is a surfing location and it is recommended in general windsports are better represented within the plan
For Lyall Bay in particular, Management approach 3.2b looks to recognise and support Lyall Bay as a key surfing destination and this is good, but it therefore elevates surfing over other equally important water sports which combined have a significant number of users including windsurfing, wingfoiling, kite surfing etc.
Submission Request:
• Change approach 3.2b to say: "Support Lyall Bay as a key surfing and windsports destination by maintaining appropriate facilities at both ends of the beach, supporting surf lifesaving clubs, and ensuring continued safe access to the beach.

2. Strengthen the Recognition of Windsports Access Area at Lyall Bay
The 2002 South Coast Management Plan explicitly recognised the western corner of Lyall Bay as a dedicated windsurfing access location. The Draft Plan (2025) does not have that mentioned quite as clearly.
So we support the inclusion in Section 3.2g of the Draft Plan that commits to:

"Continuing to support windsurfing and kite surfing access at the western end of Lyall Bay Beach."
This recognition is welcome and should be retained but with some enhancements in the request below.
Windsurfing, wingfoiling, and kitesurfing are equally prominent and iconic activities at Lyall Bay. They ideally require purpose-designed rigging and launching infrastructure, especially in Wellington's strong wind conditions. I ask that the plan adopts a consistent level of recognition and support for windsports at Lyall Bay, but also other spots like Worser Bay and Evans Bay.
In strong Wellington winds, it is unsafe to rig windsurfing and wingfoiling equipment on the open beach — gear can be blown away, damaged, or injure people. Equally, setting up on footpaths or berms obstructs pedestrians and traffic. Safe, purpose-appropriate access and set-up space (as historically identified in the 2002 Plan) is essential.
Setting up windsurf sails, wings and foils on the footpath isn't ideal as wind can blow them over and they also protrude into the walkway and someone could walk into them. Equally blowing up a wing on the footpath isn't ideal for all the obvious reasons. Simiarly trying to blow this up on the sand in 25kts wind means it could either blow away and/or get damaged. These are not like kites that are able to rest on the beach – these hand held winds fly around and need to be weighted down.

Submission Request:
• Ensure that wind-powered watersports are given the same level of recognition, facility support, and structured access planning as surfing under Section 3.2(b).
• Support the draft plans inclusion in the management plan for Lyall Bay 3.2g: "Continuing to support windsurfing and kite surfing access at the western end of Lyall Bay Beach." But amend this slightly to say "Continue to support wind based water sports access at the western end of Lyall Bay beach by providing grassy rigging areas where possible and adequate space for users to safely set up and de-install their gear."
• Reinstate an explicitly mapped and protected wind sports access / rigging / launching area for Lyall Bay (as in the 2002 Plan).
• Improve the rigging area by removing obstacles (including some of the current poles and ropes in front of the dunes) and creating a better walkway that could also protect the dunes.
• Make it easier to access the rigging area by having a better gap between the car barrier and the grass and/or some cut aways in the wall so it does not have to be climbed over every time.
• Consult with all wind sports groups over the current poles that create multiple hazards. It will be easy to come up with a workable solution for all given the intention is a light touch barrier to prevent people walking on them outside of designated access to the footpath.

3. Recognise other areas which are well used windsports locations
As mentioned previously there are other locations where windsports access should be recognised and is needed. There does not necessarily need to be any additional enhancements to the areas, but it is important that current access remains and further obstacles are not created.

Request
Recognise the following locations:
Worser Bay – an excellent location to park and rig up on the grass and walk down to the beach. Well sheltered from the wind in that spot.
Seatoun Beach – best accessed from Hector Street where there is parking some grassy area already.
Evans Bay – best accessed from Shark Bay but also Kio Bay opposite. Shark Bay has good parking and stairs down to the sheltered beach, the railings installed there are too high and making taking gear down difficult, but its manageable. Parking at Kio Bay was removed, but this used to be a good area from the city side to rig up in a sheltered spot and then go straight into the windline.
Lyall Bay – as covered above
Dorrie Leslie Park access to Lyall Bay - When the Southerly swells are significant, launching from Dorrie Leslie park is very handy as it is protected from the swell and also not too far out to sea, making it easy to get back to.
4. Alignment with Draft Plan Values
The requests above should all align squarely with the Draft Plan's values and pathways, including:
• Whai wāhi – equitable access to the coast for recreation and enjoyment.
• Kanorau / Diverse – supporting a wide range of recreational activities.
• Pāhekohekotanga / Integrated – balancing multiple users with smart design and management.

Ngā mihi nui,

Greg Thomas and David Sweeting

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q10 **Please let us know a bit more about your choice.**

Long Text: I do not know much about this, but have recently attended events at Evans Bay Yacht and Motor Boat Club (EBYMBC) in the lead up to the Matariki festival and found the history of Evans Bay and Wellington from a Maori perspective interesting and I am happy for the integration of Te Reo

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: I strongly support the value and specifically water access and recreation, being a keen sailor and a member of EBYMC for over 30 years (including being a past Commodore of the Club). I do, however, have some concerns regarding some of the plans outlined to achieve this value and have outlined these later in this submission.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: Our harbour needs to be protected - it is what makes Wellington. I would like it noted that there is over 100 years of history based around EBYMBC (which was established in 1919). This history has not been recognised in the plan which is an omission in my view. For example the EBYMBC Clubhouse was used by TEAL as its terminal before it moved to Cog Park.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text It is always amazing to see wildlife in and around the harbour. With respect to litter management, I support investigation into public litter collection tools including recycling and note that I am not aware of any around the wharves and boat ramps (specifically thinking of Evans Bay). There are probably facilities around the motorhome area, but these are not easily accessible to ramp and wharf users.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text Understanding potential implications of sea-level rise is critical to knowing how best to protect facilities such as EBYMBC particularly as areas of the ground leased by the Club from the Council are already prone to tidal/storm flooding.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Ākautangi
Cobham Dr to Point Jerningham

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text Section 7.1 talks about pockets of open space and key sites and stories of significance yet it makes no mention that the space between the Club's start box and the EB marina is all open to the public and indeed includes two public jetties/launching ramps. Nor does it note that EBYMBC has had a clubhouse in the Bay for more than 100 years, which was also the terminal for TEAL prior to it moving to Cog Park, which is recognised. The Club's history was well documented as part of its Centennial celebrations in 2019 and should be recognised.

Section 7.2 references access to the coast for recreation and enjoyment including large-scale events and community gatherings. EBYMBC's recent Matariki regatta is a great example of such a multi-cultural event which would not have been possible without on-road parking given the 'open spaces' were all needed for their intended use of boat rigging and launching. The proposed cycle way extension along Evans Bay Parade will remove all on-street parking and make such events logistically challenging at best. While the Matariki regatta is an annual event for which 'special arrangements' may be possible, the loss of street parking around the Club will impact regular activities at the Club which occur all year round. People come from all over the Wellington region to enjoy the Club's facilities and need to bring gear (including boats) and equipment with them. The removal of all street parking near the Club needs to be reconsidered if its facilities are to remain accessible. The concerns about the planned cycle way being in direct conflict with providing access to the water due to the removal of available parking are not new and have been the topics of previous submissions to the Council.

Section 7.2b references managing the EB Marina precinct (marina, boat ramp, car park and yacht club) as a multi-user water sports hub, ensuring future lease arrangements support a range of community activities including waka ama, sailing and other recreation groups. The plan does not recognise that EBYMBC has already established such a hub through the provision of affiliate memberships for other water sport organisations including Wakas, Kayaks, Paddleboards, Sailing for the Disabled, Fishing, Secondary School and University sailing programmes. These affiliations provide their members with easy access to the water along with boat storage and maintenance facilities. It is not clear what is intended by 'Manage the Evans Bay Marina Precinct as a multi-user water sports hub'. There is no need to change the current arrangements which are working well for all groups, and any additional management by the Council (costs) would not provide any additional benefit. As a past Commodore of the Club and a current member of the Management Committee, I know that the Club is open to continuing to work with WCC on this basis and ensure that future lease arrangements are appropriate.

Section 7.2c references plans to upgrade to the EB Boat Ramp to make it easier to use at all times of the day. This needs to be a short term priority given how long it has been a matter of discussion. It is well known that the gradient of the ramp is wrong and makes retrieving and launching boats very challenging at certain tide levels.

Overall, I support ongoing development of the Akautangi sector to provide access to the coast for recreation and enjoyment, particularly as it is a key access point to on the water activities on the Wellington side of the harbour. During my time as Commodore of EBYMBC (2019-2022), I was heavily involved with the consultation run by the Council with the Club and the EB Marine Tenants Association where the Council engaged Wardale Consulting. This was a costly and time-consuming exercise and all the matters I have raised above were discussed at the time. In those discussions, the Club's history and role as a hub for a range of community activities was acknowledged and the remediation of the EB Boat ramp was given a high priority. Reading section 7 of the Draft Coastal Reserves Management Plan suggests that this has all been forgotten?

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Don't know
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Don't know
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Don't know
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Don't know
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Don't know
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Don't know
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Don't know
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Don't know

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text In reference to the Key issues identified in the plan.
- Increasing pressure on coastal reserves.
- Loss of natural and cultural landscape.
- Environmental degradation and ecological emergency.
- Overharvesting of coastal marine species.

I support the urgent action required to prevent these issues getting worse.
I have first hand seen these issues developing in the last 50+years of association with the Te Kopahou coastal route.

I have witnessed over these years several natural landscape areas severely damaged and destroyed by the inappropriate and anti-social use of motor vehicles and motorcycles.
Large areas of tussocks, grasses and vegetation have been obliterated.

Some of the anti-social use of vehicles has resulted in rollovers and physical harm to people. I have first hand had to attend some of these incidents and offer assistance.
I have a high level of concern that it is only luck that has prevented these incidents from resulting in serious injury or worse.

All year round there is consistent littering and poor consideration for the environment.
The natural coastal landscape is constantly filled with bottles, plastics and fallout from camp sites and fires.
This is a major concern with poor camping etiquette of rubbish not being collected, but more importantly, fires not being extinguished correctly.
The coastal route is a very high wind zone and especially in the summer gets extremely dry. These fires could very easily decimate a large area of coastline.
I have personally had to extinguish several in the past after campsites have been cleared.

In the last 50+years there has been significant damage to the wildlife and coastal reserves. This has been however accelerated by the ease of access in modern 4wd's, lack of education and minimal control of users accessing the coastline.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text
I support the plan in general.

I support the intention to work closely with kitesurfers, windsurfers, wingfoilers, surfers, Standup Paddle Boarders and other key user groups of the Lyall Bay area as I do all of the above activities there and have done since the 1980s.

In particular, treatment of the dune protection at the western end needs careful assessment with kitesurfers and windsurfers to come up with a solution that is resilient, achieves the protection goals and does not create safety and equipment damage risks. The treatments to date have failed in most of those respects.

In particular for kitesurfers, the 2 access points just to the east of the Queens Drive roundabout toilets are the most used. This is because that area of beach is the only consistently safe area with clean enough wind and space to launch a kite.

The poles installed to date are too high and have sharp corners on the tops making it difficult to carry a kite off the beach. The poles only need to be waist high to act as a marker and deterrent. If people really want to get into the dunes the current high ones don't create any more of a barrier as you can duck under them.

The poles placed along the front are going to keep washing out in the next big swell and king/storm-surge tides, creating a huge mess of sharp wood and rope. A waste of money and new cost of clean-up. We attach our kites to logs on the beach but there needs to be room for the kites to swing back to the dunes when there is a wind-shift. The kites do not cause any dune or plant damage doing this. With the posts along the front (which as mentioned will wash away anyway) this risks the kite tearing on the sharp post tops or tangling the kite lines which can cause it to suddenly power up and injure the pilot or assistant.

Recommendations:
Lower the height of the posts and ropes down the access lanes to knee-thigh height.
Round the tops of the posts so they don't damage kites being carried through.
Find another solution for the barrier along the beach front of the dune protection area that is not subject to repetitive storm damage.

I support the submission from Wellington Windsurfers about the windsurf rigging area to the SW of the Queens Drive Toilets.

Long Text Introduction
Over the last 20-years, Wellington has emerged as a globally significant centre for community conservation and rewilding of taonga species.
Pioneering work from Zealandia and trapping and restoration mahi across the city has been the base of umbrella organisations like Predator Free Wellington and the Capital Kiwi Project, underpinned by partnership with iwi mana whenua.
The city is supporting recovery of a wide range of indigenous species – tūī, kākā, kererū, kārearea, and now kiwi – that have historically declined or been extirpated as a consequence of living in close proximity to humans. Their recovery is now also due to human impact: this time as guardians and kaimanaaki.
As our communities increasingly focus on how to protect and live alongside our taonga species, it is timely to review how we collectively manage our coastal reserves: the south and west coast of Wellington is a critical part of the city's conservation efforts. Some of these values are due to the coast's relative distance from populated areas and management

needs to be bespoke in recognition of that.
We are proud to play a leading role in delivering on the city's vision: Pōneke, te wāhi auaha e whitawhita ai ōne tāngata me tōna taiao – Pōneke the creative capital where people and nature thrive. We welcome this Plan's commitment to continue to work in partnership with the Capital Kiwi Project on many of our shared objectives.
The Capital Kiwi Project
Across 24,000 hectares – an area bigger than Abel Tasman National Park – the Capital Kiwi Project has operated and maintained a network of 4,600 mustelid traps for eight years. With mustelid numbers controlled to low levels, more than 200 wild Kiwi have been successfully reintroduced to the southwestern hills after 150 years of absence. They are now thriving and successfully breeding.
This grid of traps across more than 100 properties has been made possible by a network of relationships that have been built over time. The essence of the project is the partners that comprise it. The project owns no land and has no regulatory authority; the outcomes have been enabled through building trust and harnessing the voluntary goodwill of a range of partners:
 landowners (80 per cent of the landscape is on privately-owned land; it spans farms, forestry, power infrastructure, city suburbs and the council green belt);
 iwi (both mana whenua and iwi who have gifted kiwi);
 communities that increasingly own and drive this project.
The project is funded from a wide range of sources, including a core corporate partnership with Transpower, and Long Term Plan support from Greater Wellington Regional Council and Wellington City Council.
While the bulk of the Capital Kiwi landscape is on private owned land, Wellington City Council reserve land makes up the majority of the public land in the project area (around one sixth of the total area). Te Kopahou Reserve is an area kiwi are likely to disperse into in from now onwards, and kiwi are already likely to be present in the vicinity of the coastal road running from Te Rimurapa to Ōteranga Bay (kiwi releases have occurred on adjacent Kinnoull and Terawhiti Stations)..
The 5,000-hectare Terawhiti Station is the foundation of the Capital Kiwi Project, providing the bulk of early kiwi release sites. Terawhiti Station is a large land area (around one fifth of Te Upoko o Te Ika / the Wellington peninsula) with significant area of coastal boundary.
Comments on the Coastal Reserves Management Plan
The Capital Kiwi Project believes it is timely to conduct this review, particularly in light of the hard-won conservation gains Wellington has made, and the importance of the coastal environment in taiao protection and restoration.
We are happy to meet and discuss the following short, high-level comments:
We broadly support the areas of focus in the Plan, including acknowledgement of the need for a high management priority to be afforded to nature (taiao) and for an improved balance and management approach between competing demands. We tautoko the setting of the four values that guide this plan.
We agree that the South Coast is increasingly home to a range of indigenous taonga species as a result of community, iwi and landowner work.
The most remote section of the South Coast in the plan runs from Te Rimurapa to Ōteranga Bays. This is now home to kiwi after 150 years of absence. This strip of coast and wider landscape has significant potential for the restoration of other taonga species.
We share the view expressed in the Plan that the absence of tītī, kororā, pakahā, tākapu, kuaka, and kawau pāteketeke along this coast "is a stark sign of habitat loss and ecosystem collapse." We agree with Ngāti Toa that the absence of these seabirds on our South Coast is a reflection of environmental degradation.
We also share a vision, based on partnership with landowners, iwi and community that we can turnaround this degradation, and that Wellington is a pioneer in these efforts.
But the status quo with regard to some behaviours (including destructive vehicle use in sensitive areas, uncontrolled dogs) will need to change to deliver on these taiao aspirations.
We support the statement that "better vehicle management is important to balance recreation with the protection of Te Kopahou's unique ecology and cultural values."
(We note that many 4WDers are part of the Capital Kiwi trapping community and we acknowledge their passion and commitment e.g. the Cross Country Vehicle Club looking after an extensive trap network in Te Kopahou; an effective long-term partnership with the project and WCC.)
How vehicle access to this part of the coast is managed is a policy discussion for council and stakeholders (including landowners, iwi and user groups); we endorse calls for discussion of stricter management, including vehicle restrictions, permits, and nighttime closures.
Alongside taonga species protection and restoration, the risk of fire, of uncontrolled dogs (not only to wildlife but to people, other dogs and livestock), and protection for overfished marine species would all be improved through better management of vehicles.
2. We broadly support the Plan's approach and focus as it relates to dogs. We support the proposal to continually review and refine dog exercise areas with a focus on the prioritisation and protection of taonga species. We support the identification of the Te Rimurapa / Sinclair Head to Oteranga Bay coastal strip as regionally significant for ground-nesting birds and that it should be managed accordingly (vehicles, dogs),
We note that dog owners are core conservation partners and for every dog exercise area changed or removed, other options must be provided if dog control regulations are to be followed.

We note the importance of adequately resourcing education, relationships and awareness amongst the dog owning community to achieve these outcomes.
Conclusion
We support the acknowledgement in the Plan that our South Coast is a vital part of our city's identity, and core to our shared commitment to ecology and taiao protection.
We offer an invitation to the authors of this Plan and decision makers on its final form to come and engage with the Capital Kiwi team and discuss with us the changes we believe are required to better manage and protect the outstanding and hugely valuable South Coast environment.
We look forward to hearing back from you and to meeting as soon as you are able.
Ngā manaakitanga.

Long Text: Our coast is a major part of the attraction of living here.
It is much more attractive than it was when I first moved to Wellington; further improvements will enhance the value of living here.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text: I think the plan is weak on dealing with exotic plants & trees which form a significant part of the local landscape.

The pines and macrocarpa trees along the escarpment are old, a fire risk and are preventing re-growth of more appropriate local species. There needs to be a phased plan for replacing them over time.

Some scrub acts as a nursery for native plants, but there are also extensive areas of invasive species such as wandering willy and old man's beard.

Q15 **To what extent do you support or oppose this value and its pathways?**

Long Text See comments above about plan for progressive removal of pines/macrocarpa

Good to have toilets somewhere between Pass of Branda and Moa Pt

Need a plan for using Seatoun Wharf for transport rather than just fishing

The top of Oruaiti Reserve (the old pa site) is not being looked after properly and looks scruffy. If money gets spent on improving these areas, it needs to be maintained properly.

Take more care of which materials are used for signs, lights and other structures.
Wooden signs become invisible; metal signs and lamp-posts are rusting away; stainless steel should be used instead of galvanised fittings in order to reduce corrosion.

Do more to discourage fireworks/bonfires in this area in late October/early November. We are often a sky-rocket away from a major blaze on the escarpment - which would lead to decades of recovery on steep slopes.

Stop approving more buildings (mainly homes) that are close to the sea and only just above sea level.

Plan for how to change designs to enable survival in the event of sea level rise, storm surges and minor tsunami (e.g. by making ground floor areas for garages/storage only - not living areas).

I can't see why the dog pound needs to be moved. This sounds like a costly exercise and will lead to noise issues with neighbours at a new location.

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q10 **Please let us know a bit more about your choice.**

Long Text: We respect the valuable input and leadership from Taranaki Whanau and Ngati Toa and their attitude of inclusiveness and education. The cultural significance of Wellington's coastline is what makes it an even more special place. We're confident that with their guidance the coast will flourish and become a magnet for spiritual and cultural growth.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Many people have told us that we're an "essential coastal amenity" yet we receive no financial support from the Council. We pay a facility use fee, water charges and a maintenance fee to the WCC. We strongly endorse the Council supporting diverse experiences but would appreciate being included as an "essential coastal amenity". We are not in support of providing freedom camping on the coast. We feel that if freedom campers were situated closer to the city, they'd be more inclined to shop and dine there.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text

We would prefer signage, new structures and man-made infrastructure be kept to a minimum on the South Coast. It's a wild natural environment and any kind of artificial structure is intrusive and usually ugly.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice

Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

A lot of these things are already happening on the South Coast thanks to dedicated community volunteers. In Island Bay, many of the school groups that book for our Marine Education Programmes are encouraged to collect rubbish from the beach. They come back to visit us time and time again and feel a special "ownership" of "their" beach. This ethic spreads to the rest of the community when the school children tell their whanau what they've been doing. We're convinced that education is the key to restoration and environmental custodianship.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice

Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Waves on the South Coast occur from the south with waves from the south-southwest being predominant but the presence of Taputeranga Island means that waves arriving at the Bait House are refracted resulting in lower waves. The Bait House isn't subjected to the ferocity of storms like those experienced in Owhiro Bay and other less protected areas of the coast. Also, there are studies that confirm that climate change and sea level rise in Wellington is very unlikely to affect the Bait House in the foreseeable future. The Kapiti Coast Council is investigating studies that call into question the models that Kapiti Council and the WCC have used in predicting the effect of climate change. In addition, the Bait House's deadline for earthquake strengthening is 2032 - 7 years away. In one document the Council says that the Bait House is a "reinforced building" yet more recently it has been declared unreinforced. Since it was constructed in 1949 there have been several major earthquakes which have not affected the integrity of the building. It's built on bedrock - not sand. In any event, major funding will be required to mitigate the effects of climate change and it doesn't appear that such funding is available.

Long Text

We've been a presence in the Island Bay community for 30 years. Since 2004, we've poured our heart and soul into the Bait House. We transformed it from a derelict eyesore that was scheduled for demolition into our Island Bay Marine Education Centre. A welcoming sanctuary where people of all ages, all nationalities and all walks of life can learn about our treasured marine environment. A place where people become inspired to care about the sea creatures that are our close neighbours. We've hosted over 750,000 people for our booked Marine Education Programmes and our Open Sundays @ the Bait House. We've encouraged our visitors to support local businesses when some of them were suffering badly because of the construction of the cycle lane and lengthy roadworks. We were devastated when a Council Officer told us to check out the Coastal Management Plan because the Bait House was mentioned in it - only to find that it was under threat of demolition or repurposing.
We feel that the Bait House - or more specifically our Island Bay Marine Education Centre - is part of Island Bay's history and it would be terribly sad to lose it.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

The Maranui Depot and Quarry was a site that we investigated intensively as a possible place to construct our proposed Ocean Exploration Centre. We found that it had been a toxic dumping ground for many years and we would either have to encapsulate the ground where the waste was dumped before building or build away from it and encapsulate the rest of the site so the waste couldn't be accessed. This would have been prohibitively expensive. In addition, much of the cliff at the rear of the site is dangerously unstable and any construction would have to be well away from it leaving most of the site unusable. So, we have reservations about what the Council proposes to do with the site and the availability of the amount of money required to remediate it.

Long Text Local community involvement in coastal reserve management
Local community groups along the southern coast undertake a lot more than written in the plan. We in Lyall Bay contribute to a monthly cleaning of plastic from the coastline. This occurs on a monthly basis (first Sunday of the month at 10am by the Lyall Bay playground. We normally collect around 3 bags full of rubbish from the beach and surrounding streets. There are a number of other local groups who undertake similar regular beach cleaning activities throughout the year. In addition there is a yearly beach clean at the beginning of summer involving many local community groups and collecting large amounts of rubbish.
Of note these activities by the local community groups have actually reduced the amount of rubbish dumped on the coastal environment. If people see the coastline as an area of land that it looked after e.g. no rubbish, they tend not to dump rubbish.
The southern coastal reserves are in essence cleaned and looked after by the community. Which is in radical contrast to the WCC manicuring of Oriental Bay on a daily basis in summer.
Lyall Bay Coast Care is supported by the council in the fact that we can leave the rubbish by the bins and it is picked up however greater support would be welcome in the form of gloves, bags, advertising and recognition in this reserve management planning.
In addition please talk to local community coast care groups as they have a lifetime of knowledge and different perspectives that can add to the resilient planning that is needed along the coastline.

Coastal structures – Rubbish bins
The Lyall Bay beach cleaning activities would be greatly enhanced with appropriate rubbish bins. The rubbish bins that are presently on the Lyall Bay are not fit for purpose. Unfortunately, the reserve management plan is moare interested in 'visual cohesion' than actual functionality of coastal rubbish bins. The present rubbish bins are not big enough and on a sunny weekend are overflowing by the end of the day. But worse is the seagulls sit on the covering at the top of the bin and pull the rubbish out looking for things they can eat. The rubbish bins have got to a time of life when they are often do not shut properly after they are emptied, leaving the whole bin able to fall out of the bin frame. A replacement rubbish bin that was larger and seagull proof would be more appropriate than the ones we have at present.
Therefore I would add the design of structures to be 'functional' in the extreme coastal environment.
In Lyall Bay we don't want a reduction in the number of bins as the local community would be left to pick up the rubbish or it will just blow about in the coastal environment. Its great having the idea of 'Pack it In and pack it out' however most of the rubbish comes from food container waste bought in the local Lyall Bay area.

Reserve classification
It is positive to have the reserve classification of Lyall Bay Beach in total classified as Recreation Reserve. It is primarily and are of recreation and sporting activity. However the council and the community have worked hard for many years to create a sand dune with native fauna on the bay. In 1986 when I undertook a survey of the southern coastline and Wellington Harbour the Lyall Bay dunes were in very bad shape with only remanent pingao growing at the western and eastern end of the bay. The dunes now look amazing. However with climate change increasing sea level and storm events constant work needs to be undertaken in maintaining the rope fence restricting people access on the dunes.

Lyall Bay West Escarpment to be named Waitaha Reserve
The name Waitaha Reseve is good as it relates to the settlement and early Iwi. It would be good if there was some way to access this land as it is very weed infested. It would also give an alternate elevated area in case of Tsunami for the local Lyall Bay residents.

Integration of fore dunes of Lyall Bay and back dunes of Hue te Para Park (Lyall Bay Esplanade Resreve
While it is positive that the eastern end of Lyall Bay could get a toilet and change structure on Wellington Airport land greater consideration of the long term plan of Hue te Para Park is required before selling off the land,
I believe that the Lyall Parade should be moved inland onto Hue te Para Park and Lyall Parade road, footpath and seawall should become a wider dune.
By moving Lyall Parade inland you will recognise the important intrinsic connection between the land and the sea and improve the natural dune formation. Your will create a true dune that is more resilient to sea level rise and storm events than what is there at present.

Ex Maranui Depot site
It would be very positive to have the ex Maranui Depot site restored for environmental and recreational purposes.

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Moa Point pound
Transforming the dog pound into something positive for the coastal environment rather than something that is a lock up for dogs would have many benefits.

Walking track along the coast between Breaker Bay and Moa Point
It is positive to see the idea of having a better coastal path. The section of coastline between Breaker Bay and Mao Point could be improved with a more formlised raised pathway. This would help provide access for people less able but also create a defined walking pathway and potentially reduce the number of informal pathways in different places.

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

This may be duplication of what I have already said - Coastal Reserves Management Plan 2025 comments by Yvonne Weeber

Local community involvement in coastal reserve management
Local community groups along the southern coast undertake a lot more than written in the plan. We in Lyall Bay contribute to a monthly cleaning of plastic from the coastline. This occurs on a monthly basis (first Sunday of the month at 10am by the Lyall Bay playground. We normally collect around 3 bags full of rubbish from the beach and surrounding streets. There are a number of other local groups who undertake similar regular beach cleaning activities throughout the year. In addition there is a yearly beach clean at the beginning of summer involving many local community groups and collecting large amounts of rubbish.
Of note these activities by the local community groups have actually reduced the amount of rubbish dumped on the coastal environment. If people see the coastline as an area of land that it looked after e.g. no rubbish, they tend not to dump rubbish.
The southern coastal reserves are in essence cleaned and looked after by the community. Which is in radical contrast to the WCC manicuring of Oriental Bay on a daily basis in summer.
Lyall Bay Coast Care is supported by the council in the fact that we can leave the rubbish by the bins and it is picked up however greater support would be welcome in the form of gloves, bags, advertising and recognition in this reserve management planning.
In addition please talk to local community coast care groups as they have a lifetime of knowledge and different perspectives that can add to the resilient planning that is needed along the coastline.

Coastal structures – Rubbish bins
The Lyall Bay beach cleaning activities would be greatly enhanced with appropriate rubbish bins. The rubbish bins that are presently on the Lyall Bay are not fit for purpose. Unfortunately, the reserve management plan is moare interested in 'visual cohesion' than actual functionality of coastal rubbish bins. The present rubbish bins are not big enough and on a sunny weekend are overflowing by the end of the day. But worse is the seagulls sit on the covering at the top of the bin and pull the rubbish out looking for things they can eat. The rubbish bins have got to a time of life when they are often do not shut properly after they are emptied, leaving the whole bin able to fall out of the bin frame. A replacement rubbish bin that was larger and seagull proof would be more appropriate than the ones we have at present.
Therefore I would add the design of structures to be 'functional' in the extreme coastal environment.
In Lyall Bay we don't want a reduction in the number of bins as the local community would be left to pick up the rubbish or it will just blow about in the coastal environment. Its great having the idea of 'Pack it In and pack it out' however most of the rubbish comes from food container waste bought in the local Lyall Bay area.

Coastal Structures - Cycle stands along the coastline
Cycling is an important recreational activity along the coastal roads in Wellington. Where there are facilities and carparks there should also be appropriately designed and placed bike stands for bikes to be locked on to. This will allow people to use cycling as a mode of transport to the coast and then enjoy the coast without the fear of having their bikes stolen.

Coastal Structures – lighting
There are a number of areas around the southern coastline where dark sky environment should restrict artificial light to allow for enhanced stargazing and also support nocturnal wildlife habitats.
At the same time as supporting dark sky areas the design and placement of all lighting along the coastline should be considered in greater detail as it is such an important component in the coastal night environment.

Predator control
The local community has in the past and now undertake maintenance and management of predator free traps along the coastline.

Reserve classification
It is positive to have the reserve classification of Lyall Bay Beach in total classified as Recreation Reserve. It is primarily and are of recreation and sporting activity. However the council and the community have worked hard for many years to create a sand dune with native fauna on the bay. In 1986 when I undertook a survey of the southern coastline and Wellington Harbour the Lyall Bay dunes were in very bad shape with only remanent pingao growing at the western and eastern end of the bay. The dunes now look amazing. However with climate change increasing sea level and storm events constant work needs to be undertaken in maintaining the rope fence restricting people access on the dunes.

Lyall Bay West Escarpment to be named Waitaha Reserve
The name Waitaha Reserve is good as it relates to the settlement and early Iwi. It would be good if there was some way to access this land as it is very weed infested. It would also give an alternate elevated area in case of Tsunami

for the local Lyall Bay residents.
Walking track along the coast between Breaker Bay and Moa Point
It is positive to see the idea of having a better coastal path. The section of coastline between Breaker Bay and Mao Point could be improved with a more formlised raised pathway. This would help provide access for people less able but also create a defined walking pathway and potentially reduce the number of informal pathways in different places.

Swim rafts
Have swim rafts been considered in Shelley Bay now the large wharf area has been removed?

Dogs
Signage on where dogs are allowed and need to be restricted for wildlife protection should be part of the Coast Reserve Management Plan. The compartmentalisation of dog bylaws and coastal reserve management planning does not create a happy situation with a high number of deaths of Little Blue Penguin in Lyall Bay.
In addition dog owners appear not to be able to read the signs in Lyall Bay and continue to use the western side of the beach. They also don't like being told that the western end of the beach is not for dog walking.

Remediating and mitigating coastal infrastructure impacts- Culverts and Stormwater discharge points in the coastal environment
Thought the coastal reserve management plan does not cover culverts and stormwater discharge points due to the compartmentalisation of different council areas their design and where they are placed needs greater consideration to improve the coastal environment.
Sumps throughout Wellington needs regular cleaning to reduce the amount of plastic bottles and polystyrene that gets into the coast through the stormwater system. An education campaign on the plastics not getting into drains would be a good idea.
A redesign of how water gets into the stormwater drains and into Lyall Bay would be a very worth while exercise to reduce the flow in storm events. Moving the large stormwater culvert that discharges at this point at the eastern end of Lyall Bay next to the Airport would reduce the erosion that occurs at this end of the beach. The airport reclamation should have created a curved beach at this point but the large stormwater culvert is stopping this happening. The moving of this large culvert discharge point would increase sand accretion at this end of the bay.

Integration of fore dunes of Lyall Bay and back dunes of Hue te Para Park (Lyall Bay Esplanade Resreve
While it is positive that the eastern end of Lyall Bay could get a toilet and change structure on Wellington Airport land greater consideration of the long term plan of Hue te Para Park is required before selling off the land,
I believe that the Lyall Parade should be moved inland onto Hue te Para Park and Lyall Parade road, footpath and seawall should become a wider dune.
By moving Lyall Parade inland you will recognise the important intrinsic connection between the land and the sea and improve the natural dune formation. Your will create a true dune that is more resilient to sea level rise and storm events than what is there at present.

Ex Maranui Depot site
It would be very positive to have the ex Maranui Depot site restored for environmental and recreational purposes.

Moa Point pound
Transforming the dog pound into something positive for the coastal environment rather than something that is a lock up for dogs would have many benefits.

Matai Moana and the Shelly Bay Road and Massey Road
Greater design work will be required in this area and the future adjoining reserve. I support the reduction of traffic around the roads and the one lane and road closures of Shelly Bay to Scorching Bay Road.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly oppose
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Neutral
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly oppose
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat oppose
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Long Text

Wellington International Airport Limited is the owner and operator of Wellington International Airport - a key link in New Zealand's domestic and international aviation network.
The Airport was established on south coast/Lyall Bay site in 1908 and has been a constant in the surrounding coastal environs since. The Airport is bounded by Lyall Bay to the west and south, and Evans Bay to the north of the runway. The Airport shares boundaries with coastal reserves in and around the airport seawalls in Lyall Bay.

Wellington Airport is the gateway to our capital city and surrounding regions. As one of New Zealand's three busiest airports, we connect people and goods across the country and the world. We host millions of travellers every year and make a major contribution to Wellington's economy, society and wellbeing.
The Airport hosts a range of aviation operators including domestic and international flights, corporate jets, the New Zealand Defence Force, medical and diplomatic flights, and helicopters. The Airport is also a provider of emergency services and is a lifeline utility under the Civil Defence Emergency Management Act 2002.
We support Wellington City Council (WCC) in updating and replacing the current South Coast Management Plan (2002) with Tātou ki uta – the draft coastal reserves management plan.
First and foremost, the Airport's key role is to ensure that aircraft can operate safely, and we are primarily concerned with ensuring the draft Plan appropriately recognises and provides for the Airport to operate in a safe and efficient and effective manner. Functional, technical, operational and safety related constrains often influence the location of critical infrastructure which needs to be recognised.

The draft plan recognises there is an existing seawall immediately adjacent to reserve land at the south of the airport. This seawall serves a significant function, protecting the Airport as well as key civic infrastructure, including Moa Point Road, and Wellington Water's Three Waters infrastructure, from the effects of coastal erosion and storm surges. These reserves need to be utilised by the Airport for access/laydown areas for the regular repair and maintenance of the seawall, and in case of an emergency.

The Airport is also of the opinion that the reserve area located between Moa Point Road and the southern seawall (between Moa Point Beach and the Lyall Bay Breakwater) is not appropriate for unhindered public access.
In terms of public safety, the risks include exposure to severe aircraft jet blast and the potential for injury from resulting airborne objects. Because this area is at the end of a runway, it is the location where, statistically, there are greater chances of aircraft-related incidents. The area is also frequently subject to extreme sea conditions at times (people and vehicles have been swept off the breakwater in the past – refer Photo 1 below), and the akmons (seawall armour) are very dangerous to be walking over due to their tendency to move and the cavernous voids in between them.– people could fall in between them and risk serious injury. Refer photo 2 below.
Photo 1: 2018: A car parked on Lyall Bay breakwater pushed into the sea by a wave

Photo 2: Akmons on southern seawall

In this area, public access must be discouraged not only to prevent both public health and safety risks (injury, etc.) for reasons stated, but also to prevent activities occurring that could affect aircraft safety.
For this reason, after the reconstruction of the southern seawall, the Airport is likely to pursue having the reserve status of this area revoked to prohibit unimpeded public access around this area. It should be noted that as the owner of this reserve, WCC is liable as a PCBU under the Health and Safety at Work Act 2015.
Under the South Coast Management Plan, section 6, Management Policies states that:
Section 6 Management Policies
6.5 SAFETY
In the area near the airport (sites B3, B4 and the eastern end of B5) signs warning of the hazard presented by aircraft, or for the safety of aircraft (for example, highlighting the risk of bird strike), are appropriate.
This policy does not seem to have been brought forward into the draft plan. We request that it be reinstated.

In addition to the seawalls, the Airport also maintains the Tarakena Boat ramp in Tarakena Bay for the purpose of access to the sea for its emergency vehicles and watercraft. This boat ramp is located within WCC Recreational Reserve (Section 56 Watts Peninsula District). Although this boat ramp is used by recreational boat users, the Airport only maintains it to a level that allows for its emergency vehicles to utilise.
Section and Page Number Comment
General comment WIAL notes that the plan does not make it clear that several of the issues / actions outlined in the plan are matters for consideration under other statutes (i.e. Resource Management Act 1991 (RMA), Wildlife Act etc). It is unclear how the plan distinguishes its role as required by the Reserves Act from those that are addressed by other legislation. It appears that several of the identified issues and actions go beyond the scope of the management of coastal reserves and the scope of the Reserves Act. It would be useful for the plan to reiterate its role in the management of coastal reserves, and the legislation governing the management of the coastal environment and wildlife.
The strategic and legislative context page should place more emphasis on the NZ Coastal Policy Statement and the Natural Resources Plan, which are the key statutory documents for managing the coastal marine area (which would cover most of the coastal reserves in the south coast).
Key issues (page 12) Inequitable public access is set out as a key issue, with the plan noting that access to the coast remain inequitable – both in terms of who can reach / use coastal spaces and how access is allocated through leases and infrastructure. While it is agreed that there is inequity, public access must be restricted in some locations for health and safety reasons (or to protect indigenous biodiversity). The plan must ensure that, where required, public access to the coast and the reserves network can be restricted.
Pathway 2.1 Strategic placement of coastal amenities (page 24)
It is agreed that well-placed and well-maintained amenities in key coastal locations supports recreation, enhances visitor experiences and protects natural environments. However, amenities need to be placed in appropriate locations, avoiding areas where public access should be restricted.
Pathway 2.3 Supporting water recreation and access (page 26)
Tarakena Boat Ramp. This ramp is used (and maintained, as required) by the Airport for use by the Airport Fire Service for the launching of their marine rescue craft. The ramp is also utilised by the public. WIAL maintains it to a level that is fit for purpose for its rescue craft only.
Pathway 3.1 Protect the coastal character through careful design (page 32)
It is generally agreed that new structures on the seaward side of the road should be limited, and it is agreed that the plan must allow for infrastructure with a functional or operational need to locate in a coastal environment (for example, seawalls). Similarly, the plan must allow for the maintenance and upgrading of existing coastal structures, which may not integrate totally with the coastal environment (by modern standards).

Section and Page Number Comment
The resource consent process is the place where impacts on coastal character are typically considered, and it would be useful

for the plan to discuss how the plan can be applied in an RMA context (or whether it can).
Actions (page 34) WIAL supports the development of sector-based coastal landscape and amenity plans and notes that stakeholders should be involved in the preparation of these plans.
Ecosystems of Wellington's CMA (page 39)
Ensure that the area identified as 'dune system'(yellow) and 'shingle beaches; (light pink / peach) in proximity to the Southern Seawall (Moa Point area) does not include land reclaimed as part of the development of the airport and has been verified (on the ground) so the extent of these ecosystems are appropriately captured by the mapping.
Management approach (page 40)
The plan documents that there are 20 SNA's along the coast. It is noted that the extent and nature of the SNA's in this plan, should reflect the decisions on the Proposed Wellington City District Plan (which in some cases has reduced / refined the extent of SNA's).

Pathway 4.2 Wildlife recovery (page 42 and page 43)
This section of the plan identifies the 'southern end of Wellington Airport' as one of the four "most important mainland habitats for seabird breeding in Pōneke", noting that the identified sites "support Wellington's only mainland nesting colonies for several threatened species." This statement has been extracted from the "State and trends in the indigenous bird values of the Pōneke/Wellington City coastline – May 2025"1 (or earlier version), which refers to "the foreshore at the southern end of Wellington airport runway supports the only breeding population of banded dotterels to be found along the WCC coastline east of Sinclair Head". There are other banded dotterel nesting sites west and north of Sinclair Head. During site surveys by WIAL's avifauna specialists, historical records from WIAL and records from Mainland Island Restoration Operation (MIRO), the number of breeding dotterel at Moa Point is considered to support up to three pairs (at a conservative estimate). This statement therefore needs to be amended to (a) refer to the foreshore to the south of the runway. And (b) refer to banded dotterel only in this area, (i.e., not several threatened species", and (c) refer to "east of Sinclair Head (rather than the whole of the city).
1 McArthur, N. 2025. State and trends in the indigenous bird values of the Pōneke / Wellington City coastline. Client report prepared for Greater Wellington Regional Council, Wellington.

Section and Page Number Comment
WIAL supports the approach to protecting wildlife, and notes that there is a need for infrastructure, including seawalls, to be maintained and upgraded on an ongoing basis, which (if not appropriately managed) could also negatively impact threatened species. These potential effects are managed through the Resource Management Act and Wildlife Act processes, with modern resource consents requiring effects on indigenous biodiversity be avoided, remedied, mitigated, offset or compensated for. Care needs to be taken to not duplicate the requirements of the various statutes that control the management of the environment, reserves and wildlife.
WIAL supports the desire to strengthen protections of biodiversity within reserves through management measures such as restricting access (dogs and people), fencing nesting areas etc.
WIAL notes here that there is a potential conflict and risks to its operations through restoration efforts that attract flying birds to the area. There are significant health and safety and aviation life safety risks for airport operations associated with the potential for bird strike to impact aircraft. WIAL is required to actively discourage hazardous avian species from nesting within the airport environs. It should also be noted that for this reason, the seawalls to the south and south-west of the airport have been excluded from Schedule F2c: Significant Habitats for indigenous birds in the CMA in the GWRC Natural Resources Plan). WIAL encourages the Council to work with the airport when undertaking habitat restoration works in and around the Wellington International Airport coastal area.
Pathway 4.5 Remediating and

Section and Page Number	Comment
mitigating coastal infrastructure impacts (page 45)	The plan notes that the plan focuses on coastal reserves rather than broader infrastructure networks, but managing these impacts is an essential connection for ecosystem health and resilience. Again, it is noted that several different statutes guide the development and management of the coastal environment, including the RMA, which addresses the effects of infrastructure on the coastal environment. The management of infrastructure, unless on a reserve, should not be a matter of consideration for this plan. Existing seawalls, particularly those associated with Regionally Significant Infrastructure (a defined term in the Wellington Regional Policy Statement and Wellington City 2024 District Plan: Appeals version) are fundamental for protecting other infrastructure from coastal inundation and erosion, and there is a functional need for seawalls to be in a specific environment (i.e. a location with a coastal hazard to protect the surrounding land). The plan should ensure that these existing seawalls associated with Regionally Significant Infrastructure, which are located on or adjacent to a reserve, are recognised and provided for. Actions (page 47) Action 4 sets out the following: "Protect the nighttime environment, cultural heritage, and coastal birdlife by investigating lighting controls, including the potential for a Dark Sky Reserve or Park on the South Coast. Review current light pollution levels to assess impacts on wildlife and identify opportunities to reduce unnecessary lighting." WIAL notes that there is significant infrastructure in the south coast that has specific lighting needs – including Wellington International Airport, who's lighting is required for the safe navigation of aircraft in critical phases of flight. It would not be appropriate to have a Dark Sky Reserve / Park in the South Coast area around the Airport, and this expectation should be removed from the plan in its entirety (as it relates to the area around the airport). Stakeholders will need to be involved in any process that places restrictions on lighting, beyond those that are addressed by district plans.
Pathway 5.1 Prioritising nature□based solutions for coastal protection (page 50)	WIAL supports the general intent on prioritising nature-based solutions for coastal protection in general; however, in areas adjacent to the airport, the plan should acknowledge that there are existing hard protection structures (seawalls) that play a significant role in protecting land / infrastructure (including WCC's 3-waters infrastructure, and public roads) from coastal inundation and erosion. These existing structures require frequent and ongoing maintenance (and periodic upgrades) to retain levels of protection. Nature-based solutions for coastal protection in these areas are impractical.
Sector 3 Hue te Para / Lyall Bay 3.2 Access to the coast for recreation and enjoyment (page 89)	WIAL supports the intent to work with WIAL and for the Council to respect the operational constraints of the airport, as outlined by the following text: "f. Work with Wellington Airport to support safe, low-impact recreational use along the coastal edge of the airport seawall for activities like fishing, plane watching, and walking – while managing environmental impacts and respecting operational constraints." This is reflected in Action 5 (on page 92) which sets out that Wellington Airport will be worked with to "improve recreation access along the western breakwater, investigating and implementing options for better pedestrian, recreation and cycling connections." There are health and safety issues associated with utilising airport□related infrastructure for recreational activities, such that public access along the western seawall, breakwater and southern seawall is not appropriate. This matter will need to be addressed through engagement between the Council and WIAL.
3.3 Protection and restoration of coastal ecosystems (page 90)	WIAL agrees with the intent to:

• Support improved stormwater management along Lyall Bay (although it is noted that discharge management is addressed via RMA processes). WIAL holds a global stormwater discharge permit, which includes ongoing monitoring to ensure discharges from the Airport are not having adverse effects on the water quality within Lyall Bay; and

Section and Page Number Comment
• Protect and support kororā populations by managing nesting areas around the riprap seawall, incorporating public education efforts, and minimising disturbance (noting that maintenance / upgrading is required for seawalls and effects on biodiversity are managed via RMA and Wildlife Act processes). The plan should contemplate situations where, to protect kororā, people (and dogs) should be excluded from areas to minimise disturbance.
• WIAL, as part of the project to renew the Southern Seawall, is proposing to relocate kororā from within the seawall (not optimal habitat) to two new (purpose-built) kororā habitat areas.
3.4 Nature first approach to resilience (page 91)
WIAL supports management approach b. which seeks to accommodate runway seawall maintenance by enabling Wellington Airport to maintain and upgrade the seawall. It is noted here that WIAL is currently planning the Southern Seawall renewal project. The plan needs to recognise and provide for these renewal projects to occur.
Appendix A – Activity – Storage or laydown area
Notes that use must minimise disruption to public access, recreation and reserve status. The area around the southern seawall is dangerous for continued public access, especially during repairs and maintenance. It is suggested that there is a "where practicable/safe" preclusion is noted here.
Appendix A Activity – Utility Services
Some infrastructure, such as navigational aids, is required to be located within reserve areas and cannot be located underground.
Appendix B, Proposal 8 Lyall Bay Esplanade Reserves to Hue to Para Park
WIAL supports the name change; however, it should be noted that none of these reserves are vested as "esplanade reserves" as noted. The reserve area shown between Cochrane Street and Tirangi Road is "legal road"; the area between Tirangi Road and Kingsford Smith Street (Lot 63 DP 21360 and Section 1-2 SO Plan 450076) is mostly road reserve with a slither of Recreation reserve between the road reserve and the adjoining privately owned land parcel. The area between Kingsford Smith Street and the Leonie Gill pathway is a Recreation Reserve (Lot 2 DP 839268)

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix
A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat oppose
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Long Text Dear Sir/Madam

The following are our submissions and observations as long time Bach owners on the South Coast, Wellington.

1. No driving on the beach. It is unnecessary to ride or drive on the beach. There is a formed road right to Sinclair Head. Driving on the beach is a danger to the bird life - people fishing, swimming, sunbathing, walking or families with children having picnics. Vehicles increase their speed to stop getting stuck on the beach and have no consideration for other beach users.

2. Enforce a 10 kph speed restriction everywhere past the Information Centre.

3. All vehicles to have registration and W.O.F. (including ALL motorcycles).

4. No LED lights. They blind people and cyclists at night and are used for hunting rabbits and possums etc.

5. No shooting.

6. Close the gate at night. Deters bad behaviour and poaching. Suggest 9pm - 6am.

7. All dogs on leads. At present they worry bird life, people and other dogs.

8. Clearer signage - in one place and easy to read.

Thank you for your consideration to the above submissions.

Regards,

Ken and Ilona Bosher

Long Text
I am a resident of Breaker Bay and have lived there for over 50 years. My family go back here 90 years.

One of the key proposals in the new coastal reserves plan, is to restore dunes and coastal vegetation at Moa point and Breaker Bay to manage erosion and support climate resilience through nature based solutions.

We have kindly been provided with plants from the WCC and we are very keen to plant them to protect the foreshore, however we are finding it impossible to get permission to have any soil placed on the low lying coastal areas, to plant the plants in. Without soil they will die and the nature based solutions to climate resilience sadly will not work.

Apparently, we need to apply to the Transport team and/ or the greater Wellington Council and check with gecko experts, penguin experts and more before we can have even a small amount of clean local clay base soil placed where there is not enough soil. We want to build up the surface where it is low lying so we can restore coastal vegetation to support climate change resilience.

What do you suggest?

Long Text

Draft Coastal Reserves Management Plan

The attached paper should be seen as a personal submission on Council's Draft Coastal Reserves Management Plan. The format includes both direct and what I will call indirect comment by way of statement often requiring a written answer. Given this plan is said to replace the 2002 South Coast Management Plan I have also included a few questions regarding Council's performance for which a written response is also requested.
For ease of reference, I have generally used a standard format involving identification of page and statement or paragraph followed by comment.
In preparing this submission I have been mindful of directions given to Reserve Administering Bodies by the Department of Conservation.

Nature of Consultation
Consultation is not a mere informing, but a meaningful discussion between parties. The party consulting must

ensure that the party consulted has all the relevant information. The administering body must be prepared to listen to the party being consulted and, if necessary, change its views.
Consultation is not a negotiation, nor does it necessarily imply that the administering body has to accept the views of iwi or hapu.

At several points throughout this submission, I have been critical of incorrect names being used. In response to a formal request for clarification, Land Information New Zealand have made it clear that local authorities are legally required to use "official names" where such exist in their published material.

Page 6
Introduction
While certainly not my way of wording an introduction I will concede we are all different. What is important is the accuracy of the content. I note you refer to the water body between North Island and South Island as "Te Moana o Raukawa" Although there is no "official" name I note the Crown through the New Zealand Geographic Board use the descriptive Cook Strait- Māori name Raukawa Moana, a reversal of the words you have chosen. Land Information New Zealand (LINZ), another Crown agency also uses the term Cook Strait on both topographic maps and maritime charts e.g. Chart 46 Cook Strait (last updated 31/8/2023). I am not a fan of flip flopping between the country's official languages.

Within this section the text includes;
"The coast marks the meeting of Tangaroa, atua of the sea and Papatuanuku, the earth mother- an ever – changing interaction shaping the land. This relationship intensified by climate change...." (emphasis added)
To many this comes across as a confusing statement. It would be helpful if plain language was to be used incorporating an example how Council believes the" relationship has been intensified by climate change."

Page 8
Scope
Personally, I found it disappointing the map failed to include the western boundary of the plan. Clearly it was not my decision but no explanation has been given as to why it was excluded. Likewise, the descriptive between Oriental Bay and Karori stream is a little vague. Is Karori Stream in or out, can we have a clear statement?

Page 12
Loss of natural and cultural landscape
While it is true the character has changed with the introduction of habitation, different land use etc. I pose the question where-else would they go if not for, as you emotively put it "encroachment on natural spaces." Society as we know it would not exist had there not been large scale change. To add balance, it equally needs to be recorded much change was consented or approved by officials of the day. The statement does seem "over the top."

Page 12
Environmental degradation and ecological emergency
Here we have an example of where there is a lack of information to support key statements. Officers should be aware that the party consulting must ensure that the party consulted has all the relevant information.
The plan states "once- abundant species such as titi (mutton birds), koroa (little penguins), and takapu (gannets) face habitat loss, invasive predators and human related threats such as off-leash dogs disturbing nesting sites and 4WD's" You may wish to reflect on the chosen wording here as I do not think dogs are disturbing 4WD's.
If we could discuss this for a moment, what period are we talking about when you say once abundant titi, remember we are talking about birds in a specific zone, are you able to set out the reasons for the apparent decline? Another question is where is/are the former gannet site(s) that have been affected by habitat loss etc.? yet another is why have walking sightseers been omitted as a threat, there is ample material covering disturbance of wildlife by members of the public and I would suggest most walkers are unable to spot the eggs of smaller ground nesting birds in the coastal gravels.
In the final part of this section an emotive picture is painted i.e. "leaving behind bare rock"
To add balance, is it not true that some of the activities listed e.g. quarrying have or previously had Council approval? Is it not also possible that the lack of inputs from Council may have also been a contributing factor in some circumstances, if that were to be true then say as much.

Regarding the quarry, a media item from 1919 states;
"To-morrow afternoon The Mayor (Mr. J P Luke) and city councilors accompanied by the City Engineer (Mr. W H Morton) will pay a visit of inspection to what is known as the "Run Around" just beyond Ohiro Bay. They will pay special attention to the matter of road construction in the future, and they will also be on the lookout for a site suitable for a new stone quarry."

If the bare rock faces are of significant concern, then you may wish to seek an amendment to Council's Owhiro Bay Quarry Closure Management Plan 2000.
As an informative comment much of the red rock removed in the late 1960's- early 1970's was for ornamental purposes. As I recall a significant amount went to the facility now known as the Brentwood Hotel in Kemp Street, Kilbirnie.

Page 13
Overharvesting of coastal marine species.
It is all very well claiming "over-harvest" but the statement lacks a creditable source, additionally there is no data setting out what both the estimated and sustainable take levels are. While Council officers may be concerned, I suggest this matter is both technically outside of the scope of this document (The plan provides direction for coastal land owned or managed by Wellington City Council) and further, Council lacks any specific legal authority to get

involved in marine quota, that function rests with the highly professional Ministry of Fisheries. Feel free to correct me if I am wrong. The appearance is that the material Council is reliant upon is anecdotal rather than data driven.

Page 20
Restore Māori place names
Without being seen to be disrespectful or stepping into an area I am not overly familiar with I would simply say to what and why?
Place names change with society, time, and personal association with the land. I am familiar with a case where a catchment's local European name has changed over the decades likewise a prominent point where the given Māori name has also reportedly changed.
Over 100 years ago noted ethnologist Elsdon Best saw fit to write;
"it is however, now impossible to identify some of these old place names, as they were not acquired and preserved by the tribes who took possession of this district a century ago"

Another quote from Best's writings is;
"If this is Makure-rua, then the creek between Sinclair Head and Red Rocks is Waipapa, though most of these creeks have received more modern names, given by the Awa tribe"
It may well be the reasons behind the name are no-longer valid or the name has failed to gain wide acceptance. The decision making must be flexible. A fixed policy has pitfalls. The log has long gone from the headland known by some as Log Point westward of Sinclair Head/Te Rimurapa.
It is not only place names that change, the bird species identified in this document as titi is / was also known as hakoakoa or hakoko.

Page 24
Public toilets
It is recommended Council Officers reflect on the self-imposed ruling of "expanding over time so that all coastal areas have a toilet within 4km along the coast." Close examination will show that one is needed on the westward side of Sinclair Head/Te Rimurapa as the plan's western boundary, Karori stream, is significantly further than 4km from the Te Kopahou Information Centre. Other aspects here include; serviceability, vandalism, actual need, and likely out of character structures.
As a side issue it is my understanding the visitor center toilets are often in "poor condition" during what you may call times of heavy use. Perhaps the plan needs to incorporate a few words around improved facility management.

Page 25
Why this matters
Current text includes "This plan prioritises walking access as the primary way people connect with the coast." yet no rationale or summary of discussions with other users has been included. Such a position gives weight to those suggesting submissions are a waste of time as Council has already made up its mind.
Earlier, under the heading of Connected Coastal Paths and Tracks, reference was made to what is called the Red Rocks Trail, given that nothing appears under that name on Council's web site it is assumed reference is being made to what an information item referred to as the Red Rocks Coastal Walk. Let's be honest, and call it what it is. I suggest Council knows very well that this is not a trail as most New Zealanders understand the word, the chosen walking surface for most is along the unformed legal road used daily by 4wd vehicles, it is likely more appropriate to refer to it as a 4wd access track. Subtle changes like this are a well-known trait of spin doctors.
The draft plan has Wellington's Te Aranui O Poneke (Great Harbour Way) finishing at Owhiro Bay. This end point, is in conflicts with that promoted by both Boffa Miskell, and the website www. greatharbourway.org.nz. Perhaps Council needs to state its case explaining why it believes end point should be at Owhiro Bay.
Might I also suggest, that to avoid speculation, the specific user groups should be identified who will potentially benefit from Management approach- B- Maintain and enhance off-road coastal tracks

Page 29
Managed approach – Dogs
Perhaps harsh, but there is a "pithy" bit of text here. Personal observations suggest on average 25% of dogs seen in the Te Kopahou zone are off leash. Questions need to be raised as to why the plan is silent on fully explaining why specific areas (such as Te Kopahou) are not approved off leash zones and highlight potential penalties. Perhaps you should self-test the situation by asking how many prosecutions or infringement notices have been issued over say the last 5 years. This is a good example of Council creating rules but generally failing to enforce them. Just weeks ago (1/6/25), I sent an email to the Parks Ranger responsible for the South Coast saying "passed three dog walkers when heading out this morning. Not one dog was on a leash." I speculate it will not be too long before Kiwi are seen or heard in this zone.

Page 33
Pathway 3.3
It would be helpful if the text included comment on what period Waitaha people are said to have occupied Wellington along with general location, etc.

Page 34
Evaluate the functions and design of coastal carparks
Perhaps I have overlooked something but I do not recall seeing discussion on any current adverse design elements.

Page 36
Pathway 4.1
As written, it is unclear how the diverse coastal ecosystem enhances climate resilience. This could well be another example of folk being provided with inadequate information on which to form an opinion. Officers may wish to

reconsider the current text.
A reworded section would provide the opportunity to give clear examples of where climate change has led to habitat loss.

Page 36
Shingle beaches
As an observation I have seen "driftwood" come and go from the south coast beaches. Addressing the gravel and pebble beaches within the "Te Kopahou zone" are you able to identify which beaches have particularly benefited by the retention of driftwood?
Under the heading Rocky shores, turfs and seepages, the draft includes;
"A 2004 survey of Wellington's coast identified 34 coastal turf and seepage sites, many of which are in decline due to trampling, erosion, and invasive species."
The authors have neither given the location of these sites nor identified in which zone(s) the decline is occurring in. This lack of information is a pity as it hinders keen folk the opportunity to offer solutions. There are around six or seven such sites between Hape and Karori Streams. The question I would ask is, how many of those sites are on land Council either owns or if requested can produce documentation giving them management rights? Another question worthy of contemplation is what actions have Council taken in recent years to protect those sites that are said to be in decline. I suggest some sites are on land over which Council has no legal interest and are thus outside the "Scope" of this plan. The initial statement although perhaps technically correct may have created a distorted picture.

Page 37
Estuaries
Here I would like to discuss the wording "Wellington's estuaries, such as those in Owhiro Bay, Te Kopahou, and Karori Stream, are highly modified and degraded due to sedimentation, pollution and urban infrastructure." (emphasis added)
The technical paper Whaitua Te Whanganui - a- Tara Coastal Assessment Report includes "The South Coast is characterized by high biodiversity rocky shores and reefs interspersed by a string of embayments, most with small stream mouth estuaries. These estuaries are freshwater and gravel dominated, lack intertidal flats and saltmarsh....."
There are approximately seven "estuaries" between Hape stream and Mangarara stream if both are included. Note- I have not included Karori Stream as it was singled out in the narrative. Would you please modify the text to clearly identify the specific estuaries which are said to be highly modified and degraded within Te Kopahou and explain the reasoning for the conclusion?

Page 39
Marine Coastal Area
This is another example of introducing ideas or visions for lands outside the "Scope" of the plan.

Page 41
Manage Karo and other invasive plant species
The management of pest plant species, was also discussed in the 2002 but still operative South Coast Management Plan. Current text almost suggests control is a new concept. No attempt has been made to report on the success or otherwise of works already undertaken over the years, if indeed there were any. Why not use this opportunity to tell the community what Council is currently doing or has achieved over the years?

Page 41
Support connectivity for fish passage
The obvious question here must surely be is Council satisfied that the limited works in Spooky Creek or Hape Stream as some people call it adequate to ensure tuna and whitebait can migrate freely?
Movement of these species was discussed by at least one official at a formal gathering when Council took over the Quarry from its former operators.
In addressing this question, you need to be mindful of the text within the 2002 South Coast Management Plan and thus the vision Council promoted to the community, "it is proposed to construct a rock ramp to improve fish passage."
At one point, work to date comprised a piece of old rope (possibly psat). Like most things in life monitoring and maintenance is required. On a recent visit the rope was not visible. You may wish to question ranger staff to determine the robustness of the monitoring system. If it has gone then are we talking about weeks, months or years.
A key question that I have not seen addressed is; Would fish species that require passage be present if barriers (e.g. dam) downstream were made passable?
As a broad comment the draft is lacking robust discussion around freshwater species.

Page 42
Wildlife Recovery
There may well have been significant declines or even removal of some species listed but I put it to you as currently worded you have created an inaccurate picture. I take exception with the word "absence"
The website eBird records recent sightings of both what you have called pakaha and koroa. Published material shows that over the years there have been several national censuses of the Australiasian gannet in New Zealand, the first being in 1946. Correct me if I am wrong but I have seen no evidence to suggest the Wellington southern coastline has ever been described as a breeding site. I suggest gannet species (technically I think there are 3 subspecies but never the less just called gannets) are seen on a regular basis off Wellington's shoreline.

Page 42

Kekeno
Tena rukahu tena to say “Pariwhero (Red Rocks) is a key haul-out site, where around 300 kekeno rest each winter”. Such statements reflect poorly on both the writer and those charged with editing. Both the funders (ratepayers) and the community at large expect a higher standard of professionalism. The recognized haul-out is at Sinclair Head/Te Rimurapa. The former Department of Lands and Survey even went to the extent to have a section of the headland gazetted as a Scientific Reserve to protect the habitat. This is NOT the first time I have had to remind Council.

Page 42
Mokomoko
Readers are told these small but important populations “help control insect populations” REALLY! What insect species and to what levels? Another question may well be why do they (targeted insect sp.) need to be controlled? To avoid ridicule, perhaps Council needs to identify the scientific papers they have been reliant upon.

Page 43
Protect Kekeno habitats
As part of the obligation to provide the party consulted with all relevant information, would some -one, please set out Councils thinking that gave rise to the statement “Protect Kekeno habitats by managing visitor access”

Page 47
Action Point 1
In respect of the Woodworthia minimac gecko, I suggest, that where suitable habitat exists, this species is reasonably well established between Sinclair Head /Te Rimurapa and the western plan boundary of Karori stream.

Page 47
Action Point 9
As a word of caution, based on past performance this could have the potential to reflect poorly on Council.

Page 48
Action points 11 & 12
I note there is a wish to use the Wellington Dog Review Policy to influence the management of dogs between Te Rimurapa/Sinclair Head and Oteranga Bay. Here we go again, firstly the writers have used an inappropriate official name and then land beyond the scope of the document is being discussed. Oteranga Bay is approximately 7 or 8 kilometers from the plans stated western boundary, a distance greater than Island Bay through to Waitangi Park in the inner harbour. I am not suggesting it is a bad idea but rather just drawing to your attention to the fact that if you set boundaries confine your narrative to that area. If you strongly believe there is merit in a more distant boundary, which I do, set out the case, seek comment and if supported change it. A second point here is that the draft has given no indication of species involved, current numbers or what minimum outcomes staff are looking for.
With, regard to the statement “Collaborate with Dog Control to strengthen existing patrols….” Correct me if I am wrong but surely this is just another arm of Council. The community does not need to necessarily see or get involved in inhouse matters - just get on with whatever must be done.

Page 49
Wellingtons coast is shaped
Having made the statement, I suggest it would be helpful to identify the site(s) where one could find evidence of the coast being “shaped by wildfires” The language does seem a little dramatic.

Page 50
Carbon sequestration
Expressed in tonnes or part thereof, perhaps you could indicate how much we are talking about and why alternative species would be less effective?

Page 54
Fires
While the text sounds great this is virtually a repeat of words used more than two decades ago.
The 2002 plan was quite explicit;

“Open fires will only be allowed by permit or at times and places specified by Council under the bylaws (for example 5th November celebrations)”

There is a saying that if you do what you have always done you will get what you always got.
And what is the relevance here – well in general terms in the absence of constant and consistent compliance nothing is likely to change. While some staff have been pro-active others have been less so. There is an internal problem here that needs to be addressed.
FENZ rulings around open fires have included the need for landowner consent, and it is that which is lacking in most cases. Might I suggest you seek confirmation of the need for landowner approval then ask internally how many have been issued by Council in recent years. Not to be forgotten, fires feature under “Activities that are specifically prohibited” on page 208 of the 2019 Outer Green belt Management Plan.
As I recall the SCMP also spoke of fire-retardant species being used in high-risk areas. Was anything done along these lines?

Page 58
Road stopping
Text here includes” Road stopping may be considered in exceptional circumstances where coastal road edges primarily serve recreation or environmental purposes”

I see this statement as being a deliberately calculated position with a primary focus on the unformed section of Owhiro Bay Parade beyond the Te Kopahou Information Center. If this was to be proven correct, then the word "may," has been inserted to fudge the situation as a tentative decision has already been established.
Could I please be provided with background papers which show both the development and approval stages of the policy/vision?

Page 60
Final paragraph
The text "The sector also includes the unformed legal road or coastal route, which is legally designated as a road but remains undeveloped" is a little confusing and perhaps could do with a re-write.

Page 61
Sector 1
You may wish to consider whether it is appropriate to record that the "sector" also includes two scientific reserves administered by the Department of Conservation.

Page 61
Enduring connection
I again draw your attention to the use of "official" names. You may also wish to consider adding something to the narrative about the Kinnoull dunes, the largest left in the Wellington area, parts are on Council administered land via the 1922 legal road designation.
Text in this section equally talks of a "Wellington Channel" This is not a place readily identifiable by name on marine charts, you are encouraged to find an alternative descriptive.
The final paragraph on this page includes "Traces of early settlement -urupa, karaka groves, and pa sites including Makure-rua pa, Waik- komaru pa (misspelt), Taumatat Patiti Pa (misspelt)...." Apart from the misspelling I suggest Council should be upfront and say some sites quoted are on adjoining private land. Finally, for correctness I challenge Council yet again over the presence of urupa. This should not be a document of smoke and mirrors but one of known fact. If you do not have a specific grid reference or other solid material pinpointing its/their location reference should be removed.

Page 62
Apart from naming issues I would add the following comment,
Pariwhero -The text should have included something covering statutory ownership of the land (Council & DOC) along with a few words addressing the designation created under the Historic Places Act.
Pariwhero translates to Cliff Red. It has been suggested the rocks (Toka whero) within the Scientific Reserve were likely underwater prior to the 1855 Wairarapa earthquake.

Page 62
Te Rimurapa
Let us first reflect on the chosen wording within the draft document;
"Te Rimurapa (Sinclair Head) was a Māori settlement and later served as a WW11 observation post, with visible bunkers marking its history."
As the reserve administering authority the descriptive WW11 observation post, "with visible bunkers" is certainly basic. Given that in past years, Council has been told specialists considered this to be one of the best examples of its type in New Zealand, I would have thought something more enlightening could have been used, or would that risk a backlash over lack of effort in, as statute puts it;" protecting and preserving in perpetuity"
By failing to clearly record the period of Māori occupation the reader could easily be led to believe that this was in what we might call modern times.
To save investigation, the early pa, are said to be linked to Ngati Mamoe, who reportedly arrived in the area at the beginning of the 14th century and apparently stayed for around 150 years. The construction of the observation outpost likely commenced in the late 1930's some hundreds of years later. I believe it correct to say no subsequent tribe holding mana whenua rights are known to have established either pa or kainga on this headland.

Page 62
Toka Haere (Thoms Rock)
Your choice of the Tyne is interesting in so far as there is no evidence to link this vessel to Thoms, likewise there is no conclusive evidence, as to where the vessel sank and presumably now rests.
I would again make the point that the named rock is technically outside of the scope of the plan.
Toka Haere may well be an historical name (period unknown) but little used by the wider community these days.

Page 62
Baches
The baches at Red Rocks were indeed recognized by the New Zealand Historic Places Trust (now Heritage New Zealand Pouhere Taonga). It is disappointing the text did not go further and record that the four standing baches now sit within a formally registered "Historic Area" established under the Historic Places Act 1993, this is additional to being part of the fabric of a 70 odd hectare Historic Reserve established under the Reserves Act.

Page 62
Management approach
To be polite this seems all huff with little puff. Perhaps the plan needs to set out why Council has found it necessary to say it will work with mana whenua on restoration of indigenous vegetation but makes no reference to other ethnic groups. Such statements lessen the value of the nearly two decades of community plantings I and others have been involved with.
Let us now take a quick look at action point iv-

To talk of titi reintroduction suggests they were once established. For clarity perhaps the plan needs to include some evidence of just where those nesting sites were within the Te Kopahou zone. As recorded earlier what you have elected to call Titi are known in other circles as hakoakoa or hakoko. Ornithologist Hugh Robertson, is reported to have speculated observations of the fluttering Shearwater around Wellington Harbour declined 3.1% between the years 1975 and 2021. Are you able to include any material that points to the date titi are said to have nested in this block?
Now for action point vii, – "Protection to preserve former pa, middens and archaeological sites," The land upon which these features can be found, first fell under the Reserves act decades ago with the establishment of both the Sinclair Head and Red Rocks Recreation Reserves. In 2010 these reserves were amalgamated to form what some now call the Pariwhero/Red Rocks Historic Reserve. Irrespective of classification the principles or requirements of the Reserves Act apply. Council holds no legal authority to operate in a manner contrary to the act.
Key wording in the statute includes;
S18- It is hereby declared that the appropriate provisions of this Act shall have effect in relation to reserves classified historic reserves, for the purpose of protecting and preserving in perpetuity such places as, objects, and natural features and such things thereon or therein contained as are of historic, archaeological, cultural, educational, and other special interest.
I speculate that over the years Council has FAILED to comply with these statutory provisions. In the event you hold a differing view would someone please write to me setting out the actions taken to preserve each of the recognized features within the Te Kopahou zone. I also draw your attention to the wording on page 53 of the operative South Coast Management Plan 2002;
"The heritage of the coast will be maintained wherever possible and practicable"
The 2019 Outer Green Belt Management Plan equally addresses archaeological/historic resources e.g. P 187 "Some of these features and places require protective and/or remedial work"
Further reference is found on pages 192 & 193 "Maintain vegetation around the historic features and structures to protect them from damage."
Recent images showing the antenna that formed part of the early radar system along with a few other shots have been attached as appendix 1.
Without being too blunt, I suggest it is about time Council focused on statutory obligations before running off on what I will call discretionary projects. Using the OGBMP as an example, despite the clear statement to maintain vegetation around historic features nothing appears to have been done. Unfortunately, other like examples of what I will call poor management can be found within this zone. This raises the question, why should the community have faith in Council's planning documents when its officers do not adhere to the prescriptions themselves?

Not to be forgotten it has been eight years since Council officers assisted a young academic in the preparation of what was to be called Rimurapa/Sinclair Head Conservation plan. The executive summary included;

"There are a number of threats to the survival of the heritage features of Rimurapa/Sinclair Head, especially the effects of water, vegetation and vandalism. These must be actively and regularly managed to ensure the sites future perseveration."

While Council hides behind crafted wording within management plans and public relations items, the historic and archaeological assets continue to be put at risk. Perhaps it is timely for Council to acknowledge their failings and bring the statutory obligations up to date before starting new projects.
It is most disappointing there is no narrative pointing to hope of asset protection in respect of the former WW11 military observation post, Ngati Mamoe Pa and terraced sites.
Now to quote an extract from the New Zealand Archaeological Association submission supporting the establishment of an Historical Reserve in September 2009 (16 years ago)
"The World War II Sinclair Head coast watching station/observation post, which is one of the best preserved, examples of this type of military installations in New Zealand."
I note that the text uses the word "middens" (plural) would someone please be kind enough to provide me with details of the specific location of each site. The New Zealand Archaeological Association records show just a single midden in this area recorded as R27/100

Page 63
Access to the coast
Authors of the draft have omitted to identify the source of data they have used claiming "Nearly half of Wellingtonians visit Te Kopahou annually for activities such as walking, mountain biking, fishing, horse riding and 4WD exploration.
With a population of approximately 209,000, readers are led to believe close to 100,000 locals visit Te Kopahou at least once each year. This is a bold call, and one which the community needs to be given wider information so they may assess the accuracy of such comments. It is all very well reporting the data but does Council agree with the conclusions? The narrative overlooks the fact most of the visitors only use a very limited portion of the coast.
The authors report that "public engagement and mana whenua have raised concerns about environmental impact of 4WD, safety, antisocial behaviour, and illegal poaching operations."
No attempt seems to have been made to draw upon the individual or collective views of agencies such as Department of Conservation, Greater Wellington, Police or Fisheries. Likewise, there is no mention of the views held by Council's own ranger staff who visit this coastal platform on a regular basis. Perhaps some held a contrary view or felt the isolated incidences were being exaggerated. No statistics what's- so-ever have been presented, likewise there are no examples describing the "antisocial behaviour." This is disappointing as the absence of detail denies readers the ability to visualize the size of the problem or make meaningful comment. One is left to wonder if this was a deliberate ploy. I suggest it would be most unwise to develop / advance policy in the absence of sound information.
It is highly likely the paucity of detail provided to those who use 4WD vehicles on the coast is a breach of the guidance issued by the Department of Conservation. One thing is for sure and that is there has not been

"meaningful discussion" (words used by DOC at the commencement of this submission) between the parties. Such a failing could put Council at risk of legal challenge or formal complaint to the Minister of Conservation. I would make the point that as one of the higher profile users of the coast with recognised strong connections to both conservation and heritage protection, along with being a life member of the largest 4WD club in Wellington I had absolutely no knowledge of the proposals to further limit the use of off-road vehicles until reading of them in the plan. Be assured I strongly believe consultation has been flawed. Relationships seem to count for nothing.
Progression of the plan deserves to fail at this point due to the lack of meaningful discussion. Using language from a recent Court case I put it to you Council has not fairly and fully informed the user group. It is also likely that Mayor Whanau was incorrect, when she recently said "We have worked closely with our community" sections thereof maybe, but I suggest in other areas consultation has failed to occur.
You cannot call a 1.5 hour get together where participants working within groups write a few words on "stickies" consultation. Such groupings are often domineered by the loudest voice. Council has likely tried to achieve too much in too little time. It is also possible officers have failed to acknowledge the fact that "special relationships" exist with some interest groups. In the early part of the draft plan readers were told the scope would include the unformed road. I see no attempt has been made to clarify how the Reserves Act is able to be used to influence the management of legal roads.
I invite you to look at the current text carefully, the narrative fails to;
• Clearly define the adverse issues.
• Describe Council's mitigation measures trialed to date.
• Offer the community a range of options

Returning to the issue of perceived safety a formal request for detail was put to officers on 3 June.
The Question was;
"Drawing on data for say the last two years could you please indicate the number of occasions that Council is aware of, where the wellbeing of the public was put at risk by public vehicles and indicate how many of these were known to have been referred to the Police."
Key words are "Council is aware of"
The formal response to this LGOIMA request included;
1 "Council does not hold a complete record of the number of occasions in the past two years where the wellbeing of the public was put at risk by public vehicles" and

2 "Concerns about unsafe driving or vehicle-related risks are raised with Council through a variety of informal channels, including online complaints, in-person reports to Council Rangers and through comments made at public engagement events."
The construction of the statement "does not hold a complete record...." (emphasis added) Suggests some information is held but for reasons not explained has not been released. This position could constitute a breach of the LGOIMA legislation.
It should be of significant concern that Officers are introducing matters to influence intended policy but when challenged are unable or unwilling to supply any supporting data. In this example it would appear there is no comprehensive record of the number of occasions involved. One assumes that in the absence of sound data it would also be unlikely the validity of each complaint can or had been tested. It is plausible some of the reported instances lacked substance.
The question was rephrased and submitted to the Police on 27/6/25. Their response is yet to be received. Subject to your willingness to accept additional material I will write to you again once the Police information comes to hand.
Moving away from vehicle use, saying visitors also "enjoy displays" could fudge reality. The text hides the fact most, if not all display panels have been there since day one and are looking "tired" it also overlooks the fact that at least one panel contains errors of fact which was brought to the attention of Council years ago. Reference to multiple seal colonies is also challenged.
Addressing the Te Kopahou Tracks Plan, I suggest reference should have been made to the significant departure to the vision created in the statutory SCMP.
"The area from the closed Owhiro Bay Quarry parking area to Karori Stream, and inland to the extent of the coastal catchments (Waipapa & Hape streams) will be primarily managed as natural wilderness"
This change occurred outside of any formal management plan review. To go further, I suggest there is a possibility Council likely deliberately failed to inform the community of the conflict with the operative plan.
With regard, to marine poaching, is this not a function for the Ministry of Fisheries and their warranted enforcement officers? You do not close a road because once a month you experience a "boy racer" issue, you plan a specific operation and deal to the individual(s). Given the number of discarded dog poo bags found on the coast no moves have been made to curtail dog exercise and oddly enough I suggest there is little to no enforcement, if there was to be any it would likely be focused on individuals and supported by educational material.
Caution, needs to be shown around the statement the unformed coastal road was" initially developed for quarrying." Quarrying in the early years was very much limited to the first kilometer, whereas records show a surveyed route to Karori stream was declared a road as far back as 1922. Land Information New Zealand suggests the actual field survey work may have been undertaken circa 1905. Council's 2005 document "The story of Owhiro Bay Quarry" has shingle and sand extraction starting around 1908.

Page 64
Management approach
As discussed above, Council has made a significant error in so far as it has failed to reasonably consult and provide all the relevant information to facilitate a reasoned submission. It has been at least 14 or 15 years since David Ross, the then Karori Community Constable told Council via discussions with the South Coast Ranger of the need to clarify the speed limit on the unformed legal road. As he put it at the time "give me confidence over the speed limit and I will enforce it" or words to that effect. Although David retired some years ago, I have continued to raise the matter from time to time. I invite you to look at yourselves. Here we are in 2025 and on the face of it nothing appears to have been done. If correct, in the absence of sound argument this situation reflects poorly on internal administrative

procedures.
I suggest there is ample evidence to show that the legal speed limit for the unformed section of Owhiro Bay Parade beyond the Te Kopahou information Center is 50km/h. The question I ponder is surely staff are aware of this, so what is the motive for not making it known? Statement's such as "Observe the recommended 10 km/h speed limit at all times" pushed by Council at one time failed to gain traction with many saying it lacked common sense, had no legal basis, and failed to recognize the distance some users travelled around the coast. There may potentially be a case to demonstrate the recommended 10 km limit was an attempt to undermine a lawfully set speed limit.
I suggest it is morally wrong to criticise others for their actions when part of the blame rests with Council. Perhaps some of the issues could have been mitigated if officers had of worked closer with relevant partners and specialist groups.
Regarding road closure due to swell events, I urge Council to involve stakeholders in determining the critical trigger point. Justification for this modern trend has been variable to date.

Page 64
Bach leases
Retain current leases
My concern here is around the word "retain"
Provided the conditions of the ground lease were being adhered to, did Council have any other option to not renew the leases?

Page 64
Explore potential public use options... " Implementing a book a bach system"
This seems a change in longstanding policy. Could someone please send to me a copy of the paper the decision maker signed approving this position?

Page 64
Historic coastal walk
When the long-distance coastal walk was first suggested some many years back, it was just that - A coastal walk. The obvious question is when did the vision change. The next matter is why is this even being introduced as most of such a walk is well beyond the western boundary described in the scope of this document. Has the position of key private landowners changed?

Page 65
Paragraph 2
Text here includes "supporting some of the region's last remaining intact ecosystems that reflect pre-human Wellington" Could the text please be expanded to clearly describe what you are talking about?

Page 65
Protection and restoration
To better inform the reader Council needs to explain why it thinks they have some responsibility to provide clear guidelines and information to minimize human interference with seal haul-outs. As I see it, it is a Crown responsibility under the direct responsibility of the Department of Conservation.

Page 65
Quarry
For clarity does it need to be identified that the OBQ plan is another Council plan.

Page 66
Fires
Much hype has been focused on fires and vehicles. Using available data, the question arises how many fires have been caused by vehicles on the coast, I personally know of none.
The problem seems more likely to be with the occupants of some of the vehicles which poses a different line of approach.
• How many official interactions regarding fires are there each year?
• On how many occasions did ranger or other staff request to see the land owner approval for the fire?
• How many verbal or written warnings were issued?
• How many occasions was the recommendation of prosecution considered?
As discussed elsewhere in this submission it is my belief staff have failed to present a consistent approach.
My final point on the text of this page concerns the maintenance of a drivable surface. Council must be mindful of access in the case of an emergency. The recent incident involving a KiwiRail vessel off Sinclair Head/Te Rimurapa is well worth reflecting on.

Page 67
Item 3
In the absence of a compelling case, which has not been established, I cannot support the action point.

Page 67
Item 5
As above.
It is possible the same or similar objectives can be achieved without the implementation of a permitting system. Remember permits are landowner consents with a list of conditions or expectations. Council will need resources to enforce the conditions, have a system to punish those who break the conditions, be prepared to deny permits and have procedures where decisions of Council can reasonably be contested, no simple task. The costs are likely to be significant, and in a time when both Government and ratepayers are calling for better financial management other

options need to be fully explored first.

Page 67
Item 7
As above.
As a broad statement I urge Council to think very carefully about its current position. As highlighted there have been significant failures with the consultation process. I will go further and suggest there is also strong evidence to show officers have even overlooked written undertakings to recognized special interest groups. Some in the community are questioning the value of submissions saying Council has already formed an opinion and are thus not looking for solutions with an open mind.

Page 67
Item 8
Obviously there has been wide inhouse discussion around cultural and ecological monitoring of kekeno prior to inclusion of this action point into the draft document, however this appears another example where Council, seem unwilling to share all information. The reader is left to ponder; what do they wish to monitor and why should the ratepayer become involved. In the absence of wider information, the action point is not currently supported.

Page 69
Item 1.05
It is incorrect to infer that the area as marked is a Historic Reserve. It is the "footprint" of each of the standing baches that has the designation.

Page 70
The map leads the reader to believe places such as the Run Around and Mestanes Bay are seal haul out areas. While the odd seal may be seen from time to time the descriptive is well off the mark. Likewise, I would make the point, few seals use the Pariwhero/Red Rocks area. Should you doubt my comment I would invite you to visit the area.
As a broad comment at a time when ratepayers are fed up with significant annual rate increases, it surprises me such an extravagant document has been prepared. The frugalness displayed in the earlier management plan has long gone. Colour has been used on most of the 155 pages compared to just 7 of the 75 that comprised the South Coast Management Plan 2002. Much of the text, and thus input costs, has been spent on "story telling" and while interesting, I suggest it is not necessary in such documents.

Page 70
I note one of the "Sites and Areas of Significance to Māori, a Ngati Mamoe Pa, is missing. Was this primarily the result of the site being on private land and thus outside the Scope of the document or had officers failed to observe the map layout falls short of the Karori stream western boundary by almost 2 kilometers and it is for this reason both the Pa and the Kinnoull dunes are missing?

Page 71
Could I please have some clarity around;
• What descriptive are Council reliant upon to place the Whare Raureku kainga inland from the coast and can a precise gid reference be given?
Council's 2009 Draft Reserve Classification Plan claimed the exact area was known.
• How accurate is the placement of Makure-rua? I note you have it on or near the boundary with Long Gully station some distance from the headland.

• Are you being serious in recording the quarried faces in the Run Around/ Mestons Bay area are deemed to be "significant Natural areas"

Before closing this submission, I would like to reflect on the still operative South Coast Management Plan 2002 and raise a couple of issues for which written answers would be appreciated.

Page 41
Paragraph 4
"....and by providing strong messages about responsible use, it is hoped the conflict will reduce, whilst allowing a reasonable level of access along the coastal platform track for recreational pursuits..."
In relation to this statement; (a) Is Council satisfied that over the years it has consistently conveyed "strong messages" and, (b) as a result that messaging, was there a recorded decline in conflict?

Page 42
Paragraph 1
Gate closure times
Here it is recorded that consideration would be given to the "investigating reduced hours over the winter period" Twenty-three years later I have now forgotten how many times I raised this matter with staff. To enable a sense of closure can you please confirm that notwithstanding the plan requirement and relative limited resource input, Council has done absolutely nothing? If I am wrong then I sincerely apologise but would ask that you kindly provide me with a copy of the internal paper work which would no doubt set out details of any investigation, level of consultation undertaken and the decision recommended for approval.

Page 42
Implementation
"Off-road users of the coastal road will be consulted and involved in managing access to it, erecting signs stating obligations of all roadway users and indicating the condition of the road, separating users where possible for

reasons of safety.
An assessment will be undertaken of the need to impose a speed limit on the coastal road"
My questions here are;
• Is Council satisfied it has appropriately consulted and involved "off-road users" over the years?
• What were the stated "obligations of all roadway users?
• What work was done to investigate separating users where possible for safety?
• What was the outcome of the assessment of the need to impose a speed limit?

While this paper perhaps goes on a little and at times may seem aggressive it is intended to be both thought provoking and most importantly helpful. While penning these notes it was suggested to me that the document understates the need for effective community partnerships particularly for Te Kopahou.
As a "heads up" I would welcome the opportunity to make an oral submission when the time arises. At this point, it is likely I will touch on what I saw as poorly directed consultation and the management of historic/archaeological resources.

Photo included:

Radar antenna buried in vegetation

Looking towards the site of distinct terraces (R27/102 and R27 103)
Although formally visible their value is now being compromised through lack of vegetation management.

Aerial image showing approx. terrace locations (R27/102 shown as pin point 12 and
R27/103 as pin point 13

Statutory obligations bypassed in favor of recreational track maintenance – a little used track at that.

Long Text
The rest of the Management Plan is ok. All I'm interested in is protecting the Island Bay Marine Education Centre. Victor and Judy are doing good work. Leave them alone to get on with it. They need help- instead of cycle lanes, support them with our ratepayer money. A much better use of dollars. They're a tourist attraction, a jewel in Island Bay's crown and an essential education facility. Everyone I know has had a wonderful experience there. They're amazing what they've done to that small building. I remember how it used to be - an eyesore and they've made it into something special.

Long Text Support for Cost-Neutral Remodelling of Evans Bay Marina

To the Wellington City Council,

I am writing in support of a carefully considered, cost-neutral remodelling of Evans Bay Marina as part of the Wellington City Council's Draft Coastal Plan. Evans Bay is a unique and valuable public asset that, with thoughtful investment and partnerships, can be transformed into a more functional, sustainable, and welcoming space — without placing additional strain on ratepayers.

Why Evans Bay Marina Matters

Evans Bay Marina is more than just a berth facility — it is a community hub, a recreational haven, and a gateway to Wellington's coastal heritage. However, in its current state, the marina is underutilised, at risk of collapse, and in need of modernisation to meet the city's evolving needs, it is at risk of rising sea levels and more frequent storms due the climate change.

It differs from other Marina's because it caters to the people that own boats that are not well off and need a cost-effective place to store their boat/yacht. If this marina or cost-effective solution is lost many of these boats would end up either disappearing from Wellington or end up on swing moorings in the harbour and would be uninsured (as Marine insurance is almost impossible to get on a swing mooring). In this case we would see more abandoned boats (as we see in Auckland) slowing deteriorating and becoming hazards, the cost of disposal is a significant cost to the Auckland rate payers.1 The reduction of boats in Wellington would be a blow to our boat/yacht industry, every boat/yacht owner in Wellington spend thousands each year maintaining their boats/yachts.

Evans bay Marina could be a lot more than it currently is, it could be:

· Recreational access for local residents, kayakers, paddleboarders, and swimmers.

· Berthing and marine services for boat owners and maritime businesses. There is a chance to develop a business precinct around the Mariner.

· Public amenities such as walkways, seating, lighting, and signage that encourage community use and connectivity with the nearby coastal pathway.

· A haven for protected wildlife such as the kororā.

In its current state Evans Bay Mariner is at risk of being beyond a point where it can be saved, mainly due to a lack of investment of the rental fees that are currently being paid. So, whatever is decided as a pathway forward the absolute riskiest action, in terms of cost to rate payers, is to do nothing.

A Cost-Neutral Approach Is Possible

While budgets are tight, there is an opportunity to pursue a cost-neutral or low-cost remodelling strategy through a combination of:

Public-private partnerships: Engage with the boating community, local marine businesses, and iwi to co-invest in improvements that benefit all users. If council were to offer Iwi or to a trust group or combination of these groups the marina to refurbish then the group could make the necessary improvements that would fulfil its potential. The downside to the council for this tis the loss of revenue streams from this new facility in the future. The main input from the council would be underwriting the risk to allow any group that was undertaking this to raise funds in the first instance.

Revenue-generating improvements: The council could undertake these renovations themselves by staging the renovation and selling some of the berths to fund the improvements while still having other berths for the price sensitive boat owners

Implementing upgrades in phases allows improvements to be funded through generated revenue over time rather than upfront capital.

The major problem with developing marinas (at present) is the difficulty of getting insurance and the lack of an actual asset to get a mortgage against, so (insurance aside) we would need a guaranteed cashflow from rentals etc to raise funds. But the council can raise funds to start this develop off but with a focus on I quick pay back that would remove the risk to the rate payer.

Sponsorship and grants: Both the council or private groups could tap into regional development funds, central government infrastructure grants, or climate resilience funding to support green infrastructure initiatives (e.g., stormwater upgrades, solar lighting).

Community involvement: Again, both private or council could leverage local volunteer groups and “friends of the marina” initiatives for landscaping, art installations, and minor works.

Aligning with City Objectives

This remodelling supports key goals outlined in the Draft Coastal (and the Long-Term Plan Plan):

· Resilience and climate adaptation: Upgraded facilities can be built with sea level rise in mind, using environmentally conscious materials.

· Transport and connectivity: Integrating the marina with cycling and pedestrian routes encourages sustainable travel and better use of public spaces.

· Economic revitalisation: A revitalised marina can stimulate marine tourism, events, and small business opportunities.

· Equity and inclusion: Making the marina more accessible to all — not just boat owners — strengthens community well-being.

· Enhancing the protection of vulnerable and protected flora and fauna.

Final Thoughts

Evans Bay Marina has the potential to be an iconic waterfront precinct that reflects Wellington’s character: creative, sustainable, and community oriented. But the time to act is now, delay is not an option. The Marina is suffering from a blatant lack of investment that borders on neglect and as stated previously, at this point in time the riskiest action the council can do is nothing, failing to act now will cost the rate payer more in the future.

Thank you for your time and consideration.

Yours sincerely,

Colin Smithies

Secretary and Treasurer Evans Bay Marina Tenants group

Long Text

Marina: The minor works on the marina are appreciated although well overdue and not really avoiding the state of not worth repairing. One pile that my boat was secured to on pier 1 fell over.
I am concerned that the many $ going into the piecemeal repairs are going to be wasted when the marina is replaced. I urge action on this because at the same time the tenants' monthly cost of the berth is being hiked and wasted.
The management cost of the marina appears to be excessive and I would like to see a manager paid directly out of the tenant revenue.

Evans Bay Yacht and Motor Boat Club area. In appendix A why is sailing or Yachting not listed and allowed supported activity, or is that "informal"?
The yacht club area is a thriving entity and provides water borne recreational activities for a variety of groups. Parking is one of the issues that plague the club on sailing days and especially dramatically on regatta events for sailing or Wakarama, the canoe/ paddle club and TRIYA. The cycle way proposed is not the only recreation that occurs in the area and reduced parking caused by poor considerations of others in its development is bad.
The launching ramp at the club is used by all the groups listed above and is often in a poor and slippery condition. there needs to be a more genuine approach to maintaining this to a safe condition.

Hataitai Beach. The cycleway has intruded on the beach area to the point there is little or no beach at high tide. So I hope that there will be extra sand brought on to make up the beach area.
The parking in this area is also limited and precludes people from bringing their families to the beach. You say go by bike or bus ! What about the young family coming from Karori or thereabouts. What about the Mums n Dads dropping off and picking up kids from scouts and the like or the scout leaders providing activities for your young people.
It is inconsiderate planning to consider only one recreational activity.

Long Text: Mana Whenua should not be the only partnerships. There are many more cultural groups throughout the coastal areas of Wellington so the Council should take a neutral stance and not have Iwi (who are effectively commercial entities with many conflicts of interest) as part of the decision making process. Existing place names should not be changed in favour of Māori place names as they also have backstories and are in common usage.

Q11 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**
Long Text: Supportive of most of this section except for freedom camping which just brings more issues than benefit.

Q13 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Neutral

Q14 **Please let us know a bit more about your choice.**
Long Text: Less story telling and cultural narratives. Development still needs to occur and this section should not be overly obtrusive to that.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q16 **Please let us know a bit more about your choice.**

Long Text There is a place for non native plantings and nature beyond natives only, please don't exclude these from future plans. Open grassy spaces are a benefit too. I am supportive of better litter management too but cautious of how this will be achieved.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text Let engineering and development solutions guide coastal protection. Nature-based is only one part of the solution and as seen in other areas often just gets in the way. Seawalls, jettys, concrete and rocks are still very effective.

Appendix B; Please stop renaming every feature in Wellington to Māori place names. Existing names in English are in common usage, have meaning already and are often named after notable individuals or reasons eg. Shorland Park or Overtoun Park. This is effectively repressing all other cultures in favour of one. As this seems to be a focus for the Council, it should instead focus on naming features that do not have a name already eg. Proposal 8: Lyall Bay Esplanade Reserves to Hue te Para park.

Long Text: I am a member of Wellington Southern Bays Historical society and therefore interested in the history of the south coast and the people who were here before my pakeha forebears.
I think the Wellington Southern Bays Historical Society would like to join with and support Ngati Toa and Taranaki whanau in their efforts to strengthen Maori presence in the form of historical references and protection of this coastal area. We have resources that may be useful we could share. We are aware of several pa sites and the food sources of fishing and karaka berries in this area. I read that the glossy karaka tree leaves were a navigational aid to waka returning from fishing to their settlements along the coast. The trees also have spiritual significance.

Q11 **To what extent do you support or oppose this value and its pathways?**

Wellington Southern Bays Historical Society has a collection of maps, photos, documents, newsclips, stories in a large cupboard in the Island Bay Community Centre. We also have a facebook page and a website wellingtonsouthernbayshistory.com Our collection is open to public on 1st and 3rd Saturdays 1- 4 pm at the Community Centre. We have an annual magazine. I researched & wrote an article about south coast karaka trees in the latest magazine no 20 2025. Barry Insull gave me a 'white knuckle' trip in his 4 wheel drive to see them, we went as far as Long Bay and saw many.
Te Kopahau Reserve Information Centre is a useful introduction to visitors.

Q15 **To what extent do you support or oppose this value and its pathways?**

It is important to protect and enhance the natural environment. Robert Logan who was a member of WSBHS fought long and hard to get the quarry closed - we acknowledge him for this work. In 2020 we had Myfanwy Emery, at that time a WCC ecologist, address one of the quarterly public meetings the Society holds each year.

I am concerned about runoff from the Southern Landfill, this enters the sea and causes pollution and damage to sea life. Litter is a concern and needs to be controlled

Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Don't know
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Don't know
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q5 **Name of organisation you are submitting on behalf of**

Short Text:

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: I support active partnership. Both mātauranga Māori and Western science tell us that kororā are tohu, indicators of the health of the coastal marine environment . As this whakatauki tells us: 'He kororā he tohu oranga (The little penguin is the sign of life), the success of kororā populations can inform us about the health of our harbour.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: I somewhat oppose as some of these activities could impact little blue penguins (kororā), habitat enhancement. I would support this value more if
• Signage for dogs was increased or improved. Signage can help educate the public about penguin presence and appropriate behavior in coastal areas, reducing disturbance.
• There was better management of dog behavior. Public feedback highlighted concerns about dogs disturbing wildlife, particularly nesting penguins.
• There was better enforcement of dog restrictions in coastal areas to mitigate dogs being off lead in "dogs on lead" areas.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text

Protection and restoration of natural habitats. Actions related to restoring dunes, wetlands, estuaries, and protecting seeps and rock pools can provide crucial nesting and foraging habitats for penguins.
Making penguins the iconic coastal species to represent conservation aspirations. This highlights the importance of kororā in overall conservation efforts and could lead to more focused initiatives and public awareness campaigns.
Make use of pūrākau (stories) and visuals to make this message impactful and relatable. For example, a sculptural trail could be used to signpost where kororā are nesting, and to tell stories that will encourage people to respect and protect them.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice

Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

Tackling invasive species. This includes promoting predator control and restricting cats, which are significant threats to penguin populations.
Addressing pollution. Actions to fix pipes, use drain traps on stormwater outlets, and sweep streets more regularly can reduce pollution that harms marine life, including penguins.
Strengthening wildlife protection. The plan specifically mentions seeking resources to enhance protections for kororā, geckos, and seals.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice

Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Protection and restoration of natural habitats. Actions related to restoring dunes, wetlands, estuaries, and protecting seeps and rock pools can provide crucial nesting and foraging habitats for penguins.
The creation of new habitats along the waterfront for kororā, where the Council has been strengthening structures, creating safe homes for penguins.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice

Te Kopahou & coastal route
Taputeranga
Southern Bays
Rangitatau
Moa Point to Breaker Bay
Te Whanga Rāwhiti
Eastern Bays
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Signage. Increased or improved signage can help educate the public about penguin presence and appropriate behavior in coastal areas, reducing disturbance. This should include clearer communication and stronger enforcement of dog restrictions in coastal areas.
There needs to be clearer signage that dogs should be on a lead at all times on all the sites ticked above. Dog owners don't seem to be aware that the default on the coast is dogs on lead unless signed that the dogs can be off lead.
Key areas for Dogs on Lead signs as they have had recent dog kills are:

At the start of the Te Kopahou & coastal route so people know that dogs should be in control near the wildlife on the beach.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Signage. Increased or improved signage can help educate the public about penguin presence and appropriate behavior in coastal areas, reducing disturbance. This should include clearer communication and stronger enforcement of dog restrictions in coastal areas.
There needs to be clearer signage that dogs should be on a lead at all times on all the sites ticked above. Dog owners don't seem to be aware that the default on the coast is dogs on lead unless signed that the dogs can be off lead.
Key areas for Dogs on Lead signs as they have had recent dog kills are: Area from Owhiro Bay boat ramp to the lighthouse, ie coastline opposite the Beach House cafe.

Each end of Hougton Bay off lead area - before the revetment starts & rocky headland on the other side, as

penguins nest there.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text Signage. Increased or improved signage can help educate the public about penguin presence and appropriate behavior in coastal areas, reducing disturbance. This should include clearer communication and stronger enforcement of dog restrictions in coastal areas.
There needs to be clearer signage that dogs should be on a lead at all times on all the sites ticked above. Dog owners don't seem to be aware that the default on the coast is dogs on lead unless signed that the dogs can be off lead.
Key areas for Dogs on Lead signs as they have had recent dog kills are:
Each end of the Seatoun beach ie near boat ramp and the Seatoun wharf, then the other end at the start of Hector St.

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text ignage. Increased or improved signage can help educate the public about penguin presence and appropriate behavior in coastal areas, reducing disturbance. This should include clearer communication and stronger enforcement of dog restrictions in coastal areas.
There needs to be clearer signage that dogs should be on a lead at all times on all the sites ticked above. Dog owners don't seem to be aware that the default on the coast is dogs on lead unless signed that the dogs can be off lead.
Key areas for Dogs on Lead signs as they have had recent dog kills are - Around Miramar peninsula, especially Shelly, Kau & Mahanga Bays.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat oppose
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**
Long Text: Your action of: Identify areas where bollards, landscaping, and other interventions are needed to prevent vehicle intrusion into sensitive ecosystems.
I absolutely agree with this statement. There are a number of people that drive vehicles around with no respect for the land, and there needs to be clear barriers to prevent intrusion into the ecosystems. There are several notes about "A number of rare and threatened plant and animal species and naturally rare or threatened plant communities are present" and it would be devastating if we were to lose them.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Absolutely agree with these points, strongly on action numbers 1, 2 and 4. It is super important to keep our native wildlife safe, including free from litter, and a dark sky project would be amazing.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text Agree with supporting the GWRC on work here, and also need some dune resilience.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I have concerns around the unformed coastal road beyond Ōwhiro Bay, extending past Te Kopahou. It's marked on your map as a '4WD adventure' spot, but in reality it's a playground for yobbos in their silly 4WDs that have little or no respect for the land or the wildlife. They hoon along the beach going 80kmph towards seals and birds, tearing up the ground by not sticking to the track and making general nuisances of themselves. It is a beautiful place, and as a hiker I appreciate the natural beauty of it all. I believe restricting vehicle access would make it a safer place for nature and people on bikes/walking.
There is also concern around people driving down there to fish/remove shellfish that are beyond what the law says is a suitable amount. If vehicular access was restricted it would be less likely that this would continue to happen, as your plan says "The coast is our storehouse; it must provide again for our future generations." and at this rate it won't.
While talking about restricting vehicular access, even limiting it as you mention in your plan would be a fantastic start, but closing the road at Karori Stream (towards Tongue Point) for vehicles would be beneficial to not only the wildlife but the landscape itself. This must be something that everyone should agree with, as I believe there are also historical sites along the coast of importance for both Māori and Pakeha.

Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

As per my comment on the unformed coastal road beyond Ōwhiro Bay, extending past Te Kopahou being restricted, I think within Appendix A it needs to be updated from 'allowed' to 'managed' or 'restricted' to protect the land and the wildlife.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix
A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: I support what the council is proposing, with some changes to the 4WD access only.
The 4WD current access on the unformed coastal roads heading from Sinclair Head/ Te Rimurapa up to Karori Stream Estuary is troublesome. This road is used to access the coast past the Karori Stream Estuary, past Tongue Point and up to Waiariki Stream. The road passes through a number of archeological sites listed with heritage NZ and through a number of sites containing threatened biodiversity. The largest amount of damage caused by the 4WD vehicles is past Karori Stream, heading North-West up the coast. So that 4WD enthusiasts are not disadvantaged, I believe the council should block the road and any access past Karori Stream, so that vehicles can access the route between Sinclair Head and Karori Stream, entering or exiting at Karori Stream via Noel Ashton Way. Blocking the unformed road past this point (on the Tongue Point side) does not overly disadvantage anyone nor take away from locals enjoying that area, so does not diminish any values of the proposed plan, yet it puts in place protections for historical, cultural and biodiversity values present in the adjacent area - thereby strengthening and adhering to the proposed Management plan's values of Hononga Taiao/ Enduring connection to the landscape and Tiaki Taiao/ Protection & restoration of coastal ecosystems.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text I strongly support this value, my aforementioned request to block the coastal road access past Karori Stream will help realise this value and have an enduring impact by protecting the coastal character through careful design, and at the same time recognising and honouring coastal cultural heritage.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text This is a highly important value, as this will ensure the coast remains a valued asset for generations to come. To help achieve this, as per previous comments I request that the council limit the coastal unformed road used for 4WD up to the Karori Stream Estuary and no further. This will allow 4WD access from Karori Stream Estuary down to Sinclair Head and Pariwhero/ Red Rocks, yet it will protect the delicate ecosystems, biodiversity and heritage sites further north-west up the coast from Karori Stream Estuary.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I support this value strongly as it is a logical, sensible way to approach the risk of damage from extreme natural events

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text The 4WD current access on the unformed coastal roads heading from Sinclair Head/ Te Rimurapa up to Karori Stream Estuary is troublesome. This road is used to access the coast past the Karori Stream Estuary, past Tongue Point and up to Waiariki Stream. The road passes through a number of archeological sites listed with heritage NZ and through a number of sites containing threatened biodiversity. The largest amount of damage caused by the 4WD vehicles is past Karori Stream, heading North-West up the coast. So that 4WD enthusiasts are not disadvantaged, I believe the council should block the road and any access past Karori Stream, so that vehicles can access the route between Sinclair Head and Karori Stream, entering or exiting at Karori Stream via Noel Ashton Way. Blocking the unformed road past this point (on the Tongue Point side) does not overly disadvantage anyone nor take away from locals enjoying that area, so does not diminish any values of the proposed plan, yet it puts in place protections for historical, cultural and biodiversity values present in the adjacent area - thereby strengthening and adhering to the proposed Management plan's values (2, 3 &4)

Long Text: It's been great to see Ngati Toa take a leadership role in the coastal restoration of Tapu teranga, and pest control along the coast.
I like the idea of the proposed te reo place names, they are very fitting.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: I do think more needs to be done to protect our korora. Increased signage, increased comms re penguin aversion training, and greater enforcement if people are walking thier dogs off leash in sensitive areas. Also more signage re slowing down for penguins at night along our coastal roads.

I would like to see less traffic along the beach to red rocks. The amount of traffic really detracts from the experience of walking along the beach to the seal haul out.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text I do like historical/interpretive signage! More please!

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Wellington has a good track record with increasing biodiversity, and we need to do more along the coast.
Controlling invasive species, both animal and plant species is really important, and I would like to see more of it along the coast.
Introducing rat proof bins along the coast would be great too, particularly in popular picnic areas.
More resources should be given to managing litter from the Southern Landfill, along the roadside, and aquatic litter washed down Owhiro stream and potentially into the Tapu te ranga Marine Reserve.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text The south coast is already baring the brunt of climate change/sea level rise.
The council seem to be working well with communities such as Owhiro Bay residents association re emergency preparedness etc.
Difficult conversations need to be had about managed retreat as access to some areas/homes maybe lost in the future.

I agree with the dune restoration work, and would like to see this increase where practicable.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I would like to see less vehicles along the coastal route.
I would encourage the council to look at a permit or some such systems to reduce the traffic along this area.

I like the idea of a 'book a bach' system for dwellings along the coast, should the opportunity arise.

Very much in favour of the historic coastal walkway - would love to see this happen!

I would like to see more investment in educating the public in what a special area this is, highlighting the need for protection of threatened species.
Very keen to see more in the way of native plant reestablishment and predator control.

I am in favour of allowing the coastal route to recede naturally.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I agree with the suggested management approaches in the discussion document.
Particularly the ecological restoration of Taputeranga motu.

I would like to see the Bait House remain as it is. The current occupants seem to think the building is still fit for purpose.
It would be a shame to lose our local aquarium.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Q12 **Please let us know a bit more about your choice.**

Long Text:

1. Introduction
The Wellington Boardriders Club (WBC) welcomes the opportunity to provide feedback on the draft Wellington Coastal Reserves Management Plan 2025. We are a community-based organisation representing the interests of surfers across the Wellington region. Our club has a long-standing history of engagement with Wellington's coastal environments, and is committed to the sustainable enjoyment, stewardship, and protection of the region's surfing resources.
2. General Comments
We strongly support the intent of the plan to protect and enhance Wellington's coastal environment and appreciate the Council's recognition of the diverse values and uses associated with coastal reserves. For WBC and the broader surfing community, the coast is not just a scenic or ecological asset—it is a vital recreational, social, and cultural space.
3. Key Points of Interest to the Club
A. Surfing Amenity Protection
We encourage the plan to explicitly acknowledge the significance of surfing as a long-established and culturally important use of coastal areas, particularly in locations such as Lyall Bay, Houghton Bay, Breaker Bay, and the south coast from Owhiro Bay to Karori Stream.
We request that the plan include specific provisions to:
• Recognise and protect established surf breaks as regionally significant recreational assets.

• Avoid coastal structures (e.g. groynes, sea walls, breakwaters, or stormwater outlets) or activities (e.g. dredging or sand mining) that could negatively affect surf quality or wave consistency.
• Incorporate surf amenity considerations into all planning and design decisions that impact the nearshore marine environment.
B. Access to Coastal Areas
Maintaining public access to the coast is essential for recreational use, including surfing. We support ongoing investment in:
• Safe and sustainable access paths to surf breaks, including stairs, walkways, and carparks.
• Preservation of parking availability, particularly in areas like Lyall Bay where surfers require proximity due to the need to transport boards and gear.
• Timely maintenance of accessways damaged by storms or erosion.
C. Coastal Resilience and Natural Hazards
We support efforts to build coastal resilience but urge that any managed retreat or protective infrastructure be assessed in terms of its impact on surf breaks. Natural solutions like dune restoration and soft engineering should be preferred over hard coastal defences, which can degrade wave quality.
D. Environmental Stewardship and Education
As users of the marine environment, surfers are acutely aware of water quality, pollution, and coastal degradation. We support:
• Water quality monitoring and improvements, especially near stormwater outfalls. The leachate flowing into Houghton Bay from the old landfills further up the valley is of particular interest to our club.
• Community education and stewardship programs, with opportunities for WBC and other local groups to participate in beach clean-ups and conservation efforts.
E. Partnership with Mana whenua
Our club has a strong Māori membership base. As such the club supports Mana whenua engagement in coastal issues. We support the recognition and use of traditional Māori place names along the coast.
4. Recommendations
We respectfully request that the following be incorporated into the final Coastal Reserves Management Plan:
1. A clear statement acknowledging surfing as a valued recreational activity within the Wellington coastal reserves. This needs to be recognized and provided for in any future planning and/or development
2. Specific mention of key surf breaks and the need to preserve their quality and accessibility. These Are:
a) Breaker Bay, particularly the carpark and the area below the carpark.
b) All of Lyall Bay, but particularly the airport "The Corner" end of the beach. Parking along the western seawall is of significant interest to surfers. We also hold most of our surfing events here and would ask that our interest in the use of the foreshore for these events be acknowledged.
c) Houghton Bay. Parking here is very limited. The leachate issue is of particular concern to us.
d) Island Bay. The carpark area adjacent to the snorkel trail.
e) Te Kopahau coast from Owhiro Bay to Long Beach. We would ask to be consulted if any change to vehicle access conditions here is being considered.
3. A policy requiring surf impact assessments for any proposed coastal works that may affect surf spots in the areas listed above.
4. Continued provision and maintenance of coastal access and surf-friendly infrastructure.
5. Support for community partnerships in coastal stewardship and water quality advocacy.
6. Acknowledgment and consultation with Mana whenua.
5. Conclusion
Wellington's coastline is a taonga to all who use and care for it. Surfers are among the most consistent, engaged, and environmentally aware users of these spaces. We hope the Council will recognise the important role that surfing plays in the social and cultural life of the city and ensure that this is reflected in the Coastal Reserves Management Plan 2025.
The Wellington Boardriders Club welcomes the opportunity to be involved further in the planning process and to work collaboratively with the Council on matters of shared concern.
Ngā mihi,
Wellington Boardriders Club - Eke Ngaru o Te Upoko o te Ika

Long Text: personally I don't support Freedom Camping in any form, as inevitably a minority will noy abide by the rules. We should adopt the same approach as Iceland, where camping or campervans are only allowed to use camp grounds, which are relatively cheap & have toilets & shower blocks. Red Rocks typifies the problem with litter over flowing bins & campervans that are clearly not compliant with self contained toilets blatantly dsplaying blue stickers that they are.

Long Text BUT, you make no mention of the ocean ecosystems themselves, as if somehow they will be ok if you just do stuff with the coastal landscape. What about sediment run off, kina rock barrens with over fishing for fin fish & crayfish, as well as ongoing poaching on Wgtn's south coast, including in the marine reserve. Have any of you watched Dr Nicole Miller's short documentary film 'Seaweed, a Love Story'. Should be compulsary viewing for all WCC council officers & councillers. And as for Shne Jones , a supporter of bottom trawling & extracting sea floor, don't get me started. What sort of ocean are we leaving for our grandchildren??

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more

accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Long Text Draft Coastal Reserves Management Plan submission

Introduction:
My name is Murray Martin. I am a bach owner at Long Beach, west of Sinclair Head, on Wellington south coast. The bach is vehicle accessed by the unformed road section of Owhiro Bay Parade that starts at the Te Kopahou Visitor Centre. The family bach was constructed in1968 and purchased by my parents in approximately 1972. I have been frequenting this area of Wellington for some 55 years baching, diving and fishing. With a large family (and ageing) it was, and still is, important that I maintain vehicle access to the bach. As such my submission is principally concentrated on Sector 1 of the draft Plan, Te Kopahou coast and coastal route. I will address particular points of this part of the draft Plan as below. But I will also address other general relevant issues with the draft Plan at the end of my Sector 1 submission as there are a number of inaccuracies and inconsistencies in the draft Plan.
There have been significant changes to the nature and management of this portion of Wellington coastline over time, the main ones being:
- quarry closed down.
- Recreation and Scientific Reserves formed.
- rural subdivisions at adjoining coastal farms (Kinnoul Station and Long Gully Station).
- formation of a wind farm on Terawhiti Station.
- various management plans implemented by Council - Healing The South Coast, South Coast Management Plan 2002 being the significant documents.
- Council promotion of the south coast and seal haul out area as significant locations of interest for the public to visit.
- installation of electronic security gate at Te Kopahou entrance.
The public have been given two months to prepare a submission to this draft Plan. One could get the impression from the draft that it is more an informative document as to what Council intend to do, as opposed to a consultation document for the concerned public to participate in. I understand there is no appeal process available to the public prior to the Plan becoming operative therefore the Plan needs to be accurate and finite in its objective.

SECTOR 1: Management approach
1.2
The statement 90% of visitors access the reserve on foot is misleading and probably incorrect. A vehicle counter was installed at the entrance to Te Kopahou Reserve in 2020 and vehicle data collected since then. However, Council only combined pedestrian and vehicle data from 2021. This means therefore that Council are limited in what they can reliably say about the proportions of users travelling on foot versus by vehicle. Vehicle count on Saturdays average around 100 per day, and over the summer months (December-January) Council typically see around 2300 vehicles total. Over the winter months vehicle count is typically half that. The busiest single day recorded was on 9 October 2021 when 257 vehicles were counted. Now bear in mind that vehicle count does not clarify the number of occupants in these vehicles. Most vehicles are four door and would have at least 2, possibly 4 or more occupants per trip. Based on the previous figure assumptions it is clear the proportion of foot users versus vehicle users does not take into account the passengers inside the vehicles thereby not giving a reliable person head count for the different user groups.

Clause 1.2 states 'initially developed for quarrying the unformed road remains popular with 4wd users'. This statement is incorrect. The coastal road (Owhiro Bay Parade) was surveyed c.1905, actual road legislation action completed in 1922. The road was originally conceived as a scenic coastal drive from Owhiro Bay to Karori. It would have linked up with the unformed legal road running down the Karori Stream and then linking with South Makara Road, and up to Karori. This route was not developed and the unformed road was used principally as a stock route from Terawhiti, Kinnoul, and Long Gully Stations. The quarry developed the first section (city end) of the unformed road for its needs in accessing the Runaround area for quarry materials. I point out that in this era foot users along this coastline was minimal and the unformed road was eventually formed for beach buggy and, later, 4wd use. Foot users to this coastline increased dramatically when the coast was promoted by Council as an area worthy of visit. In effect what I am implying is that motor vehicles were the one of the predominant early road users, and indeed kept the road accessible for emergency personnel and fisheries protection etc. It now appears from the draft Plan that vehicle users are in danger of being castigated with suggestions from Council that their road access may be closed off via a change in status to the road (Esplanade Reserve?). To put it bluntly, vehicles were some of the original

predominate users of the road and to now suggest walkers/bikers should have exclusive access is discriminatory. Walkers/bikers should work in with these original users, not dictate their terms over the road usage.

Concerns have been raised about the environmental impact of vehicles to the coast, antisocial behaviour, and illegal poaching operations. I can assure you these claims are a minority of this user group, and with all general public access areas in New Zealand one can expect some misbehaviour. I urge Council to have a stronger Ranger approach along the coast, particularly on busy Saturdays, to ensure better vehicle management and ensure walkers' toe the line' also with satisfactory behaviour. There have been recorded cases of the walking public annoying and disrupting seals at their haul out areas.
Fisheries presence needs to be more prominent, but this is not a Council jurisdiction and out of their scope.

The road through Te Kopahou Reserve appears the area of most concern for Council with the different user groups. The road west from Sinclair Head only has very limited walker/biker activity.
Suggestion: there are only a few, albeit short, locations in the Reserve where the walkers/bikers need to use the road for passage to the seal colony, due to the nature of the terrain (steep escarpments falling direct to the shoreline). Other areas have scope for a separate walking/biking track to be formed away from the road to separate the user groups. Maybe this could be identified and put in place where possible. Refer also to my summary and attachments.

Management approach:
Restricting public access when necessary:
At various high risk periods this is agreeable with me, and indeed encouraged. Foot and vehicle traffic at high seas only endangers other members of the public at any rescue attempt.

Managing vehicle access:
Sunday gate closures are existing and prove satisfactory for vehicle users on the unformed road. This has been in place now for a number off years and the public have come to accept it as the norm.
Public holiday gate closure is not satisfactory, nor fair, to the vehicle users. For working folk this only leaves Saturday for vehicle recreational use and will put more pressure for various groups to clash on this day, especially in summer months. As Council will be aware Saturdays are the problem days for clash of the various user groups and closing the road on public holidays will only exasperate this situation.
Council has stated they have worked closely with its mana whenua partners - do they realise they may be shut out from the coast area for gathering kai on public holidays?
Non vehicle recreation is not acceptable to myself, and no doubt other vehicle users. As pointed out in my second paragraph 'the vehicles were here first' and is the sole reason the road is still in existence as we know it today. This vehicle access issue was discussed in some length for the compilation of the South Coast Management Plan 2002. There has been little change regarding interaction with the various user groups along this coastal road so I do not see any necessary cause for concern by Council.
Suggestion - maybe a bit more vehicle user and walker education could be encouraged.

Nighttime gate closure is acceptable to me, but only if vehicles can exit at night when they are faced with vehicle breakdown or getting stuck. If vehicles are not able to exit at night then this puts the security of baches at risk as users seek shelter at night. It also encourages overnighters to light fires to keep warm.

Permit system:
I struggle to see the point of a permit system for vehicle users. Who qualifies for a permit to drive the road? What is the criteria for a permit? Just because someone has a permit to use the road does not guarantee responsible use and risk environmental risks. I also question whether a permit system would be easy to administer - does a permit holder have an access card for the gate, or are they challenged by a full time gate keeper? Lots of questions and definitely a lot more work required by Council, and more compliance information required by the public for this to be instigated.

Monitor vehicle access impact:
How does Council intend for this to be instigated? Maybe this is where the Rangers could get involved. But I suspect more than the one Ranger currently used at any one time will need to be increased. Adjusting the approach to vehicle users on this information could be discriminatory, and Council could get forced into more public consultancy to be seen to be fair and reasonable.

Maintain access to the coast for bach owners between Te Kopahou and Devils Gate:
I remind Council that there are 6 baches and 1 legal household (see below - Investigate road to be reclassified as a Reserve) up to end of Long Beach, and 12 baches at mouth of Karori Stream, all west of Devils Gate. I presume access will be maintained to these structures also. If this is not the case please advise the writer.

Bach leases:
I understand leases to baches at Mestanes Bay and Red Rocks are satisfactory to the owners. Leases to baches at Long Beach could be explored by Council to be consistent.

Bach public use:.
This clause confuses me. This clause implies that when bach leases expire they will not be renewed. Is this correct? Implementing a 'book a bach' system contradicts Council suggestions of closing off the unformed road. Community access, or cultural education would probably necessitate vehicle access to move the occupants to these 'book a baches', as charging would no doubt occur, keeping in line with other private 'book a baches'.

Bach alterations and permanent living:

A typical bach definition for New Zealand is a small, modest, holiday home or beach house. Council are aware there are permanent residents on the coast. Obviously they live there because they have nowhere else to live, so, do they become homeless, which would be contrary to Government and Council intentions. I also remind Council of the legal property at the west end of Long Beach - this is a home and the owners have a right to live permanently in it. I do not see any particular issue with permanent residents on this coast but also I have no objection to bach use being monitored to keep them in line with their typical definition.

Management approach C - F:
These particular suggestions have my approval. Particular emphasis on the proposed historic coastal walkway could ensure the majority of the walk is separate from the unformed road where practicable.

SECTOR 1: Action table
3 Investigate reclassifying the coastal road (Owhiro Bay Parade) as a Reserve:
Assuming an Esplanade Reserve reclassification this would obviously have implications to the status of the unformed road (Owhiro Bay Parade), and give Council carte blanche authority to prohibit access to vehicles.
I remind Council that there is a legal fee simple property at the west end of Long Beach - 708 Owhiro Bay Parade, Makara 6972 - Lot 122 DP508140. Obviously if the road was closed then this property becomes land locked as there is no other legal means of exit from the property to a formed road (Southernthread Road is a private road). Taking this property into account a challenging legal claim against Council could occur if they were to consider closing off the road up to Sinclair Head.
A suitable document to use as a guide for Council, and the public, is Guidelines for the Management of Unformed Roads 2011 (by Heranga a Nuku). This document is quite specific on the procedure for reclassification of a public road, and the appeal process necessary to appease the public in the decision making process.
Have local 4wd clubs been notified of a possible road reclassification that would affect their access to the coast? If they have been contacted Council should have included this in their draft plan. If no contact with the 4wd clubs has been made then Council should mention this fact in their final plan decision. This would make it transparent to the general public and give them a 'heads up' on how the Council consultation process appears to them. This may also open the way to appeal the final plan (presuming this option exists).
I do not support a coastal road reclassification.

5 Permit system for vehicles:
Addressed earlier.

7. Night time and public holiday vehicle access:
Addressed earlier.

Other statements of the draft plan to be addressed
Page 12 - ecological emergency:
Rather emotive statement. I assume 4wd vehicles are in the 'firing line' again, but I advise that walking sightseers are also a threat to habitat eg; seal haul out.

Page 13 - over harvesting of coastal marine species:
Surely a matter for Fisheries and not a Council jurisdiction. I remind Council that Fisheries require vehicle access to the coastline via the unformed road to effectively perform their surveillance duties.

Page 25 - Red Rocks Trail:
This term is incorrect if referring to Red Rocks Coastal Walk, which in reality is the unformed road for most of the journey. Lets get the descriptions correct please.

Page 37 - estuaries :
Owhiro Bay stream, Te Kopahou (Spooky Creek), and Karori Stream are listed as whitebait habitat. I point out that these streams are not open to the sea and therefore cannot support whitebait breeding. Connecting these waterways to the open sea would be a good solution but this work would need to be ongoing to combat natural storm disturbance of the waterway openings to keep them open. Cost?

Page 58 - road stopping:
Refer SECTOR 1: Action table (3).

Page 61 - enduring connection to the landscape:
Could Council please clarify location of urupa and midden sites mentioned.

Page 66 - Nature - first approach to resilience:
To quote - 'Additionally, the coastal platform (this includes the road) is critical to emergency evacuation and maritime disaster response in the hazardous Cook Strait area, necessitating careful consideration of access and preparedness".
And Management approach (c) - 'Clearing slips only where necessary to keep 4wd access feasible'.

Both these statements appear to be in contradictment with SECTOR 1: Action table (3) above, which discusses reclassification of the coastal road, and probable road closure.
I also point out that slip clearance to the road is also essential for walkers and bikers (not just 4wd and emergency response vehicles) as in some locations of continual slippage access is impassable due to the proximity of the road to the sea.

SUMMARY

I have been involved as an interested party in Council submission Plans and other documents for this sector of Wellington coastline since 1994. Healing The South Coast 1994, South Coast Management Plan 2002 and Scientific Study of Vehicle Impacts on Wellington's South Coast (by Harrison Grierson Consultants Ltd) being the relevant documents.
All these documents have dwelled on the impact of 4wd vehicles on the coastal road and potential clash with other user groups. Suggestions have been made in all these documents to rectify any suggested misuse or clash of user groups to this coastal road, but apart from an electronic gate entry to the road nothing else has been forthcoming.
South Coast Management Plan 2002 Implementation: (p42) 'Off road users of the coastal road will be consulted and involved in managing access to it, erecting signs, and separating users where possible for reasons of safety". I note none of this implementation, or other suggestions, have been put in place so it makes one wonder whether there is actually an opportunity for off road users to have an involvement in managing vehicle access to this road.
Page 67 of the Plan, Action table, (#3) suggests investigating reclassification of the coastal road (Owhiro Bay Parade) to a reserve (Esplanade Reserve?). This action will require a consultation process under the existing RMA, with the right of appeal at conclusion. Chris Bishop, minister for RMA reform, may further complicate this process with replacement of the RMA with two new Acts later this year. This will require Councils to stop any plan reviews and changes for which hearings have not already started. Delays will be inevitable.
Suggestion: In respect of separating the shared carriageway (road) the users (vehicles, walkers and bikers) I have taken particular notice along the road of the areas where a separate walking/biking track may be formed. There are only two short locations, Mestanes Bay corner and the point before Red Rocks, (refer attached photos) where it would probably be too difficult to separate the user groups and controlled joint use would be necessary. Under the Proposed District Plan (Public notice 12 June 2025) construction of new public walking and mountain biking tracks within significant natural areas will still require a resource consent as a 'controlled activity'. But I would expect this to be be a mere formality for Council, without public objections, as the benefit to the various user groups far outweighs the non-benefits. This walking/biking track would be costly but a permanent asset for Council and the public and all but eliminate a clash of interests in Te Kopahou Reserve.

I also took particular notice in the Te Kopahou carpark that there is a distinct lack of information informing walkers that they are indeed walking on a public road to visit the seal colony. There is a sign inside the electronic gate that merely states 'Vehicle/pedestrian shared access' on a short hazards list (refer attachment). The WCC Red Rocks walk website does give a tip that the gate is closed Sunday and walkers would have a more enjoyable vehicle free walk. Also be aware the majority of the coast walkers probably just turn up on hearsay of what attractions are at the coast and do not know what to expect in respect of access until they get there.
On the other side of the coastal entrance are two nearly identical 4wd hazard signs merely telling drivers they need to be 4wd competent on the coastal road. No reference to legal road status or sharing the road with other users.
Suggestion: Make it very clear to the walkers/bikers that they are sharing a legal road with vehicles on 6 days a week and need to be able to react accordingly when approached. I suggest altering the website to show this, and more explicit signage in the carpark. More user education the key here.

The extent of the Taputeranga Marine Reserve (Houghton Bay to old quarry site in Te Kopahou Reserve) effectively forces kai gatherers west towards Red Rocks and further beyond. Limiting, or closing, the coastal access for these kai gatherers will no doubt spark an unsavoury reaction from these coast users toward Council. I would expect local Iwi to have some input regarding any access restrictions to this part of the south coast.

I thank Council for the opportunity to prepare and submit this submission. I do not want to make an oral submission but I am prepared to enter into informal discussion with Council on the relevant matters I have raised.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses

for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Neutral
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q10 **Please let us know a bit more about your choice.**

Long Text: This is very important, but I feel that this active partnership might be better integrated into all the other values, rather than keeping it separate.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: All these pathways make sense and are important but why are these not reflected in the actions? It seems like only having two action points after offering us 6 pathways is very small. It now seems like the only thing WCC is truly working on is limiting freedom camping and "working with" the disabled community (this is too vague in my opinion, at what point is this action point "done"?).

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: I don't have much to add about this.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I enormously support this value and its pathways but I am incredibly surprised to see this at the end of the document. This, in my opinion, is the most important job WCC has in terms of managing its coastal reserves and this is the ONLY one that touches on the wellbeing/safety/long-term stability of coastal communities. Adaptive planning for sea-level rise and prioritising nature-based solutions should be the main focus of this entire document.

Long Text

I am surprised that WCC has not touched on ensuring the safety of its coastal communities with respect to extreme weather events and sea level rise, rather it focuses on managing its council infrastructure. I think ensuring the safety of residents along the coast, while maybe not a direct responsibility of WCC, can easily be integrated in your considerations for the management of coastal council infrastructure, but also in the conversation around nature-based solutions. Also, who is responsible for ensuring the resilience of coastal communities?

MfE published their coastal hazards guidance sometime in the last two years. In that they discuss how a DAPP should be implemented and used. The way it is outlined on page 53 of the draft report is not in line with that; you should 1. be prepared, 2. avoid, 3. accommodate, 4. relocate/retreat and/or protect. The DAPP plan WCC is proposing is not inline with MfE's guidance and is too vague to be actually helpful in planning.

Lastly, the data used to calculate inundation areas with future sea level rise is outdates, NZSeaRise has the most up-to-date data (also discussed in MfE's coastal hazards guidance). While the eventual numbers don't change much, this is a ten year plan, and I think that should not be based on outdated data. Please work with newer data.

Long Text:

I welcome the council's stated commitment to a holistic approach in managing this valuable coastal area. However, it is essential that "holistic" translates into tangible, responsible action—not simply aspirational language.
The marina has suffered from a prolonged period of poor oversight, substandard maintenance, and a lack of strategic investment. In stark contrast, the yacht club remains vibrant, well-managed, and financially sustainable. It is imperative that the council does not replicate the flawed management model used for the marina at EBYMBC. The success of community-driven operations should be protected, not undermined by ill-fitting administrative decisions.
Regarding the proposed cycleway, I maintain my opposition to the reduction of on-street parking as currently planned. This reduction poses serious logistical challenges, particularly during regatta days and other high-traffic events. The council's snapshot analysis of parking demand—taken on a day when water activities were cancelled due to high winds—was incomplete and misrepresentative. There is no adequate parking capacity at the yacht club during large events, and the nature of the equipment involved makes public transport impractical.
I urge the council to consider a more cost-effective and safer alternative cycle route. A northern entrance through EBYMBC, continuing along the water's edge to the Coast Guard station and through the free-camping zone, would be an ideal solution—already used informally by many cyclists, including myself. With minimal additional infrastructure such as lighting and cameras, this route could be made suitable for day and night use.
Haitaitai Beach
I strongly support the inclusion of the cycle path alongside the jetty and changing rooms. It reflects a thoughtful integration of recreational access and urban mobility. As a regular cyclist through the area, I witness both younger and older residents actively enjoying the beachfront.
However, I note that the current cycleway alignment has encroached on beach space. To preserve Haitaitai Beach as a thriving community asset, additional sand should be added—much like the improvements seen at Oriental Bay. This would reinforce its appeal and maintain its function as a cherished public swimming area.
In conclusion, I encourage the council to maintain clear communication with the public throughout this process and to prioritise pragmatic, community-informed solutions. Investment in infrastructure must align with real-world usage and safeguard the interests of those who contribute most to the vitality of this coastal space.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Long Text EVANS BAY MARINA TO EVANS BAY YACHT CLUB:

The plans calls for an "holistic" approach to managing this area.

The marina is in trouble due to indifferent management, poor maintenance and under-investment, while the yacht club is thriving and profitable.

I oppose any move to apply to EBYMBC, the type of management that WCC has applied to the marina!

I also oppose (and did so when WCC asked for feedback about it) the reduction in on-street car parks that the cycleway under its present plan will cause.

[The snapshot view of whether this would interfere with water activities at the yacht club on regatta days, was taken by WCC when the wind was so strong that activities were cancelled for the day. So the conclusion that on-street parking was "not needed" was WRONG. There is no room to park at the yacht club when dozens of dinghies are being readied and the amount of clobber that has to be transported to boats rules out the use of buses to reach the club.]

A cheaper and safer cycleway would take cyclists down the northern entrance to EBYMBC and along the waterside to the Coast Guard station, the through the free-camping zone to the already completed Cobham Drive cycle way. It's a great route which I follow on my bike trip to the CBD. For night-time use, just a few lights and security cameras are all that is needed.

HAITAITAI BEACH
I applaud the new cycle-path passing beside the jetty and changing rooms. Although not a swimmer myself, I see young (usually on the beach) and old (usually on the jetty) enjoying the water access as I cycle to the city. BUT the

cycle-way has stolen a meter or so of beach. I would urge adding more beach (similar to that in Oriental Bay) to retain this as a popular "swimming hole" .

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

I wish you'd provided the questions and explanations in clear English. I have absolutely nothing against Māori but I do not understand many of the Māori words you used in this questionnaire.
I do not believe that Māori have any greater right - except in currently used traditional areas- than other New Zealanders.
I do not want to see more exclusively Māori areas or control than there is currently.

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Neutral

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: New Zealand is multicultural and many services are becoming inaccessible with Maori only names. I support having both, but not renaming so that all boaties, divers, recreational users have to learn a new set of placenames. Have both. I also believe that the management should not be Maori alone, it should be accessible to New Zealanders and access is not guaranteed if it is not managed by representatives of all cultures.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: We should retain access along the red rocks coastline. I understand the few are making it hard for many people who rely upon it for recreation and food. Simply closing it has a much greater impact on wellbeing. There must be other ways to manage the area and retain access (I used to use this all the time, I now use a boat. However, I know many people that still drive along the coast as part of their way of life.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text: I support the values, but not at the cost of recreational use or a multicultural approach. New Zealand is diverse and that makes it an amazing place to live. We should honour our diversity.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text So much of the values resonates with me but the intent to restrict access does not work for me. There must be other ways.
The baithouse, also, is iconic. We should protect that aquarium and give it longevity. Make no decision until the baithouse aquarium has a confirmed future (even if its not on that site)

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text The values may not translate into tolerable outcomes. Yes protect nature, but keep access. One day we may not be able to use the coast because of sea level rise, but until then, make it accessible to all.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Rangitatau
Moa Point to Breaker Bay
Taputeranga
Southern Bays
Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text These belong to all people and are critical areas for recreation and food for all people.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: I don't support restricting access to the south coast, specifically the Red Rocks area. As a family we travel to the area to enjoy recreational activities, including fishing and diving. In doing so we add to the economic outcomes in the area. If the access is restricted, it's unlikely we'll continue to visit the area.
I suspect a minority of visitors to the red rocks area contribute to reckless behaviour and undertake the environmental damage. Those, like me, who are passionate about fishing and diving are supportive of positive environmental outcomes.
Other areas in the Wellington region are proposing closing a similar coastline (beyond Cape Palliser), if both of these were to be restricted, this would be a negative outcome for recreational fishers and divers. It would also have an unintentional negative impact on the environment as there would become less places to collect kai moana and put significantly more pressure on other areas, leading to overfishing. Kina are also a major issue for marine coastlines, how would central or local government propose keeping kina numbers uncontrol in these restricted areas.
In summary, I support positive environmental outcomes but don't support restricting access to coastlines.

Long Text Mainland Island Restoration Organisation (MIRO) holds a high impact permit to protect and study the native banded dotterel, pohowera, along the Wellington south coast and harbor. We are now entering our 10th year of protection and study of the pohowera at Parangahau Lakes and the Eastbourne foreshore, 5th year at Baring Head and 2nd year at the southern end of the Wellington Airport. We have taken the nest success at Baring and Parangahau from 3% to over 50% through many protection methods including signage, predator control, rahui, fencing and public engagement.

The pohowera are at risk and in decline, the same as the little blue penguin which MIRO is also protecting, so it is important to protect any place the pohowera are currently nesting. The Wellington airport nests were located at the south end of the runway, both inside the safety fence, and outside on the seaward side of the road. In the 2024-2025 nesting season, we monitored 8 nests at the airport which produced 3 successful fledglings. Unfortunately we lost a number of chicks after the nests hatched due to predation. Our trapping around the airport nesting area leads us to believe that cats are the main predator of the chicks at the airport.

The area south of the road is prone to many humans taking pictures of planes taking off. In order for this population to be productive, the threat of human and introduced predators destroying pohowera nests and chicks must be mitigated using similar methods MIRO has developed over the last 10 years at the other areas we are working in.

Long Text

It looks like the little blue penguin is being well catered for, we also need to help the pohowera that are nesting at the south end of the airport.

Thanks for your response. I have been able to blow up the draft plan and, indeed, see off leash is still planned for Lyall Bay.

...However the map shows dogs no longer allowed on Worser Bay, but only on the little traffic island across from the surf club. See attached.

Would you also pass on my observation about the horrible design of the plan — white font on pale blue background is unreadable and one of the first things teen-age designers learn to avoid. Many people I've talked to say they haven't read it because it looked to difficult. They didn't identify the anti-readability fonts, but it would turn off anyone right from the first pages.

Long Text SUBMISSION FROM HERITAGE NEW ZEALAND POUHERE TAONGA ON TĀTOU KI UTA – DRAFT COASTAL RESERVES MANAGEMENT PLAN
1. Thank you for the opportunity to make a submission on the Tātou ki Uta – Draft Coastal Reserves Management Plan 2025.
2. Heritage New Zealand Pouhere Taonga (HNZPT) is an autonomous Crown Entity with statutory responsibility under the Heritage New Zealand Pouhere Taonga Act 2014 (HNZPTA) for the identification, protection, preservation and conservation of New Zealand's historical and cultural heritage. Heritage New Zealand is New Zealand's lead heritage agency.
3. HNZPT is supportive of the overall direction of the Tātou ki Uta – Draft Coastal Reserves Management Plan 2025. HNZPT appreciates that there is substantial mention of heritage throughout the plan, including the mention of various heritage places which contribute to the heritage values and management of Wellington's coastal reserves.
4. HNZPT supports the active partnership between Wellington City Council and mana whenua who are Taranaki Whānui and Ngāti Toa Rangatira (Ngāti Toa). As indicated in the draft plan, mana whenua are

the kaitiaki (guardians) of Wellington's coastline and active partnership with mana whenua is very important in the preservation and continuity of heritage features of the coastline.
HNZPT Position on Key Heritage Places and Features
5. Heritage New Zealand supports that the wharves and jetties which "provide access for fishing, diving, and social gatherings, while also serving as launch points for boats and popular spots for jumping into the water" are also recognised as heritage assets and should be protected as they have heritage value
(64 4) 494 8320 Central Regional Office Level 1, 79 Boulcott Street PO Box 2629, Wellington 6140 heritage.org.nz
by contributing to the recreational use within these public spaces. HNZPT supports the seven pathways the Wellington City Council has highlighted for the access to the coastal amenities for public usage.
1
6. HNZPT supports the maintenance and use of historic baches at Mestanes Bay and Red Rocks. HNZPT supports the Council to retain the current leases for these baches and for the ownership to revert to Council when the lease is relinquished. HNZPT also supports the Council to investigate choicesfor public use for the baches and to partner with "mana whenua to assess their potential as whare wānanga spaces for cultural and environmental education".
2 Implementing a public feature for the historic
baches at Mestanes Bay and Red Rocks will provide communal benefits for the long-term public use of the baches.
7. Heritage New Zealand strongly supports the references in the plan to archaeological sites such as pā, karaka groves, tauranga waka (traditional landing places), and middens. These places reflect the rich coastal cultural heritage, particularly in connection to mana whenua and their connection to the whenua. HNZPT acknowledges that "wāhi tapu are sacred sites of spiritual and cultural significance while wāhi tūpuna connect Māori to their heritage and reinforce whakapapa"3
.
8. HNZPT supports the preservation and the enduring connection to the landscape for Taputeranga. HNZPT acknowledges the deep symbolisms and cultural heritage significance for Ngāti Toa and enduring connections with Taranaki Whānui in this region and strongly supports the preservation of cultural heritage mentioned in the plan for Taputeranga Island.
9. HNZPT acknowledges the work Council is undertaking with mana whenua to implement cultural restoration initiatives in Te Kopahou Reserve. HNZPT also acknowledges that a specific cultural restoration plan for Te Kopahou will consider maintaining the Te Kopahou Visitor Centre to incorporate and enhance cultural and educational elements that reflect the area's unique heritage and significance. HNZPT supports the maintenance and use of Te Kopahou Reserve and acknowledges that it will be a significant place commemorating history.
10. HNZPT strongly supports the key heritage features mentioned in the Rangitatau Moa Point to Breaker Bay section in the plan and supports the key sites and stories of significance of Rangitatau Pā and Poito Pā in relation to the significance of Wellington's coastal reserves.
11. HNZPT is also supportive of the heritage areas mentioned in Sector 8 (Te Rāngai o Onemutu Oriental Bay) for recreational use including Clyde Quay Boat Harbour, Cog Park heritage area, and Oriental band rotunda which reflect the rich historic heritage of the Wellington region.
12. HNZPT understands that coastal heritage is dynamic, and not all structures can or should be preserved, as some heritage sites may deteriorate through erosion, sea-level rise or natural degradation. HNZPT always takes a pragmatic approach to the heritage values of structures and assets, such as seawalls, which provide an important practical protective role in the dynamic coastal environment.
1 Tātou ki Uta Draft Coastal Reserves Management Plan 2025, page 21 2 Tātou ki Uta Draft Coastal Reserves Management Plan 2025, page 64 3 Tātou ki Uta Draft Coastal Reserves Management Plan 2025, page 33
(64 4) 494 8320 Central Regional Office Level 1, 79 Boulcott Street PO Box 2629, Wellington 6140 heritage.org.nz
13. HNZPT understands that it is important to enrich coastal storytelling through the Māori narratives of iwi and mana whenua through storytelling, interpretation and design in relation to the rich cultural narratives relating to Wellington coastal reserves. Such narratives provide rich cultural history which is beneficial for the long-term community understanding of the coastal reserve.
HNZPT Corrections to the Plan

14. HNZPT has found a few minor errors in the Tātou ki Uta – Draft Coastal Reserves Management Plan 2025. HNZPT would appreciate if the Council makes the following corrections to the plan:
• In Section 1: Te Takenga/Background: Under Strategic and Legislative Contest, the plan indicates that one of the enabling legislations is, Heritage Poutama Act. This is a mistake as there is no legislation called Heritage Poutama Act. The correct statutory legislation is Heritage New Zealand Pouhere Taonga Act 2014.
• In Section 4: Ngā Rāngai Whakahaere/Management sectors: Under key sites and stories of significance, for Historic Baches at Mestanes Bay and Red Rocks, the plan indicates that these places are recognised by the New Zealand Historic Places Trust. Heritage New Zealand Pouhere Taonga was formerly known as Historic Places Trust, but the name was changed in 2014. The correct wording should be:
Historic Baches at Mestanes Bay and Red Rocks are recognised by the New Zealand Historic Places Trust Heritage New Zealand Pouhere Taonga and offer a glimpse into early 20th-century coastal life, reflecting a period of resilience and community along the coast.
Concluding remarks
15. Heritage New Zealand Pouhere Taonga looks forward to further opportunities to be involved in future decision-making stages of the Plan. We are available to speak to our submission at an oral submission. We are also available to answer any queries that Council may have regarding the submission and continue to be able to offer advice to Council regarding heritage conservation, and advice concerning archaeological authority requirements under the Heritage New Zealand Pouhere Taonga Act 2014.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I strongly oppose the Bait House (Marine Reserve Centre) being demolished. (1) It is an historical place for the community especially the Italians and Shetland Islanders. (2) The Marine Reserve Centre is a gathering place for many from the community and groups from far afield to learn about our marine life. (3) Has the earthquake status being peer reviewed, in a number of cases in the city when this was done the status has changed. The second point I do not approve of Shorland Park being renamed, I feel J O Shorland was a person who represented our community, He also built the play area. I feel we should celebrate the life of J O Shorland and recognise the name Te Mupunga Kainga which was a significant battle on the beach either (1) having a double name eg Shorland - Te Mupunga Kainga Park. Or keep the name Shorland Park and naming the beach Te Mupunga Kainga Beach. I would like to see the Council listen to the community of the Southern Bays. I feel I have been to consultations and pop up consultations that have listened to the minority not the majority.

Long Text Submission on Tātou ki Uta – Coastal Reserves Management Plan

I strongly support keeping public access to Wellington's coastal reserves unchanged. These areas are a key part of community life, offering vital access for weekend activities like fishing, diving, swimming, walking, and spending time with whānau.

Rather than introducing more restrictive or "hard" controls such as new fences, barriers, or heavy infrastructure, the Council should focus on protecting these spaces through soft, ecological approaches. Natural solutions—like native planting, dune restoration, and habitat protection—can improve the environment without cutting people off from enjoying it.

It's especially important to recognise the value of coastal access for recreational users. For many locals, access to the coast is central to weekend routines—fishing off the rocks, launching a boat, or diving from popular coastal points. These activities are more than hobbies; they're part of our identity and our connection to the environment.

The four-wheel-drive community also relies on coastal access. There are very few legal, accessible areas left for responsible off-road recreation. The south coast in particular has long been a place where families and groups can explore, access remote fishing or diving spots, and enjoy a shared passion for the outdoors. Losing this would significantly impact a community that already has limited alternatives.

I support measures that protect the natural environment—but they must be balanced with fair and continued public access. Any changes that limit movement, restrict vehicle access, or reduce entry points should be carefully reconsidered. The coastline can be protected without shutting people out.

I also believe community stewardship is the most powerful tool we have. Locals care deeply about these places and already contribute through cleanups, restoration projects, and respectful use. With the right support, education and engagement, the community can play a bigger role in protecting these spaces without the need for excessive control.

In summary:

Keep coastal access open and unchanged.

Avoid hard infrastructure that limits public use or enjoyment.

Recognise the value of the coast for recreation, especially for fishers, divers, and the 4WD community.

Focus on natural, soft protection methods.

Support local stewardship and community care.

Thank you for the opportunity to provide feedback. Wellington's coastline is a shared taonga, and protecting it should not come at the cost of cutting people off from experiencing and enjoying it.

Q10 **Please let us know a bit more about your choice.**

Long Text: It is essential that Mana Whenua are partners in this plan. I am not clear if they have agreed with the draft and would like to see the agreement right at the front of the document

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: I am 72 years old and drive a small Jimny Suzuki out to Devil's Gate at least twice a month. My main interest is access to the wild, and photography of the sea is my passion. I drive responsibly. Walking that far with heavy camera gear is not really a viable option these days. I would be more than happy to apply for a permit. It is definitely the big heavy duty vehicles that sometimes are involved in hoon behaviour. I do not know how you would weed those people out.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: I like the idea very much, but cannot see how that is happening

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Not sure how you control invasive species in such a wild environment.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text On reading the plan for the track to Devils Gate, it looks like the nature based solution is just to leave the road to disintegrate. So how will ecological restoration be carried out? I think the 4 wheel drive/walking track needs to be safely maintained for access.

As for fires, I thought all fires are banned from the entire Wellington coastline except Princess Bay, which requires one. Last summer a friend and I were concered about 2 separate fires that had been lit by the Wahine Park carpark...everything was tinder dry. We tried ringing the Council, then DOC and then finally the fire service. This needs HUGE improvement. DOC and WCC had no idea what the fire regs were for the area or who to contact. Signage is totally inadequate.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Rangitatau
Moa Point to Breaker Bay
Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Please maintain the road to a minimal level for the safety of walkers and vehicles. ie fill in the main potholes so the road can be driven on, and to stop people driving on the dunes and beach.

Please dont close it off completely at night. People like to access the dark sky aspect of the reserve for stargazing and astrophotography. Maybe give those people night access?

Q5 **Name of organisation you are submitting on behalf of**

Short Text:

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: I'd love to learn more about the origins of this area through information and place names, and completely support mana whenua to be part of decision-making processes about kaitiakitanga of our coast

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: I love the access to the coast and the opportunities for many different people to interact in a way that benefits them (dog walkers, fishing, walking, swimming, exploring) but am not supportive of general drive-through access to red rocks (unless in an emergency). I don't understand how a very wild stretch of coast with large seal and penguin populations can co-exist with regular 4WD access.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text: I definitely support coastal design if it prioritises wildlife and incorporates climate change mitigation but am not so strongly supportive of tax-payer money being spent on storytelling. I think this money is better spent on pest eradication, responsible dog owner education and aversion training, and ensuring people can safely cross busy roads to the beach - perhaps a zebra crossing from Shorland Park to the beach or similar ideas that improve safety for small people.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Fully support this value!

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays
Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I don't support the access to red rocks with 4WD recreational vehicles. This is a wild area with healthy populations of seals and sea life. There's no need for this to be a 4WD play zone.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Issues include safe crossing from the play area to the beach, and speed limits around the coast. I'd favour a reduction to 30 km/hr max. I don't think there's a strong reason to support 50km/hr speeds on what is essentially a scenic route.

I also favour climate change mitigation and natural ecosystem restoration over signage and storytelling.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including

closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice:

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: We all equally should be responsible citizens and guardians (Kaitiaki) of our coastlines, and open spaces. The Treaty relationship rests with the Crown. Many areas and bays already have maori place names and te reo maori signage. A WCC focus on core services would benefit all Wellingtonians.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: The only caution I would note is to discourage freedom camping - I think campers should be directed to managed campsites to ensure our environment is protected.
The only request is there is too big a distance between toilets along the popular walking route between Moa Point - Tarakena Bay/Ataturk Memorial/Rangitatau Reserve and beyond to Breaker Bay.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: The coastline is always changing, refreshing in Wellington's breezes, wild and untamed for the most part it should stay this way - a haven from the city bustle, whilst maintaining safe access for walkers, cyclists, boats and vehicles.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Ensure the sewage plant is safe and effective - the raw sewage outflows after heavy rain in the city must be addressed.

Q17 **To what extent do you support or oppose this value and its pathways?**

Long Text Kia ora. Could you please let me know if this email is received. Thanks, Will

Submission to WCC on draft Coastal Reserves Management Plan

1. I have lived in Wellington for most of the last 32 years, and have had our boat in Evans Bay marina since about 2005. I have been a member of the Evans Bay marina tenants group (EBMTG) committee since then. I am a civil engineer by background, a Fellow of Engineers NZ, a Fellow of the Chartered Institute of Logistics and Transport, and hold a number of public and private governance roles.

2. I would like to see a significant improvement in the quality of asset management of the marina, as I believe that the marina community has been let down by the WCC planning processes - particularly over the last 8 years. The marina is in a degraded state and the outcomes of the “grandfather’s axe” approach has resulted in increasingly expensive interventions which have a short life.

3. My fellow committee members (Warren Rankin and Colin Smithies) have made several important points. I fully support their submissions, especially to keep boating accessible to those of moderate means. Many of the boats in the marina provide great pleasure to the owners and their families, and most boats are smaller and basic compared to those in Chaffers or Seaview marinas.

4. EBMTG and WCC signed a charter in 2009 – 16 years ago. As part of this, we developed a 10 year forward financial model which ring fenced all direct costs and revenues, capital costs, and made a proportionate contribution to shared council overheads, providing they were efficient. It is a cashflow model, so that costs are sensibly planned and reflect actual expenditure. This ensures that the marina has not received any subsidy from ratepayers nor will do, averaged over the period to allow for periodic surpluses and deficits with maintenance and investment. This has been verified by the WCC accountants during the time it has been in operation. 10 years was agreed between the tenants and WCC as part of the charter as it reflected the likely life of assets until the marina was reconfigured.

5. While we have not been provided with final costs, we understand WCC have spent $1.5m on replacement timber work on the marina piers and piles in the last year. All of this will be discarded and written off with any marina redevelopment, as it will not account for king tides, sea level rise, nor a future layout to make efficient use of the space. Tenants were not consulted nor agreed with the scale of this investment, and should not be responsible for funding the write off when it occurs.

6. My fellow submitters have covered the initiative taken by the EBMTG at our cost to engage Shearwater consulting to develop a long term plan in 2018, and the WCC planner's expensive and ultimately discarded engagement of Wardale Ltd in 2022 to develop a grandiose, unaffordable, and unconsentable master plan, including a move to towards privatising or outsourcing the marina.

7. In regard to the specifics in the draft. There is no need nor any confidence in current WCC planners to develop another master plan. We would like the opportunity to drive the development of a marina redevelopment plan, in consultation with WCC officers, to ensure money is well spent and will be right sized, affordable and relevant to users.

8. There is no need to introduce another operating model but simply to adhere to the discipline and structure already in place, with potentially changing the financial model outlook from 10 to say 25 years if that is the agreed asset life. In frank terms, if council had developed and funded a long-term asset management plan back in 2018, with costs fully recovered from tenants over the life of the investment, we would not be in this situation.

9. What is required is to commit to long term stewardship of the marina with a low-cost and safe marina which allows people of moderate means to enjoy their boats. I think that financial ring-fencing and sound asset management would see a marina with a range of service standards, with a raised breakwater to protect the boat ramp and the marina (funded 50/50 by marina and public access), one pier of floating berths, and two piers of pile berths, built to allow future conversion if desired. I am fully supportive of upgrading pier boat ramp, and making the foreshore welcoming to all.

10. Despite all the challenges, the tenants group and the yacht club are still willing to work with the WCC to find a way forward. We like the idea of working with iwi and the council to out the marina on a stable footing for current and future boaties and other recreational users, as well as for the public.

11. I would like to heard in support of this submission, preferably 19-22 August.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I have found the copious number of 4x4, dirt bikes and associated motor vehicles to be incredibly intimidating and discourteous when using the Red Rocks coastal track. The traffic should be restricted to essential vehicles only. There is not enough space for elderly and mobility impaired people to constantly step off the road to avoid fast-moving large vehicles. I recently took my elderly parents on a walking trip to Red Rocks and was frustrated at the cavalier attitude of the motorists using the track. There's a significant health and safety risk with motorists hogging this track while hikers try to enjoy some exercise. An observation I made was that motorists were bringing in fishing gear for illegal poaching and not always taking away the rubbish that they brought it, spoiling this natural space. Lots of erosion caused by vehicles too.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support

Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Love the dune and wetland management for sea level mitigation, severely restricted motorists on Te Kopahau and Red Rocks tracks, prioritise and restore nature, give native fauna and seabirds an environment that they can thrive in - even at the expense of human convenience.

Long Text:
Regarding Pathway 2.3: Supporting Water Recreation and Access, and Pathway 2.4: Enhancing Coastal Accessibility and Equity
Both pathways strongly support maintaining vehicle access to Red Rocks and surrounding coastal areas. This region is a well-used destination for recreational activities such as diving and shore-based fishing. Restricting vehicle access would likely concentrate recreational pressure in more easily accessible areas to the east of the marine reserve, increasing ecological strain in those zones.
Enabling access for 4WD vehicles helps to disperse recreational use over a broader area, reducing environmental impacts and supporting more sustainable use of the coastline.
Moreover, vehicle access is essential for ensuring equitable coastal access. Many individuals—particularly older adults, young children, and people with limited mobility—are unable to reach these areas on foot. Limiting vehicle access would therefore pose a barrier to inclusive enjoyment of the coast, undermining the goals of both accessibility and equity.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I strongly support continued open 4WD vehicle access along the Te Kopahou and coastal route without the introduction of a restrictive permit system. This route is a unique and iconic part of Wellington's coastline that should remain freely accessible for all residents and visitors who wish to experience its rugged beauty.
While well-intentioned, the proposed permit-based access system introduces unnecessary barriers for recreational users. It risks excluding people who may not have the means or awareness to navigate bureaucratic requirements and could reduce public engagement with the area. The majority of users act responsibly.
Open access ensures equitable use by families, the elderly, fishers, photographers, people with limited mobility, and others who may rely on vehicles to enjoy remote natural areas.
The route is a long-standing recreational destination that fosters connection to the coast, and vehicle access plays a vital role in maintaining that tradition.
Rather than limiting access through permits, the Council should invest in signage, track maintenance, clear behavioural guidelines to promote responsible use, and increased ranger presence.

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text The proposal to rename Shorland Park, a prominent Southern Bays proponent, needs to involve local residents, the Island Bay Residents Assoc and the Southern Bays Historical Society. J O Shorland was a prominent Wellington City Councillor in the early part of the 20th Century. His name should be retained as the name of the Island Bay Park - playarea and concert venue; the suggestion to rename this should be limited to the very Southern portion of the park i.e that shaded (///) in the Coastal Managment Plan. Family members continue to reside in the Southern Bays.

The Marine Reserve Centre (aka as the Island Bay "baithouse") should remain as is. Should an engineers report be necessary on this building that Report should be peer reviewed and made publically available. The "baithouse" h as historic connections with the Italian and Shetland Islands Community; these communities should be actively consulted. This approach would be consistent with the recent re-construction of the Island Bay sea-wall following major storm damage.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: In general I support the ideas but execution of some will need to be managed very carefully. For instance, promoting shared use of water-based amenities to support multiple uses of recreation amenities for boaters, swimmers, divers, fishers, and other recreational users. "Sharing spaces" doesn't always lead to equitable enjoyment given you're mixing big, motorised objects with much more vulnerable humans and wildlife. I would like to see highest priority given to people over (for example) boats and fishing, such as restricting the area where motorised vehicles can be used within the shared areas.
I think its good that the environmental and cultural impact of commercial uses is being considered while also ensuring there are still fun events being held. On that note, the recent Matariki event on the waterfront was a big fail when it came to protecting the harbour by providing enough bins. The ones that were there were overflowing as there were just not enough "official" bins for the number of people, with most of the usual ones being closed off, and it seemed there were only one or two actually available across the whole event! This sort of thing really needs better planning and more resources to ensure event waste is appropriately dealt with, so we can enjoy events on our harbour without trashing it.

Long Text

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text I support a focus on restoration with habitat-specific approaches being used, rather than a one-size fits all approach, as each habitat has its own unique characteristics. It would also be good to see more protection of kororā and kekeno habitats, through education, dogs on leads and restricting vehicle access as needed. I particularly support involving and enabling citizen scientists and community led initiatives in this area, as the majority of residents care about their local environments and want to see it thrive - I say this as a citizen scientist and organiser of a catchment group with wide support for our work. Councils simply don't have enough resources to do all of this themselves, so it just makes sense to get the community involved and take more of a guidance/advisory role where needed.
In terms of litter management, I wonder why council have not invested in the stormwater drain "trash nets" to capture rubbish before it goes into our waterways and out to sea to in the first place (this applies across the city btw!). Yes they'd need to be regularly cleared out and there still needs to be other effort like public education to reduce the amount going in, but it really seems like a no-brainer solution to a significant issue. Merely saying having less bins or "smarter" bins or relying on groups to clean up after the fact is really not going to cut it (and its not working now).

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I would really like to see more focus on avoiding new development in flood-prone areas, and that doesn't just apply to coastal areas. There's still some mad development going on that is just going to end up costing us (rate/taxpayers) when it inevitably comes under threat from climate impacts. I support this but council needs to walks the talk.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd
Ākautangi
Cobham Dr to Point Jerningham

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I support the cultural restoration initiatives as long as it doesn’t involve spending heaps of money on expensive art pieces – that would be more of a nice-to-have when there is less cost pressure on rates - as well as preserving the dark sky.
Stricter vehicle management in this area is long overdue and I 100% support this as I have been subject to antisocial drivers while walking there and am very concerned about the environmental impact of 4WDs on our fragile moana and the wildlife that frequent the area. It would be good to have less days that vehicles are allowed on the ‘road’, or only allow authorised vehicles such as the bach owners unless they have a special permit. I hope this would also help with the poaching issue, as having vehicles tied to a permit system would be able to provide data who is being responsible and who is not.
Happy for the coffee cart to remain but it would be good to see them getting rid of disposable cups and replace with a mug library or similar, being so close to the sea with the rubbish being created by disposables and the strong wind and all.
As an organiser of the Karori stream catchment group I support all additional protections for the Kinnoull dunes and Karori stream mouth and our group is happy to assist both councils on this where we can.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Collaborating with groups like Mountains to Sea who are very experienced in ecology of the marine environment and contributing freshwater paths will be very important. Not sure I agree with the plans for the Bait House, given

it's a key visitor and educational attraction, it would be better to try and keep it but look at moving it somewhere less hazardous – I think the community should be actively consulted before taking any action on this one!
I didn't see any mention of better managing the off-leash dog areas to ensure they don't interfere with Korora in this area though?

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Not sure I agree with the suggestion to look at reducing Shelly Bay Rd to a single (one-way) lane. Yes it would be nice for road users like cyclists but I think it would create unintended downstream congestion impacts for vehicles all having to come out at one end to try and get back to where they came from. This is another idea that would need all the options and all their likely impacts laid on the table and making sure the majority of the community is onside with the chosen option before doing anything.
I support the coastal headland becoming a classified reserve to increase its environmental protection.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text I definitely support the marina becoming more multi-use and inclusive for more types of users, as well as improving public access to Greta Point. In terms of the litter in Evans Bay, I have been part of clean up groups there, and unless something is done about the plastics proiduction in Seaview it will continue to be a problem. As previously mentioned, council needs to invest in the nets in stormwater drains to stop rubbish going into drains and flowing out to sea to be washed back on shore in the first place and should also ensure all private businesses are doing something similar with stormwater drains, particularly in Hutt/Seaview where a lot of the 'litter' is being generated. Basically the only solutions worth looking at – to avoid having to keep cleaning up over and over and filling up all our landfills – is to stop the pollution at its source/s.

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Don't know
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Neutral
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Short Text:

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Strongly support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: This has been thoughtfully done, is a partnership approach and is values aligned to Wellington and it's people. Love this mahi.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: This has been well outlined and thought through. Many of these paths and reserves have been underfunded. It's good to see more facilities being added including in Te Kopahou.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text This is great to see this thoughtful, diligent investment into the recreational areas of Te Kopahou. I'm a runner who spends time in in trails across Wellington. The opportunities in Te Kopahou have fallen behind and it hasn't felt safe, or well thought out, for longer trips. This is a sound move in supporting recreation alongside nature.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Multi Choice: Neutral

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: As long as support doesn't give overall or final decision making to mana whenua and name changes includes both Māori and English then its makes sense

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: Council should put more resource into looking after these areas... when they have the money to do so. Should prioritise these after fixing Wellington water issues and before spending on unnecessary wants rather than needs. Freedom camping should be made available not in parking areas but rather consideration should be given to identify specific areas with amenities for them. Suggest there should be a minimum cost for using the amenities. Keeping NZ clean.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q14 **Please let us know a bit more about your choice.**

Multi Choice: Strongly oppose

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: I don't believe we need to be wasting ratepayers
Money on changing the names of parks.
Also as we have seen in the past, The more groups involved in having a say always makes it harder to achieve an outcome on decisions that need to be made.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: I somewhat support what is trying to be achieved, but it should not be at another recreational user's expense.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q14 **Please let us know a bit more about your choice.**

Long Text: I believe there is already plenty of accessible information available on the area.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text I understand the coast needs looking after as myself personally have been using it for 51 years
I also believe people should be able to go fishing and teach their kids how to make and have a beach fire in a safe manner using common sense

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I believe the coastal area from the gate to karori stream should be left as it is. The biggest problem is policing the area. A more visual presence by MAF in the area would be a huge benefit

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text As above.

Long Text

4x4 access around the coast past devils gate is vital to hundreds of people for recreation. The vast majority of users respect the area and use it responsibly. The system with the gate closing on Sunday has worked well for decades and there is no need to change it.

Q12 **Please let us know a bit more about your choice.**
Long Text: I don't support freedom camping.
I would like to see a new toilet/ changing facility in Island Bay. I feel unsafe using the current women's toilet/changing facility when on my own. I would be happy with a simple outdoor shower, toilets and a small changing facility- not shared with the toilets. an e.g. is the new block in Maclean's Park Paraparaumu.
I would like to be able to walk around the Mātai Moana coast without cars so would support some weekend road closure times for vehicles.

Long Text Go for a walk any summers day and see the number of families who use family safe Hataitai Beach. Then notice it has been sacrificed for cycleways.

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat oppose
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat oppose
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat oppose
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat oppose
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat oppose

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat oppose
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat oppose
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I support the restriction of vehicle access overnight and on public holidays, in addition to the current Sunday closures, with gate closures. This would allow safer access for other users during popular times and restrict anti-social behaviour and possible poaching after dark. In addition, while the Wellington 4WD club are respectful of the reserve during their day adventures and are also a valid form of recreation, unfettered vehicle access and unnecessary beach driving should be restricted as it can endanger other users and destroy natural habitats. While all forms of access and public recreation (walkers, 4WDing, horse riding, bike riding, fishing, boating) can be allowed for, placing some restrictions on the more damaging aspects will ensure a sustainable natural reserve and support mātauanga Māori principles.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Let me introduce myself.

My name is Graeme Hoedemaeckers and with my son Luke we keep the feral pigs under control for Guy Parkinson on Terawhiti station. I have a team of dogs which regularly undergo Kiwi aversion training and have a good relationship with Capital Kiwi. I also have been a regular diver with my son on the south coast venturing as far around as to the start of Oteranga Bay on a 4wd Quad Bike (which is registered).

During my excursions to the south coast for diving I have seen a huge amount of Paua poaching going on and this is occurring predominately past the mouth of Karori stream which is like a natural barrier for most divers or 4wder's. The beach becomes impassable at times past this point and only the most determined take on the challenge with 4wd's.

The beach past this point (Karori stream mouth) is quite desolate and isolated and is a haven for poaching. The beach at various locations is littered with hundreds (if not thousands) of empty paua shells which are a good indication as to the level of offending. The rubbish and human waste left behind is quite disheartening as it totally spoils the "wildness" of the coast. I have on a number of occasions taken my quad bike trailer with me and collected as much of the rubbish as I can, depositing at the waste bins at Owhiro Bay.

The weekend just gone (19.7.25) I also observed five motorbike riders trespassing on the station attempting to ride up a steep coastal face and looking for an entry point into the farm. They were quite brazen about what they were doing and totally ignored my attempts to get them to leave and stop what they were doing. There are numerous points where the coastal vegetation has been significantly damaged by 4wd's and motorbikes looking for places to "have a play".

I have also seen a poachers vehicle parked on Terawhiti land with the occupants hunting illegally with dogs (I could hear their dogs barking approx1.5 kms past the coastal boundary). I doubt very much if their dogs are aversion trained for Kiwis and would pose a significant threat to the Kiwis. It is very hard to police this type of activity as the coast has so many 'safe' access points for Poachers.

All of the issues I have listed above could be stopped with a vehicle barrier at the mouth of Karori stream. Foot access would still be available for those wanting to go diving but would stop the Paua poaching because with the large quantities of Paua they are moving they need 4wd to move them. The poaching (hunting) would be reduced to access from Karori stream and would be more noticeable due to the Baches located there and the risk of being seen.

A final thought here is that if the gate at the Owhiro Bay Access is locked during the week it will stop the poaching during the week and allow walkers etc to be allowed to visit the area without having to navigate through the large number of vehicles using the road to access further around the coast. The gate could be left open on the weekend to allow 4wd's etc to access the diving spots and recreational areas. With the weather patterns the way they are the amount of good diving weather available to those people with vehicles will be greatly diminished allowing the seafood stocks to be replenished.

Long Text

These are all nice to haves and there are more important things to be spending the ratepayer's money on. In case you haven't noticed people are struggling. The minority received their cycle lanes; when will the majority have leaky and broken drains replaced, storm water drains regularly unblocked to prevent flooding and footpaths water blasted from the debri and bodily functions left behind by those who sleep on the streets in courtney place [redacted].(not opposed to cyclists, but when will they obey the road rules and stop riding over pedestrian crossings and through red lights) Travelled to Bhutan a while back and their roads are far superior to the trucks that go along and spray over the potholes., a temporary fix at best.Do it properly the first time.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses

for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Number: [redacted]

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: In pre-colonial times, Māori lived close to the Kaiwharawhara Estuary, gathered kaimoana from the harbour and ika from the Kaiwharawhara Stream. The valley was a rich source of food and was used as the first stage of a well-worn path north to Porirua and beyond. The Trelissick Path Group acknowledges this history and strongly supports active partnership with mana whenua as we work to restore the mouri of the stream, estuary and valley.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Trellisick Park Group has, for many years, advocated for community access to the Kaiwharawhara Estuary and to the 'north' beach on Kaiwharawhara Point.
While the CRMP does not include this northern section of Wellington coast, we ask that it be added so that there can be access to these coastal features for ecological restoration, rubbish collection and recreational activities. The overall policies and management approaches outlined in the CRMP should apply to this area. This includes policies around minimising infrastructure, prioritising nature based solutions, and so on. There is a small DOC reserve near the river mouth which is not included in the plan. However its important it is managed consistently with the wider policies and management approaches of this plan.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text The Kaiwharawhara Estuary has been the site of Māori pā, karaka groves, and colonial settlement. There are significant historic remnants close to the estuary including: a WW2 bomb shelter (now a culvert to take the waters of the Kaiwharawhara Stream; the Historic Place Category 2 ruins of the powder magazine; and the old Kaiwharawhara school building.
Each of these sites exists because of its proximity to the harbour. As such they form an important part of Wellington's coastal history. This needs to be recognised and honoured.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text The Kaiwharawhara Stream is the only Wellington City stream that retains an open estuary in the Harbour. It is an inanga spawning area and home to many estuarine fish and plant species. The estuary is sited beside the ferry terminal and marshalling yards at the Port of Wellington and is impacted by the operations of the port and KiwiRail. It is time for Wellington City Council to remediate and mitigate the coastal impacts of these operations, particularly at the estuary and the reclaimed land at Kaiwharawhara Point.

Strong collaborative relationships for coastal restoration has one of its management approaches “formalise key partnerships through MoUs”. We recommend one of these should be with DOC to ensure consistency of management of this area

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text The Kaiwharawhara Stream takes all the stormwater from the suburbs that are built within the Kaiwharawhara catchment. At times of heavy rain the stream becomes a raging torrent, eroding and disgorging volumes of silt and rubbish into Wellington Harbour. Storm events are becoming more frequent and more damaging as the result of global warming, causing increased erosion in the Kaiwharawhara valley and bringing larger quantities of silt and rubbish down into the harbour. Prioritising nature-based solutions for storm-water management upstream from the coast is an important management tool for protecting our coast. In this respect, the land and the sea cannot be considered separately.

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

We ask that you add another section of coast (Sector 9) covering the harbour through to its border with the Hutt City Council boundary. We note that there will of course be exclusions for the Port and probably the wharf from the railway station to Oriental Bay. We ask that this Sector be added so that it too can benefit from the values and management accorded to the other eight sectors.

The Coastal Reserves Management Plan already includes sectors within the harbour - the Ākautangi and Te Rāngai o Onemutu sectors. However the sectors stop at Oriental Bay. Why is this? Residents in the northern suburbs are currently denied access to their closest marine area, the coastline on the northern side of the harbour. The ecological , recreational and historic values of the area are currently ignored through their absence in the Management Plan.

Please include this area as Sector 9 in the plan and afford it the care and management it deserves.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Don't know
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Don't know
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Don't know
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Don't know

Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

The Kaiwharawhara Estuary and Point have deep historic significance for iwi and is treasured by the Trelissick Park Group and Kia Mouriora te Kaiwharawhara Stream / Sanctuary to Sea (Zealandia). There is currently a mix of land ownership around the estuary, Kaiwharawhara Point and the coastline north to Petone. We ask that WCC explore ways of creating a Reserve at and around the estuary and on Kaiwharawhara Point.

The closest reserve to the estuary is Trelissick Park. which bears the name given by a Wakefield Scheme colonial landowner (Trelissick was the name of his estate in Cornwall, England). Because the Kaiwharawhara Stream flows through Trelissick Park and into the harbour at the estuary, we are in favour of a name change for the park. We have had some discussions with mana whenua over renaming the park and would support a name change including one name proposed by them being "Kaiwharawhara". We note that this might require a name change for the Kaiwharawhara reserve off Rangiora Avenue.

Q1 **Name**

Short Text: Mike Oates

Q2 **Suburb**

Select Box: Ngaio

Q3 **Email**

Email: [redacted]

Q4 **I am making this submission:**

Multi Choice: as an individual

Q5 **Name of organisation you are submitting on behalf of**

Short Text:

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Strongly support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: Total support for a partnership-based approach to future management. Also support the proposed pathways and actions. There is a need for clarity between co - management, partnership and governance. In the wording in Pathway 1.1 on page 19 for instance it says " Support the direct involvement of mana whenua in coastal management through governance roles, ranger positions, and contracting opportunities" Nowhere in the actions does it clarify what governance roles are or how they can be achieved. Given that the administering authority for most of the reserves is WCC then the plan will need to show how this is different from the current governance arrangements with mana whenua.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Strongly support. It's important that the proposals as a result of this value and the pathways are specific and achievable. Otherwise, they will never happen. This is specifically around "Enhancing coastal accessibility and equity". one of the management approaches for instance " Apply an equity lens to coastal recreation planning and investment to support fairer access for underserved communities" This is so general as to be almost meaningless. Nowhere in the actions do you identify the "lens" or who are underserved communities. This policy is likely to languish in a plan such as this. It needs to be more direct and specific or removed. The action around working with the wider disability community is strongly supported but would be more achievable if it included a review of current and potential use of coastal reserves by this community so limited resources could be allocated where they are most effective.

Regarding Pathway 2.6 on Freedom camping. There seems to be an assumption here that further freedom camping sites could be identified around the coast. Yet there is no evidence given as to why future sites (if required) should

be around the coast and not in other areas where there is less potential conflict between natural and other recreational values. The corresponding action suggests a major review of areas will take place yet I can only assume that there are already many areas where it is already prohibited for good reason. Where is the evidence to suggest major changes may be needed?

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text I strongly support the values but am uncertain how these can be achieved through this plan. Especially as they apply to large areas on both the coastal and landward sides of the coastal roads from the Esplanade to Oriental Bay that are not part of the reserve network. To work these values need to be adopted as design guides for the wider city and its numerous functions. Management Approach "a" is an example of this limited influence. Whilst I have not analyzed the whole coastal strip I suspect only a third is reserve. You need to show how the remaining land can be managed to achieve this approach (which I strongly support). Many of the other management approaches can only be achieved using a city-wide approach for instance placement of street lighting and so on.

Action three is very ambitious and potentially very expensive. it would be more useful if you prioritized which sectors should be completed first based on a needs analysis otherwise its likely plans will be developed but not implemented over the life of the plan.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text need to be clear around the relationship between the management approaches and where these lead to actions. Many of the management approaches are principle based so do not require actions. However, several are action based yet do not seem to have any corresponding actions to enable them to be completed. For instance:
1. Prioritise the restoration of the 20 Significant Natural Areas (SNAs) - there are no actions on how this will occur
2. Monitor ecosystem change over time using cultural indicators alongside scientific monitoring - Fundamental to ensure you can monitor progress over many years yet no obvious action to make this happen.

Given the fundamental importance of this section and the range of actions needed it needs further work to align a suite of actions with each pathway. This should include the wide range of actions currently under way.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text Fully support this section and the actions proposed. The only thing that is missing is the potential impacts on hazardous sites near the coasts through sea level rise. The work at Te Raikaihau Point highlights the need to identify and prioritise these sites for remediation and/or removal.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Rangitatau
Moa Point to Breaker Bay
Te Whanga Rāwhiti
Eastern Bays
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd
Te Rāngai o Onemutu
Oriental Bay

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Strongly support the approach and actions around vehicle access around the coast. Increased control and management is needed. Strongly support implementing the Te Kopahou track plan as well as the historic route around the Makara.
1.2 - Management approach e (v) - The wording here needs to change to reflect the generic approval for a coffee cart like concession. The current wording seems to imply ongoing approval for the specific cart already there. Any concession under the Reserves Act needs to follow the process under the Act linked to the management plan.
1.3 - need to explain what a KNE is and how it differs from an SNA.

Actions 3 - This needs rewording if the current road is legal road. It is not reclassifying but closure of the legal road and then classifying the land as reserve.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text Strongly support the policies and management approach in this plan. Just to note that Ōruaiti Reserve comprises two land parcels 4.27 and 4.28 which form part of the current Ōruaiti Management Plan. Both parcels are managed in partnership with PNBST but one is owned by WCC and was acquired with PNBST support from the adjacent developer as part of a reserves contribution for the adjacent housing development. It might be useful to add in to the land schedule 4.27 that the land is owned by WCC but managed in partnership with PNBST.

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text Strong support for the overall approach.
5.2 -Management approach B. The wording is a little confusing here. it talks about transition but really it's about ending the leases and then deciding what to do with the remaining sheds.
5.2 Management approach C. there are no maps showing Karaka Road or the extent of this proposal. Unclear what it actually means.
5.2 Management approach D. Unclear if this means a connection with an old track right around the coastal area or simply a short connection to an old track.
Action 5. Unclear what is meant here by "improve accessibility" to the beach? or better parking access for those with disabilities? Is there a need for more parking at peak times?
Action 8. I understand now what was meant in 5.2 above. The wording in the management approach needs to be much clearer to align with this action. Given this proposal to potentially have a gateway to Matai Moana here then the parking study needs to take this into account.

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Support the approach.
6.2 management approach a. Any review of future toilet facilities should be integrated with future planning around the development of Matai moana.
6.2 Management approach c. Nowhere do you show or say what the Council owned land at Shelly Bay is or how it might link (or not) with the ownership of the other land at Shelly Bay or the proposed Matai Moana reserve.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text Support the approach in this sector.
Sector 8 title - You call Point Jerningham - Jerningham Point here yet further on use Point Jerningham.
8.3 Management approach c - This is a very general statement with no indication of where and how it can be achieved. In addition, there is nothing in the actions about it. recommend deleting it or be more specific.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at

Island Bay, Breaker Bay, and Mātai Moana. - Neutral
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat oppose
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Neutral
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Scope of plan - The scope is limited to coastal land owned or managed as public open space. It also says "where appropriate the Council will also apply its values and pathways to other Council - owned land including roads. There do not seem to be specific policies within the plan as to how this will occur in particular with respect to the road corridor. it might be useful to specify how this might work in practice and how the management plan might provide formal guidance for other business units within Council.

it would be helpful if the Plan outlined why large areas of the coastline between Oriental Bay and the boundary with Hutt City Council are not included in this plan as many of the policies and management approaches could apply to some of these areas. In particular the Kaiwharawhara Stream mouth and coastal area should be considered for inclusion in this plan.

Appendix A - Strongly support the development of an integrated set of rules and regulations for use and development of reserve land.

Forestry/plantations (non-native species, production) – Prohibited. This rule is a little unclear as it could imply that native forestry could be permitted and then harvested. If that is the case, then you need to be explicit about that and its implications. Otherwise reword.

Appendix B - Fully support the proposed name changes but also recommend you consider some dual names where established use and community support for existing names is strong.

Strategic and legislative context - It would be useful to outline how the provisions of the District Plan overlap with this plan. in particular the open space categories and the SNA designations in particular.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Don't know
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Don't know
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Don't know
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Don't know
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Don't know

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Don't know
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Don't know
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Don't know
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Don't know
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Don't know

Multi Choice: Somewhat support

Q10 **Please let us know a bit more about your choice.**

Long Text: I do like the idea about more Maori place names for these locations - I think all NZers should embrace multi-lingual naming more. Sector 1, Pariwhero Red Rocks for example could probably use more signposting that is multi-lingual as it receives a large number of international visitors as well as locals.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Most of my submission focuses on sector 1 Pariwhero Red Rocks. Allowing or enhancing access to the area I am all for. The main recreational activity I do around here is 4WDing, and a vast amount of the sector people only access using 4WD vehicles. If there are some signposts put up around the entrance where there is more pedestrian access to enhance public safety, I am all for this, but limiting access for 4WD vehicles to the sector I am against. 4WDing has allowed me to connect more with my friends, provide learning on how to drive off-road safely and properly and also uplifted my own mental health (depression, anxiety, ADHD) from being able to be exposed to the beauty around the coastal area which is so unique to Wellington. One of the main reasons I travel far around Pariwhero is to get away from the population dense city itself, and any limitations for vehicle access will prevent this. I love the natural beauty of the area and respect the flora and fauna around the coast but know that there are a limited few who do perform antisocial behavior around here, but prohibition isn't the solution to this problem. Having access for local 4WD clubs for example, or some kind of permit system that could be implemented with the possibility of being revoked would incentivise better behavior from users of the area using motorized vehicles (including motorbikes). Around fire risk, I have 0 issues about limiting access to vehicles that could possibly cause problems (hot exhausts hitting dry grass), but I think closing vehicle access on public holidays would be a backwards step to opening up accessibility to the region. Public holidays are one of the main times trips are planned for vehicles in these areas, and limiting this would seem to be at-odds to opening accessibility up to users. Night time closures I don't see a problem with either,

especially if this limits antisocial behavior, but again, I think incentives work better for people to behave properly rather than what feels like a blanket punishment.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text Storytelling around the coast I totally endorse. More plaques or boards that educate about the history of an area or how this was incorporated in mythologies I think are great for local and international peoples to enjoy. It would engage the community and maybe help with learning and respect for what is available.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Referring specifically to Sector 1 Pariwhero Red Rocks, I would personally like to assist in any way I can to enhance the natural beauty of the area. I am a part of the Akatarawa Forest 4WD club and we are currently engaged in some activities to assist with invasive plant removal and possible future barrier installation to protect the fauna from people and vehicles in the future. I believe there needs to be more community engagement of local groups to assist with these kinds of activities to incentivise and enhance community for the users of the areas. Even if there was a council initiative for 1 day a year for a large-scale litter run around these areas, groups like 4WD clubs would gladly get many hands on board to go around and help clean up the coast from rubbish - it could be a massive event at multiple locations (not just Pariwhero for example) that engages the community to show their respect for the natural beauty at their doorstep. It could be partnering with DOC around education of plant and animal species in the areas at the same time to help people feel like they are making a positive difference and learn something new as well.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text This is around Sector 1 Pariwhero Red Rocks. Around fire risk, I have 0 issues about limiting access to vehicles that could possibly cause problems (hot exhausts hitting dry grass). This I believe has already been in place and I am all about proactive protection. There should probably be an outright ban on open fires around this section of the coast, as I have seen plenty of driftwood fires that people have not quenched after leaving the area which is totally irresponsible. I think closing vehicle access on public holidays would be a backwards step to opening up accessibility to the region. Public holidays are one of the main times trips are planned for vehicles in these areas, and limiting this would seem to be at-odds to opening accessibility up to users. Night time closures I don't see a problem with either, especially if this limits antisocial behavior, but again, I think incentives work better for people to behave properly rather than what feels like a blanket punishment.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text 4WD accessibility I think can be more 'managed' for this area, but I think any widespread kind of prohibition sends the opposite message to users of the area when it's trying to be made more accessible. Incentivising activities is a much better way to get community involvement and help build community and respect for the area. The seals and other wildlife I think should have some more protection - both for them and the public, so some barriers for example in specific locations could be very useful, and assistance to install these could be gained via clubs and groups who use that areas (CCVC, Akatarawa Forest 4WD club to name a few). Getting some community involvement in litter pick up would be nice also - maybe a single day where the community is engaged and maybe a large skip bin provided at the Pariwhero carpark for what is recovered around the coast. Fire prevention should definitely be clearly outlined prior to accessing the area - this could be done with more signposting maybe. Limiting access to a portion of the users (4WD vehicles) I believe is the opposite effect of what the proposal is bringing - it's to engage community and a sense of belonging to all users and a small minority of antisocial users shouldn't evoke a knee jerk reaction to close off access entirely. If there was a way to better report antisocial behavior to authorities I think that would help matters, but I don't have a solution on enforcement. A permit system or club-access only solution could also work (only limited users/groups have access to a gate lock/key for example). Engagement with local clubs would also give you access to a variety of different ideas around ways forward with management and respect to the area rather than punishing many for the actions of a few. Closure to 4WDs should only be a last resort option and believe there are other ways forward to encompass WCC's values and engage and empower its communities.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I am strongly opposed to the limitations on 4wd activities stated in the plan. Although I personally take part in limited 4wd activities, I know that this area is very popular with enthusiasts and other options are limited that provide a similar experience. I look forward to a 4wd adventure in this area, and have many friends who go most weekends. The proposed plan is allegedly based on complaints, but recent OIA requests have suggested these are very limited. I ask that reconsideration of limiting 4wd access to this area is considered - is it really that impactful? If a permit system is required, it should be open and allow reasonable access - including on Sundays (when else would you go) to the area. This is a long standing and popular trail!

The Island Bay Marine Education Centre is a taonga and should be supported by the WCC - not threatened. I've taken my children and now my grandchildren there regularly. They are doing an excellent job- the only facility in Wellington providing high-quality fascinating education about marine education about marine animals for people of all ages. I learn something new every time I visit. It's affordable and a high-quality experience. Much better than the Zoo or Zealandia. Wake up WCC!

Long Text I am opposed to the inclusion in the coastal plan the removal of the old bait house that sits on the eastern side of Island Bay. There is no justification for removing this building and the loss of the aquarium and there is much to justify its retention. The bait house has been located at its site for more than 70 years. My father was an Italian commercial fishermen on boats moored in the bay. Each day the fishermen would take frozen bait from the building and load it onto dinghies and then row out to the launches. It was back-breaking work but there was no alternative. The bait house is iconic and represents an era of successful fishing that has now died out. In recent years the bait house has taken on an educative responsibility, a place where people of all ages but particularly children can see up close the marine life collected and placed there. There are many school groups who make the bait shed an important part of their education almost daily. There is no reason to remove the bait house. The possible removal has had virtually no publicity and local people are very concerned at this proposal.

Long Text Ref blocking vehicle access from / near Karori Stream.

I'm not the best on computers & the steps to do a survey but wanted to have some input into this as have ongoing 1st hand knowledge of what goes on.
I live part time on the south coast / [redacted] & also work part time as a contractor for capital kiwi - so am often moving around the south coast.

I was doing the trap lines today from Cable bay to Karori stream and as usual (every single time) filled an entire tub of rubbish.
Beer bottles, nappies, assorted rubbish, food packaging - you name it & that's only the new recent stuff.
The poo / toilet paper all over the place in bushes I don't touch..

There was also another big pile of paua shells I saw discarded in the shallows - more poaching & I often see vehicles sneaking around the coast in the middle of night.

Its endless - damaged dunes & grasses, rubbish & litter, fires still smouldering, large scale poaching - needs to be stopped & a simple gate closure will sort it.

There also seems to be a lot of seals moving further around coast - from cave bay to cable bay that are being disturbed by the 4 x 4 idiots who tear the place up .
Only a matter of time before one of them is in a serios accident..

Long Text Hi

I am Warren, the Chairperson of the Evans Bay Marina Tenants group, Chairperson of Sailability Wellington and life member (62 years) of Evans Bay Yacht and motorboat Club.

This submission is representing marina tenants of Evans Bay Marina but draws on all my other boating experience as well.

History

1. Most of the Marina boating tenants are on low income or are beneficiaries.

We have a charter with the WCC which includes an agreed financial model

We have been working with WCC officers and staff for over 20 years to improve outcomes for the marina and tenants.

We believe we have done everything possible to help WCC and tenants get the best outcomes possible.

Since we started meeting with WCC over 20 years ago we have been asking for the development of a future plan as we knew the marina was nearing the end of its viable life.

WCC officers refused to engage in these discussions.

In frustration in 2017, we tenants paid for a highly regarded marina planner to develop a cost efficient, safe, plan. The plan would enable a new marina of floating piers at a price tenants could afford. and would futureproof the life

of the marina. (Shearwater 2018)

We gave the plan to WCC officers and until 2 years ago they refused to engage about implementing the plan but had no sensible alternatives. WCC had BECA do lots of reports and all stated the marina needed renewal from about 2022.

Recently WCC commissioned an update of the Shearwater plan we submitted. By now the costs had spiralled to be now costing about 16 million dollars. A now non affordable option for most tenants and a big risk for WCC.

WCC has done minimal repairs over the period but not invested in long term solutions.

Currently

I refer to pages 137 and 138 of the Draft Coastal Plan

It is great to finally see the marina in a future plan. Indeed sea level rise is evident by some jetties being awash during large weather events.

There is no growth in the number of boats in the Wellington area.

Solution

Marina

We are told WCC has no funding for a new marina.

We now suggest WCC obtain updated costs and presell floating berths. For sale on long term leases -on pier one and offer pole berths when pier 2 and 3 reach their end of life.

This would be very cost effective, minimal risk and expense, and meet sea level rise issues for WCC and offer options for tenants.

We also submit that the management of the marina could be easily run by the marina supervisor from the office using a package like XERO to avoid the expensive and ever increasing WCC unnecessary internal costs.

P138 also states use "alternative finance model for the marina. That is unnecessary. [redacted] from WCC finance agreed the model we currently use is usable and developed an updated model in 2018 that would work with the new floating marina we presented.

Precinct

The draft plan page 138 states develop a master plan.

This idea was suggested in 2021 and has no support from any stakeholders -especially EBMTG, nor the Evans Bay Yacht club. The area does not need more bureaucracy or more costs and has 3 distinct areas.

Access

Page 138 states enhance access. This appears out of touch with WCC plans. The cycleway will take away over 130 parks. There will be no parking for boaties and club affiliates like Sailability, waka and canoes. Who all carry heavy gear when they attend.

Hub

P138 also states develop a new recreation hub. The yacht club is the hub offering diverse affiliates from the community ability to use the club. There is a desire and room for more affiliates at the club. There is no need to build more buildings and costly infrastructure.

Conclusion

The Tenants group look forward to both WCC and ourselves continuing to uphold the signed charter and working meaningfully together to get the best outcomes possible.

Kind Regards

Warren Rankin

Long Text:

The Mākara Peak Mountain Bike Park Supporters ('the Supporters') are a volunteer organisation that was established in 1998 and are made up of keen mountain bikers, runners, walkers and residents with a passion for Mākara Peak and a vision for a world class MTB park in regenerating native forest, which we are developing in partnership with Wellington City Council.
Our focus in submitting on the Coastal Management Plan is to support the proposed cycling initiatives contained in the plan.
Of particular interest to the Supporters is the proposed Te Kopahou coastal trail, which has the potential if developed as an off-road cycle trail as well as walkway to become an exceptional adventure ride for both residents and visitors to Wellington. It would have the potential to be a significant attractor to Wellington of adventure tourists, particularly when combined with other MTB investments in the region. We would also like to advocate for inclusion in the Coastal Management Plan an addition to the proposed coastal trail proposal to include a connection to Karori via Mākara Peak, a vision which is included in the Mākara Peak Master Plan. Such a connection will expand the usability of the coastal trail by enabling different route and loop combinations.
MPS is also strongly supportive of expanding the MTB trail network around the city and therefore strongly support the proposed grade 4 Carters Park trail descending to Shelly Bay and for the conversion of Massey Road into permanent recreational use, i.e. closing Massey Road to general traffic completely.

Thank you for the opportunity to submit.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Long Text Shelly Bay should be a no-dogs area, due to the thread to the local kororā from off leash dogs. Unfortunately it doesn't seem possible to enforce on-leash only dogs, so the necessary step must be to exclude dogs from the area. Shelly Bay could benefit from being closed in the middle, so access is possible by car, but it's not possible to use it as a route to get around the coast. This, combined with speed reduction features (speed bumps) would be another great way to protect the kororā, as many are still killed by speeding cars.

I support the ideals and values behind this action, however the removal of the island bay marine education centre is a horrible mistake and a huge disruption for the community you claim to be strengthening. The island bay marine centre has been a stronghold of learning and the encouragement of curiosity for three decades. Stop focusing on half-assed 'improvements' and take actual action to improve the city. Fix the water, fund the arts, fund the education and keep the island bay marine centre.

Kia ora Wellington City Council,

I am writing to express my deep disappointment and growing concern upon discovering that the Wellington City Council is considering the removal or repurposing of the Island Bay Bait House as outlined in your draft Tātou ki Uta, Coastal Reserves Management Plan.

How dare this Council consider demolishing one of the last-standing heritage icons of Wellington's working coastline. While you waste millions on impractical vanity projects, you now turn your attention to dismantling a site that has served as a vital marine education centre, a cultural cornerstone, and a beloved part of Island Bay's identity for decades.

Let me be clear:
The Bait House is not just a building. It is a living taonga, a historical link to our fishing heritage, a hub of marine learning, and a cherished space where generations of Wellingtonians have come to connect with the sea and each other.

We as a city cannot stand by while our most treasured places are devalued and destroyed. First it was the Begonia House. Now it's the Bait House. What's next, Te Papa?

You speak of climate resilience, sustainability, and education, yet the actions taken by this Council increasingly show a ruthless disregard for the very heritage and community assets that reflect those values. Instead of threatening demolition, the Council should be investing in the Bait House as a flagship eco-tourism and marine learning hub, celebrating and expanding on the incredible work already being done by volunteers and educators there.

Please know I will be taking this issue public. I will be shining a bold spotlight on the wasteful, frivolous spending of taxpayer dollars and exposing the neglect of our historic and educational institutions. I will not allow this proposal to proceed without a fight, and neither will the thousands of Wellingtonians who love the Bait House and what it represents.

I urge you to reconsider this short-sighted proposal immediately. If you want to show true leadership, work with the community to protect and future-proof the Bait House, not tear it down.

I look forward to your formal response.
Ngā mihi,

Rachel Lyon
Island Bay Resident & Supporter of the Island Bay Marine Education Centre

Long Text:

Hi there

Thank you for sending the coastal plan for review. I have had a look at the parts that I am interested in and what is proposed largely makes sense.

I have one VERY IMPORTANT REQUEST, where areas are being given names in Te Reo Māori, PLEASE PLEASE PLEASE can you also keep a current or English name for those of us that cannot speak Maori. Preferably in a different colour or font so the two languages are easily distinguished.

I was always hopeless at all language subjects at school, I am an immigrant to NZ and know that I will never be able to learn Te Reo. I feel overwhelmed with the amount of Maori names that are now being used in everyday life and as an older person I struggle to remember the names of things in English let alone things in a language that is completely foreign to me. My brain just shuts down if I try to read something strewn with unfamiliar Maori words. It also makes me feel like I am not welcome if I can't understand the words, making me feel sad in a country I love and that is my home.

Please treat my request how it is meant, with kindness and sincerity, I am not trying to be awkward or disrespectful to Maori, just asking for consideration of older people like myself and also all the other immigrants, especially those who struggle with English as a second language.

Best regards

Kay

Congratulations WCC on producing a comprehensive coastal management plan for our city. We believe this plan will ensure that our coastal reserves are well cared for and managed well into the future. We fully support it although there are three specific comments our community has.

1. Te Kopahou tracks plan – Great we are keen to continue to work with WCC to support the development of trails in Te Kopahou.
2. Te Kopahou coastal trail – We fully support the addition of this trail to Wellington's trail network although we would like to see it be designed to allow for biking as well as walking. We also believe that this trail should provide a connection from the south coast to Karori. This will enable loop rides and walks and greatly enhance usage of the trail.

3. We are fully supportive that the G4 Carters Park trail descending to Shelly Bay is to be investigated by WCC.
4. We like the idea of transforming Massey Road (between Shelley Bay and Scorching Bay) into a recreational zone, however we don't believe your proposed investigation goes far enough in its scope. We would like to see the investigation look at totally closing this road to vehicles. We believe it's value as a recreation asset would far exceed the loss of road use given it is not a necessary transportation link.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Long Text
Well done WCC on producing a comprehensive coastal management plan for our city. We believe this plan will help protect and enhance Wellington's coastal reserves for the future.

We strongly support the plan overall and wish to comment on three areas in particular:

Te Kopahou Trail Network: We support the continued investment in the Te Kopahou trail network, as signalled through the reference to the Te Kopahou Tracks Plan. This area is a long-standing priority for our community, and we welcome WCC's commitment to improving and expanding the trail system.

Te Kopahou Coastal Trail: We fully support the addition of this trail to Wellington's trail network. We would like to see it designed for both walking and biking, and to include a connection from the south coast to Karori. This would allow for loops and greater accessibility.

G4 Carters Park MTB Trail: We support WCC's investigation of this trail to Shelly Bay and look forward to seeing it progress.

Massey Road: We support the idea of transforming this road into a recreation zone. However, we believe the investigation should go further – including the option of fully closing the road to vehicles. This would significantly enhance its recreational value and aligns with climate resilience goals.

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Love the coastal environment very much. My only concern is that the climate adaptation value may not be being properly weighted, as the impact sea level rise has on every other consideration. Infrastructure built now may have to be replaced or relocated rapidly, and dunes restored through natural processes may be destroyed anyway. This should be front-of-mind in every decision made about coastal management.

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**
Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**
Multi Choice: Strongly oppose

Q9 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**
Long Text: The coast is Ok and does not need further meddling. All you need to do is concentrate on the sources or pollution especially the litter on the streets that gets washed into the sea then ends up on the coast

Q11 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**
Long Text: As long as the costs are kept down

Q13 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Somewhat oppose

Q14 **Please let us know a bit more about your choice.**
Long Text: Let's just concentrate on protecting the coast through careful design

Q15 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Be sensible and do not go over the top. Try to do with existing capacity to keep costs down

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text As far as adapting planning for sea level rise. You cannot fight nature. People who live near the coast do so at their own risk

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat oppose
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat oppose
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses

for the future of this site. - Strongly oppose
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Don't know
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Don't know
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Just concentrate on the basic services and infrastructure. There are ratepayers who cannot afford rate increases due to over the top spending. If it's going to cost more then don't do it.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text The principle issue for this sector is resourcing. Much of the proposed plan simply replicates the finer details of the 2002 plan and leaves hanging multiple outcomes which have not been achieved.
Increased monitoring and enforcement will address many concerns and perceptions anecdotally held. While 4wds are an obvious target, in some instances rightly so, motorbikes. quads and side by sides traversing the beaches at speed remain an ongoing issue.
Over last summer, during the fire bans, there were large groups with large fires. On one trip there were five fires between Devils Gate and Karori stream.
There are more opportunities for engaging with user groups and stakeholders particularly with weed control.
On the weekend of 12/7/25, and having done so many years previously, I assisted withe a dune replanting. It was very disappointing to see the amount of pig roots right on the beach and through the remaining dunes which had been completely turned over. This is not 4wds or other users causing damage. It is lack of pest control and renders any restoration works almost pointless.

Q12 **Please let us know a bit more about your choice.**

Long Text: you can't make everywhere accessible for people/vehicles etc and you shouldn't. there should be larger areas reserved just for nature itself. The support of native flora and fauna should take precedence everywhere. I have a comment on dogs. Dog ownership is increasing and with that there are more and more people who let their dogs off leash in on-leash areas or just regular streets and roads - I see it constantly and it is infuriating and the more dog owners see other dogs off leash the more they think it is ok. if you are going to increase accessibility then good signage and most importantly enforcement. There needs to be good funding to crack down, for the sake of native fauna but also other people. I am sick of dodging dog shit an not wanting to take my kids on walks because of dogs off leads.

Long Text Kia ora. I just came here to quickly say that the Bait House Aquarium is really important for kids & grownups, locals and visitors, friends and whānau who are learning about our local, national & global marine environment. It's a joyful and inexpensive for us to visit and learn important things from well-informed and very helpful people, set in the context of a real seaside environment and close to the city. If you do end up "Review[ing] options for removal or repurposing of the bait house", please make sure it doesn't disappear! Ngā mihi.

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text All great initiatives, except the proposed retreat of the Bait House. I understand that's it's in a high-risk area and could involve considerably cost to save. What you're missing is its importance in educating generations of people in the very same issues your management plan embodies, eg biodiversity, care of the coastline, passion for and care of the natural world. The Bait House reaches people that your initiatives never will. You can place all the signage you like, print flyers and posters, try to educate the public, but none of that matches the experience of talking to their passionate volunteers and experiencing sea life first hand.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text I would like to see the airport end of Lyall Bay closed to dogs. Many dog walkers ignore the temporary signage which goes up at nesting times.

Also it would be good to make it clearer where the dog walking areas are on Lyall Bay Beach. I'm a dog owner myself and it drives me mad seeing other owners walking in the no-dog areas. How about some kind of indicator on the sand itself? Like embedded rocks or a netted pathway or something? I'm not sure what's possible/what could withstand the storms!

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text Just a quick note on Scorching Bay. Yes, I agree parking needs to be improved. But how about improving public transport too? Extra buses during the weekend in the summer months? A 'park & ride' style shuttle bus from Miramar? (If you can source a decent sized car park which could be used, say from a Monday - Friday business which would have an empty car park at weekends).

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Please keep the Bait Shed and the Aquarium at Island Bay

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses

for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support
