Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

I have history with the Bait House. I have been visiting it over many years and the University Lab before that. This is a unique place, offering an education on the very place that it sits. It would be a travesty to see it go.

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text Please enhance pedestrian and non-car users safety and comfort around the Scorch O Rama cafe. Suggest a pedestrian crossing and possibly narrowing to one lane (cars giving way to each other) to give non-car users more comfort and enjoyment.

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Big supporter of Massey Road becoming one way with more running, biking, walking focus for the space! This is such a great idea and seems obvious!

Suggest implementing a freedom camping spot in this quiet section of coast. Extend freedom camping to support tourism passing through via ferry and encourage diversity of wealth enjoyment of the capital the NZ way.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text Option to have bike / walking go around Greta Point rather than through urban area? I've never known this was an option. Redirect footpath around coast if possible. Feels very private and exclusive on south end.

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support

Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Neutral
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Great plan :) Regarding some of the pathways:
Pathway 2.2
Prioritise wider footpaths all the way around but in high use areas.
Pathway 2.3
Fishing only 8%, don't focus on it. Also bad for marine life.
Boating only 6% and exclusive. Focus less on ramps and marinas. Used mostly by wealthy people.
Walking/running/relaxing/wildlife & biking all high % and accessible regardless of wealth. Focus on these.
More dog poo stations and encouragement to clean up. High use of dogs means poo on footpaths.

Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly oppose
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q29 **Please provide any additional feedback on the draft plan.**

Q13 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**
Long Text: I absolutely support your intent however I notice that you have included an action to demolish or repurpose the Bait House. In my view this action will undermine your purpose as the Bait House and the marine education centre based there provide an essential connection to the natural ecosystem for visitors and schoolchildren

Q15 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text I absolutely support your intent but again I feel that your plan to demolish or repurpose the Bait House contradicts this goal. In my view this action will undermine your purpose as the Bait House and the marine education centre based there provide education to support the coastal and marine environment and should be preserved.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I absolutely support your intent however I strongly oppose your proposed action to demolish or repurpose the Bait House. In the body of the report you describe the Bait House and its marine education centre as a key attraction of Island Bay. You provide no reason in the report for demolishing the building or repurposing it in the report and describe no link between this action and the benefits to the coast. By doing so you will remove a key educational resource for the coast and away to connect visitors and children to the importance of our coastal and marine environment

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Open Space & Recreation Planner | Parks, Sport & Recreation | Wellington City Council |
E [redacted]
Dear CRMP Project Team

On behalf of the Wellington Recreational Marine Fishers Association, I am writing this submission. Within this submission we will bring the knowledge we have acquired, after we found that there has not been any scientific research into the value of our intertidal zone to marine species or had discovered its ecosystem.
The Draft Plan lacks information describing the value of the intertidal zone to marine and freshwater species. However, this is not quite true, and I will get to it further on.
2
This submission will work through these questions.
1 What is the value of the ecosystem in the intertidal zone to freshwater and marine fish?
2 How I had wastelands recognised as the intertidal zone
2 (A) Discovering “Natural Ecosystems”
3 What is within an estuary in Wellington?
3 (A) How we restored the marine ecosystems of Petone Beach.
4 Discussing the points in the WCC 2024 Coastal Reserves Management Plan
4 (A) Owhiro Bay boat ramp
5 Discussing the points made in the WCC Draft Coastal Reserves Management Plan 2025
5 (A) The most common fish found in the intertidal zone is yellow eyed mullet
5 (B) The environmental disaster in Lyall Bay
5 (C) Presentations describing marine ecosystems
5 (D) The future of South Coast ecosystems
5 (E) Meridian West Wind Turbine project and the Makara Guardians search for a marine scientist with intertidal knowledge.
5 (F) Describing ecosystems to the GWRC management in a presentation
3
5 (G) The region’s estuaries in 440 pages by DOC
5 (H) Section 1 Background
5 (I) We endorse the Plan function
5 (J) Section 2 : Values and Pathways
Ecosystems of Wellington Marine Coastal Area- indicative species
5 (K) Threats to Hector dolphins
5 (L) Draft Plan has failed to comply with 2010 NZ Coastal Policy Statement
5 (M) Key issues and emerging challenges for coastal reserves
5 (N) Describing the impact of fast ferries on marine food source
5 (O) Pathway 2.1 Strategic placements of coastal amenities
5 (P) Pathway 3.1 Protect the coastal character through careful design
5 (Q) Actions Enduring connections to the Landscape
Prevent vehicle intrusion into sensitive ecosystems
5 (R) Theme 2 Ecosystems, wildlife and Natural Habitats – Protection and Restoration
5 (S) Pathway 4 Targeted ecosystem restoration.
5 (T) Pathway 2.1 Strategic placement of coastal amenities
5 (U) Pathway 3.1 Protect the coastal character through careful design. Phase out unnecessary coastal structures
5 (V) Enduring connections to the landscape
5 (W) The value of beach cast seaweed to marine species
4
1 What is the value of the ecosystemin the intertidal zone to freshwater and marine species?
I have read the 2024 Coastal Reserves Planand the word “ecosystems” appears four times yet there is no definition of what an ecosystem is.
I have read the 2025 Draft Coastal Reserves Management Planand the word “ecosystem” appears fifty times and again there is no definition.
I have read the Greater Wellington Regional Council (GWRC) Key Native Ecosystem Operational Plan for Wellington South Coast 2020 – 2025 and the word “ecosystem, or ecosystems” appears 31 times and once again there is no definition provided.
The Draft 2025 Coastal Reserves Management Plan has no description of an ecosystem in an estuary or the intertidal zone. As a result, there is no description of how native freshwater and marine fish use the ecosystem in an estuary. The Plan fails to name one marine fish that can be found in our region’s estuaries yet marine fish can be commonly found in every estuary in New Zealand. The Plan fails to describe how native freshwater and marine fish use the waters of an estuary at the time of spawning. The Plan fails to name the most valuable plants in an estuary to both freshwater and marine species. The Plan fails to describe why yellow eyed mullet travel in massive schools into an estuary at night.
The reason why there is no science paper describing an intertidal ecosystem is simple, there is not a published science paper. The intertidal ecosystem is a secretive environment that cannot

be discovered by sitting at the side of the banks and going home when the sun sets, as you would have learnt nothing. The intertidal zone is 20% more productive than the sea and 7% more productive than the land and within this zone there is an ecosystem that provides a variety of food sources for freshwater and marine species and coastal sea birds. As Government science providers had not identified the food sources in the intertidal zone I used my marine knowledge and obtained the information. Some of my discoveries were described in a number of my NZ Fishing Coast to Coast stories when we looked at what the marine species yellow eyed mullet had been eating. That information is being used by colleges as it can be used as an education tool to provide a practical way to describe the intertidal zone.
5
It is extremely important that the intertidal ecosystems be recognised, protected, restored and described in Government and council publications and that information be available to schools and colleges so that the intertidal zone is understood as a valuable resource. The intertidal zone provides a major food source for yellow eyed mullet and they in turn are a major food source for marine life and dolphins. In the discoveries we made I took many photos of what yellow eyed mullet had been eating in the intertidal zone and in 2017 I described it to GWRC management in a Power Point presentation. This was at a time when the GWRC could not believe they were totally responsible for the damage they had caused to intertidal ecosystems and the destruction of a major yellow eyed mullet spawning area. When I showed them, they were cutting off the migration of fish and eels into two south coast lakes they stopped the presentation before I was finished. To gauge how much their environmental managers understood or were interested in the environment they failed to describe the ecosystem in the intertidal zone in estuaries in their publication Key Native Ecosystem Operational Plan for Wellington South Coast 2020 – 2025 yet had used the word ecosystem thirty one times.
The intertidal zone is described on the internet as “the area between the high and low tide which may also extend up rivers and streams determined by the extent of the salt water wedge”. (A salt water wedge is the term given to the incoming tide as it flows under a river or stream as salt water is heavier than freshwater). A marine scientist works up to a river mouth and a freshwater scientist works down to the end of the salt water wedge but there could be ten miles or more between the two areas and science knows nothing as it takes a lot of marine knowledge and years of research to discover its secrets. The GWRC proved they had little knowledge of this zone when they built the estuary at Moera as they placed the inlet pipe above the height of the river water at low tide. As a result no water flows into the estuary for the four hours either side of low tide, which is twice a day, and as a result there is no fish in the estuary they created for spawning fish, so they said in the Hutt News.
2 How I got wastelands recognised as the intertidal zone
I wrote to the then Prime Minister Rt Hon Helen Clark highlighting the fact that the New Zealand Coastal Policy Statement (NZCPS) had no data describing the value of the intertidal zone to marine species. I showed her through a number of photos, how councils were mismanaging the intertidal zone. In a three page letter she acknowledged my environmental concerns and announced the NZCPS would be reviewed by The Minister of Conservation Hon Chris Carter. I then worked with Chris Carter to set up guidelines for the Board of Enquiry. I wrote 44 pages
6
and attached over a hundred photos to the Board of Enquiry, which described how councils and Government agencies were destroying marine and intertidal zone ecosystems as if there was no tomorrow. There were sixty submissions but only our WRMFA submission described the value of the intertidal zone to marine species. From our information Policy 21 to 23 were introduced to the 2010 NZCPS. The board asked what I would like to see in the new Policy. I asked that in future waste lands and the area between high and low tides and the salt water wedge in a river be called the intertidal zone so that science in future can describe its importance and value to marine species.
The letter to the Prime Minister was also sent to the Minister for the Environment Hon Marion Hobbs who used my information to help form the NZ National Policy Statement for Freshwater Management. Two other Ministers of Conservation Hon Sandra Lee and Hon Kiri Alan sent letters thanking me and recognizing the intertidal knowledge I was bringing to environmental decisions.
2(A) Discovering “Natural Ecosystems”
A few months after the letter I was invited to use my marine knowledge on a Ministry of Science and Technology project that had been passed onto a Foundation Research, Science and Technology (FRST) project called to discover our “Natural Ecosystems”. The Ministry had allocated $32 million to discover our “Natural Ecosystems”and I was soon discovering why local councils, regional councils, DOC, NIWA, MofE, MPI and Mfish cannot describe what is in our intertidal ecosystems.
I have included the following information as it describes how the $32 million Government had directed for science to research the value of the intertidal zone to marine species was diverted. Before I attended the FRST meetings called to discover our ”Natural Ecosystems” we were asked to look into our eight national important databases. I looked at them and found four had major errors or omissions. At the first meeting a manager rushed up to me and asked “What do you know about dinoflagellates?” I knew quite a lot about them and she went away just as fast. Experiencing that greeting I thought, what would be next, and when the manager introduced the programme, he told the group assembled there will be no funding in the intertidal zone unless a commercial end user is found. I had already established the biggest end user was the yellow eyed mullet which provided the link between life in the intertidal zone land and the marine
7

environment including dolphins so I asked "What If the life in the intertidal zone had no voice would that be bad luck? He confirmed it was bad luck. The $32 million that Government had marked for science to discover our "Natural Ecosystems" in the intertidal zone was then diverted away from universities to NIWA who used the $32 million traveling around Antarctica. This resulted in their inability to describe the ecosystems found in the intertidal zone when MofE asked them at their Environmental Reporting Forum.
Describing the value of the intertidal zone to marine species to the FRST people was greeted with ridicule and laughter as they believed the intertidal zone was a waste land. It is a common reaction and an example of the lack of marine and intertidal knowledge by staff within Government and councils and why the WCC has the word ecosystems fifty times without a definition and the GWRC has it thirty one times without a description. Unfortunately, it has become quite serious and I have been on the receiving end of abuse by GWRC appointed commissioners at four resource consent hearings who abuse their power and abuse other presenters and marine scientists. Unfortunately, it's not confined to resource consent hearings as I have seen it happen at NIWA, Mfish, and MPI meetings when informal marine knowledge is presented, yet there remains no formal description of the ecosystems in the intertidal zone.
So, the misdirection of Government funding targeted to learn about our "Natural Ecosystems" has put those who wrote this WCC Draft Coastal Reserves Management Plan in a position where they could not define what lives in an ecosystem or what marine species can be found there. The information I have supplied here is not in the level of detail it could be, but it is little look into a world I have discovered that is not known to science, but this is the result of twenty five years of my research. I would like to use my marine knowledge in the Plan but I would expect to be given credit for it.
3 What is within an estuary in Wellington?
I contacted Dr Erik Horstman from Waikato University who had described the value of mangroves in a Dominion Post article 7.5.2018. I asked if there had been any study of our cold water wetlands and his reply was there had been no such research.
NIWA in "The Living World" 2009 stated "not a lot was known about the importance of estuarine habitats to fish in New Zealand." NIWA in 2008 had already described "knowing little about the
8
intertidal zone" and changed the wording in 2009 to "not knowing a lot" which means the same thing.
In 2020 at the Ministry of the Environment Environmental Reporting Forum NIWA began their presentation to describe the intertidal zone and after six slides they stopped and stated they could not find any information and their funding had been cut.
The lack of scientific knowledge of these impacts on marine species is a great deal more serious than most will realise as the 2008 NIWA publication A review of land based effects on coastal fisheries and supporting biodiversity in New Zealand by Morrison, Lowe, Parsons, Usmar and McLeod. (this paper was received as a result of my involvement in the Mfish Inshore Working Group). They stated that little is known scientifically about our intertidal zone or the impacts of our actions upon it. On page 25 they made a very important statement when trying to describe the impact of mud and silt on marine species. They said, "Most of our current knowledge concerning the effects of suspended sediments on fish is based on freshwater species". Then they further explain "Most existing information of the effects of suspended sediment is based on acute exposure laboratory experiments, with little empirical information available on chronic responses to high concentrations for extended periods, especially for marine species, or under natural field conditions".
The link to NIWA paper on coastal impacts follows:
http://www.doc.govt.nz/upload/documents/getting-involved/consultations/current□consultations/nzcps/evidence/211-nzcps-exhibit-2-2.pdf
3A How we restored the marine ecosystems of Petone Beach.
By stopping the grooming
To give the CRMP team a goal to work to I have included how I returned Petone Beach into a beach with its ecosystem returned which resulted in an increase in different species of fish and sea birds. In 2004 when John Terris was Mayor of Hutt City I wrote to him with some of my research and stories that had been published in the magazine NZ Fishing Coast to Coast and photos of the grooming results. Every two weeks a ten tonne front end loader ran all over the beach crushing all the shellfish in the intertidal zone and with the fork attachment dug into the sand and scooped up the marine ecosystems living in the beach cast seaweed into huge piles
9
of seaweed which was taken to a land fill. The loader also scooped up all the grass growing alongside the breakwater wall for a land fill trip. The beach looked like a cricket pitch and no one visited the beach.
The grooming had taken away the food source of yellow eyed mullet that in turn are the food source for dolphins and the local Tokelauan population. With the grooming stopped driftwood was left on the beach and yellow eyed mullet returned, which resulted in dolphins and orcas returning to the harbour. The driftwood encouraged many families to arrive with their children and they made structures with the driftwood.
I am on the Hutt City Wastewater Community Group where I meet senior managers of Hutt City who describe that now native grasses have returned along the Esplanade breakwater wall the grasses have trapped the sand that before used to blow over the road into houses. With sand now contained, the Council is no longer receiving complaints and will never go back to grooming the Petone Beach again. The WCC could learn from the Hutt City Council management of Petone Beach and return the sand that is washed onto the road at Lyall Bay and Island Bay

back to the beach. The sand provides marine ecosystems with the habitat to live in.
Stopping the grooming had another result. In 2013 a Hutt City Councilor had a letter published in the Hutt News asking for support to get the grooming of Petone Beach back again. I replied to the Hutt News and explained the reason for the grooming. The Councilor ignored the explanation and went ahead and called a public meeting at the Petone Wharf to support her wishes. I went up and spoke to her before the meeting started and pointed out that removing beach cast seaweed would deny yellow eyed mullet with a food source and they in turn are the food source for dolphins.
Prior to 2013 no one cared about the plastic on beaches and it was getting quite bad. I asked her to look down and see how much plastic was on the beach. I asked her to get the people she had asked to come to the beach to collect the plastic that was everywhere on the beach. She organised a couple of rolls of plastic bags and they were handed out. In a few hours over sixty bags came back full of plastic. This was the first time in New Zealand that the public had been organised into removing plastic off the beaches. The Councilor took the message to her groups and soon groups formed to remove the plastic from other beaches. With the information
10
I am about to bring to this draft Plan I hope a wider public can also be educated that marine life and sea birds do not find a food source in an ecosystem smothered in plastic.
4 Discussing the points in the WCC 2024 Coastal ReservesPlan
In the 2024 Coastal Reserves Management Plan there is Theme 2 Ecosystems, wildlife and nature there is a sub heading Natural Habitats - Protection and restoration. By location on page 16 is Owhiro Bay Boat ramp.
4 (A) Owhiro Bay boat ramp
I am totally responsible for convincing the Wellington City Council to build this ramp and it took me five years before the council called a meeting of those interested in a boat ramp on the south coast. The meeting assured the council there was a need for a south coast boat ramp. I had found a 1988 Wellington Harbour Board Plan that had suggested the site for a boat ramp. The WCC City Engineer made contact and invited me to put my ideas for a boat ramp and the ramp was decided. The council used my ideas to repair two other boat ramps. We worked out the general layout of the site and a rock wall was built around the ramp. The rocks along the side of the ramp provide a natural break water wall. I chose the deck angle of seventeen degrees and the deck material of Gobi blocks set in concrete now have mussels growing on them which adds to the non slip surface. The angle of the ramp was agreed to as it allows a boat to be launched with the tow vehicle wheels just in the water. We did not ask for toilets as with water available it would allow the inconsiderate to run their engines and this extra cost to build toilets may have stopped the ramp being built.
I conducted a survey of local residentsand they had said they would not object to the ramp if their views of the South Coast were not restricted. Their stipulation was they did not want their view of the south coast interrupted with poles or toilets. I talked with senior Maori who asked that the native plants that were of the south coast be planted and we did that. The ramp was supported by over 250 recreational fishers and divers, Police, WCC management including two Mayors and does not require any more concrete. This boat ramp has become the only boat ramp that blends into the surrounding environment.
11
5 Discussing the points made in the WCC Draft Coastal Reserves Management Plan 2025
In Draft Plan Section 2 Values and Pathways there is a heading called Ecosystems of Wellingtons Marine Coastal Area with a sub heading titled Total Marine Coastal Area. Under that heading the Plan identifies rock lobster, moki and blue cod are an intertidal ecosystem. Fish find a food source in the intertidal ecosystem and these fish are not an ecosystem. This wrong information exposes that there is a serious lack of marine knowledge within the WCC.
The Plan fails to name the marine species that have been scientifically identified in our ‘Coastal Area’. The marine fish that travel through our “Coastal Area”, into estuaries and up rivers or streams to feed and spawn are kahawai, yellow eyed mullet, grey mullet, black flounder, sand flounder, stargazer, snapper, salmon, and the three species of native freshwater fish. But this information is not the only life in the “Coastal Area”.
This Plan must acknowledge freshwater fish and marine fish species travel into and past the immediate intertidal zone. The distance marine fish travel into freshwater is demonstrated by grey mullet that can be seen in the tributaries of the Waitomo Caves and in the waters below the Kennedy Good Bridge, when you know when to look. Freshwater and marine fish leave a stream or river in flood before their gills become blocked with silt.
For years I was representing the region on the Mfish Recreational Fishers Advisory Groups and Mfish stock assessment committees and found the Mfish Plenary which carries a description of all fishers. I had watched yellow eyed mullet spawning so I looked up the Plenary to see what science could tell me about yellow eyed mullet but there was only misinformation. The section on yellow eyed mullet said they spawn thirty miles at sea which I knew was wrong as I and other recreational fishers have seen them spawning in the warm waters in the intertidal zone. I asked NIWA for the science paper to support their description they had in the Plenary but there was none. I found the NIWA misinformation as to where they spawned was from an assumption made in a book describing freshwater fish and the page on yellow eyed mullet was guess work.
I will be commenting on the sections of the Draft Plan where I have made a study of for the last twenty five years. My marine knowledge and discoveries has been recognised by many
12

Ministers of the Crown including the Prime Minister Rt Hon Helen Clark when I pointed out the NZ Coastal Policy Statement was missing the intertidal zone function to marine and freshwater species. I have co-written a science paper in my area of expertise which is the food sources found in the intertidal zone that yellow eyed mullet has found. I have captured the first recorded yellow eyed mullet and a native freshwater fish with ripe running roe which is at the immediate time of spawning – this is held at Te Papa. I have observed marine fish and freshwater fish spawning in a Wellington region estuary and noted the native plants they use.
The NIWA and Mfish Plenary has more misinformation on yellow eyed mullet as they state they return to the sea at night which is also wrong as I was netting big mature fish travelling into a stream when it was dark to feed on mysid shrimps which are nocturnal. The mysid shrimps I found are seven millimeters long and almost clear and form a massive food source for the fish found in an estuary. Research by Otago University had discovered that there are, on average, 595 mysid shrimps per square metre in an estuary and there are five known species. The misinformation in the Plenary said they eat life found in sediment. This proves NIWA and Mfish have not done a speck of research to make that comment as their scientist would tell them yellow eyed mullet do not have the gut structure to process food out of sediment like a red cod. It's a serious corruption of the Plenary for NIWA and Mfish to write misinformation that could never be supported by science. In fact, the whole section in the Plenary describing yellow eyed mullet should be deleted as it is pages of misinformation that Government, councils, universities and the public read it as if it is true.
In my research I found the intertidal ecosystemis a living world that provides a variety of food sources to the many marine and freshwater species. To discover this food source, I spent hours in the zone often at night catching the yellow eyed mullet and then taking them to Te Papa to have their gut contents scientifically identified by Andrew Stuart, which I recorded with photos. The marine species that is found in all intertidal zones in NZ is yellow eyed mullet and at other times grey mullet, kahawai, moki, flounder, star gazers and coastal sea birds can also be found. I have spent twenty five years discovering the ecosystem that fish eat in the marine coastal and intertidal zone by capturing yellow eyed mullet as they move into an estuary at night.
13
5 (A) The most common fish found in the intertidal zone is
yellow eyed mullet
I asked Andrew Stuart at Te Papa for help to prove yellow eyed mullet spawn in the intertidal zone and he told me to bring twelve fish to inspect. I knew when and where they spawned and by the second week, I had captured twelve and arrived at Te Papa for Andrew to look at them. I had captured the first yellow eyed mullet with ripe running roe, and this was confirmed by the Te Papa Science Director Clive Roberts.
With Andrew opening up the fish, we took the opportunity to open their gut to see what they eat. We were discovering what lives in the intertidal ecosystem, and I took photos to record what every fish had eaten. We found some with a gut full of sand hoppers and after asking Rick Weber the crustation expert at Te Papa what specie they were, I learnt there are one hundred and fifty different specie but there may be more now as they had never been collected out of a fish gut before. Some of the fish had mysid shrimps in the gut and they would have been the reason why these fish come into an estuary at night as the shrimps are nocturnal. In the past I had asked Gerry Closs from Otago University about mysid shrimps so I asked him if he could identify the seven millimeter shrimps I had caught,and they were identified as Tenagomysis novae- zealandiae.
When I was representing the NZ Fishing Council on the DOC NGO forum the Director General Robert Logan introduced me to the DOC Marine Scientist Ian West so that my discoveries could be described in a science paper. Ian West asked me to show him what I had discovered. He was impressed and went out of his way and located and supplied me with every science paper written about yellow eyed mullet and told me to find out what we do not know. I found there was not a paper that described their food source and that set me on the path into discovering the ecosystems that yellow eyed mullet find to eat.
We found the yellow eyed mullet had been eating plants. This plant we saw was identified as Urea Glasswort which has flowers and fruit that you can only see under a macro lens, however, this important plant is not identified in the Draft Plan. Research has found this plant is also eaten by lizards, hedgehogs, cattle and rabbits. Another food source we found in the yellow eyed mullet gut was green algae. I had to spend some time to find where they had found the
14
algae. Algae are the very beginning of every ecosystems life in an estuary or in the intertidal zone.
The algae grows under the freshwater after the tide goes out or on rocks after rain and is also found in every rock pool where it eaten by marine life such as crabs, limpets and snails. They can be seen at night eating the algae as the tide comes in. At another location I recorded limpets would move off the rocks at night to graze on algae but would not move over the area where road run off had flowed.
Another example of the ecosystem in the intertidal zone we found in the gut of another yellow eyed mullet, which was bursting with maggots. I had not seen maggots that size and guessed they were kelp fly maggots. I was with Ian West and he introduced Allan Heath to our research as he is the NZ expert on fly identification. He immediately gave us the task of finding where the kelp fly maggots could be found which we did. We learnt there are seven different species of kelp flies. Our research was not finished as we had to capture the flies and friends helped with this. Allan established the maggots in the yellow eyed mullet were the same species that

we found on the beach and that the flies were all of the same species.
With all the information coming together we co-wrote a science paper and could have written another as kelp fly maggots were converting the cellulose of the seaweed into protein. Protein is essential for all life to reproduce. This discovery we presented to DOC management in a formal science paper which should have been accepted and published.
We have on record the Department of Conservation (DOC) requested an Order in Council from the Minister of Conservation for Wellington City Council to groom the Island Bay beach advising her that beach cast seaweed had no value to marine life. However, immediately after receiving our science paper (which they would not publish) describing the value of beach cast seaweed to marine species DOC stopped the grooming of the Island Bay beach. DOC management did not give us any credit for the change in DOC policy. Removing the beach cast seaweed, driftwood and sand from the Island Bay beach was environmental vandalism and should never have happened. This beach is within the marine reserve and to remove a major ecosystem that provides a valuable food source for yellow eyed mullet, piper, flounder, moki, trevally, sea birds and in turn dolphins must have been DOC policy before we presented them with our discovery.
15
5 (B) The environmental disaster in Lyall Bay
There cannot be a WCC Coastal Management Plan that has ecosystem written into the Draft without addressing the fact that Wellington wastewater is discharged five hundred meters way from the nearest reef, which is Te Raekaihau Point, and there is no ecosystem. All wastewater contains endocrine chemicals along with the chemicals we use for cleaning. We use chemicals to remove algae, and some are a serious cleaning product. These chemicals float on seawater and are driven by wind and currents and are making the rock pools at Te Raekaihau Point empty of marine life as the chemicals have washed the rock pool life's food source from the rock pools. Scientists describe that it will take five years before algae will return.
The placement of the outfall wastewater pipe in Lyall Bay is an environmental disaster. At the 2006 resource consent hearing I predicted the wastewater would destroy the marine life at Te Raekaihau Point in a few years' time and in the area to the west of the pipe where a marine reserve is proposed. I and a DOC scientist had both described the impact the wastewater would have on the ecosystems along the south coast and in the marine reserve when two of the commissioners stood up and began abusing both of us for raising a concern. In the commissioners' resource consent report they failed to record that we had raised a concern.
Years later, after the discharge was every day a class of college students could not find any marine life in the rock pools at the Point or those in Princess Bay. Wastewater is lighter than seawater and it produces a chemical slick that kills the beginning of marine ecosystems and can be seen flowing through the rock pools with every tide change all the way to Sinclair Point. Concerned residents provided me with photos they had taken of the chemicals discharging from the pipe and as they passed Houghton Bay.
At the 2003 WCC resource consent there was shown the wastewater pipe would go out further. I knew some of the crew on the barge pulling the pipe out, and they told me they struck problems after a southerly disengaged them from the pipe. This resulted in the pipe ending up well inside Lyall Bay, although 1800 metres from the shore beginning. There were still another thousand meters of pipes on shore, but they were quickly taken away.
I am on the WCC Moa Point Wastewater Community Group and we were presented with their end of year reports. On the cover was a photo taken under water of the outlet diffusers with seaweed growing inside the wastewater pipe. WCC could not believe their pipe was broken, but at sea there was only one discharge point, and by using the photo WCC proved they lacked
16
the marine knowledge to know seaweed does not grow in chemically enriched wastewater or freshwater just as seaweed does not grow in lakes. The pipe should not have had seaweed growing inside the diffusers and that was a sure sign the pipe was broken. An example of what happens to marine life and marine algae can be seen at the HCC wastewater pipe that discharges into the Waiwhetu Stream thirty times a year, all around the pipe the concrete walls are black with a serious loss of marine life well up the stream.
5 (C) Presentations describing marine ecosystems
Wellington City Council Coastal Reserve Management Plan people, I have put this submission together using the research I made to write stories for the NZ Fishing Coast to Coast magazine and resource consent presentations. I had also given presentations to GWRC in 2017 Natural Recourses Plan, DOC 2010 NZ Coastal Policy Statement, MFE National Policy Statement for Freshwater Management 2017, MPI proposed NZ National Policy Statement for Plantation Forests, MofE Boards of Enquiry to the Patea Iron Sand Mining proposal. These submissions and presentations were describing the ecosystems found in the intertidal zone and beaches.
The intertidal zone can extend many miles up a stream or river and as far as the saltwater wedge travels with the incoming tide. Science knows very little about this zone as the marine scientist's work stops at the river mouth and freshwater scientist's work stops at the end of the salt water wedge.
5 (D) The future of South Coast ecosystems
If I am given the opportunity to present to you a Power Point presentation showing the life in the intertidal ecosystem you will agree that removing beachcast seaweed should not be allowed.
This Plan is all about restoring the ecosystems on the Wellington South Coast and they cannot be restored while the public and WCC contractors remove beachcast seaweed and driftwood from the south coast beaches. All south coast beaches, including at Tarakena Bay, should have a total ban on the removable of beach cast seaweed, driftwood and logs. At present after a big sea, a truck arrives on the Tarakena Bay beach and travels all over the beach collecting

the logs that arrive. This should be stopped as the truck is crushing to death the life that lives in the sand that supports the fragile ecosystemthat sees yellow eyed mullet feeding and hector dolphins hunting them. On Saturday 14 June 2025 a large trailer was towed to Red Rocks and they collected a huge quantity of bull kelp. The bull kelp would have been used by nature to provide an ecosystem that could have been used to restore the marine ecosystems in the area.
17
5 (E) Meridian West Wind Turbine projectand the Makara Guardians search for a marine scientist with intertidal knowledge.
The Makara Guardians could not find a scientist to support their opposition to the West Wind power turbines and asked me to be their marine and intertidal expert witness. Resource consents describing big projects have hundreds of pages supporting their resource consent and never have a section describing the adverse effects. The resource consent application did not describe the impact on marine ecosystems. Before the hearing I described to Meridian Lawyers how their proposal to land the turbine parts at either Ohau Bay or Oteranga Bay would seriously impact on the food source of Orcas and dolphins. I asked that they build a wharf in Otereanga Bay to unload the turbine parts. They asked me to select a suitable site for the wharf and I also asked that when the work was finished that the wharf be removed. As the wharf was not included in the resource consent application I had to describe the wharf at the Environmental Court to obtain approval. Meridian has restored the environment where the wharf was and its position cannot be seen.
Later those opposed to the Meridian Mill Creek wind turbine farm asked if I could become their marine and intertidal expert witness as they too could not find a scientist with marine and intertidal knowledge. This I did as I was concerned that the run off would impact on the Makara Stream. I then worked with Meridian to design a sediment trap system that would work as the GWRC sediment trap design used at a Porirua subdivision had failed badly and had covered fragile ecosystems with deep mud and caused the Porirua Harbour to lose one metre of depth in ten years.
5 (F) Describing ecosystems to the GWRC management in a ` presentation
I wrote a story that was published in Wellington Scoop illustrating that the ecosystems in the Waiwhetu Stream were dead. The Chair of GWRC Daren Ponter asked me to put together a PowerPoint presentation to describe why there was no life in the stream anymore and present it to councilors and managers at GWRC. A manager asked that I bring my own projector to run my memory stick as she did not want me to use my memory stick on their projector. That
18
decision reduced the presentations to photos without a description as I was required to talk to the photos. When a manager, after the presentation, asked for a copy of a section of the presentation, he had missed the point. The presentation was designed for Daren Ponter the GWRC Chair requirement to show why the Waiwhetu Stream was dead it was exposing how the GWRC management was destroying the streams ecosystems. A photo without an explanation can have other meanings so I offered to present the information again, which was declined.
5 (G) The regions estuaries in 440 pages by DOC
In 2017 DOC produced a 440 page book describing the region's estuaries. I was given a draft of the book in 2010 and saw they were describing anchovies in the estuaries. I advised them that this was incorrect as these fish do not enter freshwater and suggested the fish may have been yellow eyed mullet or grey mullet.
The final version of the book described the fish they saw as sprats, but they had not had them scientifically identified and the name sprats is a nickname for a number of species. For DOC to spend ten years producing a 440 page book on the region's estuaries and make a wild guess as to the species of fish they saw and did not capture one puts into question the whole book. We know that the young of a number of marine specie live much of their young life in estuaries and the fish DOC saw could have been yellow eyed mullet, grey mullet, flounder, stargazer, trevally, snapper or kahawai. There are a number of science papers recording the fish found in estuaries and I have seen the one describing the fish found in the Makara Estuary.
The DOC Book on Wellington Regional Estuaries declared fourteen times that the waters in an estuary are brackish, this is not true. Freshwater is lighter than seawater and does not readily mix unless subjected to winds over 15 knots. The incoming tide enters a stream or river and as it moves under the freshwater flow it is called the "saltwater wedge". The water in an estuary has on the surface freshwater and when the tide comes in it is then called the saltwater wedge, which lifts the freshwater higher than the high tide height. The two waters do not mix and the environment they produce produces an ecosystem that very few have seen or have knowledge of. The saltwater wedge lifts the eggs from spawning fish into the Raupo, Toetoe and Flax where they become trapped in the root system until they hatch a week later. Only these intertidal plants have the structure to trap fish eggs. This information should be in the Plan as the plant Oioi that is named in the Plan has not the root structure to assist in fish spawning. Within the root structure mysid shrimps live feeding on the algae the two different waters create.
19
5 (H) Section 1 Background This scope includes:
(a) Natural ecosystems and habitats.
Including beaches, coastal forests and rock foreshore as well as plants.
This section names Community outcomes and:
Environmental: A city restoring and protecting nature.
This is most important as in my studies from the gut contents of the yellow eyed mullet we

caught they provided us with this knowledge.
Protection and restoration of coastal ecosystems.
Wellington's coastal ecosystems are taonga.
Protecting and enhancing biodiversity and respecting natural processes is crucial for protecting ecosystems to thrive for future generations
5 (I) We endorse the Plan function:
"Protection of coastal habitats and biodiversity and restoring ecological function".
However, we are very concerned that: The WCC has demonstrated through this Plan they have not acquired the marine intertidal knowledge to know where to begin "restoring ecological function" of coastal habitats. There is no information describing they have identified the micro life and their ecosystems in estuaries or the intertidal zone and as a result there is not a plan proposed on where to start: "Protection of coastal habitats". However, it is extremely important that you give me the opportunity to pass on my marine intertidal knowledge.
5 (J) Section 2: Values and Pathways page 41 and 37
Ecosystems of Wellington Marine Coastal Area- indicative species
Estuaries
This is poorly described and only names name three species in an estuary.
1 Oioi /jointed wire rush
20
2 Inanga / whitebait
3 Tuna/longfin eel
I am not surprised that you could only name Oioi as when I was asked by FRST to look at our eight nationally important databases for their project "Natural Ecosystems" to allocate $32 million for science to discover. There was not a database that named an intertidal plant. I was asked to name the plants I had found in the intertidal zone and now they are in two databases. However, I was prevented from naming their function and science has not discovered their function.
As a result of one of my discoveries I asked Gerry Closs at Otago University for his help as he is light years ahead of DOC, Government, and regional councils' knowledge of estuaries. Under his guidance his team has established the importance of a continuous flow of water to the sea from rivers and streams. A team led by Gerry Closs included Bruno David, Lindsay Chadron, Bernard Barry, and Andrew Markwitz researched the life cycle of the giant kokopu and discovered by using microchemistry on the otolith that native freshwater fish travel in and out of the sea throughout their life cycle.
5 (K) Threats to Hector dolphins
I met up with those who wrote the "Threat Management Plan for Hector Dolphins" and asked why there were only two paragraphs describing their food sources in 298 pages. They described how they saw Hector Dolphins moving in and out of the mud bubble flowing out of a river in flood and did not know the reason. I found the reason when I was discovering the food sources of yellow eyed mullet as they do not eat one speck of sediment and along with native freshwater fish they travel out to sea when their river or streams floods muddy water.
21
5 (L) Draft Plan has failed to comply with 2010 NZCPS
This draft Coastal Reserves Management Plan has been badly let down by not describing the ecosystem found in the intertidal zone. The WCC has failed to comply with the 2010 New Zealand Coastal Policy Statement (NZCPS). I had a huge impact on the 2010 NZCPS as Policy 21 to 23 was formed from my information.
Objective 1 of the NZCPS states:- "To safeguard the integrity, form, functioning and resilience of the coastal environment and sustain its ecosystems, including marine and intertidal areas, estuaries, dunes and land, by: maintaining or enhancing natural biological and physical processes in the coastal environment and recognising their dynamic, complex and interdependent nature."
Further Objective I of the NZCPS requires councils to be "protecting representative or significant natural ecosystems and sites of biological importance and maintaining the diversity of New Zealand's indigenous coastal flora and fauna"
The Plan fails to identify or describe what are "significant natural ecosystems" and the function of estuaries to both freshwater and marine species is missing, which is a NZCPS requirement. The WCC search for information that describes an ecosystem within the intertidal zone would have come up zero. We found there is no scientific information published and now only informal information published in the magazine NZ Fishing Coast to Coast that I wrote. An example of the information that is available is really misinformation displayed on public Boards produced by DOC in partnership with the GWRC. Their misinformation has been put on public display at QE2 Park Paekakariki where they have put up a display board signed off by DOC and GWRC describing how native freshwater fish lay their eggs.
"Adult galaxiids lay their eggs on grasses hanging in the water at high tide".
That is not true and this Plan by WCC has to be of a higher standard than the DOC and GWRC management information. Advising the public that fish lay their eggs on top of grass at high tide places them in the sun for hours would have killed them, this is unbelievable misinformation. Both GWRC and DOC have put on display they have never seen fish spawning as this is a serious lack of intertidal knowledge as fish do not lay their eggs on top of grass at high tide. I along with other recreational fishers have watched native freshwater and marine fish spawning
22
in the intertidal zone and their spawning process is special. I had described how they spawn in

a Power Point presentation at the GWRC Natural Resources Plan Hearing 2017 but obviously GWRC staff who attended had fallen asleep.
Oioi /jointed wire rush
With the naming of the rush Oioi as a plant found in an estuary it confirms there is a serious lack of marine and intertidal knowledge within GWRC and DOC staff. The only time I have seen this rush in an estuary was after GWRC and DOC planted it there as it has no function that fish can use.
The GWRC has produced a Draft Natural Resources Plan and their booklet on waterways was presented at a Porirua Council public meeting at Tawa to find ways to improve the ecosystem in the Porirua Harbour. It came as a shock to the public at the meeting when GWRC showed how they had planted native plants on the top of the Tawa Stream banks. Then they showed the banks being undercut by the stream and the unprotected banks were collapsing, the GWRC error was quickly pointed out by the meeting.
At Moera the GWRC built an estuary to replace the one that they had destroyed, as a result of the Hutt River realignment. But things went terribly wrong when they changed the displayed Plan and went about building an estuary without going through the public consultation phase. GWRC created a new estuary at Moera and put it on display in the Hutt News with a photo of their group planting the new banks with the rush Oioi. I advised the GWRC environment managers that this specie is wrong as it provides no function. The GWRC then planted shrubs along the Hutt River stop banks at the Moera Estuary and poisoned the grass around their plants and then heavy rain washed out the poisoned grass leaving the plants perched on clumps of dirt.
The planners in the environment section of GWRC must not have known that at high tide sea water flows up a river raising the height of the river water. At the new Moera Estuary GWRC placed the inlet pipe above the low tide height of the river and as a result at low tide no water flows into their estuary for hours. This is bad news as all estuaries must have a constant water flow. Today the GWRC have not corrected their error and the inlet pipe is still above the low tide height of the Hutt River. They also placed the inlet pipe in the section of the river where mud and logs travel which flow into their estuary. Their Oioi plants are now smothered in mud.
23
Inanga / whitebait
The draft Plan fails to name one marine fish that can be found in an estuary or up a stream. This Draft Plan has only named inanga as a freshwater fish without describing there are 26 species of freshwater fish or that many marine fish enter rivers, streams and estuaries to feed and spawn. However nowhere in this draft Plan has the food source fish seek in the estuaries been named.
5(M) Key issues and emerging challenges for coastal reserves
Environmental degradation and ecological emergency
The Plan states there is a decline in coastal bird populations and this identifies a broader environmental crisis.
The Plan states the decline in once-abundant species such as mutton birds (shear waters), penguins, and gannets is described as being caused by habitat loss, invasive predators, and human-related threats. There is more to this than that as their food sources are being allowed to be taken away and destroyed.
Then a section then describes the impact on the coastal bird loss is caused by marine debris, impacting on pāua, kina, and crayfish. This is an unresearched misguided view as the reduction in bird numbers cannot be possibly caused by paua, kina and crayfish as these are not their food source.
5 (N) Describing the impact of fast ferries on marine food source
The mutton birds, penguins and gannets all find much of their food in the schools of anchovies, pilchards and yellow eyed mullet. Before the arrival of fast ferries there were very large schools of pilchards, anchovies and yellow eyed mullet in Wellington Harbour and off the south coast that attracted big schools of kahawai and big flocks of mutton birds. There were large numbers of penguins along the south of the coast and east of the harbour.
24
When the fast ferries arrived, I experienced a noticeable decline in the pilchard schools as I was netting them at night and using them for bait. I became quite concerned at the course the ferries were taking as watched them change course and run over and suck up the bait fish schools on the south coast. While fishing on the south coast I estimated the course they were taking would have them passing through the proposed marine reserve. To prove that in 2005 off Island Bay I waited till a fast ferry had pasted and drove my boat into its immediate wake. My crew looked at my sounder and told me to look at it. On the screen it showed the fast ferry underwater wake produced by the two ten thousand horse power engines driving two massive jet units were sucking up so much water they were blasting the sea bed in forty two metres of water so I took a photo of the sounder screen.
At the time I was on the DOCNGO forum and showed the photo to the Director General of DOC Huge Logan and I sent the photo to the Minister of Conservation Hon Sandra Lee with an explanation that the two fast ferries would, as they passed through the proposed marine reserve, have sucked up the entire waters of the marine reserve in three days. The photo circulated around Parliament and three months later both ferries were sent back to Australia.
Unfortunately, I was too late to save the pilchard and anchovy schools which were the

food source of shear waters (Mutton Birds), penguins and shags. Before the fast ferries we often had mutton birds and penguins around my boat. The fast ferries had also sucked up the pilchard, anchovy and yellow eyed mullet schools in the Marlborough Sounds, which, during World War Two, was the fish source available to the public in Wellington. As the ferries went at speed through the Sounds the two-metre waves they created damaged wharves and sent paua spat up the banks of the Sound.
It is correct to note that coastal pollution from sewage overflows after heavy rain and muddy storm water from subdivisions and chemically enriched run off from land and roads has a massive impact of the food sources for inshore fish and birds. We also
25
found fish eat the algae that grows on intertidal rocks after rain. Unfortunately, we also found stormwater/road runoff kills the algae and destroys the food sources the fish eat.
5 (O) Pathway 2.1 Strategic placement of coastal amenities.
Amenities cannot only impact on ecosystems but for example the boat ramp at Owhiro Bay has a condition that all parties agreed to that the WCC would not put in poles. That was also a condition of the resource consent and that the area of the ramp would not have toilets. This was confirmed at WCC Town Planning meeting when Kerry Prendergast was Mayor.
5 (P) Pathway 3.1 Protect the coastal character through careful design. Page 32
(J) Minimize infrastructure impacts on coastal ecosystems by ensuring development avoids further degradation. The ecosystem that is threatened must be defined and described so the public is made aware of the ecosystem.
5 (Q) Actions Enduring connections to the Landscape. Page 34
(3) Prevent vehicle intrusion into sensitive ecosystems
Everyone involved in the management of this plan will have go through a training programme as I have already identified the word ecosystem appears in the Plan fifty times and there is no description of an ecosystem that requires protection. I can provide the information in a Power Point presentation as I have discovered many sensitive ecosystems that at present have vehicles traveling over them.
5 (R) Pathway 4 Targeted ecosystem restoration.
The statement made here contradicts the Plan's purpose: "the marine coastal area and rocky intertidal zones are outside the plan's scope". This statement is illogical as it contradicts the importance of the ecosystems found in the intertidal zone as a marine and bird food source. Also the SECTION 2 Value and Pathways describes the importance of the intertidal zone. There is nothing in the rest of the Draft Plan that suggests this is WCC managements view. Under Estuaries: The little information has to be expanded upon.
26
(1) Maintain and restore estuary function: By identifying opportunities to reduce flow barriers. There is more to this than that. At present planting along stream banks and in estuaries is being mismanaged by people who have no environmental, marine or intertidal knowledge. As a result stream banks have plants planted on top of them instead of being planted to protect the banks. All around the region stream banks are being undermined and are falling in creating muddy water that marine life fails to find food in. We see important rushes being removed and trees chopped down and then thrown in streams while regional council contractors travel along water ways poisoning the very plants that provide a function to fish and birds. I questioned the practice of poisoning around trees in a Porirua park as a mowing strip and the mayor commissioned a scientist who found the poison enters the shoreline gravels and enters intertidal zones and poisons the micro life in that zone.
5 (S) Boat ramps
The boat ramp built by WCC at Seatoun Beach is missing from the list.
The boat ramp in Lyall Bay called the Dory Leslie ramp was built with Gobi blocks and was repaired by the WCC with a layer of concrete without channels. This is thoughtless engineering as algae grows on flat concrete which makes the ramp slippery and as result "This action makes the ramp dangerous" The WCC and ACC should take action to prevent IDENTIFIED slip accidents on the ramp. Under the Health and Safety Act the WCC has become responsible for any slip accidents at the ramp. We were not consulted with this type of repair and we would not have agreed to it. We had agreed with WCC when the Owhiro Bay boat ramp was built that boat ramp surfaces in future would not be made slippery and dangerous. The Evans Bay boat ramp is also extremely dangerous due to the poor ramp surface of flat concrete and a lack of cleaning.
5(T) Pathway 3.1 Protect the coastal character through careful design. Phase out unnecessary coastal structures
The trouble with this view is there has already been a lack of consultation. Already access to the sea is being made impossible, restricted or dangerous and chances to repair what we have has been dismissed without consultation to user group's representatives that were once part of a WCC recreational user group. A management Plan that describes it is there to manage fish, paua or kina stocks is not what I pay my raters for. It's not a WCC function nor does it have the resources to manage shellfish stocks and restricting access based on this assumption is a
27
misuse of power. Government has provided MPI with the resources to manage shell fish and fish stocks and have trained people to carry out surveillance coastal watch duties. These are a specially trained group of professionals who spend hours identifying poachers and their bankers and any interference by WCC staff will end up with the poachers not getting caught.
5 (U) Enduring connections to the landscape

Identify areas where bollards, landscaping, and other interventions are needed to prevent vehicle intrusion into “sensitive ecosystems”. The WCC needs to manage what we have got. Allowing a truck to travel all over the beach at Tarakena Bay is not acceptable as it is crushing an ecosystem that the WCC demonstrates it has no knowledge of.
While the Plan is naming “sensitive ecosystems” the trouble is there is no description of the life that will be in the ecosystem. It is now quite obvious as I work through this Draft Plan that it is extremely urgent that all WCC staff understands what intertidal ecosystems are and where to find them.
5 (V) The importance of sensitive ecosystems described
The ecosystem that needs protection is the intertidal zone, beaches, sand hills, and beaches that attract beach cast seaweed. What is not understood by every council in our region and by the GWRC as to the function of driftwood on our beaches. An example of what happens when a council removes the drift wood and logs that arrive on the beaches is at Parapararaumu where the Council replaces the logs with one tonne concrete blocks. The concrete blocks then sink below the surrounding sand. The council there has not the environmental knowledge understand how nature’s way of historically building up coastal beaches is with logs and driftwood. A number of large logs arrived at the QE2 park beach were removed by GWRC and placed inland at a position where they have no function. They should have been used to protect the walking track above the beach as six months later the walking track that had been there for many years was washed away. The lack of marine coastal knowledge by WCC and GWRC is not only on display everywhere around our coast. This lack of coastal and intertidal knowledge has seriously impacted our coastal marine and intertidal ecosystems. The reporting of environmental concerns to the GWRC must be overhauled as they are failing to take a concern seriously. Dismissing a notification of a large chemical spill in the Takapu Stream as someone washing a paint brush is totally unacceptable.
28
5 (W) The value of beach cast seaweed to marine species
I see DOC and WCC have finally stopped beach grooming but only after I had proved the value of not grooming beaches to the HCC. Petone Beach had a ten tonne front end loader driving all over the beach every two weeks. The result now is massive as it no longer crushes the intertidal zone shellfish beds. It no longer removes the native plants that historically had grown along the sea wall. Now fishers are catching snapper off the beach.
The crushing of the intertidal life and the public removing of beach cast seaweed along the Wellington South Coast must stop. If the Plan does not stop the removal of beach cast seaweed from all south coast beaches then the concern expressed of protecting sensitive ecosystems fifty times in this draft of the Plan will demonstrate why there is no definition of an ecosystem in this draft of the Plan. Those who will be writing the final Plan must be given the opportunity to acquire the knowledge to describe an ecosystem on land and in the intertidal zone as both are just as important.

Kia ora,

I am from Houghton Bay, and would like to submit some feedback on the parts that relate directly to that area. This Includes:
Page 75 - the paragraph titled Te Raekaihau Point is a little confusing as we have always considered the point as the area on the coastal side of the road. The other side we just call Te Raekaihau or "the headland" to distinguish it from the point. But then as is mentioned on page 77, the current official name for the headland reserve is View Road Park. So who knows?
Page 77 - I fully support item 4 to improve the tracks etc. But again, I am assuming it is the headland. I think people can find their way sufficiently around the flat area!
Page 77 - Item 11, the renaming of the headland/View Road Park to Haewai Reserve might help solve the confusion. And although we have been calling the place Te Raekaihau for nearly 15 years, if Mana Whenua have initiated this name change, then I fully support it.
The headland has remained spray-free for many years now, I hope this status continues as it is a popular place for foraging.
Otherwise, the values/aspirations of the document are awesome.

Nga mihi nui,
Jenny Rattenbury

Thank you for the opportunity to submit. The Island Bay Bait Station/Marine Education Centre must not be closed. It is a major scientific and education centre. I took my children there, and when I last visited I spoke to several New Zealand and overseas scientists working there. It is a major asset for the city and region.
Please record my views as you consult on the draft plan

WCC on producing a comprehensive coastal management plan for our city. I believe this plan will help protect and enhance Wellington's coastal reserves for the future.

I strongly support the plan overall and wish to comment on three areas in particular:

Te Kopahou Trail Network: I support the continued investment in the Te Kopahou trail network, as signalled through the reference to the Te Kopahou Tracks Plan. This area is a long-standing priority for the Wellington community, and I welcome WCC's commitment to improving and expanding the trail system.

Te Kopahou Coastal Trail: I fully support the addition of this trail to Wellington's trail network. I would like to see it designed for both walking and biking, and to include a connection from the south coast to Karori. This would allow for loops and greater accessibility.

Thanks you for putting together the great coastal management plan for our city. It's very important that we protect and enhance Wellington's coastal reserves for future recreation for both Wellingtonians and visitors.

I firmly support the plan overall and would like to commend three areas in particular:

Te Kopahou Trail Network: I support the continued investment in the Te Kopahou trail network, as signalled through the reference to the Te Kopahou Tracks Plan. This area is a long-standing priority for our community, and I welcome WCC's commitment to improving and expanding the trail system, along with Trails Wellington and other volunteer groups. This will also provide further pest trapping opportunities near Zealandia and Capital Kiwi projects.

Te Kopahou Coastal Trail: I fully support the addition of this trail to Wellington's trail network. A shared walking and biking trail would make most sense and open access to a wider group of trail users, and could include a connection from the south coast to Karori. This would allow for walking and riding loops and greater accessibility to this amazing but underused part of the Wellington outdoors.

G4 Carters Park MTB Trail: We support WCC's investigation of this trail to Shelly Bay and look forward to seeing it progress. Piki Ki Maupuia uphill trail would then finish a nice loop.

Massey Road: I support the idea of transforming this road into a recreation zone. Perhaps the investigation should go further – including the option of fully closing the road to vehicles, possibly weekends only. This would significantly enhance its recreational value and aligns with WCC climate resilience goals.

I'm absolutely appalled the Bait House is under threat of being closed.

It's a vital part of the community and provides people of all walks life insight into the incredible marine life of the South Coast. It is well known that people protect what they know, understand and enjoy. As such it is existence is an intergal part of the Coastal Reserves Management Plans objectives.

Protection & restoration of nature
the Marine Education centre is key education tool for people to understand benefits of Protecting and restoring the nature. Many schools bring their students here.

Recreation & access
Marine Education Centre, a vibrant hub where kids, families, and curious minds of all backgrounds come to learn, laugh, and fall in love with our marine environment. The Marine Education centre has a cherished Coastal recreation area which access not be lost.

Cultural connections & heritage
It's a living, breathing part of Island Bay's history, a legacy of our local fishing community, lovingly built in the late 1940s by apprentices, war veterans, and characters of the sea.

Resilience & climate adaptation
I ask the council works alongside the Marine Education Centre to undertake the necessary Commit steps to retain the Centre for future generations

Sincerely,
Julie Williams [redacted]

Hello WCC staff and councillors

I see growing numbers of Wellingtonians embracing dogs as an integral part of their lives. I'd like to see more areas where dogs are permitted. Both on leash and off leash.

Owners should be warned they should only take social dogs (ie dogs that are not dangerous to humans or other dogs) to public areas.

Fancy facilities are not necessary, just room to run preferably away from roads and dogs love beaches!

Natalie Muir

Kia ora and congratulations to Wellington City Council on the development of a thorough and forward-thinking coastal management plan. This strategy represents a significant step in protecting and enhancing our city's unique coastal environment for future generations.

We are broadly supportive of the direction outlined in the plan and would like to highlight our views on several key aspects:

Te Kopahou Trail Network

We are pleased to see the ongoing commitment to the Te Kopahou trail network through the reference to the Te Kopahou Tracks Plan. This area has long been valued by the local outdoor community, and continued investment in its development is a positive signal for recreational users and conservation efforts alike.

Te Kopahou Coastal Trail

The proposed addition of the Te Kopahou Coastal Trail is a welcome enhancement to the city's trail offerings. We encourage the design to accommodate both pedestrians and cyclists and recommend incorporating a link between the south coast and Karori. This would create valuable loop options and improve accessibility across the region.

G4 Carters Park MTB Trail

We support the Council's proposal to investigate a mountain bike trail from Carters Park to Shelly Bay. This concept has strong potential and we look forward to further progress on this initiative.

Massey Road

We endorse the idea of transitioning Massey Road into a dedicated recreational area. We suggest that this investigation include the option of closing the road entirely to motor vehicles. Doing so would greatly enhance the user experience, reduce environmental impact, and align well with Wellington's climate adaptation goals.

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text
1. Te Kopahou Trail Network
I fully support the ongoing investment in the Te Kopahou trail network, as referenced in the plan's commitment to the Te Kopahou Tracks Plan. This area has long been a focal point for outdoor recreation, and I appreciate the Council's recognition of its value. The plan states:

"Te Kopahou is a significant area for recreation, providing a range of walking, running, cycling and mountain biking opportunities, and is a priority for track improvements and investment."

I encourage WCC to continue prioritising the enhancement and expansion of this network, ensuring that it remains accessible, sustainable, and enjoyable for all users. Ongoing investment will not only support the health and wellbeing of residents but also contribute to Wellington's reputation as a premier destination for outdoor recreation.

2. Te Kopahou Coastal Trail
I strongly endorse the proposed addition of the Te Kopahou Coastal Trail to Wellington's trail network. I recommend that the trail be designed as a shared-use facility, accommodating both walkers and cyclists, and that it includes a connection from the south coast to Karori. This would create valuable loop options and significantly improve accessibility for a wider range of users.

The plan highlights the importance of "providing a connected network of tracks and trails that cater for a range of abilities and activities," and I believe the Te Kopahou Coastal Trail exemplifies this objective. A well-designed, multi-use trail will enhance recreational opportunities, support active transport, and foster greater appreciation of the coastal environment.

Long Text
3. G4 Carters Park MTB Trail
I am pleased to see WCC's commitment to investigating the development of the G4 Carters Park MTB Trail, extending towards Shelly Bay. This initiative aligns with the plan's goal to "expand and improve the track network to meet growing demand and changing recreational trends." I look forward to the progression of this project and encourage the Council to engage closely with the MTB community throughout the planning and implementation phases to ensure the trail meets the needs of all users.

4. Massey Road Recreation Zone
I support the proposal to transform Massey Road into a dedicated recreation zone. However, I recommend that the

scope of the investigation be broadened to include the option of fully closing the road to private vehicles. Such a measure would significantly enhance the area's recreational value, improve safety for non-motorised users, and contribute to the plan's climate resilience objectives.

The plan notes the importance of "providing safe, accessible and enjoyable spaces for recreation while supporting climate change adaptation and resilience." Full closure of Massey Road to vehicles would be a bold step towards achieving these goals, creating a unique coastal recreation corridor for walking, cycling, and other non-motorised activities.

Submission on the Tātou ki Uta – Coastal Reserves Management Plan: Support for MTB Trail Development and Enhanced Recreational Access

Introduction

I commend Wellington City Council (WCC) for the development and publication of the Tātou ki Uta – Coastal Reserves Management Plan. This comprehensive document demonstrates a clear commitment to the long-term protection, enhancement, and sustainable use of Wellington's coastal reserves. The plan's vision to "protect, restore and enhance the natural, cultural and recreational values of Wellington's coastal reserves for current and future generations" aligns closely with my aspirations as a mountain biker and wider recreational advocate.

I fully endorse the plan's overall direction and wish to provide specific feedback on several key areas of particular importance to me.

Conclusion

In summary, I commend WCC for its forward-thinking approach to coastal reserve management and its recognition of the value of high-quality recreational infrastructure. I urge the Council to:

Maintain and increase investment in the Te Kopahou trail network.

Ensure the Te Kopahou Coastal Trail is designed for shared use and includes a connection to Karori.

Progress the G4 Carters Park MTB Trail with strong community engagement.

Consider full vehicle closure of Massey Road to maximise recreational and climate resilience benefits.

By implementing these recommendations, WCC will further strengthen Wellington's position as a leader in sustainable recreation and environmental stewardship, in line with the guiding principles of the Tātou ki Uta – Coastal Reserves Management Plan.

To Whom It May Concern,

I am writing on behalf of concerned citizens and supporters of the Island Bay Marine Education Centre, formerly known as the Bait House, to express our strong opposition to the proposal outlined in the draft Coastal Reserves Management Plan to review options for the removal or repurposing of the Bait House within a medium-term timeframe (5–7 years).

This proposal is gravely concerning and deeply upsetting to many in our community. The Bait House is not merely a structure; it is a treasured heritage site, a hub for marine education, and a beacon of community spirit.

Since 2004, this once-derelict site has been lovingly restored and maintained by volunteers, who turned it into a place where people of all ages and walks of life can learn about the precious marine environment of Island Bay.

The historical significance of the Bait House cannot be overstated. It was built in the post-war era by local tradesmen and returned servicemen. Stories like those of Bruce Askew, an apprentice carpenter involved in the original construction, form a precious oral history. These accounts highlight the importance of the building in the development of Island Bay's fishing culture and the wider community.

We understand the need to plan for coastal hazards and earthquake safety, but we urge the Council to consider strengthening and preserving the Bait House rather than removing it. Its cultural and educational value far outweighs the cost of repurposing or demolition.

We ask the Council to:

1. Acknowledge the historical and cultural significance of the Bait House.

2. Commit to retaining and strengthening the building for future generations.

3. Support continued community-led education and conservation efforts on site.

We believe the Bait House is aligned with the core values of Wellington's identity: resilience, sustainability, community, and heritage. Removing it would be a loss not only to Island Bay, but to the city's collective memory and marine future.

Sincerely,
ChristineChesterfield/ Island Bay Marine Centre Trust / Supporter]
[redacted]
6/7/2025

Also I would like to add, the Marine Education Centre has been an icon and cherished memories for many who live in Wellington and all over NZ, it is the ONLY PLACE IN ALL NEW ZEALAND THAT HOUSES INJURED SEA LIFE AND ONCE RECCUPERATED THEY ARE RELEASED BACK TO THEIR NATURAL HABITAT. OCTOPUS ARE MANY OF THESE BEAUTIFUL CREATURES I AND MANY HAVE HAD THE PRIVILEGE TO ENCOUNTER. WITHOUT THE BAIT HOUSE education classes would never learn about the sea life that surrounds us and it is imperative to preserve and learn about in real life as children can see, touch feel the creatures in the touch pool , if you want to know more details about this amazing voluntary organization as they rely on people's donations to run as The Ministery of Education has cut funding which should've ever of happened as thousands of schools visit the Bait House as they're eager to learn and passionate about our sea life! Go to their Facebook #IslandBayMarineEducationCentre, you will see many beautiful stories and

memories from children all over New Zealand and a history lesson that's like no other.
#SavetheBaitHouse
Last year I won a raffle the Marine Education Centre was running to raise funds to help with running the Bait House and I won an amazing Octopus encounter, it was the best experience I ever had, where else would you have such an experience anywhere else?
Nowhere else can you experience first hand such an amazing opportunity to see what the Bait House has to offer for everyone to experience.
I implore you to #Save the Bait House!
Yours sincerely
Christine Chesterfield Supporter of saving the Bait House

ubject: Strong Opposition to the Proposed Removal/Repurposing of the Island Bay Bait House

To Whom It May Concern,

I am writing as a supporter of the Island Bay Marine Education Centre (aka The Bait House), to express my strong opposition to the proposal outlined in the draft Coastal Reserves Management Plan to review options for the removal or repurposing of the Bait House.

The proposal is very worrying. The Bait House is not just a building - it's taonga. It provides much-needed marine education to schools, locals and visiting tourists of all ages, and does it via engaging and memorable hands-on, experiences.

I understand the need to plan for coastal hazards and earthquake safety, and urge the Council to consider strengthening and preserving The Bait House rather than removing it. Its cultural and educational value far outweighs the cost of repurposing or demolition.

I ask the Council to:

1. Acknowledge The Bait House structure as taonga.

2. Acknowledge the educational value of The Bait House.

3. Commit to retaining and strengthening the current Bait House building on site.

I believe the Bait House is aligned with core Wellington values, in particular sustainability, education, community, and heritage, and removing it would be a huge loss to the city.

Ngā mihi,

Dianne Khan

Long Text
Congratulations WCC on producing a comprehensive coastal management plan for our city. We believe this plan will help protect and enhance Wellington's coastal reserves for the future.

We strongly support the plan overall and wish to comment on three areas in particular:

Te Kopahou Trail Network: We support the continued investment in the Te Kopahou trail network, as signalled through the reference to the Te Kopahou Tracks Plan. This area is a long-standing priority for our community, and we welcome WCC's commitment to improving and expanding the trail system.

Te Kopahou Coastal Trail: We fully support the addition of this trail to Wellington's trail network. We would like to see it designed for both walking and biking, and to include a connection from the south coast to Karori. This would allow for loops and greater accessibility.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

To Whom It May Concern,

I am writing on behalf of concerned citizens and supporters of the Island Bay Marine Education Centre, formerly known as the Bait House, to express our strong opposition to the proposal outlined in the draft Coastal Reserves Management Plan to review options for the removal or repurposing of the Bait House within a medium-term timeframe (5–7 years).

This proposal is gravely concerning and deeply upsetting to many in our community. The Bait House is not merely a structure; it is a treasured heritage site, a hub for marine education, and a beacon of community spirit.

Since 2004, this once-derelict site has been lovingly restored and maintained by volunteers, who turned it into a place where people of all ages and walks of life can learn about the precious marine environment of Island Bay.

The historical significance of the Bait House cannot be overstated. It was built in the post-war era by local tradesmen and returned servicemen. Stories like those of Bruce Askew, an apprentice carpenter involved in the original construction, form a precious oral history. These accounts highlight the importance of the building in the development of Island Bay's fishing culture and the wider community.

We understand the need to plan for coastal hazards and earthquake safety, but we urge the Council to consider strengthening and preserving the Bait House rather than removing it. Its cultural and educational value far outweighs the cost of repurposing or demolition.

We ask the Council to:

1. Acknowledge the historical and cultural significance of the Bait House.

2. Commit to retaining and strengthening the building for future generations.

3. Support continued community-led education and conservation efforts on site.

We believe the Bait House is aligned with the core values of Wellington's identity: resilience, sustainability, community, and heritage. Removing it would be a loss not only to Island Bay, but to the city's collective memory and marine future.

o Whom It May Concern,

Our family is very shocked and angry that the Island Bay Marine Education Centre could lose the Bait House building. Our family have been visiting for years. It's an important resource for engaging our community with conservation and climate change, and is a valuable and affordable attraction for families.

I am writing on behalf of concerned citizens and supporters of the Island Bay Marine Education Centre, formerly known as the Bait House, to express our strong opposition to the proposal outlined in the draft Coastal Reserves Management Plan to review options for the removal or repurposing of the Bait House within a medium-term timeframe (5–7 years).

This proposal is gravely concerning and deeply upsetting to many in our community. The Bait House is not merely a structure; it is a treasured heritage site, a hub for marine education, and a beacon of community spirit.

Since 2004, this once-derelict site has been lovingly restored and maintained by volunteers, who turned it into a place where people of all ages and walks of life can learn about the precious marine environment of Island Bay.

The historical significance of the Bait House cannot be overstated. It was built in the post-war era by local tradesmen and returned servicemen. Stories like those of Bruce Askew, an apprentice carpenter involved in the original construction, form a precious oral history. These accounts highlight the importance of the building in the development of Island Bay's fishing culture and the wider community.

We understand the need to plan for coastal hazards and earthquake safety, but we urge the Council to consider strengthening and preserving the Bait House rather than removing it. Its cultural and educational value far outweighs the cost of repurposing or demolition.

We ask the Council to:

1. Acknowledge the historical and cultural significance of the Bait House.

2. Commit to retaining and strengthening the building for future generations.

3. Support continued community-led education and conservation efforts on site.

We believe the Bait House is aligned with the core values of Wellington's identity: resilience, sustainability, community, and heritage. Removing it would be a loss not only to Island Bay, but to the city's collective memory and marine future.

Sincerely,
Esther King

To Whom It May Concern,

I am writing to join my voice to the voices of concerned citizens and supporters of the Island Bay Marine Education Centre, formerly known as the Bait House, to express our strong opposition to the proposal outlined in the draft Coastal Reserves Management Plan to review options for the removal or repurposing of the Bait House within a medium-term timeframe (5–7 years).

This proposal is gravely concerning and deeply upsetting to many in our community. The Bait House is not merely a structure; it is a treasured heritage site, a hub for marine education, and a beacon of community spirit.

Since 2004, this once-derelict site has been lovingly restored and maintained by volunteers, who turned it into a place where people of all ages and walks of life can learn about the precious marine environment of Island Bay.

The historical significance of the Bait House cannot be overstated. It was built in the post-war era by local tradesmen and returned servicemen. Stories like those of Bruce Askew, an apprentice carpenter involved in the original construction, form a precious oral history. These accounts highlight the importance of the building in the development of Island Bay's fishing culture and the wider community.

We understand the need to plan for coastal hazards and earthquake safety, but we urge the Council to consider strengthening and preserving the Bait House rather than removing it. Its cultural and educational value far outweighs the cost of repurposing or demolition.

We ask the Council to:

1. Acknowledge the historical and cultural significance of the Bait House.

2. Commit to retaining and strengthening the building for future generations.

3. Support continued community-led education and conservation efforts on site.

We believe the Bait House is aligned with the core values of Wellington's identity: resilience, sustainability, community, and heritage. Removing it would be a loss not only to Island Bay, but to the city's collective memory and marine future.

The Island Bay Marine Education Centre is a vibrant hub where kids, families, and curious minds of all backgrounds come to learn, laugh, and fall in love with our marine environment. I have been there with my children many times and they loved the amazing hands-on experience, coming face to face with nature. They have also visited with school and at birthday parties and come home full of stories about what they learnt. The amazing volunteers make sure every visitor leaves full of passion for the marine environment of Tapu te Ranga Reserve on their doorstep.

Sincerely,
Jenny Moore
Island Bay Marine Centre Trust Supporter

To Whom It May Concern,

I am writing on behalf of concerned citizens and supporters of the Island Bay Marine Education Centre, formerly known as the Bait House, to express our strong opposition to the proposal outlined in the draft Coastal Reserves Management Plan to review options for the removal or repurposing of the Bait House within a medium-term timeframe (5–7 years).

This proposal is gravely concerning and deeply upsetting to many in our community. The Bait House is not merely a structure; it is a treasured heritage site, a hub for marine education, and a beacon of community spirit.

Since 2004, this once-derelict site has been lovingly restored and maintained by volunteers, who turned it into a place where people of all ages and walks of life can learn about the precious marine environment of Island Bay.

The historical significance of the Bait House cannot be overstated. It was built in the post-war era by local tradesmen and returned servicemen. Stories like those of Bruce Askew, an apprentice carpenter involved in the original construction, form a precious oral history. These accounts highlight the importance of the building in the development of Island Bay's fishing culture and the wider community.

We understand the need to plan for coastal hazards and earthquake safety, but we urge the Council to consider strengthening and preserving the Bait House rather than removing it. Its cultural and educational value far outweighs the cost of repurposing or demolition.

We ask the Council to:

1. Acknowledge the historical and cultural significance of the Bait House.

2. Commit to retaining and strengthening the building for future generations.

3. Support continued community-led education and conservation efforts on site.

We believe the Bait House is aligned with the core values of Wellington's identity: resilience, sustainability, community, and heritage. Removing it would be a loss not only to Island Bay, but to the city's collective memory and marine future.

Long Text Hi WCC,

I am not from your rohe but urge you to reconsider the reclassification of the Red Rocks area. I am a 4WD enthusiast and enjoy taking my family on overlanding adventures. I especially love showing my young girls what this beautiful country has to offer. I appreciate your commitment to preserving our natural landscapes and understand the importance of protecting these areas for future generations. Families like mine care for the landscape by collecting rubbish and leaving no trace when we go out. Please reconsider this decision so that families like mine can continue to enjoy this place. Additionally, I am in support of a 4WD license, which would ensure that drivers are educated on responsible and safe practices. I am open to discussing ways we can work together to maintain access while ensuring environmental protection.

The Red Rocks has been on my bucket list for a long time and I hope I get to experience it oneday.

Thank you for your consideration.

Re: WCC Coastal Management Plan Submission
dsport welcomes the opportunity to provide a submission on the WCC Coastal Management Plan. We have reviewed the plan and believe that while the Council uses the words accessible, inclusive and all-users, the plan still does not consider the necessary steps required to make the space accessible to disabled people. Providing for disabled people is more than just providing a piece of equipment, it's about ensuring disabled people are further marginalised from using these spaces non-disabled people can readily and take for granted.

Who is dsport
Established in 1969, dsport is a charity managed by a board of elected volunteers, and our vision is for Wellington to be a diverse and inclusive region. We have been delivering dedicated co-designed disability sport and recreation opportunities for our members for over 50 years.
dsport is underpinned by the principles of inspire, enable, achieve.
We inspire disabled people to believe in themselves. To aspire to being involved in sport and active recreation. To dream.
We enable disabled people to get into sport and active recreation. We don't believe in can't. Rather how can we. How can we make this fun and make this work? We persevere and we build strength collectively.
But more importantly, our members achieve. They overcome adversity, find work-arounds and creative solutions to achieve. And for some, they will achieve their dreams.
While many of our programmes are facility-based, we do provide a range of recreation opportunities which are based around Wellington's coastal environment.
Ākau Tangi Sports Centre | 72 Kemp Street, Kilbirnie | Wellington 6023 2

Participating in the annual Round the Bays
Orienteering along the Wellington waterfront
Ākau Tangi Sports Centre | 72 Kemp Street, Kilbirnie | Wellington 6023 4
Nearly 36,000 Wellingtonians identify as disabled
1 in 6 people identify as disabled (Statistics NZ, 2025). This increases as people age and females are more likely to be disabled than males.
Mobility impairments are the most common in the region followed by hearing and agility. Disabled people with mobility impairments have difficulty travelling to and through the city and this is exacerbated by not only geography but also poor provision of amenities and services to enhance their travel and an unreliable transport network.
The following feedback is provided based on our experiences delivering disability sport and recreation opportunities to our members, insights from our members on access and inclusion and our desire to see Wellington City Council provide better more considered opportunities for disabled people from our community.
Furthermore, dsport does not believe this plan currently aligns fully with the principles espoused in other Council documentation focused on improving accessibility – Accessible Wellington – the accessible journey action plan 2019, Towards 2040: Smart City strategy and the Mobility Parking Policy 2005 and Parking Policy 2020 (see Appendix Summary of these plans).
Specific feedback on plan
P10 Strategic and legislative context
Disappointed to see that the Strategic and legislative context and Coastal planning related plans and policies on appear to preclude recognition and acknowledgement of the Accessibility Action Plan 2019 as a Key influencing strategy and Activity based plan or policy, yet on page 11 states This plan aligns with the strategy's five strategic focuses of the Open Space and Recreation Strategy 2023 - Whai Wāhitanga Inclusive Making the coastal environment welcoming and accessible to all.
Ākau Tangi Sports Centre | 72 Kemp Street, Kilbirnie | Wellington 6023 5
P12 Key issues and emerging challenges for coastal reserves
Recognises that the use of the coast has evolved, but access remains inequitable – both in who can reach and use coastal spaces and how access is allocated through leases and infrastructure. Barriers include physical accessibility, transport limitations, and financial constraints. However, one of the greatest barriers for disabled people accessing these areas has been the establishment of dedicated cycle-lanes which have removed parking; where parking is available it is not accessible; and some of the limited accessible parking spaces are now time-limited whereas non-disabled parks remain unlimited parking. These interventions by the Council are not improving access but limiting access and enhancing inequities between disabled and non-disabled people wanting to use these spaces.
P 17 Values
Whai wāhi - Access to the coast for recreation and enjoyment Wellington's coast is a space of joy and relaxation, offering a variety of recreational activities, from surfing and swimming to walking and spending time with whānau and friends. This ableist position reinforces the lack of understanding and perhaps desire to ensure these places are actually accessible to disabled people. It's more than putting a wheelchair icon in an image, it has to be tangible to those disabled people in the community who want to actually use these spaces.
Page 21 Value 2 Whai wāhi Access to the coast for recreation and enjoyment
To support these experiences, Council provides essential recreation amenities, including walkways, boat ramps, wharves, public toilets, playgrounds, and off-leash dog areas. But again, these essential amenities are frames around non-disabled people. Essential amenities for disabled people include places to park that are accessible and suitably located.
For example, to use the public toilets at Balaena Bay there are no adjacent accessible car parks. The parking area approximately 200m with a drive which is too steep for a wheelchair user to use unassisted, which could be argued contravenes the principle of the New Zealand Building Code Clause G1 Personal Hygiene which defines an accessible route as a route usable by a person with a disability. It shall be a continuous route that can be negotiated unaided by a wheelchair user. The route

shall extend from street boundary or car parking area to those spaces within the building required to be accessible to enable a person with a disability to carry out normal activities and processes within the building. A gradient of 1:20 is the maximum a footpath or ramp should be (see NZS 4121:2001 section 6).
Page 24 Pathway 2.1 Strategic placement of coastal amenities
This section contradicts itself in relation to amenity provision for disabled people where it states, "Reviewing locations where multiple toilets exist within a short walking distance to consider relocation or consolidation for better efficiency while maintaining public access" while also stating "Inclusive and accessible amenities – Prioritised at high-use coastal destinations to accommodate diverse community needs, including visitors with disabilities, families, and older adults". A short walking distance for a non-disabled person versus a disabled person walking, or someone assisting a disabled person in a wheelchair are likely to be different and the needs of both groups may differ so these need to be considered with more finesse and understanding than previous WCC decisions around the needs of disabled people vis-à-vis non-disabled people.
P25 Pathway 2.2 Connected coastal paths and track
Why this matters. This plan prioritises walking access as the primary way people connect with and experience the coast. We disagree that this statement includes consideration of disabled people given the lack of accessible parking and the imposition of time-limited parking on accessible parking spaces but not on standard non-disabled parking spaces in some areas around the coast.
Ākau Tangi Sports Centre | 72 Kemp Street, Kilbirnie | Wellington 6023 6
Management approach will prioritise widening pedestrian paths to at least 1.5m. However, to truly be accessible, NZS4121:2001 recommends a minimum of 1500m to allow a wheelchair and pushchair to pass, but 1800m for two wheelchairs to pass safely (Appendix D).
P26 refers to boat ramps, swim rafts etc, but no mention is made of providing amenities to facilitate the easier access of disabled people across a beach to the water. Most beaches in Wellington have stair access down onto the beach, not ramps, and there are few options for wheelchair users.
P28 Pathway 2.4 Enhancing coastal accessibility and equity
dsport is more than willing to work with Council to enhance the coastal accessibility and equity. Many of our members enjoy coastal and aquatic environments but would welcome the opportunity to experience more in and around Wellington if they were able.
We acknowledge the reference to beach wheelchairs and beach mats but access to these currently cannot happen without the explicit intervention of third-parties, such as Lyall Bay Surf Club or Freyberg Pool – both of whom store accessible beach chairs. To use these pieces of equipment, a user needs to contact these organisations and if at Lyall Bay, the chair is only available during club open season and open hours – restricting the unfettered access of the coastal area afforded to non-disabled people. A better system needs to be investigated that does not add additional barriers to those wishing to use this equipment.
P29 Pathway Providing opportunities for dog recreation without harming coastal wildlife
Some of our members have mobility and assistance dogs. These working dogs need recreation too, so ensuring dog recreation areas also consider their needs is important, ie, making these areas accessible for disabled people through the provision of accessible parking and ramps.
P30 Actions Access to the coast for recreation and enjoyment
We would encourage the Council to change the timeframe for working with the disabled community to Short term. Too long has the disabled community been a low priority and as members of the Wellington Community should be prioritised higher than visitors, i.e. freedom campers.
Furthermore, the engagement with disabled people should not be limited to just exploring improvements to beach access but as outlined above other issues such as accessible parking, public toilets etc are imperative to a disabled person's access and enjoyment of the coastal environment in Wellington so we expect this engagement to be much much wider and more meaningful that the limited scope currently in the plan.
P32 Pathway 3.1 Protect the coastal character through careful design
We ask that consideration be given to the accessibility needs of users when positioning seating to enhance connection to the coastal environment. Having suitable surfaces and safe areas for disabled people to navigate around seating, and adjacent spaces for wheelchair users would enhance the value of these to disabled people and others, such as parents with young children.
Minimise visual clutter by grouping signage and wayfinding elements and avoiding excessive installations. We bring to Council's attention the needs of disabled people, such as those with a visual impairment, who may require signage that is more visible, larger and easier to read than perceived in this statement. Do not assume because someone's sight is limited, that they cannot see, hear or experience a coastal environment experience.
Ākau Tangi Sports Centre | 72 Kemp Street, Kilbirnie | Wellington 6023 7
P33 Pathway 3.2 Enrich coastal experiences through storytelling
As per above, there is a need to ensure the use of design itself as a storytelling tool, incorporating symbolic layouts, patterns, and materials that reflect local identity and heritage are appropriate for disabled people to understand and use.
P52 Pathway 5.2 Adaptive planning for a sea-level rise
Again, we bring to the Council's attention that any relocate and retreat coastal recreation structures from high-risk hazard areas to safer locations where feasible, allowing natural coastal processes to occur and reducing long-term risks to public structures in coastal parks and reserves must take into consideration accessibility needs for disabled people. Relocating amenities to inaccessible sites is not an appropriate solution.
P63 Te Kopahou 1.2 Access to the coast for recreation and enjoyment
dsport would caution Council to ensure better vehicle management to balance recreation with the protection of Te Kopahou's unique ecology and cultural value does not result in disabled people being

marginalised and their access to this area limited if vehicular access is restricted.
P74 Taputeranga 2.2 Access to the coast for recreation and enjoyment
dsport thanks the Council's recognition of the need to explore opportunities to improve accessibility to the coast, and ensure that pathways, entrances, and facilities are designed to accommodate people of all abilities, however notes this is not included in the actions on P77.
P89 Lyall Bay 3.2 Access to the coast for recreation and enjoyment
dsport wishes to ensure Council aligns the management approach for Lyall Bay with the commitment to enhance accessibility and equity as noted on P28 Pathway 2.4 Enhancing coastal accessibility and equity.
With the proposed development by Wellington Airport at the eastern end of Lyall Bay, we ask that suitable and adequate accessible parks are provided to ensure disabled people are able to utilise and enjoy these new amenities.
P124 6.2 Access to the coast for recreation and enjoyment
dsport asks that any new toilet facility provided in this sector is accessible, both in terms of the toilet facility itself, but also the provision of suitable accessible parking.
P146 8.2 Access to the coast for recreation and enjoyment
dsport acknowledges the Council's intention relating to ensuring amenities at Oriental Bay and Freyberg Beach are welcoming, inclusive, and fit-for-purpose by applying universal design principles that support accessibility, usability, and diverse recreational needs. This includes considering location, functionality, and operational efficiency to create spaces where all people – regardless of age, ability, or background – can connect, participate, and feel a sense of belonging. We would ask that this fundamental principle be applied across all Council amenities and facilities regardless of locale along the Coast.
We also note in the Action Plan, P149, that the Council intends to work with swimming groups to look at improving swimming safety information at Oriental Bay, yet there is no mention of safety of users of the footpaths – which are now multi-use with the inclusion of the cycleway. The multitude of different users – walkers, runners, those with children, dogs on lead, bikes, e-bikes, e-scooters and crocodile bikes – does mean this area is very busy, chaotic and often dangerous for disabled people especially
Ākau Tangi Sports Centre | 72 Kemp Street, Kilbirnie | Wellington 6023 8
when other users are travelling at speed. dsport would like to see some more consideration given to the safety of disabled people using these areas.
dsport are happy to discuss our submission further.
Yours sincerely
Dr Catriona McBean

[redacted]

Appendix – Summary of WCC Plans and Policies related to accessibility
The city's attractions are available to everyone.
With steep hills and narrow streets, it's not the easiest place to get around, challenging for those with mobility issues whether due to
• disability
• age
• having young children in prams and pushchairs.
With planning and forethought can include everyone in all aspects of city life.
WCC should be at the forefront of accessibility planning and design.
Accessible Journey is a very important for disabled people as it impacts their ability to participate as Wellingtonians.
Accessible Wellington Action Plan
• awareness of the responsibility local government agencies have towards establishing accessible environments
• part of creating sustainable cities and communities.
Towards 2040: Smart City
strategy
Wellington's people-centred city will be
• Healthy and vibrant
• Affordable
• Resilient
• strong sense of identity and 'place'.
This will be expressed through urban form, openness and accessibility for current and future populations.
Connected city, Wellington's people, places and ideas access networks
• physical – allowing for ease of movement of people and goods
• social – allowing people to connect
Efficient accessible transport options (including mobility parking, active mode routes, multi-node routes and clear signage and wayfinding).
Accessible Spaces

• creating accessible spaces will act as a starting point
• champion and model good accessible design and practice
• will address the physical accessibility well as also promoting an accessible culture
Ākau Tangi Sports Centre | 72 Kemp Street, Kilbirnie | Wellington 6023 10
Urban design of public spaces incorporates universal design principles
• city design makes a big difference to the ease of people's journeys
• accessible access to services (e.g. public buildings, restaurants, theatres, accommodation, business providers)
• remove street clutter and other barriers that people experience already
• improve street design, removing potential barriers that block these spaces, will create more accessible journeys around the city.
Mobility Parking Policy 2005 and Parking Policy 2020
Aims to ensure Wellington is a liveable place for people with limited mobility by enhancing their ability to participate in employment, social, cultural and political life and their access to services and resources.
Mobility parks are
• fit-for-purpose
• in the places that are of use to people - shops, services, medical and social service providers and entries to those places
• they are available and not misused
• a priority for city area - central city and suburban centres
• if on-street mobility parking spaces removed for cycleways the Council will seek to replace the mobility parking spaces as close to the intended destination point as possible and with the same number of spaces.

To whom it may concern
Please retain the bait house and island bay marine centre in its current form. The building is super strong and survives every storm.
The marine centre is amazing! So many kids learn to love our environment there and many more learn skills as volunteers. My son was a volunteer there for two years and went from a shy boy to being confident talking to strangers, and learnt a ton from Dr Victor and others about marine life.
It is a treasure that should be supported and protected. Please don't let us lose this gem in our city.

Long Text
I have occupied a boatshed at Seatoun Beach since the mid 1970's. I understand that the boatsheds have been a feature at Seatoun since the 1930's. The Lessee is responsible for all maintenance and there are no costs borne by the Council.

The Boatsheds are an asset to the community as well as to the Lessees.

The area is popular with kite surfers. The sheds provide shelter in both Northerly and Southerly wind conditions for rigging and setting up.

The sheds also provide protection to Churchill Park. There are Council installed seats and picnic tables situated there because of the protection from the Northerly winds provided by the sheds. Correspondingly, the Northern side is used when the wind is from a Southerly direction.

Removal of the Sheds would remove the only shelter there is at the Park. I note that no reason is given why the sheds are a problem

Long Text This is one of the most crowded heavily used roads (feel like it) also quite densely populations, I like that the cycle walking routes being slowly extend, but I think further efforts need to be made to slow down car traffic. This council include reducing the width of the road for vehicular traffic, reducing speeds, buildings corssing zones, reducing parking, Hataitai Beach area could be entirely transformed into a recreation hub, a place to relax enjoy community, play etc., I would like to see more trees/foliage along the road, even on windy days, this part of the cycle way is most heavily used wellington got to make ore pedestrian friendly

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including

closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Appendix B – Name change is a good please do it soon.
Making wellington coast a socially equitable space for all is great increase own own the city – ecologically future proof as well as based on respect for mana whenua

Long Text

We support the continued investment in the Te Kopahou trail network, as signalled through the reference to the Te Kopahou Tracks Plan. This area is a long-standing priority for our community, and we welcome WCC's commitment to improving and expanding the trail system.
Massey Road: We support the idea of transforming this road into a recreation zone. However, we believe the investigation should go further – including the option of fully closing the road to vehicles. This would significantly enhance its recreational value and aligns with climate resilience goals.

Q10 **Please let us know a bit more about your choice.**

Long Text:

Active engagement with mana whenua should not involve the devolution of decision making from council (as the elected representatives of all Wellingtonians including mana whenua). While it is correct for the council to work with, engage with and consult with mana whenua where relevant, the council must also do the same for all communities.

This value and stated pathways does not recognise the significance of the coastline for other communities and appears to make the subjective judgement that mana whenua's connection with the coastline is more important that other Wellingtonians' connection with the coastline.

The value also suggests that mana whenua are the only kaitiaki (guardians) of the coastline. This is not true as it all Wellingtonians and indeed New Zealanders who are kaitiaki/guardians of the environment. We must all play our part.

Overall this value appears to value mana whenua input over input from other communities, which is inconsistent with the purpose of local government. The value should be drafted or additional value added to recognise the importance of active partnership with all communities and groups (including mana whenua) who value the coastline.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

The activity rules for foot access to a reserve should make it clear than any exclusions are a decision for council (with public consultation). Any request for an exclusion, including on cultural, spiritual or religious grounds should be balanced against the other communities' interests (including being free from council requiring all Wellingtonian's to adhere to another person's cultural /spiritual/religious views).

Where action or work on a coastal reserve is at the request of a community group, consideration should be given to whether that group should compensate the council (ie, ratepayers) for that work. The council has limited resources and if work or an action is primarily intended to advance the position of a single group, then that group should bear some or all of the cost of such work/action.

Q1 **Name**

Short Text: Geoff HENRY

Q2 **Suburb**

Select Box: Miramar

Q3 **Email**

Email: [redacted]

Q4 **I am making this submission:**

Multi Choice: as an individual

Q5 **Name of organisation you are submitting on behalf of**

Short Text:

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q10 **Please let us know a bit more about your choice.**

Long Text: I want our coastal environment to meet the needs of our Wellington population as it is now, not as it once might have been. A small proportion of our population continues to be Maori and deserve recognition, but the vast majority are of european heritage and deserve recognition of their own needs, history and culture.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: I want us all to have equal access rights and equal sharing of the water and its resources.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: Our coastal history and heritage is multi-cultural. We need to recognise the european history and culture fishing, navigation, shipping and sport.
The Island Bay "baitshed" is an historic record and its present use as an aquarium should be recognised by making it a cultural reserve!

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Preserve the Baithouse!
Encourage water-sport, sport fishing, marine exploration experiences.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text Preserve historic relics like the bait-house, the frigate and coastal shipwrecks.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays
Hue te Para
Lyall Bay
Rangitatau
Moa Point to Breaker Bay
Te Whanga Rāwhiti
Eastern Bays
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd
Ākautangi
Cobham Dr to Point Jerningham

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Strongly support a coastal walkway including the difficult section from Sorching Bay to Burnham Wharf.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Strongly support the Island Bay Aquarium.
Would like to see the "Bait-House" presered as an historic place and continued as a marine aquarium

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text Enhance and promote as a surfing venue providing for both swimmers and board riders. Board kiting is a growing activity. The bay is large enough to cater for everybody, but some safety management may be necessary. The Lyall Bay launching ramp is necessary for airport safety services: it should NOT be allowed ot become a recreational boating one!

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text We sould strive to prevent sewage discharges. Permitting "emergency" ones would encourage abuse to suit economic cconvenience!

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text Some of our most popular beaches, protected for our southerlies! They are so popular that traffic and parking are a problem which deserve to be addressed. I can see no scope for "Freedom Campers".

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Sheelly Bay is undergoing much needed renovation. We need to ensure that public access is not hindered.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text Cobham Drive provides for footpath and cycleway activity. The foreshoreis exposed to the north wind, but the beach-line is well protected. There is scope for artificial reef off-shore, which would provide safe recreational snorkelling experience, while at the same time break heavy wavea from spraying the traffic!

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Strongly support the protection of the Island Bay Bait-House as both an historic site and an aquarium. Leaving it where it is, even if a sea-level risk, is of itself of educational benefit!

Q30 **Tick the box if you would like to receive ongoing updates about this project.**

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text

Over 16 years I have watched the degradation of the Marine and Coastal Environment West of Karori Stream. I have witnessed Poaching of thousands of Paua and other seafood species,on a regular basis, a huge amount of erosion caused by 4wd vehicles ,vehicles running over nests of Plover and Black Billed Gulls, litter being dumped ,fires and unrestrained dogs killing wildlife.
If managed restrictions are put in place from Red Rocks to Karori Stream, more problems will move West where there is no one to report wrong doing.
Vehicle access should be blocked at Karori Stream.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice

Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice

Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Red Rocks to Karori Stream can be practically managed and is largely self Policing due to high usage, the majority of users are respectful of the area.
Beyond Karori Stream is where most of the anti social behaviour occurs as it is seldom seen.
By restricting vehicle access , this would provide an area which is not overfished which in turn would provide increased fish stocks for the wider region.
Rare bird Colonies would have a chance to strengthen as the Capital Kiwi Project has created a predator free area, the main threats now are vehicles and dogs.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: As tangata whenua, but not mana whenua, I am always supportive of strengthening my own knowledge of the whenua I live on. Not only out of personal interest, but out of an obligation to know the history of the whenua which I inhabit and honour it the best I can. Restoring place names and te reo Māori along our coastlines continues to strengthen awareness and knowledge of the pūrākau within our communities, deepening and enriching our commitment to honouring it.

Furthermore, protecting our coastlines and our wildlife simply CANNOT be done without mana whenua partnership and leadership. The council must honour Te Tiriti throughout this entire process, and in anything to do with our whenua and our moana.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: 100% support this, especially the point about dog recreation. Although it says no dogs allowed on the beach at Island Bay, there are always tons of dogs on the shore. This either needs to be monitored more, or there needs to be alternatives proposed to curb this.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text As I said in my first point - knowing more about our coastal cultural heritage is crucial to strengthening our commitments and protections of the whenua we live on. I would love to see this more reflected when I am walking or exploring the coast.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text This draft plan has hugely educated me on the abundance of ecosystems and taonga we have along our coastlines, so yes I 100% support this. It would be wonderful to see the community more involved in this kaupapa, but it needs to start with more education about what taonga we actually house here in Pōneke.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Multi Choice Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I strongly oppose the removal of the Bait House/Island Bay Marine Education Centre. It is an under-utilised taonga in Pōneke and I would hate to see it go. For many of us, it's the closest we can get to these sea creatures in an ethical way, and the mahi they do at the centre is phenomenal and contributes hugely to researching & protecting our ecosystems. Its cultural and educational significance is mighty, and this should be considered in the process. Please look into strengthening and preserving the bait house, to further support its conservation efforts.

Long Text:

Te Kopahou Trail Network: I support the continued investment in the Te Kopahou trail network, as signalled through the reference to the Te Kopahou Tracks Plan. This area is a long-standing priority for our community, and I welcome WCC's commitment to improving and expanding the trail system.

Te Kopahou Coastal Trail: I fully support the addition of this trail to Wellington's trail network. I would like to see it designed for both walking and biking, and to include a connection from the south coast to Karori. This would allow for loops and greater accessibility.

G4 Carters Park MTB Trail: I support WCC's investigation of this trail to Shelly Bay and look forward to seeing it progress.

Massey Road: I support the idea of transforming this road into a recreation zone. I believe the most suitable option would be closing one lane and establishing the road as one way.

Multi Choice Te Kopahou & coastal route
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I strongly support the provision of formal mountain bike tracks in the Te Kopahou plan; providing tracks that are managed by WCC means mountain bikers will be able to enjoy the area, and rogue mountain bikers are less likely to make unsanctioned tracks, leading to safer usage for everyone.
Working with private land owners in the area to provide the coastal walkway would create a significant and enduring walkway, likely to be used by many people.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at

Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

I would like to see development of walking tracks which are not right next to the coastal road, wherever possible. If there are opportunities to divert roads from the coast, as recently in island bay, we should take those opportunities and leave the coast for pedestrians streams and dog walkers.

Long Text:

Generally speaking, I support the Council's aim of working with iwi in the co-management of coastal spaces, in particular wahi tapu sites, and actively drawing on iwi knowledge and practices. For example, I think there is considerable potential for using rahui to actively protect and conserve marine wildlife and plants in areas outside the Taputeranga Marine Reserve, such as around the Miramar Peninsula. I would love to see the WCC explore this with iwi and community groups, and to find ways of giving rahui "teeth".

However, this document seems to prioritise iwi at the expense of all other Wellingtonians, including the many community groups who voluntarily dedicate so much time and effort to protecting our coast. Whoever wrote this document seems to have forgotten that the Council is democratically elected by all Wellingtonians, with a mandate to govern and manage on behalf of all.

The draft plan also gives undue primacy to Ngati Toa Rangitira, and that iwi's claim of suzerainity over the Wellington region, at the expense of Taranaki iwi. It is also disturbing to see that the historic presence of iwi such as Ngati Ira and Ngai Tara is downplayed, indeed almost ignored, in the document.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q12 **Please let us know a bit more about your choice.**

Long Text:

This aspect of the plan is immensely disappointing in regard to dog management. I can't believe that people like myself have to keep on saying this time and time again - but WCC must prioritise protection of native wildlife, such as korora and other native birds and fur seals. This means active dog control by (1) banning dogs from areas where native wildlife, especially penguins, breed and (2) active regulation through frequent dog patrols and tough penalties for owners who disobey the rules.

I spend a lot of time on the Miramar Peninsula coast, and I routinely see dog owners flouting the rules, no matter how many council signs are in place. Signage and "education" are needed, but these things are not enough. It's time for the Council to adopt a rigorous policy on wildlife and dogs and a tough approach for enforcing it. Weak half-measures, such as those in place at the moment, and those set out in the draft plan, will only lead to more deaths of penguins and the eventual local extinction of korora on our shores.

The plan is also disappointing in relation to access to Te Kopahau Reserve. There is no good reason for 4WDs and trail bikes to be able to keep accessing the coast west of Owhiro car park; this destroys coastal habitat, threatens native birds, and makes things very unpleasant for walkers and cyclists. I think that as a general rule, such vehicles should be banned from the coast - there are plenty of other places where they can go in the Wellington region.

The plan talks about providing "fishing amenities like bait boards, bins and rod holders at popular and appropriate fishing spots" (page 27). I don't agree with this, as it will simply encourage more people to pillage our fish, crayfish and paua. I dive a lot around the Miramar peninsula, and I see the devastating impact that constant fishing pressure has on local marine species. Blue Moki, Blue Cod, crayfish and paua, for example are there, and if protected could thrive, but at present they are mostly juveniles - all the larger individuals are taken for food. The contrast with the Taputeranga Marine Reserve is stark: there, crayfish and paua are incredibly abundant, as are large schools of, for instance, Blue Moki, Blue Cod, Butterfish and so on.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text Signs telling stories should be placed in moderation; the south coast is a place where people live and work - it is not a theme park.

A point about accuracy. Aotearoa was first settled by Polynesian seafarers between 1320 and 1350 AD, so 675 - 705 years ago, not "nearly 1000 years" as the draft plan says. This may sound pedantic - what's 300 years give or take, right? - but it is not. If you can't get minor, easily checkable facts like this right, then one has to wonder about the accuracy of other, more important, facts and statements in the plan.

Similarly, the plan states that Sooty Shearwaters (Titi) have "disappeared from Wellington's coast" (page 42). This is only partly correct: there are no breeding colonies of Titi as undoubtedly there were (in abundance) before human settlement, but Titi are seen often in Raukawa Moana (Cook Strait). Check eBird or the NZ Bird Atlas (eBird) for sightings. Also page 42, Takapu (Australasian Gannet) and Pakaha (Fluttering and Hutton's Shearwater) are not "absent" from our coast, but can be seen routinely. This is not to say that such species aren't threatened, but simply to be more accurate about the extent of presence and absence.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text A lot of good measures here. I would urge you to consider reducing Massey Rd to one way, thus allowing more space for walkers, cyclists, wildlife etc. And installing traffic slowing measures along the road - too many people drive too fast on this road, one of the factors leading to deaths of korora.

Q17 **To what extent do you support or oppose this value and its pathways?**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text This stretch of coast seems to be grossly neglected by WCC. So-called freedom campers, in reality vagrants, are allowed to live semi-permantly on council reserve land from at Mahanga Bay. They have dogs which threaten korora and other wildlife. Massey Rd is routinely used as a race track by hoons. I would urge the council to (1) close off and revegetate roadside reserves, (2) reduce Massey Road to one lane and perhaps close it overnight, thus protecting korora in breeding season from being killed by speeding vehicles, and (3) installing traffic slowing measures along Massey Rd, similar to those already in place on Shelly Bay Rd and Karaka Rd.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text Not sure from the docs how this interacts with council approaches to freshwater - e.g. the habitats where streams come down to the coast etc. Streams and the coast are literally connected!

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I strongly support this approach but how does this work where there are significant built structures and business interests - like the airport? The seawall around the runway doesn't reflect this type of approach at all. Will the airport (part owned by Council) be required to take this approach? And councillors appear to have taken a decision to sell off some of the back dunes at Lyall Bay to the Airport. I don't support this as I think appropriate management of this land (as per this value and its pathways) is needed. If it's sold to the Airport then how can council make sure this happens? This land should be allowed to revert to dunes - as it does very quickly when left alone - not cleared for paving. I think handing this to the airport in exchange for a toilet block is too large a price to pay and very short term thinking.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Hue te Para
Lyall Bay
Rangitatau
Moa Point to Breaker Bay

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text I strongly oppose selling the foreshore and back dunes at the east end of Lyall Bay to the airport company. These areas are important for the resilience of the beach and the land behind it. The Airport has not demonstrated an interest or ability in managing the coastal environment around it in a way that is consistent with the values in this strategy. Maintaining a seawall is not the same as this. If supported, penguins nest at the east end of the beach. Dotterels would return. The dunes cleared recently at the back of the airport retail park would be home to other dune species and help with resilience of the beach. The beach at "surfers' corner" is frequently undermined and washed out. It's short term thinking to put a toilet block and paving here . Could close this section of Lyall Parade to motor vehicles (leave it as a path for walkers and bikes) grow the dunes and re open the road behind the airport through to Moa Point.

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text The plan doesn't say what will happen if the airport extends the runway. I understand that if this goes ahead it will fill in most of the bay between the runway and the end of Moa Point. This small but special area is a fragile and unique eco-system on the coast, with its awesome reef system etc. It's also beautiful and should be protected.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q18 **Please let us know a bit more about your choice.**

Long Text What evidence do you have to support increased wildfire risk in Wellington?

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Te Kopahou Trail Network: I support the continued investment in the Te Kopahou trail network, as signalled through the reference to the Te Kopahou Tracks Plan. This area is a long-standing priority for the MTB community, and we welcome WCC's commitment to improving and expanding the trail system.

Te Kopahou Coastal Trail: We fully support the addition of this trail to Wellington's trail network. We would like to see it designed for both walking and biking, and to include a connection from the south coast to Karori. This would allow for loops and greater accessibility.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text 4 Carters Park MTB Trail: I support WCC's investigation of this trail to Shelly Bay and look forward to seeing it progress.

Massey Road: I do not support the idea of transforming this road into a recreation zone. it's an area well suited to light traffic and has been used as a start to many a young drivers journey to full licence.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Neutral

A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Neutral
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

I support the direction outlined in Appendix A regarding activity management in coastal reserves, particularly the intention to address concerns around recreational fishing. I believe this is an essential step to ensure that Wellington's coastal environment is protected, safe, and accessible for all users.

In particular, I strongly support the introduction of a no-fishing zone along the stretch from Oriental Bay Beach to Point Jerningham—and ideally extending further. This section of the coast has become increasingly popular as a recreational space, with a high-functioning coastal cycleway and footpath that supports walking, running, cycling, and families enjoying the waterfront. However, this is increasingly compromised by the concentration of fishing activity along this stretch.

There are frequently:
• Lines and hooks cast across shared paths,
• Loose fishing wire, sharp hooks, and other litter left behind,
• Alcohol containers and other rubbish,
• Congestion and safety risks due to people standing in the way of pedestrians and cyclists,
• And an observable lack of oversight or enforcement.

During the summer months, the number of people fishing along this area surged dramatically, and without any form of regulation or monitoring, I am concerned about the unsustainable pressure on local marine species. The cumulative effect of this unmanaged activity likely has a significant impact on coastal biodiversity.

I would like to see stronger protections introduced, including:
• A formal no-fishing zone between Oriental Bay Beach and Point Jerningham,
• Consideration of further extension of that zone along adjacent stretches,
• Signage and public education on marine conservation in urban coastal areas,
• Enforcement to ensure compliance.

This proposal would align with the management plan's intent to balance ecological protection with community access and enjoyment. I urge the Council to include this no-fishing zone in the final plan.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Neutral
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q29 **Please provide any additional feedback on the draft plan.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text 4wd access around the south coast to red rocks and beyond is very important to many Wellingtonians.
Not everyone is fit and able and the 4wd access makes the south coast accessible to those who are less physically capable. I personally love exploring around the bays and think limiting vehicle access would close off a huge part of our coast to many people. Less people would visit this area if it was not accessible by vehicle and I think this would be a huge shame.
Additionally I am involved in the Wellingtonn spearfishing and diving scene. I do not believe that limiting car access would help control poaching. I believe that more poaching occurs at the diving spots around breaker bay, moa point etc. as these are easily accessible by road so poachers can leave in a hurry. I think statistics of poaching numbers at red rocks may be skewed by the fact it is easier to catch them by simply setting up one check point at the car park. If catching poachers is the objective then more checkpoints should be utilized.
Finally I believe closing the gate at night to prevent people entering the 4wd track poses the danger of trapping vehicles on the track overnight. Given the nature of the sandy beaches and track it is very easy to get stuck and would be easy to miss the deadline of the overnight gate closure. This would force people to be stuck in the cold overnight which could have dangerous consequences.

In summary I think that the 4wd access to red rocks and beyond should not be restricted. I believe more monitoring by fisheries officers should be utilized to prevent poaching rather than limiting access. Fencing off sections near the track where fragile plants and animals live can be used to protect wildlife while still keeping access. Closing the gate at night creates dangers to vehicles that may get trapped on the wrong side of the gate especially on Saturday night if the gate is closed all of Sunday.
Thank you for your consideration and I look forward to enjoying the coastline for many years to come.

Multi Choice: on behalf of an organisation

Q5 **Name of organisation you are submitting on behalf of**

Short Text: Maranui Surf Life Saving Club Inc

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q10 **Please let us know a bit more about your choice.**

Long Text: support the renaming of areas of significance to Maori with names that meet mana whenua approval, and gain the support of the local community.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Maranui is an integral part of the western end of Lyall Bay and has been since 1911. The continued use of this particular area as recreational for us as a Club is essential. As a voluntary organisation focused on saving lives and protecting beach users, we need our ground lease protected so we are able to educate and train our members, and also protect beach users in and around the ocean.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: Maranui has always been supportive of protection and enrichment of the coastline.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Maranui has assisted with dune restoration for many years.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text it is almost impossible to mitigate the damage caused by storms from the south. However Maranui has been able to secure its building against this for over 100 years. Not sure about wildfires!!!

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Hue te Para
Lyall Bay

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text Very difficult to manage the ocean in this area due to changes in the structure of the Bay over many years. The airport is crucial to the functioning of our City so we must work with them to get the best result. Lyall Bay (Hue te Para) is a beautiful natural wonderland. it needs to be available to the general public for recreation and fun.

Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

1. Maranui SLSC has long been seeking a review of the ground lease agreements. Revised structure of lease renewal for those of us who have significant investment in our buildings but no ongoing commitment from WCC other than 'goodwill'.
2. Maranui supports the re-naming of areas of significance to Maori. Maranui is part of this as the entire west area of Lyall Bay was originally called Maranui. Lyall Bay school was Maranui school. Lets get this name in here somewhere!

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text We have an amazing marine reserve and numbers of fish, dolphins and birds are increasing every year in the bay. As well there is a dedicated team of people at the Bait House here who educate the public on the ocean environment. Like Zealandia people come to the Bait House to get close to nature and learn about the environment. It is spectacular when a large pod of dolphins come into the bay. I would like to see the Bait House developed further so it becomes the education hub for the south coast marine environment.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses

for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text Oriental bay is lovely but needs a little tlc here and there. It's great to see the retunda coming back to life but there needs to be more support of businesses through increased number of loading bays.

In addition to this an extension of the beach beyond the pavillion could be beneficial up to the first or second breaker.

More information points regarding wildlife and efforts to support wildlife would be nice to increase awareness and community support. Entice more community events to occur right down the promenade front such as a food market or eco/biodiversity events.

I really enjoy the lighting in the trees however two in the middle don't have any lights on and so if these could be replaced that would help tidy up the area.

I also hope the swim platforms return following winter

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Neutral
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text VEHICLES: I recreate Te Kopahau and enjoy it's remoteness and feeling of wilderness and knowing kiwi are in that area is amazing. When I run down to the beach, I am suddenly having to avoid vehicles splashing through puddles beside me. I saw a car veer off the formed track onto the beach and a flock of birds had to take flight in a hurry. I do not enjoy the vehicles when I am in the wilderness. I feel very unsafe at night there. (Female). Better vehicle management is required.
PAUA POACHERS: I often come across piles of small paua shells. More needs to be done to control paua poachers.

Q9 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**
Long Text: As I know from my experience, in order to protect once country whether its natural resource, cultural value, the life of people in terms of daily routine, and others shall be governed by at least some of the situations stated under value supported through the three pathways.

Q11 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**
Long Text: All the above mentioned pathways under section value 2 access to the coast for recreation and enjoyment, I strongly support with respect to architecture and urban space in relation with environment and sustainability. Therefore, if it implemented completely I hope good for human interactions between animals and nature as well as simplicity for the development of infrastructure.

Q13 **To what extent do you support or oppose this value and its pathways?**
Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**
Long Text: In fact, as an architect all the three stated under value 3 enduring connection to the landscape are crucial aspects and also inputs for design components. However, as I've some of reading pdf documents and videos getting from your emails that I downloaded, I don't think that there are barriers in the surrounding of these sections. Somehow possible to redevelop in terms of design to gain an improvement.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text In short doing the above all under section value 4 protection and restoration of coastal ecosystems preserves historic value which means becoming enrich in architectural assets.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text Truly we can protect the landscape and ensures sustainability.

Long Text: It is vital decisions made regarding the future of our environment are made with the manu whenua.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: I do not support freedom camping on our coastline - I think those who wish to camp should do so in managed camping areas such as those provided in Evans Bay. I do not think the economic value the freedom campers bring to Wellington City outways the cost of providing facilities and the cleaning up of the areas used for such camping activities.

I would like more information regarding the provision of "opportunities for dog recreation" before deciding if I support this plank of the draft plan. The impression I have is that dog owners are currently well catered for in terms of the places they can exercise their dogs within Wellington City and its environs. I would not support increasing the amount of land given over to dog exercising areas on the coast. I support the protection of coastal wildlife and to this end would prefer it if dogs were only exercised on leash on our beaches.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text We should honour the cultural heritage of our coastlines in line with working with manu whenua.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text I am unclear if the proposal to remove or repurpose the Bait House at Island Bay falls within this category. I am a supporter of the Bait House as an educational facility. I do not want WCC to remove this facility from the use of residents and visitors of Wellington.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Proposal to remove or repurpose the Island Bay Marine Education Centre (formerly known as the Bait House) at Island Bay:

This proposal is gravely concerning and deeply upsetting to many in our community. The Bait House is not merely a structure; it is a treasured heritage site, a hub for marine education, and a beacon of community spirit. Since 2004, this once-derelict site has been lovingly restored and maintained by volunteers, who turned it into a place where people of all ages and walks of life can learn about the precious marine environment of Island Bay.

The historical significance of the Bait House cannot be overstated. It was built in the post-war era by local tradesmen and returned servicemen. Stories like those of Bruce Askew, an apprentice carpenter involved in the original construction, form a precious oral history. These accounts highlight the importance of the building in the development of Island Bay's fishing culture and the wider community.

I understand the need to plan for coastal hazards and earthquake safety, but I urge the Council to consider strengthening and preserving the Bait House rather than removing it. Its cultural and educational value far outweighs the cost of repurposing or demolition.

I ask the Council to:
1. Acknowledge the historical and cultural significance of the Bait House.
2. Commit to retaining and strengthening the building for future generations.
3. Support continued community-led education and conservation efforts on site.
We believe the Bait House is aligned with the core values of Wellington's identity: resilience, sustainability, community, and heritage. Removing it would be a loss not only to Island Bay, but to the city's collective memory and marine future.

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text i am concerned that red rocks may be closed of to 4wd and or motorised access.
Red rocks is currently one or two places open to public for recreational motorized access. And Odins Road off of Akatarawa Road. there is currently no other places we can go without being in a 4wd club. $wd clubs can mean more expensive. for some households.
Akatarawa forest is under a managed access plan for 4wds. to get 4wd access you ether join a 4wd club for the day trip or for the year. you simply cant go for a. drive on a thursday afternoon.
Motorbikes can but not 4wd's. If 4wds are locked out of red rocks then that will putt a lot more pressure on Odlins road. Odlins road is not a novus playground and there has been alot of 4wds slid off the tracks. it is very steep hill county and you need to know what you are doing or you may find in alot of trouble quickly. with a long walk out for cell service to call for help.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays
Te Rāngai o Onemutu
Oriental Bay
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Amenities on Island Bay Beach - better toilets and a shower would be great.
Pedestrian crossing between park and beach (I know not the scope of this!!)

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Improved pedestrian access would be great in this area

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text The cycleway around the coast is amazing and I cannot wait for it to be finished

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support

water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text The draft plan is very comprehensive and clearly laid out making it easy to read and understand.

Looks great. The only thing I was slightly dissapointed by, but probably wasn't in the scope of this plan (?) was the cleaning up of Owhiro stream. The fact that it regularly pollutes the bay, making people and no doubt animals and fish sick in a residential area isn't great. I understand some of the complexities of doing this, but it would be amazing to see an improvement

Long Text Our world changes and will continue to do so long after us human are gone, but recent the changes to our environment causing rising sea levels and changing storms are our own doing, these aren't natural and should be considered outside what is normal and we should actively mitigate these with manmade solutions opposed to letting nature takes it course.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I have enjoyed the bait house and its educational purposes for many years now and it would be of great loss to our tamariki's understanding and appreciation of SeaLife and our current and historical connections with it. I also hope, as it has for myself, lead to the current and future protection of our precious sea ecosystems though that understanding and appreciation. It was a missed opportunity a few years ago to increase this buildings size to create something amazing for education I have seen and experienced overseas. Bottom line being you cannot help something if you know nothing about it, the solution might not be perfect but it's much better than nothing.

Long Text: Submission on Value 1 – Mana Whenua

No formal co-governance
I do not support establishing a Coastal Governance Group with iwi seats. Three high-profile iwi-led/co-governance initiatives have demonstrably failed, highlighting risks of embedding a formal co-governance tier:

Te Waihora (Lake Ellesmere) Fisheries: Despite quota rights and governance structures, Ngāi Tahu fishers were unable to reverse declining eel stocks due to internal fragmentation and weak enforcement, rendering the scheme commercially unviable by 2018 .

Mimiwhangata Marine Reserve: Hapū withdrew from the partnership when DOC retained final veto over regulations, showing that nominal co-governance without real power-sharing stalls conservation indefinitely .

Canterbury Water Zone Committees: Strong iwi representation and lengthy hui led to gridlock, delaying water-quality improvements until central government intervention; clear decision pathways were absent .

No guaranteed iwi-led funding
Council budgets are already under extreme pressure, making multi-year funding pledges to iwi programmes irresponsible:

Wellington City rates hike: The 2024/25 Long-Term Plan imposed a 16.9 % average rates rise to cover seismic strengthening and water infrastructure .

Nationwide infrastructure deficit: Over 80 % of councils plan double-digit rates rises in 2025/26 to address a NZ $52 b shortfall; Wellington expects rates doubling within a decade .

WCC debt escalation: Post-Kaikōura building-code upgrades have pushed WCC debt toward $1 b, squeezing funds for core services .

Unclear rationale for iwi-led mātauranga
I do not understand why traditional knowledge must be led by iwi rather than delivered through existing environmental science partnerships. Past mātauranga-driven projects have under-performed (see fisheries, marine reserve and water-zone examples above), suggesting cultural leadership alone doesn't guarantee better ecological or social outcomes.

Support limited bilingual signage
I have no objection to restoring te reo place-names and cultural narratives—but this should be delivered cost-effectively.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat oppose

Q12 **Please let us know a bit more about your choice.**

Long Text Revised Submission on Value 2 – Whai Wāhi (Access & Recreation)

Universal access improvements – Supported
Installing beach wheelchairs, accessible matting, ramps and boardwalk upgrades has proven to dramatically increase inclusion and visitation. In Aotearoa, Sport NZ case studies show that purpose-built beach access infrastructure doubled participation rates among people with mobility impairments and reduced safety incidents by 60 % .

Enhanced water-based recreation – Qualified support
National boating data indicate that kayak usage has remained stable at 32 % of all recreational vessels since 2019, suggesting existing launch points and jetties adequately meet current demand . Targeted maintenance of these facilities, rather than wholesale expansion, will ensure cost-effective service for swimmers, kayakers and divers.

Freedom camping & facilities – Supported
Designated freedom-camping zones with toilets, bins and greywater disposal have reduced unmanaged site impacts by 45 % in Otago and Southland, improving both environmental outcomes and camper satisfaction .

Dog-management zoning – Not supported
I oppose dog-prohibited areas on coastal reserves. Studies show that mixed-use beaches with responsible dog-owner education and clear signage can protect wildlife without exclusion: in Otago, a community-led "dog welcome" programme maintained kororā chick survival rates above 80 % through owner engagement rather than bans .

Great Harbour Way integration – Not supported
Major cycle-trail investment in New Zealand has proven that branding and new route development can divert up to 40 % of transport budgets from core maintenance and safety upgrades. Central government cuts cycling and walking funding by $230 m in 2023 to cover pressing roading repairs illustrate the risk of over-prioritising branded routes

Cycle-tourism infrastructure – Deferred priority
An Infrastructure NZ review found that prioritising marquee cycle-tourism amenities often leads to a 25 % increase in deferred maintenance backlogs on adjacent local roads. Redirecting funds to core coastal-track erosion control and safety measures delivers significantly higher public-value return per dollar spent .

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly oppose

Q14 **Please let us know a bit more about your choice.**

Long Text Submission on Value 3 – Hononga Taiao (Cultural Connection)

Oppose large-scale interpretive signage projects
Extensive physical signage often fails to engage visitors and delivers poor value for money. A study of 129 interpretive panels across 11 US national parks found that heavy use of jargon and complex text left over half of visitors unable to comprehend key messages . At Seattle's Discovery Park, inconsistent kiosk design and messaging confused visitors and undermined educational goals, prompting park managers to overhaul the entire system at significant cost.

Limit digital-interpretation tools & apps
Digital platforms added for storytelling can distract more than they inform. The ACCC's recent commissioned report on digital transitions warns that poorly integrated apps fragment visitor focus and require continual, expensive updates—often with low user uptake outside initial novelty phases.

Question the efficacy of iwi-led narrative control
Even DOC's own Interpretation Handbook acknowledges "quality of endeavours varies" and calls for "ongoing commitment" to maintain professional, accurate storytelling—implying frequent project overruns and variable outcomes. Embedding mātauranga Māori without clear performance metrics risks handing budget to initiatives that may never deliver consistent educational or conservation results.

Recommend a low-cost, user-driven model
Rather than bespoke signage or apps, adopt a capped-budget approach: install up to 15 simple interpretive panels with QR-codes linking to a GIS portal for optional, on-demand stories. This delivers cultural narratives cost-effectively, lets users choose their level of engagement, and avoids the risks seen in large-scale signage and digital-tool rollouts.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q16 **Please let us know a bit more about your choice.**

Long Text Submission on Value 4 – Tiaki Taiao (Ecosystem Stewardship)

Targeted Ecosystem Restoration – Supported
Active planting of indigenous dune and shore species (pīngao, spinifex, sand tussock) must remain a top priority. Over ten years at Island Bay, volunteers established over 20,000 native plants, producing self-sustaining foredune systems and halving shoreline erosion rates

Wildlife Recovery – Supported
Intensive predator control around key breeding habitats delivers dramatic results. Since fencing in 2000, Zealandia has reintroduced 23 rare species—including kororā and pāteke—and expanded their populations beyond sanctuary walls, underscoring the value of well-resourced recovery programmes

Controlling Invasive Species – Supported
Rat, stoat and possum eradication is proven to boost native wildlife. In DOC aerial possum operations, by-kill of rats regularly achieves ~90 % reduction, directly benefiting seabird and shore-bird breeding success when timed to breeding windows

Remediating & Mitigating Infrastructure Impacts – Supported
Where hard structures encroach on coastal processes, removal or reconfiguration is essential. Matiu/Somes Island's decommissioning of quarantine infrastructure enabled 30 years of native-forest and dune-system regeneration, transforming a former transport hub into a self-renewing ecological reserve

Enhancing Litter Management – Supported, oppose "smart" bins
Community-led bin placement and beach-clean stations cut debris by over 35 % on North Island beaches through Sustainable Coastlines' Litter Intelligence data-driven approach .Conversely, Marlborough's two-year "smart" bin trial was abandoned due to low usage and high maintenance costs, illustrating the risk of high-tech solutions with marginal uptake

Strong Collaborative Relationships – Not supported
Multi-agency "Coastal Coordination Groups" risk replicating the delays and complexity of Canterbury's Zone Committees, where prolonged hui and split mandates stalled enforceable water-quality rules for years . I reject governance models that impose separate rules for mana whenua versus other stakeholders—decision-making must be streamlined and equitable.

Sustaining the Coast as a Storehouse – Supported, oppose dark-sky initiatives
Transparent, real-time monitoring via Greater Wellington's Environmental Data Dashboard provides crucial indicators—water quality, erosion rates, biodiversity counts—without burdensome reporting. In contrast, Fiordland's Dark Sky Park proposal has languished in planning for years with no confirmed tourism or conservation benefits, demonstrating the high cost and uncertain returns of dark-sky projects

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat oppose

Q18 **Please let us know a bit more about your choice.**

Long Text Submission on Value 5 – Taiao Tuatahi (Nature-First Resilience)

Flexible, development-friendly planning
I oppose onerous new coastal rules that render region-wide development unfeasible. Instead, Council must adopt Dynamic Adaptive Pathways Planning (DAPP) with clear thresholds and real-time monitoring. The High Court's decision in Coastal Ratepayers Union v Kāpiti Coast District Council (Feb 2025) found over-zealous hazard mapping was blocking consenting and stalling growth . New Zealand DAPP pilots have demonstrated how trigger-based

planning prevents maladaptive lock-ins and allows staged, responsive investments in coastal protection .

Pragmatic, site-appropriate defenses
Nature-based solutions should be used where landward buffers permit—but man-made defences must be available elsewhere. Hawke's Bay's Clifton–Tangoio Coastal Hazards Strategy 2120 shows purely living shore approaches can fail in tight urban corridors . In those locations, NZ-led innovations—like Whitianga Marina's curved breakwater and Tauranga's intertidal "living seawall"—provide proven resilience and amenity benefits far beyond basic seawalls . Managed retreat should be a last resort, applied only where site conditions genuinely allow (as Matatā's costly, delayed retreat demonstrated) .

Streamlined governance & accountability
Complex multi-agency "coordination groups" risk overreach, unclear jurisdictions and runaway costs. Major NZ infrastructure reforms (Transmission Gully, Three Waters) regularly double initial budgets when mandates overlap . Instead, Council should bind itself to a light-touch governance model with defined roles—and leverage existing tools like Greater Wellington's Environmental Data Dashboard for transparent, cost-effective ongoing monitoring and reporting .

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Revised Submission on Sector 1 – Te Kopahou Coast (Pariwhero / Red Rocks 4WD Access)

Reject Permit Fees & Permissions
Introducing permits for 4WD access will deter genuine users and set a costly precedent. When DOC proposed concession fees on Ninety Mile Beach (Te Oneroa a Tohe) in 2021, strong community opposition forced its withdrawal—locals rightly saw unfettered beach driving as part of regional identity, not a revenue stream .

Decline Broad Seasonal or Time-Based Bans
Blanket closures fracture access and impact local operators. Kaikōura's SH1 post-quake model uses real-time, incident-specific closures—only when hazards are present—and reopens promptly once safe . Te Kopahou should adopt the same agile approach, not enforce sweeping weekend or seasonal lockdowns.

Endorse Minimal-Intervention Track Maintenance
Let nature reclaim sections, with targeted slip-clears by skilled volunteers. Stewart Island's Ranger Conservation Corps clear storm debris without full regrading, preserving both access and ecological integrity . A similar volunteer-led maintenance cadre at Red Rocks would be efficient and low-impact.

Establish a User-Funded Stewardship Collective
Mirror the Friends of Abel Tasman: a volunteer group funded through donations and small event fees, empowered to coordinate track clearing, litter clean-ups and hazard reporting under a simple DOC concession . This model keeps overheads minimal, delivers rapid response and fosters community ownership—without council permits.

Implement Trust-Based Monitoring, Not Gate Enforcement
Replace physical closures with a user-reporting portal. Hawke's Bay's TANK catchment group uses an online system for farmers and residents to flag erosion and hazards in real time—guiding targeted interventions with high compliance and minimal bureaucracy . Pariwhero 4WDers should be treated as guardians, not regulated suspects.

These measures balance unrestricted access with practical environmental safeguards, leveraging proven NZ community models rather than introducing onerous fees, broad bans or heavy-handed enforcement. Te Kopahou's 4WD route must remain open, safe and community-driven.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Neutral
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat oppose
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat oppose
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly oppose
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Appendix A – Rules for Use and Development in Parks and Reserves

Allowed (e.g. walking, informal recreation, self-contained freedom camping)
My view: Fully support. These low-impact uses shouldn't incur permits or fees

Managed (e.g. non-commercial events >50 people, community volunteering, drone flights under CAA rules)
My view: Only minimal, event-specific management is acceptable. I oppose broad Managed-use permit regimes (e.g. 4WD access permits) that create red tape

Restricted (e.g. new structures, leases for club facilities, large commercial operations)
My view: Agree that genuinely high-impact developments need case-by-case assessment—but urge Council to prioritise existing uses and only impose restrictions where clear environmental harm is demonstrated

Prohibited (e.g. new private buildings, open fires, firearms, mining)
My view: Broadly sensible. I support prohibiting activities that clearly damage ecological, cultural or recreational values

Overall on Appendix A:
I back a light-touch, values-based approach that protects ko ngā taonga while preserving everyday access. The Council must resist expanding Managed/Restricted categories in ways that burden users and stall community activities.

Long Text: Divers get a lot of value out of being able to access the Te Kopahou coastal route.
I dive there often.
Continued motor vehicle access to this track is very important to me and my community.

Also, sometimes we are driving back from a dive after dark so it is important to be able to reenter the red rocks car park in the evening.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q29 **Please provide any additional feedback on the draft plan.**

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Te Kopahou coast and coastal route

Vehicle access is really required to get far around the beautiful Te Kopahou coast due to the distance. Past Devil's Gate you see limited non-vehicle users, because of this distance.

Vehicle access is already closed on Sundays, I oppose this being extended to public holidays. Access on public holidays allows taking 4wd trips to visit red rocks, the seals, further around to by Karori light etc with family and friends when not required to work. As a member of a 4wd club public holidays are a time when people are able to go on trips as don't have to work, closing access on public holidays will very much hinder meeting and enjoying the coast together

I oppose night time gate closures to vehicles. The coast is a location close to the city shielded from much of the city light. Dark skys (especially if drive around the coast away from the lights of the Te Kopahou carpark / freedom camping park) allow beautiful views of the Milky Way and a chance to see the Southern Lights / Aurora Australis if you are lucky! Night time gate closures will prevent enjoying these dark skys, and astro photography, around the coast away from city lights (and lights of the Te Kopahou carpark)

I oppose a permit system for 4WD access Te Kopahou coast and coastal route, this will hinder free easy access for people to enjoy the coast. Significantly less people will enjoy the special area

I have cherished memories of being taken on 4wd trips around the Te Kopahou coast and coastal route as a child by my Grandfather, and I have taken my kids around the coast many times to see the seals and coastal views. I will be deeply saddened if restrictions to 4wd access in the future prevent taking my Grandchildren out to enjoy around the beautiful Te Kopahou coast and coastal route

A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly oppose
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways,

and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly oppose
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly oppose

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Strongly oppose

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: All Wellingtonians have enduring responsibilities for the protection of the coastline and adjoining areas and Māori should not be given significance over others.I am born in NZ and regard myself as Tangata Whenua and do my share to contribute to the protection of this important area for all Wellingtonians.Change of guardianship by stealth should not happen even under the guise of mana Whenua or miss use of treaty claims this Māori bull shit needs to stop we are all here to look after the Whenua and respect what we have

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: All these are currently available and divesting access rights by having Māori control access at a cost to users and at times unsuitable for vehicles being restricted is not acceptable.Equity for all is the current situation and access ability should be ensured by council not hamstrung by your current proposal in conjunction with Maori-

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q14 **Please let us know a bit more about your choice.**

Long Text: Coastal character has been the result of Mother Nature and not design and this should continue naturally.Storytelling could be enhanced with a new interactive visitor centre at the gateway not with mana Whenua Controlled access.As I was born in Wellington it is apart of my heritage the same as any Wellingtonian and supposed

cultural heritage should not take precedence over the management or access to the whenua

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text As a member of the Akatarawa 4x4club I do my part to maintain coastal environment and the kiwi and predator program a greater push to involve the wider community is what is needed including planting on a large scale.As a free diver I collect kai along the coast and monitor others and remind people of their responsibilities to ensure the environment is protected.Any restrictions or costs imposed are not welcomed and if Māori are given stewardship over this area they will strip away the pantry and deny access to all except for themselves and this cannot be tolerated

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat oppose

Q18 **Please let us know a bit more about your choice.**

Long Text As mentioned community planting of appropriate plants will negate effects on the environment.Council free access needs to be continued and the track maintained for all types of public access including 4x4 and should not be levelled a charge or have restrictions via timings or costs placed upon it and that includes changes in management to Māori by stealth

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Red Rocks and the South Coast
This is public taonga for all Wellingtonians to access freely and safely to enjoy and to stealthily change the guardianship of this to Māori under the guise of treaty claims is bullshit and should not happen I do my part in protecting the area and it's value to me as a Wellingtonian born and bred and no group has anymore rights than another.It is my right as Tangata Whenua to access the area for kai responsibly and if Māori are given stewardship over the area the pantry will be stripped bare and unless you are part of the click you will be denied.It has been shown on many occasions Māori have abused the pantry and all pay the price.The council has been given the responsibility by the community for the community to maintain access free to all for the benefit of all and this should be maintained not changed due to woke politics and policies to benefit any one group

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

A new visitor centre at Red Rock gate entrance with interactive storytelling abilities for the public we don't need or want Māori control over the area in any guise whatsoever
and continued free access for all with no change to 4x4 access.Greater planting of appropriate plants to negate possible fire issues and strengthen the environment generally with greater public involvement to ensure community engagement and protection

Multi Choice: Strongly oppose

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q10 **Please let us know a bit more about your choice.**

Long Text: Not something for a council to be addressing

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: I dont agree with the permitting and limiting acess for 4wd activities around the redrocks area - while I appreciate that some 4wd / motorbike users abuse access, some walkers also abuse access and leave rubbish etc - it should not be that we look to control the whole due to the actions of a minority.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q14 **Please let us know a bit more about your choice.**

Long Text: It depends on whether this is used to limit access

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q16 **Please let us know a bit more about your choice.**

Long Text Again, it really depends on how this is propsoed to be used.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text Nature is always an issue for Wellington - as above, it depends on how this initiative is used.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text As noted I dont agree with the permitting and limiting acess for 4wd activities around the redrocks area - while I appreciate that some 4wd / motorbike users abuse access, some walkers also abuse access and leave rubbish etc - it should not be that we look to control the whole due to the actions of a minority.

This route has been a shared access route for a long period of time and enjoyed by multi users - if there are a few at issue I belive having more rangers policing use would be a more effective method

Perhaps supporting/encouraging a car driving area/boy racer pad somewhere would keep cars off the beaches and roads and allow this 'sport'/'activity' to have an outlet that doesn't harm the participants or the community.

(I'm an elderly female, not a car enthusiast)

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix
A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support

Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat oppose

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: Other names can be supplementary. Maori did not orignially camp or occupy this area. Too cold and exposed. But do not replace the existing names. Too confusing.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: To use public land where is the resource consents for additional use where the use is specifically detailed. The plan is too vague. Eg the boating users have to have resource consents why are other activities not having that imposed with no limitations. The other consents are very specific and have to pay rent and fees. Plus where is parking for the additional activities. With no parking it makes the area solely for use of locals but the rates are being paid by all rate payers.
The dogs already have a park nothing extra needed there. We dont need dogs on the beaches.
I dont want to see access to amenities obstructed or minimized by putting cycle lanes across the access to beaches and boat sheds and boating areas as this locks those areas off to users and essentially changes thier use and reduces the amenity. In a number of cases it would terminate them. Particually yachting and boat sheds ie how do you get paddle boards /waka to the water if there is no where to off load them. That needs a resource consent.
Recent european history is just as important as Maori heritage. If it was not for Europeans this area would not be used at all. Maori did not launch their boats in this area as it was too exposed.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q14 **Please let us know a bit more about your choice.**

Long Text I dont want to see a lot of cost put into this. Leave the area to come back naturally.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q16 **Please let us know a bit more about your choice.**

Long Text The wcc could target leaking drains in roads that are discharging sewage into the harbour. No one can eat shell fish due to this and even swimming is hazardous due to the high coliform count.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly oppose

Q18 **Please let us know a bit more about your choice.**

Long Text I have no clue how you will affect climate change. How? There is very little bush affected by wild fires.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays
Ākautangi
Cobham Dr to Point Jerningham

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text No mention of boat sheds. but I assume it is because it is under the jurisdiction of the Regional Council but then so does most of this area.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Te Kopahou & coastal route is the only remaining area in the whole of Wellington that people can use for 4WD activities. Many many people regularly use a 4WD to access the diving and fishing that is available on that coast. To close or heavily restrict access to this area for vehicles would leave NOWHERE for people to carry out these types of activities.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Neutral
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at

Island Bay, Breaker Bay, and Mātai Moana. - Neutral
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Neutral
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Do not close the last remaining 4WD only road in Wellington. Diving, fishing and off roaring are some of the things that Kiwis love the most and closing or restricting access will leave no where in the Wellington area to do these things

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat oppose
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly oppose
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat oppose
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat oppose
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q29 **Please provide any additional feedback on the draft plan.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text 4x4 access should not be restricted any more than it currently is at Red Rocks. Many people enjoy access to the Red Rocks track and have done for generations. Stopping or heavily restricting 4x4 access is robbing Wellington 4x4 community of one of the only remaining tracks in Wellington in favor of other activities which are plentiful throughout the region.

Adding in a permit system is an unnecessary and expensive system, all vehicles have registration plates and can be tracked if needed already.

Multi Choice: Strongly oppose

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: The cost in renaming would be expensive. Please focus on fixing the infrastructure.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: The cost in providing more freedom camping would be expensive. Please focus on fixing the infrastructure

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q14 **Please let us know a bit more about your choice.**

Long Text: This sounds expensive. Please focus on fixing the infrastructure

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text Sounds worthwhile, but how would costs be managed?

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly oppose

Q18 **Please let us know a bit more about your choice.**

Long Text Will this stop me enjoying 4WD access around the coast? I am against stopping 4WD access.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I do not agree with the proposed 4WD changes. There is too much scope for a full blanket ban. We need to keep 4WD open as it is to continue enjoying it. Too many 4WD tracks are closing locally which is disappointing given all the great conservation work 4WD clubs do in the area.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

It's the cost that worries me. Especially after the ridiculous money spent on the public toilets recently. And I am concerned all 4WD access will be removed.

Long Text

Please do not close red rocks 4x4 track i get why you want to close it but us the diving and 4x4ing community are trying our best to clean up after the little 1% that are thrashing it. How ever i get its still not enough, how ever there is no where else in the lower north island where you can have the same amazing experience of going for a dive then having a bbq on the back of your ute all within 20 steps there's something so nice and special about it

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Neutral
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Neutral
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Neutral
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Neutral

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Neutral
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Neutral
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q29 **Please provide any additional feedback on the draft plan.**

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: The coast is for everyone, access should not be controlled by a group based on how long ago you identify as being 'from' NZ. I am of European and Maori decent but I am not considered mana whenua. I have enjoyed access to our South coast for recreation and diving and food gathering since the 1980's. My children have grown up diving for kai between Devils Gate and Cable Bay. What gives someone else the right to control that access? By all means police it, and penalise the idiots that abuse the right, pollute, poach and desecrate. But please, leave the rest of us alone and stop all this unnecessary meddling and wasting of rates payer and tax payer money.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q12 **Please let us know a bit more about your choice.**

Long Text: It seems to work ok now. More effort could be put into policing dumping, poaching, fire education and general idiot behaviour, but other than that I don't believe there is a need to completely re-invent the wheel.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q14 **Please let us know a bit more about your choice.**

Long Text: "Wellington's coastal landscapes tell a story of transformation, shaped by natural forces and nearly 1,000 years of human settlement."
Amen, let it continue!

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text Yes, but this needs to be done through inclusion and education, not exclusion and Red tape.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q18 **Please let us know a bit more about your choice.**

Long Text Change is constant, I would love to know how you plan to stop the sea?

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text The coast is of everyone and for everyone and access can not be controlled based on consultation with a group who identifies themselves based on how long ago they arrived in NZ. I am of European and Maori decent, but I am not considered mana whenua, I am a New Zealander, a Kiwi. I have enjoyed access to our South coast for recreation and diving and food gathering since the 1980's. My father, his father, and generations before them did so as well. My children have grown up diving for kai between Devils Gate and Cable Bay. What gives someone else the right to control that access? By all means police it, and penalise the idiots that abuse the right, pollute, poach and desecrate. But please, leave the rest of us alone and stop all this unnecessary meddling and wasting of rates payer and tax payer money.

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: I think the plan could go further and implement Marine Reserves around the Miramar Peninsula

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: The volume and speed of traffic between Miramar Cutting and Scorching Bay impedes safe recreational use by runners, walkers and cyclists.
I would like to see one one traffic between these locations and a dedicated cycleway.
Freedom Camping should be banned in this area. Police are constantly dealing with issues relating to freedom camping in the area.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text:

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Banning freedom camping would support this initiative. It should also include the marine environment and be setup as a marine reserve to enhance the fish life and create an ecosystem people can enjoy

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text This area has been open to the 4x4 comunity for many years and is seen as a real asset to those of us who enjoy the ability to 4x4 around the coast.
It is importnat that are area is kept open for such activity, only runed by a few who do not respect the area. I would be comfortable with a gated pass and permit system to control access as long as this did not lead to the closing of access. Alternatively, cameras could be located and number plate recognition so those who damage the area are identified.
As there are only three access points to this coast for vehicles there should be the ability to identify poaches. Regular policing should be undertaken to control this activity. A permit system would limit access by regular offenders. Its time the area was monitored and fishery offices take responsibility to stop this behaviour.
However this is a historic area we known globally as a 4x4 area of renound access so close to a capitol city. Access must be maintained.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat support

Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Neutral
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Neutral
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text The Freyberg carpark should include a paint (wet feet) or similar pedestrian marking between the beach/ changing rooms and Freyberg pool to encourage slow careful driving through the carpark.
Freyberg beach needs a flexible rubber mat or board walk pedestrian walkway between the changing rooms and beach to protect the grass.
Grass could be potentially replaced by a more robust grass species due to the very high footfall count.
Possible install lights at either end of Freyberg beach and/or pontoon to highlight risks and safe beach landing for low light swimmers. Lights make it much safer for swimmers to sight when returning in low light and/or rough conditions.
The area between Freyberg beach to the Lighthouse or, at worst, the 1km turning (Clever) buoy should be designated primarily for ocean swimmers. This is to mitigate a repeat of jetski versus swimmer recently and avoid an unnecessary potentially fatality. Fast vessels should only be operating well beyond the 200m buoys.
The ends of the stormwater outlets could potentially have buoys to identify low tide risks in rough weather.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Although this suggestion relates to infrastructure, it is critical for water quality.

Install significant high volume, filtering stormwater controls to mitigate waste entering the ocean during high rainfalls.
Intensive resources are required to track and eliminate cross connections. This is the critical cause of waste water plants being overloaded and sending partially or unprocessed waste to sea and/or stormwater systems carrying pollution to the harbour.

Fix the growing water pollution issue before it needs a massive clean up. And removed the historical need for engineered cross connections.

Don't let Wellington Harbour (its jewel) become affected as Erhai Lake.

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text Do not close red rocks

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly oppose
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly oppose
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly oppose
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly oppose
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly oppose
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses

for the future of this site. - Strongly oppose
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly oppose
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly oppose

Q29 **Please provide any additional feedback on the draft plan.**

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: Mostly around the access to Red Rocks for vehicles. It's unclear how a permit system will be applied if it comes with a fee or with further reduced access. The far reaches of that coastline are only accessible via vehicle and are one of the unique things a resident in Wellington can do. I very much value this, hence my concerns about losing access.

The community of 4WD visitors there are very aware of the minority of misbehaviors out there and do approach the location with some sense of stewardship, putting out fires, reporting poachers, etc. It would be good if we could find a method of controlling these poorly behaving groups that does not punish most recreational drivers. For example, locking the gate at night may be one method of poaching control.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q14 **Please let us know a bit more about your choice.**

Long Text I like the idea, although it is vague. I think that possibly funding should prioritize the other values present here, e.g. Costal ecosystems.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Neutral
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

The Wellington region has extremely limited 4x4 access, closing the Red Rocks track for any reason is not acceptable. A small number of users abuse the current access rights which will greatly affect the majority. Any restriction of 4x4 access to the area will affect people with limited mobility. The gate is currently closed on a Sunday (which I understand may not be legal as it is a public road) for walkers, in general 4x4 users are very respectful of walkers at other times. No reason has been given as to why the gate should be closed at night, who does this benefit?

Long Text "Use the Wellington Dog Policy review process to investigate and prioritise future dog access changes at four critical coastal bird
habitats – Ōruaiti Reserve, Taputeranga Island, Te Rimurapa / Sinclair Head to Oteranga Bay, and the southern end of Wellington
Airport. These sites are hotspots for ground-nesting indigenous seabirds and require stronger protection."

If dog access is reduced in these areas, then alternative areas should be designated for dog access. Dog access to the coastline in wellington is already extremely limited compared to most international cities I have visited. It should not be limited further - changing areas of access to accomodate wildlife rich areas is acceptable to me, but removing dog access is not.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q18 **Please let us know a bit more about your choice.**

Long Text "Review options for removal or repurposing of the bait house in the context of coastal hazard issues, earthquake strengthening
requirements, and lease renewal." I do NOT support this. The bait house should be left alone.

Long Text on Page 114 a Management approach suggestion is “B. Support the gradual transition of the privately leased boat sheds at Churchill Park, exploring opportunities for better community use or removal to allow space for nature”. Also, on page 117 Action Table “4. Investigate the phased removal of private leases from Churchill Park to enhance public access and community use, ensuring a transition plan that considers existing leaseholders.”

Regarding the privately leased boast sheds at Churchill Park.
These boat sheds have enabled the water sport recreation of our family over multiple generations. The sheds are historically significant built during the war, and they do not restriction community use of the area in any way. In fact, they currently provide wind protection both from the North and South to form a popular spot for families to picnic and BBQ. The draft plan mentions only an intent on removal with no other consideration like enhancing such amenities.
There is an acute shortage of recreational boat storage and launching faculties in the Eastern Suburbs, I see nothing in the Draft Coastal Reserves Management Plan that addresses this, only the opposite. This area of Seatoun beach is a hub for water sports such-as windsurfing, kite surfing, fishing/surfcasting, kayaking, and boating. I note that this area and these activities are not noted on your map on page 22. An unfortunate down side of all this activity is frequently people use the nearby bushes as a toilet or for getting changed. A better outcome would be an upgrade of the area’s facilities to include public changing rooms and shower for beach swimmers and water sports users. As a new recreational hub for water sports and beach activities this could become another a great asset for Wellingtonians.
I hope the council can consider a longer-term view of supporting more accessible recreational water sports rather than just a blanket policy or removing such an asset without any mention on why such removal will benefit the city in anyway.

Q4 **I am making this submission:**

Multi Choice: as an individual

Q5 **Name of organisation you are submitting on behalf of**

Short Text:

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Strongly support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q10 **Please let us know a bit more about your choice.**

Long Text: I think active partnership should include the community that lives in the area not just mana whenua. Local communities can provide some of the resources need to support the plan and as they live in the area are very motivated to be guardians of it.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text:

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: Wellingtons coastal landscape is a key part of what makes Wellington an attractive place to live

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text I am sure local communities will provide volunteer resources to support this.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I would have thought the threat of major storms greater than that of fire

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Rangitatau
Moa Point to Breaker Bay
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Strongly support the walkway from Owhiro bay to Makara Beach. Access from Makara township to the southern coast would be great for those unable to complete the entire walkway.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text I support the idea of no dogs at all in the Oruaiti reserve as a means of total protection of penguins and other birds. Some dog owners are poor at keeping their dogs on a leash in areas requiring this and the mere presence of dogs stresses the birds.

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text I support putting resources to clean up and explain Fort Balance and to identify and explain the Pa sites in the area.

Strongly support the idea of a one way road for vehicles

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more

accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

I think it is good to recognise maori names of important sites. However this should not be a blanket use of te reo as the local communities also have strong links to the coast and this should be recognised also in the names used.

Q4 **I am making this submission:**

Multi Choice: as an individual

Q5 **Name of organisation you are submitting on behalf of**

Short Text:

Q6 **Would you like to make an oral submission to the Councillors?**

Multi Choice: No

Q7 **Please provide your phone number so you can be contacted to arrange your oral submission time.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: New Zealand is multicultural. I think the current balance of English and Māori names is appropriate. I don't support more changing of place names. I struggle to remember place names that are changed from English to Māori, and this must be much more difficult for tourists visiting our city.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: Our coast has something for everyone and it is good to offer options to make provision for a range of different uses and enjoyment. More rubbish bins would be good, more toilets would also be good. I strongly support dog exercise areas.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text: I support coastal protection.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text I strongly support protection of wildlife and ecological restoration and protection.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text We must accept the damage that humans have done and do our best to protect the coastal environment and houses on the coast against sea level rise and extreme weather events, especially Owhiro Bay that is being very hard hit.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Provide protection against sea level rise and extreme weather events, ideally without destroying views.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Provide protection against sea level rise and extreme weather events, ideally without destroying views. Storms in recent years have been getting increasingly worse. Owhiro Bay is urgent, Island Bay has suffered some damage and this will get worse.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Please leave names as they are. There is a good balance already of English and Māori names. A lot of Māori names are hard to remember. This must be even harder for tourists and we want to welcome tourists. We are multicultural, non-Māori culture matters too. Enough, leave names alone.

A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Neutral
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Neutral

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

The 4x4 access being brought into question due to the minority mistreating that access is truly unfair to those of us who use it safely and courteously to other users, it would be a right shame to remove access from those who like to use the access for things like heading out for a day trip for lunch that remove all rubbish and make sure to be safe

Q28 **To what extent do you support or oppose the following proposals?**

Matrix
A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Somewhat support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q10 **Please let us know a bit more about your choice.**

Long Text: I dont mind either way, I like to think im respectful of the history, however am cautious as to how much time, effort and spend is applied to this proposal. It doesnt feel like its providing a balance, it feels like its swinging in the other direction. I dont think this proposal makes a balanced approach but I accept that it tries to.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: Agree there is an issue with vehicle access, as a regular around the red rocks costal track in my 4wd ive witnessed some horrific behaviour. This proposal suggests multiple approaches and then recommends an investigation to a permit system. I fully agree with the intent of this, however historically such a system managed by local government is expensive and I would say it would drive away plenty of the good people who spend many weekends enjoying what the coast provides in a safe and respectful way. And then how do you police this? the costs add up very quickly no matter what the solution. But doing nothing is also expensive. I have noticed a larger presence of NZ police and Fisheries officers over the last few years, I wonder if empowering them through legislation is a better approach? Maybe making it clearer that people can report bad behaviour directly to the council. I would be happy to discuss this further with the council.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text This is a must, we need to better tell our story to further not only our connection, but also the connection our visitors feel.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text No further comment, needs to be done.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text Mostly support, I do wonder if the language is a touch wrong in the proposal, but the gist I took away from it is that nature will be a large factor in the remediation and forward planning. The adaptive planning side of things is on point and needs to be called out more. What is the fix for one costal area, wont be the fix for another.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I think the plan seriously down plays the amount of 4wd use this area attracts. No matter what, if people are going to be in the area then there are going to be some bad eggs we will need to deal with. I've seen plenty of evidence of walks and bikers lighting fires, trashing the area and generally disrespecting the history and the environment of the coast. This costal track is one of the Gems of wellington, but it needs further improvements, those improvements need to be a balance of the good, the bad and the cost. (noting the cost of doing nothing is also expensive here).

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text While the environment is important, it is also there for us to use - and we shouldn't be afraid to use it. Manage it, yes, but also use it as the gift to us that it is.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I believe that the proposed permit systems, decreased maintenance, decreased hours and days of access for 4WD vehicles is the thin edge of a veiled plan to remove 4WD access to this area altogether. This is a huge blow to those who enjoy the outdoors in a responsible and respectful way, and those with disabilities or family members with disabilities.

In saying this, there are always the few morons who ruin it for the many. The vast majority of 4WD vehicles that access the area are by responsible, careful people who are grateful for the areas that they have to access. It is no secret that Red Rocks is a gathering ground for organized gangs from outside of the area to gather and sell any and all seafood (legal or not) on the black market outside of the region. I would 100% support the posting of a fulltime fisheries officer at the main gate

A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose

Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Don't know
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Don't know
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Don't know
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Don't know
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q29 **Please provide any additional feedback on the draft plan.**

Long Text — Name changes are unhelpful and confusing and actually do very little in increasing acceptance or "ties" to the land or the earlier inhabitants of it, or anything else

Multi Choice: Somewhat oppose

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: This is great and should be promoted however there is far too much weight on Mana Whenua, Wellington coast is for everyone and that should be better reflected in the plan.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: Much of what is proposed here is great and much needed however as usual there is an attack on 4wd users, who are already restricted in how they can access the coast. Wellington is blessed to have such an amazing place accessible by 4wd and it would be a terrible shame if this was taken away from us from people who no doubt spend far less time on the coast themselves. Of course there are always bad eggs who need to be monitored but the vast majority of the people who drive the coast are some of the most compassionate costal environmentalists. WCC needs to stop trying to close out people from this activity, and start looking at how maintaining vehicle access can benefit the coast line. 4wd groups will be more than happy to support things such as native planting, pest trapping etc, shutting off or further restricting access is the wrong way to look at it. As usual the fun police are at the forefront of the plan

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text agreed

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text strongly supported other than further limiting 4wd access to red rocks. the impact of this activity is totally blown out of proportion and is enjoyed by many passionate locals. some individual opinions on this activity should not dictate access restrictions for the rest of us. Of course there are always bad eggs who need to be monitored but the vast majority of the people who drive the coast are some of the most compassionate costal environmentalists. focus on sorting out the people who don't play ball rather than penalising those who do this as a way of life. WCC needs to stop trying to close out people from this activity, and start looking at how maintaining vehicle access can benefit the coast line. 4wd groups will be more than happy to support things such as native planting, pest trapping etc, shutting off or further restricting access is the wrong way to look at it

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text agreed

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text let 4wd users remain. it will be a terrible shame if WCC took this away from and extremely passionate group of locals. closing people out is not the way forward, WCC should be looking at ways in how maintaining vehicle access can benefit the coastal environment. 4wd users and groups will be more than happy to facilitate the transport of planting equipment, traps for pest removal etc. To a lot of people this access is one of the best points about Wellington, it is treasured by so many. We surf, fish and dive around there. A handful of people doing the wrong thing should not give WCC cause to take this away from the many good people who I'm sure are far more passionate about our coastal environment than the people looking take away access.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Having a 4wd route around the south coast is essential. There's not many places you can take the family for a bit of fun and excitement with some minor 4wding. We often take the kids down and park up at devils gateway and explore the rock pools and check out the sea life. We often take fish and chis down and have a picnic. We always stay on the track and take our rubbish with us. By being able to drive there we getting the feeling that we are o an adventure. Having a disabled child we get to explore more ruggered and exciting coast line by being able to take the ute there. Please don't take this simple joy away from us. It's hard enough for us to find accessible coast as it is. It's becoming a nanny state.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I agree that 4wd access needs to be controlled to better protect the environment. However the damage is largely done by a small group of people who don't respect it.

Any access restriction needs to target this group. I believe this is best done via a permit system. This will have the added benefit of deterring poachers too.

Please consult the with local 4WD clubs
Such as the Wellington Cross Country Vehicle Club.

Long Text:

4WD access facilitates responsible, low-speed recreational driving and is integral to the unique experience of Wellington's rugged coastline. Many residents and visitors engage with the coast through this activity, often combining it with other forms of nature enjoyment and conservation.

Restricting vehicle access would disproportionately impact users who rely on transport to reach remote or otherwise inaccessible areas, particularly those with physical disabilities or older citizens who cannot walk long distances over rough terrain. Managed access ensures inclusive enjoyment of public space.

Prohibition or restricting of 4WD access would not only disenfranchise responsible users but also risk creating unmanaged or informal access points elsewhere, increasing environmental harm.

I am supportive of requiring permits for access and recording vehicle registration to reduce illegal activities such as poaching in the area.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I am writing to strongly support the retention of designated 4WD access along the South Coast, particularly within areas such as the Owhiro Bay to Red Rocks route, which has longstanding significance for recreation, cultural access, and responsible engagement with the coastline.

This are is a cherished recreational area that supports diverse users, including families, fishers, surfers, divers, conservation volunteers, and those with limited mobility. 4WD access allows equitable use of these spaces for those who might otherwise be excluded due to physical ability, age, or remoteness of the terrain.

4WD access facilitates responsible, low-speed recreational driving and is integral to the unique experience of Wellington's rugged coastline. Many residents and visitors engage with the coast through this activity, often combining it with other forms of nature enjoyment and conservation.

Restricting vehicle access would disproportionately impact users who rely on transport to reach remote or otherwise inaccessible areas, particularly those with physical disabilities or older citizens who cannot walk long distances over rough terrain. Managed access ensures inclusive enjoyment of public space.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Don't know
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Somewhat support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q10 **Please let us know a bit more about your choice.**

Long Text: This value aligns strongly with my support for upholding the cultural significance of the coastline. The emphasis on co-management, mātauranga Māori, and restoring traditional names is not only culturally affirming butwill also support more sustainable management practices informed by deep intergenerational knowledge.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: I recognises the importance of recreation and aims to enhance access equitably and sustainably. I also acknowledge the value of protecting sensitive areas and request designated vehicle access routes or seasonal allowances for responsible 4WD users with a conservation ethic.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: I appreciate the cultural and natural story of the coastline—something I experience intimately through diving, fishing and remote exploration. I support storytelling, design, and heritage recognition that will enrich users understanding and connection to these spaces.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text This is a core value for me. Targeted ecosystem restoration, invasive species control, and wildlife recovery directly support the health of the marine ecosystems on which I rely on as a diver and fisherman. I support the pathways and ask for co-designed approaches that allow low-impact activities like diving and fishing to continue in alignment with conservation goals

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I promote the long-term protection of the coast from climate threats. This is an issue that can affect the quality of water, marine life habitats, and even road and track access to fishing spots. The nature-first approach complements my ecological outlook.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Hue te Para
Lyall Bay
Te Kopahou & coastal route
Rangitatau
Moa Point to Breaker Bay
Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Access for 4x4 vehicles: Given that this area is popular for 4x4 use, I seek clear guidance on permitted areas for vehicle access to avoid damage to sensitive coastal environments. The plan should specify where 4x4 access is allowed and where it is restricted to protect vegetation, dunes, and wildlife.

Diving access and safety: As a diving spot, maintaining safe and clear access points is important. Consideration should be given to signage and facilities (e.g., parking) that support divers without increasing environmental degradation.

Environmental protection: Any vehicle or recreational activity must be balanced against protecting fragile coastal ecosystems, including nesting birds and native plants. Regular monitoring and adaptive management plans should be included.

Cultural site protection: Ensure that 4x4 and other recreational use does not encroach on wāhi tapu or other culturally sensitive areas identified by mana whenua.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Recreational use management: The Southern Bays are heavily used for swimming, diving, and walking. The plan should address managing visitor impact, including waste, erosion, and disturbance to marine and coastal habitats.

Infrastructure: Consideration of additional amenities such as toilets, rubbish bins, and parking would support sustainable use but must be designed with environmental and cultural sensitivity.

Partnership with mana whenua: Ongoing engagement with mana whenua to protect cultural sites and integrate mātauranga Māori in conservation efforts is significantly important.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text Dog access and management: Given frequent dog walking, clear rules on leash areas, dog waste management, and sensitive ecological zones are essential to protect wildlife and maintain a safe, enjoyable environment for all users.

Diving considerations: As a diving location, maintaining safe entry and exit points, along with clear communication of any hazards or restrictions, would improve user experience.

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Diving access and conservation: Maintain and improve facilities to support diving access without degrading coastal habitats. Monitor for any impacts on marine biodiversity from recreational use.

Cultural and environmental protection: This area has important cultural significance; protection of these values alongside recreational use must be prioritised.

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Somewhat support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Strong endorsement of mana whenua partnership: The emphasis on partnership with mana whenua, guided by the Tākai Here agreement, is critical and must remain central. Ensuring that kaitiakitanga responsibilities guide all coastal management will protect cultural values and natural resources.

Integration of mātauranga Māori: I support efforts to embed mātauranga Māori alongside scientific knowledge in decision-making. This approach strengthens environmental stewardship and honours local iwi/hapū relationships with the whenua and moana.

Balancing recreation and conservation: The plan acknowledges the need to balance recreational use with ecosystem protection. This balance is essential given the high recreational use along Wellington's coast, especially in areas important to tangata whenua and the community.

Pathway improvements: Pathways and access need to be managed sustainably to reduce erosion, protect wildlife habitats, and respect cultural sites, while still allowing public enjoyment.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I think by restricting The vehicle access it will negatively affect the other users such as walkers and cyclists. The vehicles forge the track through the sand and rocks after a large tide or storm surge. If you watch the walkers they mostly walk in the vehicle tracks to avoid the soft and loose sand/gravel. Without the vehicle tracks the cyclists don't stand a chance and actually riding most parts of the coast.
The groups I've been involved with while using this area for 4wding have always been conscious of rubbish on the coastline. Everytime we stop we make sure before we leave we take whatever rubbish we can see. The vehicles travel much further than the walkers and reach areas that other clean up parties might never get to. I do understand that some of the rubbish comes from the vehicles themselves but the groups I've spoken to feel similarly to me

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support

Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Neutral
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Somewhat support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Access to red rocks needs to remain open to anyone who wishes to access it, especially 4WD access. As well as being a national and global attraction to off-road drivers, there is a whole community of people in and around Wellington who regularly utilise the track for land and sea-based activities. Limiting or removing vehicle access to the track will cause large inequities in who can or cannot access it.

Hue te Para
Lyall Bay
Ākautangi
Cobham Dr to Point Jerningham

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Pāua Diving & Marine Life
• The Taputeranga Marine Reserve is a biodiversity hotspot, as a paua diver and spear fisher I appreciate that overharvesting outside the reserve is a concern. I also support anti-poaching efforts and marine restoration (e.g., kelp forests, pāua habitats).

Access & Recreation
• It would be great to see improved walking and biking access and the long-term vision for a historic coastal walkway to Mākara confirmed. This could ease pressure on overharvesting outside the Taputeranga Marine Reserve but may need funding for additional oversight from (the excellent) Fisheries Officers.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text Surfing & Surf Life Saving
• Continue to support for surf lifesaving and surf access as a priority.
• Lyall Bay Surf Lifesaving Club is an important amenity and service to the community, needs to be supported.
• The ex-Maranui Depot site should be considered for environmental restoration and recreation, this is a great opportunity.

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text • Prioritise year-round access for swimming including the addition of a pontoon in the water like the existing examples at Oriental Bay and Island Bay. Sponsors could be sought (eg real estate companies in the area like Lowe and Co or Tommy's - both of these companies sponsor local events, have staff who are residents and are known to the community.
• Maintain existing amenities like the toilets and seating (hopefully the previous seats that were built into the timber retaining wall on Hataitai beach that is currently being replaced will return in some shape or form).
• Introduce the ability for Food trucks to enhance the recreational experience and encourage the mobile saunas that have been there in the summer of '24/'25 to return.
Cycling & Running
• The Tahitai cycleway continuous coastal path is a great concept and needs to be completed.

Ecological Protection
• Restoration of native vegetation and stormwater management should be key priorities.

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Neutral
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support

Long Text: Why should the maoris get any more say than everyone else? They dont own the land any more than a white person. This is highly racist and it strongly offends me.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Off-roading is something I enjoy responsibly, you cannot take it away. I have taken many overseas tourist around there and there is nothing else like it on the planet, they all love the area. It is such an iconic Wellington spot and having the ability to take a vehicle there makes seeing all of it within a day possible. Also, I do a lot of recreational diving around the far end, something that would never be possible without vehicle access. Therefore I strongly oppose closing the south coast and red rocks to 4x4 access.

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Somewhat oppose
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Neutral
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat oppose
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways,

and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Neutral
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Neutral
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Number:

Q8 **Do you support or oppose the overall direction of the plan? (Choose one option)**

Multi Choice: Strongly support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Neutral

Q10 **Please let us know a bit more about your choice.**

Long Text:

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: I think the values are fine, but that they are very likely to conflict with one another. The plan doesn't give any indication of how these conflicts will be managed. eg. we know that dog recreation (dogs on beaches) harms wildlife, but I do not expect that dogs will be banned from beaches any time soon- it would be too unpopular and would reduce the public benefits.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text: I know the Council tried several years ago to reroute the road around the coast at Island Bay to go round the back of Shorland park. This was not supported at public consultation but it would undoubtedly benefit dune regeneration as well as extending the park down to the beach which would be great for families.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text I don't support the removal of litter bins from parks, I do not believe that people would take the litter home. Even with half empty bins, Shorland Park is full of litter after a fine weekend. The other source of litter is the recycling bins blowing over. I think people should be fined for putting them out the night before on days with a strong wind forecast.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I think fishing should be more controlled in the harbour. Kina are too established with few predators, and they are destroying the kelp forests. Kelp forests are a great breeding ground for native fauna and they also have an important role to play in tsunamis, as they can absorb energy. As well as help to manage carbon emissions. I'd like to see more coastal reserves for this reason.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text I would like to see:
the coastal rd rerouted around the back of Shorland park to enable the dunes to regenerate and improve the park
dogs banned from the beach, and the ruff area nearby (opposite the beach) fenced instead. Or dogs on lead on the beach
the old surf rescue removed for restored - its an eyesore
a cycle way established between Owhiro Bay and Lyall Bay. I don't know how this could be established given the road is narrow, but the coast rd is flat and is ideal for cycling except for the trucks, buses, cars...

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Neutral
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

The draft plan didn't mention jet skiing - possibly because the sea is excluded from the plan? I worry about the impact of jet skis on our native fauna - whenever there is a whale or orca in the area, the jet skis come. I know that they are prohibited from being within a certain distance of these creature. but it doesn't seem to deter them. I think they should be banned from the marine reserve.

Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text: Protecting coastal area without further restricting the current access limits to general public.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text These things are positive however without the actions of how listed in the question, it's hard to choose the agreement level, I support these things but not if it means restricting access. Working with local 4wd clubs for example could remove burden from some of the upkeep using volunteer days - stimulate to how the mountain bike groups to native tree planting and pest trapping.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q18 **Please let us know a bit more about your choice.**

Long Text I think access should be maintained as there is always risk of injury, more likely with pedestrians and cyclists where 4wd's have been able to assist. Vehicle access should not be limited but more education around prohibition of starting fires during peak time, or a hotline to report inappropriate fire starting or irresponsible vehicle users.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Coastal areas are unique and should be accessible to all for exploration and traditional recreational activities as we are all one.

Education and community support to report antisocial behaviour is a more inclusive approach than removing access to these locations.

Removing access will also likely see a dramatic negative impact on other already suffering Marine environments sick as Lyall Bay and Eastbourne.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

It would be good to see some actions about investigating further public transport options to some of the coastal sites, for example to Scorching Bay or Tarakena Bay. Or some larger car parking areas that acted as hubs for people to then bike or walk from.

Long Text: I take my 4WD around red rocks on a regular basis, to clear my mind and enjoy the scenery and what nature has to offer. Otherwise i will drive around the coast line to a calm and sensible bay for diving which also helps with my mental health where i spend time to reflect and observe the ecosystem under water in the ocean.

Restricting access would cause some issues. like who has the right and authority to access. I think the greater wellington region has a few examples where access is restricted to access by locals or Iwi. Example i can think of is Eastbourne.

I believe creating such a system isn't required if the users of the un formed road take care and share the space with other users.

I also believe vehicles have been able to drive in and around Red rocks for many decades.
having the gate closed on Sunday serves a great purpose to the greater public who wish to exercise, sometimes there are members of the public who are not so mobile and being able to be driven in and around the coast can be sentimental or bring back great memories to the individual.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Neutral
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Somewhat support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Neutral
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat oppose
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

I take my 4WD around red rocks on a regular basis, to clear my mind and enjoy the scenery and what nature has to offer. Otherwise i will drive around the coast line to a calm and sensible bay for diving which also helps with my mental health where i spend time to reflect and observe the ecosystem under water in the ocean.

Restricting access would cause some issues. like who has the right and authority to access. I think the greater

wellington region has a few examples where access is restricted to access by locals or Iwi. Example i can think of is Eastbourne.

I believe creating such a system isn't required if the users of the un formed road take care and share the space with other users.

I also believe vehicles have been able to drive in and around Red rocks for many decades.
having the gate closed on Sunday serves a great purpose to the greater public who wish to exercise, sometimes there are members of the public who are not so mobile and being able to be driven in and around the coast can be sentimental or bring back great memories to the individual.

Multi Choice: Strongly support

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q10 **Please let us know a bit more about your choice.**

Long Text: I think the strengthening of cultural values and connection is valuable, however to be considered also in consideration with recognition of the strong historical connection with Italian fishers and settlers.

Opportunities for enhancing coastal pathways and connections such as Makara to Red Rocks would be a significant asset for all.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Strongly support the concepts to explore promoting better 4WD behaviour in coastal zone 1 red rocks area. As a keen local diver I have a 4WD and do access this area for recreation, but in a manner that is considerate of walkers and other users and stick to the high beach access to access bays beyond Sinclair head. Over the last 20 years I have noticed increasing demand and some poor behaviour so would support night time closures and exploration of a permit system. However practicable administration and policing of a permit system may be challenging. As a responsible local I would like to think I could apply for a permit to access this area of coast in a responsible way. I am also supportive of continued Sunday closures and Public Holidays moving forward.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q14 **Please let us know a bit more about your choice.**

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Refer to my main submission on access for 4WD within this edition. As a keen local diver I have used a 4WD to access bays past Sinclair Head for over 20 years in a responsible manner I.e. keeping to the main track at the top of the coast and being courteous to walkers and cyclists. In recent years I have observed far more pressure on the coast, especially on weekend and PHs, as well as anti social behaviour such as irresponsible 4WD use, littering/dumped beer bottles and unattended fires. I've also observed increasing night time 4WD access - to what purpose! I support investigation of a permit shyster to promote responsible access and would like to think as a local I could apply. Administration and policing of such a system could have some challenges that need to be managed. Sunday and PH closures are also supported to provide walkers and wildlife a break from 4WD activity.

I also think the idea of exploring a coastal walkway from red rocks to makara would be a great asset.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text Support continued access to the beach for responsible dog owners. Ongoing dune protection and planting is critical and the landscape Values/ecology could certainly be enhanced e.g. on Taputuranga Island and parts of the foreshore.

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I have zero issues with permits, assuming they're free and managed well. Public holiday closure isn't ideal, it's the time that people get to head out in whatever means of transport they use.

The nighttime closure would be super unfortunate - being able to use a 4WD to push well out around the coast for night sky viewing, photography would be lost. Being able to take my vehicle means I don't have to risk a multi hour walk through rough terrain with camera gear - and means I can return home the same night.

Better education and maybe better signage around using a 4WD in the area is going to be far more beneficial than closing it off - the majority of drivers slow and and look after the place. For the most people they're not demanding the council maintain the route to a high standard and the clubs and individuals are willing to undertake a level of maintenance

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text As a 4 Wheel driver who regularly uses red rocks and enjoys being the able to enjoy the area while sticking to the main tracks I think it would be a great shame if such an amazing area was closed due to the actions of the minority of people determined to ruin the access for others. I think less harsh solutions to begin would such as more fisheries patrols and infringements for dangerous driving on the beach and fires would be a better start than clamping down on access to one of the best pieces of New Zealand so close to a major city

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: I don't believe any one people should have more authority over any land in NZ than any other people.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: I think I theoretically agree with what you are trying to do, but in reality I oppose the ways this council implements "solutions" which usually involve restricting access to things that bring people joy.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q14 **Please let us know a bit more about your choice.**

Long Text: Again the way this is worded is cryptic, what are you trying to do? If you plan on restricting access in any way, I am against this.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q16 **Please let us know a bit more about your choice.**

Long Text I don't support overly strict enforcement that prevent people from enjoying the coast in favour of the nature that the people are trying enjoy.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly oppose

Q18 **Please let us know a bit more about your choice.**

Long Text I don't support a nature first approach, I support a people first approach with a healthy integration of nature to allow all people to enjoy nature including 4wds and motorcycles. However I do enjoy the challenge that the coastline provides and don't think that we need to spend money on maintaining coastal roads. Let nature determine the coast we enjoy.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text Please don't make any changes to Red rocks Vehicles access, it is one of my favourite things about this city. Out there you are free to enjoy nature, especially at night. I have spent many nights enjoying the stars way out at red rocks. I don't think requiring permits is a good idea, it will prevent many people from enjoying the area.

Long Text

I agree with the protection of the environment but am opposed to a tikanga-based permit system. You rightly state fisheries compliance sits with MPI - the council should "stick to its knitting".
NZ is a multi-cultural, multi-ethnic, community of people with many religious belief systems. It is not / should not be (local or central) government's role to enforce one of those culture's beliefs or practices over any others. An individual may choose to respect or adhere to other cultures' practices or beliefs, but it should not be enforced or promoted by government. Therefore, I am opposed to any council recognition or support of these, including imposition of rahui.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice

Strongly oppose

Q18 **Please let us know a bit more about your choice.**

Long Text

The is a significant body of evidence that most climate modelling is highly inaccurate. Despite predictions in the early 2000s that whole nations would be under water by 2015, this has not happened. there is verifiable evidence at numerous locations around the globe that after 100-200 years of monitoring there has been no change, and it has been reported that recent studies show the ice at both poles have grown significantly. Planning for sea-level rise is a waste to time and money.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

The impacts of 4wd are overstated, as is the anti-social behavior. I have been accessing the south coast via 4wd for @ 50yrs to enjoy the scenery and wildlife, as well as to fish. I personally would not be physically able to visit the area or dive if 4wd'ing was limited or banned and this would have a significant impact to my mental and spiritual wellbeing. Over the years 4wd access has also enabled me to share the area with thousands of others who otherwise would not have been able to enjoy it.
There have been some bad-eggs but you get this in any community and in my experience the bad-eggs are a very insignificant minority. The vast majority of 4wd'ers are courteous, respectful, and community minded. I have been involved with many organised 4wd beach clean-ups in areas where it would not be practical by foot, and organised or not, I and many other 4wd'ers collect plastic etc. washed up from the sea every time we see it.

The Red Rocks coastal track is the last publicly accessible 4wd track in Wellington. It must remain open so that a significant part of the wellington community (& the generations to come) are able to access some of the most beautiful, rugged, and truly remote parts of our coast beyond Sinclair Head.

Q28 **To what extent do you support or oppose the following proposals?**

Matrix

A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Neutral
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Somewhat oppose
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Somewhat oppose
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly oppose
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly oppose
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Somewhat support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Somewhat support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly oppose
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Somewhat support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Neutral
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Somewhat oppose

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Maori names could be used in conjunction with existing names but should not replace them - in doing so we will continue to lose the significant non-Maori heritage of this land.

The council should proactively look to open up other areas of its estate to 4WDs to reduce the pressure on Wellingtons only public access 4wd track at Red Rocks.

Fires should be permitted on beaches between Sinclair Head and Oteranga bay during Winter and the FENZ Open fire season

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: I regularly access the Te Kopahou Reserve coastline and beyond as a runner, mountain biker, and motorcyclist. I support the continued access, including motorised access, as a way for all people to experience the coast for recreation and enjoyment.

I recognise the issues that come with public access and the need to balance the impacts of all different forms of access. The current restrictions on motorised access are sufficient to ensure that balance. I do not support stricter management of motorised access. I believe the impacts that the management plan notes can be dealt with without further restricting access.

Kia ora
I just want to point out this consultation itself is not accessible to our disabled people.
If you really want to include disabled people's feedback, this consultation should be available in accessible formats (NZSL video, braille, audio, easy Read) and the draft plan should be too.
A PDF is not accessible for a screen reader, so you are excluding a lot of blind people from accessing the information.
Disabled people will be excluded from having their say if they can't access this information in a way that suits them.
Alternate formats are done via the Ministry of Social Development and a Google search will get you the information on this that you need, to hopefully make consultations accessible going forwards.

Multi Choice Hue te Para
Lyall Bay
Mātai Moana coastline
Shelly Bay Rd & Massey Bay Rd

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Long Text I have a feeling that Lyall Bay is going to be changing quite a bit with the new Lyall Bay Junction and other improvements in the retail sector. I am heartened to see WCC wanting to ensure the Bay doesn't lose its environmental protections and purpose. Lyall Bay beach is a gem and should be the focus of that area, not a shopping district.

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text I am particularly interested in the action point of investigating making these roads more pedestrian-friendly and working toward a large-scale, connected walkway. At the moment, it feels like you need a car to access these areas, which is very un-Wellington. I'm not sure I quite understand what the point about trialling restricting/closing the road means, but I like the idea of investigating a one-way traffic system so there is a better walkway along this area.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Don't know
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more

accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Strongly support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support
Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

Love the idea of changing/adding names to these locations to better represent cultural/historical identities and events. Really appreciate wanting to reevaluate existing structures (eg old jetties) for use and purpose, with the aim of optimising recreation/environmental activities. I think that's great. Also love the idea of slowly phasing out existing leases in reserve areas to better protect them in the future. I also really love the focus on ensure connectedness through long-distance walkways/cycleways etc.

Re Appendix A I really appreciate that temporary fixtures like food carts and coffee carts will still be allowed in these areas. It's such a Wellington tradition to go for a long walk and stop by a coffee cart for a drink and a snack.

Long Text:

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: Many boat ramps around the coast need frequent maintenance but do not receive it restricting the acessablity and saftey of launching boats kayaks and other watercraft, seatoun is extremely dangerous in a large shorebreak and often the boat ramp is hidden under soft sand, requiring people to be pulled out on occasion. other boat ramps such as the multiple Evans Bay boat ramps, are very slippery and dangerous to launch and retrieve watercraft on, I personally have nearly slipped and fallen many times and have heard some people falling and injuring themselfs.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q14 **Please let us know a bit more about your choice.**

Long Text:

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text I believe a harsh crackdown on poaching is needed to sustain the coastal ecosystem, especially in the redrocks area, as it receives frequent poaching of paua and other species, more frequent checks and possibly a fisheries officer posted at all times arround redrocks checking vehicles and people

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I personally love to drive Redrocks and have had many good times around there, I have found the general community who offroads around there, especially past the gate is very respectful and cares for what we have access to. However, there are outliers and some who have no care for the environment, leaving parts, litter and going off the track into the restricted reserve area near the beginning.
I disagree with closing the gate on public holidays as this is no different to the traffic it receives on a Saturday, drivers and walkers in my experience, have a level of respect for each other, slowing down when passing walkers and walkers moving to the edge of the track to allow drivers to pass safely. I both agree and disagree with closing the gate during night times, as while it would partially prevent poaching and improve saftey preventing people from entering in vehicles in the dark. However i have had multiple trips where we planned to be back early evening and it quickly turned very late due to breakdowns, breakages and towing others back (sometimes needing another person to come out and assist as well. If the gate were closed during nights on these occasions, we would be forced to either stay in out trucks till it was opened or figure out some sort of transport home, leaving vehicles there. This would be a major inconvenience and risk to people damaging and looting vehicles. Living near the coast, many trips are spontaneous and not planned in advance, as it is a fun and easy drive and a good place to get out and enjoy nature.
Having permits would greatly decrease the ability to go out and enjoy the coast that we have.
The gate should definitely be maintained to a point, but not making it easy to pass as it acts as a natural barrier to those who do not have suitable vehicles for what is further along (the softer sand and unclear tracks), preventing even more recoveries and rescue jobs.

Multi Choice: Somewhat oppose

Q9 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: No single group should have power over coastal areas which are already on public land.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: Nobody wants restricted access to areas we all enjoy. In particular, I don't want to see restricted 4WD access to Red Rocks coastal road. Closed on Sundays is more than enough. There aren't many public places to drive off road in Wellington and vehicles allow access to people with limited mobility, so that everyone can enjoy our coastal areas.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat oppose

Q14 **Please let us know a bit more about your choice.**

Long Text: Don't tell people what they can and can't do with the coastal properties. Coastal baches should be allowed to be leased privately.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q16 **Please let us know a bit more about your choice.**

Long Text This is the only thing that you should worry about spending money on/changing. Environmental protection is very important and should be managed in a way that doesn't sacrifice recreational use of our coasts.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Neutral

Q18 **Please let us know a bit more about your choice.**

Long Text Don't spend all our money on this.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

The plan is unnecessary. Just leave our coasts how they are for the most part and save some money for fixing existing infrastructure and conservation. Plant some native plants and maybe fence off a couple of sand dunes, then call it a day.

Long Text:

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q12 **Please let us know a bit more about your choice.**

Long Text: I frequently use my 4x4 to access the south coast beaches past Red Rocks. This has been a family activity to fish, snorkel and dive. I'm a member of the Wellington Surfcasting and Anglers club and access to the south coast at night allows me to catch species that I normally wouldn't be able to during the day. Please do not remove or restrict further our access. It is one of the special places that make Wellington unique globally.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q14 **Please let us know a bit more about your choice.**

Long Text: Not interested

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat oppose

Q16 **Please let us know a bit more about your choice.**

Long Text I read between these lines and see that it will mean the removal of 4wd access. Therefore I'm strongly against.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat oppose

Q18 **Please let us know a bit more about your choice.**

Long Text Nature is not first. Humans are first and we should be operating in a sustainable way. I feel that there are ways to ensure sustainablility is reached without cutting 4wd access to the south coast.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route
Taputeranga
Southern Bays

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I don't know what te kopahou is but from the lack of other options i can only assume that this section deals with Red Rocks. Please don't remove our 4wd access at night. I will drive out and fish from the afternoon until late at night.

Q21 **Please provide your comments on Taputeranga | Southern Bays.**

Long Text This area has already been blocked for fishing. I also selected this as I'm unsure if this includes the southern bays past Red Rocks. Please do not restrict 4wd access at night. That is when I'm able to fish for specific species that I wouldn't normally be able to catch during the day.

Q22 **Please provide your comments on Hue te Para | Lyall Bay.**

Multi Choice: Strongly oppose

Q10 **Please let us know a bit more about your choice.**

Long Text: I don't support public assets being controlled by non-democratic institutions. I resent the implication that mana whenua have a greater level of connection with the land than other groups of people or should have a greater level of influence on the management of public spaces.
Drop this as a value

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: As noted in 4- this is stuff Council should be spending time on.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Strongly oppose

Q14 **Please let us know a bit more about your choice.**

Long Text: Storytelling is a waste of money- rates are too high. It is just a coast, don't overthink it. This all sounds like nice to have from a Council where rates are through the roof.
Your pathway 3.3 is just a repeat of the first value about mana whenua, you don't need it here too- a coastal cultural interpretation project is a waste of money, I don't need my Council spending money on educating me about culture- we have a school system for that and library. I am an adult, I don't need the Council educating me.

Drop this whole value- focus on 3 and 4.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text This is the stuff Council should be spending time on- actually managing the physical coast, not telling stories about it.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Somewhat support

Q18 **Please let us know a bit more about your choice.**

Long Text Sounds fine

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text Scorching Bay is fine- please don't expend more money on 'enhancing amenities' there. The parking spaces are narrow, but just repaint them when you are next resealing the road as per normal resealing schedule- avoid extra cost.

I don't know why Eastern Bays needs a 'landscape and amenity' plan- isn't that what this plan is? i.e. you have actions to enhance amenity at Scorching Bay in this plan.

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Long Text It would be great for some very simple lockers at Hataitai Beach (where you bring your own padlock)- for cyclists or walkers to lock valuables when they are commuting but want to stop for a swim.

Q27 **Please provide your comments on Te Rāngai o Onemutu | Oriental Bay.**

Long Text

Q29 **Please provide any additional feedback on the draft plan.**

Long Text

I do not support this plan- it is another Council plan filled with even more ideas to make things better and better and better. Ratepayers are broke, please just leave things as they are. Stick to core Council business of managing facilities and physical spaces, stay away from all the education and culture building work- this is not the role I personally want my local Council to be doing. There are plenty of do good community groups who can progress all the social stuff under their own steam rather than ratepayers having to do all of this.

How about a plan that just says: 'We looked at it and found that, in the context of the other costs facing the city, the coast is pretty ok really. Our plan is to just keep it as it is for now while limited ratepayer financial resource is directed to more pressing city needs. The end.' That would be a great plan!

Q10 **Please let us know a bit more about your choice.**

Long Text: I live in Ōwhiro Bay near Te Kopahau and always feel saddened that there is no public information available about the indigenous history of our amazing coastline. For example the estuary of Owhiro Stream is spoken about in a wonderful myth about the Atua Rongomai who took the form of a comet and crashed to earth at Te Hapua-o-Rongomai - the sacred pool of Rongomai. Yet there is no signage near the stream or the carparks etc telling this story. Similarly, there is no signage to explain the significance of sites of kainga or pa for those walking to Pariwhero. The only signage in the area is related to 4WD'ing or fire hazards. There isn't anything to build the cultural knowledge of those visiting the area - which includes a lot of tourists who would be interested in this history.

Q11 **To what extent do you support or oppose this value and its pathways?**

Multi Choice: Somewhat support

Q12 **Please let us know a bit more about your choice.**

Long Text: As someone one living on the 'frontline of the action' I would take a stronger approach to management of the Red Rocks track. Whilst shutting the gate at night is a good start, it doesn't address the increasing number of 4WD's using the track over the past 15 years I have lived here. Some of those drivers egg each other on to attempt to drive in precarious areas and dangerous ways and pedestrians and cyclists have to get out of the way when they are driving on shingle as the vehicles can't slow down without getting stuck. Dirt bikers are also considering the track to be somewhere to 'go hard'. They speed, they go off track, they try to mount the scree slopes, and electric motorbikes are so quiet often walkers can't hear them coming around tight bends. There is even a FB page dedicated to showing off photos and videos of people getting their vehicles stuck and towed out and showing off their bravado. They don't follow the rules at Red Rocks and there are often children present in those vehicles without using child carseats or seatbelts, their dogs are allowed to roam free across the track, and frequent fires being lit by these drivers despite knowing it's not allowed. It's like just being on the track allows them to cut loose and do as they like. They don't care about the natural environment or the safety of others.

Last summer there were 4WD rallies organised through FB with up to 80 vehicles meeting up to traverse the track en masse. This kind of activity isn't managed by any authorities and brings up lots of questions - who is liable if there is a serious injury? Where are participants going to the toilet? Who clears up the rubbish after these events? Who enforces speed limits and ensures they aren't driving on planted areas or birds nests among the shingle?
I have never known any kind of enforcement to occur on the track. It's a public road so the ranger isn't responsible. Animal enforcement never visits the track. We walk there daily and our dog is generally the only one on a lead and when asked about it by other dog owners they claim to not know that dogs are to be on leads. We see dogs off lead on Ōwhiro Bay Parade and the foreshore there every day. I am sick of doing the job of reminding owners to leash their dogs as I often get a mouthful of abuse. But we have personally known of three Korora that have died of dog attack opposite our home in the past few years. It's upsetting for our community of trappers and Korora supporters.

Q13 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q14 **Please let us know a bit more about your choice.**

Long Text See my answer above about more cultural signage and storytelling in Ōwhiro Bay, Te Kopahau, Rimurapa and Pariwhero.

Q15 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q16 **Please let us know a bit more about your choice.**

Long Text Over the last 15 years of living here in Owhiro Bay we have noticed a growing amount of care and input from our little community. We plant the verges with WCC plants, keep an eye on the Korora, collect rubbish and trap for pests etc. It's the increasing number of visitors coming to the area who behave badly. There wouldn't be a week where we don't see someone trying to fish or collect shellfish in the reserve, or pitching a tent or parking a camper overnight on the verge, or lighting fires and leaving rubbish behind. It gets tiring to call WCC or DOC or whichever authority to report bad behaviour so many things don't get reported. You can also get abused by asking someone to put out their fire or not to collect koura in the reserve. Some people can be very threatening.
Also, there is confusion about the status of the verges and coastline above the high tide line. On one side of Owhiro Bay WCC give tickets to those parking on the footpath. Yet on the Te Kopahau-adjacent coastline where I live there are cars parked on the footpath every single day. And often trucks and trailers too. And they never ever have been ticketed even though they are damaging the grass on the verge. Recently someone came with a trailer and chainsaw and cut up and took away an enormous 8 metre native log on the beach that has been there since 2013. People used it as a seat for years. WCC said it was on the beach so not on their land. DOC said it was above high tideline so not their concern. So theoretically the area above high tide and below the verge of the road has no protection from misuse at all! These designations are ridiculous and don't make sense - householders aren't allowed to carefully trim/manage the taupeta so they can better see the ocean from their homes yet those not living here can come and use a chainsaw on the beach with no consequences.

Q17 **To what extent do you support or oppose this value and its pathways?**

Multi Choice Strongly support

Q18 **Please let us know a bit more about your choice.**

Long Text I'm super proud of the way residents of Ōwhiro Bay have worked with authorities to manage our risk during times of waves over-topping and surges. Between our What's App group and the school's disaster hub we have each other's backs. Every resident is checked on and because of our disaster-preparedness public meetings we all know what to do and where to go The grading of the beach makes a huge difference when there is a surge and I hope WCC keeps that up, and eventually considers putting in a seawall opposite #80 where the fence always gets taken out by waves.

Q19 **Please select any specific coastal sectors you would like to give feedback on.**

Multi Choice Te Kopahou & coastal route

Q20 **Please provide your comments on Te Kopahou & coastal route.**

Long Text I am concerned about the anti-social, unsafe and illegal activities like poaching and dangerous driving that occurs on the Red Rocks track. In the 2002 Coastal Management Plan WCC stated they expected the number of vehicles on the track to decrease, but the number of drivers using the track is increasing year by year as second hand 4WD's become cheaper and more available.
On Ōwhiro Bay Parade speeding vehicles are a constant concern to residents especially on the straight pieces of road between Owhiro Stream and the old boat ramp, and the old boat ramp and Te Kopahau carpark. We see motorcyclists with no helmets racing each other, 4WD's revving up at the carpark and going down Ōwhiro Bay Parade at great speeds. Boy racers in fast cars trying to outdo each other by slamming on their brakes at the corners

at the last minute.
I love that Te Kopahau has become such a popular place for tourists and locals to visit and that number increases every year. But that means more cars = more dangerous drivers and the need for speeding to be regulated. More pedestrians = the need for better footpaths. And more anti-social or dangerous behaviour which can only be addressed with better use of security cameras at Te Kopahau and follow through of WCC staff when rules are being broken. For example people let off fireworks at Te Kopahau all November-long despite signage telling them not to do so. And freedom campers park up in front of people's houses or the verge opposite and sleep there with no reaction from WCC.
The yearly increase in visitors means you need more rangers in the area giving infringements out, more police on regular patrol, more animal control interactions with off lead owners and stronger language on signage re lighting fires etc. And to ensure vehicles stick to safer speed limits via speed humps or chicanes like there are in similar coastal suburbs like Breaker Bay or Karaka Bay.

Long Text

Q23 **Please provide your comments on Rangitatau | Moa Point to Breaker Bay.**

Long Text Council should really prioritise providing bathrooms near the start of Eastern Walkway/Wahine Memorial Park. The area is getting increasingly popular and lack of amenities is very noticeable making is less accessible and more polluted.

Q24 **Please provide your comments on Te Whanga Rāwhiti | Eastern Bays.**

Long Text

Q25 **Please provide your comments on Mātai Moana coastline | Shelly Bay Rd & Massey Bay Rd.**

Long Text Another solution for Shelly Bay Rd and Massey Rd is to have a scheduled weekend and public holidays gate closure from Shelly Bay to Scorching Bay. This approach is utilised in extremely popular Golden Gate Park in San Francisco where JFK Drive is closed to cars on weekends and public holidays making it an amazing pedestrian-only/bike space. The most popular time for recreational activities along the Shelly Bay Rd and Massey Rd are weekends, but narrow road is often prohibiting to less experiences cyclists, kids on bikes, and runners/walkers having to negotiate with cars. Putting the gates just past Shelly Bay (going from Miramar Cutting) and just past Scorching Bay (going from the direction of Karaka Bay) will ensure ample parking spaces at both ends. It won't impede any local business (it will still allow access to food delivery trucks, and won't require business closure) and would encourage more recreational activity from Wellingtonians.

Q26 **Please provide your comments on Ākautangi | Cobham Dr to Point Jerningham.**

Q28 **To what extent do you support or oppose the following proposals?**

Matrix A stronger commitment to nature-based adaptation: Using nature-based solutions like dunes and wetlands to manage climate impacts, rather than hard infrastructure. - Strongly support
Strengthening wildlife protection: Seeking resources to enhance protections for kororā (little penguins), geckos, and seals. - Strongly support
Strengthening dune management: Giving dunes more space to move and function as natural coastal defences. - Strongly support
A new approach to 4WD access at Te Kopahou: Introducing new management options for 4WD access, including closing gate access at night, and future planning for a permit-based system - Strongly support
Repositioning Mātai Moana coastal road as a recreation precinct: Seeking to make the coastal road to a more accessible recreation zone, improving walking and cycling connections while providing ecological protections. - Strongly support
Transforming Ākautangi/Evans Bay Marina Precinct into a coastal recreation hub: Upgrading facilities to support water-based recreation and improve public access. - Somewhat support
A commitment to inclusive access to the coastal reserves and essential facilities: Improving beach access, pathways, and amenities to ensure coastal spaces are welcoming and usable for all - including proposing new public toilets at Island Bay, Breaker Bay, and Mātai Moana. - Strongly support
A new future for the ex-Māranui depot site at the western side of Lyall Bay: Exploring recreational and public uses for the future of this site. - Strongly support

Strengthening Māori identity on the coast: Restoring Māori place names, cultural storytelling, and interpretation. - Strongly support
Landscape and amenity planning: Sector-based plans to enhance coastal experiences and reduce visual clutter by guiding the placement and design of parking, seating, fencing, and signs. - Strongly support
Creating a penguin protection area at Rangitatau: Strengthening efforts to safeguard kororā (little penguins) from threats like dogs and development. - Strongly support
Planning for the future of structures in our coastal reserves: Reviewing at-risk buildings, amenities, and infrastructure and relocate where at risk of sea level rise. - Strongly support

Q29 **Please provide any additional feedback on the draft plan.**

Multi Choice: Strongly support

Q12 **Please let us know a bit more about your choice.**

Long Text: I think you are missing a MAJOR improvement to Wellington as a whole by not prioritising a shared cycle/walkway around the south coast. I see you mentioned it under 2.2 but it is not emphasised. I think if you created a shared path from lets say Lyall to Red Rocks car park, you would be creating a major amenity for the city. Think of Dunedin coastal path or the coast-path in New Plymouth. They are huge draw cards. As a driver, I have been caught behind cyclists on the southcoast, overtaking is dangerous and the ride itself is not safe for bikers, I have experienced this cycling myself. For sections of the road that are tight you could create a platform that would create habit for penguins underneath and help with erosion etc. I think it would also be a boast for local business in on the coast, I would imagine a bike rental company starting there etc

ADVISORY GROUP ANNUAL REPORTS 2024-2025

Kōrero taunaki | Summary of considerations

Purpose

1. This report provides Kōrau Mātinitini | Social, Cultural, and Economic Committee with the final annual reports of Council's five current advisory groups:
    - Accessibility Advisory Group
    - Ethnic Communities Advisory Group
    - Pacific Advisory Group
    - Takatāpui Rainbow Advisory Council
    - Youth Council

Strategic alignment

2. The most relevant community outcomes, strategic approaches, and priorities for this paper include:

    Community outcomes
    - Cultural Wellbeing - A welcoming, diverse and creative city
    - Social Wellbeing - A city of healthy and thriving whānau and communities
    - Urban Form - A liveable and accessible, compact city
    - Environmental Wellbeing - A city restoring and protecting nature

    Strategic approaches
    - Making our city accessible and inclusive for all
    - Embedding climate action
    - Engaging our community

Relevant previous decisions

3. Under their current terms of reference, the advisory groups must report to committee annually with their agreed work plan, and an outline of their previous years progress. Linked is last year's report. Advisory Group Annual Reports 2023-24 and Work Plans 2024-2025

4. On 28 November 2024 Kōrau Mātinitini | Social, Cultural, and Economic Committee agreed to a new Advisory Group Model. Advisory Groups Future Model

Significance

5. The decision is **rated low significance** in accordance with schedule 1 of the Council's Significance and Engagement Policy.

Financial considerations

☒ Nil	☐ Budgetary provision in Annual Plan / Long-term Plan	☐ Unbudgeted $X

Risk

☐ Low	☐ Medium	☐ High	☐ Extreme

Author	Steph James, Democracy Advisor
Authoriser	Anna Calver, Chief Economic and Engagement Officer

Taunakitanga | Officers' Recommendations

Officers recommend the following motion:

That the Kōrau Mātinitini | Social, Cultural, and Economic Committee:

1. Receive the advisory groups' annual reports.
2. Thank the advisory groups for their contributions.

Whakarāpopoto | Executive Summary

6. Wellington City Council's advisory groups are required by their terms of reference to produce an annual report and work plan for presentation to Council. The annual reports are appended to the end of this report.
7. A new advisory group model was agreed by the Kōrau Mātinitini | Social, Cultural, and Economic Committee in November 2024, and as part of implementation, the terms of reference of the new advisory group model will be considered by this committee 4 September 2025. Therefore, the advisory groups have not provided the Committee with work plans for the following year.

Takenga mai | Background

8. Wellington City Council currently operates the following advisory groups
    - Accessibility Advisory Group
    - Ethnic Communities Advisory Group
    - Pacific Advisory Group
    - Takatāpui Rainbow Advisory Council
    - Youth Council
9. The advisory groups serve a range of general purposes:
    - To advise Council officers working on relevant policies, strategies and operations on how to improve outcomes for the city and communities, based on their experience and knowledge; and
    - To pass information on issues relevant to communities between Council and advisory groups.
10. The advisory groups share terms of reference which set out their purpose and expectations.
11. Each advisory group is required to submit within the first four months of the financial year, an annual report to the Council outlining work achieved over the previous year, and a work plan which outlines priorities for the year ahead. Because of the changes to the advisory group model as discussed above, this financial year the advisory groups are submitting only an annual report.
12. The Ethnic Communities Advisory Group was established in 2024. Their report covers the period between December 2024 – September 2025.

Accessibility Advisory Group Annual Report 2024 - 2025

Introduction

Under the Terms of Reference for Wellington City Council Advisory Groups, advisory groups are required to publicly report to the relevant Council committee once a year. This report covers the reporting period from July 2024 – June 2025 for the Accessibility Advisory Group (AAG).

Purpose

The purpose of the Accessibility Advisory Group is to:

- Advise Council on how to help grow a great and accessible City, where barriers disabled people face are minimised.
- Bring lived experience and knowledge to Council around accessibility issues in the context of Council's roles and priorities.
- It is recognised that members come from and remain connected to their communities, it is from this foundation members share their expertise and lived experience in this advisory role, and engage with their communities and others as part of the wider council consultation processes. The expectations around this connection are set out in the Terms of Reference.

2024 - 2025 Work Programme

Regarding the 2024-2025 work programme, AAG identified process improvements in feedback loops to the group following engagement with officers. They appreciated involvement in the early stages of projects and early communication, but still see room for improvement in ongoing engagement and feedback.

The group acknowledged the benefit of working with the Accessibility Lead and stressed the importance of this role, which is currently vacant.

The group spent considerable time over the year engaging on the embedding accessibility and inclusion strategic approaches mahi. This arose out of a previous submission to the Council. Officers consistently came back to the group to present on this topic, and this was a key work programme focus. Members felt positive that feedback provided to officers was referenced frequently in later engagements with the group.

AAG engaged with officers on the change to the Advisory Group model. Whilst members felt that communication and engagement in initial stages of the project was good, they

believe there was a later disconnect in the communications, and a communication gap between the decision and updates on implementation. Members felt heard in voicing their issues, but not necessarily that these issues were reflected in the solutions/proposals that were made. The model shift was a challenge for new members who had recently joined the group.

AAG was especially pleased with the engagement and their input into the micro-mobility scheme programme code of practice. This was a win for AAG. An additional win, as advocated for by AAG, was the new accessible Inglewood Place toilets and Changing Places facility. AAG attended a joint Advisory Group session, including on the topic of Local Water Done Well, advocating for how changes impacted disabled communities.

Provision of Advice

During the 2024 - 2025 period, AAG was able to provide advice on and engage in the following:

July 2024:

- Micro-mobility scheme programme code of practice.

September 2024:

- Advisory Group review.

October 2024:

- Embedding accessibility and inclusion strategic approaches.
- Te Ngākau consultation (joint hui).

November 2024:

- Embedding accessibility and inclusion strategic approaches.

February 2025:

- Embedding accessibility and inclusion strategic approaches.

March 2025:

- Annual Plan and Long-term Plan Amendment, and Local Water Done Well consultation (joint hui).
- Embedding accessibility and inclusion strategic approaches.

April 2025:

- Embedding accessibility and inclusion strategic approaches.

May 2025:

- Advisory Groups model transition.

The 2024 – 2025 year in review

Highlights and achievements for the 2024 – 2025 period for AAG include:

- Accessibility Advisory Group submitted on the 2024-2034 Long-term Plan and 25/26 Annual Plan, and Local Water Done Well consultations. This was a significant piece of mahi.
- Advocating for the new accessible Inglewood Place toilets and Changing Places facility.
- Engagement on the micro-mobility scheme programme code of practice.
- Being able to be involved/advise at early stages of a project e.g. as occurred initially regarding the Advisory Group model and how the group wishes to be engaged with.

AAG acknowledges the following issues and challenges:

- Accessibility awareness of Council staff.
- Continual relationship building between Council staff and the group.
- Expectations of workload compared to allocated resources to the group (including the allocation of time towards items to provide engagement).
- Some feelings of lack of ability to provide input to the organisation, with updates and information provided frequently, and fewer exercises to seek direct input.
- Lack of training and guidance for leadership roles within the group.

AAG's aspirations include:

- New members of future groups are provided appropriate training to allow them to excel within those roles.
- Regarding establishment of the new Advisory Group model and Disability Advisory Group:
    - AAG requests that, ideally, new membership is chosen by an external group of those with lived experience to limit bias. However, a minimum expectation would be to have at least one panel member have lived experience.

Appendix one – Overview of AAG membership

Membership

AAG membership has been selected to provide a considerable range and depth of disability expertise. All members have lived experience of disability and there is a variety of experiences. AAG does not purport to represent any community or the full spectrum of disability perspectives; however, the group has a diverse mix of gender, ethnicity, age, and disability.

AAG members:

- Olivia Murphy (co-chair)
- Renee Patete (co-chair)
- Ali Aminifard
- Alice Mander (new member*)
- Anthony King (new member*)
- Cyrus Dahl
- David Karl
- Donna Fasavalu (resigned)
- Erikka Helliwell (term ended November 2024)
- Humphrey Hanley
- Krystle Field (new member*)
- Ra Smith (resigned)
- Rachel Noble (term ended November 2024)
- Sean Prenter (new member*)
- Susan Williams

* New members as of December 2024.

Note that co-chairs, Olivia and Renee, were elected in March of 2025. Susan and Erikka were co-chairs of the group prior to this election.

Councillor Representatives

- Councillor Rebecca Matthews
- Councillor Iona Pannett (alternate)

Council liaison officers

- Liam Hodgetts (Chief Planning Officer, Executive Leadership team representative)
- Leteicha Lowry (Senior Democracy Advisor)

- Sophie Dobbs (Democracy Advisor)

Attendance data

Attendance at AAG meetings over the July 2024 – June 2025 period (14 meetings) is below. Note that the Terms of Reference Wellington City Council Advisory Groups allows up to 12 paid meetings per year of AAG. Two additional meetings were scheduled for this period.

Name:	**Count of meetings present:**	**Attendance percentage (%) of meetings held during membership:**
Ali Aminifard	7/14	50%
Alice Mander (new member*)	6/7	85.7%
Anthony King (new member*)	6/7	85.7%
Cyrus Dahl	10/14	71.4%
Donna Fasavalu (resigned)	1/14	7.1%
David Karl	6/14	42.9%
Erikka Helliwell (term ended November 2024)	5/7	71.4%
Humphrey Hanley	8/14	57.1%
Olivia Murphy	13/14	92.9%
Ra Smith (resigned)	0/5	0%
Rachel Noble (term ended November 2024)	6/7	85.7%
Renee Patete	12/14	85.7%
Krystle Field (new member*)	7/7	100%
Sean Prenter (new member*)	4/7	57.1%
Susan Williams	10/14	71.4%

Ethnic Communities in *Wellington*

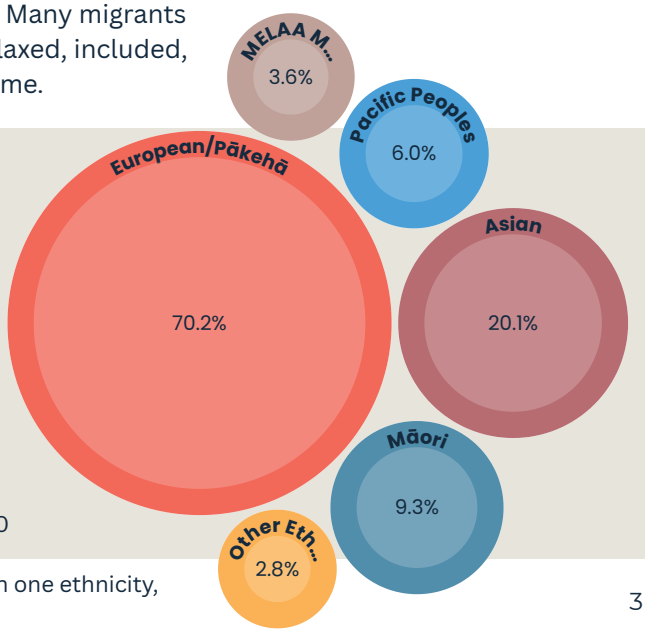
Wellington is home to a vibrant mix of cultures and communities. Since 1840, migrants have played a vital role in shaping the city's identity, including ethnic organisations such as the Wellington Indian Association and the Tung Jung Association, both of which have celebrated 100 years of presence in the capital.

Wellington offers career opportunities in tech, healthcare, film, and education, along with a lifestyle that values balance and wellbeing. The many festivals, food scene, and easy access to nature; beaches, hills, and parks, make Wellington a welcoming place to raise a family. Many migrants say Wellington helps them feel relaxed, included, and proud to call New Zealand home.

As of the latest census data:

European	70.2%
Maori	9.3%
Pacific Peoples	6.0%
Asian	20.1%
MELAA	3.6%
Other Ethnicities	2.8%

Total Wgtn population (2023): ~213,000



Note: People identified with more than one ethnicity, so percentages exceed 100%.

Asian Ethnic Breakdown – Wellington City (2023 Census)

Ethnic Subgroup	Number of People	% of Total Population
Chinese	13,770	~6.5%
Indian	9,870	~4.6%
Filipino	4,230	~2.0%
Korean	1,560	~0.7%
Japanese	1,320	~0.6%
Sri Lankan	1,110	~0.5%
Other Asian groups	9,576	~4.5%

Total Asian population: 41,436

Notes:

- "Other Asian" includes Thai, Vietnamese, Cambodian, Malaysian, Bangladeshi, and other smaller communities.
- People can identify with more than one ethnicity, so these numbers may overlap.
- Chinese and Indian communities make up the largest Asian subgroups in Wellington, together accounting for over half of the city's Asian population.

MELAA Breakdown – Wellington City (2023 Census)

Subgroup	Estimated Population	% of Total Population
Middle Eastern	~1,230	~0.6%
Latin American	~1,020	~0.5%
African	~3,360	~1.6%

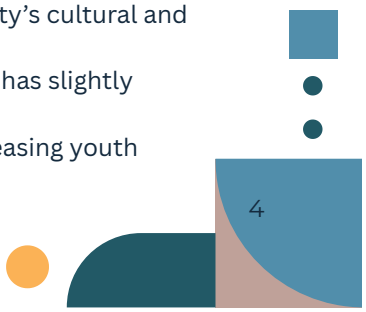
Total MELAA population: ~5,610

Notes:

- These figures are rounded estimates based on regional data and ethnic group summaries from Stats NZ.
- African communities in Wellington include Sudanese, Ethiopian, Somali, Nigerian, and others, many of whom are active in civic and cultural spaces.
- Middle Eastern groups include Palestinian, Syrian, Iranian, and Lebanese communities.
- Latin American representation includes Brazilian, Chilean, Colombian, and Argentinian communities.

Key Insights

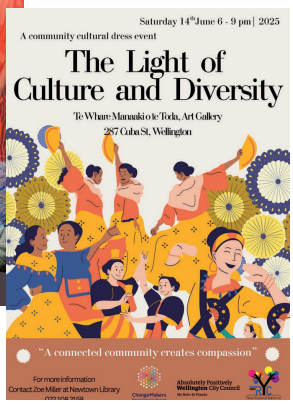
- The Asian population has grown significantly, now representing over 1 in 5 Wellingtonians.
- MELAA communities continue to expand, contributing to the city's cultural and civic life.
- European/Pākehā remains the largest group, but its proportion has slightly declined since 2018.
- Māori and Pacific communities show modest growth, with increasing youth representation.



Each month, around 240 people, including families from all walks of life, take a significant step in their journey by becoming New Zealand citizens through two official ceremonies hosted by Wellington City Council. Led by the Mayor or a Council representative, these events are more than just a formality - it's a celebration. Citizenship opens doors to employment, education, and full participation in community life.

Wellington's ethnic diversity is one of its greatest strengths. Over the years, the city has become home to more than 160 ethnic groups, with growing communities in suburbs like Newtown and Kilbirnie. You can see it in the languages spoken on the street, the festivals that light up the calendar, the city's architectural landscape, and the flavours served in local eateries. It's a city where cultures don't just coexist; they enrich one another.

Council Ethnic and Multicultural Initiatives



Wellington City Council helps ethnic communities feel welcome and included by running different programmes and activities that bring people together, celebrate different cultures, and support strong, connected communities. These include:

- **Multicultural Events**: The Council actively supports and promotes events such as Diwali, Japan Festival, Lunar New Year, and other cultural celebrations that showcase Wellington's diversity.
- **Funding Support:** Grants are available for community-led projects that celebrate ethnic diversity and promote intercultural understanding.
- **Multicultural Community Specialist:** A dedicated role within Wellington City Libraries helps improve services for speakers of other languages and supports migrant integration.
- **Welcome Kits for Refugees:** New arrivals receive resources to help them settle and feel at home in Wellington.
- **Ethnic Advisory Group:** In 2024, the Council established an Ethnic Advisory Group to give ethnic communities a formal voice in civic decision-making.

Ethnic Communities Advisory Group

About

The Ethnic Communities Advisory Group is a collective of community leaders who provide strategic advice to Wellington City Council on matters affecting ethnic communities. The group champions inclusive policy, equitable engagement, and culturally responsive governance.

Role of the Advisory Group

The Ethnic Communities Advisory Group (ECAG) was set up in December 2024 to strengthen the voice of ethnic communities in Council decision-making. After receiving over 40 applications, twelve members were selected to reflect Wellington's cultural diversity. Inducted on 10 December, they bring lived experience, cultural knowledge, and leadership. Together, they offer fresh perspectives and help connect communities, advocate for inclusion, and guide Council on issues that matter to Wellington's ethnic groups.

Our Responsibilities

Advise Council on issues affecting ethnic communities

Promote inclusive engagement

Support Council's strategic goals around diversity and equity

Meet the Team

Bayan Abu-harbid

Bayan Abu-Harbid, MInstD – Accomplished Portfolio Manager with governance expertise and a strong track record across public service, UN, and community sectors. Skilled in strategic leadership, stakeholder engagement, and cultural intelligence, I am committed to strengthening equity and inclusion in decision-making for lasting societal impact.

Chelsea Wong She

Chelsea is a New Zealand-born Chinese with Jung Seng heritage. She serves on the NZ Chinese Association Wellington Branch committee, supporting cultural, educational, and community initiatives. Her work includes revitalising Cantonese heritage in Aotearoa. Chelsea holds a Bachelor of Commerce and is a qualified Chartered Accountant.

Faiza Abukar

Faiza Abukar, originally from Somalia, is a dedicated community advocate, volunteer, gardener, and henna artist. She supports diverse communities with honesty and fairness, listening to people's struggles and carrying their voices to decision-makers. Through her work, Faiza creates spaces of healing and connection. She is seeking reappointment to the Ethnic Advisory Group.

Judah Seomeng

Judah Seomeng, born in Botswana, is a Wellington-based musician, researcher, and community advocate. He serves as General Manager at ChangeMakers Resettlement Forum and is pursuing a PhD in Ethnic Studies. Judah champions migrant inclusion, cultural equity, and creative collaboration, bridging communities through music, research, and grassroots leadership across Aotearoa New Zealand.

Manisha Morar, QSM

Manisha is a prominent and dynamic leader in Wellington's Indian community. With extensive experience of building a resilient and thriving Indian community centre and diversity initiatives, she offers deep cultural insight and a collaborative approach. Her work bridges communities & businesses, fosters inclusion, and champions the voices of New Zealand's Indian diaspora across civic, cultural, and policy platforms.

Nora Abdelrahman

Nora, from Wellington's Egyptian community, is completing her degree in Political Science and International Relations. She founded and leads Victoria University's first Arab Society, promoting cultural pride and connection. Passionate about diversity and cross-cultural understanding, she aims to advocate for representation, dialogue, and inclusivity locally and on the global stage.

Nuzha Saleem

Nuzha Saleem is a Wellington-based researcher, advocate, and PhD candidate focused on refugee youth and inclusion. Her journey began through volunteering with Syrian newcomers. As a KiwiNet Emerging Innovator, she develops tools to foster belonging. Her work highlights resilience, joy, and ambition in refugee communities across Aotearoa New Zealand.

Rachel Qi

As a business, arts and multicultural exchange professional, Rachel has extensive business and trade, arts and culture, community and governance experience in New Zealand and internationally. She is a highly-motivated, future-focused and innovative person, with excellent stakeholder relationship management, communications, strategic planning, leadership and management skills.

Sam Adaickalam

Sam brings over 20 years of government and community leadership, backed by a doctorate and two master's degrees. He advocates for Wellington's Indian, Pacific, Māori, and Asian communities, championing development, inclusion, and cultural identity. His academic and grassroots experience helps bridge cultures, empower communities, and build resilience across the region.

Sum Sum Tsui

Sum Sum is an eighth-generation Chinese New Zealander and a passionate young leader, actively engaged in strengthening the Wellington Asian Youth community. She works to celebrate cultural heritage, foster connections among diverse groups, and empower other young people to embrace leadership roles, ensuring the ethnic communities thrive for future generations.

Warkina Tujuba

Warkina Tujuba is President of the African Communities Council Wellington and a Community Coordinator at Creative HQ. He's a bold advocate for ethnic representation, civic engagement, and systemic change. Through leadership, innovation, and activism, Warkina empowers African communities and challenges tokenism to build inclusive, resilient futures across Wellington.

Yarang Mom

Yarang Mom is originally from Cambodia and has been living in New Zealand since 2001. He holds degrees from Victoria University and currently serves the Wellington Cambodian Buddhist Community, as well as being an Advisory member of the ECAG. Through his work with ECAG, Yarang has gained valuable insights, built meaningful connections, and actively contributed to the vibrancy and inclusivity of Wellington city.

How we worked

Meeting Activity and Engagement

Over the reporting period, the Ethnic Communities Advisory Group convened a total of 10 hybrid meetings held on Council premises, including two joint sessions with other advisory groups.

In addition, ECAG held three members only meetings, which were independently arranged and facilitated by the group's co-chairs.

Beyond formal meetings, co-chairs met regularly in advance of each monthly session to coordinate with guest speakers and Council staff. These preparatory engagements included discussions on agenda development, logistical planning, and ongoing communication with ECAG members.

ECAG members and co-chairs also dedicated significant time outside of scheduled meetings to prepare materials, review pre-agenda items, and drafting of formal submissions.

Throughout the year, ECAG co-chairs met with the chairs and co-chairs of other advisory groups twice to foster cross-group collaboration and alignment on shared priorities.

Co-Chairs

Rachel Qi and Warkina Tujuba stood uncontested as co-chairs and were confirmed at a meeting on 4 March 2025.

Communications

The ECAG established a members only WhatsApp group chat for communications outside of meetings, as well as the WCC distribution list: ECAG@wcc.govt.nz

Special Thanks

ECAG sincerely thanked Alisi Folaumoetu'i from Democracy Services for her clear guidance, and steady support. Her behind the scenes coordination helped the group stay organised and focused. Alisi's understanding of ECAG's purpose and people made a real difference, and her support was felt throughout the year

Co-Chair *Reflections*

Warkina Tujuba

Serving as co-chair of the Ethnic Communities Advisory Group in its first year has been an immense honour. Over the past nine months I have had the privilege of working alongside an incredible group of people representing the vastness and richness of Wellington's ethnic communities.

One of our first steps was to restructure meetings so that agendas reflected the real needs of our communities. This shift has allowed us to focus on what matters most and to engage with the depth and diversity within the bracket of "ethnic" communities in understanding we are all so different, but there are core themes to tackle.

We have also faced a tug of war over the proposed changes to the Advisory Group structure. Our stance has been clear: this group must remain a genuine platform for marginalised and often overlooked voices to shape decisions that influence their city. We do not believe the changes enhance this and have worked to vocalise this.

It has been my honour to speak on behalf of the Advisory Group and the communities we represent at Council on the Wellington City Safety and Wellbeing Plan, the Long-Term Plan Amendment, and the Long-Term Plan itself. Each engagement underscored the responsibility we carry to advocate with courage and clarity.

This journey has been a significant learning experience, and I want to extend my thanks to my co-chair Rachel, the incredible members that made up the rest of the Advisory Group, as well as Alisi and the Democracy Services team for their unwavering support.

As Helen Clark once said, "New Zealand has an obligation to be a good international citizen. We show that by the way we treat refugees and migrants who make their home here." This is the spirit we must continue to uphold.

Ngā mihi nui,

Warkina Tujuba

Co-Chair, Wellington City Council Ethnic Communities Advisory Group

Co-Chair *Reflections*

Rachel Qi

As Co-Chair of the Ethnic Communities Advisory Group (ECAG), it has been a privilege to work alongside a dedicated team, each member bringing the voice, insight, and lived experience of their own communities.

ECAG serves as a vital bridge between Wellington's ethnic communities and the City Council, helping ensure that diverse perspectives are heard, understood, and reflected in Council policies, programmes, and services. Over the past year, the group has played a key role in elevating minority voices on important issues and promoting meaningful engagement across the city.

Advisory Input: ECAG has provided strategic advice on key Council initiatives, including the Long-Term Plan, Annual Plan, Local Water Done Well consultations, the City Safety and Wellbeing Plan, and changes to the Advisory Group model, ensuring that the needs of ethnic communities are considered at every stage.

Community Engagement: The group has facilitated dialogue between Council and ethnic communities through the Ethnic Communities Forum and consultations on housing, city safety, small business, city revitalisation, election engagement, and cultural events.

Collaboration: ECAG has worked closely with Council teams, including Engagement, Social and Cultural Wellbeing, Community Services, and Policy, to embed ethnic perspectives into work programmes and strengthen inclusive outcomes.

ECAG remains an indispensable part of the Council's commitment to inclusion, equity, and community engagement. By drawing on the expertise and energy of the members, the Council is better equipped to build a welcoming, vibrant, and well connected Wellington.

We look forward to continuing our partnership with the Council and working together to create a future that reflects Wellington's diversity.

Ngā mihi nui,

Rachel Qi

Co-Chair, Ethnic Communities Advisory Group (ECAG)

Engagement Areas

Topics we discussed

The ECAG discussed the following topics at their meetings:

- LTP Amendment, Annual Plan and Local Water Done Well consultation. ECAG submitted a written submission to these consultations, and spoke to their submission at the Committee meeting.

- WCC City Safety and Wellbeing Plan
- Toi Pōneke
- Elections Engagement
- Advisory Group Model Review
- Ethnic Communities Forum 2025

Other areas of Interest

Topics that the group were interested in, but didn't get to hear about or discuss due to time:

- Te Toi Mahana
- Rates
- Community funding
- Small businesses
- Wellington's Multicultural Strategy

ECAG in the Community

Members contributed to civic life through:

- ANZAC Day Citizen's wreath-laying
- Citizenship ceremonies
- Lunar New Year
- Japan Festival
- Multicultural Festival
- Diwali

TIRITI-BASED
MULTICULTURAL DAY
CELEBRATIONS
2025
Huarahi Hou

TE REO MĀORI
World Languages

WCC City Safety and Wellbeing Plan

While the City Safety and Wellbeing Plan contains many positive initiatives, it falls short in addressing systemic inequities affecting marginalised groups.

Two key gaps stand out:

1. Ethnic Patrols Remain Unfunded – Despite being named as delivery partners in the plan, Ethnic Patrols receive no financial support. Volunteers cannot sustainably cover late-night or high-risk shifts without paid positions. Funding patrols would provide a trusted, community-based presence, help capture unreported incidents, and address existing distrust in police processes.

2. Lack of Explicit Consultation with Ethnic Communities – The plan speaks of a "community-centric approach" but fails to establish structured engagement with those most affected, including ethnic communities, young women, and gender minorities. Co-design is critical to ensure meaningful and inclusive solutions.

Recommendations Made:

- Allocate funding for paid Ethnic Patrols.
- Formalise consultation with ethnic communities, beginning with the Ethnic Communities Advisory Group.
- Expand nightlife safety measures to include anti-racism training.
- Publish disaggregated data on racially motivated incidents and gendered harassment to inform targeted interventions.

Conclusion:

For Wellington to be truly safe, the plan must prioritise those most vulnerable. By adopting these changes, the City can move from promises to delivery, ensuring safety is not just for some, but for all.

Ethnic Communities Forum 2025

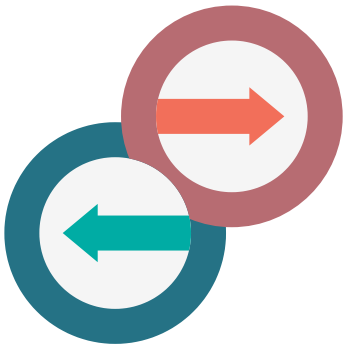
Held on Saturday, 23 August 2025, at the Wellington Indian Cultural Centre, this Wellington City Council-run, community-led event, developed in partnership with Wellington City Council's Engagement Team, successfully brought together over 100 participants from Wellington's diverse ethnic communities to discuss priority issues facing our city.
The forum generated good community input on four critical areas, by the presentations from Council panellists:

- **Housing:** Updates on Council initiatives, with discussions on affordability, rental security, and culturally appropriate housing.
- **City Safety:** Overview of new safety measures and community-led solutions.
- **Small Business:** Support tools and challenges faced by ethnic business owners.
- **City Revitalisation:** Feedback on major projects and how they can better serve ethnic communities.

The forum emphahised the need for dedicated spaces for ethnic communities to engage with council. The participation of diverse community leaders, combined with expert Council updates, allowed dialogue and perspectives.

We wish to acknowledge the exceptional work of the Council's Engagement Team, whose professional support and collaborative approach were instrumental to the event's success. We particularly thank the Council panelists for their comprehensive updates on critical topics, which provided essential information that greatly enhanced the quality of discussion.
We also thank Chief Executive Matt Prosser for his opening remarks, which underscored the Council's commitment to genuine partnership with ethnic communities.

Advisory Group Model Changes



Our Views

Following a review on the advisory group model, Council is implementing changes to the way advisory groups work. The aim of the review was to identify a model that could best lift diverse community voices and integrate them into strategic decision making, while supporting intersectionality and enabling more transparent and collective advice.

- The ECAG discussed the proposed changes to the Council Advisory Groups Future Model. The ECAG members raised concerns with the proposed changes which included the proposed reduction in number of ECAG members, the reduction in monthly advisory group meetings and intended recruitment process for the new ECAG members.

The ECAG raised its views to the Council, Counsellors and met with co-chairs of other advisory groups to discuss. The ECAG raised the following feedback:

- Maintain total of 12 members from its existing advisory group members
- Maintain paid monthly meetings for ECAG

The proposed new model is intended to improve the way the Council engages with communities, especially those communities that find it hardest to be heard. The ECAG feel it will be hard to achieve this intention with only eight members. Approx. 24% of Wellington City's population are ethnic communities (Asian, Middle Eastern/Latin American/African), with another 2.8% of "other ethnicity).
The ECAG believe maintaining 12 members will ensure greater representation of ethnic communities in wellington, and therefore a greater ability to support Council strategic decisions. Ensuring that these voices are heard and integrated into decision-making will enhance accessibility and inclusion in Pōneke. ECAG believe it is important to show awareness of supporting diversity and ethnic communities.

Keeping same members allows the ECAG to build on existing momentum currently built.

Key advantages of maintaining 12 members in the ECAG:

- Enhancing representation and equity
- Improved decision making
- Building trust and strengthen relationships and leveraging on existing relationships within community groups
- Cultural insights from direct community groups
- Improved social cohesion and inclusion

Councillor INSIGHTS

"We're not addressing all the issues.
There's a lot to do still. Housing for some migrants and refugees is a big concern."

Councillor Ray Chung

"The ethnic communities have a lot of potential. Council need to engage more with them."

Councillor Nureddin Abdurahman

"Council services must reflect the people they serve. Embracing ethnic communities means designing with diversity in mind so everyone feels seen, supported, and included."

Councillor Diane Calvert

"One of the greatest privileges has been engaging with Wellington's ethnic communities—understanding their needs and witnessing how they come together to celebrate diversity."

Councillor Tony Randle

"Ethnic communities is what gives Wellington it's soul, colour and interesting vibes. That is why we welcome all of our communities. You make us the special place that we are"

Deputy Mayor Laurie Foon

Newtown is the Earth's Heaven

Faiza Abukar

Newtown is the earth's heaven,
where strangers sit side by side,
a bowl of soup becomes a prayer,
and stories flow like rivers wide.

The library is a second home,
a safe embrace, a gentle light,
where knowledge heals, where hearts belong,
where day feels softer than the night.

The gardens bloom on every street,
with hands that give, not ask for more,
a gift of fruit, a gift of hope,
left freely at a neighbour's door.

The music rises — piano keys,
a guitar strummed with quiet grace,
each note reminding weary souls
that love still has a sacred place.

Newtown is no "bad suburb,"
it is the pulse, the heart, the song,
a living proof of what can grow
when communities are strong.

So let the media tell its tales,
we know the truth, we see, we live:
Newtown is the earth's heaven,
because it knows the power to give.

THE EDITOR HAS MADE EVERY REASONABLE EFFORT TO ENSURE THE ACCURACY OF THE INFORMATION PROVIDED IN THIS REPORT IS CORRECT. ANY ERRORS OR OMISSIONS ARE UNINTENTIONAL.

Pacific Advisory Group
Annual Report

1 July 2024 – 30 June 2025

Foreword from the Chair and Deputy Chair

Talofa lava, Fakaalofa lahi atu, Mālō e lelei, Kia orana, Ni sa bula vinaka, Taloha ni, Ia orana, Kam na mauri, Håfa Adai, Kia ora, and warm Pacific greetings,

As Chair and Deputy Chair of the Pacific Advisory Group (PAG), we are honoured to reflect on a year of deep engagement, cultural advocacy, and strategic contribution. This year has been one of both celebration and challenge. We have continued to amplify the voices of Pacific peoples in Wellington, ensuring that our communities are not only heard but respected and included in Council processes.

This year brought significant challenges, including the advisory group model changes, which sparked important conversations about representation, equity, and cultural responsiveness. Throughout this, PAG has remained steadfast in its commitment to uphold Pacific values and advocate for a model that reflects the diversity and mana of our communities.

Our members have contributed to key Council initiatives, including the Fale Malae project, the Long-Term Plan, and climate adaptation strategies. We have also supported Pacific Language Weeks, civic engagement efforts, and cultural events such as the Pasifika Festival that strengthen identity and belonging for our communities.

We acknowledge the resilience of our communities, especially as they continue to face housing pressures, economic challenges, and the impacts of displacement. Despite these barriers, Pacific peoples continue to enrich the life of our city through their leadership, creativity, and enduring cultural presence.

As we reflect on the past year, we are filled with gratitude for the collective strength and wisdom of our PAG members. Each person who has served, past and present, has brought their heart, cultural knowledge, and leadership to this space. Their contributions have shaped the work of PAG and ensured that our communities are represented with integrity and care. We acknowledge the time, energy, and commitment that our members have given, often beyond what is seen. Their service has upheld the values that we hold very dear - respect, unity, and service to our people. It is through their dedication that PAG has remained a strong and trusted voice within Council, and we honour them for walking this journey with us.

Looking ahead, we are committed to ensuring that PAG evolves in a way that honours our legacy, retains institutional knowledge, and builds a sustainable future for Pacific leadership in local government. As we enter this next chapter, we do so with a deep sense of responsibility to those who came before us and to those who will follow. We recognise that the strength of PAG lies not only in its advocacy, but in its ability to hold space for Pacific values, voices, and visions within civic decision-making.

We thank our fellow members for their courage, wisdom, and service. We also acknowledge the support of Council staff, community partners, and all those who have walked alongside us.

Together, we look forward to strengthening relationships, uplifting our communities, and ensuring that Pacific peoples remain at the heart of Wellington City's future.

Fa'afetai tele lava, Vinaka vakalevu, Kilisou Shapwur, Meitaki ma'ata, Mālō 'aupito, Fakaaue lahi, Fakafetai and thank you.

Maria Mitimeti and Laauli Joseph Seupule

Our Journey

The Pacific Advisory Group (PAG) was formally established in 2003 by Wellington City Council following the adoption of the *Intercultural Relationships Framework*. This was a landmark moment in the Council's commitment to equity and inclusion, recognising the need for Pacific peoples to have a dedicated space for influence and advocacy within local government.

The formation of PAG was significant not only for its timing but for its composition. It was designed to include representatives from Wellington's main Pacific nation groups—Samoa, Cook Islands, Fiji, Niue, Tonga, Tokelau, Tuvalu, Melanesia, and Micronesia. This structure enabled the diversity of Pacific identities and experiences to be reflected in Council advice and decision-making.

From its inception, PAG has served as a cultural and strategic bridge between Council and Pacific communities. Members have brought lived experience, cultural knowledge, and leadership, deeply rooted in their communities. This connection has enabled PAG to provide insights that reflect the realities, aspirations, and challenges of Pacific peoples in Wellington City.

While the Pacific population is a smaller proportion of the Wellington City population it remains a vibrant and influential community, particularly in areas such as Newtown, Berhampore, and the Northern suburbs. Pacific peoples contribute significantly to Wellington's cultural, social, and economic fabric, despite facing challenges such as housing insecurity, displacement due to gentrification, and underrepresentation in civic spaces.

The need for representation is underscored by the fact that Pacific communities often maintain strong ties to Wellington through work, education, faith, and cultural networks, even when they reside outside the city boundaries. PAG's role in advocating for these communities both within and beyond the formal geographic limits is essential to ensuring that Pacific voices are not only heard but centred in Council processes.

Our Members

As at July 2025, PAG members included representatives from Samoa, Cook Islands, Fiji, Melanesia, Micronesia, Niue, Tonga, Tokelau, and Tuvalu.

1. Maria Mitimeti – Niue (Chair)
2. Laauli Joe Seupule – Samoa (Deputy Chair)
3. Āpeafusia Katalina Semisi – Tokelau
4. Divesh Prakash – Fijian
5. Inangaro Vakaafi - Niue
6. Mary Moeono-Kolio – Samoa
7. Nate Rigler Siguenza – Micronesia
8. Nia Bartley – Tuvalu
9. Sandra Tisam – Cook Islands
10. Suliana Vea – Tonga

In the past year we farewelled seven members, including former co-chairs Natalia Fareti and Anthony Carter, and in December 2024 and we welcomed two new members, Divesh Prakash and Mary Moeono-Kolio.

Our Contributions

PAG brings knowledge and insight into Council about how the different needs of Wellington's Pasifika communities can be addressed in the context of Council's roles and responsibilities. It is recognised that members come from and remain connected to their communities. From this foundation, members share their expertise and lived experience in this advisory role and engage with their communities and others as part of the wider Council consultation processes.

During the 2024–2025 financial year, PAG has continued to play a vital role in representing Pacific communities across Wellington City. Through our work on key initiatives such as the Fale Malae project, the Long-Term Plan, and climate adaptation strategies, we have demonstrated the importance of Pacific leadership in civic life. We have also supported cultural events such as the Pasifika Festival and language weeks that celebrate our identity and strengthen our collective wellbeing.

We wish to express our ongoing support for the Fale Malae development, and hope that Council will continue to support the initiative the Fale Malae Trust wish to bring to the city.

This year, we have contributed to the following areas:

- Provided strategic advice on the Fale Malae development and cultural heritage planning
- Participated in the Long-Term Plan consultation process, advocating for Pacific priorities
- Supported Pacific Language Weeks and cultural events across the city
- Engaged in discussions on climate adaptation and resilience planning
- Contributed to the review of the Council's advisory group model, advocating for culturally responsive representation
- Maintained strong community connections through talanoa sessions and outreach
- Highlighted the impact of gentrification and housing pressures on Pacific communities
- Contributed to planning and policy discussions on water infrastructure, including the Three Waters Water Reform

- Engaged in climate change mitigation and adaptation initiatives, while advocating for funding criteria that support equitable engagement and participation from Pacific communities

PAG's work this year has focused on continuing the legacy of its founding members while laying a sustainable foundation for future Pacific leadership. We continue to offer our support for the Council to grow its cultural competency in relation to Pacific communities.

We fundamentally believe that Council needs Pacific people in decision-making positions. The changes to membership numbers and representation proposed in the model change to advisory groups reflects a lack of Pacific capability within the Council (around the table and within the organisation). This has major consequences for Pacific people in Wellington.

Our Legacy

In 2024, the Pacific Advisory Group (PAG), in collaboration with Council staff and community partners, launched a three-year cultural festival journey designed to reflect the Pacific experience of migration, belonging, and identity. This initiative, deeply aligned with the Tagata o le Moana Strategy, has become a cornerstone of our cultural engagement efforts, offering a powerful platform for storytelling, connection, and celebration.

The journey began with the theme 'Homeland', honouring our ancestral roots across the Pacific. A commissioned Pasifika artwork—a stone sculpture by artist Leo Semau—was introduced as a blank canvas, symbolising the beginning of our shared narrative. Festival attendees were invited to meet the artist and reflect on the concept of homeland, setting the foundation for a collective exploration of Pacific identity.

In 2025, the journey continued with the theme 'Journey', focusing on migration stories and the voyage across the sea. The 2025 Pasifika Festival, held at Waitangi Park, was a vibrant and unifying celebration of Pacific cultures, drawing communities from across Wellington and beyond. The festival featured traditional and contemporary music, dance, food, and visual art, creating a space of joy, pride, and cultural affirmation. Leo Semau returned with the partially carved anchor stone, inviting attendees to contribute to its transformation. This interactive element became a powerful symbol of shared experience and resilience, reinforcing the festival's theme and deepening community engagement.

The success of the 2025 Pasifika Festival was reflected in the high level of community participation, overwhelmingly positive feedback from attendees, and strong media coverage. PAG played a key role in supporting and promoting the event, contributing to planning discussions, cultural programming, and outreach efforts. Our involvement ensured the festival was inclusive and representative of the diverse Pacific nations, amplifying Pacific voices and visibility across the region.

A special acknowledgement is extended to the Wellington City Council Festival Team, led by Zoe Christall and Karl whose tireless work and commitment ensured that the voices of our communities were seen and heard throughout the journey of the festival. Their leadership

was instrumental in the creation of a Pacific youth talent incubator, a visionary initiative designed to nurture emerging Pacific creatives and ensure the legacy of PAG continues through the next generation. This incubator provides a pathway for young artists, performers, and storytellers to develop their craft, connect with mentors, and contribute meaningfully to the cultural fabric of Wellington.

Looking ahead, the final phase of our festival journey will be guided by the theme 'Arrival'. This chapter will celebrate the establishment of Pacific identity in Aotearoa and honour the contributions of Pacific peoples to New Zealand's cultural landscape. The completion of the anchor stone sculpture will serve as a lasting symbol of belonging, resilience, and collective strength.

As we move into this next chapter, our aspiration is for the Pasifika Festival to evolve into a truly community-led celebration, shaped by the voices, creativity, and leadership of Pacific peoples. We envision a future where our communities continue to lead, inspire, and carry forward the stories that define us, with the Pasifika Festival as a vibrant platform for cultural expression and connection.

Challenges and Reflections: Advisory Group Review

The review of Council's advisory groups has brought significant shifts [Suggested revision: Council's advisory group restructure introduced significant changes, prompting PAG to reflect on its impact and the path forward.], prompting PAG to reflect on its impact and the path forward. While the intention behind these changes was to enhance strategic alignment and connectivity, the implementation process prompted important conversations among current and former PAG members, as well as within our wider Pacific communities.

The restructure involved the removal of ethnic-specific seats, a reduction in group size to eight members, and a requirement for existing members to reapply under new criteria. These changes were introduced without a clear transition plan, which led to the unintended loss of institutional knowledge and the disruption of long-standing relationships built on trust, service, and cultural leadership.

From a Pacific perspective, the process highlighted a need for deeper relational engagement and cultural understanding. Both elements foundational to meaningful partnership. The communication approach challenged principles of open, respectful dialogue and impacted confidence and trust. It also underscored the importance of recognising Pacific values such as collective identity, reciprocity, and continuity in leadership.

One of the key concerns raised by PAG members is the separation of 'lived experience' from 'representation' within the new model. For Pacific peoples, these concepts are deeply interconnected. Our identities are shaped by our cultures, histories, and lived realities, which in turn inform how we serve and represent our communities. The current criteria do not fully reflect this holistic perspective. Despite this, our communities remain strongly connected to Wellington through work, education, and cultural ties, and must continue to be recognised and included in civic decision-making.

Despite the challenges, PAG has actively supported a constructive path forward, centered on Pacific values and inclusive practices one that centers Pacific values, fosters inclusive practices, and strengthens cultural leadership across Council spaces. We have actively contributed to processes that promote belonging and respect for Pacific peoples. This includes supporting recruitment practices that are welcoming and culturally responsive, offering guidance to ensure Pacific candidates are engaged in ways that reflect our values of hospitality, relational depth, and collective identity. We have encouraged approaches that go beyond procedural fairness to embrace the spirit of inclusion where Pacific voices are not only present but meaningfully heard and valued.

PAG remains steadfast in its role as a connector between Council and Pacific communities, working to ensure that decision-making processes are informed by lived experience and cultural insight. Looking ahead, we invite Council to reflect on these experiences with openness and humility, and to work alongside our communities to uphold the mana of our communities and reflect the aspirations of Pacific peoples in Wellington City.

Acknowledgements

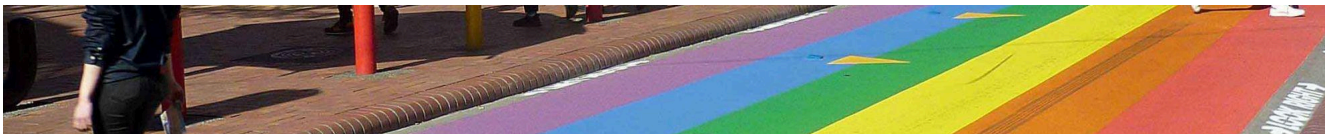
We acknowledge Sam Hutcheson and her work alongside PAG in the review of the Advisory Groups. We honour her contributions with immense gratitude. Sam embodied the values of kindness, sincerity, and respectful engagement. From our very first talanoa, her genuine care and thoughtful listening stood out. She approached our feedback with humility and integrity, ensuring that the voices of PAG were heard and considered with compassion.

We also extend our sincere appreciation and gratitude to Alisi Folaumoetu'i for her dedicated service and unwavering support of PAG and our Pacific communities. Alisi's contribution has been marked by deep respect, humility, and a strong sense of duty to our people. Her commitment to nurturing relationships, upholding cultural integrity, and ensuring that Pacific voices were heard and valued has been evident in every aspect of her work. She brought wisdom, calm, and clarity to our spaces, and her presence strengthened the collective leadership of PAG. Her service has been a reflection of the values that guide our communities, respect for others, care for relationships, and a deep responsibility to serve with heart. We thank Alisi for her time, energy, and the grace with which she carried out her role. Her contribution will not be forgotten.

Appendix I: Member Attendance

There were 12 meetings within the July 2024 – June 2025 period for which this report covers.

	Total	**Attendance**
Anthony Carter (term ended Oct 2024)	2	100%
Āpeafusia Katalina Semisi	9	75%
Fiemalie Pe Fale (resigned April 2025)	7	78%
Inangaro Vakaafi	6	50%
Laauli Joseph Seupule	11	92%
Maikali Kilione (resigned Oct 2024)	1	50%
Maria Clark	12	100%
Natalia Fareti (term ended Oct 2024)	2	100%
Nathaniel Rigler	8	67%
Nesleen Pentani Hamilton (resigned Nov 2024)	2	66%
Nia Bartley	7	58%
Sandra Tisam	8	67%
Suliana Vea	9	75%
Divesh Prakash (appointed in Dec 2024)	7	88%
Mary Moeono-Kolio (appointed in Dec 2024)	4	50%



WCC Takatāpui & Rainbow Advisory Council (TRAC)

2024-2025 Annual Report

Guiding Whakataukī

E koekoe te tūī, e ketekete te kākā, e kūkū te kererū.

The tūī squawks, the kākā chatters, the kererū coos - it takes all kinds of people.

Introduction

The Takātapui & Rainbow Communities Advisory Council (TRAC) is an advisory group of the Wellington City Council with the purpose to:

- Assist and advise the City Council on how to grow a great City where diverse rainbow people and communities thrive and contribute to the city's priorities.
- Bring insight to Council to ensure Rainbow[1] inclusion in our city via our lived experiences

Created in 2021, TRAC has completed the fourth and final year of its current formation as an advisory group. As part of the new advisory group model, TRAC will be disestablished in order for a new iteration to be formed in 2026.

Note that as an advisory group we should not be seen as representing all facets of rainbow people in the city. Specific consultation with the rest of the LGBTTQIA+ community will often bring further value, which we have often advocated for where appropriate in various Council projects. This is especially important as Takatāpui and Rainbow residents make up 11% of this city's population and we are a group of 12 members.

In the last 4 years, TRAC has advised Wellington City Council on ways to make the city a great place for all people to live, work and visit. We would not be able to promote this vision without the considerable efforts of our support system, including Councillors Iona Pannett and Teri O'Neill for enabling the Rainbow Action Plan, council officers (many of whom are also members of the Rainbow Communities we serve), Karepa Wall, our leadership sponsor who brought well considered guidance and experience to our hui, and our Democracy Advisor Steph James for helping the rōpū function effectively.

In the last year we also want to specifically thank the Strategy, Policy & Research Team for their genuine and consistent efforts in consultations with TRAC, and Sam Hutcheson's rigorous mahi into the formulation of the new advisory group model.

Noho ora mai,
Rākau Buchanan & Sam Low (Co-Chairs) | 28 August 2025

[1] *Rainbow as an umbrella term, including but not limited to: Māori identities such as Takatāpui identities, tāhine, or lesbian, gay, bisexual, transgender, queer, intersex individuals, asexual, or identities of the Pacific such as MVPFAFF+, fa'afafine and fakaleiti communities.*

This Year in Review

Monthly Processes: TRAC meets for two hours each month. Meetings are hybrid in nature with about a quarter of attendees joining online. A typical agenda entails opening & closing karakia, updates from WCC Councillors and ELT, and presentations by Council representatives with space for open discussion/feedback. Although it takes more time, during feedback sessions, we have found breaking out into groups of 2-4 and returning as a larger group to be effective in ensuring every member's voice is included.

Group Composition: Membership currently consists of a mixture of professionals, students, academics, and community advocates and members who are connected to the LGBTTQIA+ community in Wellington city.

Council Officers
Democracy Advisor: Steph James
Executive Leadership Team (ELT) member: Karepa Wall

Councillors
Iona Pannett
Teri O'Neill (alternate)

Membership (as of Aug 2025)
Rākau Buchanan (Co-chair as of Nov 2024)
Sam Low (Co-chair)
Vinod Bal - resigned
Jamie Clarke
Louis Crawford
Caitlin Hickman
Tatyana King-Finau (Takatāpui seat)
Bryan Patchett
Quack Pirihi (Takatāpui seat) - resigned
Miniruwani Samarakoon
Alex Sawyer
Maggie Shippam - resigned

Submissions Made

WCC LTP Amended (April 2025), key topics to TRAC**:**

- **Water Reform:** We reiterated that where water rates are introduced, there needs to be deliberate consideration for who is impacted when cost of living is increased. When wellbeing is deprioritized, rainbow communities - especially our disabled and/or takatāpui and migrant whānau - are always one of the firsts to be impacted. We called for clear, supportive policies or subsidies to be considered.

- **Paneke Pōneke bike network:** We supported continuous investment into the city's bike network, out of consideration of cost of living, environmentally-friendly modes of transport and safety.
- **Te Awe Māpara – the Community Facilities Plan**: We strongly oppose the reduction of funding to community facilities in the City. We support the upgrading of venues for more inclusivity with accessibility, functionality, staff training, and so on. WIth the heavy focus on water reform, the qualitative aspects of a city should not be deferred.
- **Begonia House (Option C - Do Minimum) OR Option E - Meets Scope):** As one of the rare public facilities that is free-to-use, we support the proposal to save the building.

Additional Training

As per previous years, no official training sessions have been arranged for the group.
As co-chairs (Sam & Rākau) we have, in our own time, formulated personal development plans for this role. Where appropriate and within our capacity we also facilitate different items for practice. We appreciate the group and Council systems have been flexible enough to enable our growth as co-chairs.

Challenges

- **Lack of Intersectionality** (e.g. inclusion of rainbow migrants and people of colour, disabled people) in solutions being presented to the group has been consistently a challenge we face. However, we also acknowledge there has been good growth in the group in this area, as we notice more confidence and support for these voices around the table. On the other hand the growth in Council policies on intersectionality with rainbow issues has been slow and at times disappointing to the group.
  To mitigate this we encourage such conversations to continue at governance and operational level, and more flexibility for policies to be shaped for improvement.

- **Tick-Box Exercise**: While occurring less often this year, mismatch of project timelines meant at times there is still the issue of projects coming in at a point where there's not meaningful engagement or space for feedback to actually be incorporated. In these items it becomes evident the presenter is unaware of why they're consulting with TRAC and what they want out of the advisory group.

- **Closing the Loop:** There is still a lack of indication to the group on what has been done with our advice. Perhaps as part of debriefing, project teams may consider how input from their advisory group consultation have or have not been implemented, and this information is passed onto the groups for their consideration also.

- **Tight Agenda:** Our newer members have felt sometimes there is not enough time in a meeting and that they have had to hit the ground running. This may be good and bad, as it means the advisory group is utilised well. Internally in TRAC, perhaps a longer and more specific period for personal introductions could have been arranged. From a bigger picture, a culture that overprioritises results over people could lead to a higher turnover rate of members, leading to disruption in our work. In the new

model it is worth deliberately including allowance for whakawhanaungatanga or internal workshops to re-centre our group culture. This will build trust among group members and between the group and council staff.

- **'Grinding to a Halt' for New Model:** The disestablishment related to the shift to the new model appears very sudden, especially more so for our new members who have only just begun to gain footing since Feb 2025. With our rich run of projects to advise on this year and the formulation of the Rainbow Action Plan, there is concern momentum of the mahi/work will be lost over this transition period of approx. 6 months of no meetings and no follow ups.
  There is also a sense of loss among members as there is no guarantee we can continue working together in the culture that we have shaped to be our own.

- **Attendance**: In continuing last year's trend, attendance has been inconsistent, understandably due to shifting capacities among our members. However, attendance rate has been high among most of our newest members. In conjunction with this year's resignation of members, this may result in a higher attendance percentage over the last 6 months.

- **Support for Takatāpui:** There is still very low attendance among the Takatāpui seats, with one resignation after a short term. It would be worth having an additional hui or interview (paid time) with these members to understand specific reasons for why engagement has been challenging. It is possible this trend would have improved with more time under Māori leadership among the co-chairs of TRAC. In the new model there also needs to be a culture of deliberate support and seeking of whakaaro and Māoritanga in our hui.

- **Older Voice:** There should be improved representation for older members of the rainbow community in TRAC (we currently only have one). This is especially important around issues of housing and wellbeing of older residents, and how there are accounts of LGBTTQIA+ people who feel the need to hide their identities once more upon entering aged care facilities.

- **Payment:** Compared to last year, there was less extra work being carried out this year (apart from the expected and reasonable pre-meeting preparations). This may be due to an improved workplan and agenda which makes better use of our time. However, we reiterate that the current honorarium rate has not been increased since TRAC's inception 4 years ago. In a sense, with every year at the unchanged rate our members are operating at a slow loss the more time we spend in this role.

- **Growing Hateful Rhetoric:** Exterior challenges with the current political climate assuredly affects the wairua of our group members. Widespread anti-trans and anti-rainbow rhetoric is evidently growing across the country - it is a growing issue for Council events and venues (e.g. protests against Pride events, Library) and also to members of TRAC. We also want to stress the need for proactive measures, as there is a genuine risk of these harmful trends influencing Council culture.

WCC Takatāpui & Rainbow Advisory Council (TRAC) | Annual Report 2025

Successes & Highlights

- **More Early Engagement:** We have had more success this year in being consulted on for projects at suitable stages where our feedback can be incorporated. We acknowledge this may be predominantly due to the fortunate timeline of the **Strategic Approaches Plan** which informed many of our hui this year.
  Other specific projects our rōpū highlighted were:
  - **Te Tai Ohinga | Central City Youth Hub:** Although the youth hub team consulted with TRAC at a slightly later stage, there were insightful discussions in that meeting which were deemed helpful to both parties. One of our members also noted that some ideas were taken on board and implemented on site (e.g. clothing swap rack), which was fulfilling to see.

  - **Libraries & Pools**: It was useful learning about resources and services available to the rainbow whānau and what is being done to continuously improve the safety of our community in these spaces. It is valuable to know what safe spaces are available for our community and we hope this culture continues within those teams.

  - **Te Toi Mahana:** We enjoyed learning of the existing diversity in that organisation and the value of community within that team. We hope there will be more room for their engagement with TRAG in the future as housing is a long-term issue for the rainbow community.

  - **Wellington Regional Stadium Trust:** We highly appreciate the initiative shown by the Trust in reaching out to TRAC for a kōrero and to establish a connection. For spaces that are not necessarily traditionally welcoming to members of the rainbow community, the group found the discussion positive and were challenged to think about indirect ways a non council-controlled venue may support LGBTTQIA+ visitors. The discussion also stemmed from a guideline document written by TRAC 3 years ago and it is encouraging to witness the continuity of our work.

- **Engagement with Mayor & Chief Executive:** We appreciate the valuable opportunity in having the Mayor and new Chief Executive visit some of our meetings. We believe these kinds of connections ‘humanise’ the process of governing a city and navigating it as particular communities.

- **Data Evidence:** Seeing Council deliberately make use of new and first-time collection of LGBTTQIA+ 2023 census data, especially when presented visually, has been an encouraging ‘full circle’ moment which clearly showed the story of the queer community in Wellington.

- **Opportunity to be in TRAC**: Members were appreciative of being given the opportunity to give back to the city and have their voices heard on the basis of their lived experiences. Especially so for queer and disabled individuals, there are not many who have been provided this position. Meeting other members of the

community in this group has also been enlightening and fun, and TRAC has been a special space for many of our members.

- **Better Feedback**: There has been increased confidence among the group in speaking up during meetings. With the assistance of our Democracy Advisor, we not only made a point to allow time for breakout groups during consultations, we also held our hui in different rooms and re-arranged the physical space for a more conducive workshop-type discussion. This appeared an effective way of creating safety for our members.

- **From Officers:** Initial challenges with agenda-shaping and timing of projects were mitigated with the support of Karepa and the manager of Connected Communities. With the move into the new model and the handover to the Engagement Team and a dedicated advisory group officer, there should be further improvement around this aspect of meetings. On the other hand, it is encouraging to know the rōpū have felt the work this year has been time-worthy.
  In the next iteration of TRAC, it would be prudent to focus on engaging with Council as a governing body to affect Councillor decisions.

Aspirations

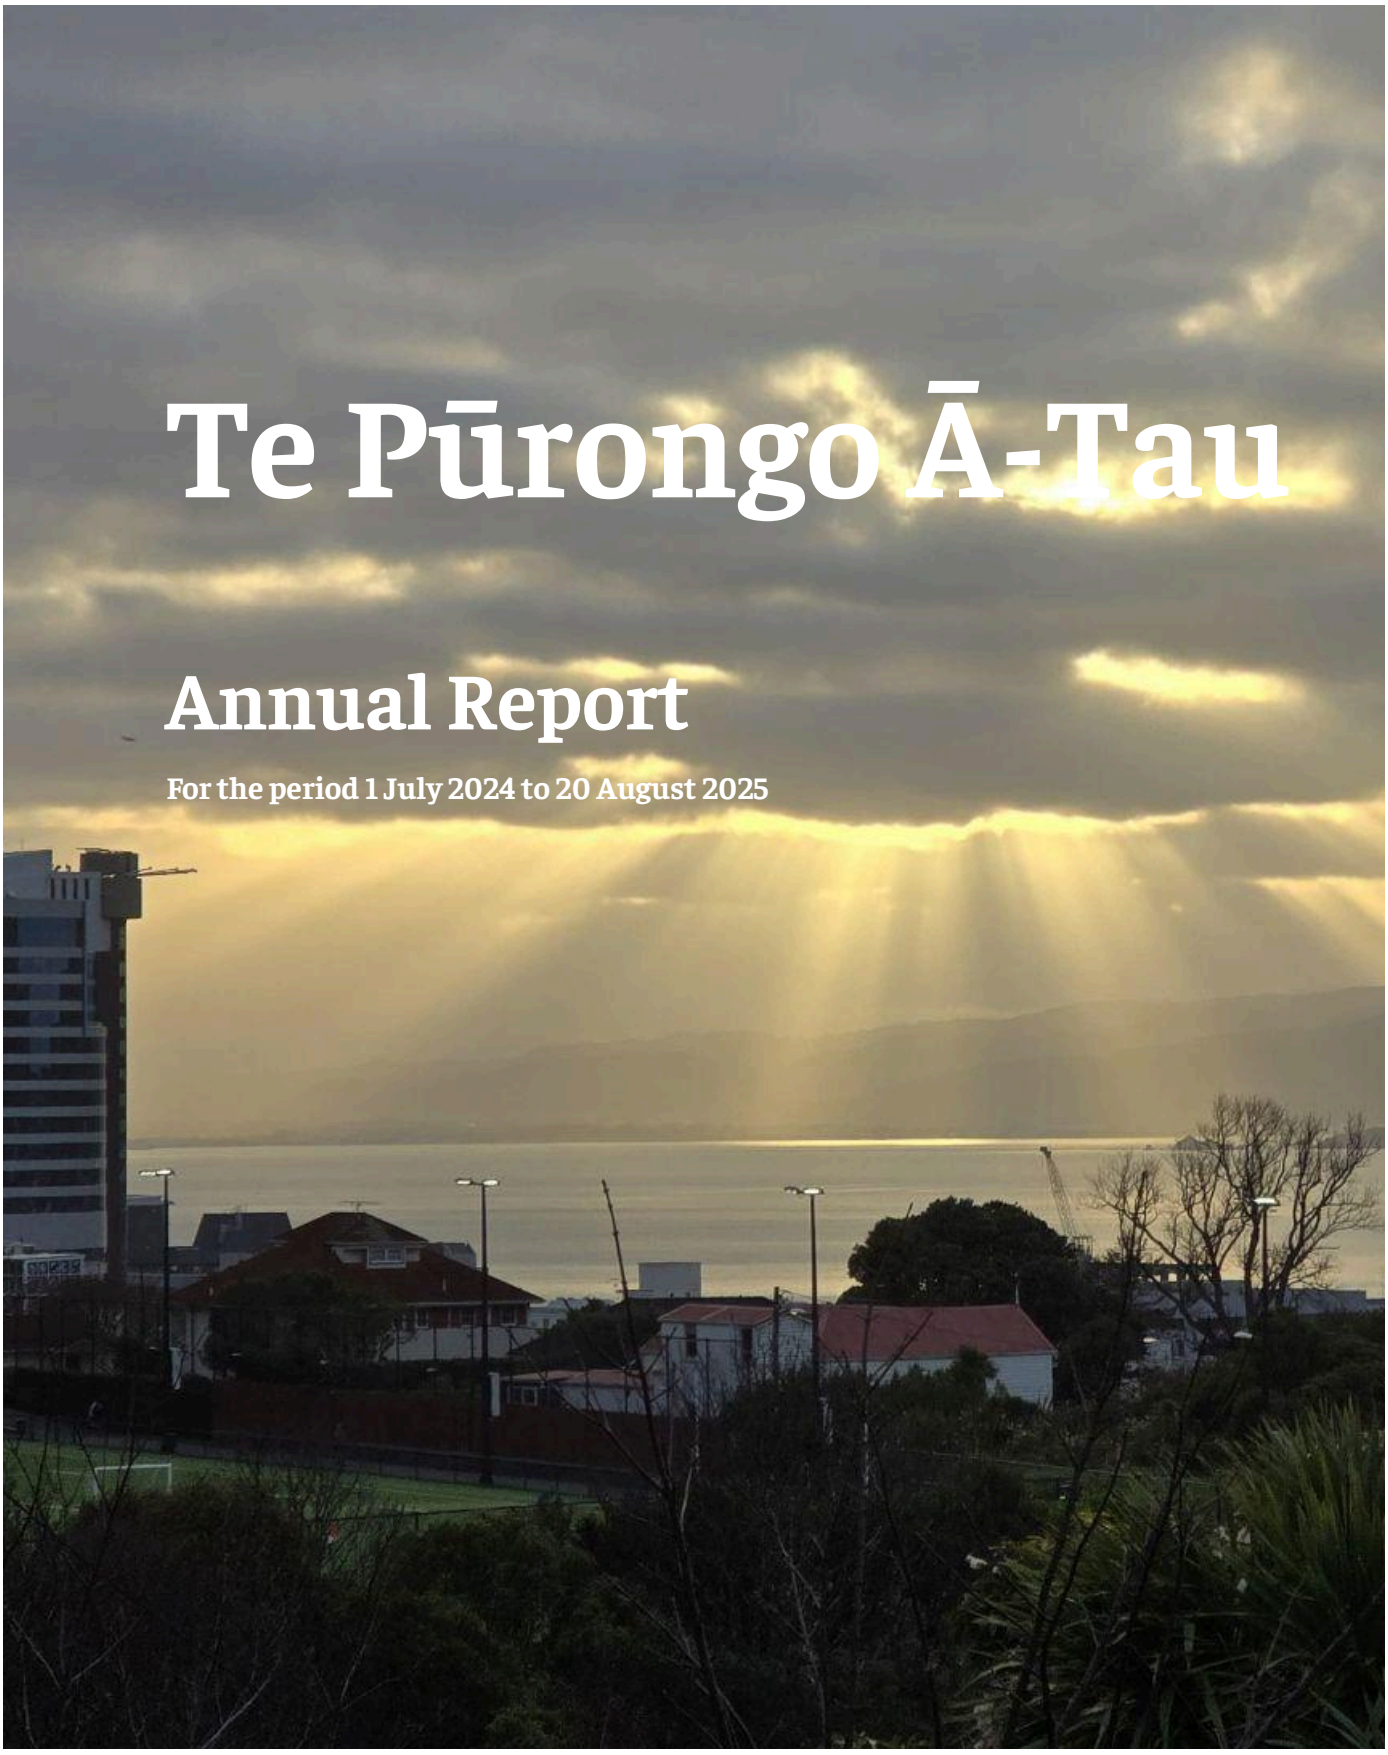
We hope the next iteration of the Takatāpui & Rainbow Advisory Council will keep up the momentum of some of the key mahi the group has been involved with this year, especially the work outlined in the Rainbow Action Plan.
For the community, we hope there will be more Council initiative in making connections with organisations specifically for rainbow people of colour, migrants, and Takatāpui.
Out in the city, we hope to see continued celebration of Wellington's vibrant Rainbow history and community through more commissions of queer art, signage and fixture installation.
Above all, we hope that in the coming years, rainbow and takatāpui issues will continue to be honoured and taken into consideration at the Council table and at the operational level.

Acknowledgements

- TRAC members acknowledged the work of the co-chairs and their energy in keeping this space positive for work to grow. Stepping up as co-chair has been a great challenge to Rākau, who has grown a lot from the role and with the support of Sam.
- Councillor Iona Pannett for her collaboration with TRAC over the last 3 years, for advocating for the Rainbow Action Plan with Councillor O'Neill, and for being our staunch ally at the Council table. We appreciate the experience and commitment Clr Pannett has brought to the group in helping us achieve our goals and pushing us to do more.
- Many thanks to Deputy Mayor Laurie Foon for reaching out to TRAC and facilitating the reinstatement of the flag mural in Berhampore. We also appreciate all other councillors who voted to reinstate the mural for the community.
- The Engagement Team who have elected to spend after-work hours at TRAC meetings to learn more about how our rōpū works so that the new advisory group model works effectively. We are excited about what the new phase brings for this mahi.

- Our Council officers Steph James and Karepa Wall, for both their patience and guidance to TRAC all these years. We appreciate Karepa has worked with TRAC since day one, and we are thankful for Steph's understanding (and grit) in working with us through our challenging times as a group.
- Lastly, we'd like to acknowledge every member of TRAC and the diverse knowledge brought to the table. Each member picked up new skills and learned from one another's lived experiences, and new members have jumped straight in with fresh energy and valuable insights. From the perspective of an older member of the community, there is some sadness that the current generation of the rainbow community are having the same issues as decades prior. However, the diversity in the community now is beautiful to see and will continue to thrive.

Takatāpui Rainbow Advisory Council at their final meeting.



Te Pūrongo Ā-Tau

Annual Report

For the period 1 July 2024 to 20 August 2025

Introduction from the Chairs

We are proud to close this chapter for the Youth Council and look forward to the beginning of the Rangatahi Youth Advisory Group, continuing the important work of representing Wellington youth at the local government level.

Tēnā koutou katoa,

We submitted detailed recommendations on the Wellington's Long-Term Plan amendment and Annual Plan 2025/26. Local Water Done Well.

In 2025, the Youth Council bid farewell to our outgoing Co-Chair, Finley Duncan, and welcomed our new Co-Chair Shelly Liang, to join the re-elected Co-Chair Diana Milne. The Youth Council extends our heartfelt gratitude to Finley for all the hard work, insight and contributions that he made during his time on the Youth Council. We thank Finley for his time and energy in the role and look forward to seeing the positive impact he will continue to make in future endeavours. Shelly and Diana have worked closely together to lead the Youth Council for the remainder of the term, and have worked hard to champion the voices of youth people in Wellington.

We would like to express our sincere appreciation to members of the Council team that have provided continuous support to the Youth Council and ensure we are able to do all our work. Councillors Ben McNulty and Nīkau Wi Neera have been key figures in connecting the Youth Council to the elected Council. Our thanks also go to all Council Staff, especially the Democracy Services team for all your support. In particular Tian Daniels from the Democracy Services team and Greer Forde-MacNaughton, Senior Engagement Advisor, who have both been a core part of the Youth Council. Their unwavering support has been instrumental in enabling Youth Council's ongoing success. While they will no longer be working closely with the Rangatahi Youth Advisory Group, we are excited to welcome (the new team) and hope for continued partnership with Council Officers.

As we close out this term, we also mark the conclusion of the Wellington City Youth Council, which will soon be restructured as the Rangatahi Youth Advisory Group. It has been a privilege to work in collaboration with the Wellington City Council over the past 27 years. We want to extend our thanks to all past and present Youth Councillors for their dedicated service to the youth of Wellington. The Rangatahi Youth Advisory Group represents a significant step forward and will continue the amazing work of the Youth Council, continuing to advocate for the wellbeing and empowerment of Wellington youth.

Nāku noa, nā

D. E. Milne

Diana Milne **Shelly Liang**

Co- Chairs of the Wellington City Youth Council

Membership

Leadership:

Diana Milne (Co-chair, June 2024 - August 2025)

Shelly Liang (Co-chair, March 2025 - August 2025)

Finley Duncan (Co-Chair, June 2024 - November 2024)

Membership:

- Diana Milne (Co-Chair)
- Shelly Liang (Co-Chair)
- Aarthi Candadai
- Andrew Ackerley
- April Lily Marshall
- Arpith Sampath Kumar
- Arunan Noble
- Ashleigh Putt-Fallows
- August Metherell
- Austin Ellingham-Banks
- Brynn Pierce
- Caspar Levack
- Faizan Hasnain
- Henry Yao
- Jayathi Jaiganesh
- Kalani Fransen
- Maia Hills
- Matthew Biddington
- Naomi Tull
- Sophie Lee
- Finley Duncan (Co-Chair) (resigned)
- Ashika Chander (resigned)
- Sophia Newmann (resigned)
- Teresa Ng (resigned)

Purpose:

The purpose of Youth Council is to:

1) Assist and advise the City Council on how to help grow a great City where young people thrive and contribute to the City Council's priorities.
2) Bring extra insight to Council (a youth perspective) to solve problems facing a changing world.
3) Develop the capabilities of its members (including leadership and engaging wider youth).

Engagements and Submissions:

Long Term Plan Amendment and Annual Plan Submission

Youth Council completed written and oral submissions on the Wellington City Council's Long Term Plan amendment and Annual Plan. We appreciated the opportunity to submit and have our voices heard on significant and important changes which will impact the lives of young Wellingtonians for years to come.

In April and May, the Council consulted on options to amend the 2024-34 Long Term Plan to address financial risks and changes as part of its Annual Plan update.

For the Long term plan amendment, we submitted on the following topics: Managing Insurance and Investment Risks, Begonia House, Karori Events Centre, and Paneke Pōneke. For the Annual plan, we submitted on the following topics: Mātai Moana Reserve, Sludge Levy, Changes to Fees and User Charges, Changes to Financial Policies.

The Youth Council spent one meeting and their own time to produce a piece of work that was clear, comprehensive and reflected the differing opinions of our members. An oral submission was also delivered by Youth Councillors Sophie Lee, Shelly Liang, and Arunan Noble in addition to a written advisory opinion. This allowed for a more comprehensive presentation of the Youth Council's viewpoints and provided councillors the chance to ask specific and relevant questions. Our Youth Council representatives answered all questions with strong insight and accuracy, providing a valuable perspective from young Wellingtonians. The long term plan submission is something our Youth Council takes pride in, as it requires a large amount of mahi and focus across the board; we believe our submission was completed to a high standard exemplifying the continuous work from our council.

Local Water Done Well Submission

"Ka ora te wai, ka ora te whenua, ka ora te whenua, ka ora te tangata"

If the water is healthy, the land will be nourished. If the land is nourished, the people will be healthy.

In early May, we had the opportunity to submit on the way Wellington City Council manages the delivery of water services in the region. A committee of interested youth councillors was formed to consider the options.

A comprehensive submission was ultimately made to council and supplemented by an oral submission. After much deliberation, we were proud to provide a nuanced perspective. A split committee recommended Option 1 (the preferred option,) although it's important to note this recommendation wasn't unanimous. Following discussion to consolidate the committee's opinion, we made a number of recommendations to council. We reserved concerns, which were addressed in a diverse range of progressive recommendations; adopting a franchised model, and progressive proportional representation, all of which was welcomed by councils, and some of which, ultimately included in the final decision adopted council.

A successful oral submission addressed councils concerns regarding privatisation, and the democratic outcomes.

Advisory group change feedback

In response to the proposed changes to the Council's Advisory Group model, the Youth Council held a thoughtful discussion and voted to raise concerns with our Council representative. A supermajority of members supported seeking amendments to the proposed model, reflecting significant concern about how the changes would impact the Youth Council's ability to fulfil its purpose.

Members expressed that the proposed model risks undermining the diversity, continuity, and effectiveness of youth representation in Council decision-making. Following this discussion, the Youth Council communicated its feedback directly to Wellington City Councillors, outlining our concerns and recommending adjustments to ensure the model better reflects the distinct role and value of the Youth Council. This feedback demonstrates the strong consensus among Youth Councillors and our continued commitment to maintaining a meaningful and effective youth voice within Council processes.

Mataaho Aronui

In February, we had Paratene Wirepa-Kingi come in from Mataaho Aronui and kōrero about their mahi. We covered Tākai Here the partnership agreement between Mana Whenua and WCC, Tūpiki Ora the Māori strategy and Mahau the new app launched for Te Reo Māori use. This was a good chance to get acquainted with Mataaho Aronui and their mahi, learn about key work programs within council and discuss important topics such as Te Tiriti Partnership and the key parts of Tūpiki ora and key focus points for them.

Training & Development:

Political Neutrality

The Youth Council was incredibly grateful for the opportunity to partake in a Political Neutrality workshop during meeting time. This workshop, presented by Diana, allowed us to explore the rules and expectations around non-partisanship and the importance of maintaining unbiased discussions in our work. Through open dialogue and real-world examples, members gained a clearer understanding of how to balance personal beliefs with our responsibility to represent a broad and diverse range of youth voices across Wellington.

This session was particularly valuable in reinforcing our role as an advisory body to Council, where credibility, trust, and integrity are key. Upholding political neutrality ensures that the Youth Council remains a safe and inclusive space for all rangatahi, and that our advice is considered fair, informed, and representative of the wider youth community.

Member Development

At the beginning of the year youth council went into an introductory session with the rest of the advisory groups where we learnt about the wider background of all the advisory groups, how council operates, and how our role impacts the voices of rangatahi in Wellington. In further reference to the youth council specifically we learnt about allocation of funds through a practical activity, how funds are distributed and how much weight our voices hold. We were also given a presentation on the background of the youth council, and the work that was done in previous years e.g Te Tai Ohinga.

We also learnt the process of democracy in voting through voicing our opinions on who was to lead the group. This involved refining our skills on how proper voting works and learning how decisions are made.

Mock Submissions

As part of Youth councils commitment to training and developing our members, Youth Councillors took part in a mock submissions workshop. There were three parts to this workshop. First, we held a group discussion on what makes an effective submission. Following this, the Youth Council divided into smaller working groups, each group was presented with a fictional scenario that would benefit from the input of the Youth Council. Each group then created their own mock submission on the issue, carefully considering how our submissions would affect different groups within our community. After this, the Youth Council came back together, with each group presenting their mock submission to the rest of the Youth Council. Each group also had a chance to answer any questions other groups had on their own mock submission.

Events:

National Events

In April 2025, Shelly and Diana attended the ANZAC Day National Commemoration Service. The occasion was a chance for remembrance and recognition of New Zealanders' experiences of war. This year also marked the 80th anniversary of the end of the Second World War in 1945. We believe it is significant to have youth represented at the service, reminding us of the importance of younger generations carrying forward these stories of sacrifice and resilience.

Youth Hub Grand Opening

In August 2024, Caspar and Diana had the privilege of representing the Youth Council at the grand opening of Te Tai Ohinga | Youth Hub. The event was a milestone moment, marking the culmination of years of dedicated advocacy by the Youth Council and many others for a space designed by and for young people. It was inspiring to see this vision finally realised—a vibrant hub where young people can connect, create, and thrive.

Appendix: Member Attendancy 2024-2025

Member	Attendance Rate
Teresa Ng	85.71%
Finley Duncan	100.00%
Caspar Levack	73.68%

ADVISORY GROUP TRANSITION PROGRESS UPDATE AND TERMS OF REFERENCE

Kōrero taunaki | Summary of considerations

Purpose

1. This report provides an update on progress to implement the Hybrid Advisory Group model and seeks approval of the Terms of Reference for the new Advisory Groups and Strategic Advisory Panel.

Strategic alignment

2. The Advisory Group model aligns to all community outcomes by including diverse community voices into decision making. The model contributes to the 2024-2034 Long-term Plan strategic approaches of 'engaging our community', and 'making our city accessible and inclusive for all.

Relevant previous decisions

3. The Kōrau Mātinitini | Social, Cultural, and Economic Committee made the following decisions relevant to this matter. On:

- **12 October 2023** agreed to explore options for Advisory Groups, including establishing an Ethnic Communities Advisory Group in 2024, and directed Officers to report back. Advisory Group Annual Reports and Work Plans
- **10 April 2024** agreed that it is important to integrate diverse community voices, including ethnic communities, into the decision-making process. That the current model has recurring issues and constraints and agreed to establish an Ethnic Communities Advisory Group. The Committee directed Officers to explore a full range of options, including a deliberative process to ensure that we engage effectively and inclusively with Wellington's diverse communities. Advisory Group Report Back
- **28 November 2024** agreed to adopt the recommended Option Two – Hybrid of identity Advisory Groups and a joint Panel. Advisory Groups Future Model

Significance

4. The decision is **rated low significance** in accordance with schedule 1 of the Council's Significance and Engagement Policy.

Financial considerations

☐ Nil	☒ Budgetary provision in Annual Plan / Long-term Plan	☐ Unbudgeted $X

5. The budget required for delivery of this work has been provided for through the 2024/34 Long-term Plan and the 2025/2026 Annual Plan.

Risk

☒ Low	☐ Medium	☐ High	☐ Extreme

6. As transition to the new Advisory Group model progresses, risks have been identified such as relationship strains with outgoing members, the quality of decision making and the need for flexibility. Strategies to mitigate these risks include implementing a comprehensive reset, conducting annual evaluations, encouraging participation in the new model through an Expression of Interest process, and maintaining transparent communication.

Author	Mandy Bohte, Manager Community Engagement
Authoriser	Lexy Seedhouse, Engagement Manager Anna Calver, Chief Economic and Engagement Officer

Taunakitanga | Officers' Recommendations

Officers recommend the following motion:

That the Kōrau Mātinitini | Social, Cultural, and Economic Committee:

1. Receive the information.
2. Adopt the recommended Terms of Reference for the Advisory Groups and Strategic Advisory Panel.

Whakarāpopoto | Executive Summary

7. Following a comprehensive review of its Advisory Groups in 2024, Wellington City Council is transitioning to a new model. This followed other reviews, which found several issues in the current model that result in a lack of clarity of the purpose of Advisory Groups; inconsistent effectiveness; a lack of alignment with strategy and decision making; challenges in representation, limited feedback mechanisms and the need to update engagement practices.
8. Adopted on 28 November 2024, the new model aims to enhance effectiveness and efficiency by incorporating a combined Strategic Advisory Panel and five identity-based Advisory Groups. The transition process, led by Democracy Services and Engagement teams, involves disbanding existing Groups and recruiting new members through an Expression of Interest process, initially open only to recent Advisory Group members.
9. The transition has been communicated to outgoing Advisory Group members, with final meetings of the current model and acknowledgements completed in August 2025. Recruitment for new members will commence after the Local Election, with induction planned for early 2026.
10. The current Advisory Group Terms of Reference (ToR) have been updated with clauses to ensure transparency, alignment, and a shared understanding among members and Officers. The areas of the ToR that were adopted by the Committee previously have been included as directed. Additional clauses have been included and feedback from recent Advisory Group Co-Chairs has been incorporated to strengthen areas such as conflict resolution, roles and responsibilities, and the recruitment process for members.

11. The full ToR appear in Attachment A. Terms of Reference need to be in place prior to commencing recruitment for the new Groups.

Takenga mai | Background

12. Wellington City Council has five existing Advisory Groups: Accessibility Advisory Group Ethnic Communities Advisory Group, Pacific Advisory Group, Takatāpui Rainbow Advisory Council, and Youth Council.

13. Three previous reviews of the Advisory Groups, undertaken in 2007, 2014, and 2020 identified issues such as:

- **Unclear roles and expectations:** Advisory Groups lacked clarity in their purpose and responsibilities.
- **Poor timing and decision alignment:** Input from the Groups often did not coincide with key decision-making processes.
- **Insufficient feedback loops:** There were limited mechanisms for providing updates and responses to Group advice.
- **Inconsistent effectiveness:** The impact of Advisory Groups varied.
- **Unsustainable expansion model:** Creating additional Groups for specific communities was not viable in the long term.
- **Outdated engagement approach:** Existing practices did not align with recognised best practice for effective and inclusive community engagement.

14. On 12 October 2023, the Kōrau Mātinitini | Social, Cultural, and Economic Committee tasked Officers with investigating options for improving the Advisory Group model, including establishing an Ethnic Communities Advisory Group, with advice on funding implications as part of the Long-term Plan process.

15. On 10 April 2024, the Committee instructed Officers to review the current Advisory Group model to identify the most effective approach for incorporating diverse community voices into strategic decision-making, ensuring intersectionality, and providing transparent, collective advice.

16. Officers advised against establishing an Ethnic Communities Advisory Group at that time. They suggested that if established, such a group would likely be disbanded within a few months to transition to a new model. The Committee decided to made an amendment to establish an Ethnic Communities Advisory Group and include it in the transition to any new Advisory Group model.

17. From April to November 2024, comprehensive research and engagement were conducted with Advisory Group Co-Chairs and members, Elected Members, and staff. A full timeline of engagement appears as Attachment B.

18. A key part of this research and engagement was workshops with Advisory Groups, focused on elements that were working well or required improvement. A summary of the workshop findings was subsequently presented to each Advisory Group to provide updates and discuss ideas. Additionally, a presentation outlining the final recommendation for the new model was delivered to all Co-Chairs for sharing with Advisory Groups. Two of these presentations appear as Attachment C.

19. Because this research was undertaken prior to the establishment of the Ethnic Communities Advisory Group, an ethnic communities focus group was held in August 2024 to ensure input from multi-cultural communities into the research.

20. A report on the findings of this research was presented to the Committee on 28 November 2024, recommending a new 'hybrid model' for the Advisory Groups. This model incorporates five identity-based Advisory Groups and a combined Strategic Advisory Panel involving all Advisory Groups members, the Executive Leadership Team, and Councillors. Further detail about the new model is available as Attachment D.

21. The hybrid model builds on the strengths of the existing approach, whilst introducing improvements in structure and strategy. It features a more collaborative design, streamlined membership, the introduction of a Strategic Advisory Panel, and more efficient meetings. The model also clarifies roles, enhances the recruitment process, and strengthens cultural responsiveness and collaboration with decision-makers. This ensures that diverse perspectives are meaningfully integrated into Council policies and operations. Guided by research and feedback from the Advisory Group Review, the new structure includes smaller, more effective groups of around eight members, aligning with best practice in community engagement. This size enables stronger dynamics, greater participation, and more impactful advice to the Council.

22. Councillors unanimously supported the adoption of the new model.

Kōrerorero | Discussion

23. The ToR for the new Advisory Groups and Strategic Advisory Panel clearly outlines the purpose, scope, roles and responsibilities and expectations of how the Groups will operate.

24. The aim of the ToR is to ensure transparency, alignment and a shared understanding among members, Officers and Elected Members.

25. Key elements of the new hybrid model were adopted by the Council at the 28 November 2024 Committee meeting and have been included in the ToR. These elements include:

Adopted Terms of Reference clauses

- Adoption of the hybrid structure of five identity-based Advisory Groups, supported by a combined Strategic Advisory Panel.
- Number, names and identity areas of Advisory Groups:
    - Disabled Communities Advisory Group (DCAG)
    - Ethnic Communities Advisory Group (ECAG)
    - Pacific Communities Advisory Group (PCAG)
    - Takatāpui Rainbow Communities Advisory Group (TRCAG)
    - Rangatahi Youth Communities Advisory Group (RYCAG)
- Group sizes: eight members per Group, except for RYCAG which has 12.
- Number and frequency of meetings:
    - For DCAG, ECAG, PCAG and TRCAG- five to seven Advisory Group meetings per year.
    - For RYCAG up to 10 Advisory Group meetings per year.
    - Plus, three to four Strategic Advisory Panel meetings per year for all Groups.
- Reserved seats for Māori members:
    - Two in both DCAG and TRCAG.
    - Three in RYCAG.
- Establishment and scope of the Strategic Advisory Panel.
- Inclusion of Pouiwi in the Strategic Advisory Panel.

Additional Terms of Reference clauses

26. Additional clauses include those that remain fit for purpose from the former Advisory Group ToR, and new clauses identified for strengthening during the review process.

27. Recent Advisory Group Co-Chairs were invited to review and provide feedback on the new clauses, focusing on bringing greater clarity, particularly around leadership roles, the purpose of the Groups, and the processes for providing impactful, identity-informed advice. The feedback was focused on aspects of the ToR that could be modified to improve how the Groups function operationally, such as:

    - Description of purpose for Advisory Groups.
    - Expectations of members.
    - Submissions on Council consultations by individuals or Groups.
    - Cessation of membership.
    - Conflict resolution guidelines.
    - Roles and responsibilities.

28. All recent Advisory Group Co-Chairs met with the Engagement team to discuss the new Terms of Reference, except the AAG Co-Chairs, who were unavailable. Feedback from these meetings is incorporated into the Terms of Reference wherever possible. A table of changes and action taken appears in Attachment E.

Recruitment

29. Recruitment for the new Advisory Group model will start with an Expression of Interest (EOI) phase. All outgoing Advisory Group members will be invited to submit their EOI during a two-week period, beginning on 8 September 2025, once the Terms of Reference are approved. This process aligns with Wellington City Council's recruitment practices following a change process.

30. All outgoing members who submit an EOI will be invited for an interview. Criteria developed by the Council's Talent Acquisition, Strategic Policy and Planning, and Engagement teams will be used for the interview assessment. This will include a mix of identity, community, and competency-based skills.

31. After the EOI and interview process, any unfilled roles will be advertised through an open process, encouraging the wider community to apply

Kōwhiringa | Options

32. The ToR need to be approved before beginning recruitment for the new Advisory Groups. The Terms of Reference provide a foundation and serve as a clear position description, roadmap, and invitation for candidates.

33. Prospective applicants will have access to a transparent outline of the Group's purpose, scope, roles, responsibilities, and required skills, knowledge, and experience. The document also clearly communicates the level of commitment expected and underpins a fair, open, and consistent recruitment process.

Options for Council to consider include:

1. Adopt the recommended Terms of Reference for the Advisory Groups and Strategic Advisory Panel.
   The ToR reflect the new model adopted by the Committee on 28 November 2024. They include additional clauses from the former Advisory Group ToR, and enhancements identified through a review process and discussions with Co-Chairs.
2. Agree to the Terms of Reference with amendments.
   Any amendments will require consideration of budgetary implications. The budget for Advisory Groups is constrained. Any increase in membership or number of meetings would mean extra costs for attendance fees, catering, training, administrative support, and staff time. For this reason, amendments will need to be assessed carefully to ensure they are affordable.
3. Do not agree to the Terms of Reference.
   The Terms of Reference will guide the recruitment phases and the commencement of the Advisory Group introductions in February 2026. Assessment of implications to timelines and necessary mitigations will need to be considered.

Whai whakaaro ki ngā whakataunga | Considerations for decision-making

Alignment with Council's strategies and policies

34. The new hybrid model aligns with the Council embedding diverse community perspectives into strategy and policy direction, so that implementation is visible and consistent across the city, providing better outcomes for all.

Engagement and Consultation

35. A summary of engagement undertaken on the Advisory Group model and Terms of Reference appears as Attachment B.

36. The November 2024 Committee paper confirmed that current Advisory Groups would be disbanded as part of the move to a new structure with fewer members in each Group.

37. In April 2025, Advisory Group members received an update outlining the transition timeline for the new hybrid model. Detailed information about the proposed changes was shared with Co-Chairs and Advisory Group members before, during, and after the November 2024 Committee meeting. All members recruited after the November meeting, including those on the Ethnic Community Advisory Group, were informed about the new model during their recruitment.

38. From April to August 2025, the Democracy Services team collaborated closely with the Engagement team to guide the operational transition to the new Advisory Group model. During August 2025, final meetings of the outgoing Advisory Groups were held, which included celebrations of the valuable contributions of members.

39. Recruitment for the new Advisory Groups will begin following the Local Elections. Newly appointed members will participate in a welcome and induction programme scheduled for February 2026. This timeline ensures that the establishment of Advisory Groups and the Strategic Advisory Panel aligns with the Council triennium.

40. Throughout the engagement and transition process, Council staff observed a wide range of responses from Advisory Group members. These reactions were influenced by several key factors, including:

- **Individual Roles:** Members' involvement and responsibilities within their Groups shaped their perspectives on the changes.
- **Personal Experience:** Past interactions with the review process and Council staff impacted on their willingness to engage.
- **Perceived Impact:** Understanding of the changes led to varied responses.
- **Levels of Trust:** Members who felt meaningfully included in the review process were largely open to the new model, whereas newer members or those that did not engage in the review expressed some uncertainty or resistance.

41. This diversity of responses created both opportunities and challenges. Maintaining momentum required tailored approaches to engagement. Some individuals were eager and receptive, while others needed additional support and reassurance during the transition. Council staff responded by adapting communication and providing targeted resources to address concerns, build understanding, and foster effective participation in the new model.

42. To support the transition, Council staff have continued to communicate with Advisory Groups about the intended outcomes of the new model for both communities and the city. Outgoing members have been encouraged to apply for positions in the new model. While the review process and approval of the model have been explained transparently, change can be challenging, and now that implementation is underway, the specific details and their impacts are coming into sharper focus.

43. Officers organised tailored sessions with each recent Advisory Group to review the decisions and changes adopted. These sessions addressed the unique concerns and contexts of each Group. Additionally, further meetings and Q&A opportunities were offered to answer questions, clarify the direction of the new model, and collaborate around the recruitment process for new members and Terms of Reference of the new Groups.

Māori Impact Statement

44. The hybrid model was assessed against a set of criteria, including a specific criterion to 'embed and embrace te ao Māori and te Tiriti o Waitangi'. The model aims to strengthen the involvement of hapori Māori communities in Pōneke within the Advisory Groups, ensuring their perspectives and aspirations are reflected in Council decision-making.

45. Engagement with mana whenua sits outside the Advisory Group structure and will continue to be upheld through the existing Tākai Here framework. This includes ongoing representation through our Pou Iwi within Council and their inclusion in the Strategic Advisory Panel, ensuring mana whenua voices remain central to strategic direction and governance.

Financial implications

46. There is a total budget of $283k to deliver the new Advisory Group model.

47. The budget covers essential expenses, including staffing, fees for panel facilitators, member and Co-Chair training, as well as costs related to Advisory Group meetings such as catering, security, and attendance fees.

48. Two Advisory Groups, the Takatāpui Rainbow Communities Advisory Group and the Ethnic Communities Advisory Group were added in recent years without an uplift in funding. The above budget incorporates funding to accommodate the increase in the number of Groups and associated costs.

49. The budget does not provide allowance for unexpected expenses, so careful financial management will be required to stay within the allocated funds.

Legal considerations

50. There are no legal considerations.

Risks and mitigations

51. Identified risks include:

- **Relationship Strain:** A primary risk involves potential strains in relationships with outgoing Advisory Group members during the transition to the new model. This risk is heightened by the varied responses and levels of trust among members, which are shaped by several factors, including their previous experiences and the extent to which they felt included in the original research and engagement.
- **Quality of Decision Making:** Previous efforts to adjust the former Advisory Group Model have not fully addressed recurring issues. Without a significant reset, these challenges are likely to continue, diminishing the model's effectiveness and contributing to ongoing friction.
- **Need for Flexibility:** The new model must remain adaptable, incorporating ongoing evaluation and improvements. Inflexibility could reduce its effectiveness.

52. To address these risks, several strategies are in place:

- **Significant Reset:** Implementing a comprehensive reset is intended to support stronger outcomes and healthier relationships within the Groups.
- **Continuous Evaluation:** Annual evaluation reports will be provided to the Committee to ensure the model remains effective and responsive to changing needs.
- **Encouraging Participation:** Recent Advisory Group members are being encouraged to apply for positions through a closed Expression of Interest (EOI) process. This initiative is designed to help them understand the goals of the new model and foster trust and confidence in the transition.
- **Good Faith Engagement:** Transparent communication and supportive engagement help build trust and demonstrate that the transition is being managed thoughtfully and respectfully.

Disability and accessibility impact

53. The new model will enhance engagement with underrepresented communities, ensuring their input is included in decision making and improving accessibility and inclusion in Pōneke.

Climate Change impact and considerations

54. Aligning the model with the Council's key decisions will help focus it on issues like climate change.

Communications Plan

55. Following the Committee's adoption of the model on 28 November 2024, a media release and related articles were published.

56. A Communications plan has been developed for the implementation stage to ensure that all those undertaking roles in the future Advisory Group model understand the new model and can contribute in the most effective way.

57. This primary focus is on clear messaging to inform communities through existing channels and relationships about the recruitment process and implementation of the new model.

58. Internal communication for kamahi on the new ways of engaging with the Advisory Groups to support a strategic work programme are being developed.

Health and Safety Impact considered

59. Health and safety concerns are being addressed by improving conflict resolution clauses in the Terms of Reference and updating Operational Guidelines.

60. Ensuring accessible spaces for everyone is essential in the new model.

Ngā mahinga e whai ake nei | Next actions

61. Once the Terms of Reference are approved, the recruitment process will begin. Outgoing Advisory Group members will first be invited to express their interest in joining the new model. Following this, interviews will be held and final decisions about appointments will be made. If there are still roles to fill after this process, they will be opened to applicants from the wider community.

62. The project timeline plans for the new Advisory Groups to start with a welcome and introduction event in early February 2026. This will coincide with the Council's efforts to set strategic priorities for the year.

DRAFT

Terms of Reference

The Terms of Reference set out the purpose, role, and operating protocols for all Wellington City Council Advisory Groups. Members are expected to uphold the values and principles outlined in the Council Code of Conduct for Advisory Group Members (see Appendix A)

Groups

The Wellington City Council Advisory Groups are:

- Disabled Communities Advisory Group (DCAG)
- Ethnic Communities[1] Advisory Group (ECAG)
- Pacific Communities Advisory Group (PCAG)
- Takatāpui Rainbow[2] Communities Advisory Group (TRCAG)
- Rangatahi Youth Communities Advisory Group (RYCAG)

In addition, all Advisory Groups will collectively feed into the Combined Strategic Advisory Panel (Appendix B).

Purpose

Advisory Group members provide high-level, strategic advice to Wellington City Council. Their role is to support inclusive, forward-looking decision-making that reflects the diverse needs of Wellington's communities (see Appendix C). This advice focuses on Council's work programme, including its policies, plans, projects, and key initiatives.

Each Group focuses on strategic issues relevant to their community identity, rather than providing technical expertise.

Advisory Group members are not appointed as representatives or spokespersons for entire communities, organisations, or interest groups. Rather, they are selected as individuals who bring identity-informed perspectives, strategic thinking, and relevant lived experience. While members may maintain strong relationships with their communities, they do not hold a mandate to speak on behalf of those communities.

[1] According to the Ministry for Ethnic Communities (New Zealand Government), **Ethnic Communities** include people who identify as **Asian, African, Continental European, Latin American, and Middle Eastern**. These groups are recognised as distinct from Māori, Pacific Peoples, and Pākehā (New Zealand Europeans).

[2] **Rainbow** as an umbrella term, including but not limited to: Māori identities such as Takatāpui identities, tāhine, or lesbian, gay, bisexual, transgender, queer, intersex individuals, asexual, or identities of the Pacific such as MVPFAFF+, fa'afafine and fakaleiti communities.

Their role is to share advice that draws on both their personal experiences and what they have learned through engaging with others.

Expectations

The role of Advisory Group members is to share advice that draws on both their personal experiences and what they have learned through engaging with others

Members are expected to:

- Engage constructively in strategic conversations.
- Focus on high-level Council strategies and projects.
- Uphold kaupapa Māori principles.
- Draw on their lived experience and community-informed perspectives to support strategic discussions.
- Attend induction and training sessions.
- Participate actively in both Group and Panel meetings.
- Contribute to the Group's Annual Report

Members are accountable for their contributions - within their capabilities and any legitimate time or resource constraints – to:

- Provide strategic, identity-based advice on Wellington City Council's strategies and projects.
- Where possible, identify evidence, community insights, and solutions that reflect the diverse needs, experiences, and aspirations of their communities.

Each Advisory Group's strategic input will be guided by an agreed Strategic Work Programme, developed in collaboration with Council Officers.

The work programme will align with the Council's long-term strategies, critical projects, and triennial priorities.

Council Officers will provide feedback to Advisory Groups on how their advice has been considered and incorporated, including rationale where advice was not adopted.

Council will take all reasonable steps to ensure that meetings are accessible, inclusive, culturally safe, and welcoming for all members.

The Council Liaison Officer, in partnership with Co-Chairs, will monitor member engagement, including:

- Punctuality and meeting attendance.
- Alignment with the Code of Conduct.

- Active and meaningful participation in the Group's strategic work programme (see also: Terms of Appointment).

Reporting

The Advisory Groups will report to the appropriate Council committee with the agreed workplan within the first four months of each financial year.

Each Advisory Group will contribute to an Annual Report prepared for the Council's relevant Committee. The report will be submitted within the first four months of each financial year.

The Annual Report will:

- Refer to the Group's Strategic Work Programme.
- Outline progress against the agreed priorities over the previous year.
- Highlight key insights and strategic advice provided.

In the interest of transparency:

The names of Advisory Group members will be made publicly available on the Council's website and through the Council's Annual Report.

Structure and Meetings

- DCAG, ECAG, PCAG and TRCAG will meet between five and seven times per year, with meeting schedules aligned to key Council priorities and planning cycles. As part of the Council's commitment to promoting youth participation and civic education, RYCAG may meet more frequently—up to 10 times per year.
- The Strategic Advisory Panel will convene three to four times per year, bringing together all Advisory Groups to provide collective, intersectional input on major Council strategies and initiatives.
- Strategic Advisory Panel meetings will be facilitated to ensure inclusive participation, constructive dialogue, and transparent decision-making processes.
- Each Advisory Group will be composed of eight members, with the exception of RYCAG, which will include up to 12 members to reflect the transitional nature of youth involvement.
- Each Group will elect two Co-Chairs, who will provide leadership, guide discussions, and liaise with Council staff and the Strategic Advisory Panel.
- Meetings of the Strategic Advisory Panel may include breakout caucus sessions as needed, allowing members to engage in focused discussions within their Advisory Groups before contributing to broader strategic conversations.

DRAFT

Membership

General Criteria for All Advisory Group Members

To be eligible for membership, applicants must:

- Live within the Wellington City Council boundaries at the time of selection.
- Demonstrate the ability to work collaboratively in a team environment that values diverse lived experiences.
- Bring a strategic, identity-based perspective, rooted in lived experience and/or strong community connection.

Further details of member roles and accountabilities (including Co-Chairs) and support roles (e.g. Liaison Officers) are outlined in Appendix C.

Group-Specific Membership Criteria

Disabled Communities Advisory Group (DCAG)

Members must:

- Have lived experience with disability and/or strong knowledge of disability issues.
- Possess a broad understanding of accessibility issues across Wellington, with the ability to offer strategic input that reflects the diverse needs and experiences of disabled communities.
- Have good relationships and networks with a range of communities.

Two seats will be reserved for Māori members.

In recruitment, the Council will seek to maintain a balance across:

- Disabilities
- Cultural backgrounds
- Age
- Gender identities
- Diversity of Māori and other ethnic communities.

Ethnic Communities Advisory Group (ECAG)

Members must:

- Identify as belonging to an Ethnic Community.
- Possess a broad understanding of issues affecting ethnic communities across Wellington, with the ability to offer strategic input that reflects their diverse needs, identities, and experiences.

DRAFT

- Have good relationships and networks with a range of communities.

In recruitment, the Council will seek to maintain a balance across:

- Ethnic backgrounds
- Languages
- Gender identities
- Age.

Pacific Communities Advisory Group (PCAG)

Members must:

- Identify as belonging to a Pacific community (including Pasifika peoples of diverse nationalities, cultures, languages and heritage).
- Possess a broad understanding of issues affecting Pacific communities across Wellington, with the ability to offer strategic input that reflects their diverse needs, strengths, and experiences.
- Have good relationships and networks with a range of communities.

In recruitment, the Council will seek to maintain a balance across:

- Pacific national, cultural heritage, languages and dialects spoken
- Gender identities
- Age.

Takatāpui Rainbow Communities Advisory Group (TRCAG)

Members must:

- Identify as belonging to a Rainbow community, including people of diverse sexual orientations, gender identities, and sex characteristics.
- Possess a broad understanding of issues affecting Rainbow communities across Wellington, with the ability to offer strategic input that reflects their diverse needs, identities, and lived experiences.
- Have good relationships and networks with a range of communities.

Two seats will be reserved for takatāpui (Māori rainbow community members).

In recruitment, the Council will seek to maintain a balance across:

- Cultural backgrounds
- Gender identities
- Sexual orientations

DRAFT

- Age.

Rangatahi Youth Communities Advisory Group (RYCAG)

Members must:

- Be aged between 14–23 years at the time of appointment.
- Be interested in the issues that affect young people in Wellington and be willing to share ideas that reflect their diverse backgrounds, experiences, and needs.

Three seats will be reserved for rangatahi Māori (Māori youth members).

In recruitment, the Council will seek to maintain a balance across:

- Cultural backgrounds
- Gender identities
- Interests
- Ages.

Given the transitional nature of this age group, RYCAG will have a larger membership (up to 12 members).

Term of Appointment

- The standard term of appointment for members will be three years, aligned with the Council triennium.
- Before the end of the term, current members will be invited to submit an Expression of Interest (EOI) if they wish to continue serving for another term. Members must still meet the eligibility criteria at the time of reappointment—such as residing in Wellington, and for certain groups like RYCAG, remaining within the eligible age range.
- The Advisory Groups term will end, typically one month prior to the next local government elections.

Cessation of Membership

Membership will cease if a member:

- Resigns.
- Misses three consecutive meetings without providing an apology.
- Misses half of the scheduled meetings in total within a 12-month period, regardless of apologies.
- Does not take part in the Group's activities or provide input into its work over a one-year period.

DRAFT

- Seriously or repeatedly breaches the Code of Conduct (Appendix A), or engages in behaviour that compromises the effective operation, cohesion, or mana of the Group or Council staff. Termination of membership on conduct grounds will only occur after reasonable steps to address concerns, provide support, and seek re-engagement have been taken.

Note: Members on sick leave will not be subject to the attendance or participation criteria above.

Participation and Engagement Process

- The Advisory Group Coordinator will monitor attendance.
- Participation will be monitored holistically, recognising that contribution can vary (e.g. verbal input, written input between meetings, or small group engagement).
- If concerns arise, the Council Liaison Officer will first seek to understand whether barriers to participation exist and provide support.
- If a concern is identified, the member will be contacted by the Co-Chairs and Council Liaison Officer for a confidential conversation. This discussion will:
    - Outline the specific concern.
    - Clarify expectations under the Terms of Reference.
    - Offer appropriate support if needed.
    - Agree on any next steps or commitments.
- The member will be given a reasonable timeframe to demonstrate improvement, with any agreed support put in place.
- If there is no improvement, a formal review of the member's participation will be undertaken by the Co-Chairs and Council Liaison Officer. The member will have an opportunity to provide context or respond.
- Based on the outcome of the review, a decision will be made on whether the member's term will continue or end. This decision will be communicated in writing.
- The decision to end membership will only occur after all reasonable steps to support the member have been explored and documented.

Reappointment and Consecutive Terms

- Members will serve a three-year term aligned with the Council triennium—commencing after the election and disbanding before the next election. Members may reapply for one further term (a maximum of six years total) if they wish.
- After completing the maximum number of consecutive terms, members may reapply for membership following a break of at least one full term.

Leadership Elections

- The election process for Co-Chairs of each Group is outlined in Appendix E.
- Leadership elections will occur early in each Group's term to ensure stable guidance and support for members.

Leadership

- Each Group will elect two Co-Chairs.
- Co-Chairs are responsible for liaising with Council staff and facilitating Group input into the Panel.
- Leadership elections will follow established election procedures.

Payment

For DCAG, TRCAG, PCAG and ECAG

- $120 per meeting for Advisory Group members.
- $150 per meeting per Co-Chair

For RYCAG

- $90 (pro rata) per meeting for Advisory Group members
- $120 (pro rata) per meeting per Co-Chair

Budget

The Advisory Groups are set up to inform the work and activities of the Wellington Council. The Groups will not be given an independent budget to commission work or undertake activities outside of work that is agreed with the City Council.

Support for Full Participation

Wellington City Council is committed to creating inclusive and accessible spaces where all Advisory Group members can participate fully and confidently.

Participation Support

- The Council will provide support to assist members who face barriers to participating in Advisory Group meetings and Strategic Advisory Panel hui.
- Support will be considered on a case-by-case basis and will be at the discretion of the relevant Council directorate.

Support may include:

- Reimbursement of reasonable travel expenses required to enable participation, particularly for members with mobility or accessibility needs.
- Payment of up to $40 per hour for a support person if this is necessary to enable a member's full participation in meetings or associated activities.

Limitations

Payments will not be made to cover the cost of childcare or other general family care arrangements associated with attending meetings.

DRAFT

Accessibility of Meeting Venues

All Council-based venues used for Advisory Group and Panel meetings will be fully accessible and will include:

- Accessible entrances and facilities (including accessible toilets).
- Availability of required assistance such as New Zealand Sign Language interpreters where needed.
- Physical and sensory accommodations as appropriate to enable safe and equitable participation.

Members will also have the option to attend meetings online, recognising that flexibility is an important part of ensuring access for all.

The Council is committed to continually reviewing accessibility needs to ensure every member feels welcome, included, and able to contribute fully.

Conflict Resolution

Wellington City Council expects all Advisory Group and Panel interactions to be conducted in a spirit of mutual respect, trust, and collaboration. However, if conflict arises, the following steps will guide its resolution:

Initial Conflict Management

In the first instance, the Co-Chairs and Group members will work together and with Council Officers to seek a constructive and respectful resolution.

In the first instance, members are encouraged to approach the other party directly to discuss the issue in a respectful and constructive manner, where appropriate. If further support is needed, the Co-Chairs will work together and with Council Liaison Officer to seek a resolution that upholds the values of the Advisory Groups.

Escalation Pathways

If concerns remain unresolved, members should raise issues as follows:

- If the concern relates to another Group member, the matter should be raised with the Co-Chairs.
- If the concern relates to a Co-Chair, the matter should be raised with the Council Liaison Officer.
- If the concern relates to a Council employee, members should raise the issue with the Group's Council Liaison Officer.

Principles for Conflict Resolution

Confidentiality, cultural safety, and mana-enhancing practices will guide all conflict resolution processes. Where necessary, external facilitation or mediation support may be considered to assist in resolving complex issues.

DRAFT

Conflict of Interest

The integrity and credibility of the Advisory Groups and Strategic Advisory Panel rely on members providing advice that is free from actual, potential, or perceived conflicts of interest.

A conflict of interest occurs when a member's personal interests, relationships, or affiliations could improperly influence—or appear to influence—the advice they give or the decisions they support. This might include situations where a member stands to gain personally, financially, or professionally from a matter being discussed, or where their involvement could favour an organisation or group they are closely connected to.

Members are expected to declare any real or perceived conflicts at the start of each meeting, or as they arise, so appropriate steps can be taken to manage the situation transparently and fairly.

Declaration of Interests

All new members will be required to complete a Conflict of Interest Declaration Form at the time of appointment. Members will reconfirm or update their Conflict of Interest Declaration at the beginning of each year they remain on the Group.

The Council's Advisory Group Co-ordinator is responsible for:

- Providing Conflict of Interest forms during the induction process.
- Coordinating the annual update cycle.

Ongoing Disclosure

Members are expected to declare any new or emerging conflicts of interest at the beginning of each meeting or as soon as they become aware of a conflict during their term.

Definition of Conflict of Interest

A conflict of interest for the purposes of Advisory Group and Panel work arises when a member is involved in giving advice that could:

- Directly or indirectly affect money, funding, contracts, or other resources in which the member has a personal interest.
- Benefit or impact the member's immediate family or whānau.
- Involve official positions the member holds with other organisations, groups, or entities outside of Wellington City Council.

Managing Conflicts

When a conflict is identified, the Council Liaison Officer and Co-Chairs will work with the member to determine the appropriate course of action, which may include:

DRAFT

- The member withdrawing from discussions or decision-making on the relevant topic.
- Noting the conflict for transparency purposes without requiring withdrawal if the risk is minimal.

Maintaining transparency about conflicts of interest is essential to protect the trust, mana, and strategic focus of the Advisory Groups.

Review and Evaluation

The structure and functioning of the Advisory Groups will be reviewed annually. These reviews will help assess the effectiveness of the model and may inform future improvements to ensure continued alignment with Council priorities.

Review of Terms of Reference

The Terms of Reference will be reviewed when needed. Advisory Groups will have the opportunity to participate in any review process.

Support and Training

Wellington City Council is committed to providing Advisory Group members with the guidance, training, and resources required to carry out their roles confidently and effectively. Members will have access to tools and participation support that promote preparedness, inclusion, and meaningful contribution.

Council will provide:

- Full induction for all members.
- Training for all Advisory Group members and specialist training for Co-Chairs.
- Facilitated Strategic Advisory Panel meetings.
- Accessible meeting spaces and participation support (e.g. interpreters, mobility access).

Appendices

- A: Code of Conduct
- B: Strategic Advisory Panel
- C: Role Descriptions (Members, Co-Chairs)
- D: Recruitment and Selection Process
- E: Leadership Election Procedure

DRAFT

Appendix A: Code of Conduct

Objective

The objective of the code is to enhance:

• Mutual trust, respect and tolerance between members as a group and with Councillors and Council staff.

• The credibility and accountability of the Council within its communities.

The following is the standard of behaviour that is expected from members of Wellington City Council and Advisory Groups.

Relationships with others

Members will conduct their dealings with each other, and Elected Members, in ways

that:

• Are open, honest and maintain integrity.

• Focus on issues rather than personalities.

• Avoid aggressive, offensive and abusive conduct.

• Maintain confidence in their Group.

Relationships with Council staff

The effective performance of the Groups also requires a high level of cooperation and mutual respect between members and Council staff. To ensure this is maintained, members will:

• Treat all employees with courtesy and respect (including the avoidance of aggressive, offensive or abusive conduct towards employees).

• Observe any guidelines that the Chief Executive puts in place regarding contact with employees.

• Not do anything which compromises, or could be seen as compromising, the impartiality of an employee.

• Avoid publicly criticising any employee in any way, but especially in ways that reflect on the competence and integrity of the employee.

• Raise concerns about employees only with their Council Liaison Officer.

• Not seek to improperly influence staff in the normal undertaking of their duties.

Breaches of Conduct and Membership Termination

Clause:

All Advisory Group members are expected to uphold the principles and standards outlined in this Code of Conduct at all times. Where a member's behaviour or conduct significantly breaches this Code or repeatedly undermines the mana, trust, or effectiveness of the Group, Council, or Council staff, their membership may be suspended or terminated. Termination of membership is a last resort, considered only when other avenues of support and re-engagement have been exhausted.

Grounds for potential suspension or termination include, but are not limited to:

- Breaches of confidentiality.
- Aggressive, abusive, or discriminatory behaviour toward other members, Council staff, or the public.
- Non-attendance or lack of engagement without reasonable excuse, beyond the thresholds already defined.
- Conduct that brings the Group or Council into disrepute.
- Failing to declare conflicts of interest or acting in ways that create a real or perceived conflict of interest contrary to the Code.
- Misrepresentation of the Group's views in public or to media without Group consent.

Who Manages the Process?

All conduct matters shall be managed by:

- The **Council Liaison Officer** (primary contact).
- The **Responsible Council Manager** (decision-maker).
- With escalation to the **Executive Leadership Team (ELT) Sponsor** if required.

Process:

1. **Concern Raised**

   Any member, Council staff, or external party may raise a concern in writing to the Council Liaison Officer.

2. **Preliminary Review**

   The Liaison Officer will assess the concern and gather any relevant context or supporting information.

3. **Formal Investigation**

   If the concern appears substantive, the Liaison Officer will notify the Responsible Manager who will:

   - Advise the member in writing of the concern.

DRAFT

- Offer the member an opportunity to respond in writing within five working days.
- Consult the ELT Sponsor and Legal Advisor (if required).

4. **Interim Measures**

Where appropriate, temporary measures may be enacted (e.g. suspension from meetings), especially if the breach may affect the safety of staff or cohesion, or function of the Group.

5. **Outcome and Resolution**

The Responsible Manager may, based on the evidence and consultation:

- Issue a written warning.
- Place the member on probation with expectations for behaviour change.
- Remove the member from the Advisory Group.

6. **Communication and Transparency**

The decision will be communicated in writing to the member. The Advisory Group will be informed that a change in membership has occurred, but personal details will be kept confidential.

Right to Respond

All members subject to conduct proceedings have the right to:

- Receive written notice of the issue.
- Respond with their perspective.
- Request a support person to attend any meetings related to the process.

Contact with the media

Groups may have the opportunity to input into different initiatives and for consistency, it is important that a single point of contact is established to respond to any media enquiries.

• All media enquiries shall be redirected to Council staff.

• If it is agreed with Council staff that it is appropriate for a view to be expressed by the Group, only the Co-Chairs, may represent the Group to the media. The Co-Chairs will work with the relevant Council team in relation to any public comments.

• Views expressed to the media on behalf of the Group must have been previously agreed on by the Group as a whole.

• If a member is contacted by a journalist for a view from their Group, they must refer the journalist to Council Staff.

• Members are free to express a personal view in the media or the view of other organisations of which they are a member. However, they must make clear that these represent their private views as an individual, or the view of their organisation, and not those of Wellington City Council, or the Advisory Group they are a member of.

Confidential Information

In the course of their duties, members will receive information that they must treat as confidential. This will often be information that is either commercially sensitive or is personal to a particular individual or organisation.

Members should be aware that failure to observe confidentially will impede the performance of Council and could expose the Council to prosecution under the Privacy Act 1993 and/or civil litigation.

Council staff will ensure that Advisory Group members are aware which information is confidential.

Individual queries

Advisory Group members should not use Group meetings to raise personal matters or service requests that are better handled through the Council's Service Centre or other official public channels.

Honesty and Integrity

Members have a duty to act honestly. They must declare any private interests relating to their duties and take steps to resolve any conflicts of interest in such a way that protects the public interest. They must not act in order to gain financial or other benefits for themselves, their families, friends or business interests.

Complaints

If a member believes that another member or a Co-Chair, has breached the Advisory Groups' Code of Conduct, they may raise a complaint for further consideration.

Complaints should be made in good faith and relate to behaviour or actions that compromise the respectful, inclusive, or effective functioning of the Group. Examples may include discriminatory remarks, repeated disrespectful behaviour, or actions that undermine group cohesion.

DRAFT

Appendix B: Strategic Advisory Panel

Purpose

The Strategic Advisory Panel (the Panel) brings together the voices, perspectives, and strategic insights of Wellington City Council's Advisory Groups to strengthen collective input into Council's high-level strategies, policies, and transformational projects.

The Panel aims to:

- Amplify diverse community voices at the highest levels of Council decision-making.
- Support collective, intersectional advice while respecting individual Group identities.
- Enhance trust, transparency, and influence in the strategic direction of Wellington City.
- Uphold Te Tiriti o Waitangi and promote the active inclusion of Māori perspectives.

Role

The Panel will:

- Provide strategic advice on major Council initiatives, such as the Long-term Plan (LTP), Spatial Plan, Transport Strategy, and other key priorities.
- Identify cross-cutting themes and opportunities for collaboration across different community identities.
- Strengthen the connection between community voices and Elected Members.
- Encourage strategic, future-focused input rather than operational or technical feedback.
- Model relationship-enhancing practices, with facilitation that supports open dialogue and collective influence.

Composition

The Panel is made up of:

- All members of the five Advisory Groups:
  - Disabled Communities Advisory Group (DCAG)
  - Ethnic Communities Advisory Group (ECAG)
  - Pacific Communities Advisory Group (PCAG)
  - Takatāpui Rainbow Communities Advisory Group (TRCAG)
  - Rangatahi Youth Communities Advisory Group (RYCAG)
- Elected Members of Wellington City Council

DRAFT

- Tākai Here Representatives - Pouiwi
- Members of the Council's Executive Leadership Team (ELT).

Each Group’s Co-Chairs will act as key contacts and spokespeople during Panel sessions.

Meetings

The Panel will meet three to four times per year, aligned with key milestones in Council's strategic planning and decision-making calendar.

Meetings will be facilitated to support safe, open, and productive intersectional discussion.

Panel hui will include:

- Strategic briefings from Council staff on major projects or policy directions.
- Breakout sessions for caucusing within Advisory Groups where necessary.
- Joint discussions to identify collective insights and shared recommendations.

Expectations of Members

Panel members are expected to:

- Attend and actively participate in Panel meetings.
- Bring the strategic insights of their identity communities to the table.
- Engage respectfully and collaboratively across diverse perspectives.
- Focus discussions on high-level strategy and future impact.
- Uphold the Panel’s kaupapa of mana-enhancing, trust-building engagement.
- Maintain confidentiality where required, while promoting transparency overall.

Facilitation and Support

Meetings will be professionally facilitated with a focus on cultural safety, equity of voice, and strategic outcomes.

Reporting and Influence

Strategic advice and collective insights from the Panel will be reported directly to the appropriate Council committee and decision-making forums.

Annual reports on the operation and impact of the Panel will be provided to the relevant committee.

Review

The Strategic Advisory Panel will be reviewed annually.

DRAFT

Notes

The Panel is not a decision-making body, but its collective strategic advice is intended to shape and influence Council's highest-level decisions.

Panel advice will complement, not replace, other forms of community consultation and engagement.

DRAFT

Appendix C: Role Descriptions

Members

Position	Roles and Accountabilities
Co-Chairs (Two per Group)	Provide leadership, strategic focus, and facilitation to ensure the effective functioning and collective voice of each Advisory Group. • Uphold the Advisory Groups' Code of Conduct and model respectful, inclusive engagement at all times. • Promote open, respectful, and inclusive communication, creating space for all members to contribute meaningfully to discussions. • Maintain a positive and collaborative relationship with Council staff. • Lead the development and refinement of the Group's Strategic Work Programme, ensuring it aligns with Council priorities. • Collaborate with Advisory Group members and Council Liaison Officers to develop meeting agendas that are strategically focused and aligned with the Group's Work Programme. • Serve as spokespersons for the Group where required. • Partner with Council Liaison Officers to monitor member attendance, engagement, and participation, and to support a cohesive and inclusive group culture. • Lead the development of the Group's annual report, working in partnership with members and Council staff to reflect on achievements, insights, and impact. **Attend:** Advisory Group meetings, Co-Chair planning meetings, Strategic Advisory Panel, and induction and training sessions.
All Advisory Group Members (including Co-Chairs)	Provide identity-informed strategic advice, drawing on lived experience and community insight to support the work of their Advisory Group and the Strategic Advisory Panel. • Uphold the Advisory Groups' Code of Conduct and model respectful, inclusive engagement at all times. • Maintain a positive and collaborative relationship with Council staff.

DRAFT

Position	Roles and Accountabilities
	• Demonstrate a strong personal connection to their identity group, offering perspectives grounded in real-world experiences. • Prepare for meetings in advance and contribute to discussions with an open, respectful, and forward-thinking mindset. • Actively participate in Advisory Group meetings, Strategic Advisory Panel hui, and any other related engagements. • Contribute to the delivery of the Group's Strategic Work Programme, including progressing actions and supporting key outcomes. • Focus on strategic-level matters relevant to the Group's kaupapa, and direct operational, individual, or service-related concerns to Council's public-facing channels. • Participate in induction, training, and capacity-building activities to strengthen their understanding of Council systems and processes. **Attend:** Advisory Group meetings, Strategic Advisory Panel hui, training and induction sessions.

Non-Members Who Support the Advisory Groups

Position	Roles and Accountabilities
Advisory Group Coordinator **(Diversity and Engagement Assistant)**	Provide operational, administrative, and logistical support to ensure the effective delivery of Advisory Group meetings and activities. • Prepare and distribute agendas, background briefings, minutes, and supporting documentation in collaboration with Co-Chairs and relevant Council teams. • Track Group attendance. • Coordinate logistics and accessibility requirements including venue bookings, interpretation services, dietary and mobility needs, and hybrid meeting technology. • Develop and maintain run sheets, oversee meeting day logistics, and ensure the smooth delivery of sessions.

Position	Roles and Accountabilities
	• Organise and facilitate planning meetings with Co-Chairs, ensuring they are well supported in their leadership roles. • Provide briefing support and reference material to Council staff attending Advisory Group meetings. • Serve as the primary point of contact for members, Council departments, and external stakeholders. • Circulate key documents such as work programme summaries, Terms of Reference, and updates in accessible formats. • Maintain records including membership, attendance, conflicts of interest, payments, and reporting obligations. • Monitor and track costs related to meetings and special projects and provide input into budget forecasting. **Attend:** Advisory Group meetings, Co-Chairs planning meetings, Strategic Advisory Panel meetings, onboarding and induction sessions.
Engagement Liaison Advisor **(Senior Diversity and Engagement Advisor)**	Lead the effective delivery and continuous improvement of the Advisory Group model. • Oversee the design, implementation, and refinement of operational guidelines, training resources, templates, and internal protocols. • Ensure alignment with Council's strategic priorities, Te Tiriti o Waitangi obligations, and equity-led community engagement principles. • Develop and deliver tailored induction and training for Advisory Group members and Co-Chairs in collaboration with BUs. • Lead initiatives to build Advisory Group capability, including mentoring, reflective tools, and resource development. • Act as the first point of escalation for sensitive or complex issues. • Design and lead evaluation processes to assess impact, reach, and relevance of the Advisory Group model. • Contribute to reporting, including annual summaries, case studies, and strategic insights. • Collate and synthesise Advisory Group advice and feedback for timely delivery to Council leadership and departments. • Partner with Strategy and Policy teams to embed Advisory Group insights into Council work programmes.

DRAFT

Position	Roles and Accountabilities
	• Track follow-up actions to close the advice loop and ensure members are informed of how their input has been used. **Attend:** Advisory Group Co-Chairs planning meetings, Strategic Advisory Panel meetings, Advisory Group Meetings (as required) onboarding and induction sessions.
Responsible Manager	Provide strategic leadership and oversight • Monitor delivery against key milestones and escalate risks or barriers where required. • Provide professional support to staff coordinating Advisory Groups. • Ensure engagement practices uphold Te Tiriti o Waitangi, equity principles, and community-led approaches. **Attend:** Strategic Advisory Panel meetings, onboarding and induction sessions.
Council Liaison Officer	Provide leadership, relationship continuity, and professional development support for Co-Chairs and Advisory Group members. • Attend Advisory Group meetings to offer managerial presence and institutional knowledge. • Provide mentorship and leadership coaching to Co-Chairs, particularly in managing Group dynamics and Council expectations. • Advocate for the integration of Advisory Group recommendations into Council workstreams. • Approve each Group's Strategic Work Programme. **Attend: I**nduction, training, Co-chairs meetings and Advisory Groups and Strategic Advisory Panel meetings
Engagement Specialist (ES)	Provide engagement advice to support inclusive, culturally responsive, and effective participation. • Advice on inclusive engagement approaches that align with the purpose and focus of the Advisory Group.

Position	Roles and Accountabilities
	Attend: Co-Chairs Meeting, Advisory Group meetings.
Executive Leadership Team (ELT)	Provide senior leadership and strategic alignment support • Promote early involvement of Advisory Groups in relevant project planning and scoping activities. **Attend:** Strategic Advisory Panel meetings
Elected Members	Provide political context, uphold democratic accountability, and support the strategic integration of Advisory Group and Strategic Advisory Panel insights. • Explain Council's political processes and priorities when appropriate. • Convey advice and insights from Advisory Groups in relevant Council systems. • Take part in an advisory group buddy system if requested by an advisory group and approved by the Mayor. **Attend:** Strategic Advisory Panel meetings.

DRAFT

Appendix D: Recruitment and Selection Process

Wellington City Council will invite expressions of interest from residents residing within the city boundaries through a range of outreach and communications channels. Individuals interested in joining an Advisory Group are required to submit an application. Shortlisted candidates will be invited to participate in an interview.

Where possible, the interview panel will include at least one member with lived experience or relevant identity-based expertise connected to the Advisory Group being recruited for.

Triennium-Based Recruitment

Recruitment for Advisory Groups will take place once every three years, aligned with the Council triennium. All members are appointed for a term of three years and may reapply for one further term (maximum of six years).

Replacement of Vacancies

Should membership in any Advisory Group fall below six members for DCAG, ECAG, PCAG, TRCAG and below nine for RYCAG during the triennium, and more than nine months remain before the end of the term, Wellington City Council may initiate a supplementary recruitment process.

Members appointed through this mid-term process will serve for the remainder of the current triennium. They will be eligible to reapply for a full term in the subsequent triennium, in alignment with the two-term limit established across all Advisory Groups.

DRAFT

Appendix E: Process for Conducting Advisory Group Leadership Elections

Purpose

This document outlines the process for electing Co-Chairs for each Advisory Group under Wellington City Council's new Hybrid Model.

Overview

1. Each Advisory Group will elect two Co-Chairs.
2. A maximum of two Co-Chairs is permitted at any time.
3. Elections will be facilitated by the Council Liaison Officer.
4. Members must self-nominate for Co-Chair roles.
5. Candidates will have the opportunity to speak about their eligibility for the role for up to one minute.
6. Voting will be conducted by secret ballot.
7. The two candidates with the highest number of votes will be elected as Co-Chairs.

Timing of Leadership Elections

8. Leadership elections will be held:
    - Early in each triennium, shortly after new Group appointments are finalised (target: first or second meeting).
    - Annually for RYCAG, to accommodate natural turnover among youth members.
9. The specific election timing can be varied by mutual agreement between the Group and the Liaison Officer.
10. In the case of a vacancy, an additional election will be held as soon as practicable (see Additional Elections).

Pre-Meeting Tasks

11. The Liaison Officer will announce the upcoming election at the meeting prior to the election meeting.
12. The Liaison Officer will circulate this election procedure to all members.
13. Nominations may be received in advance or at the election meeting.

DRAFT

Election Process

a) Opening Nominations

- Members self-nominate for the Co-Chair positions.
- Nominations may be made prior to or during the election meeting.
- All nominations will be noted in the meeting minutes.
- Members not present may still nominate themselves in advance.

b) Candidate Speeches

- Each candidate may address the Group for up to one minute before voting begins.
- Candidates attending remotely may address the Group by audio or audiovisual link.

c) Voting

- Voting will be conducted by secret ballot.
- Only members present (in-person or online) may vote.
- Each member may cast up to two votes.
- Ballots will be collected, counted, and verified by the Liaison Officer and one nominated Group member.

d) Result Announcement

- The two candidates receiving the highest number of votes will be declared elected as Co-Chairs.
- No vote totals or margins will be announced.
- In the event of a tie, the result will be determined by drawing names at random (e.g. from a hat by the Liaison Officer).
- Results will be recorded in the meeting minutes.
- All ballots will be destroyed after the election.

Additional Elections (in Case of Vacancy)

14. If a Co-Chair position becomes vacant:

- An additional election will be held as soon as practicable.
- A full election process will be followed for the vacant position.

DRAFT

Special Notes

- All leadership elections will prioritise transparency, fairness, and inclusion.
- Cultural safety and mana-enhancing practices will be embedded throughout the process.
- Elected Co-Chairs are expected to actively partner with Council to support the Group's contribution to strategic decision-making.

DRAFT

Timeline of Engagement on the Advisory Group Model

This document outlines the main timeline and key communications regarding how recent Advisory Group members were engaged in the proposal and adoption of the new hybrid Advisory Group model.

Date	Who Was Involved	Communication Type	Summary of Engagement Purpose/Content
12 October 2023	Councillors, All Advisory Group (AG) Members	Annual reports, work plans	Councillors asked staff to review the Advisory Group model and report on possible improvements after annual reports and work plans were presented. They also requested exploration of a new group for Ethnic Communities.
5 April 2024	All AG Members, Committee	Email	Officers informed Advisory Group members about a Report Back paper that recommended reviewing and improving the Advisory Group model. The Committee agreed to review the Advisory Group model and to establish an Ethnic Communities AG, via an amendment.
10 April 2024	PAG	Meeting	In the minutes from the PAG meeting on 10 April, it was noted that Councillor Matthews provided the following update: The Kōrau Mātinitini | Social, Cultural, and Economic Committee made a decision regarding Advisory Groups, including the creation of a new Ethnic Communities Advisory Group.

11 June 2024	PAG Co-Chairs	Meeting	Officers met with PAG Co-Chairs Anthony and Natalia to discuss the approach for a workshop with PAG on the Advisory Group model.
12 June 2024	Youth Council	Meeting	Officers spoke to Youth Council members and highlighted that a resolution was made by Councillors to establish an Ethnic Communities Advisory Group and explore the current Advisory Group model.
12 June 2024	PAG	Meeting	The minutes from 12 June PAG meeting show a 'Review of Advisory Groups' workshop was presented.
June 2024	PAG Members and Officers	Workshop	The first PAG workshop took place. The purpose was to provide an update on the Advisory Group review, test findings from previous reviews and identify any gaps.
2 September 2024	Youth Council Co-Chairs	Email	Officers emailed Co-Chairs Diana and Finley to share an update about the Advisory Group review.
4 September 2024	Youth Council	Meeting	Officers presented an Advisory Group review update to Youth Council.
17 Sep 2024	AAG Members	Email	Officers shared the 24 Sept agenda, which included an update on the Advisory Group review.
18 September 2024	TRAC Members	Email	Draft Advisory Group workshop analysis was shared with all TRAC members

September 2024	PAG Members	Workshop	The second PAG workshop focused on identifying strengths, assessing current and past issues, and gathering ideas for improving the Advisory Group model.
25 September 2024	TRAC Members	Workshop	Advisory Group review 30-minute workshop.
2 October 2024	Youth Council	Meeting	Advisory Group review updates were presented by Officers.
October 2024	PAG Co-Chair Maria Mitimesi and Officers.	Meeting	Officers had a one-on-one meeting with PAG Chair Maria to discuss the options being considered by the Committee.
October 2024	New PAG Members	Interviews	Recruitment for new PAG members began. During interviews, candidates were advised of the Advisory Group review but not given final details, as decisions were still pending.
24 Oct 2024	AG Co-Chairs	Email	Officers offered briefings ahead of the Committee meeting (28 Nov); and invited Co-Chairs to attend their meetings online.
25 Oct 2024	AG Co-Chairs	Email + Slides	Officers shared slides about the new model design which included meeting frequency, group size, Māori seats, term length, re-application process.
6 November 2024	TRAC Co-Chairs	Email to Cr Iona Pannet, Cr Terri O'Neill	TRAC shared their comments on the new hybrid model, prepared by Co-Chairs, with Cr Iona Pannet, Cr Terri O'Neill.

			TRAC outline that they support the hybrid model that combines joint Advisory Group meetings with TRAC-only sessions. TRAC supports middle management attending the meetings.
8 Nov 2024	AG Co-Chairs	Email	Officers updated co-Chairs on the upcoming Committee decision. Officers encouraged Co-Chairs to attend, to ask questions or speak at Committee.
21 Nov 2024	All AG Members	Email	Officers shared the Committee report on the new hybrid model, and invited members to speak/attend the 28 Nov meeting. Sam advised members that option two out of four, the Hybrid model, was the recommended model.
27 Nov 2024	AAG Members	Email	Officers reminded members about the upcoming Committee decision the next day and asked if anyone wished to speak.
28 November 2024	AG members, Chairs	Email	Officers emailed all members and Chairs to share that the Kōrau Mātinitini | Social, Cultural and Economic Committee had resolved to adopt the recommended hybrid Advisory Group model. They shared the media release with recipients.
27 Nov 2024	Co chair of AAG Erikka Helliwell	Email (to officers)	Confirmed to speak at Committee but unable to attend; expressed strong support for Officers' work.
18 Dec 2024	AAG Members	Email	Officers shared Committee's decision: adoption of hybrid model with expected implementation late

			2025. Reiterated that AAG continues until then.
2 Apr 2025	All AG Members	Email	Officers reminded Members about the transition of the Advisory Groups to the Engagement team, notified that the final meetings would take place in August 2025 and the new model starts February 2026; attached the AG committee paper.
6 May 2025	ECAG Members	Meeting	Inform and update ECAG about transition and implementation plan, listened to AG members concerns.
19 May 2025	AAG Members, Crs Pannett & Matthews	Email	Announced 27 May meeting to present model transition update, shared model overview, FAQs, and report.
20 May 2025	Youth Council	Email	Document 'Advisory Groups Future Model' was shared with Youth Council members.
21 May 2025	PAG Chair and Deputy Chair	Meeting	Meeting between Officers, and the PAG Chair and Deputy Chair. Officers asked to speak about the new model at the May PAG meeting. Chairs raised concerns and requested a further meeting with Officers.
21 May 2025	Youth Council Members	Meeting	Inform and update Members about transition and implementation plan, listened to AG members' concerns.
21 May 2025	PAG Members	Meeting	Engagement Team introductions to PAG Members.

27 May 2025	PAG Chair and Deputy Chair	Meeting	Meeting between Officers, the PAG Chair, and Deputy Chair to further discuss the new model.
27 May 2025	Youth Council Co-Chairs	Meeting	Follow up on transition to new model
27 May 2025	AAG Members	Meeting	Inform and update Members about transition and implementation plan.
28 May 2025	AAG Members	Email	Follow-up from 27 May meeting; minutes and presentation shared; invited member questions by 6 June to inform response document; confirmed continued Engagement Team presence.
3 June 2025	ECAG Members	Meeting	Raising the planning of the Ethnic Forum and ECAG's opposition to some of the elements of the new model.
4 June 2025	Youth Council	Meeting	New hybrid model discussed, Group had questions and reservations about some of the elements of the new model.
10 June 2025	TRAC Members	Meeting	New hybrid model discussed, a new Group member expressed disappointment about needing to re-apply to the Group.
18 June 2025	Youth Council Members	Meeting	Youth Council meeting with Engagement staff present to advise of hybrid model changes.
18 June 2025	Youth Council AG Members	Email	Members were provided with written advice on the avenues that they have available to them to raise their concerns on the Advisory Group changes with Elected Members.

19 June 2025	Youth Council Co-Chairs	Email	Officers emailed Youth Council Co-Chairs to let them know they were aware of concerns about the new Advisory Group model and offered to meet with them. Co-Chairs declined as they had good knowledge of the new model.
23 Jun 2025	All AG Members	Email	Shared FAQ document responding to Group feedback; acknowledged some feelings of disappointment; reaffirmed model benefits and appreciation for member contributions.
23 June 2025	Youth Council Co-Chairs	Email	Officers responded to feedback about some of the membership changes in the new model.
25 June 2025	PAG Members	Meeting	PAG Members were shown a presentation on the new model. Members expressed disappointment with some elements of the new model.
28 July 2025	All AG Co-Chairs	Email	All Co-Chairs were emailed to invite them to a hui to discuss the new Advisory Group and Strategic Advisory Panel Terms of Reference.
30 June 2025	TRAC Co-Chairs	Meeting	Discussing current work plans and the wrapping up of the current TRAC group.
30 July 2025	TRAC Co-Chairs	Meeting	Terms of Reference meeting with TRAC Co-Chairs – collating feedback about the new Terms of Reference.
30 July 2025	Youth Council Co-Chairs	Meeting	Terms of Reference meeting with RYAG Co-Chairs – collating

			feedback about the new Terms of Reference.
31 July 2025	ECAG Co-Chairs	Meeting	Terms of Reference meeting with ECAG Co-Chairs– collating feedback about the new Terms of Reference.
1 August 2025	PAG Co-Chairs	Meeting	Terms of Reference meeting with PAG Co-Chairs– collating feedback about the new Terms of Reference.
5 August 2025	PAG, TRAC, ECAG, RYAC	Email	Recruitment process update, detailing Expression of Interest process. Advising that we have met with co-chairs to review and discuss draft Terms of Reference.
15 August 2025	AAG	Email	Update to AAG members on the recruitment process including an Expression of Interest process.
19 August 2025	AAG	Email	Update to AAG members via Dem Services on recruitment process and advising that co-chairs of PAG, TRAC, ECAG & RYAC meet to review and discuss draft Terms of Reference. Advised that no meeting with AAG was held due to Co-Chair availability.
27 August 2025	All Advisory Groups	Email	Updated Advisory Groups with the Committee Report, Terms of Reference and table of ToR changes based on feedback.

12 October 2023

Advisory Groups presented their annual reports and work plans to the Social, Cultural and Economic Committee (as they do each year). Members raised issues within their Advisory Groups, and Councillors asked staff to review the Advisory Group model and report back with improvement options. Additionally, they requested that staff explore options for establishing a Group for ethnic communities. PAG did not have an annual report to present at that meeting and instead submitted its annual report and work plan at the 23 November 2023 Committee meeting.

5 April 2024

Officers emailed all Advisory Group members to provide an update on a Report Back paper they intended to present to the Kōrau Mātinitini | Social, Cultural and Economic Committee in April. This was the meeting that led to an amendment to establish the Ethnic Communities Advisory Group (ECAG) and review the Advisory Group model as a whole. The report acknowledged recurring issues and constraints and recommended further investigation into improving the model before establishing a new group for ethnic communities. Councillors agreed to both conduct a review of the model and establish an ethnic communities' group under the current framework.

11 June 2024

Officers met with PAG Co-Chairs Anthony and Natalia to discuss the approach for a workshop with PAG on the new Advisory Group model.

12 June 2024

The Youth Council agenda includes an Advisory Group Review item.

Officers spoke to slides regarding the Advisory Groups and highlighted the following information:

A resolution was made by Councillors to establish an Ethnic Advisory Group and explore the current Advisory Group model to ensure effective engagement.

- Members broke into two groups and provided feedback on the following questions:
- When is a time you've felt that the Advisory Group has been effective and why do you think it has been effective?
- Are the reoccurring issues found in previous reviews the same and are we missing anything?
- Do you have good practice examples or creative ideas to share about how we can do better?

12 June 2024

The minutes from 12 June PAG meeting show a Review of Advisory Groups workshop was presented by Officers.

June 2024

First PAG workshop. The purpose of the workshop was to provide an update on the project, what was happening and what was coming next, as well testing findings from previous reviews and identify any gaps or additions and to share and gather creative ideas for engaging with diverse communities.

2 September 2024

Officers shared the document Advisory Group Review - Background Research and the with the Co-Chairs of the Youth Council.

Officers advised that over September, they would be adding to their 'brain dump of working notes and workshop analysis' as they meet with all Advisory Groups.

4 September 2024

In the minutes, from the 4 September Youth Council meeting, it is outlined that Officers presented an Advisory Group Review update to Youth Council.

Officers spoke to slides on the Advisory Group Review and highlighted the following points:

- We are looking to advertise for advisory groups in September and continue recruitment into November.
- Two documents are in development: Working notes and Analysis of Feedback. We are looking at three Challenges and Opportunities: Intersectionality, Values/Criteria and Rest.
- Intersectionality – How do we build these cross-group connections into our future model while ensuring we hear the separate voices of the groups and not increasing the workload of the groups?
- What values/criteria should we use to evaluate them? Some of the values that came through the workshop in June were: Accessibility, Te Tiriti, Autonomy, Building Consensus, Empowering, Enabling.

Youth Council provided the following feedback:

- We could provide feedback through a joint Advisory Group hui, carving out some time in a meeting.
- Some members would be happy to increase the workload and have more meetings so Groups could meet as a collective.
- We need to add flexibility into the criteria.
- Having an awareness of Te Tiriti should be evaluated rather than using it as an evaluation tool by itself.
- It would be good to have a strong onboarding including Te Tiriti training.

September 2024

Second PAG workshop. The workshop sought input from PAG members on the problems and opportunities for the future state of Advisory Groups. Topics included:

- Growing from strengths – members identified times the Advisory Group had been effective and unpacked what made those moments successful.
- Testing previous review findings – members reflected on whether issues identified in earlier reviews were still current and identified any new issues.
- Gathering good practice and creative ideas – members shared examples and ideas to help improve the model.

17 September 2024

Officers shared with all AG members the agenda for their meeting on 24 September. The email includes a presentation about the Advisory Group research. The Advisory Group review draft was also attached.

18 September 2024

Officers emailed all TRAC members ahead of the upcoming meeting and shared a draft of the Advisory Groups Review 2024 Workshops Analysis for members review ahead of the meeting for feedback.

Officers also shared the September 2024 Advisory group workshop Slideshow. In the slideshow, on slide 5, three questions were raised with the group for feedback -

- How do we build these cross-Group connections into our future model while ensuring we hear the separate voices of the groups and not increasing the workload of the Groups?
- What values/criteria should we use to evaluate them?
- What would you see in the model that would assure you that there had been a strong reset?

Officers raised in the email that it should be noted that these are not final documents, and that Officers were continuing to add to the working notes and the workshop analysis throughout September as they engage with all the Advisory Groups. Members were advised that Officers were actively seeking feedback on gaps and critiques of the documents, as well as aiming to discuss the three questions outlined in the slide deck included below.

2 October 2024

Advisory Group Review Updates were presented by Officers.

24 October 2024

Officers advised the Co-Chairs that they would give a briefing on the report closer to the Committee date of 28 November.

They asked if in the meantime, recipients would like them to join any of their meetings.

25 October 2024

Officers shared these information slides with all Advisory Group Co-Chairs. Slides included the following information:

- Expect 5 to 7 meetings per year scheduled depending on work programme.
- RYAG may have more meetings.
- Smaller group size – 8, except RYAG which is 12.
- Two seats dedicated to Māori in the DCAG and TRAC, and 3 in RYAG.
- Members serve a 3-year term aligned with triennium.
- All to re-apply, if interested, for a second term and a maximum of six years.

6 November 2024

TRAC's comments on the new hybrid model, prepared by Co-Chair Sam L, outline that TRAC supports the hybrid model that combines joint Advisory Group meetings with TRAC-only sessions, emphasising that joint discussions enhance, rather than dilute, their perspectives. They stress the need for processes that ensure member safety, encourage inclusive feedback through small group discussions, and incorporate activities to build relationships and foster open communication during meetings.

They support middle management attending, as these individuals connect strategic direction to practical projects relevant to their advice. Nevertheless, they believe ELT should continue participating in joint hui, given that their contributions offer valuable insight into Council operations.

8 November 2024

Officers emailed Advisory Group Co-Chairs to inform them that the review was nearing consideration by the Kōrau Mātinitini Social, Cultural & Economic Committee on 28 November. Co-Chairs were encouraged to submit questions or speak at the Committee.

The email follows up on the hui held the previous day, acknowledging that many could not attend. Officers listed a few points for the Group to consider:

- Questions/Comments? Do any Group Members have questions or comments following the briefing?
- Remaining meetings – Is there a need for staff to join any of the remaining Advisory Group hui before the Committee on 28 November?
- Speaking/attending – Would any members wish to speak or listen in on 28 November? It is helpful if members have time to participate, as Elected Members appreciate hearing directly from the group.

Officers emphasised that the report about the review would be shared with all Group members by email prior to being posted on the Council website on 21 November.

AG Members were encouraged to email about any of the above topics or other thoughts.

21 November 2024

Officers emailed all AG members and invited them to either attend or speak about the proposed hybrid model report at the Committee Meeting on 28 November 2024.

All AG members were advised the report would ask the Committee to consider adopting the hybrid model that they [AG members] had discussed with Officers.

Officers attached a PDF of the report to members.

Officers advised that four potential models were discussed in the paper, and option two, the Hybrid Model of identity Advisory Groups and a joint panel is recommended.

From Officers:

It's a real pleasure to let you know that the report for the Committee meeting on Thursday 28 November will be going online today. The Committee meeting calendar link is below, and a PDF of the report is attached.

I wanted to take this opportunity to thank you once again for the generous way that you have participated in this mahi to improve and refine a proposed future model. We could

not have come up with such considered options and advice for the Committee without your expert input.

The report asks the Committee to consider adopting the model we have discussed, now called the 'Hybrid of identity advisory groups and a joint panel'. It asks for increased resourcing and for the Committee to thank you for your work on this project.

27 November 2024

Officers emailed all Accessibility Advisory Group members that the decision on the future advisory group model would be decided at the meeting of the Kōrau Mātinitini Social, Cultural, and Economic Committee the following day.

Officers invited members to let them know if they wanted to speak, as an individual or on behalf of AAG.

27 November 2024

Erikka, a Co-Chair of AAG was confirmed to speak at the Kōrau Mātinitini | Social, Cultural, and Economic Committee during public participation, but wasn't able to attend.

She expressed her support for the work undertaken by Officers, saying that they had done an excellent job balancing the need to work across different Groups while still maintaining their ability to act collectively for their specific Groups.

28 November 2024

Officers emailed all members and Co-Chairs to share that the Kōrau Mātinitini | Social, Cultural and Economic Committee had resolved to adopt the recommended hybrid model. Officers shared the media release, which stated that the model:

"Maintains the strengths of the existing model, while positioning it in a more strategic way and providing a more transparent and connected structure to bring diverse voices together with Council's elected members, including pouiwi." Key recommendations included a more strategic and collaborative approach, fewer members, a combined panel, fewer and more efficient meetings, better use of resources, the addition of an Ethnic Communities Advisory Group, and changes to the Environmental Reference Group.

18 December 2024

Officers emailed all AAG members about the new Advisory Group model, stating that the new mode is expected to be in place in late 2025.

The email states that the paper containing information on this can be found in the agenda and the decision is recorded in the minutes. The Committee decided that the future advisory group model will be a hybrid with both identity groups and a panel (all members of identity groups on the panel, with reduced identity group size).

The email states that AAG will continue to operate under the current model until a time when the new model is in place – which is expected to be near the end of 2025.

2 April 2025

Transition of the Advisory Groups from under the care of Democracy Services to the Engagement team begins. Officers emailed all Advisory Group members to remind them of the new model and advise that final meetings of the current Groups would occur in August 2025, with the new model commencing in February 2026.

The Committee paper including the research into the new model was attached as a reminder.

19 May 2025

Officers shared the agenda for the upcoming meeting with AAG members and Elected Members liaisons.

Recipients were made aware the upcoming meeting on 27 May would include a presentation about the Advisory Groups transition. The presentation was shared with recipients, as well as an FAQ document about the new model.

The Committee paper including the research into the new model was attached as a reminder.

28 May 2025

Officers sent minutes from the AAG meeting on 27 May, a presentation, and information to all AAG members in a 'high importance' email.

Officers acknowledged in the email with the minutes there are a lot of feelings and thoughts among members regarding the upcoming changes – The team aims to work

through this with everyone so that support is provided and opportunities for feedback are available.

The Democracy Services Adviser offered to put together a document of questions for Officers about the Advisory Group model transition.

It was noted that the Engagement team would attend the remaining AAG meetings under the current structure, ensuring continued opportunities for questions and engagement concerning the transition.

The meeting minutes were attached, along with the presentation provided by Officers.

For those who missed the meeting, or did not review previous communications regarding the upcoming changes, a summary was included:

- Following directions by Committee in November of 2024, the Advisory Group model will be changing.
- The new model will be a hybrid model featuring Advisory Groups and a Strategic Advisory Panel.
- Existing Advisory Groups will be disbanded to implement these changes after the August meetings of the Groups.
- The new Hybrid Advisory Group model will officially launch in early 2026.
- Current AAG members wishing to be part of the Disability Advisory Group within the new model will need to apply when the recruitment process opens.

19 June 2025

Officers emailed Youth Council Co-chairs to meet about the new model. Co-Chairs decline to meet as they felt they had a good understanding of the model.

23 June 2025

Officers sent a list of FAQS to all Advisory Group members, acknowledging disappointment and feedback. The email further notes:

- The team has now met with each of the Advisory Groups to discuss the new model in transition. All feedback received was thoughtful and constructive, demonstrating how deeply members care about the communities they support, and the collaborative work accomplished with the Council.
- While change is never easy, the new model presents a real opportunity to strengthen collaboration—offering greater clarity of purpose, stronger support for members, and more influence over decisions that affect communities.

- The team is enthusiastic about this opportunity and sincerely hopes members will consider reapplying. The knowledge, experience, and leadership of current members are highly valued, and ongoing collaboration in this new phase is encouraged.
- Options are being considered for a recruitment process that honors the contributions of current members.

28 July 2025

Email to Advisory Group Co-Chairs inviting them to a hui to discuss the draft Terms of Reference for the new Advisory Group model. Some aspects of the new model—such as the structure, group sizes, meeting frequency, and budget—have already been confirmed by the Committee and are therefore not open for change.

Further information included:

- The hui will focus on gathering feedback about leadership roles, Group purpose, support and training needs, and recruitment processes.
- The draft ToR will be provided before the meeting, and members are encouraged to prepare feedback in advance.
- The hui is paid and will also cover the process for expressing interest in continued membership.

30 July 2025

Officers met with TRAC Co-Chairs to receive feedback and discuss elements of the Terms of Reference that were open to change.

30 July 2025

Officers met with RYAC Co-Chairs to receive feedback and discuss elements of the Terms of Reference that were open to change.

31 July 2025

Officers met with ECAG Co-Chairs to receive feedback and discuss elements of the Terms of Reference that were open to change.

1 August 2025

Officers met with PAG Co-Chairs to receive feedback and discuss elements of the Terms of Reference that were open to change.

5 August 2025

Officers emailed all Advisory Groups except AAG an update on the recruitment process, explaining that they met Co-Chairs to discuss and review elements of the ToR that were open to operational review. The information provided included the recruitment process for recent Group members.

15 August 2025

Officers emailed all AAG members an update on the recruitment process. The information provided included the recruitment process for recent Group members.

19 August 2025

Officers emailed AAG members with an update on the transition to the new model. Current members were informed they will be invited to submit an Expression of Interest before the roles are publicly advertised. They were also informed that Officers met with Co-Chairs of TRAC, YC, ECAG and PAG to discuss the draft Terms of Reference, covering Group purpose, member roles, and accessibility of the recruitment process. A meeting with AAG Co-Chairs was not possible due to availability of Co-Chairs.

28 August 2025

Officers emailed all Advisory Group members to let them know the Terms of Reference for the new Advisory Group model was being considered by the Kōrau Mātinitini Social, Cultural & Economic Committee on 4 September 2025.

Attachments included the report provided to the Committee, Terms of Reference and table of changes proposed by Co-Chairs and actions taken to incorporate them.

Working Milestones – draft

Month	Milestone
May	Early engagement Research
June	Advisory Group Workshops Internal Staff Workshop Research
July	Research – Auckland CC
August	Elected Members Hui Ethnic Communities Focus Group
September	Options development Recruitment campaign starts Information Evening 30 Sept
October	Further engagement with Advisory Groups Options finalisation
November	Report to Committee for decision
December	Ethnic Communities first meeting

To Share this month…

Two documents in development:

1. **Working Notes -** a brain dump of relevant research ideas to support the development of possible future models. Alice Ash will introduce this work

2. **Analysis of the feedback** shared at the workshops earlier in the year – Sam will give a quick overview

Challenges & Opportunities
3 Questions

1. Intersectionality

2. Values/Criteria

3. Reset

Challenges & Opportunities Questions

I'd like to explore opportunities through these questions.

1. **Intersectionality** - We had strong feedback that we should lean into the rich intersectionality that we get when the advisory groups come together. **How do we build these cross group connections into our future model while ensuring we hear the separate voices of the groups and not increasing the workload of the groups?**
2. **Values/Criteria** to evaluate future models - We will be developing a range of models shortly. **What values/criteria should we use to evaluate them?** Here are some values that came through from the workshops in June
   a. Accessibility
   b. Te Tiriti
   c. Autonomy, such as the groups should help shape the agenda
   d. Building consensus – strong, deep and broad discussion leading to good consensus
   e. Empowering – strong commitment; willingness to co-design;
   f. Enabling – giving groups choice and ability to be strategic
3. **Reset** - There has been a clear theme that we need to make enough change to ensure a good reset of the model. **What would see in the model that would assure you that there had been a strong reset?**

Additional ideas re Values/Criteria so far

From YC

- Flexibility
- For Te Tiriti, more about awareness of te ao Māori and te reo Māori in Wellington context – wording to be follow

From ERG

- Transparency – use facilitation
- Iterative/Pace approach and early engagement
- Flexible/mindful use of hours

From PAG

- Mindful use of hours e.g. different delegates from each Group attending Cross Group hui to spread the load
- Not let resourcing dictate option possibilities
- Provides good feedback loop

How would you like to give feedback?

We will be gathering thoughts over September, how would you like to give feedback on the

- 2 Documents
- 3 Questions
- Anything else?

Direction & Mandate for this work

That the Kōrau Mātinitini | Social, Cultural, and Economic Committee on 10 April 2024:

1)Receive the information.

2)Agree that it is important to integrate diverse community voices, including ethnic communities, into the decision-making process.

3)Note that the current model has recurring issues and constraints.

4)Agree to establish an Ethnic Communities Advisory Group.

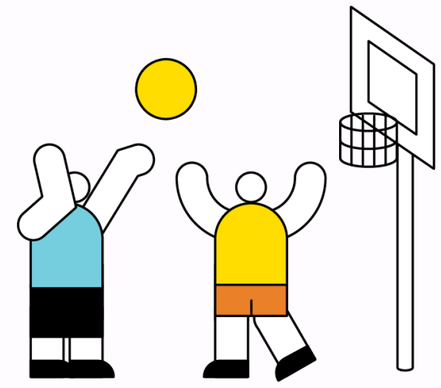
1) Include the Ethnic Advisory Group in the transition to any new engagement model, if/when council decides to transition all the advisory groups into a new model.
2) Engage with Ethnic Community stakeholders and provide funding to hold a multi-cultural forum in 2024/25, to provide input and advice to Council on issues identified by the community as well as the new engagement model.

5)Direct officers to explore a full range of options, including a deliberative process to ensure that we engage effectively and inclusively with Wellington's diverse communities so they have an effective and mana enhancing voice to inform the Council's work including how we engage with Ethnic Communities.

Opportunity Statement

How do we lift diverse community voices and integrate them into strategic decision making while supporting intersectionality and enabling more transparent and collective advice?

What have we learnt? - Engagement



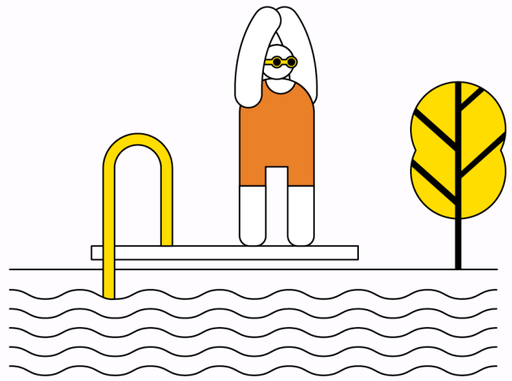
Engagement included

- Advisory Groups
- Staff
- Elected Members

Findings

1. **Lack of clarity** – a clear purpose is essential to reduce confusion
2. **Inconsistent engagement–** current model impacts on relationships and outcomes
3. **Undervalued** – current model too transactional, and members feel undervalued and not heard
4. **Undue pressure** – Submission writing at the end of a consultation process is time consuming and members prefer earlier engagement
5. **Lift voices, support cohesion** – There is a need to amplify the voices of diverse communities' while fostering unity and cohesion
6. **Elected member connection valued** – The link to Elected Members is highly valued by all parties involved
7. **Support for significant reset** – Advisory Group members support a substantial reset to address current challenges
8. **Increase Māori participation** – Advisory Group members recommend enhancing Māori participation and incorporating Māori customary practices

What have we learnt? - Research



Research included

- Lit Review
- Statistical data
- Ethnic Communities Focus Group
- Auckland Council research visit

Findings

1. **Unite diverse communities** – Bringing diverse communities together facilitates better understanding of other perspectives and results in more creative solutions to tricky problems
2. **Smaller groups more effective** – Smaller group sizes and clear roles provide more effective advice
3. **Build engagement and respect** – Advisory group contact with Elected Members drives connection, respect, and understanding to inform decisions
4. **A range of identities together** – Internationally, groups are generally technical and strategic and/or project focussed, including a range of identities within them
5. **Population diversity represented** – The current and proposed new groups correlate to the populations that are not as heard
6. **Process and facilitation** – Good processes and facilitation support better outcomes
7. **An engagement tool** – Advisory Groups are only one method in the toolkit for hearing community voices. There are a wide of range of methods including deliberative processes
8. **Fresh perspectives** – Regular refreshing of membership provides fresh perspectives

Ethnic Communities Focus Group Report

An Ethnic Communities Focus Group was held on 22 August, to ensure that the voices of Ethnic Communities as we explored future models for the Advisory Groups

A high-level summary of findings will be provided by Sahina Hossen and Daniel Dunn, Program Managers, Aotearoa Refugee & Migrant Support Services

WCC Advisory Group
A Qualitative Study

By Sahina Hossen, from ARMSS

Aotearoa
Refugee and Migrant Support Services
ARMSS

Steps followed to conduct the study

Recruiting participants

Appointing a Moderator

Conduct focus group sessions

Data collection

Generating the report

Recruiting Participants

1. Invites were sent out to different ethnic communities in Wellington to participate in the research
2. Responses received from different ethnic community members expressing interest to participate in the research
3. 14 participants for the research were shortlisted based on their engagement with their communities
4. The participants were allocated into three focus groups, with heterogeneity amongst group members

Moderator Appointed

Provide a brief introduction and purpose of the study to all participants

Provide clear guidelines and instructions for all participants to follow throughout the sessions

Introduce facilitators for each focus group

Focus Groups

- Each group consisted of at least 4 members

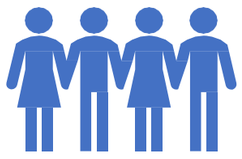
- Each group had both males and females with varied ages, and those belonging to different ethnic communities

All responses provided by participants in the sessions were collated by facilitators

Facilitators provided their individual feedback on the sessions afterwards

Data Collection

Participants were allocated specific time to discuss in their respective groups the questions they were given



All responses from participants followed by focus group discussions were collated

Common themes of all discussions were identified and recorded

Wellington City Council Advisory Group Report

By Daniel Dunn for ARMSS

Aotearoa
Refugee and Migrant Support Services
ARMSS

Made with Gamma

Role and Purpose

1 **Strategic Advice**

Provide fact-based input for council decision-making.

2 **Community Representation**

Advocate for diverse ethnic communities' needs.

3 **Cultural Sensitivity**

Offer unbiased, culturally appropriate guidance.

Made with Gamma

Challenges

- **Ensuring Inclusive Dialogue:** Balancing individual perspectives with the voices of diverse communities.
- **Meaningful Consultation Timing:** Providing opportunities for community involvement at crucial stages.
- **Culturally Informed Recruitment:** Promoting diverse representation in the selection process.

Made with Gamma

Addressing Challenges

Data Collection

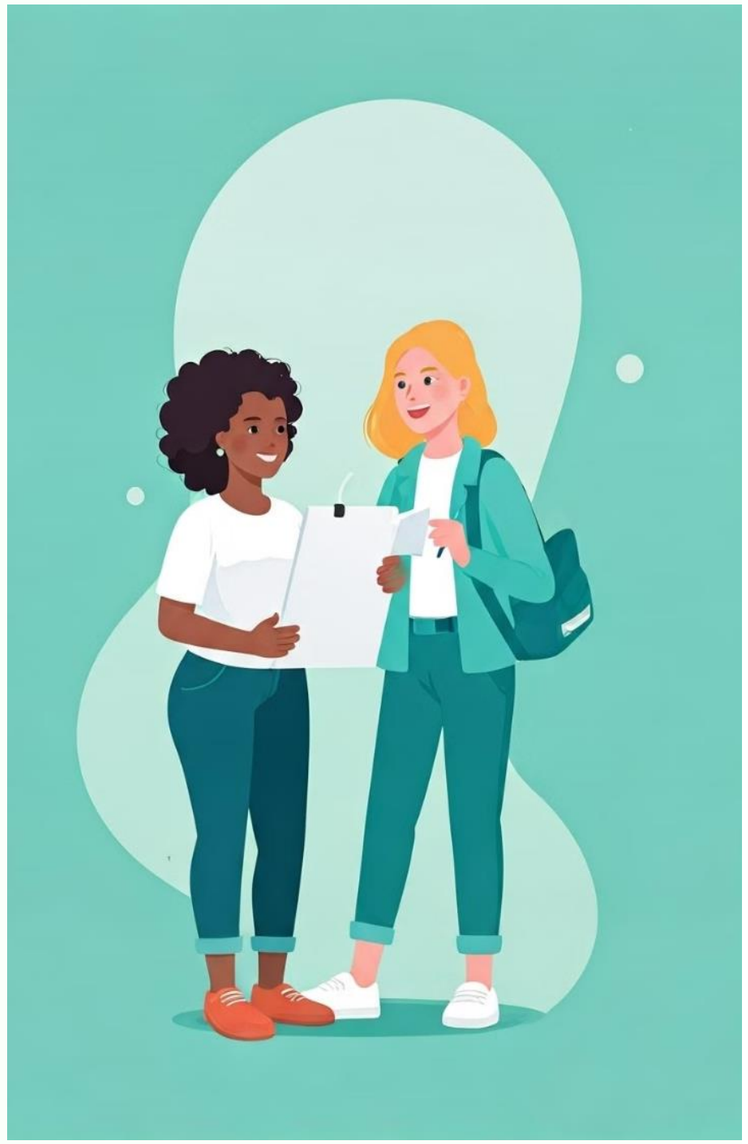
Gather information directly from community groups.

Community Engagement

Interact with members to identify specific problems.

Regular Evaluation

Conduct periodic reviews to ensure continuous improvement.



Made with Gamma

Proposed Solutions

1

Regular Check-ins

Maintain focus and address emerging issues promptly.

2

Improved Recruitment

Enhance process to ensure diverse, culturally aware members.

3

Role Clarity

Differentiate between advisory and advocacy responsibilities.

Made with Gamma

Potential Risks

Personal Gain

Members may prioritize individual interests over group objectives.

Divided Interests

Conflicts may arise from differing perspectives within the group.

Information Sharing

Inadequate communication may hinder group effectiveness.

Made with Gamma

Group Focus and Representation

Diverse Advice

Challenging the status quo to provide solutions for varied ethnic groups.

Community Reconnection

Maintain trust by reengaging after decision making.

Inclusive Representation

Strive to represent entire community, with a focus on inclusivity.

Made with Gamma

Toolkit and Induction

1 **Comprehensive Onboarding**

Develop toolkit for new members' understanding.

2 **Privacy and Security**

Prioritize confidentiality to ensure group trust.

3 **Accessible Feedback**

Implement user-friendly online feedback methods.

Made with Gamma

Facilitators' Feedback

Inclusive Selection:

Advisory members should represent all ethnicities, not just their own, and be chosen based on their ability to reflect diverse perspectives

Recruitment Strategies:

Outreach to ethnic communities should go beyond current methods, ensuring accessibility for all

Geographic Representation:

Consider suburban ethnic minorities in selection to ensure broad representation

Effective Engagement:

Encourage open, positive communication, free from barriers like faith, politics, or language

Criteria Concerns:

Current selection criteria may exclude capable individuals, calling for a more inclusive approach

Made with Gamma

Thank you

Aotearoa
Refugee and Migrant Support Services
ARMSS

Made with Gamma

Model Criteria

- Enable clear, cohesive, strategic advice
- Process supports good outcomes
- Enhance positive, trust filled relationships
- Embed and embrace te aō Māori and te Tiriti o Waitangi
- Create safe spaces for confident and effective contribution

Driving a reset

From	To	Why
Transactional	Relationship enhancing	Current model is damaging relationships
Administrative	Strategic	Quality of advice needs to be improved
Undervalued	Mana enhancing	Negative interactions are diminishing mana
Meeting orientated	Work programme driven	Less meetings, better strategic outcomes
Siloed, group driven	Facilitated, cohesive, transparent, Panel advice	Need for quality facilitation to enable connected advice
Lack of agreed role	Role clear & easily understood	Unclear messages and system placing pressure on members
Not framed to support Partnership	Better support partnership with mana whenua & Māori	Our Partnership is not built into our current model
Constrained	Responsive & Iterative	Current model constrains the way the Groups operate

How we will achieve a reset

Change	How
Relationship enhancing	• Implementation to focus on relationships first, providing safer, more culturally responsive spaces
Strategic	• Scope reduced to high level strategic matters & strategic projects – not current reactive mix • Agendas driven by WCC strategy & policy, and major strategic project work programmes • Improve recruitment processes and increase the focus on strategic advice-giving skills
Mana enhancing	• Increased interaction with Elected Members at Panel level • Deliberative process in Panel increases transparency and the opportunity to influence decisions
Work programme driven	• Driven by the work programme through the Panel with break outs for caucusing in Groups and as needed between Panel hui

How we will achieve a reset

Change	How
Facilitated, cohesive, transparent advice	• Mid-level managers partner with Co-Chairs to receive facilitation training and work together to support AGs • Facilitation provided to Panel • Smaller Group size
Role clear & easily understood	• Simplify role to provide identity-based advice and not technical expertise e.g. advice on strategies/policies to inform projects not on specific non-strategic projects. • Move ERG out of model • Develop Implementation Guidelines and Tools to ensure consistent messaging and support for the model • More extensive induction
Better support partnership with mana whenua & Māori	• Pou Iwi included in EM attendance at Panel Hui • 2 member seats reserved for hapori Māori (more for RYAG if they retain larger membership) • Increase Māori cultural practices into support for AGs
Responsive & Iterative	• Learn & adjust as we go • 3 yearly review & annual evaluation/feedback • High level TOR enables iteration

Options

Option	Description
One Status Quo 	Status Quo with some operational effectiveness improvements ERG to remain in model
Two Hybrid 	Agendas are focussed on strategic decisions Lifts community voices through a two-tiered approach with identity based Advisory Groups coalescing through a Panel ERG to move to Bi-Monthly Mayoral Forum
Three Panel 	Create a panel made up of the 5 identity-based Advisory Groups. No separate Advisory Groups
Four Citizen's Assembly only 	Coalesce strategic input through deliberative processes No Advisory Groups

Option assessment

Option	Assessment
One Status Quo +	• Similar attempts have not provided sustained improvement • Some small changes are better than continuing with current model as it is
Two Hybrid - Recommended	• Strategic work programme driven • Less meetings but they are done well • More effective and efficient as provides coalesced advice and better use of resources by having less but more effective meetings • Creates safer more collaborative spaces for AGs
Three Panel	• Does not provide tailored, safe spaces for each identity-based group • Does provide a role for all existing members
Four Citizen's Assembly only	• Coalesces strategic input through deliberative processes and does not lift individual community voices • Does not provide a role for existing members

Recommended model - Hybrid

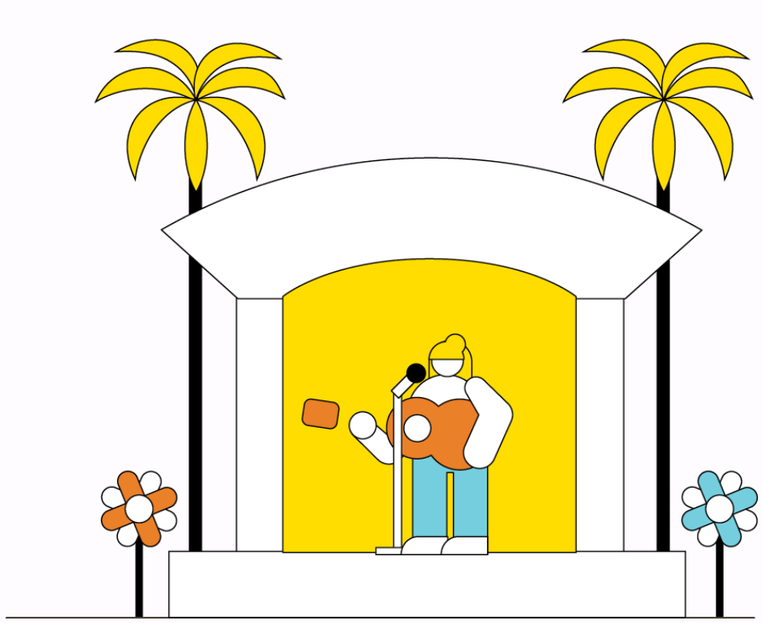
Work Programme

Identity Strategic Advisory Groups	Combined Strategic Panel	Examples
Preparation for Strategic Matters at Panel	Strategic Matters are deliberated	LTP
Preparation for Strategic Projects at Panel	Strategic Projects are deliberated	Te Ngākau
Provide advice on Project that are strategic for the identity group	NA	Youth Hub Pasifika Festival Accessibility Action Plan

Absolutely Positively
Wellington City Council
Me Heke Ki Pōneke

Combined Strategic Advisory Panel

- High level strategic matters - e.g. LTP and the Transport Plan
- Strategic projects - e.g. Te Ngākau
- 3-4 times per year
- All Group Members
- Elected Members & ELT attend



Identity Advisory Groups

X 5 Strategic focused advisory groups

- DCAG; ECAG; PAG; TRAG; RYAG
- Receive information and build identity view on strategic matters and strategic projects to provide advice and input into the Panel.
- Strategic identity-based projects conducted separately from the Panel e.g. Youth Hub

Frequency of meetings

- Expect 5 to 7 meetings per year scheduled depending on work programme
- RYAG may have more (democracy in training)

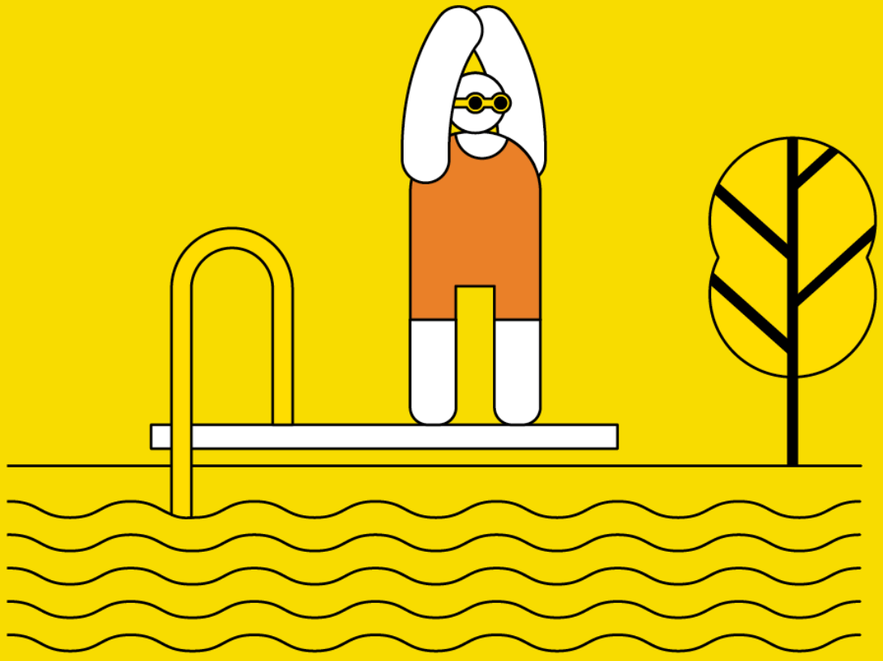
Term and Recruitment

- Smaller group size – 8, except RYAG which is 12
- 2 seats dedicated to Māori in the DCAG and TRAG, and 3 in RYAG
- Members serve a 3-year term aligned with triennium
- All to re-apply, if interested, for a 2nd term – max 6 years

Leadership and Training

- Training and extensive induction provided for all members
- Each Group has 2 Co Chairs
- Specialist training for Co-Chairs

Questions



ADVISORY GROUPS FUTURE MODEL

Kōrero taunaki | Summary of considerations

Purpose

1. This report provides advice on a range of potential future models for the current Advisory Groups following a review. The aim of the review was to identify a model that could best lift diverse community voices and integrate them into strategic decision-making, while supporting intersectionality and enabling more transparent and collective advice.

2. This paper recommends a change to the current arrangements and the adoption of Option Two – Hybrid of identity advisory groups and a joint panel.

Strategic alignment

3. This project contributes to all Community Outcomes by integrating diverse community voices into decision making. It focuses on improving how we make decisions to encourage better outcomes. Specifically, this project will help embed the Strategic Approaches as set out in the 2024 LTP.

4. The proposed new model will improve the way we engage our communities, especially those communities that find it hardest to be heard. Ensuring that these voices are heard and integrated into decision-making will enhance accessibility and inclusion in Pōneke. The model will provide better value for money and more effective delivery, addressing the recurring issues of the current model. The proposed model will also better integrate te ao Māori customary practices, such as in the way the meetings are run and hosted, to encourage increased Māori participation, although the recommended model is not specifically a Māori model. Ensuring that the model supports input into the Council's most strategic decisions will increase its focus on critical matters.

Relevant previous decisions

5. The following decisions are relevant to this matter. The Kōrau Mātinitini | Social, Cultural, and Economic Committee on 10 April 2024 agreed or noted the following**:**

   - That it is important to integrate diverse community voices, including ethnic communities, into the decision-making process.
   - That the current model has recurring issues and constraints.
   - Agreed to establish an Ethnic Communities Advisory Group.
   - Agreed to explore to engage with Ethnic Community stakeholders and provide funding to hold a multi-cultural forum in 2024/25, to provide input and advice to Council on issues identified by the community as well as the new engagement model.
   - Directed officers to explore a full range of options, including a deliberative process to ensure that we engage effectively and inclusively with Wellington's diverse communities, so they have an effective and mana enhancing voice to inform the Council's work including how we engage with Ethnic Communities.

6. Other relevant decisions are:

Kōrau Mātinitini | Social, Cultural and Economic Committee decisions

- 12 October 2023
  - Agree to explore options for advisory groups, including establishing an Ethnic Advisory Group in 2024, and direct officers to report back.
  - Direct officers to provide advice on the funding implications and options for establishing an Ethnic Advisory Group as part of the LTP process.

Te Kaunihera o Pōneke | Council 14 December decision

- Te Atakura 2023 Update
  - Request that officers investigate approaches to help our communities engage in climate action, including the use of a citizen's assembly.

Significance

7. The decision is **rated low significance** in accordance with schedule 1 of the Council's Significance and Engagement Policy.

Financial considerations

☐ Nil	☐ Budgetary provision in Annual Plan / Long-term Plan	☒ Unbudgeted $85k

8. An initial increase in budget in the 2024 Long-term Plan (LTP) of $130k was included. Following this work to define the recommended model, additional funding is required for the reset which includes expert facilitation costs, coordination, to uplift the effectiveness of relationships and advisory outcomes. See the financial section in this paper for more information.

Risk

☒ Low	☐ Medium	☐ High	☐ Extreme

9. The risks in this work relate largely to relationship strain and to the quality of decision making. The multiple reviews and attempts to tweak the current Advisory Groups Model have not managed to address the recurring issues. If the model does not have a significant reset, then these issues will continue to reduce the effectiveness of the model and to create friction. A significant reset will support better outcomes and relationships. The model must be sufficiently flexible to allow for future improvements in response to continuous evaluation.

Authors	Sam Hutcheson, Senior Strategy Advisor Baz Kaufman, Manager Strategy and Research
Authoriser	Andrea Reeves, Chief Strategy and Finance Officer Anna Calver, Chief Economic and Engagement Officer

Taunakitanga | Officers' Recommendations

Officers recommend the following motion:

That the Kōrau Mātinitini | Social, Cultural, and Economic Committee:

1. Receive the information.
2. Adopt the recommended Option Two – Hybrid of identity advisory groups and a joint panel.
3. Direct that the Environmental Reference Group be separated out from the current model and become a bi-monthly Mayoral Forum in early 2024 but be reviewed, evaluated and reported on alongside the new Hybrid Model.
4. Agree that an increased budget is required of $85k pa to ensure the new model is supported and operates effectively.
5. Direct that the Committee receives a report annually on the new Advisory Group Model.
6. Thank the Advisory Group Co-Chairs and Members for their invaluable input into the review of the current model and recommendations for the future.

Whakarāpopoto | Executive Summary

10. Council is committed to integrating diverse community voices, including ethnic communities, into the decision-making process. As directed, this work explores a full range of options, including a deliberative process, to ensure that we engage effectively and inclusively with Wellington's diverse communities, so they have an effective and mana enhancing voice to inform the Council's work including how we engage with Ethnic Communities.
11. Significant engagement and research has occurred this year, mainly with existing Advisory Groups and through an Ethnic Communities Focus Group. The focus group enabled engagement with ethnic communities prior to the establishment of an Ethnic Communities advisory group (which will meet for the first time in December 2024). In addition, research into national and international models has informed the development of the range of model options.
12. Four potential models are discussed, and option two, the Hybrid Model of identity advisory groups and a joint panel is recommended. The Hybrid Model maintains the strengths of the current model, while positioning the model in a more strategic way, and providing a more transparent and connected structure to allow the diverse voices to come together with Elected Members including Pouiwi.

Takenga mai | Background

Advisory Groups

13. Over the decades, the Advisory Groups have contributed significantly to more inclusive decision making. The Council currently has five Advisory Groups:
    - Accessibility Advisory Group (AAG),
    - Environmental Reference Group (ERG),
    - Pacific Advisory Group (PAG),
    - Takatāpui and Rainbow Advisory Council (TRAC), and

- Youth Council (YC).

14. Further information on the current model and the findings of previous reviews can be found in the 10 April Advisory Group Report Back of this year.
15. As part of a recent full recruitment round for all Advisory Groups, recruitment for the new Ethnic Communities Advisory Group (ECAG) has been undertaken. This additional group will operate under the current Terms of Reference and the first meeting for this group is expected to take place in December.
16. There has been significant engagement with Advisory Groups which has confirmed that problems identified in multiple previous reviews remain, which was outlined in the April Advisory Group Report Back.
17. As the work exploring the future model progressed, the original problem statement became an opportunity statement:

    'How do we lift diverse community voices and integrate them into strategic decision-making while supporting intersectionality and enabling more transparent and collective advice'.

18. The new understanding of and value for intersectionality has led to a focus on crafting a new model that allows the richer insights to be gained. Also, both the awareness of the increasing polarisation and divisions in society generally, and the desire for more transparency which can lead to processes that build and encourage trust, has informed the opportunity statement.

Kōrerorero | Discussion

19. There has been significant engagement and research to support the development of model options and the recommendation. The expert and generous input of the Advisory Group Co-Chairs and Members has been invaluable throughout this work.

What we have learnt – Engagement

20. Extensive engagement was undertaken, including with Advisory Group Co-Chairs and Members, Elected Members and staff. The first stage was a series of workshops with each Advisory Group, a wide range of staff who have roles in relation to the Advisory Groups and with Elected Members. A summary of the workshop findings (included in Attachment 1 Research and Engagement Report) was presented as part of repeated visits to each Advisory Group to provide updates and discuss and test ideas as the work progressed. There were numerous discussions with staff members and with a range of community members.
21. There was wide ranging feedback both at the high level, which has informed the consideration of the model, and at the process level, which will inform potential future operational guidance and practices. The following are the key findings from this engagement:
    - *Lack of clarity* – a clear purpose is essential to reduce confusion.
    - *Inconsistent engagement* **–** the current model impacts on relationships and outcomes.
    - *Undervalued* – the current model is too transactional, and members feel undervalued and not heard.

- *Undue pressure* – Submission writing at the end of a consultation process is time consuming and members prefer earlier engagement.
- *Lift voices, support cohesion* – There is a need to amplify the voices of diverse communities' while fostering unity and cohesion.
- *Elected member connection valued* – The link to Elected Members is highly valued by all parties involved.
- *Support for a significant reset* – Advisory Group members support a substantial reset to address current challenges.
- *Increase Māori participation* – Advisory Group members recommend enhancing Māori participation and incorporating tikanga Māori (customary practices).

What we have learnt - Research

22. Research done to support this work included a literature search, statistical data analysis, an ethnic communities focus group and engagement with other Councils, in particular Auckland. Further information is included in the Research and Engagement Report (Attachment 1).

23. Literature research included work on national and international models; group effectiveness, make up and size; facilitation; indigenous models, and models that support accessibility, inclusiveness and youth. Statistical data and analysis such as population trends and analysis of the reach of our current engagement also informed the work.

24. Voices from the city's ethnic communities were brought into this work via an Ethnic Communities Focus Group, which was held on 22 August. The research was undertaken by Aotearoa Refugee and Migrant Support Services. This qualitative report is provided as Attachment 2. The report includes a summary of the feedback and suggestions for best practice and stressed the:
    - importance of ensuring inclusive dialogue which balances individual perspectives with the voices of diverse communities;
    - meaningful consultation timing, and
    - culturally informed recruitment.

25. The focus group members advised that regular check-ins, improved recruitment and encouraging role clarity to avoid confusion between an advisory role vs an advocacy role are essential. They also recommended comprehensive onboarding, ensuring group trust and using accessible feedback methods. It was striking how similar the issues and concerns identified in the focus group were to those of the Advisory Groups.

26. Multicultural Wellington played a key role in encouraging participation in the focus group and distributing updates about this work regularly. Key conversations provided valuable insights.

27. The following are the key findings of this work:
    - *Unite diverse communities* – Bringing diverse communities together facilitates better understanding of other perspectives and results in more creative solutions to tricky problems.

- *Smaller groups are more effective* – Smaller group sizes and clear roles provide more effective advice.
- *Build engagement and respect* – Advisory group contact with Elected Members drives connection, respect, and understanding to inform decisions.
- *A range of identities together* – Internationally, groups are generally technical and strategic and/or project focussed, including a range of identities within them.
- *Population diversity represented* – The current and proposed new groups align with the populations that are often underrepresented in our engagement with the community.
- *Process and facilitation* – Good processes and facilitation support better outcomes.
- *An engagement tool* – Advisory Groups are only one method in the toolkit for hearing community voices. There are a wide of range of methods including deliberative processes.
- *Fresh perspectives* – Regular refreshing of membership provides fresh perspectives.

Driving a reset

28. It is crucial that any modifications to the model are substantial enough to drive the necessary transformation, enhance outcomes, and engender confidence. The above research and engagement has enabled the identification of the following eight key shifts outlined in the table below. Within the table, a description of the current state is provided, along with the desired state and the reasoning.

From ⇨	To	Why
Transactional	Relationship enhancing	Current model is damaging relationships
Administrative	Strategic	Quality of advice needs to be improved
Undervalued	Mana enhancing	Negative interactions are diminishing mana
Meeting orientated	Work programme driven	Less meetings, better strategic outcomes
Siloed, group driven	Facilitated, cohesive, transparent, Panel advice	Need for quality facilitation to enable connected advice
Lack of agreed role	Role clear & easily understood	Unclear messages and system placing pressure on members
Not framed to support Partnership	Better support partnership with mana whenua & Māori	Our partnership is not built into our current model

Constrained	Responsive & iterative	Current model constrains the way the Groups operate

Model Assessment Criteria

29. The assessment of the current state and the engagement and research undertaken informed the development of the following criteria to test future potential models. The model should:

    - Enable clear, cohesive, strategic advice.
    - Provide process that supports good outcomes.
    - Enhance positive, trust filled relationships.
    - Embed and embrace te ao Māori and te Tiriti o Waitangi.
    - Create safe spaces for confident and effective contribution.

Kōwhiringa | Options

Potential Models

30. After considering stakeholder feedback, research findings and developing the above criteria based on the assessment made, a range of potential models were then identified:

- *Option One – Status Quo*.
  This model is largely the current status quo with some operational effectiveness improvements. The ERG remains in the model, as an advisory group.

- *Option Two – Hybrid of identity advisory groups and a joint panel.*
  The Council Work Programme will drive the agendas, ensuring that the focus is on strategic decisions. It would lift community voices through a two-tiered approach with identity based Advisory Groups coalescing through a Joint Panel. The ERG moves to a Bi-Monthly Mayoral Forum.

- *Option Three – Single Joint Panel.*
  This creates a panel made up of the five identity-based Advisory Groups and there would be no separate Advisory Groups. The ERG moves to a Bi-Monthly Mayoral Forum.

- *Option Four – Citizen's Assembly only.*
  This model solely coalesces strategic input through deliberative processes and there would be no Advisory Groups. The ERG moves to a Bi-Monthly Mayoral Forum.

Option assessment

31. This following table shows a diagram of each model and brief descriptions of each model option.

Option	Assessment overview
One - Status Quo + 	• Previous reviews with minor adjustments to the model have not provided sustained improvement over time. • However, some small changes are better than continuing with current model as it is.
Two - Hybrid of identity advisory groups and a joint panel [Recommended model] 	• Strategic work programme driven. • Less meetings but they are done well. • More effective and efficient as provides coalesced advice and better use of resources by having less but more effective meetings. • Creates safer more collaborative spaces for Advisory Groups. • ERG would be separated from this model.
Three – Panel 	• Does not provide tailored, safe spaces for each identity-based group. • Does provide a role for all existing members (existing members would be grandfathered into the first iteration. • ERG would be separated from this model.
Four - Citizen's Assembly only 	• Coalesces strategic input through deliberative processes and does not lift individual community voices. • Does not provide a role for existing members (existing members would be grandfathered into the first iteration).

Recommended model - Option Two – Hybrid of identity advisory groups and a joint panel

32. The recommended model and its functions is outlined in more detail below

33. Looking at the key changes identified in the table in the preceding page, the table below outlines how each of these changes will be achieved through the recommended model.

Change	How
Relationship enhancing	• Implementation to focus on relationships first, providing safer, more culturally responsive spaces
Strategic	• Scope reduced to high level strategic matters & strategic projects – not current reactive mix • Agendas driven by WCC strategy & policy, and major strategic project work programmes • Improve recruitment processes and increase the focus on strategic advice-giving skills
Mana enhancing	• Increased interaction with Elected Members at Panel level • Deliberative process in Panel increases transparency and the opportunity to influence decisions
Strategic work programme	• The work programme would be driven by the triennium at a strategic level, in contrast to the range of matters and projects both large and small that were considered by the current groups.

Work programme driven	• Driven by the work programme through the Panel with break outs for caucusing in Groups and as needed between Panel hui
Facilitated, cohesive, transparent advice	• Mid-level managers partner with Co-Chairs to receive facilitation training and work together to support AGs • Facilitation provided to Panel • Smaller Group size
Role clear & easily understood	• Simplify role to provide identity-based advice and not technical expertise e.g. advice on strategies/policies to inform projects not on specific non-strategic projects. • Move ERG out of model (see discussion of options for the ERG future form in a section below) • Develop Implementation Guidelines and Tools to ensure consistent messaging and support for the model • More extensive induction
Better support partnership with mana whenua & Māori	• Pouiwi included in EM attendance at Panel Hui • 2 member seats reserved for hapori Māori (more for RYAG if they retain larger membership) • Increase tikanga Māori (cultural practices) into support for AGs
Responsive & Iterative	• Learn and adjust as we go • 3 yearly review & annual evaluation/feedback • High level TOR enables iteration

34. The Hybrid Model's two layers will work together as follows:

Combined Strategic Advisory Panel

35. The Combined Strategic Advisory Panel would consider high level strategic matters e.g. the LTP and the Transport Plan and strategic projects e.g. Te Ngākau. It would meet approximately three to four times per year.

36. All Advisory Group Members, Elected Members including Pouiwi, and members of the Executive Leadership Team would attend the joint panel.

Identity Advisory Groups

37. There would be five Strategic focused advisory groups:

- Disability Community Advisory Group (DCAG). This would replace the current Accessibility Advisory Group as the proposed model focuses on identity i.e. disability community in contrast to technical advice on accessibility;

- Ethnic Communities Advisory Group (ECAG)
- Pacific Advisory Group (PAG)
- Takatāpui Rainbow Advisory Group (TRAG)
- Rangatahi Youth Advisory Group (RYAG).

38. The Groups will receive information and build their identity view on strategic matters and strategic projects to provide advice in order to input into the Panel. In addition, they will also provide advice on strategic identity-based projects conducted separately from the Panel e.g. the Youth Hub.

39. The Groups will meet approximately five to seven times per year and meetings will be scheduled depending on work programme rather than the current rhythm of monthly hui regardless of the overall work programme. RYAG may have more meetings to fulfil their ancillary function of democracy education.

40. The Groups will be smaller in size than the current model and have eight members, except RYAG. The smaller size is recommended as research indicates that this leads to a better functioning, more collaborative group. RYAG would have additional members (12 in total) as there is more natural turnover due to the number of significant life changes that occur within their age group. Two of the seats would be dedicated to Māori in the DCAG and TRAG, and three in RYAG. Members would serve a three-year term aligned with the council triennium, commencing after the election and disbanding before the next election. If members are interested in a further term, they can reapply for a maximum of one further term (a maximum of six years).

41. Leadership and Training will be important to support the effective functioning of the model. Training and extensive induction will be provided for all members. Each Group will have two Co-Chairs. There will be specialist training for the Co-Chairs.

42. The option to establish a Māori Advisory Group was considered; however, given the existing, effective mechanisms through our partnership with mana whenua and our Māori ward councillor, it was determined that additional structures were not needed at this time. These established channels already ensure meaningful inclusion of Māori voices, and the Council is committed to continuously improving and strengthening these processes.

Environmental Reference Group Future Form

43. It is recommended that the ERG does not move with the new model if it is changed, as it is not an identity-based group. Should a decision be made to continue ERG in some form, it is recommended that its evaluation be integrated into the new model's evaluation process, which includes annual evaluation and triannual reviews. This evaluation will be presented to this Committee inside the full three yearly review of the new model to enable the Committee to assess the effectiveness of ERG's new form.

44. With a decision to change to the hybrid model, there are a few options for the future of ERG:

Option	Comment
1A: Status Quo – ERG continues separately as an Advisory Group	• ERG Members have expressed the same frustrations as other Advisory Group members with the current model and

	support a reset • ERG have been particularly frustrated that matters are not coming to them early enough • We don't lose the group and their input despite other advisory groups potentially moving to a new model • With this option, Elected Member involvement would continue as per current system, with one or two Councillors attending meetings
2A: Bi-monthly Mayoral Forum This Triennium – ERG changes earlier than the full model change (early 2025) OR *2B: Bi-Monthly Mayoral Forum Next Triennium – ERG changes at the same time as the full model change (late 2025)*	• If a decision is made to change the model it is possible for ERG to change to a new form earlier and this would address member concerns more immediately • Implementing the change in the new triennium allows the Group to be established in line with the triennium • We don't lose the group and their input despite other advisory groups potentially moving to a new model • The Mayor's Office would host this Group
3A: ERG is disbanded at the end of this triennium	• ERG is not working to its full capacity due the model's constraints • Staff now have greater in-house expertise

45. The option 2A of the ERG moving to a Bi-monthly Mayoral Forum early in 2025 is recommended as this will allow change to respond to ameliorate the current issues being experienced earlier.

Whai whakaaro ki ngā whakataunga | Considerations for decision-making

Alignment with Council's strategies and policies

46. This review focuses on how the Council can embed diverse community perspectives into strategy and policy direction, so that implementation is visible and consistent across the city, providing better outcomes for all.

Engagement and Consultation

47. Extensive targeted engagement has been undertaken with Advisory Groups, Elected Members and staff as well as key conversations with some agencies and organisations. This engagement is outlined in the discussion section and within Attachment 1 Research and Engagement Report.

Māori Impact Statement

48. As advised in April, engagement with mana whenua sits outside of the current Advisory Group structure. Potential future models have been assessed against criteria which includes a criterion to 'embed and embrace te ao Māori and te Tiriti o Waitangi'.

49. The recommended model seeks to contribute to our partnership by lifting participation by the significant hapori Māori communities in Pōneke in the Strategic Advisory Groups and by including Pouiwi in the Combined Strategic Advisory Panel.

Financial implications

50. It is clear from the feedback that has been received from all roles within the current model that there is a need to ensure that a reset is resourced sufficiently to ensure success. Careful leadership, facilitation, and coordination and strong processes are required to uplift relationships and ensure good quality advice that is integrated into decision-making.

51. The future model will provide better value for money and more effective delivery, addressing the recurring issues of the current model. An increase in budget of $130k was included in the 2024 Long-term Plan (LTP). This funding was for:

- Funding for fees for the new ethnic advisory group
- An additional resource to support the new ethnic advisory group, the Takatāpui Rainbow Advisory Group (TRAG) which was established without additional funding support, and to support the new model
- A one off cost for an ethnic forum.

52. Additional funding of $85k is required over the above allocation to support the reset to the recommended model for expert facilitation costs, coordination, leadership to uplift the effectiveness of the relationships and advisory outcomes.

Legal considerations

53. There are no legal considerations.

Risks and mitigations

54. The risks in this work relate largely to relationship strain and to the quality of decision making. The multiple reviews and attempts to tweak the current Advisory Groups Model have not managed to address the recurring issues. If the model does not have a significant reset, then these issues will continue to reduce the effectiveness of the model and to create friction. A significant reset will support better outcomes and relationships. The model must be sufficiently flexible to adapt based on continuous evaluation and improvement. Without this flexibility, there is a risk of reduced effectiveness as the operating environment evolves, and necessary changes informed by regular evaluations may be delayed. Reporting on the evaluation will be provided to this Committee annually.

Disability and accessibility impact

55. The proposed new model will particularly improve the way we engage with those communities that find it hardest to be heard. Ensuring that these voices are heard and integrated into decision making will improve accessibility and inclusion in Pōneke.

KŌRAU MĀTINITINI | SOCIAL, CULTURAL, AND ECONOMIC COMMITTEE
28 NOVEMBER 2024

Absolutely Positively Wellington City Council
Me Heke Ki Pōneke

Climate Change impact and considerations

56. Ensuring that the model supports input into the most strategic decisions made by the Council will increase the focus of the model on matters such as climate change.

Communications Plan

57. A Communications Plan will be included in a full Implementation Plan to ensure that all those undertaking roles in the future Advisory Group model understand the new model and can contribute in the most effective way.

58. This will primarily focus on clear messaging to inform community through existing channels and relationships as well as an explanation of the rationale behind the model change for a wider audience.

59. Frequently Asked Questions will form part of the plan and be disseminated internally to appropriate staff to assist with public queries.

60. The plan will be fully finalised once a final decision is made.

Health and Safety Impact considered

61. Health and safety risks will be addressed in the Implementation Plan and Operational Guidelines as it is important to create spaces that are accessible for all people involved in the new model.

Ngā mahinga e whai ake nei | Next actions

62. If a decision is made to change the current model as recommended, the new model would be implemented in the next triennium. Current members would finish their term prior to the election next year and recruitment would take place soon after the election. The ERG would become a Bi-monthly Forum in early 2025. An update would be provided next year including a draft Terms of Reference for consideration and annual updates provided thereafter to this Committee.

Attachment 2. Advisory Groups Review Ethnic Communities Focus Group Report

Summary of Feedback

Advisory Groups Terms of Reference August 2025

The information below presents feedback provided by recent Advisory Group Co-Chairs about the Terms of Reference for the new Advisory Group and Strategic Advisory Panel.

1. Definitions

Feedback - TRAC	Actioned
Takatāpui Rainbow definition	Yes

Feedback Summary: Provide a more comprehensive definition for 'Rainbow'.

Text of ToR updated based on feedback: 'Rainbow as an umbrella term, including but not limited to: Māori identities such as takatāpui identities, tāhine, or lesbian, gay, bisexual, transgender, queer, intersex individuals, asexual, or identities of the Pacific such as MVPFAFF+, fa'afafine and fakaleiti communities.'

2. Expectations - Role of Members

Feedback - TRAC	Actioned
Clarification of Representation	Yes

Feedback Summary: Clarify that members are not speaking on behalf of entire communities, but rather from their own lived experience.

Text of ToR updated based on feedback: 'Their [members] role is to share advice that draws on both their personal experiences and what they have learned through engaging with others.'

3. Group size

Feedback - ECAG	Actioned
Increase ECAG membership size from eight to 12	No

Feedback Summary: ECAG requested an increase in membership size from eight to 12.

Reason not actioned: The decision to reduce Advisory Group membership to eight (with the exception of RYCAG at 12) was formally adopted under the Hybrid Model by the Kōrau Mātinitini | Social, Cultural, and Economic Committee in November 2024. This decision was based on research and feedback from the Advisory Groups Review, which found that smaller group sizes with clear roles create more effective dynamics, stronger engagement, and more focused discussions. As this was a governance-level decision already adopted by the Committee, it cannot be amended at an operational level through changes to the Terms of Reference.

4. Membership

Feedback - ECAG	Actioned
Maintain current ECAG membership (with no new recruitment round)	No

Feedback Summary: ECAG members requested retaining the existing membership and not initiating a new recruitment process.

Provision: While the 'grandfathering' of current members to the new model is not possible, recent members have been invited to apply through a closed internal Expression of Interest (EOI) process. The application process is being designed to be as accessible as possible, with flexible formats to support different needs. Every current member who submits an EOI will be invited to an interview, providing a fair opportunity to demonstrate experience and interest in the new model. Because of differences in the new model, membership cannot be automatically transferred. However, the Council values existing members and encourages them to submit a new application.

Feedback - PAG	Actioned
Use consistent and inclusive terminology to describe gender identity of members across all Advisory Groups	Yes

Feedback Summary: Ensure that gender-related terminology is inclusive, respectful, and consistent throughout the Terms of Reference.

Text of ToR updated based on feedback: 'In recruitment the Council will seek to maintain a balance across **Gender identities**'.

Feedback - PAG	Actioned
Combine bullet points relating to characteristics of Pacific peoples.	Yes

Feedback Summary: Merge separate bullet points referring to Pacific heritage and languages into a single, more concise statement.

Text of ToR updated based on feedback: 'Pacific national, cultural heritage, languages and dialects spoken.'

Feedback - PAG	Actioned
Requirement to live within city boundaries	Acknowledged

Feedback Summary: While no change to the Terms of Reference was requested, it was noted that requiring Advisory Group members to live strictly within Wellington City may exclude key Pacific community voices. Pacific communities often work across boundaries, and limiting eligibility by residence could overlook those with strong cultural ties and active involvement in Wellington.

Updated Text: No change has been made to the eligibility criteria. The acknowledgement has been recorded to highlight this issue in practice and for consideration in future reviews.

Feedback - YC	Actioned
Change membership eligibility from ages 14–24 to 14–23	Yes

Feedback Summary: A suggestion was made to refine the eligibility criteria for RYCAG. The request was to lower the upper age limit from 24 to 23 years of age.

Text of ToR updated based on feedback: The Terms of Reference now state that RYCAG members must be aged between 14-23 at the time of appointment.

5. Terms of Appointment

Feedback - PAG	Actioned
Clarify reappointment process for current members	Yes

Feedback Summary: Add information about inviting current members to submit an Expression of Interest (EOI) before the end of their term if they wish to continue and specify that eligibility criteria must still be met at the time of reappointment.

Text of ToR updated based on feedback:

- The standard term of appointment for members will be three years, aligned with the Council triennium.
- Before the end of the term, current members will be invited to submit an Expression of Interest (EOI) if they wish to continue serving for another term. Members must still meet the eligibility criteria at the time of reappointment—such as residing in Wellington, and for certain groups like the RYCAG, remaining within the eligible age range.
- The Advisory Groups term will end, typically one month prior to the next local government elections in 2028.

6. Submissions

Feedback – TRAC & ECAG	Actioned
Submissions on Council consultations.	Yes

Feedback Summary TRAC: Requested clearer guidance that Advisory Groups do not submit formally but can contribute as individuals or collaborate informally outside meetings.

Feedback Summary ECAG: Advisory Group should be able to make formal submissions to Wellington City Council on strategies, policies, or plans (e.g. the Long-term Plan or Annual Plan).

Action: Following feedback from Co-Chairs, an original submissions section detailing that Groups would not draft submissions in meeting time has been removed from the Terms of Reference.

7. Cessation of Membership

Feedback - TRAC	Actioned
Sick Leave or illness	Yes

Feedback Summary: Provide clearer information on the circumstances that may lead to cessation of membership, and outline expectations for attendance, including allowances for sick leave and other approved absences.

Text of ToR updated based on feedback: Members on sick leave will not be subject to the attendance or participation criteria.

Feedback - TRAC	Actioned
Protocols and safety	Yes

Feedback Summary: Concerns about how participation is monitored, and whether members feel safe contributing when barriers exist.

Text of ToR updated based on feedback: New section added on 'Participation and Engagement Process' that outlines a step-by-step support pathway for members before a termination from the Group is considered.

Notes: Emphasises that termination is a last resort after reasonable efforts to support re-engagement.

8. Online Attendance

Feedback - TRAC	Actioned
Participation options	Yes

Feedback Summary: Include option for members to attend meetings online.

Text of ToR updated based on feedback: 'Members will also have the option to attend meetings online, recognising that flexibility is an important part of ensuring access for all.'

9. Conflict Resolution

Feedback - TRAC	Actioned
Clarify initial conflict management process and roles	Yes

Feedback Summary: Provide clearer guidance on the first steps members should take when addressing conflict, and outline the roles of members, Co-Chairs, and Council staff in resolving issues constructively.

Text of ToR updated based on feedback: 'In the first instance, members are encouraged to approach the other party directly to discuss the issue in a respectful and constructive manner, where appropriate. If further support is needed, the Co-Chairs will work together and with the Council Liaison Officer to seek a resolution that upholds the values of the Advisory Groups. This approach aims to maintain positive relationships, open communication, and a shared commitment to the group's purpose.'

10. Support and Training

Feedback – TRAC	Actioned
Include training options and topics	No

Feedback Summary: TRAC requested that the Terms of Reference outline in more detail the types of training that may be offered to members.

Reason not actioned: Training needs will vary between Groups, depending on their focus areas and the skills and experiences of their members. A flexible approach will be taken to tailor training to each Group's needs, rather than committing to a fixed list in the ToR. This avoids making assumptions about what training will be most relevant and ensures support can be responsive to members' needs.

Feedback - ECAG	Actioned
Co-Chair training should be delivered by external providers only	No

Feedback Summary: It was suggested that all training for Co-Chairs be delivered by external providers, due to a perceived lack of trust in Council-led training.

Reason not actioned: While external expertise can add valuable perspectives, limiting training to external providers only would reduce flexibility and may not always meet the specific needs of each Group. The planned approach is to use a combination of in-house and external training, with the balance determined by the needs of the Group. Training requirements will be assessed during the initial months of the new term, allowing them to be tailored and relevant, drawing on both internal and external expertise where appropriate.

11. Review and Evaluation

Feedback - ECAG	Actioned

Add a review clause after six months	No

Feedback Summary: ECAG suggested that a six-month review clause be added to the Terms of Reference. The intention was to give new members and Co-Chairs the opportunity to propose changes once the model is in operation, acknowledging that it is difficult to anticipate how the new structure will work until it is in progress.

Reason not actioned: There is already a provision for structured evaluation of the new Advisory Group model: 'reviews will take place annually and at the end of each triennium during the first term. These reviews will be conducted by Council staff, with the aim of seeking input from Advisory Groups to inform the evaluation'.

Appendices

Appendix A

12. Complaints

Feedback – YC	Actioned
Provide a clear definition of what constitutes a complaint	Yes

Feedback Summary: Include a definition to help members understand what is considered a complaint, to distinguish it from general feedback or suggestions.

Text of ToR updated based on feedback: 'If a member believes that another member or a Co-Chair, has breached the Advisory Groups' Code of Conduct, they may raise a complaint for further consideration.

Complaints should be made in good faith and relate to behaviour or actions that compromise the respectful, inclusive, or effective functioning of the Group. Examples may include discriminatory remarks, repeated disrespectful behaviour, or actions that undermine group cohesion.'

Feedback - TRAC	Actioned
Clarifying Complaint Scope and Process	Yes

Feedback Summary: Clarify that complaints may relate to breaches of the Code of Conduct and explain what happens if the concern is about Council staff.

Text of ToR updated based on feedback: 'Complaints should be made in good faith and relate to behaviour or actions that compromise the respectful, inclusive, or effective functioning of the Group.'

Notes: Added option to raise issues with an alternative contact if the concern involves a Liaison Officer.

The Terms of Reference set out the expectations that Advisory Group members agree to follow throughout their time on the Group. These expectations are supported by this Code of Conduct, which outlines the behaviours and responsibilities required to maintain a respectful, constructive, and inclusive environment.

This Code applies specifically to Advisory Group members. While members work closely with Council staff, staff are not covered by this Code because they are already subject to Wellington City Council's employee Code of Conduct. That code outlines expectations around professional conduct, impartiality, and respectful engagement.

REPORT BACK ON RAINBOW ACTION PLAN

Kōrero taunaki | Summary of considerations

Purpose

1. This report presents the proposed Rainbow Action Plan for Wellington City Council for adoption, reporting back on the Council resolution to complete a rainbow strategy by mid-2025.

Strategic alignment

2. The most relevant community outcomes, strategic approaches, and priorities for this paper include:

    - Community outcome: Social wellbeing, A city of healthy and thriving whānau and communities
    - Strategic approach: Making our city accessible and inclusive for all.

Relevant previous decisions

3. At the Council meeting of 25 October 2023, under Item 2.1 Strategy and Policy Priorities. Council resolution 2.2. Confirming that the Rainbow Strategy is completed at the latest by mid-2025.

Significance

4. The decision is **rated low significance** in accordance with schedule 1 of the Council's Significance and Engagement Policy.

Financial considerations

☐ Nil	☐ Budgetary provision in Annual Plan / Long-term Plan	☒ Unbudgeted $X

5. All actions in the Plan have been developed within existing work programmes and as such are budgeted for within responsible teams for delivery.

Risk

☒ Low	☐ Medium	☐ High	☐ Extreme

6. Overall, the level of risk is assessed as low, as proposed actions are within existing budgets and fit within the Council's existing strategic framework.

Author	Lily Zhang, Senior Advisor
Authoriser	Baz Kaufman, Manager Strategy and Research James Roberts, Chief Operating Officer

Taunakitanga | Officers' Recommendations

Officers recommend the following motion:

That the Kōrau Mātinitini | Social, Cultural, and Economic Committee:

1. Receive the information.
2. Adopt the proposed Rainbow Action Plan in Attachment 1.
3. Agree to update the action plan in line with the development of the 2027-37 Long-Term Plan.
4. Delegate to the Chair and Deputy Chair of the Kōrau Mātinitini | Social, Cultural, and Economic Committee or relevant committee and the Chief Executive to make any amendments agreed by the Committee and any other minor edits to the attached Rainbow Action Plan.

Whakarāpopoto | Executive Summary

7. In the Wellington City Council (Council) meeting of 25 October 2023, under item 2.1, 2) Agree the strategy and policy work programme for 2023-25, an amendment was agreed "confirming that the Rainbow Strategy is completed at the latest by mid-2025".
8. No council in New Zealand has a bespoke policy or strategy document for rainbow communities however some other councils have various strategic documents related to the inclusion and wellbeing of their diverse communities.
9. Under the Council's Social Wellbeing Framework (2021), the Council has a role in enabling all groups of the community to participate, thrive, and belong in the city through the delivery of its functions.
10. The Council adopted five strategic approaches as part of its 2024-27 Long-Term Plan, which are "embedded in everything we do". One of the strategic approaches is "making our city accessible and inclusive for all".
11. Wellington has a significant proportion of rainbow people in its population (11.3%). The rainbow population tends to be younger, and this trend is more pronounced in Wellington. The significant rainbow population contributes to a strong rainbow identity in Wellington.
12. In Wellington, some rainbow people report experiencing disparities in their outcomes, such as being less likely to own their own home, being more likely to be unemployed, being less likely to report a good quality of life, and more likely to feel unsafe in the central city after dark. Rainbow people in Wellington are however more likely to report satisfaction with the Council's performance, and are more likely to report feeling welcome at or regularly attending cultural or arts events in the city.
13. Officers began engaging with the Council's Takatāpui Rainbow Advisory Council (TRAC) from September 2024 to July 2025 about the lived experience of rainbow communities in the city and what the Council could deliver within its role to make the city more inclusive for rainbow people.
14. In conjunction with delivery business units of the Council, officers have developed the proposed Rainbow Action Plan in Attachment 1. An action plan has been drafted in

place of a full strategy as opportunities for action have been identified within existing and funded work across the Council.

15. Actions in the plan are organised into key focus areas, including:

    - **Safety** – from crime, violence and other harms, and includes housing options.
    - **Community** – through rainbow-friendly events and community facilities.
    - **Visibility** – normalising and celebrating diverse rainbow communities.
    - **Equity** – uplifting rainbow communities that may experience additional disadvantage.
    - **Inclusive Council Operations** – ensuring that the Council operates in a rainbow-inclusive way.

16. More research and engagement is needed with rainbow communities to better understand nuances of this large and diverse community group. Qualitative or lived experience research about rainbow subgroups or different rainbow communities may provide more detailed insight into the experiences of individuals in the city that the existing surveys may not be able to.

Takenga mai | Background

17. In the Council meeting of 25 October 2023, under item 2.1, 2) Agree the strategy and policy work programme for 2023-25, an amendment was agreed “confirming that the Rainbow Strategy is completed at the latest by mid-2025”.

Other councils’ contribution to rainbow inclusion

18. There is no current Government policy or strategy for rainbow[1] / LGBTQIA+[2] communities, and no council in New Zealand has a bespoke policy or strategy document for rainbow communities. Some councils have taken steps to demonstrate commitment to the inclusion of their rainbow communities, for example, having rainbow advisory groups, flying the Pride flag at civic buildings, having guidelines on rainbow communities’ engagement, and achieving the Rainbow Tick certification (which signals that a workplace is inclusive for rainbow employees). More engagement with other councils can help to identify good practice and lessons learned about local government’s role in supporting rainbow communities.

19. Other councils in New Zealand have various strategic documents related to the inclusion and wellbeing of their diverse communities. For example, Auckland Council has belonging and participation as an outcome of its long-term spatial plan to 2050 and a Thriving Communities Strategy 2022-32, Tauranga City Council has an Inclusive City Strategy 2023-33, Christchurch City Council has an Equity and Inclusion Policy (2024), and Horowhenua District Council has an Access and Inclusion Plan 2017-2020.

[1] The rainbow population can be referred to as rainbow communities, to signify that diverse identities under the rainbow umbrella belong to their own communities as well as the wider rainbow community.
[2] Lesbian, gay, bisexual, transgender, queer, intersex, asexual, and other identities under this umbrella term. “Rainbow” is used interchangeably as the umbrella term for all sexual orientations, gender identities, and sex characteristics.

20. These Council documents consider access/accessibility to be an aspect underpinning inclusivity. Some other aspects of inclusivity that are common for these council documents include:

    - Attitudes – respecting, valuing and celebrating diversity and differences
    - Choice – in decision-making and participation
    - Equity – in participation in city life and fair decision-making
    - Health and wellbeing – of communities, including housing access
    - Partnership – with mana whenua, recognising the cultural foundations of the land
    - Safety – in communities and in city centres, freedom from discrimination, hate speech, or violence
    - Trust and social cohesion – belonging and connection to others, through opportunities to connect at community facilities or cultural events.

Wellington City Council's strategic context for rainbow inclusion

21. Under the Council's Social Wellbeing Framework (2021), the Council has a role in enabling all groups of the community to participate, thrive, and belong in the city through the delivery of its functions. Inclusive is described as "different communities are acknowledged and celebrated, and there is a strong sense of belonging".

22. The Council adopted five strategic approaches as part of its 2024-27 Long-Term Plan, which are "embedded in everything we do". One of the strategic approaches is "making our city accessible and inclusive for all", which envisions all Wellingtonians to be empowered to participate in city life and to belong.

23. The Council currently has two documents for specific community groups, the Strategy for Children and Young People (2021) and the Positive Ageing Policy (2012). These documents were drafted to align with national strategies at the time for the groups. The Council also has an Accessible Wellington Action Plan (2018) to address community need for a more accessible city. Regarding its own workforce, the Council has an Inclusion Strategy (2021), which is not community-facing.

24. Officers began engaging with the Council's Takatāpui Rainbow Advisory Council (TRAC) from September 2024 to July 2025 about the lived experience of rainbow communities in the city and what the Council could deliver within its role to make the city more inclusive for rainbow people.

25. In conjunction with delivery business units of the Council, officers have developed the proposed Rainbow Action Plan (Plan) to articulate how existing work programmes aim to improve rainbow inclusion in the city and specify what has been delivered to date with rainbow inclusion in mind. An action plan has been drafted in place of a full strategy as no new budgets have been allocated for delivery and opportunities for action have been identified within existing and funded work across the Council.

Kōrerorero | Discussion

Wellington's rainbow communities

26. Wellington has a significant proportion of rainbow people in its population. The 2023 Census asked about rainbow status for the first time, and of all territorial authorities, Wellington City has the highest proportion of adults (15 years and older) who belong to the rainbow population (11.3%). This is higher than the proportion nationally (4.9%). Within Wellington, the Pukehīnau/Lambton General Ward has the highest proportion of rainbow adults (19%).

27. The rainbow population tends to be younger, and this trend is more pronounced in Wellington. For example, in Wellington City, 60.6% of all rainbow people are between 15 and 29 years of age (compared to 47.2% nationally). The age group with the highest rainbow proportion is 20 to 24 years, at 24.9% in Wellington City (compared to 11.9% nationally). More details about the demographic composition of the Wellington rainbow population are given in the infographic at Attachment 2.

28. The significant rainbow population contributes to a strong rainbow identity in Wellington. When asked why rainbow inclusion is important for Wellington, TRAC members commented that greater representation of rainbow in the population makes Wellington a safe and desirable destination for rainbow people, and that Wellington has historical significance for rainbow communities, including homosexual law reform and decriminalisation, activism, and protest.

29. Across New Zealand, rainbow people can experience disparities in their outcomes, reporting to experience on average poorer mental health, lower life satisfaction and higher rates of social exclusion compared to the general population[3]. Rainbow people report being victimised more than non-rainbow individuals (although to a lesser extent in Auckland or Wellington)[4], and can experience more housing deprivation[5] or homelessness[6], and are less employed[7] than the non-rainbow population. Rainbow people are also more likely to be disabled[8]

30. In Wellington, local data from monitoring surveys, including the Census, Residents' Monitoring Survey, and the Quality of Life Survey provide a snapshot of the reported outcomes and the experiences with council services for rainbow-identifying respondents and how this compares with non-rainbow respondents. Attachment 3 provides an overview of the measures that are different between rainbow and non-rainbow respondents.

31. Additionally, in the WCC Alcohol Attitudes and Behaviours in Wellington Survey 2024, rainbow respondents under 30 were more likely than non-rainbow to report experiencing more types of harm due to alcohol, both in terms of harm caused by their own drinking and by another person's drinking. Rainbow respondents under 30 were around four times more likely to report experiencing sexual assault (21% vs 6%) or sexual harassment (40% vs 10%) because of another person's drinking.

Wellington City Council's role in supporting rainbow communities

32. The Council has a role in promoting social wellbeing for all, "A city of healthy and thriving whānau and communities", as articulated in the community outcomes adopted in the 2024-27 Long-Term Plan. This is derived from the current purpose of local government under section 10(1)(b) of the Local Government Act 2002 (LGA), "to promote the social, economic, environmental and cultural well-being of communities in the present and for the future".

33. The proposed Plan considers cost-effectiveness for ratepayers. No additional budget is included for the delivery of actions, and all actions are held by their responsible teams within existing work programmes and budgets.

34. Actions in the plan are organised into key focus areas, which are based on feedback and advice from TRAC about their priority pou (pillars) for how the city can be more inclusive for rainbow communities, and common themes from other councils' strategies, policies or plans about diversity and inclusion. These focus areas include:

    - **Safety** – ensuring that the city is safe for rainbow communities, from crime, violence and other harms. This includes providing safe and inclusive housing options.
    - **Community** – providing opportunities to build community connections through rainbow-friendly events and providing access to inclusive recreation and community facilities.
    - **Visibility** – normalising and celebrating diverse rainbow communities and making rainbow identity and history visible across the city.
    - **Equity** – uplifting the voices of rainbow communities that intersect with other identities and may experience additional disadvantage and providing fair opportunities for those experiencing marginalisation.
    - **Inclusive Council Operations** – ensuring that the Council operates in a rainbow-inclusive way in how it supports and upskills staff, run public meetings, and communicates outwardly.

35. One upcoming work item related to rainbow inclusion is not listed as an action due to further decisions required by Council in the new triennium. Following the resolution of the 20 March 2025 Environment and Infrastructure Committee to '*work with the community to find a space and implement trans street art or a public mural in Berhampore'*, officers held a walking hui in June with representatives of the Berhampore community. Officers are now exploring the options for the installation of public trans artwork in locations discussed at the walking hui and will report back to the relevant Committee in the new triennium.

36. TRAC was consulted on a draft list of actions on 8 July 2025 and members provided feedback which has been addressed. InsideOUT Kōaro and Gender Minorities Aotearoa, the rainbow organisations that the Council has existing relationships with, were also sent the draft actions and did not have specific feedback. InsideOUT was generally positive about the actions and Gender Minorities Aotearoa did not have the capacity to review as an organisation.

37. The proposed Plan is intended to be an interim document, and officers recommend more research and engagement with rainbow communities to better understand nuances of the large and diverse community group. For example, TRAC members commented that more consideration is needed for Takatāpui (rainbow Māori) and rainbow people of colour and migrants, through more engagement with rainbow organisations that specifically serve them. For example, rainbow migrants may experience different and additional challenges if their country of origin has criminalised homosexuality.

38. Statistical data about the Wellington rainbow population provides some context but has some limitations, such as low data quality where sample sizes were small in surveys, non-response bias, or different definitions of rainbow status between surveys. Caution is needed therefore for interpreting this data, particularly for population subgroups under the rainbow umbrella, such as transgender, Takatāpui, or rainbow people of colour, which have smaller sample sizes in surveys and typically higher non-response rates, which may make findings less conclusive.

39. Officers propose further research be undertaken to address gaps in the existing data about rainbow communities in Wellington. Qualitative or lived experience research about rainbow subgroups or different rainbow communities may provide more detailed insight into the experiences of individuals in the city that the existing surveys may not be able to. This may shed light on reasons why there are differences in outcomes between subgroups within the rainbow population and potential actions the Council could take within its role to address specific issues faced by different rainbow communities.

Kōwhiringa | Options

40. The Kōrau Mātinitini | Social, Cultural, and Economic Committee can consider the following options for this report:

    - Adopt the proposed Rainbow Action Plan as drafted (recommended – as actions consider feedback from TRAC members and have been approved by business units within the Council)
    - Adopt the proposed Rainbow Action Plan with amendments
    - Do not adopt the proposed Rainbow Action Plan (not recommended, as the outstanding Council resolution cannot be fulfilled).

Whai whakaaro ki ngā whakataunga | Considerations for decision-making

Alignment with Council's strategies and policies

41. The Plan aligns with the Council's existing strategic commitments, including the Social Wellbeing Framework (2021), and the strategic approach "making our city accessible and inclusive for all".

Engagement and Consultation

42. TRAC has been engaged with throughout the development of the Plan and members have provided their lived experience and feedback on potential Council actions. Officers acknowledge that TRAC is not representative of the wider rainbow population in Wellington though members belong to diverse rainbow communities.

43. More research and engagement is needed to reach further into the various rainbow communities of Wellington and ensure that a greater depth and diversity of understanding of the issues and experiences facing rainbow Wellingtonians can be considered. Officers recommend further lived experience research to inform the next update to the Plan.

Māori Impact Statement

44. Mataaho Aronui were consulted regarding potential actions targeted towards Takatāpui Māori (Māori people who identify as rainbow/LGBTQIA+). At present, Mataaho Aronui's work programme does not extend to rainbow inclusion work, but officers note that Takatāpui should be considered in the delivery of other actions in the plan where relevant.

45. Wellington's Māori population has a higher proportion of those identifying as rainbow (16.8%) than the national Māori population (6.5% identifying as rainbow) in the 2023 Census. As this is a significant group, more research and engagement is needed to understand the needs and experiences of Wellington's Māori rainbow (Takatāpui) population. Some caution is needed when interpreting this data, noting that non-response rates are higher for questions about sexual identity and transgender status for Māori (though the difference is less pronounced in Wellington than nationally).

Financial implications

46. All actions in the Plan have been developed within existing work programmes and as such are budgeted for within responsible teams for delivery.

Legal considerations

47. Officers are not aware of any legal implications arising from this report.

Risks and mitigations

48. Overall, the level of risk is assessed as low, as proposed actions are within existing budgets, and fit within the Council's existing strategic framework to support social wellbeing and the inclusion of all community members.

49. There is a risk that this Plan can raise expectations for other groups in the community that are not represented by a plan or strategy, and they may wish to see their own community reflected in a Council document.

Disability and accessibility impact

50. The rainbow population in Wellington is more likely to report being disabled (having activity limitations) and accessibility in the city is important to rainbow communities, reflected in TRAC's feedback.

51. As the Council already has an Accessible Wellington Action Plan, specific actions related to accessibility are out of scope of the Rainbow Action Plan and are better placed in an updated version of the Accessible Wellington Action Plan.

Climate Change impact and considerations

52. Officers are not aware of any direct climate change impacts arising from this report.

Communications Plan

53. A copy of the adopted Plan will be uploaded to the Council website, and the main stakeholders who were engaged with in development of the Plan will be sent a copy directly.

Health and Safety Impact considered

54. Officers are not aware of any health and safety impacts because of the recommendations in this report.

55. We note feedback that some Council initiatives relating to rainbow communities have received some negative social media responses, though no specific health and safety impacts to individuals have been reported.

Ngā mahinga e whai ake nei | Next actions

56. If the Plan is adopted as drafted, or an amended version is adopted by the Kōrau Mātinitini | Social, Cultural, and Economic Committee, officers will finalise the design of the Plan and publish a copy on the Council website.

57. Officers will ensure the implementation of the Plan's actions according to their indicative timing of delivery and report back to the Committee following the three year period of the Plan.

58. Officers will conduct further research into the lived experience of the diverse rainbow communities in Wellington in 2026. We will consider this research, and the lessons learned to date while implementing the Plan to update the action plan in line with the development of the 2027-37 Long-term Plan.

59. In the new triennium, officers will report back to the relevant Council committee about options for the installation of public trans artwork in Berhampore.

Rainbow Action Plan 2025-27

Introduction

The Rainbow Action Plan has been developed through engagement with the Council's Takatāpui Rainbow Advisory Council (TRAC) from September 2024 to July 2025 to understand the lived experience of rainbow communities in the city.

We asked why rainbow inclusion is important for Wellington and we heard from TRAC members:

> "Acknowledging the massive contributions by rainbow communities across all areas – environmental, economic, activism and human rights."
>
> "Feels more safe and that the city is backing you up with a space to stand up for your rights and be respected."
>
> "Acknowledging the history of queer migrants who paved the way. A space where that is accepted and to see what being queer looks like for all cultures."
>
> "Many people come to Wellington and stay specifically because of the queer culture, such as when deciding which university to go to."
>
> "Wellington has many sites of rainbow history, activism and protest, including homosexual law reform and decriminalisation, Lesbian and Gay Archives, and the International Lesbian Gay Association."

This feedback supports other reports that Wellington is a safe and desirable destination for rainbow people and tourists[1][2], and that Wellington is home to many historical sites of significance for rainbow people[3].

Wellington has a significant rainbow population which contributes to a strong sense of identity. In Wellington City, 11.3% of adults (15 years and older who answered the relevant questions) identify as rainbow/LGBTQIA+ (2023 Census). Nationally, by comparison, 4.9% of adults identify as rainbow. A summary of the demographics of rainbow people in Wellington from the 2023 Census is provided at Appendix 1 and shows that the rainbow population skews younger and is concentrated in the Pukehīnau/Lambton General Ward, the central city and suburbs.

Across New Zealand, rainbow people can experience disparities in their outcomes, reporting to experience on average poorer mental health, lower life satisfaction and higher rates of social exclusion compared to the general population[4]. Rainbow people report being victimised more than non-rainbow individuals (although to a lesser extent in Auckland or

Wellington)[5], and can experience more housing deprivation[6] or homelessness[7], and are less employed[8] than the non-rainbow population.

Some of these outcome trends are similar in Wellington, and a summary of outcome measures for rainbow respondents from the 2023 Census, 2025 Residents' Monitoring Survey, and the 2024 Quality of Life survey is provided at Appendix 2. On the other hand, rainbow respondents have also reported greater confidence in the Council's decisions and are more likely to report frequent participation in and report feeling welcome at arts and culture events.

Strategic Context

Under the Council's Social Wellbeing Framework (2021), the Council has a role in enabling everyone, including rainbow communities, to participate, thrive, and belong in the city through the delivery of its functions. Inclusive is described as "different communities are acknowledged and celebrated, and there is a strong sense of belonging".

The Council adopted five strategic approaches as part of its 2024-27 Long-Term Plan, which are embedded in everything we deliver. One of the strategic approaches is "making our city accessible and inclusive for all", which envisions all Wellingtonians to be empowered to participate in city life and to belong.

Through engagement with advisory groups (including TRAC), officers have defined inclusive as: all communities thrive, belong, and participate with dignity and choice, across all characteristics such as ethnicity, gender, sexuality, age, culture, ability, beliefs, neurodiversity, or economic circumstances.

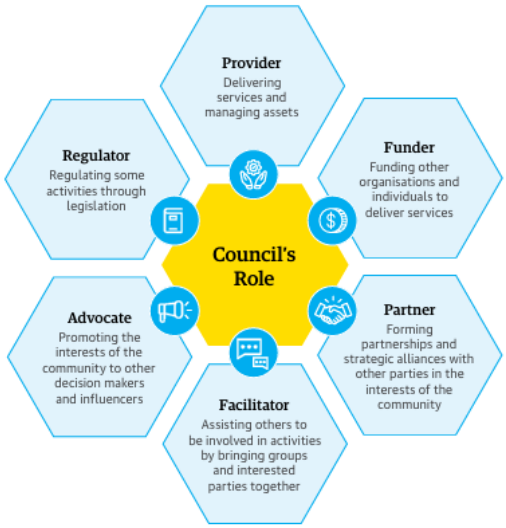
Action Focus Areas

The following actions have been developed to address some of the issues that rainbow communities face in the city (as advised by TRAC) and that aim to make the city more inclusive for rainbow communities. The rainbow organisations InsideOUT Kōaro and Gender Minorities Aotearoa were also consulted on draft actions.

Each action specifies the activity area within the Council organisation (as defined in the most recent 2024-27 Long-term Plan), the responsible team or business unit for the action, the likely timing of delivery for the action, and the role that the Council plays in delivering the action.

The Council has many roles when serving its community. Below is a diagram (from the Social Wellbeing Framework, 2021) that shows the main roles of the Council as a provider, funder, partner, facilitator, advocate, and regulator.

[5] NZ Crime and Victims Research 2024 – Auckland University of Technology
[6] Youth19 Housing Deprivation Brief
[7] Ira Mata, Ira Tangata: Auckland's Homeless Count (2018)
[8] Household Economic Survey 2020 (Stats NZ)



The actions have been organised into five main focus areas, reflecting the priority areas for rainbow communities for their inclusion and wellbeing in the city (as advised by TRAC and in alignment with the priority pou from their 2024 work plan).

- **Safety** – ensuring that the city is safe for rainbow communities, from crime, violence and other harms. This includes providing safe and inclusive housing options.
- **Community** – providing opportunities to build community connections through rainbow-friendly events and providing access to inclusive recreation and community facilities.
- **Visibility** – normalising and celebrating diverse rainbow communities and making rainbow identity and history visible across the city.
- **Intersectionality/Equity** – uplifting the voices of rainbow communities that intersect with other identities and may experience additional disadvantage. Providing fair opportunities for those experiencing marginalisation.
- **Inclusive Council Operations** – ensuring that the Council operates in a rainbow-inclusive way in how it supports and upskills staff, run public meetings, and communicates outwardly.

Research and engagement

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
0.1	Governance	Undertake further research into the lived experiences of and issues facing diverse rainbow communities in	Strategy, Policy and Research	Provider	Early 2026

		Wellington, including transgender, non-binary, and people of colour.			
0.2	Governance	Engage with other councils that have demonstrated commitment to rainbow inclusion to identify good practice and lessons learned.	Strategy, Policy and Research	Facilitator	Early 2026

Focus area 1: Safety

Outcome: Making Wellington safer for all, without fear of harassment or harm.

Safe Public Places

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
1.1	Social and Recreation	Invite representatives from rainbow community organisations to attend the quarterly Safety Forum as the City Safety Plan is implemented.	City Safety, Harm Prevention	Facilitator	End of 2025 to 2027
1.2	Social and Recreation	Hold a safety forum for all advisory groups including TRAC to hear from diverse community voices about city safety matters.	City Safety, Harm Prevention	Facilitator	Mid-2026
1.3	Social and Recreation	Publicise in the City Safety Newsletter the contact details for notifying WCC of any offensive (such as queerphobic or transphobic) graffiti in public places. This aims to speed up their removal by our contractors.	City Safety, Harm Prevention	Provider	End of 2025

Harm Prevention

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
1.4	Social and Recreation	Continue to fund organisations that help to prevent violence towards vulnerable members of the community who intersect with rainbow identities, including Age Concern and youth development organisations.	Harm Prevention	Funder	Ongoing

1.5	Social and Recreation	Incorporate a rainbow lens on sexual violence prevention through our Safer Venues programme and consent campaigns.	Harm Prevention	Funder	Ongoing

Other ways the Council delivers safety for the rainbow communities:

Tahua Whaihua Hapori - Community Outcomes Fund

- Adopted in June 2025 and aligns funding with policies (Social Wellbeing Framework and others). The new framework places emphasis on alignment with Council's five strategic approaches in applications, including "Making our city accessible and inclusive for all", which applies to all communities including rainbow communities.
- The new funding framework has two priority areas, with 55% of the fund assigned to organisations and initiatives serving the pillars of the City Safety and Wellbeing plan. The fund has three priorities which include sexual violence prevention and harm reduction, projects that strengthen approaches to homelessness and enhance city safety and wellbeing.

Housing

	Activity area	**Action**	**Responsible Business Unit / team**	**Council's role**	**Timing**
1.6	Urban development	Work with TRAC to explore how to make Te Kainga more queer-friendly and to make information about Te Kainga vacancies more available to rainbow communities.	Housing development	Provider	Mid to late 2026
1.7	Urban development	Engage with rainbow organisations and businesses to partner with us in the tenant benefit programme - where Te Kainga tenants can receive discounts from partner businesses.	Housing development	Provider	First quarter 2026
1.8	Urban development	Work with TRAC to develop an exit survey for Te Kainga tenants that identify as rainbow/Takatapui to understand their living experiences and any barriers faced during their tenancies.	Housing development	Provider	Mid to late 2026

Other ways the Council delivers safe and inclusive housing for rainbow communities:

Te Toi Mahana

- Wellington City Council (WCC) has provided social housing since the 1960s. In August 2023, Te Toi Mahana, an independent charitable trust set up by WCC took over the tenancy management of the housing portfolio. WCC remains the owner of the assets and is responsible for maintenance and upgrades, while the Trust is the tenancy provider/landlord. We partner with the Trust to ensure tenants can live in a warm, safe and dry home.
- Te Toi Mahana have a number of initiatives in place to support the rainbow community (WCC will support their implementation if asked). These include:
    - Being a member agency of the Pride Pledge and hosting annual corporate events to celebrate Pink Shirt Day.
    - Having invited kaitiaki (tenant volunteers) within their tenant community to participate in Rainbow Awareness Training. The training aimed to increase awareness and understanding of LGBTQIA+ identities, lived experiences, and the importance of allyship, particularly in their roles supporting current and new tenants, and as leaders within their communities.

Focus area 2: Community

Outcome: Creating a resilient city by fostering an engaged, connected and diverse community.

Inclusive Spaces and Places

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
	Public toilets and changing rooms				
2.1	Social and Recreation	Ensure all our public toilets that are 'all gender' have non-gendered signage.	Parks, Sports and Recreation	Provider	First quarter 2026
2.2	Social and Recreation	All new future public toilet provision will be non-gendered. (Implementing the current policy in Te Whai Oranga Poneke and Te Awe Mapara)	Parks, Sports and Recreation	Provider	Mid to late 2026
2.3	Social and Recreation	All significant upgrades of changing room facilities (free-standing at pavilions) will ensure there is provision of an 'all gender' option. (Action D7 of Te Whai Oranga Poneke)	Parks, Sports and Recreation	Provider	Ongoing
	Community facilities				
2.4	Social and Recreation	All Council-run community centre managers and front of house kaimahi receive InsideOUT training on	Libraries	Provider	End of 2026 and ongoing

		working effectively with rainbow communities.			
2.5	Social and Recreation	All Council-run community centres have 'Safe Space Alliance' accreditation.	Libraries	Partner	End of 2027
2.6	Social and Recreation	50% of funded community facilities (partner-run community centres) have Safe Space Alliance accreditation.	Connected Communities	Partner	End of 2027
2.7	Social and Recreation	Provide training for all youth hub staff and volunteers on LGBTQIA+ awareness, respectful language, and how to support youth safely.	Connected Communities	Provider	End of 2026
2.8	Social and Recreation	Ensure the Youth Hub is a LGBTQIA+ safe space where LGBTQIA+ youth can gather, access resources, and feel supported. This could include rainbow flags, inclusive signage, and private meeting areas.	Connected Communities	Provider	End of 2026
2.9	Social and Recreation	Changing rooms and toilets at new community facilities to be 'all gender' provision and have gender neutral signage. For significant upgrades of existing facilities endeavour to make all changing rooms and toilets all gender where practically feasible.	Parks, Sports and Recreation, Libraries, Connected Communities	Provider	Ongoing
2.10	Social and Recreation	Improve knowledge of rainbow inclusion by having a WCC representative on the Recreation Aotearoa's monthly Aquatics Accessibility & Inclusion Hui.	Parks, Sports and Recreation	Partner	End of 2025
2.11	Social and Recreation	Explore, develop and implement training on working effectively with rainbow communities for kaimahi at pools and recreational facilities.	Parks, Sports and Recreation	Provider	End of 2025
2.12	Social and Recreation	Work with rainbow community organisations and continue to expand Out in the Pool events beyond Keith Spry and WRAC pools.	Parks, Sports and Recreation	Provider	End of 2025
2.13	Social and	Explore Safe Space	Parks, Sports	Partner	End of

	Recreation	Alliance accreditation for pools and recreation centres.	and Recreation		2025
2.14	Social and Recreation	Continue to celebrate Pride Week at Council pools, recreation centres, parks, and open spaces.	Parks, Sports and Recreation	Provider	Ongoing

Connection

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
2.15	Social and Recreation	All community centres (Council-run and funded) are encouraged to provide regular programming for rainbow inclusive events, including during Pride Week. This can include facilitating rainbow community organisations to use community centre spaces.	Connected Communities, Libraries	Provider	End of 2026 and ongoing
2.16	Cultural Wellbeing	Continue to support our organisers for rainbow events with funding and logistics advice.	Creative Capital	Facilitator	Ongoing
2.17	Economic Development	Support businesses in Courtenay Place to activate the street with free events to provide activities to spend time together and connect, including through involvement in the Pride Parade.	Economic Wellbeing	Facilitator	March 2026

Focus area 3: Visibility

Outcome: Making diverse rainbow communities visible in positive ways.

Celebrating diversity

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
3.1	Governance	Reach out to rainbow organisations when updating our photo library to include more visual representation of diverse rainbow community members in our documents, posters, billboards, and campaigns.	Creative and Brand	Provider	Ongoing
3.2	Social and recreation	Continue to develop Library Collections to reflect a diversity of	Libraries	Provider	Ongoing

		rainbow and Takatāpui voices and experiences, including those of traditionally underrepresented groups.			
3.3	Social and recreation	Celebrate the diversity of Wellington's rainbow and Takatāpui communities through curating a programme of events for rangatahi, whānau, and the wider community during the Wellington Pride Festival, Out On The Shelves, Out In The City, and other opportunities as they arise.	Libraries	Provider	Ongoing
3.4	Social and recreation	Enhance the visibility of our rainbow and Takatāpui communities through curating displays and promotions of LGBTQIA+ collection materials across our network of libraries and community spaces throughout the year as opportunities arise.	Libraries	Provider	Ongoing
3.5	Social and Recreation	Increase visibility of rainbow communities at pools and recreation facilities including signage, communications, and photos.	Parks, Sports and Recreation	Provider	Ongoing
3.6	Economic development	Ensure rainbow identity and history is visible and enhanced through the Cuba St and Courtenay Place Precinct Plan, working with rainbow organisations.	Economic Wellbeing, City Design	Facilitator	2026

Other ways the Council celebrates the diversity of rainbow communities:

Arts and Culture

- All arts and culture funding policy considers Aho Tini, the Arts and Culture Strategy and its Focus Area 1 is: Aho Tangata Our People – connected, engaged, inclusive, accessible communities – Our communities are connected by diverse arts and cultural expression.
- There has consistently been a policy of acknowledging our rainbow community with funding many rainbow organisations directly and also by supporting queer and diverse creatives within the creative community.
- In the last three years, between March 2022 to July 2025, over $295,000 has been given in grants for projects and initiatives by, for, or about rainbow communities (which may also include other communities) through the Arts and Culture Fund, Community Events Sponsorship, Wellington Venue Subsidy, and Living Wage for Events Fund.

City design

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
3.7	Urban development	Engage with TRAC or rainbow community organisations on how to integrate visibility of and give voice to rainbow communities and their histories within public space, urban and city design projects underway and upcoming.	City Design	Provider	Ongoing until project completion (end of 2028)
3.8	Urban development	Refresh the rainbow crossing with the Rainbow Progress Flag design.	Economic Wellbeing	Provider	End of 2025

Other ways the Council delivers visibility for rainbow communities in city design:

The Wellington Design Manual

- The Wellington Design Manual will provide guidance on art and storytelling as part of placemaking, reflecting local histories and identities of particular streets, including those for rainbow communities.
- The Design Manual will guide project holders for public space design on how to identify key stakeholders and consult with them on histories, key themes and priorities for public places.
- The estimated date for publication of the Design Manual will be in the first quarter of 2026.

Focus area 4: Intersectionality/equity

Outcome: Uplifting people who intersect across identities (and may experience overlapping forms of marginalisation).

Uplifting voices

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
4.1	Social and Recreation	Engage with and respond to the needs of rainbow and Takatāpui youth through the Libraries' Youth Advisory Group quarterly meetings.	Libraries	Facilitator	Ongoing
4.2	Economic	Ensure rainbow	Economic	Facilitator	Late 2025

	Development	businesses are part of the business voice during engagement for the Cuba St and Courtenay Place precinct planning.	Wellbeing		
4.3	Urban Development	Advocate to Greater Wellington Regional Council for safer public transport for rainbow communities and greater public transport provision from the city to suburbs and after midnight on weekends.	Transport Strategy	Advocate	Ongoing – during upcoming consultations

Equitable opportunities

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
4.4	Economic Development	Identify and explore opportunities to support and promote rainbow creatives through activities in the central city including night markets, activating vacant shopfronts, and showcasing talent.	Libraries	Facilitator	Ongoing
4.5	Governance	Develop measures for diversity and social impact outcomes for rainbow-owned businesses as part of the Procurement Policy review.	Commercial Partnerships	Provider	End of 2026
4.6	Governance	Engage with TRAC during the Procurement Policy review to ensure that the policy serves the rainbow community.	Commercial Partnerships	Facilitator	End of 2026
4.7	Governance	Hold a workshop for rainbow-friendly or rainbow-owned businesses to support them to develop requests for proposals.	Commercial Partnerships	Facilitator	End of 2026
4.8	Cultural Wellbeing	Toi Poneke will continue to host the monthly development meetings of the National Takatāpui Wananga Roopu and monthly network meetings of the Wellington Pride Festival for free.	Creative Capital	Facilitator	Ongoing

Other ways the Council provides equitable opportunities for rainbow communities:

WellingtonNZ

- Under action 1.2.6 of the Economic Wellbeing Strategy (2022) WellingtonNZ has a role in partnering with government agencies, education providers, mana whenua, and employers to break down barriers for employment in rainbow communities.

Procurement

- Social and Sustainable Procurement Framework: WCC has adopted a procurement framework that incorporates social, cultural, environmental, and economic outcomes, including supplier diversity.
- Supplier Expectations: Vendors are expected to align with WCC's commitment to equity, diversity, and inclusion—including respect for rainbow communities.
- Inclusive Facilities and Services: Contractors delivering community services are required to meet inclusive standards, including safe environments for people in our rainbow communites.
- Equity and Inclusion Training: Some council staff involved in procurement have received training to consider rainbow and minority community impacts when awarding contracts. To be rolled out to rest of the team who have arrived in last year.

Focus area 5: Inclusive Council Operations

Outcome: Ensuring WCC demonstrates from within the vision of an inclusive city.

Staff capability and training

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
5.1	Governance	Review existing rainbow and Takatāpui e-learning to make sure content about the vulnerabilities, discrimination and violence that rainbow and Takatāpui communities face is covered. Where there are content gaps, offer the opportunity for Queer at Council and the kaimahi Inclusion Advisory Group to input into and review draft additions.	Culture and Capability	Provider	Mid 2026
5.2	Governance	Work with libraries leadership around how they could share the ways libraries create safety for	Culture and Capability	Provider	Early 2027

		rainbow and Takatāpui people with other customer facing business units.			
5.3	Governance	Continue to encourage WCC people leaders to engage with external providers of face-to-face workshops on understanding rainbow communities and how they can ensure employees who are part of the rainbow community feel included.	Culture and Capability	Facilitator	Ongoing
5.4	Economic Development	Wellington Basin Reserve to continue to work towards achieving the Rainbow Tick accreditation.	Council-controlled organisations and Partnerships	Partner	End of 2026
5.5	Economic Development	Explore the Rainbow Tick accreditation for Experience Wellington and the Cable Car.	Council-controlled organisations and Partnerships	Partner	End of 2026

Other ways the Council supports rainbow kaimahi and provides for staff capability when working with rainbow communities:

- Including Takatāpui and Rainbow Communities at WCC e-learning (2023) - This e-learning module was developed internally, reviewed by InsideOUT, and shared with TRAC. This learning is included in our induction learning pathway.
  - It aims to raise awareness of:
    - some of the issues facing Takatāpui and rainbow communities
    - what some of the key LGBTQIA+ terms mean
    - how best to use inclusive language.
- Inclusion of Takatāpui and Rainbow Communities – Internal Guideline (2023) - Provides advice for supporting the inclusion of Takatāpui and rainbow kaimahi communities at the Council.
- Gender Affirmation – Internal Guideline (2023) - This guideline provides advice for supporting kaimahi taking steps to affirm their gender.
- Queer at Council – Employee Led Network - A queer network of people from across the Council who come together to chat, debate, socialise and connect. Their mission to create a safe space for rainbow (and rainbow adjacent) folk at Wellington City Council to come and be themselves.
- Workforce representation
  - The number of gender diverse kaimahi has grown — from just three people in 2022 to 33 in 2025.
  - We don’t yet have enough data to report gender pay gap information for gender diverse kaimahi, but this is checked on an individual basis.

- Talent Acquisition model that enables us to significantly increase and diversify our talent pools – so our recruitment model is inclusive (range of kete to reach different communities including rainbow) and focus on assisting managers to attract people who reflect the communities we serve.

Council-controlled organisations

- Te Nukuao Wellington Zoo's Rainbow inclusion initiatives have been awarded for excellence at the national Rainbow Excellence Awards. They have achieved Rainbow Tick certification and their staff Rainbow group undertake inclusion mahi, supporting the display of the progress pride flag at the front of Wellington Zoo.
- The Cable Car employs a diverse and inclusive rainbow team, valuing and respecting individuals of all backgrounds and identities.
- Wheako Pōneke Experience Wellington
    - Delivers a varied and diverse offering ensuring all members of our community including LGBTQIA+ can enjoy programmes especially tailored for them.
    - Makes their Safe Spaces Statement visible at all sites and online that is enforced where necessary to ensure all people are welcome and safe at their sites and in their programmes, of every gender identity and expression, and sexual orientation.
    - The Access and Inclusion Committee works closely with teams to apply a strong access and inclusion lens across all policy, procedures and operational practices across the organisation.

Democracy

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
5.6	Governance	Provide training for chairs of Council committees to use standing orders to facilitate respectful meetings, so that all members of the rainbow community feel that they can attend and participate in Council meetings.	Democracy Services	Provider	Early 2026
5.7	Governance	Work with TRAC to update our Attending and Speaking at Meetings website to be more rainbow-inclusive.	Democracy Services	Provider	2026

Communications

#	Activity area	Action	Responsible Business Unit / team	Council's role	Timing
5.8	Governance	Use non-gendered icons in signage where relevant and use gender inclusive language (eg "all genders") in spaces like non-gendered toilets.	Design	Provider	Ongoing

How the Council provides for rainbow-friendly communications:

- WCC Writing Style Guide – Refers to the use of gender neutral language. Unless it's relevant, avoid using language that refers specifically to either gender.

Glossary

Source: Public Service Commission – Glossary of common rainbow terms

Asexual - A person who either does not, or does not often, experience sexual attraction but may experience romantic attraction towards others. This can also be used as an umbrella term, like 'ace', that encompasses a range of other ace spectrum identities.

Bisexual - A person who is emotionally and sexually attracted to their own and other genders.

Gay - A person who is attracted to the same gender. This is more widely used by men than women and can be both a personal and community identity.

Gender - Gender is an individual's internal sense of being a woman, a man, neither of these, both or somewhere along a spectrum. Gender is not fixed or unable to be changed.

Gender diverse - A person who does not conform to their society or culture's dominant gender roles.

Intersex - An umbrella term used to describe people born with physical or biological sex characteristics (including sexual anatomy, reproductive organs, hormonal patterns and/or chromosomal patterns) that are more diverse than stereotypical definitions for male or female bodies.

LGBTQIA+ - An acronym which stands for Lesbian, Gay, Bisexual, Transgender, Intersex, Queer, Intersex, Asexual or Ace. The + recognises there are further identities not listed, and while the combination and number of letters varies, the overall LGBTQIA+ acronym is well-recognised.

Lesbian - A woman who is attracted to other women. This is used as both a personal identity and community identity.

Non-binary - An umbrella term for gender identities outside the male/female binary.

Queer - Historically used as a derogatory term for something/someone being different. This word has been reclaimed by some people as an umbrella term for sexual and gender minorities who are not heterosexual or cisgender. Note — due to this history, it is best not to initiate the use of this term to refer to others unless this is how they describe themselves.

Rainbow - An umbrella term that covers all sexual and gender minorities, and people with variations of sex characteristics and avoids the acronym LGBTQIA+. This can be used to identify communities as well as an individual.

Takatāpui - A traditional term reclaimed by Māori to encompass both their culture and spirituality, as well as their diverse sexual orientations, gender identities and expressions, and sex characteristics.

Transgender - This term describes a wide variety of people whose gender is different from the sex they were assigned at birth. Transgender people may be binary or non-binary.

Wellington city: Rainbow overview

Wellington city's rainbow population

~18,237

rainbow people in Wellington city

(Wellington city usual residents aged 15 years or older who responded to the Census 2023 who were identified as LGBTIQ+)

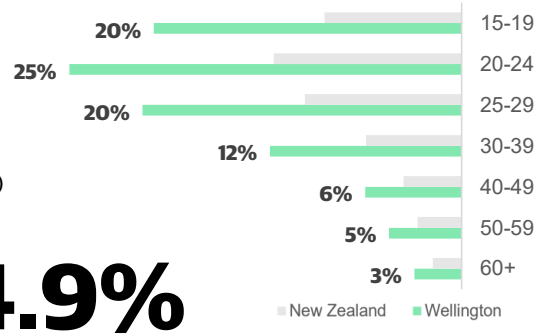
11.3%

identify as rainbow in Wellington City

vs 4.9%

identify as rainbow in the general NZ population

Rainbow identification by age



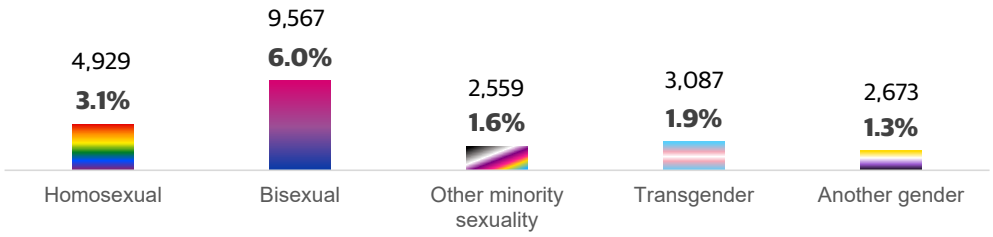
Median age of...

- Rainbow Wellingtonian: **27.1**
- Rainbow NZ: **31**
- Non-rainbow Wellingtonian: **42.7**
- Non-rainbow NZ: **47.7**

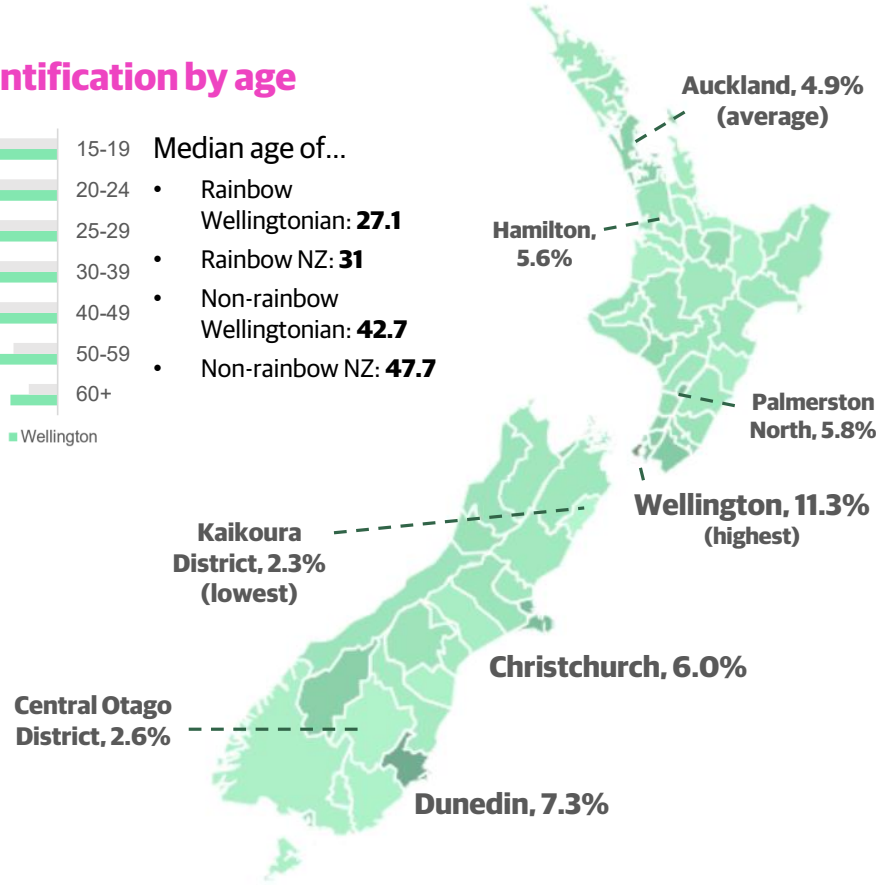
Rainbow subgroups (% of Wellington city overall)

'Rainbow' refers to anybody who has been identified as one or more of the following*...

N.B. counts are not exact due to StatsNZ confidentiality rules. See notes at bottom right of slide.



Sources: Census 2023 - Ethnicity and age by LGBTIQ+ indicator; Sexual identity, cisgender and transgender status (Statistics New Zealand)



Note: All percentages reported are of those who had an identifiable LGBTIQ+ status. LGBTIQ+ population includes anybody who was identified in Census 2023 to be one or more of: transgender, 'another gender', minority sexuality, intersex. (Intersex data was not available at the TA level). Sexual identity percentages include "prefer not to say" in the base, as this is a valid Census response. Respondents may belong to multiple rainbow groups (e.g, there is a heavy crossover between 'another gender' and 'transgender'), see StatsNZ for category specifications. All numbers should be taken as indicative rather than exact, as A) not all eligible people responded to the rainbow-related Census questions, and B) StatsNZ confidentiality rules obscure exact numbers.

Wellington city: Rainbow overview

Sources: Census 2023 - Ethnicity and age by LGBTIQ+ indicator; Disability indicator by LGBTIQ+ indicator (Statistics New Zealand)

1 in 5 young people in Wellington are rainbow

21.9%

of Wellingtonians aged 15-29 identify as rainbow

vs 10.2% (NZ)

of people aged 15-29 in the general population identify as rainbow

1 in 4 young Europeans and Māori are rainbow

25.2%

of Europeans aged 15-29 in Wellington city are LGBTIQ+

24.0%

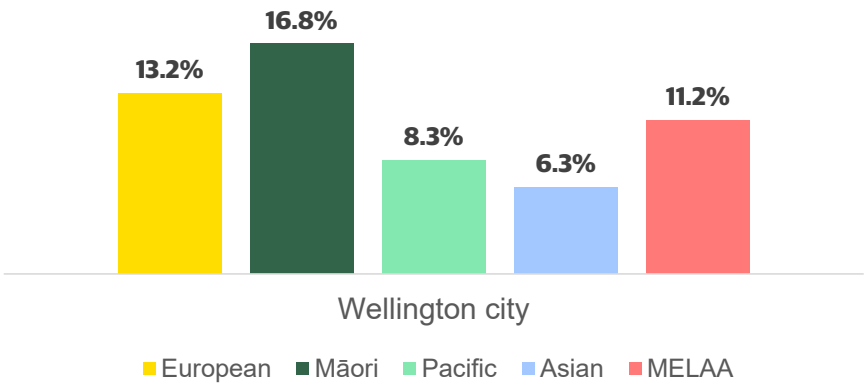
of Māori aged 15-29 in Wellington city are LGBTIQ+

vs 12.0%

of Asians aged 15-29 in Wellington city are LGBTIQ+

(The three largest ethnic groups in Wellington have been presented to illustrate that differences exist between ethnic groups)

Rainbow identification by ethnicity group, Wellington city



Note: Factors such as the different age distributions of different ethnic groups contribute to the differences (e.g., Māori are younger than the general population, and younger people have higher rainbow identification). Any correlation between ethnicity and LGBTIQ+ status should not be interpreted as an intrinsic characteristic of either group. People may identify with more than one ethnic group. All figures rounded to the nearest decimal place.

The central ward has the highest rainbow identification

19.0%

of Wellingtonians who are usual census residents in the Pukehīnau/Lambton General Ward identify as rainbow

vs 9.2%

of Wellingtonians who are usual census residents across the other four Wellington wards identify as rainbow

Rainbow people are more likely to be disabled

12.6% of LGBTIQ+ Wellingtonians have at least one activity limitation, as compared to 5.4% of non-LGBTIQ+ Wellingtonians.

The higher rate of disability is especially pronounced for young people: **15.4%** of LGBTIQ+ Wellingtonians aged 15-29 have at least one activity limitation, as compared to 4.9% of non-LGBTIQ+ Wellingtonians aged 15-29.

Summary of statistics about Wellington's rainbow population – socioeconomic outcomes and experience with Council services

The following are some of the key findings from the 2023 Census, 2025 Residents' Monitoring Survey and the 2024 Quality of Life surveys for rainbow respondents, noting that comparisons were made within the age range for young people where possible as the rainbow population skews younger, and age may influence responses.

In the 2023 Census, rainbow 15 to 29 year olds in Wellington were:

- Three times more likely to report being disabled (having at least one activity limitation) – 15.4% rainbow, 4.9% non-rainbow
- Less likely to own their own home – 3.2% rainbow, 4.9% non-rainbow. Transgender and non-binary respondents were much less likely, with 1.5% reporting to own or partly own a home
- More likely to report that their dwelling is sometimes or always damp – 38.2% rainbow, 25.2% non-rainbow, though this may be related to low home-ownership rates among young people
- More likely to report being unemployed – 6.7% rainbow, 5.2% non-rainbow
- Transgender/non-binary respondents generally reported having worse outcomes compared to the general rainbow 15 to 29 year old group.

In the 2025 Residents' Monitoring Survey, rainbow 18 to 29 year olds in Wellington were:

- Somewhat less likely to report an overall good quality of life – 83% rainbow, 91% non-rainbow
- Somewhat more likely to report feeling unsafe in the central city after dark – 67% rainbow, 60% non-rainbow
- Somewhat more likely to report satisfaction with WCC's performance over the past year – 54% rainbow, 45% non-rainbow
- Somewhat more likely to report using some community facilities – pools in the past 12 months (41% vs 29%), libraries monthly or more (56% vs 52%)
- Less likely to report using sports facilities (19% vs 34%) and sportsfields (26% vs 48%) in the past 12 months
- Somewhat more likely to report feeling welcome and included in cultural events and activities in Wellington (83% vs 76%) and to see their community reflected in Wellington's cultural activities (69% vs 58%)
- More likely to report attending or engaging with cultural or arts events in Wellington monthly or more (60% vs 35%)
- More likely to report attending Wellington attractions in the last 12 months including Wellington Museum (52% vs 42%), Cable Car Museum (33% vs 26%) and Space Place (23% vs 15%)

- More likely to report that WCC makes decisions in the best interests of the city (39% vs 20%) and that they understand how WCC makes decisions (44% vs 29%)

In the 2024 Quality of Life Survey, rainbow respondents in Wellington were:

- Less likely to rate their own mental health and wellbeing as good – 51% rainbow, 68% all respondents
- More likely to report feeling lonely most of the time or always in the past 12 months – 30% rainbow, 15% all respondents
- More likely to report experiencing at least one form of discrimination (of gender, age, ethnicity, physical or mental condition, sexual orientation, or religious beliefs) in their local area in the last 3 months – 50% rainbow, 26% all respondents
- These differences are less apparent when comparing all rainbow respondents to all under 25 year old respondents, however for this survey it was not possible to compare rainbow and non-rainbow within the under 25 age group.

HARBOUR QUAYS APPROVAL TO CONSULT ON THE PREFERRED OPTION

Kōrero taunaki | Summary of considerations

Purpose

1. This report requests Committee approval to begin community consultation on the preferred option and design for a second public transport corridor through the central city. The proposed Harbour Quays corridor links the railway station with Cambridge Terrace and Courtenay Place, following Whitmore Street, Customhouse and Jervois Quays, Cable and Wakefield Streets.
2. The community engagement will inform any changes and finalisation of the design as well as the final business case to be endorsed by both Wellington City and Greater Wellington Regional Councils in early 2026.
3. The agreement to proceed to consult includes approval to proceed with consultation on a traffic resolution for bus stops and bus lanes for the preferred Harbour Quays corridor.

Strategic alignment

4. The most relevant community outcomes, strategic approaches, and priorities for this paper include Urban Form - A liveable and accessible, compact city, making our city accessible and inclusive for all and transforming our transport system to move more people with fewer vehicles and value for money and effective delivery.

Relevant previous decisions

5. The Golden Mile single stage business case was approved by the Pūroro Āmua | Planning and Environment Committee at its meeting of 27 October 2021. Paragraph 49 in that paper identified the need for a second public transport spine through the central city.
6. Funding from Wellington City Council for the Harbour Quays project was approved through the 2024-34 Long Term Plan. Originally this project was to be jointly funded at $51.6M (capex). At that time, it was assumed that the project would attract a 51% subsidy from the National Land Transport Fund (NLTP). The approved NLTP 2024-27 deprioritised this funding subsidy. The project budget was subsequently reduced to $10.0M (capex) through the 2025 LTP Amendment, with Wellington City Council and Greater Wellington Regional Council providing half of the $10.0M each and no Government subsidy.
7. Co-funding for the project from Greater Wellington Regional Council was approved through their 2024-34 Long Term Plan where it was noted that this was to be jointly funded (50/50) by Wellington City Council.

Significance

8. The decision is **rated high significance** in accordance with schedule 1 of the Council's Significance and Engagement Policy.

Financial considerations

☐ Nil	☒ Budgetary provision in Annual Plan / Long-term Plan	☐ Unbudgeted $X

9. Funding was approved through WCC's LTP Amendment process, for the 2024-34 LTP, and became effective on 1 July 2025. Funding approved was $10 million of CAPEX and $0.5 million of OPEX. The project will be co-funded by GWRC at 50%, which was also approved in GWRC's LTP 2024-34.

Risk

☐ Low	☐ Medium	☒ High	☐ Extreme

10. There is a risk that if approval to consult is not granted or deferred to a later date that it will affect the delivery of this priority investment for GWRC. It could also compound public transport delays through the central city and negatively impact public perception of the two Councils working together for the betterment of the city.

11. There is a risk that if the Committee materially changes the investment objectives that the project team will need to reassess the preferred design and update the draft business case prior to consultation.

Author	Hamish Lobb, Project Manager Development
Authoriser	Paul Barker, Street Transformation Manager Liam Hodgetts, Chief Planning Officer

12. The following staff from GWRC have also being involved in writing or approving this committee paper.

Kim Kelly – Project Partner Liaison (GWRC/WCC)
Tamsin Evans – Senior Manager – Network and Customer (GWRC/Metlink)

Taunakitanga | Officers' Recommendations

Officers recommend the following motion:

That the Kōrau Mātinitini | Social, Cultural, and Economic Committee:

1. Receive the information
2. Agree the Harbour Quays investment objectives and preferred public transport corridor option outlined in this report.
3. Agree to consult on the Harbour Quays public transport corridor, including consultation on a proposed traffic resolution for bus stops and part-time bus lanes along the preferred bus route.
4. Note that the feedback received from consultation will inform the finalisation of the business case, which will be brought back to Wellington City Council and Greater Wellington Regional Council early in 2026 for endorsement.

Whakarāpopoto | Executive Summary

13. The Harbour Quays project has been developed jointly by Wellington City Council as the Roading Authority and Greater Wellington Regional Council as the Public Transport Authority. The project will be funded and implemented jointly.
14. Funding has been allowed for in both Councils' Long-Term Plans at a project cost of $10.0M (capex) that is to be shared equally.
15. In 2024, Greater Wellington Regional Council as the Public Transport Authority requested that Wellington City Council as the Roading Authority make the street changes necessary for a second public transport corridor through the Central City.
16. The City's existing Central City bus corridor along the Golden Mile is currently operating at or exceeding recommended capacity for buses and passengers at peak times and this is expected to worsen in the future.
17. The optimal number of buses on the Golden Mile to ensure a reliable and efficient service is 50-80 buses per hour in each direction. Investment in the Golden Mile and Waka Kōtahi NZTA's State Highway Wellington Improvements project, assumes that there will be a second public transport corridor.
18. By 2034, the number of buses per hour per direction at the AM peak is expected to increase (from 2025 levels) by just over 25% and the number of buses per hour per direction at the PM peak is expected to increase (from 2025 levels) by approximately 35%, including those services that currently use Brandon St.
19. Saturation point for the Golden Mile is when the number of buses per hour per direction reaches 130. At this point any additional buses trying to access the corridor will queue back beyond the Golden Mile. This will impact the wider Wellington transport network and buses may be travelling at speeds slower than walking.
20. Congestion on the Golden Mile at these speeds leads to slower and more variable peak bus journeys well below international benchmarks, reduced service reliability, increased travel times and negative impacts on the quality of the central city area for people and businesses.

21. With the disestablishment of Let's Get Wellington Moving and the Mass Rapid Transit Business case being stopped, Greater Wellington Regional Council and Wellington City Council agreed to look at alternative solutions. The proposal is to create a second public transport corridor for buses through the city between the railway station and the intersection of Cambridge Terrace and Courtenay Place via Whitmore Street, Customhouse Quay and Jervois Quay, Cable Street and Wakefield Street.

22. A draft business case has been developed, that sets out the case for change, investment objectives and options considered for the corridor and bus stop locations as well as the economic case. The business case includes the proposed bus services that will be using the corridor and recommends that a peak time bus lane be installed.

23. The business case states that, without additional network changes or mode shift occurring and with part-time bus lanes included, the project's Benefit Cost Ratio (BCR) is 2.9.

24. The benefits of the project are realised by bus passengers who will continue to use services along the Golden Mile, where travel will become marginally faster and more dependable. Additionally, individuals who previously travelled on the Golden Mile but will now use the Harbour Quays route will experience improved speed and reliability along the newly established Harbour Quays corridor.

25. To accommodate a north bound bus stop, it is proposed to close Ballance Street at Customhouse Quay creating a cul-de-sac from Featherston Street. Based on previous experience during the construction of 1 Whitmore Street (the new BNZ building), significant disruption is not anticipated.

26. The proposed investment from NZTA on the SH1 Wellington Improvements project as well as any form of mode change away from private motor vehicles is expected to provide an even greater benefit.

27. Details of this project have been shared with the NZTA SH1 Wellington Improvements project, who have assumed a 3-4% mode shift in their regional modelling. While we haven't applied the 3-4% mode shift assumption, we have used a 5% in the sensitivity tests, based on the Wellington City transport model. At 5% mode shift the BCR was 13.6.

28. A communication and engagement plan has been prepared jointly by the two Councils.

29. It is expected that both Councils will consider endorsement of the final business case early in 2026 alongside Traffic Resolutions, so that finalisation of the detailed design and construction can follow, enabling the corridor to be operational late 2026.

30. Community feedback is being sought prior to endorsement of the final business case and decisions regarding the traffic resolution, so community views on the wider project can be considered as part of finalising the business case and the configuration of the bus lanes and bus stops can be resolved.

Takenga mai | Background

Strategic context - Wellington City Council strategies and plans

31. Long-term Plan 2024-34: prioritises investing in sustainable, connected, and accessible community and recreation facilities planning for a liveable and accessible compact city. A strategic priority is to transform the transport system to move more people with fewer vehicles. The LTP provides local share funding for this project.

32. Te Atakura First to Zero 2019 Strategy: If an additional public transport corridor is dedicated, buses are likely to be more reliable and travel faster; this will encourage more people to use public transport. As a result of this mode shift, fewer vehicles will be on the road, which will reduce emissions and traffic congestion.

33. The Wellington City Spatial Plan (2021): calls for a safe, connected, and low-carbon transport network. Cycling and active modes are prominent in the Plan, along with infrastructure that supports growth. Additionally, the Plan outlines:

    - Safely and efficiently moving more people with fewer vehicles
    - Giving convenient, safe, and accessible choice for people to travel without using cars
    - Making city streets more attractive and safer places to be
    - Supporting urban growth and regeneration.

Strategic context - Greater Wellington Regional Council policies and plans

34. Wellington Regional Land Transport Plan (RLTP) 2021-2031: The project supports the Plan's carbon emission, safety, and mode share targets. Objective 1 refers to providing quality, affordable travel options in the Wellington region. It is noted in the Plan the Bus Network Review will continue to improve services throughout the region. The RLTP mid-term review (2024) has identified the Harbour Quays as a significant project and ranked it at regional priority four (out of 30 ranked programmes – some of which include several projects).

35. The Bus Priority Action Plan focuses on improving public transportation between the central city and suburbs.

36. Wellington Regional Transport Emissions Reduction Pathway 2023, an initiative of the nine councils of the region, offers a long-term strategy for transforming the way we design our towns and cities. The focus areas of the Pathway include but are not limited to the following: more transport choice and smarter freight – support decarbonisation and mode shift. In addition, the report mentions the fact that the bus network review will look at any changes that may be needed to the network design.

37. Greater Wellington's Long-Term plan provides local share funding for 50 percent of this project.

The case for change

38. The Let's Get Wellington Moving's Programme Business Case (2019) identified the need for two primary public transport corridors through Wellington's central city.

39. The Golden Mile Single Stage Business Case approved in October 2021 noted "There is a finite capacity on the Golden Mile to accommodate new bus services due to geometric constraints of Willis Street and Manners Mall. Therefore, bus volumes were at that stage suggested to be "capped" at 100 buses/hr in each direction and that additional increase beyond the 100 buses/hr/direction will be accommodated on the second public transport spine".

40. A report from August 2024 included modelling for bus capacity on the Golden Mile to determine optimal bus volumes as input into the Bus Priority Action Plan V.2. Looking at international best practice for central city bus speed and variability this work recommended a maximum of 50 to 80 buses per hour per direction for optimal bus operations. Beyond this number bus speeds and variability degrade until the corridor reaches saturation point at around 130 buses per hour per direction with buses averaging 3-6 km/h. At saturation point any additional buses trying to access the corridor will queue beyond the Golden Mile to the north and the south.

41. This table provides forecast bus numbers for the Golden Mile and shows the saturation point at 2032 for the PM peak Northbound initially.

42. The City's existing central city bus corridor along the Golden Mile is currently operating at or exceeding capacity for buses and passengers at peak times. This results in capacity and reliability issues for current passengers. A second transport spine along the Harbour Quays will immediately provide benefits to current bus customers using the Golden Mile and Harbour Quays.

	2026	2027	2028	2029	2030	2031	2032	2033	2034
AM Peak - GM Northbound	104	108	114	119	122	125	128	131	134
AM Peak - GM Southbound	83	86	91	112	115	119	121	123	126
AM Peak - Brandon Southbound	16	16	17						
PM Peak - GM Northbound	91	94	100	122	125	128	131	134	137
PM Peak - GM Southbound	100	104	110	114	117	120	123	126	128
PM Peak - Brandon Northbound	16	16	17						

43. SH1 and Harbour Quays are two important pieces of the puzzle that is Wellington City's transport network. SH1 through Wellington City is heavily congested at peak times and significant increases in travel times for those travelling into and around the city are likely within 10 years.

44. Additional capacity on SH1 is proposed through the Road of National Significance project for SH1 Wellington Improvements Project. The project includes duplicate Mt Victoria and Terrace tunnels, as well as upgrades to the Basin Reserve. The changes to the Basin Reserve will support an improved north-south bus corridor, a key public transport route identified in the Government Policy Statement on Land Transport (GPS).

45. These improvements are expected to enhance the movement of people and goods across Wellington City and will result in significant travel time savings during peak periods and greatly improved travel time reliability.

46. Improvements to SH1 will create opportunities to detune the central city for general traffic and move more people with fewer vehicles. Integrating the SH1 improvement into the existing street and transport networks could reduce severance, increase connectivity for active modes and allow for future increases to public transport lanes,

moving towards delivering a city transport system that moves more people with fewer vehicles.

Long Term Plan Budgets

47. National Land Transport Plan (NLTP) funding for 2024 – 2027 was lower than assumed in the 2024-34 LTP and reductions to the capital programme were required.

48. Harbour Quays is referenced in the Government Policy Statement on Land Transport 2024-34 as a priority for public transport funding. In the subsequent NLTP the project received only a 'possible' funding priority for the business case only and no funding was allocated to either Wellington City Council or Greater Wellington Regional Council.

49. Acknowledging the need for an additional public transport corridor both Councils agreed to reduce the scope of the original project (budget $51.6m) to fit within a reduced funding envelope of $10.0M (capex) shared equally (50:50) between the two Councils, i.e. $5.0M for each Council, without any financial contribution from Waka Kōtahi NZTA.

Timeline

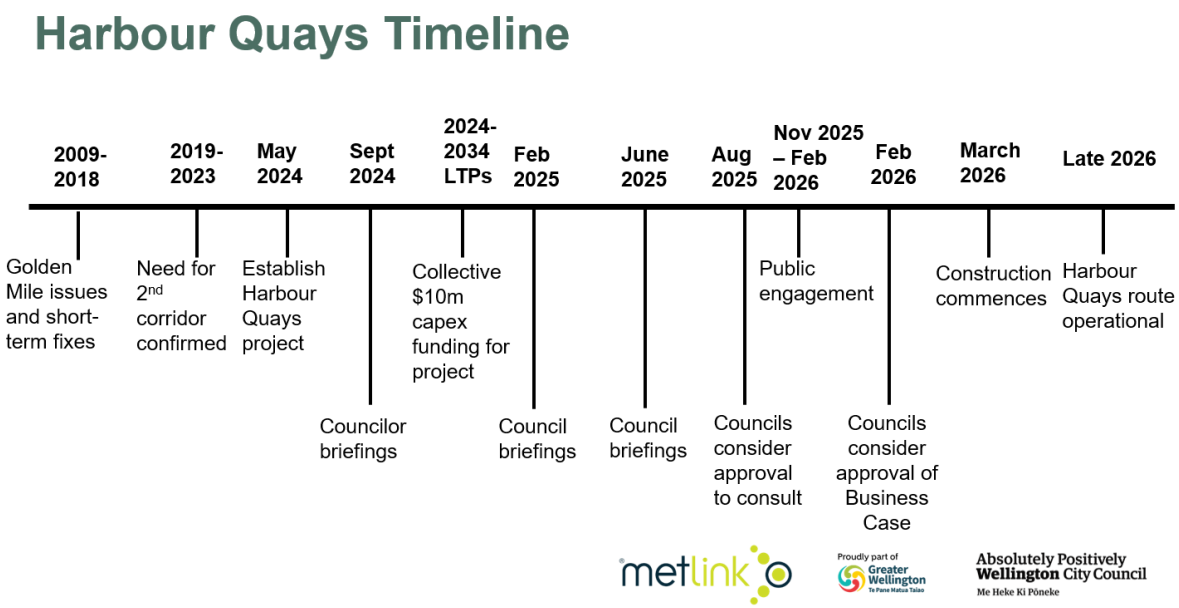
50. In May 2024 the Harbour Quays project was established.

51. Councillors of both Councils have been briefed on several occasions, as outlined in the diagram below. These briefings related to the funding arrangements, corridor selection and more recently on proposed bus stop placement, service design and lane restrictions.

52. We are now in the process of engaging with those parties directly affected by the proposal.

53. A draft business case and proposed designs has been completed by the project team.

54. This paper seeks approval to proceed to consult with the wider Wellington community later this year before bringing the final business case for endorsement and proposed traffic resolutions for approval early in 2026.



Corridor options considered

55. Ten options were considered for the public transport corridor between the Railway Station and the intersection of Cambridge Terrace and Courtenay Place. These are detailed in the attached draft business case.

56. The project considered the area between the Golden Mile and the waterfront and included options for Featherston, Victoria and Wakefield Streets in addition to the now proposed Harbour Quays corridor.

57. The ten options initially identified included eight permanent options and two interim options.

58. The ten options were:

- Permanent
  - Two options for a "split bus route" using different street options.
  - Three options for "buses both ways on Quays using different options for where and how the buses would travel
  - One option for "buses on Featherston Street" – with no general traffic
  - Two options for "buses and bikes on the Quays" with options for where the cycleways were located.
- Interim options
  - Featherston Street – split bus route which splits the northbound and southbound buses between the Harbour Quays and Featherston Street.
  - Harbour Quays which have buses in both directions on the Quays on either side of the road.

59. The eight permanent options were discounted once the project budget was reduced to $10.0M as they involved significant new infrastructure which would not be affordable within the new funding envelope (so were not considered reasonably practicable options given the fiscal constraints facing Council that led to the reduced funding), and they would not be able to be implemented before 2028 (so would not meet the objectives for an alternative route to be developed by December 2026).

60. With regards to the two interim options:

- The preferred northbound corridor was identified early as the Wakefield, Jervois, Customhouse and Whitmore route. The preferred southbound corridor took longer to identify, and the project team spent time exploring an option to use Featherston and Hunter Streets.
- The perceived advantage of Featherston/Hunter Streets was its proximity to the Golden Mile and that it removed the need for bus customers to cross the six lanes of the waterfront corridor.
- There were some significant drawbacks however that included traffic impacts at the intersection of Whitmore and Featherston to accommodate right turning buses, traffic impacts at the left turn from Featherston into Hunter to accommodate an articulated bus and traffic impacts on Jervois Quay because of accommodating right turning buses out of Hunter Street.

61. A Multi Citeria Analysis (MCA) was undertaken of the two interim options alongside a Do Minimum option as shown in the table below.

	Do Min	T01[9]	T02 [10]	Comment and Key Differentiators
Bus Travel Times and Reliability (Investment Objective 1)	-3	2	2	If nothing is done, the optimal capacity of the Golden Mile will be significantly exceeded affecting travel times and reliability. Both options take buses off the current route enabling buses to operate more efficiently than both the future Do Min and currently.
Route Legibility	2	-1	1	Having all buses on a single spine is most legible. Having two-way buses on two spines is also legible. Having second spine northbound and southbound buses on different routes is less legible.
Network Capacity (Investment Objective 2)	-3	1	2	If nothing is done, the optimal capacity of the Golden Mile will be significantly exceeded. Both routes will improve capacity, but T01 has potential capacity limitations on Whitmore Street, Featherston Street and Hunter Street. T02 also has capacity limitations on Whitmore Street but not the other locations.
Safe and Convenient Ped Access and Movements (Investment Objective 3)	1	-1	-2	Do Min is better than current situation due to Golden Mile project, but outcome impacted due to heavy bus congestion. T02 worse than T01 as the Quays are a barrier to pedestrian movement and potentially less safe.
Pedestrian LoS at Bus Stops	1	0	0	Improvements in Do Minimum due to Golden Mile. Options worse than Do Minimum due to simpler stops and less waiting area on second spine routes.
Does Not Preclude Future Routes or Connections to Existing Routes	0	-2	-1	T02 performs better than T01 as it leaves Featherston Street available for a cycling connection, whereas T01 creates conflict with bikes across both corridors, limiting future options.
Impact on General Traffic	0	-1	-1	Both options impact on general traffic travel time and variability as buses are added to existing traffic lanes. Although the options score similarly, there is a risk of greater impact with T01 due to the more complex route and less opportunities for traffic to pass buses on Featherston Street.
On Street Parking Impact	0	-1	-1	Both options affect parking, but the impact is relatively small in comparison to the length of the routes. T01 impacts 33 spaces and T02 impacts 25 spaces.

[9] Featherston Street option
[10] Harbour Quays option

	Do Min	T01[9]	T02 [10]	Comment and Key Differentiators
Business Impact	-2	1	2	Do Minimum scores poorly due to the bus and passenger crowding on the Golden Mile affecting the quality of the road and footpath environment. T01 and T02 score better due to having a greater spread of commuters through the city and increased business opportunities along new pedestrian flow routes. T02 better than T01 as it doesn't impact parking and stops for Featherston Street businesses.
Construction and Constructability	0	-1	-1	Both options are only expected to have a minor impact during construction as construction activities are relatively minor. T02 slightly better than T01 as traffic management is easier on the Waterfront Quays than Featherston Street.

62. The MCA identified the proposed route with both directions on the Harbour Quays as the best performing of the two interim options. It scored highest against the key investment criteria and outperformed the second-best option – south bound buses on Featherston Street – overall and this is the preferred option as outlined in the attached draft business case.

Kōrerorero | Discussion

Draft Business Case

63. The appended draft business case will support the engagement and will be updated taking into consideration input from Councillors, key stakeholders and feedback received during consultation. Endorsement of the business case will come before both Councils early in 2026.

64. The business case is made of the five sub cases:

1. **Strategic Case**

   The case for change. Why do we need this project? Provides supporting information as to why the project is required

2. **Economic Case**

   Options analysis. Compare solutions – provides possible solution options and the preferred option

3. **Commercial Case**

   Procurement strategy and approach – provides options on how the solution will be obtained and from where

4. **Financial Case**

   Affordability and funding arrangements – provides funding options, project/programme, and ongoing costs

5. **Management Case**

   Delivery plan – provides high level information as to how the project/programme is going to be managed and delivered

65. Three investment objectives were developed for the project:

    a. To enhance travel time and operational efficiencies and resilience (in response to planned and unplanned disruptions) through the development of a second public transport corridor by December 2026

    b. To increase the public transport capacity through the central city to reduce constraints on the Golden Mile corridor by creating a second public transport corridor through the central city by December 2026

    c. By 2030, to enhance connectivity and safety along and across the Harbour Quays corridor for all modes of travel, to support urban activation

66. The draft business case sets out how the proposed investment in the Harbour Quays corridor contributes towards achieving these investment objectives.

67. The recommendation in this paper specifically seeks approval to the use of these objectives in developing the business case.

68. The economics that form part of the economic case have been peer reviewed with any suggestions considered.

69. In addition to this, an independent peer review has also been undertaken of the full business case in terms of confirming it addresses everything that should be addressed within a business case, that this information is in the right place, that the strategic case makes sense/it articulates the problem well, all the options are outlined as expected and a credible solution has been provided.

70. The independent peer reviewer noted that overall, yes, the business case is well structured and consistent with guidelines. They provided several points to strengthen the business case which now been incorporated into the business case attached to this report.

71. Modelling was undertaken as part of the economic case using a Wellington Transport Analytics Unit (WTAU) model. The purpose of undertaking modelling is to support the economic case and to see if the model tells us what common sense suggests to us e.g. the benefits or disbenefits to general traffic of having buses on Harbour Quays.

72. Modelling has also been undertaken in a similar timeframe for the Waka Kōtahi SH1 Wellington Improvements project and modelling assumptions have been compared to confirm we are using the same assumptions where applicable – for instance the use of part time bus lanes.

Preferred corridor option

73. As outlined above, ten options were investigated for an alternative public transport corridor, eight of which were discarded because they involve significant infrastructure the costs of which will exceed the budget for the project and are unable to be implemented before 2028. Of the two remaining reasonably practicable options, the preferred corridor option is that along Harbour Quays.

74. A map of this public transport corridor can be seen under point 81 below outlining bus stop locations.

75. The other interim public transport corridor (Featherston Street) is not preferred because:

- It only outperformed the Harbour Quays option under one criteria in the MCA assessment, nothing Harbour Quays outperforms the Featherston Street option under four criteria
- The modelling completed prior to the MCA workshop concluded that the Featherston Street option was likely to result in more disruptions during the AM peak while delivering similar performance to the Harbour Quays option during the PM peak.
- The Harbour Quays option is expected to improve overall non-financial outcomes when compared to the Featherston Street option. This is because it will better activate the Harbour Quays and have fewer impacts on Featherston Street.

Service Design

76. Metlink customer focus groups undertaken as part of the business case development indicate that central city bus customers are sensitive to change and it will be a challenge for some to change travel patterns away from the Golden Mile to the Harbour Quays. The primary benefit will be faster journeys for bus passengers, and this was determined through the options analysis outlined in this paper and the draft business case to be best achieved by directing peak hours express services along the new Harbour Quays public transport corridor.

77. Other customer value can be delivered by operating services on Harbour Quays that provide:

- All-day, 7 days-a-week access to key waterfront attractions, e.g. Waitangi Park, Frank Kitts Park, Queens Wharf, East by West ferry.
- Improved Airport Express access to central city visitor destinations – Wellington Museum, Te Papa, Tākina.
- Extended services through the central city for routes currently terminating at Brandon Street.
- Pedestrian activation of the areas between the central city and waterfront.
- Extra capacity to introduce new services to and through the central city.
- An improved diversion route when required.

78. A transitional strategy to migrate regular bus services to Harbour Quays is proposed. This will start with a limited number of bus services which will support a shift to Harbour Quays with minimum customer risk and within the available budget for the infrastructure that is an essential part of a good customer experience – the bus shelters and real time service information displays.

79. In addition to regular services, it is planned to use some Harbour Quays bus stops for the Golden Mile diversion.

80. The mix of services proposed for the Harbour Quays in the first phase will transfer up to 23% of peak patronage and 12% of weekly patronage from the Golden Mile to Harbour Quays. Importantly, a relatively lower scale first phase will maintain the volume of bus and pedestrian activity essential to support employment, retail and hospitality activity in the central city.

81. Adding additional services to the Harbour Quays corridor over time will provide ongoing and increasing relief needed on the Golden Mile. Staged implementation will allow

benefits to be assessed and promises of future value for customers to be properly delivered. Critically, increasing the services in future years will allow time to plan and budget for the additional shelter and pedestrian improvements required as patronage and pedestrian activity grow.

Bus Stop Locations

82. It is proposed to have five pairs of stops along the Harbour Quays corridor as shown in the diagram below.

83. Where possible we have been able to achieve the design requirement of a three-bus bay, being a minimum of 42m. The stop adjacent to the Frank Kitts Park carpark does not have sufficient kerb length, it will accommodate one bus fully while a second bus is able to have both doors against a kerb, but the rear will extend over the carpark exit. Any additional buses will need to wait before the carpark entry and only move onto the stop when it is clear to do so.

84. The draft business case includes the Bus Stop Strategy. This document was used to assist in planning for the proposed bus stops on the corridor. The document includes:

- Legislation, standards and guidelines
- Current State and Use
- Bus Stop Location Planning, including catchment analysis
- Stop Placement Options Considered
- Recommended Stop Locations

Bus Lane Rationale / Extent

85. Almost all intersections along the route are signalised (only the four at the eastern end of Wakefield Street and Barnett Street off Cable Street are priority controlled). At all the signalised intersections the pedestrian phase runs concurrent with the parallel vehicle phase requiring left turning vehicles to give way to pedestrians and then to filter through once it is safe to do so. In most cases there is insufficient room to move out of the traffic lane to give way, so left turners wait in the traffic lane until it is safe to proceed preventing following vehicles from passing.

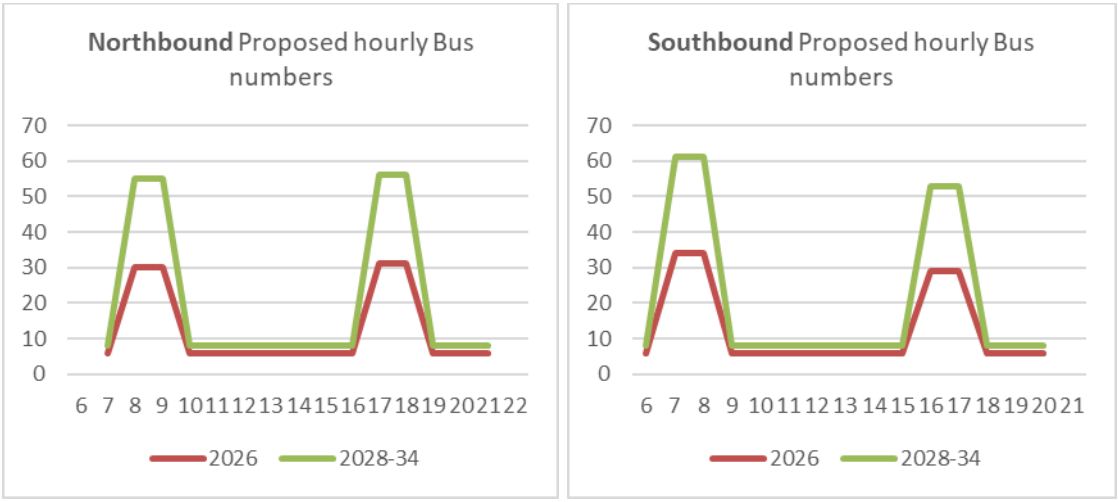
86. The TCD Rule and Land Transport Road User Rule (2004) define special vehicle lanes and set out as a Road Controlling Authority how we must sign and mark them. There is no legislation that defines minimum use requirements as this is left to the Road Controlling Authority under its mandate to operate the network efficiently.

87. The service design proposed by Metlink is heavily dominated by the peak flows with up to 60 buses /hr in each direction in the 2034 design period but off set by only 8 buses /hr in each direction in the interpeak. This disparity between peak and off peak makes it difficult to set a lane use restriction throughout the day.

88. The peak hour flows of initially 30/hr increasing over the next 8 years to 60/hr can be justified for a lane use restriction.

89. The justification for an all-day lane use restriction will be governed by the use in the interpeak and weekend use. The interpeak would have a lower threshold given that there is also a significant drop off in general traffic and therefore reduced demand. While there is not a numerical threshold, something in the order of 20-30 buses/hr would be needed before considering an all-day restriction. With the proposed service design, it is not believed that a bus lane restriction will be needed outside the weekday peak hours.

90. The graphs below show an approximation of the flows throughout the day in each direction



91. Transit Lanes, T2 or T3 (a type of High Occupancy Vehicle Lane) while allowed for, haven't been used in Wellington City. In the region, they were used for a time along the Mana Esplanade prior to the Transmission Gully highway being opened. While this is not a reason to not implement a transit lane there would be both communication and enforcement challenges of such a lane. Wellingtonians are well versed with the use of both peak hour and all-day Bus Lanes and to a lesser extent Bus-Only lanes.

92. Given that the kerbside lanes will be encumbered by both in lane bus stops and left turning traffic giving way to pedestrians, there would be little to be gained by restricting the left lane as a transit lane when motorist will probably get a better level of service along the route from either of the other general traffic lanes.

93. Introduction of bus lanes would signal the transformational shift of the Quays corridor from domination by private vehicles towards a multi-modal corridor.

94. Bus lanes are anticipated to deliver journey time savings to those on the bus; this however is difficult to quantify as it is very dependent on the number of private motorists that would otherwise choose to travel in the left lane. Left turning motorists are always able to use the lane for up to 50 m before and after their turn, so these motorists will affect travel times, but a bus lane restriction will limit the number in the left lane to only those turning.

95. With initial peak hour bus numbers of around 30/hr it could be imagined that without a bus lane motorists would chance not being encumbered by a stopped bus, but as bus numbers increase towards 60/hr there would be fewer motorists prepared to use the lane at peak times as they would undoubtedly end up behind a bus stopped at one of the five stops along the corridor in the direction they are travelling.

96. In comparing other bus corridors in Wellington, in the table below we can see that the proposed initial 30 buses/hr in each peak is consistent with our existing bus lanes.

	Am peak (inbound)		**Interpeak (12-12:59)**		**Pm peak (outbound)**	
	7-7:59	**8-8:59**	**Inbound**	**Outbound**	**4-4:59**	**5-5:59**
Glenmore Street	16	24	8	8	17	20
Kaiwharawhara Road	6	8	2	2	5	7
Thorndon Quay	27	32	16	16	29	35
Riddiford Street	21	33	22	21	22	25
Willis Street (southern section)	14	15	9	N/A	N/A	N/A
Cambridge/Kent Terrace (Sth of Elizabeth Street)	16	22	14	14	17	20

Bus lane current or resoluted

Clearway

97. Bus lanes can be used by buses, emergency vehicles, bicycles and motorcycles/scooters. All other vehicles can use these lanes briefly (up to 50 metres) to cross through to another lane or turn into another street or driveway.

98. Industry best practice for bus lanes points towards frequent use to make them viable, if use is very low it would increase instances of non-compliance (private vehicles encroaching on the lane) which can negatively impact public perception. There also needs to be consideration given to the potential correlation of bus frequency and instances of risky j-walking behaviour because of pedestrian severance across the corridor.

99. While bus lanes will support the efficiency of bus travel in the southbound direction, northbound is more problematic due to the number of side streets present, particularly between Te Ngākau and Whitmore Street. These create side-friction from turning vehicles, impact intersection performance and will limit the ability for bus lane enforcement.

100. A bus lane enforcement system, including monitoring cameras, may be required to support introduction of a bus lane along the corridor to ensure compliance.

101. The exact times in which the bus lanes would operate is still to be finalised but may include anything between the hours of 6.30am and 10 am and between 3pm and 7pm. The final decision will be decided by Wellington City Council through approval of a traffic resolution.

102. In the northbound direction it is proposed to restrict the kerbside lane on Wakefield Street adjacent to its intersection with Blair Street through to the intersection of Customhouse Quay and Ballance Street.

103. Southbound it is proposed that the bus lane would commence south of Whitmore Street and stop at the intersection of Cable Street and Tory Street at which point southbound buses will need to begin to move towards Cable Street centre lane.

104. To assist buses moving from the bus lane to the centre lane the use of a 'bus jump' or 'B'-Phase (bus only) is proposed at the Tory Street traffic signals as a way of assisting buses to move from the left lane to the middle lane, as is currently done at the southern end of Kent Terrace for buses that need to move into the Newtown bound lane.

Benefits

105. The table below outlines the current situation and expected future situation and benefits for several key service areas with the introduction of Harbour Quays.

Information	Optimum	Current	Future	Comment
Buses per single lane	50-80 per hour	<u>AM Peak Golden Mile (actual July 2025)</u> • Northbound - 99 per hour • Southbound – 79 per hour • Brandon SB – 15 per hour <u>PM Peak Golden Mile (actual July 2025)</u> • Northbound – 88 per hour • Southbound – 93 per hour • Brandon NB– 15 per hour	<u>AM Peak Golden Mile (projected 2034)</u> • Northbound - 134 per hour • Southbound including Brandon – 126 per hour <u>PM Peak Golden Mile (projected 2034)</u> • Northbound including Brand St – 137 per hour • Southbound – 128 per hour	The number of buses per single lane during peak hours **already exceeds optimal levels (2024).** By 2034 if all buses remain on the Golden Mile buses per single lane during peak hours **will be more than double the midpoint of optimum (50-80) levels**

Operational speed (speed including dwell time)	Typical 'minimum acceptable speed' in a busy city centre is 14km/h	Current operational speed on the Golden Mile – 15 min to travel 2km = 8km/h	Golden Mile <u>without</u> Harbour Quays • From 2032 (when buses would reach the "saturation point of 130 buses), bus speeds at the morning peak are expected to average 3-6 km/h (i.e. speed will have reduced from 8km/h to 3-6km/h). Golden Mile <u>with</u> Harbour Quays from 2032 (when buses would reach the "saturation point of 130 buses) • Northbound AM peak ~11km/h • Southbound AM peak ~10km/h	Increase in passengers (and buses) leads to increase in dwell time which reduces speed. Moving buses to Harbour Quays, improved dwell times and bus travel time result in: <u>Golden Mile</u> – travel being **0-1 minute** quicker with the Harbour Quays <u>Harbour Quays</u> – time savings of **2-6 minutes** for the same buses now travelling on Harbour Quays
Dwell time in peak	30 seconds at a bus stop is optimum for boarding and alighting	Average dwell time on GM - 40 seconds Certain bus stops experience dwell times of more than 50 or 60 seconds	Harbour Quays – 24 seconds Golden Mile – 40 seconds	Dwell times over 50 second start to create a significant and highly inefficient "concertina effect"

106. In addition to the areas identified in the table above, bus time variability at peak times is an issue. Current standards provide for a bus to be no more than 1 minute early and 5 minutes late. Currently buses running on the Golden Mile have a >30% running time variability and some trips can vary by up to 10 minutes (+/- 5 minutes).

107. The benefits identified in the draft business case will go towards Wellington achieving its Long-Term Plan benefits of transforming our transport system to move more people with fewer vehicles.

108. The project benefits will be realised on the Golden Mile as buses are moved away from the corridor at peak times this will free up road space. Those buses that remain will be able to offer improved reliability and an improved travel time.

109. With the reduction in the number of buses on the Golden Mile we will also see benefits to pedestrians as they won't be contending with busy bus boarding and alighting areas and won't be walking adjacent to long queues of buses as they do now and predicted to be significantly worse if we do nothing.

110. Providing a second public transport corridor will also provide an opportunity to activate a part of the city that is currently dominated by passing motorists, providing bus stops will bring pedestrians to the area and over time we would expect to see businesses developing around these stops. The activation at the stop locations will also translate to the wider areas as people make their way to and from their destinations.

111. There are also operational benefits to providing a second public transport corridor to the Golden Mile. At times when buses need to be diverted the users will have proper infrastructure for waiting, such as lighting, shelter and real time information, the stop locations will be able to be easily identified. Currently detoured buses use ad hoc stop locations without the necessary infrastructure.

112. The project benefits have been monetised using NZTA business case methodologies although it is not expected to attract any NZTA co-investment.

113. The economic case recommends that the project adopt a BCR of 2.9 which includes the impact of bus lanes. While this is high it is also conservative as it assumes no mode shift or any investment in the SH1 Wellington Improvements project through Te Aro. The project team have undertaken sensitivity test of these factors as if they were considered. See table below

114. Table: Mode Shift Sensitivity Test

	Construction Cost	**Headline BCR**	**BCR applying 5% mode shift assumption**
10 year project life (Current cost) at 2% discount Rate	$6.8M	2.9	13.6

115. A mode shift analysis assumes transfer of mode from private motor vehicle to public transport with associated decrease in on-road congestion. A conservative base rate of 3-4% was assumed within the regional modelling undertaken by the SH1 Wellington Improvements project.

116. We should expect that as a mitigation to construction of the SH1 investment that bus use will increase by at least this amount. For the purposes of sensitivity tests, the Harbour Quays project has assumed a 5% mode shift.

Traffic Impact

117. The traffic impact for the future state of 'doing nothing' is significant. While the business case and this paper talks to the degradation of the level of service to bus users of not implementing Harbour Quays, the impact on traffic because of the increase in buses using the Golden Mile (without Harbour Quays) would be felt on all the intersecting roads including Cambridge Terrace, Taranaki, Willis and Bowen streets. This impact will be felt across the network. This is due to firstly buses being backed up on the Golden Mile corridor and then buses being backed up in side streets, impacting cars and other road traffic as well.

118. The establishment of the Harbour Quays public transport corridor in our current state will have an impact on the general traffic that currently uses the route. The creation of in lane bus stops and peak hour bus lanes south bound at Bell Gully, Queens Wharf, Frank Kitts Park, Te Papa and northbound at Harris Street and Post Office Square will significantly reduce the carrying capacity of the kerbside lane. Fortunately, there are two additional lanes in each direction to carry general through traffic, while the left lane will continue to be available to be used for left turning vehicles.

119. It is proposed at peak times to prioritise buses in the left lane for most of the corridor's length. But noting that left turners will still be able to use the left lane prior to their turn.

120. The economic case includes the results of modelling to calculate both the benefits and disbenefits of the project. In removing general traffic capacity from Harbour Quays, the traffic model has reassigned many trips to the state highway network.

121. The business case suggests that without mode shift or the Waka Kōtahi NZTA SH1 Wellington Improvements, the following general traffic impacts are anticipated:

    - The reallocation of road space for buses will result in increased congestion and longer travel times for general traffic, resulting in economic disbenefits for general traffic in both the 2022 base and 2033 future model year.
    - There will be some benefits to general traffic because of reduced queueing from buses impacting the wider road network.
    - Reallocated traffic from Harbour Quays is assumed to primarily use the SH1 corridor, resulting in increased traffic and associated disbenefit on this corridor.

122. Sensitivity testing shows that even a modest 3–4% shift from private vehicles to public transport and active modes can significantly reduce network-wide traffic impacts. When combined with the capacity enhancements proposed in the SH1 Wellington Improvements project, long-term effects on general traffic volumes along Harbour Quays are expected to be minimal

123. The proposed capacity improvements from NZTA's pending SH1 Wellington Improvements project are not fully understood and have some way to go before being consented and constructed so it may be appropriate to disregard this factor at this time, however mode shift towards public transport and active modes should be part of the base case as we know this is an internationally accepted change factor when conducting network interventions of this scale.

124. Other traffic impacts include the closure of Ballance Street at Customhouse Quay for through traffic, this effectively creates a cul-de-sac off Featherston Street. Given that this was the case during construction of 1 Whitmore Street (BNZ HQ) we do not expect this to have significant impact, but it will be explored further through stakeholder and community consultation.

Walking and Cycling Impact

125. Cycling on road along the corridor will potentially be better at peak times in the parts that are restricted as a bus lane, as bikes are permitted to use the bus lanes, but this will be offset by the impact of stopped buses.

126. Whitmore Street and Kent and Cambridge Terraces are all serviced with separated bike lanes.

127. Wellington City Council is currently in the planning phase of the cross-city bike connections project that is investigating an alternative route to the waterfront promenade for commuter's and faster cyclists on the route between the southern end of the new Thorndon Quay bike lanes and Waitangi Park to connect to the Oriental Pde and Kent/Cambridge routes. As part of the planning for the Harbour Quays project consideration was given to how both projects could be integrated within the existing carriageway. It was felt that within the project budgets for each project there was not a viable option to take forward that didn't have a significant impact on either general traffic or reduce the benefits to buses.

128. While there are no explicit changes to the pedestrian environment as part of this project, there will be impact on pedestrians.

129. At peak times the western footpath of Customhouse and Jervois quays is busy with pedestrians to and from the railway station. These people will be required to pass through the boarding and alighting areas of three new bus stops. This is off set by the corresponding reduction in the use of the bus stops along the Golden Mile.

130. Some existing bus users may need to walk further while others may have a shorter walk. The service design however means that almost all destinations will still be able to be reached from bus stops along the Golden Mile when peak hour and express services are located on the Harbour Quays corridor.

131. Walking between the Golden Mile and Harbour Quays generally has safe signalised crossings to do so, and crossing the quays themselves has recently been further improved with additional crossing installed as part of the pedestrian improvement programme. The timings at these signals will need to cater for the increase in demand but needs to balance the function of the road. Introduction of bus lanes and stops should not negatively impact pedestrian crossing timings along the corridor.

132. Each of the proposed stops has good accessibility, shelter and lighting. Improvements to the network to walk to and from the stops was out of scope for the Harbour Quays project but it has been identified that lighting, shade and shelter could be improved to provide better access to and along the corridor.

133. As assessment of the wider pedestrian network will be made and interventions prioritised and addressed through either minor works budgets or bids through future LTPs.

Parking Impact

134. There will be no carparks removed as part of the bus lane operation. Carparks will only have to be removed to accommodate bus stops.

135. All carparks on Cable Street will remain, the carparks on the south side of Wakefield Street between Cambridge Terrace and Tory Street will remain and the carparks adjacent to Sheds 11 and 13 on Customhouse Quay will remain.

136. In total it is proposed to remove up to 34 parking spaces. The project team will finalise the extent of parking changes and any proposed mitigation prior to commencing formal engagement/consultation on the traffic resolution. This will require early stakeholder conversations to understand what mitigation if any can be provided. The car parks proposed to be removed are:

    - On Kent Terrace it is proposed to remove eight part time carparks that also function as a school bus stop 2pm-3.15pm Mon-Fri. it is also proposed to remove the taxi stand. The motorcycle park that is being shortened as part of the new Golden Mile crossing will remain.
    - On Cambridge Terrace the loading zone outside the Hannah Playhouse will remain. The eight carparks between the loading zone and the intersection of Wakefield Street are proposed to be removed including the four part time car parks that share the restriction with a part time tour bus stop 7-9am and 3-8pm, Mon-Sun.
    - On Wakefield Street the 10 part time carparks between Tory Street and the entrance to the signalised pedestrian crossing to Tākina will be required to be removed. These carparks are currently subject to a 7-9am clearway restriction.
    - On Customhouse Quay it is proposed to install the northbound bus stop along the full length of the block between Waring Taylor Street and Ballance Street, this block currently has eight carparks all of which are two hour metered parks and will be removed.

137. However, there is also the possibly of both a reduction of a further two car parks and/or the addition of 12 car parks that are currently restricted parking. Work on this is less advanced so these are presented as a possibility only at present and therefore not included in the financial impact section of this report. Information on these will be included in the traffic resolution. These include:

    - To accommodate the bus stop at Ballance Street it is also proposed to close the entry to Ballance Street from Customhouse Quay. This will require the creation of a turning area (that is funded through the project cost) at the closed end of Ballance Street and may result in the loss of two parking spaces.
    - On the southern side of Wakefield Street between Blair Street and Tory Street are 12 metered carparks and a two-space loading zone that are all restricted with a 7am to 9am clearway. This clearway has been in place for many years and improves the efficiency of the left lane by removing the side friction created by parked cars. Given that at peak times it is proposed that this left lane be restricted as a bus lane it may be possible to remove this clearway and return the parking to 24/7. This will be put forward to be reviewed as part of the required safety audit and provided it is safe to do so it will be included in the traffic resolution consultation.

138. While a three-bus bay length is required at peak times there may be an opportunity to use the third bay for other parking at nonpeak times. While the project team will need to confirm that it is safe to do so, it is believed that the stops on Kent Terrace, Cambridge Terrace, Wakefield Street and Customhouse Quay at Ballance Street could all accommodate part time parking at the back of the stop as the stop is out of the lane. This could be used for loading, tour coaches, taxi/uber or other purposes and will be offered as part of the stakeholder conversations to be held prior to the formal consultation.

Approval to Consult

139. Through this paper officers are seeking approval to commence the consultation phase of the joint Wellington City Council/Greater Wellington Regional Council Harbour Quays public transport corridor project.

140. At the conclusion of the consultation phase elected members of both Councils will be asked to endorse the business case and approve the project proceeding into detailed design and construction.

141. The consultation will focus on the proposition to create the second public transport corridor along the Harbour Quays and the benefits of doing so including any identified perceived disbenefits to provide an opportunity for the community to provide feedback.

142. During consultation the draft business case will be available as supporting information, rather than a document that we are seeking approval of from the community. Feedback received, where appropriate, may be integrated and require an update to the business case before being presented for endorsement.

143. Papers will be brought back in 2026 for the following decisions:

- Endorsement of the final business case
- Approval of Bus Stop location and lengths (To be confirmed through Traffic Resolution approval)
- Approval of Bus Lane restriction, time of operation and length of route restricted (To be confirmed through Traffic Resolution approval)
- Approval of parking changes, location, time of operation, restriction type, to facilitate the introduction of the Harbour Quays public transport corridor.

144. The following decisions are either not in scope of this project or require decisions by Greater Wellington Regional Council. However, officers will work with Councillors to provide feedback to GWRC on all the below points and any other matters deemed appropriate by Council.

- Bus Shelter design (Responsibility of Metlink)
- Service design (which routes being served along the corridor) (Responsibility of Metlink)
- Additional bus stops (Responsibility of Metlink)
- Amenity, planting, lighting to the wider area (funding does not permit anything beyond the minimum necessary to establish bus stops on a new corridor)

Kōwhiringa | Options

145. The Committee has an option to not proceed with the Harbour Quays public transport corridor project at all and accept the status quo, noting the impact this will have on traffic volumes on the Golden Mile and the rest of the central city network and that this is inconsistent with the current investment in the Golden Mile.

146. The Committee has an option to not proceed with the Harbour Quays public transport corridor projects currently and ask that the incoming council make the decision in early 2026. This will have an impact on timing as the current timeline allows for consultation in November 2025 and approval in February 2026 with construction beginning mid-2026 and completed and operating by the end of 2026. Delaying this decision will push back all milestones six months or more and result in the corridor not being ready at the optimum time i.e. beginning of summer.

147. The Committee has an option to amend or reject the Harbour Quays investment objectives or select a different transport corridor option as the preferred option. Either of these will require further work to be done to either develop new objectives, develop and reassess the options for the revised objectives or design the alternative route before consultation can be carried out. As with the option to defer to the next triennium, this will have an impact on timing as consultation will not be able to take place in November 2025.

148. The Committee has an option to agree to proceed with the full set of recommendations in this paper and agree the Harbour Quays investment objectives and preferred public transport corridor option, agreeing to proceed to consult on Harbour Quays including on a proposed traffic resolution.

149. If the Committee are of a mind that the proposed project doesn't go far enough and wish to increase the scope and corresponding budget, we would need to assess the quantum of change and whether we could amend plans of the proposed consultation and then bring back an amended business case for approval after consultation. If the proposed changes were significant, we may need to pause consultation and prepare amended plans, traffic resolutions before presenting this to the new Council in the new year for approval to consult. This would also have the effect of pushing back all milestones by at least six months

Whai whakaaro ki ngā whakataunga | Considerations for decision-making

Alignment with Council's strategies and policies

150. The strategic case sets out how this project sits within both the regions and cities strategies.

151. The background section to this paper sets out the alignment.

Engagement and Consultation

152. Due to the scale of change and the area's importance in both place and as a key city connection, the project is expected to attract significant public interest. As a result, it has been classified as a significant project, which is reflected in the proposed approach to stakeholder and community engagement.

153. There has been mention in both the Wellington City Council 2024 Long Term Plan and the amended Wellington City Council 2024 LTP consultation documents, but there was little detail about the project to support this.

154. The Greater Wellington Regional Council Long Term Plan refers to the need to provide for reliable bus journeys and progressing towards a future busway solution along the regionally significant eastern and southern corridors. There were no specific options discussed.

155. Metlink have undertaken a series of customer focus groups to gain an understanding of acceptability to the Harbour Quays corridor, the insights gained have helped inform bus stop locations and the service design.

156. A communications and engagement plan has been developed between the project partners of Wellington City Council and Greater Wellington/Metlink for this project. The plan outlines that GWRC will take the lead on communications relating the need for the changes, and WCC will lead on the impact of the change. Both parties will connect interested and impacted community members with the project before, during and following the consultation period.

157. Before consultation we will be engaging with key stakeholders and interested groups. We will be sharing information about the project including the process of developing designs and key project milestones (subject to approvals). This targeted stakeholder engagement is to understand local expertise and experience of the area and understand initial perceived trade-offs of the proposal. The wider public will have an opportunity to share this feedback during the consultation period.

158. Consultation will occur throughout November 2025 for four weeks. During this time, we will have joint Metlink/Wellington City Council drop-in sessions for interested parties to come with questions. Newly elected members will also be engaged and briefed as soon as practical. Both councils' websites will have up-to-date information with the designs available to view. We will have an email address for the public to contact the project team with questions. Metlink and Wellington City Council will work together to answer queries about the street changes and bus service changes.

159. Once consultation has closed, all submissions will be made available to councillors, including oral submissions. We will also synthesise the feedback and present it back to the relevant council Committee/s.

160. The consultation and engagement approach will align with the principles under s82 the Local Government Act and Wellington City Councils Significance and Engagement Policy.

161. The draft business case is based on concept designs. A more recent developed design drawing set has been prepared (appended) that will be used to support the engagement.

Māori Impact Statement

162. Discussions to date with our Takai Here partners have been limited but will elevate once the TR process commences. Due to the limited scope of the project, opportunities for cultural interpretation are few but will be explored though the detail design phase of the project.

Financial implications

163. Funding was approved through Wellington City Councils Long Term Plan Amendment process, for the 2024-34 Long Term Plan, and became effective on 1 July 2025. Funding approved was $10 million of CAPEX and $0.5 million of OPEX. The project is to receive co-funding from Greater Wellington Regional Council at 50%, which was approved in Greater Wellington Regional Councils Long Term Plan 2024-34.

164. No funding under the National Land Transport Programme is expected, as the current NZTA position is that funding is possible but would only be available to undertake this business case in year three of the programme, with no retrospective funding available.

165. The revenue impact due to the loss an estimated 30-40 street level carparks, has an estimated revenue loss of $160,000 - $200,000. The parking management plan, including mitigations and potential part time use of the stops is still being developed. The impact and these figures will be updated following consultation and brought back to council as part of subsequent decisions.

Legal considerations

166. Wellington City Council's Traffic and Parking Bylaw 2021 provides for the Council to impose restrictions on the use of its roads by way of a Traffic Resolution. Under the Bylaw, a Traffic Resolution must be published on Council's website for at least 14 days before it is considered and Council is required to consider any comments made on the proposed Traffic Resolution.

167. There is no legislative requirement to consult on the draft business case. However, if Council chooses to consult, the consultation principles in section 82 of the Local Government Act apply.

Risks and mitigations

168. The project team has identified several projects risks and has an appropriately managed risk register that is the responsibility of the joint steering group.

169. The identified project risks fall within the reputational, resourcing and budget areas.

170. For this paper that is seeking approval to consult, two strategic risks are identified these relate to partnerships & relationships and priority investment programmes & projects.

171. If either Council defer approval this will at a minimum directly affect timelines and create delay.

172. To mitigate not getting approval at this time, the project team has regularly kept Councillors of both Councils briefed at each stage of development so that the paper doesn’t bring any surprises and provides a comprehensive report that covers all aspects of the proposal.

Disability and accessibility impact

173. An accessibility audit was undertaken for all the proposed bus stops. CCS have also reviewed and approved input into the location and design of the bus stops.

Climate Change impact and considerations

174. If an additional public transport corridor is dedicated, buses are likely to be more reliable and travel faster; this will encourage more people to use public transport

instead of driving cars. As a result of this mode shift, fewer vehicles will be on the road, which will reduce emissions and traffic congestion. In this regard, the proposed investment is in line with Te Atakura First to Zero 2019 Strategy.

175. The economic case however has reported that without mode shift or the capacity improvements from NZTA's pending SH1 Wellington Improvements project there will be an overall disbenefit in Co2.

176. CO2 savings are calculated as 4% of total VOC savings for both general traffic and public transport.

177. Increased congestion for general traffic results in a slight increase in Co2 emissions

178. This excludes any reduction in Co2 emissions because of mode shift from private motor vehicle to public transport.

Communications Plan

179. A communications and engagement plan has been developed between the project partners of Wellington City Council and Greater Wellington/Metlink for this project.

180. At the time this paper was made public, information on the project's website will be updated to reflect information now available.

181. A joint media release went out in late June 2025 when Councillors were briefed about the project ahead of this meeting https://wellington.govt.nz/news-and-events/news-and-information/our-wellington/2025/06/harbour-quays-spine. If Harbour Quays is approved, another media release will go out in October/November 2025 to coincide with consultation starting.

Health and Safety Impact considered

182. This report relates to the proposal to consult therefore we have assessed the impact of consultation rather than the implementation of the corridor; this will be assessed as part of the paper brought back for approval.

183. During public consultation the risk of personal confrontation is not uncommon and possible. Both councils take this risk to staff and community seriously and we have addressed this as part of our engagement approach.

Ngā mahinga e whai ake nei | Next actions

184. This paper, the proposal to consult is being considered by Wellington City Councils Social, Cultural and Economic Committee at its meeting on 4 September 2025 and the Greater Wellington Regional Councils Transport Committee on 18 September 2025.

185. If approved, we expect to finalise conversations with directly affected stakeholders to understand what if any mitigations we can provide to address concerns at each of the impacted bus stops. Amended plans will be prepared along with the necessary traffic resolution schedules.

186. A formal period of four-week consultation is planned for after Labour Weekend at the end of October for most of November 2025.

187. Throughout December 2025 the project team will analyse submissions and consider changes to give effect to issues raised.

188. We expect that the Golden Mile team will begin construction of the proposed Cambridge Terrace and Wakefield Street bus stops in early 2026 as these are required ahead of the Courtenay Place construction to facilitate the temporary north bound bus diversion. These stops will operate under Golden Mile's traffic management plan until the Harbour Quays Traffic Resolution is considered. If the Harbour Quays Traffic Resolution is not approved, the Golden Mile project will reinstate the current state when their diversion is no longer required.

189. The relevant Wellington City Council Committee will hear from submitters that wish to speak to their submission, this is expected to be late January or early February 2026. An opportunity could be provided for Councillors of Greater Wellington Regional Council to sit in on these hearings.

190. Officers will prepare a paper following consultation and oral hearings that supports the finalised business case with recommendations on how to proceed

191. Committees of both Councils will then consider endorsing the business case and giving approval for the project to proceed, this is currently scheduled for February 2026.

192. The appropriate Committee of Wellington City Council will then consider approval to the traffic resolutions to give legal effect to the bus stop and bus lanes.

193. Subject to approval, detailed design will be completed, contractors procured with constructed expected to take place in the second half of 2026

DRAFT

1. Purpose of this Document

The purpose of the Business Case is to enable a robust process that captures what the project (business problem or business need) is, what investment is required, what are the available options and associated costs to deliver the preferred solution.

The five sections used within this document are based on the Treasury Better Business Case (BBC) guidance that is best practice in both central and local government, and cover the following:

1. **Strategic Case**
   The case for change. Why do we need this project? Provides supporting information as to why the project is required
2. **Economic Case**
   Options analysis. Compare solutions – provides possible solution options and the preferred option
3. **Commercial Case**
   Procurement strategy and approach – provides options on how the solution will be obtained and from where
4. **Financial Case**
   Affordability and funding arrangements – provides funding options, project/programme, and ongoing costs
5. **Management Case**
   Delivery plan – provides high level information as to how the project/programme is going to be managed and delivered

The business case also provides a formal record of project information. Project staff are required to support the councils obligations under the Local Government Act and LGOIM Act, as detailed in Section 6 of WCC's Information and Data Policy (sharepoint.com).

DRAFT

2. Executive Summary

This business case outlines the case for a proposed second Wellington City public transport corridor along the waterfront quays (Harbour Quays) to address current and expected future public transport capacity and reliability issues. This will complement the existing public transport corridor along the Golden Mile. The project also complements the SH1 Wellington Improvements Business case.

The Harbour Quays business case has been developed jointly by Wellington City Council (WCC) as the road controlling authority and Greater Wellington Regional Council (GWRC) as the public transport authority. The project will be implemented jointly.

The overall capital budget allocated for the Harbour Quays is $10 million equally funded by both councils.

The capacity and reliability issues that need to be addressed are:

1. Whilst international literature suggests an optimum number of buses per lane per hour should be 50-80, the current Golden Mile[1] number of buses per lane per hour ranges from 79-99 at peak, and is expected to increase to 126-137 at peak by 2034[2].
2. Assuming buses increased to 126-137 at peak, by 2034 if all buses remain on the Golden Mile the number of buses per lane per hour at peak will be more than double the midpoint of optimum (50-80 per lane per hour) levels.
3. With buses over 130 per lane per hour the network reaches “saturation point”. This is where buses are bumper to bumper and travel speed becomes more unreliable. Additional buses begin to queue further back in surrounding streets affecting the whole transport network for buses, cars and other road users
4. Typical “minimum acceptable speeds” for buses in a busy city centre is 14km. The current operational speed on the Golden mile is 8km an hour. Without Harbour Quays the Golden Mile speeds are projected to fall to 3-6km/hr at which time the journey will take 28 minutes.
5. Current running time variability for buses on the Golden Mile is greater than 30%. The same trip can vary by up to 10 minutes (+/- 5 mins)
6. Dwell time[3] optimum for boarding and alighting at a bus stop is 30 seconds. The average dwell time on the Golden Mile is 40 seconds and certain bus stops experience dwell times of more than 50 to 60 seconds. Dwell times of 50 seconds start to create a significant and highly inefficient “concertina effect”.

These capacity and reliability issues result in issues for current passengers. A second public transport spine along the Harbour Quays will immediately provide benefits to current bus customers using the Golden Mile and Harbour Quays.

[1] The Golden Mile refers collectively to the area of Courtenay Place, Manners Street, Willis Street and Lambton Quay. The future numbers include Brandon Street buses as these will run on the Golden Mile once that street is closed

[2] Two main end timeframes are included in this business case. 2032 is the year Golden Mile the current public transport corridor is expected to reach ‘saturation point”. 2034 is the last year of modelling for bus patronage.

[3] Dwell time refers to the time a bus spends at a scheduled stop without moving. This can be caused by buses having to wait longer as they are in a queue and the number of people getting on and off the bus.

Background

In 2019, GWRC and WCC identified a variety of bus priority issues and opportunities in a Bus Priority Action Plan (BPAP) to improve reliability of buses on Wellington's busiest routes. This BPAP was updated in 2024 and identified an immediate need to improve bus travel times into and through the Wellington central city based on existing low transit speeds and rapidly growing bus patronage growth. The 2024 BPAP reconfirmed the need for a second public transport corridor through the central city.

The Let's Get Wellington Moving's (LGWM) programme business case (2019) identified the need for two primary public transport corridors through the Wellington central city, with a dual corridor then enabling mass transit to be introduced on the waterfront route later.

With the dissolution of LGWM in December 2023, it was agreed that WCC, in partnership with GWRC would progress LGWM's Interim Second Spine, now called the Harbour Quays public transport corridor, to address capacity issues forecast with the Golden Mile from 2025.

Three investment objectives were agreed for the project:

1. Enhance travel time and operational efficiencies and resilience (in response to planned and unplanned disruptions) through the development of a second public transport corridor by December 2026
2. Increase public transport capacity through the central city by creating a second public transport corridor through the central city by December 2026 due to the currently constrained Golden Mile
3. Enhance connectivity and safety along and across the Harbour Quays corridor for all modes of travel by 2030 to support urban activation.

The options

A long list of 10 options for a second public transport corridor was initially developed which included eight permanent solutions and two interim solutions. From the long-list, two interim route options (Featherston Street and Harbour Quays) were considered reasonable practicable options that would achieve the objectives and were subject to further development and evaluation against a Do Minimum option.

The Do Minimum option involves retaining all buses on the Golden Mile including the buses that currently stop/start on Brandon Street with bus growth in line with projected passenger growth. This option would result in the bus journey down the length of the Golden Mile taking approximately 28 minutes by 2034, slower than walking from Courtney Place to the Railway Station.

Harbour Quays was selected as the preferred route as:

- It scored better in both the Multi Criteria Analysis (MCA) and the economic analysis process.
- It out performs the Featherston Street option under four of the five criteria (route legibility, network capacity, business impacts, and future cycle routes).
- It is expected to provide better overall non-financial benefits than the Featherston Street option as it better activates the Harbour Quays and has fewer impacts on Featherston Street.
- The Harbour Quays option enables faster bus journeys than the Featherston route would have enabled. Both options enabled faster bus journeys than on the Golden Mile.

- Modelling concluded that Harbour Quays was likely to result in fewer disruptions during the AM peak while delivering similar performance to Featherston Street during the PM peak.

The preferred route and proposed bus stop locations

Harbour Quays follows a southbound route along Whitmore Street before exiting onto Customhouse Quay. The route continues along Customhouse Quay, Jervois Quay, Cable Street, and Kent Terrace before terminating at the Kent/Cambridge Terraces/Courtenay Place intersection. The northbound route is the same route as southbound but in reverse, using Cambridge Terrace and Wakefield Street until it rejoins Jervois Quay. This can be seen in the Figure 1 below.

Figure 1 - Harbour Quays proposed corridor and stop locations

In parallel with the route options, work was undertaken on the bus stop strategy to identify preferred bus stop locations. The assessment identified bus stop locations in each direction that were optimal locations for stops, given the constraints and operational requirements.

This assessment initially identified twelve stops for Harbour Quays, six in each direction. In July 2025 a review of the number and location of bus stops was undertaken. This review included a value engineering exercise to enable the project to remain within the budget allowance. This review resulted in ten bus stop locations in total being recommended, five in each direction and these can be seen in Figure 1 above.

The service design and bus prioritisation

A phased approach to service design[4] is recommended for the utilisation of the Harbour Quays corridor. This approach:

- Minimises customer transition risk
- Provides attractive benefits to customers, supporting the objectives for growing public transport access and mobility
- Can be supported with infrastructure that is affordable within the current project budget

[4] See section 7.13 for more information on this

- Manages Golden Mile bus numbers within the optimum maximum capacity of that corridor
- Accommodates bus services displaced by the planned closure of Brandon Street.

The first phase which is included in this business case and provides a focus on peak services includes:

- Running express and Brandon Street services, and an all-day harbour side service along Harbour Quays
- Approximately 30 buses per hour in each direction at peak times initially
- Up to 23 percent of the PM peak and 12 percent of weekly patronage moves to Harbour Quays
- Faster peak journeys
- All day 7-days a week access to waterfront attractions
- Bus stop infrastructure requirements within current budget.

The above service design does not support any form of full-time special vehicle lane (24/7 bus lane) in the short term. However, given the service design focus on express services at peak, it does warrant the use of part-time special vehicle lanes, in the morning and afternoon peaks (part-time bus lanes).

Harbour Quays part-time, peak-hour bus lanes would be the busiest (outside of the Golden Mile) in the city from day one. The economic case for this project includes the use of peak hour bus lanes.

Alignment of the preferred option to investment objectives

Investment objectives and business needs for an additional public transport corridor were set in mid-2024 when the project was of a more transformational nature and a higher value investment[5].

With the project then being scoped to a lower level (see section 4.4 short list options for commentary on this change), not all these investment objectives are now able to be met. This is particularly so for Investment Objective 3.

Table 1: Alignment with investment objectives

Investment objective	Alignment
Investment objective 1: enhance travel time and operational efficiencies and resilience (in response to planned and unplanned disruptions) through the development of a second public	• There will be 2-6 minute bus travel-time savings in the peak periods for bus services moved to the Harbour Quays corridor in 2033 (eg those buses that currently travel down the Golden Mile, when travelling now on the Harbour Quays will be 2-6 minutes faster). • With Harbour Quays in place there will be about a 0-1 minute bus travel time savings in the peak periods for the bus services which remain on the Golden Mile corridor in 2033 (eg in 2022 the trip takes about 15 minutes between Cambridge Terrace and Whitmore St, and by 2034, with

[5] Originally this project was funded at $51.6M (capex) and part of the former LGWM city streets package to be delivered by WCC, it was assumed at this time that the project would attract 51% subsidy from the National Land Transport Fund (NLTP).

Investment objective	Alignment
transport corridor by December 2026	Harbour Quays in place, this trip will still take about 15 minutes). • Supports planned disruptions along the Golden Mile during planned works • Reduces current travel variability of >30% • Provides direct access to regional destinations such as Te Papa.
Investment objective 2: increase public transport capacity through the central city by creating a second public transport corridor through the central city by December 2026 due to the currently constrained Golden Mile	• The Harbour Quays design is expected to support 30-60 buses per hour, with the ability to accommodate all buses during temporary closures of the Golden Mile. • The optimum level of buses on the Golden Mile both currently and in the future is 50-80 buses per hour per direction. This level of buses expected to be the capacity of the Golden Mile, after implementation of the Golden Mile (upgrade) and implementation of Harbour Quays, capped at 100 buses per hour. • This level of buses on the Golden Mile aligns with international optimum levels of 80 buses per hour per lane. Higher levels than this and buses become less dependable with longer dwell times, less reliability and “stacking” of buses. • A second public transport corridor will enable buses on both the Harbour Quays and Golden Mile to be faster than current and predicted speeds on the Golden Mile. Current speeds are 8km/hr with optimum speeds being 14km/h. • Without Harbour Quays the Golden Mile corridor speeds are projected to fall to 3-6km/hr simply due to the expected increase in the number of buses at which time the journey along the Golden Mile will take 28 minutes. • Current modelling shows that this will result in queuing of bus services on the wider local road network while waiting to access the congested Golden Mile (e.g. along Cambridge Terrace during peak travel times can be expected). This will impact general traffic on the wider network as well.
Investment objective 3: enhance connectivity and safety along and across the Harbour Quays corridor for all modes of travel by 2030 to support urban activation.	• With increased pedestrian movements across the Harbour Quays, changes to the signalised crossings will improve pedestrian movement across the Harbour Quays. • The Harbour Quays development will integrate with the Cross City Bike Connections.

DRAFT

The financials

While full costings were not undertaken for the purposes of the MCA, both the Featherston Street and Harbour Quays options were of similar length, required a comparable number of bus stops, and affected a similar number of intersections.

A construction cost (physical construction works) envelope of $6–8 million has been set (excluding general project costs[6]), to remain within an approved Long-Term Plan (LTP) budget envelope of $10 million. Current cost estimates, including quantification of risks indicates a total budget of $11.25M to successfully deliver the project and work continues to bring this down to acceptable levels. This level of risk at this stage in the project development is deemed acceptable.

The table below provides information on the expected Benefit Cost Ratio (BCR) for this project. This BCR includes the impact of peak hour bus lanes,

Table 2 - Estimated construction costs and associated benefit cost ratios with and without modeshift.

	Construction cost	**Net present value**	**Headline BCR**	**BCR applying 5% mode shift assumption**
10-year project life (current cost) at 2% discount Rate	$6.8M	$19M	2.9	13.6

Annual maintenance and operating costs of $250K are included in the economic case.

The overall modelled economic benefits including the introduction of part time bus lanes over a 10-year period are shown in the table below, with the associated modelling report provided as **Appendix F**.

Table 3: Economic benefits including the part time bus lanes

Benefit Type (10 year period)	**Economic Benefit/Disbenefit**
General Traffic Travel Time	$ -70.4M
General Traffic Operating	$ 12.3M
PT Travel Time	$ +34.6M
PT Reliability	$ +8.5M
PT Bus Stop Waiting	$ +33.8M
PT Operating	$ 0
CO2 Reduction (4% of VOC)	$ +0.49
TOTAL BENEFIT	**$ +19.2M**

The addition of a second public transport corridor will immediately provide benefits to current bus customers using the Golden Mile and Harbour Quays and also to additional customers in the future. It will provide wider network capacity and priority bus improvements and enhance mode shift options.

[6] General project costs include professional services contracts for design, quantity surveying, traffic modelling, safety audits, etc and internal staff costs at WCC and GWRC.

Recommendation

It is recommended that the Committee endorses this business case, increases the joint WCC/GWRC project capital budget to $11.25M and agrees the project proceeds to implementation.

DRAFT

3. Strategic case

3.1. Background

Context

WCC is the road controlling authority and GWRC is the public transport authority. In this capacity GWRC has informed WCC that they require a second public transport corridor through the central city to address current and future capacity and service issues. There are already capacity and service issues on the Golden Mile public transport corridor and as bus numbers increase in response to patronage growth this is expected to get worse (see Table 4).

Without a second public transport corridor the growth in buses would remain on the Golden Mile and the numbers below are presented as such.

Table 4: Actual and forecast peak hourly buses on the Golden Mile corridor[7]

	2017	2018	2019	2020	2021	2022	2023	2024	2025

	Metlink passenger forecast used to factor bus numbers								

[7] The bus numbers in Table 4 are calculated by applying unconstrained growth forecasts to the expected peak number of buses using the Golden Mile public transport corridor in 2025. The forecasts use the patronage forecasts for buses included in GWRC's long term plan 2024-34 on page 205 (Greater-Wellington-Long-Term-Plan-2024-34_web.pdf). As these forecasts and the assumptions behind the forecasts change over time we would expect the projected number of patrons and buses would also change.

Patronage growth on the Metlink network is driven by two main factors – demand driven by population growth and demand driven by major investments and external drivers.

Modelling undertaken by GWRC[8] shows that 79% of the increase in passengers is expected to be driven by major investments and external drivers and 21% driven by population growth.

Patronage growth assumed by GWRC and as outlined in their Long-Term plan 2024-2034 are shown in table 5 below.

Table 5: GWRC patronage growth forecasting assumptions

Patronage growth	24/25	25/26	26/27	27/28	28/29	29/30	30/31	31/32	32/33	33/34
Bus	5.3%	4.7%	3.5%	3.7%	3.4%	3.5%	3.2%	1.9%	1.8%	1.6%

Patronage growth is then used to determine expected *bus number growth*. Bus numbers are used throughout this business case.

Figure 2 below shows the increase in bus numbers in graph form for both actual and projected bus numbers.

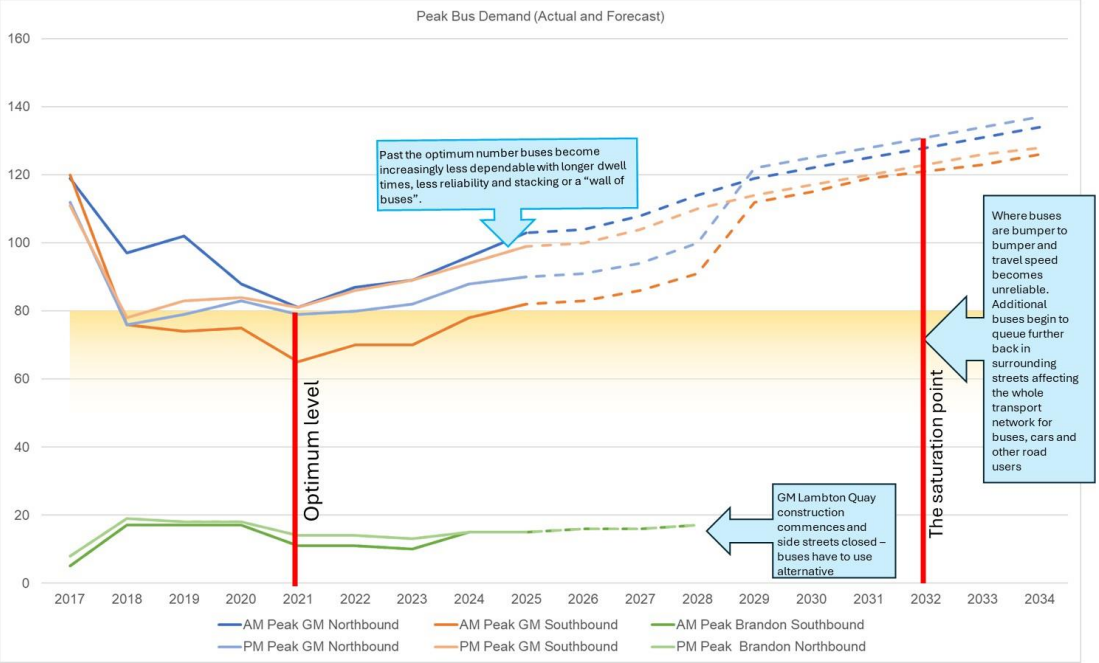

Figure 2: Actual and forecast peak hourly buses on the Golden Mile corridor

[8] Audited by both Deloitte (when made) and checked by Audit NZ

International literature reviews identify that 50–80 buses per single bus lane is optimum[9] and a single lane kerbside bus lane can carry 4260 people in the peak hour. For Metlink this is between 53 and 61 buses depending on each buses capacity[10].

When bus volumes exceed 80 buses per hour, buses begin to queue at stops and intersections, reducing the reliability of services and increasing travel time. With buses queuing at stops, this also makes it harder for passengers to board and disembark.

The Golden Mile already exceeds this number of buses as can be seen in the graph above and is resulting in capacity and service issues now.

The continued increase in bus numbers is expected to result in peak bus speeds on the current corridor (Golden Mile) declining to a walking pace (3-6km/h) and the corridor reaching a saturation point of 130 buses per lane per hour in 2032 which is the point where any additional buses trying to access the corridor will queue back beyond the Golden Mile[11]. This will impact the wider Wellington transport network.

The Golden Mile corridor is physically constrained e.g. two single direction, bus only lanes in Manners Street. Nothing in the Golden Mile improvement project will change this constraint and so the corridor will remain constrained with or without the improvement project.

The addition of a second public transport corridor will immediately provide benefits to current bus customers using the Golden Mile and Harbour Quays. It will provide wider network capacity and priority bus improvements and enhance mode shift options.

Key context information for this business case is shown in the table below. It highlights the problem to be solved.

Table 6: Key strategic context information

Information	Optimum	Current	Future	Comment
Buses per single lane[12]	50-80 per hour	AM Peak Golden Mile (actual July 2025) • Northbound - 99 per hour • Southbound – 79 per hour • Brandon SB – 15 per hour	AM Peak Golden Mile (projected 2034) • Northbound - 134 per hour • Southbound including Brandon[13] – 126 per hour PM Peak Golden Mile (projected 2034)	The number of buses per single lane during peak hours **already exceeds optimal levels (2024).** By 2034 if all buses remain on the Golden

[9] Transit Capacity and Quality of Service Manual | Blurbs New | Blurbs | Publications
[10] A large Metlink bus can carry between 70 and 81 passengers
[11] Golden Mile Bus Corridor Analysis – August 2024
[12] These numbers are taken from Table 4 above. Information is provided in that section about the assumptions behind these figures and where they can be found.
[13] Brandon Street closes under the Golden Mile development so these need to be added to the other southbound numbers in the AM peak and northbound numbers in the PM peak, as this is the number that will run along the Golden Mile if a second public transport corridor is not introduced.

Information	Optimum	Current	Future	Comment
		PM Peak Golden Mile (actual July 2025) • Northbound – 88 per hour • Southbound – 93 per hour • Brandon NB– 15 per hour	• Northbound including Brandon St– 137 per hour • Southbound – 128 per hour	Mile buses per single lane during peak hours **will be more than double the midpoint of optimum (50-80) levels**
Operational speed (speed including dwell time)	Typical 'minimum acceptable speed' in a busy city centre is 14km/h	Current operational speed on the Golden Mile – 15 min to travel 2km = 8km/h	Golden Mile without Harbour Quays • From 2032 (when buses would reach the "saturation point of 130 buses), bus speeds at the morning peak are expected to average 3-6 km/h (ie speed will have reduced from 8km/h to 3-6km/h). Golden Mile with Harbour Quays from 2032 (when buses would reach the "saturation point of 130 buses) • Northbound AM[14] peak ~11km/h • Southbound AM peak ~10km/h	Increase in passengers (and buses) leads to increase in dwell time which reduces speed. Moving buses to Harbour Quays, improved dwell times and bus travel time result in: Golden Mile – travel being **0-1 minute** quicker with the Harbour Quays Harbour Quays – time savings of **2-6 minutes** for the same buses now travelling on Harbour Quays

[14] The increase in speed of buses on the Golden Mile from 8km/hr currently to 10-11km/hr once Harbour Quays is built provides the travel time improvements noted in this table.

DRAFT

Information	Optimum	Current	Future	Comment
Dwell time in peak	30 seconds at a bus stop is optimum for boarding and alighting[15]	Average dwell time on GM - 40 seconds Certain bus stops experience dwell times of more than 50 or 60 seconds	Harbour Quays – 24 seconds Golden Mile – 40 seconds	Dwell times over 50 second start to create a significant and highly inefficient "concertina effect"

In addition to the areas identified in the table above bus time variability at peak times is an issue. Current Metlink standards provide for a bus to be no more than 1 minute early and 5 minutes late. Currently buses running on the Golden Mile have a >30% running time variability[16] and some trips can vary by up to 10 minutes (+/- 5 minutes).

A passenger might experience travel times that are 30% shorter or longer than the average on a regular basis, which makes journey times unpredictable for passengers and difficult for operators to maintain a consistent schedule. This unreliability can cause delays, longer journey times and could potentially decrease rider satisfaction.

Harbour Quays is a bus priority project led jointly by WCC and GWRC and involves developing a second public transport corridor through the central city which provides additional central city bus capacity to enable more people to travel on buses in the central city. The Golden Mile (currently the only public transport corridor through the central city) currently exceeds optimum bus volumes at peak times resulting in slow and variable peak bus journey times for current bus customers well below international benchmarks.

The geographic scope of the Harbour Quays project can be seen below.

[15] Bus stop capacity | NZ Transport Agency Waka Kotahi
[16] Golden Mile Bus Corridor Analysis August 2024 – Tonkin + Taylor

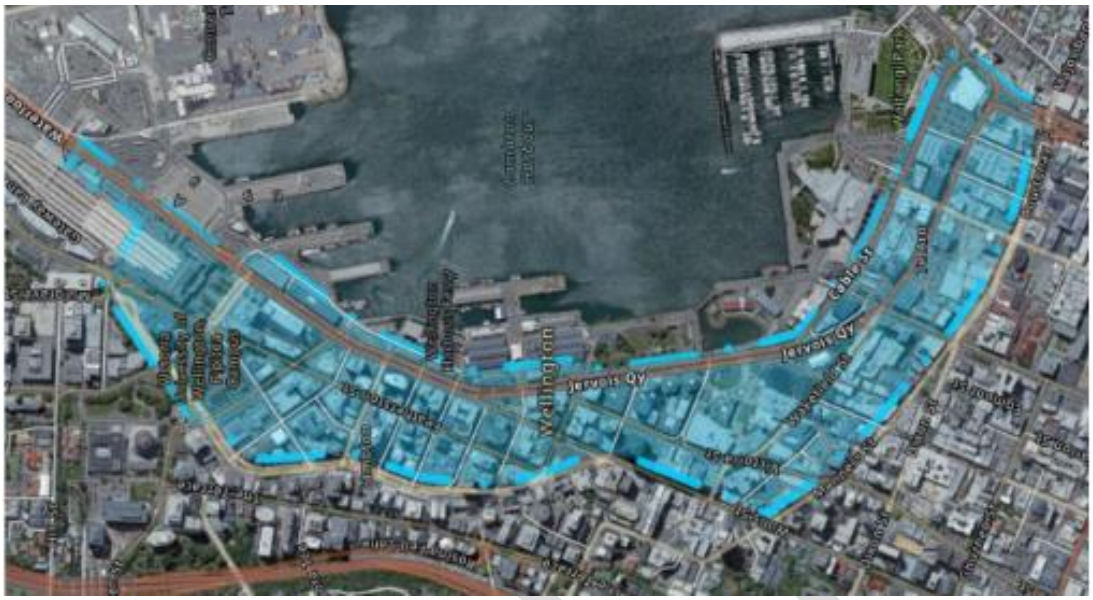

Figure 3: Harbour Quays geographic scope for initial route selections

Adding a second public transport corridor increases bus capacity and improves travel times for buses throughout the central city. This will enable more people to travel through the central city with fewer vehicles and also as a consequence increase the attractiveness of the Golden Mile for people.

There are however trade-offs with this. Faster on-bus travel times are expected to be offset for some users by longer walk times to Harbour Quays compared to their current bus stops and potential exposure to weather. This has been identified in focus group feedback and is something that will be managed when services commence on the Harbour Quays public transport corridor.

Car users on Harbour Quays are also expected to be impacted. This is discussed later in this business case.

A second public transport corridor running along Harbour Quays will complement the Golden Mile public transport corridor, with both corridors playing a part in providing increased bus capacity, reliability and improved travel times.

Problem statement

An Investment Logic Mapping (ILM) workshop was held in July 2024, (see **Appendix A**: Problem Definition Workshop Report for full report) attended by senior management and officers from both councils, to identify the problems the project intends to address. Below is a table that represents these problems as well as the high-level benefits expected from solving the problem.

Table 7: Definition of the problem and benefits identified at the high level

Problem and weighting	Problem definition	Potential benefits of resolving the problem
Lack of peak time capacity for buses on the central corridor of the city's bus network	Parts of the city's central public transport corridor along the Golden Mile are operating at or exceeding capacity for	Increased peak bus capacity Increased travel time reliability for buses and passengers

Problem and weighting	Problem definition	Potential benefits of resolving the problem
along the Golden Mile (50%)	buses and passengers at peak times and this will worsen due to increased passenger demand and services leading to reduced reliability, increased travel times and impacts on the quality of the central city area for people and businesses.	Quicker bus travel times through the central city leading to increased mode share Increased quality of central city area for people and businesses Increased productivity of buses
Temporary network disruption for all modes in the Harbour Quays (as per Figure 3 above) corridor (40%)	Multiple transport and urban development projects, including construction of and diversions for the Golden Mile project over the next 2-5 years in the central city area will result in a loss of bus capacity and disruption to all travel modes in the Harbour Quays corridor resulting in travel time delays, poor customer experience and a lack of network resilience.	Minimise loss of travel time reliability for cars and buses Travel time and customer experience reliability for bus passengers Minimise loss of service for bus passengers Central city area remains attractive destination
Poor level of service connections for bikes across the central city area (10%) NB: This problem statement is being addressed by a separate project.	Substandard levels of service connections for bikes across the central city are resulting in increased conflicts between users of shared space on the waterfront and an inability to optimise investment in the broader bike network.	Greater optimisation of investment in broader cycle network, including: • Increased people on bikes • Increased mode shift • Increased safety for bikes and pedestrians • Reduced conflict in shared spaces on the waterfront

Associated work to date

2009 - 2019

The need for an additional public transport corridor through the central city was first identified in 2009, through the Opus central area bus operational review and MRCagney's 2011 Wellington City bus review.

The Metlink focus following these reports was to implement recommended actions to increase bus utilisation with high-capacity buses and network rationalisation to reduce pressure on the Golden Mile. These measures brought some relief with peak time bus volumes being reduced from around 120 per hour in 2018 to around 100 per hour today– still higher than the optimum level of 50-80 buses per hour.

2019 – 2023

A LGWM programme business case (2019), a programme that included both WCC and GWRC identified the need for two primary public transport corridors through the Wellington central city, with a dual corridor then enabling mass transit to be introduced on the waterfront route later.

As part of the development of the business case for the Golden Mile in 2021, it was identified through Vision 2036 that there was a need for public transport to move through two corridors for efficiency and reliability, and that provision of an additional corridor should be advanced prior to capacity constraints becoming an issue on the Golden Mile.

Also, the business case identified a cap of 100 buses per hour (with an optimal limit of 50-80 buses per hour), in each direction of travel on the Golden Mile, and that any additional buses per hour were to be accommodated on an additional (unspecified) north-south public transport corridor.

With the bus capacity limitations of the Golden Mile and closure of the Brandon Street bus stop in mind, GWRC developed initial concept designs in 2021 for the planned Harbour Quays public transport corridor that would meet demand prior to the planned implementation of mass rapid transit. GWRC requested that these be included in the scope of the LGWM programme as part of a transitional solution.

As part of the work on second public transport corridor, mana whenua prepared a cultural overlay map which included sites of cultural significance so that these could be considered as part of any corridor development going forward.

While LGWM supported the need to implement an interim second public transport corridor, the programme was terminated in December 2023. To address capacity issues forecast for the Golden Mile from 2025, a second public transport corridor, now referred to as the Harbour Quays public transport corridor, was approved.

With the dissolution of LGWM in December 2023, it was agreed with the Transport Minister (The Hon Simeon Brown), Infrastructure and Housing Minister (The Hon Chris Bishop), Chair of the Greater Wellington Regional Council (Daran Ponter) and Mayor of Wellington City Council (Tory Whanau) that WCC, in partnership with GWRC would progress LGWM's Interim Second Spine, now called the Harbour Quays public transport corridor, to address capacity issues forecast with the Golden Mile from 2025.

2023 – Now

On 10 May 2024, GWRC submitted on WCC's LTP (2024-34) and expressed strong support for the joint approach of investing in the Wellington City bus rapid transit programme, aimed at bus network improvements – a faster and efficient bus network timetable across the region for fully integrated rapid transit corridors for a more efficient and productive transport network.

On 16 May 2024, WCC and GWRC officers had a joint meeting to discuss the rapid transit bus programme, which resulted in the establishment of the Harbour Quays project, to be delivered under the WCC project framework.

Several joint officer workshops were held in July 2024, including an ILM workshop to identify high-level problems and benefits, as well as optioneering workshops, which included a workshop on defining criteria for use in a MCA. Externally accredited facilitators provided facilitation. The workshops resulted in four outputs: an ILM, a benefits map, investment objectives (IOs), and Critical Success Factors (CSFs).

Several high-level planning decisions have been made within WCC regarding road space allocation, and the importance of mode shift has been recognised by WCC, with recent

LTPs reflecting some of those decisions. The Harbour Quays public transport corridor was included in both Councils' LTPs 2024-2034 following the disestablishment of LGWM. The Councils' approved their respective LTPs in June 2024.

The overall capital budget allocated for the Harbour Quays is $10 million equally funded by both councils.

Organisational overview

In its capacity as the road controlling authority, WCC is responsible for ensuring a safe and efficient operation of the roading network. It involves providing local infrastructure, ensuring environmental safety and health, managing emergency situations in the city, and managing land use. This is achieved through two laws: the Land Transport Act 1998 (implementation of road control signs and parking) and the Local Government Act 1974 (road construction, design, and general safety standards).

GWRC is a regional council, representing the wider Wellington region. GWRC is the public transport authority and is responsible for public transport planning and funding among other aspects.

Within its public transport portfolio, GWRC plans for and funds Metlink – the region's public transport network, which includes a comprehensive range of bus services throughout the region, five passenger rail lines from Wellington to Johnsonville, Kapiti, Melling, Upper Hutt and Wairarapa and a ferry service. GWRC is also responsible for public transport infrastructure, such as railway stations, bus and ferry shelters, park and ride facilities, and signage.

WCC and GWRC will jointly develop and deliver this project. The project operationally sits within the Planning and Environment Directorate at WCC, with project management responsibility coming from the Street Transformation team within the City Design Business Unit.

Harbour Quays will require decisions by both councils. In the course of the decision-making process, both councils are required by the Local Government Act 2002 to seek to identify and assess the reasonably practicable options to achieve the objective of the decision and consider affected or interested people's views.

3.2. Alignment with strategies and plans

This section outlines the national, regional, and local Acts, strategies, policies, and plans relevant for this business case. Figure 4 below outlines the strategic context of the transport elements of these plans and strategies.

DRAFT

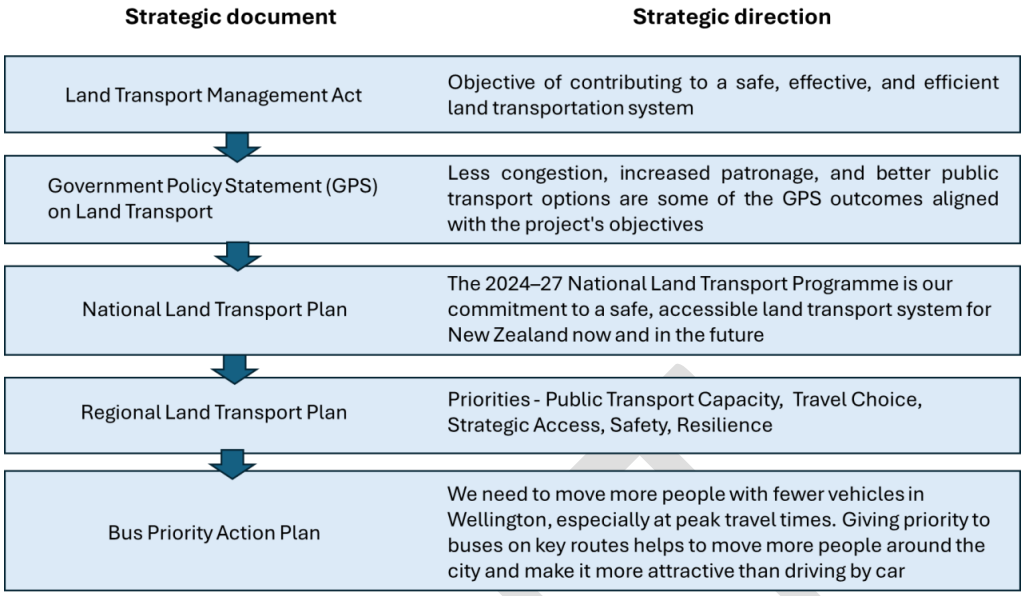

Figure 4: Strategic context

National-level plans

- Harbour Quays supports the Land Transport Management Act's (2003) objective of contributing to a safe, effective, and efficient land transportation system.
- The Government Policy Statement on Land Transport 2024-34 (GPS) outlines four strategic priorities. Two of the priorities in this align closely with the objectives of this project. Reference is made in the GPS to the acceleration of the North-South, East-West, and Harbour Quays bus corridors in Wellington. Less congestion, increased patronage, and better public transport options are some of the GPS outcomes aligned with this project's objectives.
- Whilst the National Land Transport Plan (NLTP) 2024-27 has indicated funding for the development of this business case may be 'possible' for the 2024-27 period, we currently understand that 'possible' means there is no national funding allocated to this project, and the issue is unlikely to be revisited until the fiscal year 2026/27. The implication of this statement is that the development of the business case being borne by the partners and will not benefit from the NLTP's financial assistance.

Several other strategies and plans are outlined by New Zealand Transport Agency (NZTA) to support GPS investment priorities, including:

- A well-functioning urban environment is the goal of the National Policy Statement on Urban Development 2020: particularly (c) all people have good access to housing, jobs, community services, natural spaces, and open spaces, including by means of public or active transportation; (e) greenhouse gas emissions are reduced.
- Keeping Cities Moving: A Plan for Mode Shift 2019 is NZTA's plan to increase public transport, walking, and cycling travel and to deliver social, environmental, and economic benefits.
- The *Aotearoa urban street planning and design guide* draws on national and international best-practice to provide a framework for well-functioning urban environments. Urban environments that provide great places for everyone to live, play

and work. Where people can move around safely and easily access a variety of transport options.

- NZTA's Arataki 30-year Plan represents a shared sector view of how we should plan, develop, and invest in land transport. Among the goals of the plan are to enable mode shift from private vehicles, easing congestion and supporting economic activity through high frequency and reliable services.
- A range of initiatives are identified in New Zealand's first Emissions Reduction Plan (currently under review) (Ministry for the Environment, 2022) that aim to support an affordable and inclusive transition towards a more sustainable future for individuals, families, and households. Among these initiatives is improving public transportation, walking, and cycling in low-income areas. The plan also outlines some major actions towards reducing transport emissions, including improving the reach, frequency and quality of public transport and making it more affordable for low-income New Zealanders.
- NZTA Toitū Te Taiao – Our Sustainability Action Plan 2020: This project supports the Plan's vision for a low carbon, safe and healthy land transport system.
- It is the purpose of NZTA's Regional Mode Shift Plan - Wellington 2020 to make shared and active modes more attractive, and to influence travel demand and choices of transportation, with a focus on increasing public transportation to improve travel times and reduce congestion.
- Road to Zero: Ministry of Transport's New Zealand's Road Safety Strategy for 2020-2030: This project supports two of the strategy's focus areas: infrastructure improvements and road user choices.
- In the Living Standards Framework, Treasury NZ identifies healthy individuals and communities as contributors to New Zealand's wealth.

Greater Wellington Regional Council plans

- Wellington Regional Land Transport Plan (RLTP) 2021-2031: Harbour Quays supports the plan's carbon emission, safety, and mode share headline targets. Objective 1 refers to providing quality, affordable travel options in the Wellington region. It is noted in the plan the Bus Network Review (BNR) will continue to improve services throughout the region. The RLTP mid-term review (2024) has identified Harbour Quays as a significant project and ranked it at regional priority four (out of 30 ranked programmes – some of which include several projects).
- Wellington Regional Public Transport Plan (RPTP) describes long-term goals and objectives, setting out focus areas and the actions that will help achieve these goals. The RPTP includes activities and initiatives to - provide a high quality, high capacity, high frequency core network; improve access to public transport; prioritise safety through continuous improvements to both infrastructure and operations; promote behaviour change; accelerate decarbonisation of the Metlink fleet; explore ways to further decarbonise the Metlink rail fleet and improve the accessibility of public transport.
- The BPAP 2019 focuses on improving public transportation between the central city and suburbs.
- Wellington Regional Transport Emissions Reduction Pathway 2023, an initiative of the nine councils of the region, offers a long-term strategy for transforming the way we design our towns and cities. The focus areas of the Pathway include but are not limited to the following: more transport choice and smarter freight – support decarbonisation

and mode shift. In addition, the report mentions the fact that the bus network review will look at any changes that may be needed to the network design.
- GWRCs LTP provides local share funding for this project.

Wellington City Council plans

- LTP 2024-34: prioritises investing in sustainable, connected, and accessible community and recreation facilities planning for a liveable and accessible compact city. A strategic priority is to transform the transport system to move more people with fewer vehicles. The LTP provides local share funding for this project.
- Te Atakura First to Zero 2019 Strategy: If an additional public transport corridor is dedicated, buses are likely to be more reliable and travel faster; this will encourage more people to use public transportation instead of driving cars. As a result of this mode shift, fewer vehicles will be on the road, which will reduce emissions and traffic congestion.
- The Wellington City Spatial Plan (2021): calls for a safe, connected, and low-carbon transport network. Cycling and active modes are prominent in the Plan, along with infrastructure that supports growth. Additionally, the Plan outlines:
    - Safely and efficiently moving more people with fewer vehicles
    - Giving convenient, safe, and accessible choice for people to travel without using cars
    - Making city streets more attractive and safer places to be
    - Supporting urban growth and regeneration.
- WCC Economic Wellbeing Strategy (2022): Developing thriving suburban centres and a dynamic city centre through public and active transport infrastructure is one of the outcomes of the WCC Economic Wellbeing Strategy. There is also a focus in the strategy on the disruptions that occur in the central city and the importance of keeping businesses informed about these disruptions.
- The Paneke Pōneke: Bike Network Plan (2022): This project supports the plan's objective to improve safety and connectivity for pedestrians, cyclists, and users of scooters of all ages and abilities.
- Parking Policy (2020): This project supports the policy's shift in the type of transport used and promotion of safe movement, particularly along arterial roads.
- The Golden Mile Single Stage Business Case: assumed that a second north/south public transport corridor would be developed to supplement the Golden Mile, providing increased capacity and supporting the overall efficiency of Wellington's public transport network.

3.3. Investment objectives and key service requirements

As a result of engagement with key Subject Matter Experts (SMEs) and internal stakeholders within WCC and GWRC in July and August 2024, the investment objectives, and business needs set out in Table 8, Table 9, and Table 10 have been identified.

It should be noted that these investment objectives were set when the project was of a more transformational nature and a higher value investment. Now the project has been scoped to a lower level (see section 4.4 short list options for commentary on this change), not all these investment objectives are now able to be met. This is particularly so for Investment Objective 3.

Table 8: Investment objective one

Investment Objective 1	**To enhance travel time and operational efficiencies and resilience in response to planned and unplanned disruptions through the development of a second public transport corridor by December 2026**
Existing arrangements	• Over the next 2-5 years, multiple transport, and urban development projects, including the Golden Mile project, will lead to a loss of network capacity in the central city area and disruptions of all modes of transportation, causing travel delays and poor customer experiences. • Temporary disruption caused by minor road works, events, protests, and building works will result in rerouting of buses and further impact reliability for all modes. • Suboptimal performance in public transportation may lead to issues relating to an unattractive urban environment.
Business needs	• Access to good public bus transport services is enabled through high-quality infrastructure • To improve variability of bus travel times • Operational and efficiency optimisation of transport networks • To increase alternative route options for planned and unplanned transport disruptions • To enable better continuity of service • To enable fast and more reliable journeys • To enhance street scape experiences • Infrastructure that supports more efficient bus services to and through the city, including regional destinations such as the hospital and airport, Te Papa and Tākina.

DRAFT

Table 9: Investment objective two

Investment Objective 2	**To increase public transport capacity through the central city by creating a second public transport corridor through the central city by December 2026 due to the currently constrained Golden Mile**
Existing arrangements	• Bus volumes significantly exceed optimum bus numbers (50-80 buses per hour). • Current peak bus speed (8 km/h) is well below international benchmarks. • As a result of increased passenger demand and services along the Golden Mile, parts of the city's central bus corridor operate at or exceed capacity at peak times, resulting in reduced reliability, increased travel times, and impact on the central city's quality. • From 2032, bus speeds at the morning peak are expected to average 3-6 km/h on the Golden Mile as congestion increases. • In peak traffic, buses will increasingly queue back onto Cambridge Terrace and back to the Railway station. • Without changes, unreliable services will degrade, especially in the central city, and inefficiencies like slower journeys and bus delays will continue to worsen.
Business needs	• To address the Golden Mile public transport corridor capacity constraints • To transform the transport system to move more people with fewer vehicles • To provide for growth in bus numbers • To improve the bus level of service • To improve safety for all corridor users

DRAFT

Table 10: Investment objective three

Investment Objective 3	**By 2030, to enhance connectivity and safety along and across the Harbour Quays corridor for all modes of travel, in order to support urban activation**
Existing arrangements	• The number of traffic lanes on the Quays causes a significant severance, impacting safety and accessibility for pedestrians and other active modes; also compounding poor connectivity and wayfinding between the Waterfront and city destinations. Levels of amenity along the corridor are limited with poor provision of greening and shelter from sun and wind. • Movement space in the Harbour Quays corridor is dominated by vehicles, impacting amenity, viability of active urban edges and contributing to poor safety outcomes from a Crime Prevention Through Environmental Design (CPTED) perspective. • There is a limited recognition of the route's cultural and historical significance. • Over the next 2-5 years, multiple transport, and urban development projects, including the Golden Mile project, will lead to disruptions for all modes of transportation, causing travel delays and poor customer experiences.
Business needs	• To provide alternative transportation options during the construction disruption in the next 3 years • To improve pedestrian connection to key city destinations • To provide an excellent bus passenger experience • To provide attractive, people-oriented streetscapes that encourage commercial development, and urban renewal • To maintain access to businesses, residential areas and for emergency vehicles • To provide amenities at key bus stops in keeping with the central city place function • To allow for integration with planned future bike network development projects • To ensure no net loss of green infrastructure • To support cost-effective amenity, transport safety and transport integration improvement options.
Notes	• The Harbour Quays project will partly address this investment objective by resolving the buses through the corridor. Separate projects are planning bike network developments and delivery of green infrastructure. Not all the business needs identified are able to be met by this project.

DRAFT

The table below outlines the key service requirements that must be met by this project and that have been factored into the recommended option from this business case.

Table 11: Harbour Quays potential key service requirements

ID	High-level service requirement	Rating
1.	Buses can drive along the two-way route alternative to Golden Mile with a drop-off and pick-up capability	Essential/core
2.	Providing adequate, comfortable, and safe shelter at bus stops	Essential/core
3.	Providing safe and efficient access to bus stops for buses and bus passengers	Essential/core
4.	Parking management	Essential/core
5.	Information provided in real time	Essential/core
6.	Maintaining or decreasing the total journey time (including the walk to and from the stop)	Essential/core
7.	A sufficient length of bus stops so that buses can pull into and out of stops without difficulty	Essential/core
8.	Suitable wayfinding	Essential/core
9.	Redesign of bus service routes and timetables	Essential/core
ID	**Other**	
1.	Elevated bus lanes	Out of scope
2.	Grade separation for pedestrians	Out of scope
3.	Speed limit changes	Out of scope
4.	Any civil works outside of the requirements for bus stops	Out of scope
5.	Redevelopment of the waterfront	Out of scope
6.	Increased capacity for general traffic on the roads	Out of scope
7.	The development of alternative routes (other than Harbour Quays preferred option)	Out of scope
8.	General carriageway maintenance and operations	Out of scope

3.4. Key stakeholder information

Engagement to date

GWRC have run a number of focus groups on the Harbour Quays bus route concept. These include:

- The GWRC Public Transport Advisory Group workshops on the Harbour Quays, 2021, 2023 and most recently May 2025, where the proposed designs were shared for feedback in a focus group.
- A focus group undertaken by Research First on behalf of Metlink in 2021.

Most participants supported the creation of a second public transport corridor along Harbour Quays, acknowledging it was necessary to enable more bus services to be

provided in the central city. However, any shift of bus services to the Harbour Quays would be contingent on:

- Improved bus services, including shorter travel times through the city centre, particularly at peak times
- Good shelter at bus stops to mitigate perceptions that the Harbour Quays is exposed to the weather
- A better connection to the waterfront and improved place making along the Quays
- Safe and fully accessible pedestrian access to and from Harbour Quays bus stops.

Other insights included:

- There should be a logical grouping of bus routes between Harbour Quays and Golden Mile
- The Harbour Quays public transport corridor is an opportunity to activate the area between the central city and waterfront, encouraging more amenity in the area to give it a more human scale.

Information regarding external stakeholders

- We continue to work to understand stakeholder interests in greater depth and improve designs/route plans as necessary. Stakeholders will have an opportunity to provide feedback on the design through the consultation phase.
- A list of stakeholders likely to be affected or interested in the results of the proposed Harbour Quays public transport corridor has been identified and will be engaged with.
- WCC and GWRC have jointly developed a Communications and Engagement Plan that includes considerations for the lead time required for the implementation of a new route and timetable, enabling operators to better understand the changes and how they should allocate their fleet.
- A dedicated mailing list will record stakeholders for targeted and regular engagement, allowing those affected by on-street carpark removals and new bus stop installations to be kept informed. This will complement the engagement and consultation undertaken through the WCC traffic resolution process.
- Information on the project can be found on both WCC[17] and Metlink[18] websites and a dedicated email address is available.

3.5. Benefits profile

During working sessions (including an ILM session and a separate benefits meeting) with internal stakeholders and SMEs in July and August 2024 and refined in February 2025, the following high-level benefits were identified.

[17] Harbour Quays Bus Priority | WCC Transport Projects
[18] Regional Bus Corridors - Harbour Quays » Metlink

Table 12: High-level benefits

Benefit Description	Beneficiary	Benefit Measurement	Strategic Imperative (and KPI) Linkage
Bus travel time and reliability improvements for bus passengers	Bus passengers, and the public in the Wellington region	KPI1: Average travel times for buses on both corridors (Harbour Quays and Golden Mile) KPI2: Variability of average travel time for buses on both corridors KPI3: Satisfaction with travel time and reliability along Harbour Quays	**WCC Economic Wellbeing Strategy:** Reliability of core infrastructure (water supply, energy supply, transport) supports business productivity KPI: Time it takes to travel across the city – decreasing trend KPI: Business perception survey – improving trend **Bus Priority Action Plan:** More bus priority KPI - More reliable and quicker bus trips **RLTP:** Build capacity and reliability into Wellington City's public transport network to accommodate future demand KPI: Public transport journey times and variability - Average travel times on core regional bus routes Travel time variability on core regional bus routes KPI: The efficiency of the road network on strategic routes – Average travel time variability on selected strategic routes.
Increased peak bus capacity within the central city	Bus passengers, the public in the Wellington region, businesses, and employers	KP1: Number of buses supported through both Golden Mile and Harbour Quays corridors	**RLTP:** Build capacity and reliability into Wellington City's public transport network to accommodate future demand

DRAFT

Benefit Description	Beneficiary	Benefit Measurement	Strategic Imperative (and KPI) Linkage
		KPI2: Increased central city bus peak hour patronage	KPI: Capacity utilisation rate (the public transport system can accommodate future demand) KPI: The number of people boarding bus and train services during peak and off-peak times
Improvements in the walking environment along the Harbour Quays route	Bus passengers, the public in the Wellington region, businesses, and employers	KPI1: Pedestrian flow along and across the route at key locations KPI2: Walking Safety (pedestrian crashes)	**WCC Central City Framework:** More walking KPI: Pedestrian footfall into the CBD and around it KPI: The degree to which the city is walkable.

3.6. External drivers

An external consultant and the project team identified external drivers for the project which are outlined in the table below. The relevance of each of these many change from time to time and over the life of the project.

Table 13: External drivers

The external drivers for the investment proposal	Description and considerations
Political context	Potential for change to decisions on the Golden Mile creates uncertainty for planning of Harbour Quays and other projects. Significant scrutiny of officer advice by elected members may lead to increased scope, time, and costs. Different political priorities between GWRC and WCC councillors may make for challenging decision-making. Provides an opportunity for the project to demonstrate good decision-making. Government Policy Statement on Land Transport and the direction of central government.
Economic context	Increased costs and people spending less time in the city are currently putting significant pressure on the city and economy.

The external drivers for the investment proposal	Description and considerations
	A move from central government for increase in user pays for public transport might impact on peoples travel choices. In the central city, businesses are facing a challenging economic environment, as well as a lower ability to withstand and accept disruptions. Moving additional buses from Golden Mile will make a more pleasant environment and encourage more people to spend more time (and money) at businesses.
Social licence	It is possible that the project, particularly the impact for private vehicles on the Harbour Quays, will attract strong public backlash, especially considering rising rates and struggling inner-city businesses. Broad-scale communications will be required to manage this change, and information on the impact of change provided. It will be necessary to coordinate communications with key stakeholders for central city projects, as well as businesses impacted by the changes. There is an expectation from public transport passengers, that the introduction of a second public transport corridor will lead to improved bus services.
Multi-modal and whole-of-network approach	There is currently no broader agreed transport plan for the city with a lot of parallel planning processes underway. Prior to any decision on the preferred solution, it will be necessary to clarify the relationship between this project and various other projects - in terms of spatial arrangements, and timing.
Compelling evidence base	A compelling evidence base exists for both councils supporting the need for immediate action on the issue of peak bus capacity. There is an opportunity to develop a clear plan for short-term delivery that will ultimately lead to an agreed process for longer-term solutions that will be effective in meeting the needs of the public transport customers.
Clearly defined customer value propositions	It is important to focus communication efforts on practical goals such as making bus travel faster and improving journey time.
Timing and urgency	The project will establish clear milestones and demonstrate progress, while considering the impact of construction projects, including Golden Mile, on buses.

The external drivers for the investment proposal	Description and considerations
Governance, partner relationships, programme approach and interdependencies with multiple projects in central city area	Governance decisions may affect the suitability of the preferred solution. The council partners will have a partnership and funding agreement.
Reputational risks	Different messages may confuse the public. It will be necessary to establish a working relationship between the Golden Mile and Harbour Quays projects and a joint communication message about the location of the bus network and bus operations.

3.7. Main constraints, dependencies, and assumptions

This project is subject to the following constraints, dependencies and assumptions. During the project, management strategies and registers will be used to keep track of these, and they will be monitored and managed regularly.

Table 14: Key constraints, dependencies, and assumptions

	Constraints	Notes
C1	There is a budget of $10 million for development and implementation	Allocated through LTP 2024-2034 and signalled in the project brief.
C2	Delivery timescale constraints	Needs to be operational by late 2026.
C3	Heritage sites and sites of significance to Māori, including those protected by the District Plan, need to be considered	Consider the context analysis document prepared by the Urban Regeneration Team and engage the necessary advice on specific design aspects.
C4	The heritage value of the Post Office Square may prevent shelter installation or limit nearby construction.	Likely that a non-notified resource consent will be required.
C5	The timing of the demolition of the City to Sea Bridge linking Civic Square to waterfront.	Consider the timing of demolition and remedial works in conjunction with construction of Harbour Quays to minimise disruption.
C6	The demolition and construction of a new multi-story building at 105-111 Featherston Street. When works commence, road space re-configuration will happen.	The project team will need to work with the developer if a bus stop in the vicinity is considered.

	Constraints	Notes
C7	Significance and Engagement Policies	The policies consider the importance of the project to both councils, community interests, consistency with strategy, and impact on both councils capacity to inform the level of engagement and communication.
C8	The proposed Traffic Resolution must be open for consultation for a minimum of 2-weeks before a decision can be made on it.	Normal practice on significant projects is to allow 4-weeks for feedback on proposed traffic resolutions. This will apply to this project.
C9	Space is limited and the reallocation of that space across various users is likely to be politically contentious.	It is important for designers to consider this during the optioneering process.
C10	Local Government Act requirements for elected members to make the decision on reasonably practicable options (unless delegated) and sufficient information to be included in consultation	Elected members should be provided with all options as part of any decision-making process, and the public must be informed of all the identified reasonably practicable options as part of any consultation process.
C11	The operator's bus drivers require extensive consultation and programming of changes to their rosters (between three to six months).	This lead time needs to be factored into the go-live planning.
C12	It is important to consider the construction schedule for the Golden Mile and the need to minimise disruption to transportation and businesses. If traffic management isn't used, temporary solutions would be difficult to implement in time for construction to begin.	Weekly programming meetings - to coordinate and communicate key milestones and critical paths. The Golden Mile Team would need to implement temporary traffic management if coordination in terms of timing cannot be achieved.
	Dependencies	**Notes and management strategies**
D1	Golden Mile closing Courtenay Place northbound to all traffic from early 2026. The need to shift up to 30 buses per hour off the Golden Mile around late-2026.	The construction schedule for the required bus stops should ensure alternative bus capacity is available by early 2026 to minimise transport and business disruption.
D2	The demolition and construction of a new multi-story building at 105-111 Featherston Street limits what the project can do in that block – road layout changes will happen during construction, limiting project works.	The project team will need to work with the developer to integrate the plans to make sure the infrastructure is in place.

DRAFT

	Dependencies	Notes and management strategies
D3	Construction of Lambton Quay, part of the Golden Mile project, cannot begin until the second corridor is completed by the end of 2026.	If the second public transport corridor is not delivered on time, the buses will lack the necessary infrastructure. Coordination between the two projects is essential to ensure aligned timelines.

	Assumptions	Notes and management strategies
A1	The councils can deliver the outcome within the public road reserve with no necessity to purchase private land.	It will cause additional expenses and time delays if we need to purchase private land, which requires additional approval of one or both councils. A land purchase would need to be justified by its benefits exceeding its costs. It is confirmed that no private land is required.
A2	Traffic resolution approvals will be achieved for the preferred design.	If consultation raises issues which require designs to be changed significantly before traffic resolutions are presented to the relevant Committee or are not adopted, re-design will be required to deliver an approvable solution.
A3	Golden Mile construction on Lambton Quay is dependent on the Harbour Quays project being operational	Lambton Quay construction requires diversions for the duration of construction.
A4	Golden Mile exceeds capacity in 2032 (saturation point), and bus services need to be accommodated elsewhere in the network	Buses are forecast to exceed 130 bus per hour in 2032, which will start to impact the wider transport network as buses start queuing to enter the Golden Mile.
A5	The solution is expected to be in place for the next 10-15 years.	In 10 to 15 years, the demand for public transport will likely necessitate the consideration of rapid transit systems.
A6	The Cross City Bike Connection project will address the issues in the corridor for bikes.	The Cross City Bike Connection is looking at the connections from the Railway Station to Kent Terrace and Brooklyn Road.

DRAFT

	Assumptions	Notes and management strategies
A7	Golden Mile was expected to reach capacity by end of 2025, requiring services to be relocated to other parts of the network. The solution will be implemented for the next 10 to 15 years to resolve the capacity constraints on Golden Mile.	If the assumption is not validated, we will experience declining bus speeds and increased unreliability due to greater congestion and at least 3 or 4 buses travelling together. This will hinder the achievement of regional mode shift targets, impact productivity, and prevent the addition of new services, resulting in unmet customer demand. Consequently, there will be reduced funding for new buses and services, requiring councils to rethink how they reformulate how they meet customer demand.
A8	We assume the new councils (WCC and GWRC) will support the project.	Unless the assumption is validated, the project team will need to take more time to show the new Council the project's importance. The project may need to be stopped or rescoped.
A9	The elections will not slow down our ability to communicate and engage with stakeholders.	It may be necessary to reconsider decisions made during the election period if the assumption is not validated. The project team will plan accordingly and seek the Joint Steering Groups guidance on information sharing.

DRAFT

4. Economic case

The purpose of the economic case is to assist in determining the preferred way forward for the project.

4.1. Critical Success Factors

CSFs are the attributes essential to successful delivery of the investment, against which the project options can be assessed. The CSFs must be crucial rather than desirable.

The CSFs for the project were developed through workshops held in early 2025 and then updated for this business case. These are set out in the table below.

Table 15: Critical Success Factors

CSF Dimension	Considerations	Investment-specific CSFs/Explanation
Strategic fit and business needs	Is the option aligned with the WCC, GWRC and national key strategies? How well does the option fit the investment objective, business need and service requirements?	• The project is aligned with the strategies, goals and other projects of WCC. For example: o WCC LTP 2024-34, Te Atakura First to Zero 2019 Strategy, Wellington City Spatial Plan (2021), WCC Economic Wellbeing Strategy, Paneke Pōneke: Bike Network Plan and Golden Mile SSBC. • The project is aligned with the strategies and goals of GWRC. For example: o Wellington RLTP 2021-2031, GWRC LTP 2024-34. Bus Priority Action Plan 2019 and Wellington Regional Transport Emissions Reduction Pathway 2023. • The project is aligned nationally, for example: o Government Policy Statement on Land Transport 2024-34, NZTA's Arataki 30 Year Plan, NZTA's Aotearoa urban street planning and design guide, NZ Emissions Reduction Plan, NPS on Urban Development and announced SH1 Wellington Improvements RON's project. • The project can meaningfully contribute to achieving the investment objectives (as set out above in the Strategic Case).

CSF Dimension	Considerations	Investment-specific CSFs/Explanation
Potential achievability *[Resourcing, technical and programming]*	How well will the option deliver given both council's ability to respond to changes? What are the technical risks involved in developing or implementing this option? When can the option be delivered?	• WCC and GWRC have the capacity and level of skill to deliver this project. • Regulatory approvals, such as resource consents and traffic resolutions, can be achieved. • The project will be able to satisfy a Road Safety Audit. • The project can be constructed in a reasonable timeframe, and in particular, it can be implemented by the end of 2026.
Potential value for money	Does the option provide a good value for money in terms of achieving the identified benefits?	• The benefits of this project will outweigh the cost (including cost of disruption during construction).
Potential affordability	How well can the option be funded from available sources of finance? Is there any impact on the both council's overall financial performance resulting from doing this project?	• Funds have been identified in the WCC and GWRC's LTPs for design and implementation costs. • Operational and capital costs are affordable throughout the project's lifecycle (noting there is likely to be some on-street parking revenue lost from parking removal). • As compared to taking no action, the project provides better outcomes within the affordability envelope.
Supply-side capacity and capability	Can the suppliers deliver the option? Will the option be attractive to the supply side?	• Suppliers have the capacity and capability to deliver the project. • A competitive construction tender opportunity will be provided to potential suppliers through this project.

For avoidance of doubt, the performance of the preferred option (see section 4.10) has been assessed against the above CSFs in the table above.

4.2. Long list corridor options and initial options assessment

The Strategic Case indicated that the city's only current public transport corridor, the Golden Mile has reached the limits of its operational capacity and will experience severe bus congestion by 2032, significantly affecting both travel times and travel time reliability. As almost all Wellington bus services use this corridor, the impact would be network-wide.

There are two options to address this problem: reducing demand or increasing capacity.

Since reducing demand contradicts several of WCC and GWRC's strategies and policies that promote public transport (as identified in the Strategic Case), **the preferred approach is to increase the capacity of the bus network through the central city**.

Capacity on the Golden Mile corridor is constrained by the limited road capacity of the corridor (ie the road cannot be easily widened) and therefore an additional public transport corridor is required elsewhere to provide extra capacity.

A second public transport corridor is therefore required to provide additional public transport capacity through the central city, as can also support the upgrades to the Golden Mile

This additional public transport corridor will allow for the introduction of current services onto that corridor moving them off the Golden Mile, increased service frequencies on existing routes, and provide redundancy in the event of the Golden Mile being disrupted.

4.3. Long list assessment and recommendations

Interim and permanent options for the second public transport corridor were initially developed and assessed across a series of workshops in July 2024. These workshops were attended by representatives from WCC, GWRC, NZTA and consultants. The process undertaken is documented in the Harbour Quays Options Assessment Report (Rev 2, WSP, 13 August 2024) attached as **Appendix B**.

At the time of undertaking the long list assessment, WCC and GWRC were pursuing a phased approach for delivery of the second public transport corridor so were looking at both permanent and interim options. Analysis in this section aligns with this and includes both:

- Interim improvements would be implemented to address the short-term needs of the central bus network (e.g. for the first 10 years). Identified as options referenced with a "T" below.
- Permanent improvements in the long-term. Identified as options referenced with a "P" below.

Whilst a phased approach is no longer being taken, both WCC and GWRC considered the optioneering process undertaken in 2024 was still valid in terms of identifying and assessing a long list of options, and that any future option and development process would build on this work. Therefore, these options are outlined below.

For both the interim and permanent options, two high-level road corridors were considered for a second public transport corridor parallel to the Golden Mile; no other corridors that would achieve the objectives are realistically available. The two corridors are:

- The Harbour Quays corridor which comprises Whitmore Street, Customhouse Quay, Jervois Quay, Cable Street, and Wakefield Street to Kent Terrace.
- The Featherston corridor which comprises Whitmore Street, Featherston Street, Hunter Street, Victoria Street, and Harris Street before connecting to Jervois Quay and the rest of the Harbour Quays route.

Two interim options and eight permanent options were developed as part of the long-list.

The two interim options, as shown in Figure 5[19] were referred to as follows:

- T01: Featherson Street - Split Bus Route, which splits northbound and southbound buses between the Harbour Quays and the Featherston route (it is noted at the time of the assessment bikes were proposed to be accommodated on the Harbour Quays).
- T02: Harbour Quays - Kerbside Bus, which has buses in both directions on the Quays on either side of the road (it is noted at the time of the assessment bikes were proposed to be accommodated on the Featherston Street route).

Figure 5: T01 and T02 interim bus routes

The permanent options are outlined in Table 16 below (see **Appendix B** for more detailed information). These all pivot around the two main corridors of Featherston Street and the Harbour Quays but involve greater levels of infrastructure change to enforce the status and priority of the bus routes.

Table 16: Permanent bus route options

Option Category	Option
P01 – Split bus route	P01A: Split Bus Route via Harris Street including converting Wakefield Street into a two-way busway.
	P01B: Split Bus Route Variant via Wakefield Street including converting Wakefield Street into a two-way busway.
P02 – Buses both ways on Quays, bikes on Featherston route	P02A: Buses Kerbside on Quays – buses would travel in Kerbside lanes.
	P02B: Buses Cityside on Quays – two-way buses on the current northbound carriageway, closing a number of side streets
	P02C: Buses Centre-Running on Quays – buses would travel in a new two-way bus route in the middle of the Quays, replacing the current median.

[19] See: Harbour Quays Options Assessment, Wellington City Council, August 2024.

Option Category	Option
P03 – Buses on Featherston	P03: Buses on Featherston – two way buses on Featherston Street with no general traffic.
P04 – Buses and bikes on the Quays	P04A: Buses and Bikes Cityside on Quays – similar to P02B but also including a two-way cycle lane in the same corridor.
	P04B – Buses Cityside and Bikes Waterfront Side on Quays. Similar to P04A but the cycleway is on the current southbound carriageway.

All 10 options were evaluated against a range of criteria across seven categories: Bus, Bikes, Pedestrians, Place, Strategic Alignment, Effects, and Implementability and this assessment can be found in Harbour Quays Option Assessment Report (see **Appendix B**).

The Harbour Quays Option Assessment Report (which was written at the time that the development of an additional public transport corridor was going to be phased) stated the following conclusions regarding the preferred interim and permanent options:

> *The preferred interim option was T01 – Split bus route. This option avoids the need for bus passengers to cross the Quays to access Golden Mile or nearby destinations. It allows both the Featherston and Quays routes to be tested for traffic and bus travel time impacts. It also avoids the added costs of providing a contra-flow bike facility along the Featherston route.*
>
> *No preferred option was selected for a permanent solution. While options P03, P04A, and P04B scored highest, it was agreed amongst stakeholders that more information is needed to more robustly test the options. It was agreed that all the options tabled through this options assessment process will remain to be considered through a robust Business Case process. No options were fatally flawed based on the available information. However, funding availability may mean some options are not feasible.*
>
> *While identifying the need for bike provision as part of this process, the addition of bike infrastructure may be done at a later stage of the project.*

4.4. Short listed options

Following the completion of the long list options assessment in mid-2024, several key changes occurred in the overall context of the project, as outlined below:

1. A start date for the Golden Mile enabling works was confirmed and, alongside this, confirmation that the project needed to be in place before construction starts on the Lambton Quay section of the Golden Mile in 2028.
2. WCC confirmed that they will not be looking to invest in a permanent solution in the short to medium term, and therefore this project needs to be in place for the next 10-15 years.
3. The funding envelope for physical construction of the project was confirmed as being $6M-$8M.

These changes were expected to influence the relative preference between the interim and permanent options. To help determine this, the project team assessed the do nothing, interim, and permanent options against the CSFs outlined in the table below.

The assessment focused on the most relevant considerations for each CSF. It is noted that the "Supply-side capacity and capability" CSF was not considered applicable for this particular evaluation.

Table 17: Assessment options against the Critical Success Factors

Critical Success Factor Dimensions	Relevant CSFs Considered by Project Team	Options		
		Do Nothing	Interim Options	Permanent Options
Strategic fit and business needs	The project is aligned with the strategies and goals of WCC, GWRC and national strategies	Does not align.	Good alignment	Good alignment
Potential achievability [Resourcing, technical and programming]	• WCC and GWRC have the capacity and level of skill to deliver this project. • Regulatory approvals, such as resource consents and traffic resolutions, can be readily achieved. • The project can satisfy a Road Safety Audit.	N/A	• Interim options are implementable. • Further assessment will be undertaken to confirm achievability in the Developed and Detailed design phases.	• Permanent options are implementable. • Further assessment will be undertaken to confirm achievability in the Developed and Detailed design phase.
	The project can be constructed in a reasonable timeframe, and in particular, it can be implemented by	No construction needed.	Implementation is possible in the 2025/2026 and 2026/2027 financial years.	Implementation is unlikely to be possible from the 2026/2027 financial year (but ultimately depend

DRAFT

Critical Success Factor Dimensions	Relevant CSFs Considered by Project Team	Options		
		Do Nothing	Interim Options	Permanent Options
	the end of 2026.			on the option to be pursued).
Potential Value for Money	As compared to taking no action, the project provides better outcomes within the affordability envelope.	No better outcomes are achieved.	The 2024 MCA showed good outcomes in relation to the bus criteria and the options were within the affordability envelope.	The 2024 MCA showed good outcomes in relation to the bus criteria however, the options were not within the affordability envelope.
Potential affordability	Funds have been identified in the WCC and GWRC's Long Term Plans for design and implementation costs.	No funds needed.	Can be entirely funded from existing WCC and GWRC budgets.	Higher costs mean that these options cannot be funded from existing WCC and GWRC budgets. Accordingly, a FAR contribution from NZTA would be needed. This may also not be possible due to national transport funding constraints.
	Operational costs are affordable throughout the project's lifecycle (noting there is likely to be some on-street parking revenue lost)	No changes to operational costs.	Minimal changes to operational costs.	Minimal changes to operational costs.

DRAFT

From this analysis two key decisions were made:

1. **All of the permanent options were discounted**, as:
    - They involved significant new infrastructure which would not be affordable within the funding envelope and therefore are not considered reasonably practicable at this stage given the broader fiscal constraints faced by WCC that resulted in the funding available for this project being reduced.
    - They would not be able to be implemented before 2028 and therefore would not meet investment objectives 1 and 2, which require development of the alternative route by December 2026.
2. It was determined that some further development was needed on the interim options as they would be required to have a longer design life than had been previously envisaged.

Accordingly, the two interim options identified from the long list process have been short-listed as the only reasonably practicable options that would achieve the investment objectives. These two options have been subject to further development and evaluation.

To provide a suitable basis for comparison, a Do Minimum option was developed in preference to a Do-nothing option. These options are outlined below.

Option 0: Do Minimum

The Do Minimum involves retaining all buses on the Golden Mile including the buses that currently stop/start in Brandon Street with bus growth in line with projected population and passenger growth (e.g. up to 130 buses per hour by 2032). With the completion of the Golden Mile project, including the closure of Brandon Street, all bus routes currently terminating at Brandon Street would be rerouted onto the Golden Mile.

Option T01: Featherston Street

As shown in Figure 66, Option T01 follows a southbound route along Whitmore and Featherston Streets before exiting onto Jervois Quay. The exit onto Jervois Quay would occur via Hunter Street, or Willeston Street, or Harris Street. The latter two options would necessitate the southbound route also being located along the northern section of Victoria Street. Existing connections further south of Harris Street (e.g. via Wakefield Street or Victoria Street) were considered and discarded due to construction disruption constraints that would be created by the Te Ngākau build.

From the final exit onto Jervois Quay, the route continues along Customhouse Quay, Jervois Quay, Cable Street, and Kent Terrace before terminating at the Kent / Cambridge Terraces / Courtenay Place intersection. The northbound route starts at Kent/Cambridge Terraces and traverses the Harbour Quays all the way to Whitmore Street where it re-joins the southbound route north of Featherston Street.

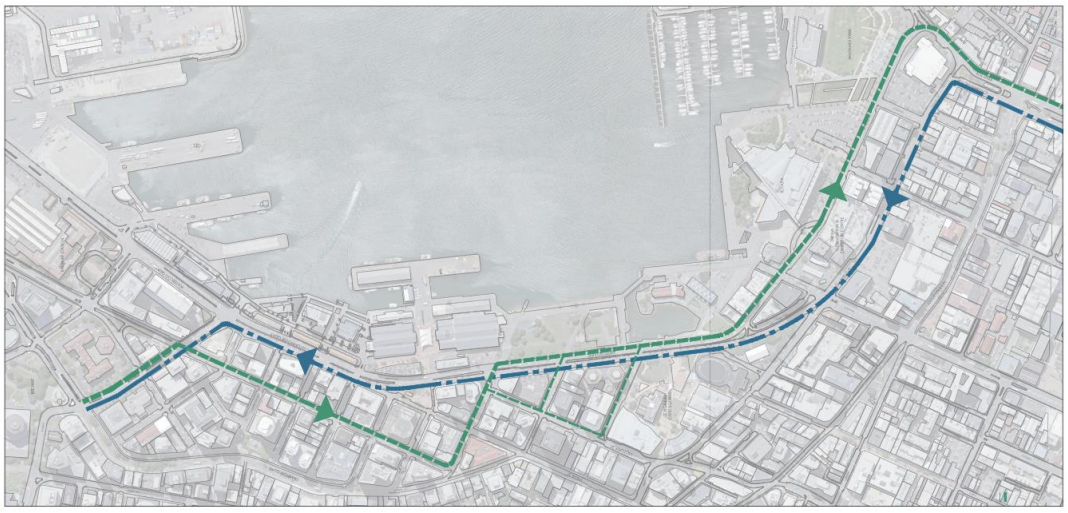

Figure 6: T01 Featherston Street route alignment

Further detail on Option T01 is contained within the Harbour Quays Draft Concept Design Report attached as **Appendix C**.

Option T02: Harbour Quays

In summary, and as shown in Figure 77, Option T02 follows a southbound route along Whitmore Street before exiting onto Customhouse Quay. The route continues along Customhouse Quay, Jervois Quay, Cable Street, and Kent Terrace before terminating at the Kent / Cambridge Terraces / Courtenay Place intersection. The northbound route is the same route as southbound (and the same as T01).

Figure 7: T02 Harbour Quays route alignment

Further detail on Option T02 is contained within the Harbour Quays Concept Design Report attached as **Appendix C**.

4.5. Bus stop location strategy

In parallel with the route corridor option assessment, a bus stop location strategy[20] was developed specifically to inform bus stop location options for the short listed options of the Featherson Street option and the Harbour Quays option. This work was undertaken at this stage of the project so this information could be used to feed into the MCA process for the short listed options.

Development of this strategy considered:

- Bus stop catchment analysis, including identifying an ideal spacing of between 250m and 400m.
- Locations and connection to major destinations along the corridor.
- Connection to other transport interchanges, including stops on the Golden Mile.
- Pedestrian connectivity, including proximity to safe pedestrian crossing points.
- Bus accessibility and manoeuvrability.
- Impacts to general traffic.
- Potential infrastructure requirements, including ease of construction.

Initial potential bus stop locations

Based on the constraints and operational requirements for both corridor options, the strategy identified 12 potential bus stop locations for the project. The general locations of the potential bus stops for both corridor options are shown in the figure below and served as key inputs for the corridor option evaluations.

Figure 8: Featherston Street option and Harbour Quays option bus stop locations

Preferred option bus stop locations

In July 2025 a review of the number and location of bus stops was undertaken for the preferred Harbour Quays option. This review included a value engineering exercise to enable the project to remain within the budget allowance.

[20] See Appendix B for further information on the Bus Stop Location Strategy.

The review resulted in both the northbound and southbound bus stops in Whitmore Street being removed for several reasons

- There is uncertainty as to whether these stops can work operationally with the proposed buses, particularly in the northbound direction where numerous services would need to cross two lanes to make a right turn into the Lambton Interchange within a short distance of the stop.

These stops additionally were going to be expensive to build compared to other stops due to the requirements for services and other aspects. This review resulted in now having a proposed 10 bus stops, five in each direction.

4.6. Key assumptions for use in the MCA

The following key assumptions were used to inform short listed corridor option development and the MCA process:

- The project needs to be operational prior to construction of the Lambton Quay section of the Golden Mile project in 2028. The Golden Mile project is expected to be fully operational by 2031.
- The project will provide an additional public transport corridor to the Golden Mile corridor that will permanently accommodate selected bus routes moving through the central city.
- The project will also accommodate additional bus routes rerouted as a result of construction activities on the Golden Mile for a temporary period (nominally 1-2 years).
- Construction of this project is scheduled for 2026 and is expected to accommodate forecast bus and passenger volumes for up to 10 years.[21]
- The bus capacity for the project is based on anticipated growth and uptake that has been identified by GWRC. In summary it is expected that:
    - 90-140 buses per peak hour may need to use the project corridor during the Golden Mile construction period.
    - 30-60 buses per peak hour will use the Harbour Quays corridor post Golden Mile construction (interpeak frequency is expected to be in the order of 20-30 buses per hour).
- It is anticipated that express, commuter, and longer-distance regional services will operate along the project corridor, while regular all-day Wellington city services will continue to focus on the Golden Mile.
- The budget for the physical construction works for the project is between $6M-$8M. Accordingly, as a rule of thumb, all physical works are expected to be minimised and contained to the existing carriageways where practical. For example, in-line bus stops rather than indented stops are anticipated. In-line stops are also preferred for journey time reliability.
- All sections of the project will have a posted speed limit of 50km/h. Emergency vehicles will have full, priority access to the project corridor.
- All new project assets will be owned by either WCC or GWRC.

[21] When bus volumes approach 80 – 100 vehicle per hour (excluding temporary diversions for construction of the Golden Mile), it is likely that additional changes to the corridor will be required.

4.7. MCA of the short-listed options

Over the course of January and February 2025, an MCA was used to help inform a decision on the preferred corridor option.

The MCA built on the earlier August 2024 assessment; however, only the criteria deemed significant or useful for distinguishing between the two short listed options were carried forward for this evaluation.

Specialists from the project team, WCC, and GWRC were identified to assess and score each criterion. These specialists were briefed during a meeting held in January 2025, where the options were presented and the MCA methodology was discussed. The briefing paper is provided in **Appendix D**, with key elements summarised below. For clarity, and as discussed further below, this assessment did not include consideration of the addition of full or part time bus lanes at the time. A further appraisal of the impacts of bus lanes is provided in Table 29: later in the section.

The MCA criteria used to evaluate the two corridor options is set out in the table below.

Table 18: MCA Criteria used to evaluate the Short-Listed Options

MCA Assessment Category (as per 2024 MCA Report)	Sub Criteria Assessment	Matters considered
Bus	Bus Travel Times and Reliability (Proxy for IO1)	• Travel time and reliability on the new route • Travel time and reliability on Golden Mile • Wider bus network impacts
	Route Legibility	• Likely passenger experience of network with two spines including relationship of inbound and outbound services and stop pairing
	Network Capacity (Proxy for IO2)	• Ability to cater for higher-capacity public transit in the future • Ability to provide for disruption from planned and unplanned events on the Golden Mile • Overall bus network capacity • Passing ability at bus stops • Bus performance during Golden Mile construction
Pedestrians	Safe and Convenient Pedestrian Access and Movement (Proxy for IO3)	• Safe and convenient access between the route and city destinations • Safe and convenient access between the route and waterfront destinations • Pedestrian level of service along and across Featherston Street • Pedestrian level of service along and across the Quays (including Wakefield and Cable)
	Pedestrian Level of Service (Los) at Bus Stops	• Pedestrian level of service at new bus stop locations including pinch points, cover and environment

MCA Assessment Category (as per 2024 MCA Report)	Sub Criteria Assessment	Matters considered
Bike	Does not preclude future cycle routes or connections to existing routes	• Impact on creating future bike routes through the city • Impact on number of people riding into the city • Impacts on cycle LoS
Effects	Impact on general traffic	• Impact on general traffic travel times • Impact on traffic network which could affect adjacent multi-modal routes
	On-street parking impact	• Net loss per option • Impact on taxi, accessible and diplomatic parks, considering re-location
	Business impact	• Short-term retail impact during construction • Long-term retail impact – including benefits due to increased activity
	Construction and Constructability	• Ease of construction • Transport network impacts during construction • Pedestrian/bus user impacts during construction of bus stops

MCA evaluators were asked to score the performance of the future Do Minimum, Featherston Street, and Harbour Quays options against their assigned criteria using the seven-point scoring scale shown in the table below. To ensure consistency and comparability, the existing situation was assigned a baseline score of 0 for all criteria.

Table 19: Seven-point scoring scale

Magnitude	Score	Definition
Large Positive	+3	Major positive impacts resulting in substantial and long-term improvements or enhancements of the existing environment.
Moderate Positive	+2	Moderate positive impact, possibly of short-, medium- or long-term duration. Positive impacts may be in terms of new opportunities and outcomes of enhancement or improvement.
Slight positive	+1	Minimal positive impact, possibly only lasting over the short term. May be confined to a limited area.
Neutral	0	Neutral – no discernible or predicted positive or negative impact. Counterfactual could be the do-minimum or do-nothing,
Slight negative	-1	Minimal negative impact, possibly only lasting over the short term, and definitely able to be managed or mitigated. May be confined to a small area.
Moderate Negative	-2	Moderate negative impact. Impacts may be short-, medium- or long term and are highly likely to respond to management actions.

Large Negative	-3	Impacts with serious, long-term and possibly irreversible effect leading to serious damage, degradation or deterioration of the physical, economic, cultural or social environment. Required major rescope of concept, design, location and justification, or requires major commitment to extensive management strategies to mitigate the effect.

MCA evaluators were asked to assess the impacts and effects of each option in relation to their assigned criteria and document the key rationale behind their scores. They were also asked to discuss their assessments with reviewers from WCC and/or GWRC before presenting their final scores at the MCA workshop held in February 2025.

The MCA evaluators populated a workshop slidepack which was presented at the workshop. This is attached as **Appendix E**. The purpose of the workshop was to discuss and challenge each of the specialist scores and identify a technically preferred option taking all criteria into account. The workshop was attended by key members of the project team, specialists, and reviewers.

General agreement was reached with attendees in relation to all criteria apart from the two Pedestrian sub-criteria. Further refinement of these was undertaken post workshop with additional input from GWRC, and the outcomes reported back to the project team.

The final scores from the MCA process, including post workshop updates, is summarised in the table below.

Table 20: MCA final scores and key evaluation remarks

	Do Min	T01 [22]	T02 [23]	Comment and Key Differentiators
Bus Travel Times and Reliability (Investment Objective 1)	-3	2	2	If nothing is done, the capacity of the Golden Mile will be significantly exceeded affecting travel times and reliability. Both options take buses off the current route enabling buses to operate more efficiently than both the future Do Min and currently.
Route Legibility	2	-1	1	Having all buses on a single spine is most legible. Having two-way buses on two spines is also legible. Having second spine northbound and southbound buses on different routes is less legible.
Network Capacity (Investment Objective 2)	-3	1	2	If nothing is done, the capacity of the Golden Mile will be significantly exceeded. Both routes will improve capacity, but T01 has potential capacity limitations on Whitmore Street, Featherston Street and Hunter Street. T02 also has capacity limitations on Whitmore Street but not the other locations.

[22] Featherston Street option
[23] Harbour Quays option

	Do Min	T01 22	T02 23	Comment and Key Differentiators
Safe and Convenient Ped Access and Movements (Investment Objective 3)	1	-1	-2	Do Min is better than current situation due to Golden Mile project, but outcome impacted due to heavy bus congestion. T02 worse than T01 as the Quays are a barrier to pedestrian movement and potentially less safe.
Pedestrian LoS at Bus Stops	1	0	0	Improvements in Do Minimum due to Golden Mile. Options worse than Do Minimum due to simpler stops and less waiting area on second spine routes.
Does Not Preclude Future Routes or Connections to Existing Routes	0	-2	-1	T02 performs better than T01 as it leaves Featherston Street available for a cycling connection, whereas T01 creates conflict with bikes across both corridors, limiting future options.
Impact on General Traffic	0	-1	-1	Both options impact on general traffic travel time and variability as buses are added to existing traffic lanes. Although the options score similarly, there is a risk of greater impact with T01 due to the more complex route and less opportunities for traffic to pass buses on Featherston Street.
On Street Parking Impact	0	-1	-1	Both options affect parking, but the impact is relatively small in comparison to the length of the routes. T01 impacts 33 spaces and T02 impacts 25 spaces.
Business Impact	-2	1	2	Do Minimum scores poorly due to the bus and passenger crowding on the Golden Mile affecting the quality of the road and footpath environment. T01 and T02 score better due to having a greater spread of commuters through the city and increased business opportunities along new pedestrian flow routes. T02 better than T01 as it doesn't impact parking and stops for Featherston Street businesses.
Construction and Constructability	0	-1	-1	Both options are only expected to have a minor impact during construction as construction activities are relatively minor. T02 slightly better than T01 as traffic management is easier on the Waterfront Quays than Featherston Street.

MCA outcomes

In relation to the Bus criteria (which relate to key investment outcomes sought), the Do Minimum scores very poorly due to the extensive congestion forecast on the Golden Mile. Both options provide significant improvement over the Do Minimum (and the current situation) in relation to travel times and capacity. Route legibility is not as positive for the options, as this is a symptom of creating a new second public transport corridor for users. Overall, the scores for these criteria show that both options respond well to the investment objectives, and that the Harbour Quays option scores better than the Featherston Street option.

The scores for the *Safe and Convenient Pedestrian Access and Movements* criteria reflected the issue of creating a new second public transport corridor that is away from the key pedestrian areas of the Golden Mile. Both options perform worse than the Do Minimum as they move pedestrians to another corridor. However it was acknowledged that the second public transport corridor may also in fact bring some bus passengers closer to their destination and will likely see the streets between the Golden Mile and the waterfront overtime become increasingly activated and more attractive for pedestrians overtime.

The Harbour Quays option scores better than the Featherston Street option for fit with future cycle routes as it leaves Featherston Street available for a priority cycle connection to be built on this street in the future.

In relation to the Impacts criterion, all options score similarly, and slightly worse than the Do Minimum, except for Business Impact, where it is considered that providing an additional public transport corridor could increase footfall and help activate additional street frontage and provide a boost to businesses on this second corridor.

When considering all criteria together:

- Harbour Quays outperforms Featherston Street under four criteria: Route Legibility, Network Capacity, Future Cycle Routes, and Business Impacts. The Network Capacity is one of the most important criterion as it reflects the project's investment objectives.
- Featherston Street outperforms Harbour Quays only in relation to Safe and Convenient Access for Pedestrians. This is due to pedestrians needing to cross the Harbour Quays under that option.
- Neither the Featherston Street option nor the Harbour Quays option scored "-3" under any criteria (whilst the Do-minimum received two "-3s")
- Each option only scored "-2" for one assessment category each (i.e. the pedestrian criterion for the Harbour Quays option, and the cycling criterion for the Featherston Street option). These impacts may be able to be mitigated with further investigation.

Since the Featherston Street option outperformed the Harbour Quays option in only one criterion and there was no disagreement on the scores across all criteria, the MCA workshop participants agreed that undertaking weighting scenario assessments (for further testing the options under different settings) was unnecessary.

Overall, the MCA process identified **the Harbour Quays option as the best-performing option.** It scored highest against the key investment criteria and outperformed the Featherston Street option overall.

4.8. Economic assessment of the short-listed options

Due to the accelerated nature of this business case, and as a full MCA had been completed, a full economic analysis was not undertaken on the short listed options, but rather would be undertaken on the preferred option once it was confirmed.

To inform the MCA, economic performance was inferred by considering key benefits and cost outcomes identified from the transport modelling that had been completed prior to the workshop. These outcomes are summarised in the table below. It is noted that post the MCA workshop further investigations into the economic performance of the two options was undertaken. These updates can be found in the *WCC Harbour Quay Second Spine – Traffic Modelling Assessment Report* (see **Appendix F**).

Table 21: Proxy benefits and cost outcomes presented at the MCA workshop

	Option 0: Do Minimum (2022 Base Case)	**Option T01 2022: Featherston Street**	**Option T02 2022: Harbour Quays**
Proxy Benefits			
Total Network Travel Time (TT) AM Peak (hours)	21,820	22,434	20,836
Total Network TT PM Peak (hours)	23,637	23,785	25,475
Total Vehicle Kilometres Travelled (VKT) AM Peak (kilometres)	685,156	688,825	687,683
Total Vehicle Kilometres Travelled (VKT) PM Peak (kilometres)	847,180	842,762	845,488
Proxy Cost			
Length of route, number of bus stops and number of intersections are all similar	$0	$6-$8M	$6-$8M

The traffic modelling[24] outcomes at the time of the MCA showed only small differences between the two options, which is understandable as the model had a large geographical area.

Key observations presented at the MCA included:

- In the AM peak:
  - The key contributing factor is that the Harbour Quays option is primarily affected by southbound traffic.
  - Both the Featherson Street option and the Harbour Quays option were likely to result in increased congestion on Waterloo Quay and Featherston Street southbound, particularly north of Whitmore Street, with the most noticeable impacts occurring just around 9AM.

[24] For the purposes of the MCA and option identification, traffic modelling at the time conservatively assumed no reduction in on-road traffic volumes due to mode shift. For avoidance of doubt, a mode shift sensitivity test was included in the economic analysis of the preferred option.

    - Between the two, the Harbour Quays option was likely to have slightly less congestion when compared to the Featherston Street option.
- PM peak performance comparison:
    - The travel time changes between the two options are relatively minor.
    - The small increases in travel time and delay is likely caused by minor traffic rerouting around the already congested network, especially during 17.00-17.30, and around Jervois Quay and Wakefield Street.

Overall, the modelling completed prior to the MCA workshop concluded that the Harbour Quays option was likely to result in fewer disruptions during the AM peak while delivering similar performance to the Featherston Street option during the PM peak. It was noted at the MCA workshop that more detailed modelling would further help to refine option performance (e.g. modelling the inter peak period and future years).

While full costings were not undertaken for the purposes of the MCA, both the Featherston Street option and the Harbour Quays option were of similar length, required a comparable number of bus stops, and affected a similar number of intersections. A hard capital cost budget of $10 million, with a physical works construction envelope of $6–8 million had been set, meaning the preferred option must remain within this budget.

Accordingly, based on the above, there was no substantive difference between the two options in terms of transport economic benefits or estimated construction costs at the time of the MCA. As a result, it was not possible to identify a clear economically superior option during the MCA stage.

Instead, the preferred option was determined based on overall performance against the MCA criteria outlined above.

4.9. Non-financial benefits and costs

The non-financial benefits identified through the MCA process primarily relate to business outcomes once the new public transport corridor is operational. Establishing a second public transport corridor offers dual advantages: it reduces bus and pedestrian congestion on the Golden Mile, which in turn enhances its amenity and commercial appeal - while also increasing foot traffic along the new corridor, improving business prospects on both corridors.

Both short list options also provide new bus stops at key tourist destinations (e.g. Te Papa / Tākina, Wellington Museum), providing the benefit of making them more accessible to tourists who choose to take public transport.

These non-financial *benefits* are partially offset by non-financial *costs*, such as construction-related disruption. However, this impact is considered minor as the scale of construction is limited.

The Harbour Quays option is expected to improve overall non-financial outcomes when compared to the Featherston Street option. This is because it will better activate the Harbour Quays and have fewer impacts on Featherston Street.

4.10. Options risks

A summary of the critical and high risks is presented in the table below alongside a discussion on whether the risk is greater for one or other of the two short list options.

Table 22: Option risks

Risk	Cause	Consequence	Mitigation	Option Specific?
The preferred option may exceed the construction budget.	Cost increases due to clashes with underground services, additional pavement remediation, bus stop mitigation and / or escalation.	Project design may need to be modified impacting on benefits and implementation timeframes.	Phase approach to design and cost estimating. Independent QS, adequate contingency and monitoring of risks, minimise intrusive works, working with maintenance and ops programmes.	Both options have cost challenges – no option is better than the other.
Bus stop shelters require resource consents or archaeological authorities, which may cause implementation delays.	Some bus stop shelters will require authorisations (in addition to traffic resolutions). These may take time to be secured.	Delays programme and increases Project costs.	Prepare consenting strategy, seek approvals following completion of the Developed Design phase.	Risk for both options. Key locations for consenting risk include the bus stop on Post Office Square.
Lack of stakeholder, public or business support for the Project.	Removing on-street parking or location of bus services to new bus stop locations is considered less convenient by passengers or businesses are concerned that loss of parking will deter custom. Business / building owners concerned that a bus stop will	Delays traffic resolution process leading to construction delays.	Prepare and execute a Communication and Engagement Plan.	Less risk for Harbour Quays as it avoids road space reallocation on Featherston Street and therefore will be less disruptive for existing businesses on this street.

Risk	Cause	Consequence	Mitigation	Option Specific?
	reduce the attractiveness of their stores / buildings.			
Design of Golden Mile bus diversions on Cambridge Terrace and Wakefield Street are developed in isolation of the project.	Golden Mile bus diversions may require temporary bus stops that have very similar design requirements.	If not designed with twin project purposes in mind may lead to extra design costs being incurred.	Coordinate design requirements between the Golden Mile and Harbour Quays project teams.	Same risk for both options.
The Cross City Bike Connection Project is developed in isolation resulting in additional design or design delays.	Lack of integration or the timing of Cross City Bike Connection design, which is yet to start, delays the project's design phases.	Increased design costs and delays.	Input from cycle project into the project MCA, project teams are co-located for design integration purposes.	Harbour Quays presents less risk as it retains the Featherston Street as a road corridor, preserving the opportunity for a future dedicated cycling connection along that route.

Based on the above high level risk assessment, the Harbour Quays option better manages the higher risk elements of the project when compared to the Featherston Street option.

4.11. Preferred option

The preferred option consists of a package of three parts which are all outlined in this business case and summarised in this section:

1. The preferred corridor
2. The potential bus stops
3. Peak hour bus lanes

The preferred corridor

The above analysis shows that **the Harbour Quays corridor option is preferred** through the MCA and risk analysis, and it is likely to have similar costs and monetised and non-monetised benefits when compared to the Featherston Street option.

Following the completion of the MCA process, the WCC/GWRC Joint Steering Group endorsed proceeding with the Harbour Quays option as the preferred option. This endorsement was subject to the condition that the final transport modelling would not reveal any critical issues ("show stoppers") and that concerns related to weather exposed

bus stops and pedestrian access across the quays could be effectively addressed during the developed design phase.

The Harbour Quays option provides a second public transport corridor through central Wellington to eliminate bus congestion on the Golden Mile. It will provide for buses to use the waterfront quays between the Railway Station and Kent and Cambridge Terraces as outlined in Figure 99 below.

Figure 9: Preferred option - Harbour Quays

The key outcomes of implementing the preferred option are summarised in Table 23 below.

Table 23: Preferred option outcomes

Aspect	Outcome
Investment objective1: **To enhance travel time and operational efficiencies and resilience** (in response to planned and unplanned disruptions) through the development of a second public transport corridor by December 2026	The Harbour Quays option delivers a second public transport corridor along the Harbour Quays. • There will be 2-6 minute bus travel-time savings in the peak periods for bus services moved to the Harbour Quays corridor in 2033 (eg those buses that currently travel down the Golden Mile, when travelling now on the Harbour Quays will be 2-6 minutes faster). • With Harbour Quays in place there will be about a 0-1 minute bus travel time savings in the peak periods for the bus services which remain on the Golden Mile corridor in 2033 (eg in 2022 the trip takes about 15 minutes between Cambridge Terrace and Whitmore St, and by 2033, with Harbour Quays in place, this trip will still take about 15 minutes). • Supports planned disruptions along the Golden Mile during planned works • Reduces current travel variability of >30% • Provides direct access to regional destinations such as Te Papa.

Aspect	Outcome
	Having a second public transport corridor will also: • Provide more flexibility and redundancy for the public transport network to respond to planned and unplanned disruption, enabling buses to use either corridor during these events. • Maintain operational efficiencies for the public transport network during construction of the Golden Mile project.
Investment objective 2: **To increase the public transport capacity through the central city** by creating a second public transport corridor by December 2026 due to the currently constrained Golden Mile	• The Harbour Quays design is expected to support 30-60 buses per hour, with the ability to accommodate all buses during temporary closures of the Golden Mile. • The capacity of the Golden Mile, after implementation of the Golden Mile (upgrade) project is expected to have an optimal capacity of 50-80 buses per hour, capped at 100 buses per hour. • This level of buses on the Golden Mile aligns with international optimum levels of 80 buses per hour per lane. Higher levels than this and buses become less dependable with longer dwell times, less reliability and "stacking" of buses. • A second public transport corridor will enable buses on both the Harbour Quays and Golden Mile to be faster than current and predicted speeds on the Golden Mile. Current speeds are 8km/hr with optimum speeds being 14km/h. • Without Harbour Quays the Golden Mile speeds are projected to fall to 3-6km/hr at which time the journey along the Golden Mile will take 28 minutes. • Currently modelling show that this is will result in queuing of bus services on the wider local road network while waiting to access the congested Golden Mile (e.g. along Cambridge Terrace during peak travel times can be expected). This will impact general traffic on the wider network as well. If Golden Mile capacity issues are not addressed, the flow of buses along the Golden Mile will slow to a crawl and buses in the future will overflow and queue on the wider local road network while waiting to access the Golden Mile - for example, increased bus queuing along Cambridge Terrace during peak travel times can be expected. This outcome impacts on general traffic on the wider network as well. The Harbour Quays corridor is a six-lane road with available road network capacity. If peak time bus lanes are implemented, buses would need to share lanes with

Aspect	Outcome
	general traffic (i.e. outside of the bus lanes operating hours).
Investment objective 3: To enhance connectivity and safety along and across the Harbour Quays corridor for all modes of travel by 2030 to support urban activation.	• With increased pedestrian movements across the Harbour Quays, changes to the signalised crossings will improve pedestrian movement across the Harbour Quays. • The Harbour Quays development will integrate with the Cross Connections Cycleway.
Advantages	The Harbour Quays option provides a high capacity, legible and high performing second public transport corridor for Wellington, enabling efficient bus journeys on both the Golden Mile and the Harbour Quays. The new corridor will enable GWRC to increase service frequencies or introduce new routes in the future, while also providing an alternative corridor for buses in the event of disruption on the Golden Mile. Passengers who live or work close to the Quay will now have less distance to walk to access their bus service.
Trade-offs	While improvements in capacity, travel time, and travel time reliability will deliver transport benefits, the new Harbour Quays bus stop locations will require passengers who work or live to the west of the Golden Mile to walk further to access their bus services. Passengers will also need to cross the Harbour Quays corridor to reach their southbound services, which may result in some safety issues if not mitigated appropriately. Additionally, if peak bus lanes are introduced (in combination with in-line bus stops) to improve bus travel times and reliability, there will be impacts on general traffic travel times along the waterfront.
Benefits	See the Economic Analysis section below. In summary: • 10-year project life Net Present Value (NPV) at a 2% discount over a 10 year period: $19.2M[25].
Costs	Construction cost: $8M
BCR	See the Economic Analysis section below. The headline BCR is as follows: • 2.9 (10-year project life at a 2% discount rate)
Residual Risks	Further work will be required during the developed and detailed design phases including:

[25] Excludes mode shift and general traffic benefits.

Aspect	Outcome
	• Careful management of construction costs to ensure the affordability envelope is not exceeded. • Ensure appropriate design for mitigation of the connectivity issues for pedestrians - including crossings and Crime Prevention Through Environmental Design (CPTED) related matters. • Further traffic signal optimisation to ensure that the transport network in this location is operating as efficiently as possible. • Ensure bus stop shelters and surrounds are appropriately designed.

The potential bus stops

The initial bus stop location strategy (see section 4.5 above) and subsequent review identifies a number of considerations for bus stop locations and identifies a potential ten bus stops on the Harbour Quays corridor, five in each direction.

Figure 10: Potential bus stop locations

Peak hour bus lanes

The use of bus lanes on Harbour Quays was considered as part of this business case (see section 4.14 and **Appendix G** for more information). There are currently 6.5km of bus lanes within Wellington City with 2.5km of this being added in 2022-2024.

This included a concept for bus lanes that establishes the start, end and geometry of bus lanes along both the north and south bound directions of travel and includes the following key features:

- Part time bus lanes only in operation during peak periods (nominally 7.00am to 9.00am and 4pm to 6pm, noting that further investigations will confirm exact time periods).
- Bus lane widths will generally be between 3 and 4 metres.

- Signage and road marking will be consistent with Traffic Control Devices (TCD) manual Part 5 and the MOTSAM, part 1, Section 2-38.[26]

As part of this assessment:

- The original MCA assessors were asked to provide comments specifically on the potential inclusion of bus lanes in relation to their individual assessment criteria.
- The project team modelled the potential introduction of part-time bus lanes along the preferred Harbour Quays corridor to help understand the possible benefits and costs of this treatment option. Key observations from the modelling can be found in section 4.14

4.12. Economic analysis for preferred option

Appendix F provides further information on the economic appraisal for the preferred option.

Assumptions

The following key assumptions were used for the economic appraisal of the preferred option:

- The base model and forecast model were based on the Wellington Transport Analytics Unit's (WTAU) Aimsum Transport Model (Version 20.0.4).
- Periods modelled and used for this assessment are:
  - AM Period: 6am – 10am
  - Inter Period: 10am – 2pm
  - PM Period: 3pm – 7pm
- Annualization factors assumed:
  - The benefit analysis includes only the 12 modelled hours; off-peak periods are not accounted for in the assessment.
  - Only workdays are incorporated in the benefits analysis, assuming 240 days a year (i.e. public holidays and weekends are excluded).
- Two modelled years were used including the base year of 2022 without the Golden Mile scheme, and a future forecast year of 2033 including the Golden Mile scheme and future growth from the Wellington Regional Demand Model.
- Benefits between 2022 and 2033 have been linearly interpolated, and benefits beyond 2033 are capped at the 2033 level.
- Discounting assumptions are summarised below:
  - Time Zero: 01/07/2024
  - Year of Estimate: 2025
  - Construction Period: 1 year
  - Benefit Period: 39 Years
- Discounting Rate: 2% for the first 30 years,[27] with 1.5% thereafter.
  - Construction Start: 1/1/2026
  - Construction Payment 01/07/2026
- Benefits Stream Captured including

[26] See: Traffic control devices manual (TCD manual) | NZ Transport Agency Waka Kotahi
[27] A 2% discount rate has been applied based on the latest NZTA guidance.

- General Vehicle Operating Cost savings (the cumulative travel distance of general traffic in the model, multiplied by operating cost per kilometre (which varies by speed). This reflects savings from reduced fuel use, wear and tear, and maintenance).
- Bus Passenger Travel Time savings of **zero to one minute** on the Golden Mile and **two to six minutes** on the Harbour Quays (the reduction in time passengers spend travelling on buses, converted into a dollar value. Only includes services operating along the Golden Mile and Harbour Quay have been calculated assuming 32 passengers per bus during peak periods and 20 in the inter-peak).
- Bus Passenger Time Reliability savings (reflects the cost savings from more consistent and predictable bus travel times. Variability is measured by standard deviation, with an equivalent time factor of 4.8 used to monetise reliability improvements, based on standard practice).
- Bus Stop waiting time savings (the estimated value of time passengers spend waiting at or boarding buses at stops. This is influenced by how long buses dwell at stops and the number of stops used. Applicable to the Golden Mile and Harbour Quays corridors only).
- Bus Operation Cost savings (represents operational cost reductions for bus services, based on how far buses travel and their speed-related cost profile. Includes all buses modelled in the network).
- Carbon Dioxide savings (estimated environmental benefits from reduced emissions, assumed to be proportional to vehicle operating costs. A fixed multiplier of 4% is used to represent CO_2 cost savings in monetary terms).

- Construction cost is assumed to be $8M, and maintenance/operational cost has not been considered as it is expected to be similar to the Do Minimum. However, a maintenance/operational scenario, which assumes $250,000 per year has been evaluated as a sensitivity BCR test.
- Given that the total number of vehicles differs between the do minimum and preferred option scenarios at the end of the model simulation, the Rule of a Half approach (i.e. variable demand matrix adjustment) was applied. This method accounts for changes in the number of vehicles between scenarios, providing a more accurate representation of user benefits under variable demand conditions.

Economic analysis summary

The preferred option was subject to a range of economic evaluation based on a 10- year project life assessment. Several sensitivity tests were also undertaken to further test the economic performance of the preferred option under different scenarios.

The economic assessment methodology was undertaken in accordance with NZTA's Monetised Benefits and Costs Manual (MBCM)[28]. In addition, the economic analysis undertaken by the project team was independently peer reviewed by Flow Transport.

[28] See: Monetised benefits and costs manual | NZ Transport Agency Waka Kotahi

10 year project life assessment

The table below sets out the NPV for the costs and benefits of the preferred option along with BCR assuming the project has a 10-year life span (assuming a 2% discount rate plus an $8M construction cost). In reading this table, the following should be noted:

- The benefits stream assumptions above should be read in conjunction with the table below.
- The NPV costs for the do-minimum and option scenario are presented under the Transport Costs heading.
- The NPV benefits are the NPV cost savings between the do-minimum and option scenario and are presented under the Tangible Benefits heading.
- The economic analysis assumes the introduction of bus lanes, which are described in detail below.

It is noted that maintenance/operational and mode shift sensitivity BCR tests have been undertaken on this BCR, and are presented under Table 24.

DRAFT

Table 24: 10-year project economic analysis (2% discount rate)

	Do Minimum	Option TO2 - Bus Improvements
Capital Costs	N/A	$6,607,843[29]
Maintenance Costs	$0	$0
Total Costs	$0	$6,607,843
Transport Costs		
General Traffic Travel Time Costs	$5,691,518,654	$5,476,247,967
General Traffic Vehicle Operating Costs	$1,758,069,966	$1,745,768,280

Tangible Benefits (NPV)	N/A	$19,212,461
Tangible BCR	**N/A**	**2.9**

Key economic findings

A summary of the key economic findings for the project is provided in the table below.

Table 25: Summary of Key Economic Findings

Impact	Findings	Commentary
General traffic travel time savings	Disbenefit	• The reallocation of road space for buses will result in increased congestion and longer travel times for general traffic, resulting in economic disbenefits in both the 2022 base and 2033 future model year. • There will be some benefits to general traffic because of reduced queueing from buses impacting the wider road network. • Reallocated traffic from Harbour Quays is assumed to primarily use the State Highway 1 corridor, resulting in increased traffic and associated disbenefit on this corridor[31]. • On balance, the introduction of the second public transport corridor is conservatively estimated to provide a net disbenefit in terms of general traffic travel time savings.
Public Transport Travel time Savings	Benefit	• The introduction of the second corridor along Harbour Quays provides faster travel time for buses than the exclusive use of the Golden Mile. • The availability of a second public transport corridor through the central city enables bus volumes to be rebalanced across the existing Golden Mile and the second corridor. This ensures no corridor exceeds the desirable operational capacity. This will provide positive benefits in both 2022 base and 2033 future modal years. • Bus travel time savings (0-1 minute on the Golden Mile and 2-6 minutes on the Harbour Quays) are due to improved signal prioritisation along the Golden Mile and Harbour Quays corridors and less delay and variability at intersections relative to the base scenario (do-minimum).

[29] Capital costs have been updated from the high-level estimate of $6-$8 million, to using the latest independent cost estimate. These costs have also been used for some of the sensitivity tests described in 4.13 below.
[30] Disbenefits in public transport trave time, reliability and stop waiting time are calculated as a comparison against current public transport travel time, reliability and waiting time on the Harbour Quays corridor. As the Harbour Quays project will introduce additional public transport services to the Harbour Quays corridor, relative travel time etc. will be worse than the present state on this corridor, however this is contrasted by improved travel time, waiting time and stop time on the Golden Mile corridor. The Harbour Quays corridor therefore provides a net benefit to public transport.
[31] This disbenefit also excludes any additional capacity on State highway 1 that might result from NZTA's pending SH1 Wellington Improvements Project (e.g. tunnel duplications).

Impact	Findings	Commentary
		• Travel time savings directly contribute to improved passenger experience and improved end to end journey time for passengers. • On balance, the increased travel time savings to buses on both the Harbour Quays and Golden Mile corridors will provide a net economic benefit.
Public Transport Reliability	Disbenefit	• While the Harbour Quays corridor provides improvements in journey time for buses using both the Harbour Quays and Golden Mile corridors, there is more variance in run times on the Harbour Quays corridor, resulting in decreased reliability for services using this corridor, compared to the Golden Mile. This is because buses will now be using a more mixed traffic environment and the number of signalised intersections along the corridor reduces the reliability of services using this corridor. • Further network optimisation, including introduction of bus lanes and signal improvements could potentially reduce this impact.
Public Transport Waiting Times	Benefit	• Rebalancing bus volumes across both corridors means bus stops may be managed to reduce bus queuing and dwell time, resulting in reduced waiting times for passengers at bus stops. • Average dwell times on the Golden Mile are reduced to approximately 40 seconds per stop[32], during peak periods, as a result of the redistribution of buses across the two corridors (i.e. both the existing Golden Mile corridor and the new Harbour Quays corridor), minimising bus queuing and delay at stops. • Average dwell times on the Harbour Quays corridor are 24 seconds[33], reflective of the lower number of buses using this corridor. • As the Harbour Quays will serve increased numbers of buses, bus waiting time on this corridor will increase (in comparison to the current state), however waiting times will be reduced on the Golden Mile corridor, resulting in a net waiting time benefit.
Public Transport Operating	No Change	• As there is no significant change in total bus vehicle kilometres travelled, public transport operating costs remain broadly similar to the exclusive use of the Golden Mile corridor.

[32] Certain bus stops at present experience dwell times of more than 50 or 60 seconds which is starting to create a significant and highly inefficient "concertina effect"
[33] Average dwell time at peak at present is 40 seconds

Impact	Findings	Commentary
Cost Savings		
Carbon Dioxide (Co2) Reduction	Disbenefit	• CO2 savings are calculated as 4% of total Volatile Organic Compound (VOC) savings for both general traffic and public transport. • Increased congestion for general traffic results in a slight increase in Co2 emissions • This excludes any reduction in Co2 emissions as a result of mode shift from private motor vehicle to public transport.

Recommended headline BCR

To support this business case, it is recommended that the 'headline BCR' for the preferred option is the 10-year project life scenario **BCR: 2.9.**

4.13. Sensitivity analysis

Table 26 below sets out the sensitivity tests undertaken to test the preferred option BCR under different capital cost and discount rate scenarios.

Table 26: BCR cost and discount sensitivity test summary

BCR Scenarios	Construction Costs	Headline BCR: 2% discount rate for first 30 years, 1.5% for thereafter	Conservative BCR #1: 4%discount rate sensitivity test	Pessimistic BCR #2: 6% discount rate sensitivity test
10 year project life (Current cost)	$6.8M	2.9	1.7	0.5
10 year project life (lower cost)	$5.4M (-20%)	3.6	2.1	0.7
10 year project life (higher cost #1)	$8.1M (+20%)	2.4	1.4	0.4
10 year project life (higher cost #2)	$10.1M (+50%)	1.9	1.1	0.4

In addition, two further sensitivity tests were undertaken, considering the potential economic benefits from:

- **Mode shift**
  Assumes transfer of mode from private motor vehicle to public transport with associated decrease in on-road congestion. A base rate of 5% was assumed.

- **Inclusion of Maintenance/Operational costs**
  Allows for an extra $250,000 per year for maintenance and operational costs, excluding interest over the 10-year evaluation period.

These sensitivity tests are summarised in the tables below:

Table 27: Mode Shift Sensitivity Tests

	Construction Cost	**BCR applying 5% mode shift assumption**
10 year project life (Current cost) at 2% discount Rate	$6.8M	13.6

Table 28: Maintenance and Operational Sensitivity Test

	Construction Cost plus maintenance and operation allowance[34]	**BCR**
Assume maintenance and operational costs of $250,000 per year for 10 years	$8.6M	2.2

4.14. Introduction of bus lanes and associated sensitivity test

During the optioneering and concept design phase of the project, bus lanes were initially excluded from the scope, as it was expected that this design element would be explored further by future projects. However, in May 2025, it was requested that the preferred option consider the possibility of including bus lanes (part-time or full-time) to further inform decision-making on the project.

The project team subsequently developed a concept plan for bus lanes (attached as **Appendix G**) that establishes the start, end and geometry[35] of bus lanes along both the north and south bound directions of travel and introduces the following key features:

- Part time bus lanes only in operation during peak periods (nominally 7.00am to 9.00am and 4pm to 6pm, noting that further investigations will confirm exact time periods).
- Bus lanes widths will generally be between 3 and 4 metres.
- Signage and road marking will be consistent with Traffic Control Devices (TCD) manual Part 5 and the MOTSAM, part 1, Section 2-38.[36]

In assessing the potential for bus lanes along the Harbour Quays corridor, the following key considerations have been identified:

- The service profile (attached as **Appendix H**) for the corridor is heavily dominated by peak flows, with up to 60 buses per hour in each direction during peak periods, with conversely low volumes (8 buses or less) outside of the peak period.

[34] A discounted maintenance cost of $2,000,548 was applied for this sensitivity test.
[35] Bus lane concept design excludes the assessment and design of signal improvements and/or bus queue jump facilities.
[36] See: Traffic control devices manual (TCD manual) | NZ Transport Agency Waka Kotahi

- The dominant peak hour service pattern makes the corridor suitable for part time (peak hour) bus lane treatments only.
- The use of kerbside/in-line bus stops supports the closure of a lane to reduce weaving and merging conflicts for general traffic, especially when higher volumes (60 buses per hour) of buses are using the corridor.
- The high incidences of entrances/exits and side roads along the corridor mean Bus-Only and Transit Lane treatments are sub-optimal for the corridor.
- The introduction of bus lanes would signal the transformational shift of the Quays corridor from a private-vehicle dominated environment to one that is multi-modal.

In addition, the original MCA assessors were asked to provide comments specifically on the potential inclusion of bus lanes in relation to their individual assessment criteria. For clarity, assessors were not asked to revisit or revise their original MCA scores. Instead, they were invited to offer general commentary on how the proposed bus lane treatment might impact the preferred option, as summarised in the table below.

Table 29: MCA assessors' comments on the introduction of part time bus lanes

Assessment Criteria	MCA assessor comments on bus lane introduction
Bus Travel Time and Reliability	It is expected that proposed bus lanes will assist peak corridor capacity for buses. Buses will be less likely to be prevented from accessing bus stops by queues of general traffic obstructing access to bus stops, resulting in an increased overall peak bus stop throughput along the corridor.
Route Legibility	A moderate improvement regarding network legibility by making the corridor's use as a bus way more visible to the general public.
Network Capacity	Reduced queuing of general traffic in the kerb side lane is likely to reduce the incidence of buses having to wait a second (or third cycle) of the traffic lights to clear intersections. This results in travel time benefits.
Safe and Convenient Pedestrian movement and Movement	No impact from a bus customer perspective.
Pedestrian LoS at Bus Stops	No impact from a bus customer perspective.
Bikes – does not preclude future cycle routes or connections to existing routes	The current plans for cycle routes assume the use of a dedicated cycle facility, and bus lanes do not constrain this. In addition, as cyclists may freely use bus lanes, bus lanes provide an additional partially protected corridor for cyclists, which may present a net benefit, however widths at stops do not allow for safe cycle overtaking of a parked bus, which should be flagged as a safety concern, particularly in view of the volume of general traffic on the quays. Outside of peak for the first part of the operating profile, cyclists should get considerable utility from the introduction of bus lanes, however cycle use may need to be revisited either during Golden Mile construction or when all day bus volume increase.

Assessment Criteria	MCA assessor comments on bus lane introduction
Impact on general traffic	Likely to be a decrease in effective traffic capacity along the corridor, as a result of lane closure during the peak periods (broadly estimated at around 10%), with the potential for this to be mitigated by: • Modal shift from car to public transport as a result of the improved public transport priority and travel times on both the corridors. • Trip re-timing - people travel earlier, later - or people choosing difference destination car parks. • People not travelling. If implemented well, alongside a broader behaviour change programme, the general traffic impacts could be mitigated by some of the changes in behaviour outlined above. Mitigation for reduced traffic capacity along the waterfront could also result from NZTA building a new Terrace Tunnel and widening Vivian Street as currently proposed in the SH1 Wellington Improvements Project.
On-street parking impact	While there is no loss of car parks directly attributable to the bus lanes, access to existing parallel car parks on Cable Street and Wakefield may be impacted by bus lanes.
Business impact	Bus lanes will have negligible impact to business along the corridor, as vehicles may still use the lane to gain access to an entry/exit. The movement of goods and deliveries may be facilitated by the bus lane, as these vehicles may utilise the bus lane during peak hour to avoid traffic congestion.
Construction and constructability	Bus lanes will potentially facilitate construction by allowing lane closure.

Bus lane economic analysis sensitivity test summary

The project team modelled the potential introduction of part-time bus lanes along the Harbour Quays corridor to help understand the possible benefits and costs of this treatment option.

The bus lanes were modelled using the following assumptions:

- Part time bus lanes in operation between 7am to 9am in the morning and 4pm to 6pm in the evening.
- Bus lanes extending from Whitmore/Customhouse Quay, along Customhouse Quay, Jervois Quay to Cable Street in the southbound direction.
- Bus lanes extending from Wakefield/Kent along Wakefield Street, Jervois Quay and Customhouse Quay in the northbound direction.
- Both southbound and northbound bus lanes are situated in the kerbside lane.
- Bus stops are inline, situated in the bus lane.

Key observations from this modelling are summarised below:

- A significant reduction in travel time for buses along the northern extent of the Harbour Quays where bus lanes were implemented.
- Increased bus travel time on Whitmore Street, as a result of reduced intersection capacity at Whitmore/Customhouse Quay. Increased traffic congestion on the Whitmore Street approach to the Quays impedes access for buses approaching the quays.
- The southern portion of the Harbour Quays bus lanes (Jervois Quay and Cable Street) show minimal improvement to travel time.
- Economic disbenefits from the introduction of bus lanes are principally associated with increased private vehicle travel time primarily on State Highway 1, due to drivers diverting to this corridor to avoid delays on the quays.
- The introduction of bus lanes provides decreased disbenefit (in terms of traffic impacts) and increase benefits (in terms of bus reliability and travel time savings) in the near term[37], relative to the use of in-line stops without bus lanes.
- In the long term[38] traffic impacts from the introduction of bus lanes are substantially increased, primarily on State Highway 1[39] and Old Hutt Road, as a result of increased traffic volumes diverting from Quays corridor.
- The introduction of bus lanes on the Harbour Quays increases average bus speed, reduces travel time and improves bus reliability on both the Harbour Quays and Golden Mile corridors, as a result of the operational ability to spread bus volumes across both corridors.

The overall modelled economic benefits including the introduction of part time bus lanes over a 10-year period are shown in the table below, with the associated modelling report provided as **Appendix F**. The information below is a summary of the modelling information in Table 24.

Table 30: Economic benefits including the part time bus lanes

Benefit Type (10 year period)	Economic Benefit/Disbenefit
General Traffic Travel Time	$ -70.4M
General Traffic Operating	$ 12.3M
PT Travel Time	$ +34.6M
PT Reliability	$ +8.5M
PT Bus Stop Waiting	$ +33.8M
Pt Operating	$ 0
CO2 Reduction (4% of VOC)	$ +0.49
TOTAL BENEFIT	**$ +19.2M**

[37] Modelling has been undertaken using service data from 2022, representative of the service pattern that will be implemented on the Harbour Quays.
[38] Modelling assumes a long-term year of 2033.
[39] This assessment excludes any increased capacity that may be provided by NZTA's SH1 Wellington Improvements Project.

5. Commercial case

5.1. Procurement approach

Professional services consultants have already been engaged to provide design and construction observation services through an open market tender and will continue to support the project through pre-implementation and implementation as necessary.

Construction procurement is to be delivered through a mixture of competitive tendering and leveraging existing contracts held by GWRC and WCC, which include bus shelter supply and install, real time displays, street furniture supply and CCTV. These existing suppliers will be nominated as subcontractors the main contractor needs to use.

The main contractor will be appointed through either an Early Contractor Involvement (ECI) or main contractor for construction only tender process.

- Under an ECI process, the contractor would provide inputs into the detailed design phase of the project and get a right to negotiate for the main construction works following completion of detailed design. This would be through either an open tender, or closed via the WCC Construction Contractor Panel, and would ask the supplier to information for both the ECI component and the main works component based on design documentation available at the time. An option to go to market, to maintain competitive tension is available and time currently allowed within the programme.
- The main contractor tender would be either an open market tender, or a closed tender via the WCC Construction Contractor Panel. Respondents would be asked to price the project based on 90% or greater level of design detail

ECI components are expected to focus on site investigations, enabling works, confirmation of timing for utility connections and construction methodology, with a view to reducing the construction timeframe to minimise disruption within the corridor.

There is an opportunity to work with the Golden Mile construction team of Brian Perry / JFC as they complete enabling works along their bus diversion routes, prior to works starting elsewhere in the corridor, it is possible that through the enabling works for Golden Mile, we can obtain the insights an ECI would provide.

5.2. Required outputs and service streams

During pre-implementation, ECI may be required to inform the final design and to undertake any site investigations, enabling works, coordination with utility providers and to advise on construction methodology with a view to minimising disruption during construction, including a minimal construction duration.

The main contractor will need to work with existing suppliers and utility providers to complete the physical works, which will include civil works around bus stop locations for shelters, kerbs and signage and the supply and installation of signage and road markings across the corridor.

5.3. Contractual approach and contract management

The professional services contract uses WCC's version of the Conditions of Contract for Consultancy Services, with payment terms monthly in arrears on acceptance of a suitable tax invoice from the consultant.

Construction services, including ECI, will be contracted under NZS3910:2023 with variation for ECI services. Given the nature of the physical works contract, the contract is

expected to be a ‘measure and value’ contract, consideration may be given to a ‘cost plus’ contract, depending on the value of existing contracts being leveraged. The project team will consider what is most likely to offer best value for money, at the time of tendering the construction works.

Payment for construction services under NZS3910:2023 would be monthly in arrears, on receipt of an approved payment claim from the contractor and a payment schedule from the independent certifier (formerly ‘Engineer to the Contract’). No payment in advance of the works or under Schedule 14 of NZS3910:2023 is expected.

Existing contractor contracts held by GWRC or WCC where relevant will continue with their current contract managers and relationships in place, with the Project Manager or Project Engineer coordinating with the contract managers as appropriate.

Professional services contracts will be managed by the Project Manager, with support from a Design Manager / Design Lead for design activities.

The construction contract will be managed by the Project Manager, with support from a Project Engineer for the day-to-day site activities.

DRAFT

6. Financial case

6.1. Financial costing for the preferred option

Table 31 - Financial Costings for the 2024-34 LTP period

	2024/25	2025/26	2026/27	2027/28	2028/29	2029/30	2030/31	2031/32	2032/33	2033/34	Total Period
Capital expenditure	$544,000	$3,404,000	$4,480,000	$-	$-	$-	$-	$-	$-	$-	$8,428,000
Project Contingency		$948,000	$1,264,000	$-	$-	$-	$-	$-	$-	$-	$2,212,000
Operating expenditure	$324,200	$225,000	$250,000	$1,092,000	$1,092,000	$1,092,000	$1,092,000	$1,092,000	$1,092,000	$1,092,000	$8,443,200

DRAFT

6.2. Funding arrangements

Funding of $10 million of CAPEX and $0.5 million of OPEX was approved through:

- WCC's LTP Amendment process, for the 2024-34 LTP, and became effective on 1 July 2025.
- GWRC's LTP 2024-34 and became effective on 1 July 2024.

No funding under the NLTP is expected, as the initial indications are that funding would only be available to undertake this business case in year three of the programme, with no retrospective funding available. This business case was completed in year one of the programme, with approvals sought in year two.

6.3. Assumptions and notes

- Costs exclude GST and are estimated based on June 2025.
- Impacts on inflation have not been considered.
- Contingency provisions for CAPEX are identified in the table above, based on the quantification of known risks at the time of preparing this business case.
- The funding risk contingencies identified in the table above cover all types of contingencies.
- It is assumed that WCC will act as banker for the project and all costs will be incurred by WCC, with GWRC then paying half of the costs.
- Revenue refers to the income from GWRC for their share of the project costs in years 1-3.
- It is assumed that funding is available in each organisation for their share of the operational costs in years 4-10 for their assets. No cost share is proposed for the maintenance and renewal of assets once the corridor is operational.
- Given the anticipated 10-15 year lifetime of the assets before more significant works occur in the corridor, the capital costs have been depreciated over a 10 year life.
- Operating expenditure includes annual maintenance and depreciation costs. Interest costs have not been calculated.
  The capital expenditure includes the construction cost estimate, consultant contracts (both existing and forecast) and internal staff costs from WCC and GWRC.
- End asset ownership between the two organisations is unresolved, as such the financial costings represent total project costs and don't break this down to each organisation.
- Within WCC, Transport and Infrastructure will need to fund the maintenance, depreciation and interest costs once the project is capitalised and any asset transfer to GWRC has been undertaken. This is expected to be from the 2027/28 financial year.

6.4. Funding contingencies

Project contingency is based on the project expected estimate (P50) following the quantity surveyor preparing a base cost estimate on the available design documentation and then reviewing cost-based risks inherent within the design and undertaking a Monte Carlo simulation on the risks and base cost estimate.

The capital required, includes the funding risk contingency of $610,000 and is based on the P95 reported within the cost estimate following the Monte Carlo simulation.

6.5. Overall affordability

A maximum capex funding envelope of $10 million is currently available for this project, the current indicative budget of $11.25 million is considered unaffordable. Several initiatives have already been explored in preparation of this business case, and as the design is further refined further initiatives to reduce the cost will be explored. These will include exploring potential improvements to construction methodology and traffic management. There is also an opportunity with the Golden Mile project to implement their diversion stops once, in a permanent manner rather than temporary construction for diversions, followed by permanent works once Golden Mile's Courtenay Place works are complete. As part of approving this business case, it is recommended that the budget be increased to the P95 value of $11.25 million.

7. Management case

7.1. Project approach

All activities follow WCC's Investment Delivery Framework and project management guidelines with all project information captured within Paiaka, which is WCCs project management system.

At the commencement of the pre-implementation phase, a comprehensive project management plan will be developed to cover the pre-implementation and implementation phases which will include the following information:

- Project Scope, objectives, outcomes, outputs, and benefits.
- Project Governance, including roles and responsibilities, reporting and meeting requirements.
- Project Approach, including work breakdown, handover, closure, ongoing support, and post implementation review.
- Project Planning and Control, including resources, schedule, budget, risks, dependencies, stakeholder management, procurement, communications and engagement, assumptions and constraints, tolerances, and change control.

The Project Manager will provide a monthly report to the Senior Responsible Officer (SRO).

A Project Engineer will support the implementation of the project and provide day-to-day liaison with the contractor and the end asset owners.

7.2. Project and governance roles

The Joint WCC/GWRC Steering Group already established and meeting regularly will continue and will provide the overall governance and direction to the project. The Project Manager will provide an update and present any papers for approval to each Joint Steering Group meeting.

A joint Leadership Team Group comprising tier 3 managers from both councils supports the Project Manager and provides advice to the Joint Steering Group as needed.

SMEs come from both organisations. External resources will be involved to support technical design and advice until the completion of construction.

The figure below illustrates the key roles in the project.

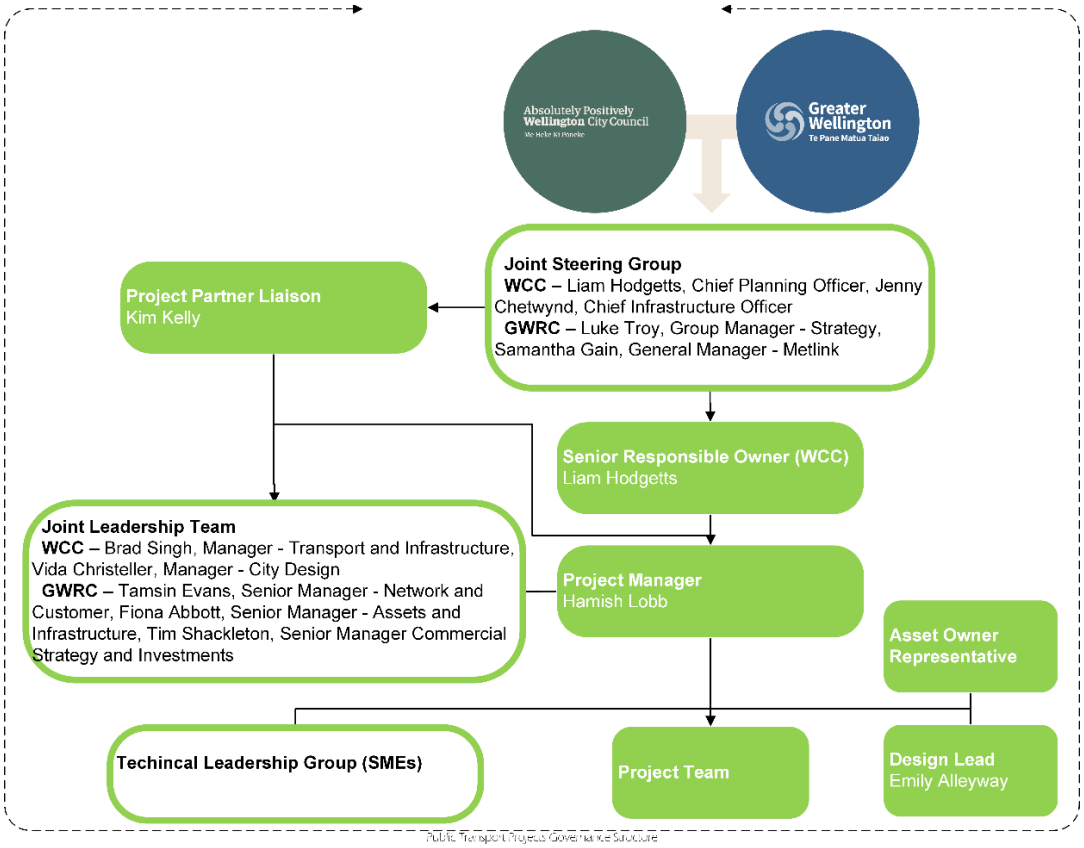

Figure 11: Harbour Quays Project Governance Structure

7.3. Risk and issue management

During project initiation and whilst preparing this business case during 2024 and 2025, several risk assessment workshops were conducted. The project team, consultants and the Joint Steering Group contributed to these workshops, identifying potential risks and agreeing on strategies to mitigate them.

A risk management strategy will be included in the project management plan that will be prepared following approval of this business case, with risk and issue registers already developed and being maintained within Paiaka. These will continue to be regularly reviewed and updated as the project progresses.

Risk Tracking

Risks and issues will be tracked in the governance risk register, as well as recorded in Paiaka. The risks will be reported to the Joint Steering Group and the SRO. Some of the risks from the governance risk register and Paiaka are presented within this section below.

Table 32: An overview of risk and mitigation measures relating to project risks

Risk description	**Likelihood of occurrence** *(Rare/Unlikely/ Possible/Likely/ Almost certain)*	**Consequence or impact** *(Insignificant/ Minor/Moderate/ Severe/Extreme)*	**Risk treatment/ mitigation**
R1. Public perception that GWRC and WCC are not aligned or coordinated in their approach to the Harbour Quays could result in opposition and disagreements with the public	Possible	Moderate	A Joint Communications and Engagement Plan has been developed.
R2: Property owners and tenants along the proposed route may oppose new bus stop infrastructure being located outside their property or business, leading to vocal opposition to the project	Possible	Moderate	Early engagement with affected owners and tenants, consider infrastructure that is complementary to the property frontage and doesn't restrict access
R3: If the Harbour Quays project is unable to be delivered quickly enough, requiring GWRC to implement new buses on the Golden Mile to meet increasing patronage demands, increasing congestion issues and travel times along the golden mile route	Possible	Moderate	Consider low cost, quick approaches to achieve quick wins that can be implemented prior to the more permanent works commencing. Robust decision-making processes with escalation channels where fast decisions are needed. Keeping Councillors well-briefed, and engagement at the right levels for city-wide stakeholder engagement. Designated positions in T & I for fast review and approval turnaround times, use of external contractors for early contractor involvement and minimisation of set-up time/TMP prep etc.
R4: Reduction in private vehicle capacity along the route may lead to strong public opposition to the project and increased congestion elsewhere in the network	Likely	Moderate	Look to maintain a balanced network (i.e., equal lanes in each direction) and consider circulation changes if needed. Strong communication demonstrating the benefits and encouraging mode shift,

Risk description	Likelihood of occurrence *(Rare/Unlikely/ Possible/Likely/ Almost certain)*	Consequence or impact *(Insignificant/ Minor/Moderate/ Severe/Extreme)*	Risk treatment/ mitigation
			combined with increases in public transport services along the route. Critical stakeholders that are considered high risk are to be managed proactively and at the right level. Councillors are well briefed, and a proactive media strategy is put in place.
R5: Insufficient internal resources are available to support the project, leading to delays in completion of reviews and delivery	Possible	Moderate	Consider backfilling roles with contractors to free up internal staff to support the project or supporting the project using contractors.
R6: Key decisions are unable to be made in a timely manner due to the availability of Joint Steering Group members and other decision makers.	Possible	Major	Brief decision makers at Joint Steering Group meetings on status of any upcoming decisions and likely timing. For decisions to be made at Joint Steering Group meetings, include detailed briefing pack as part of meeting agenda. For decision to be made out of round, ensure decision makers are fully briefed at the previous Joint Steering Group meeting and a record of any discussions is circulated with the detailed documentation for approval.
R7: If the pavement strength along the proposed routes is inadequate for frequent bus use, including passenger pick-up and drop-off, it will need to be strengthened at an additional cost	Likely	Extreme	Review route and identify any areas that require localised treatment (stops, corners, etc.) that could be addressed as part of interim works. Accept higher wear and increased maintenance on roads.
R8: Coordination between bus and bike projects within the central city: There is a risk that the bus	Likely	Major	Project Manager and Design Lead for bus projects to work with the project managers and

Risk description	**Likelihood of occurrence** *(Rare/Unlikely/ Possible/Likely/ Almost certain)*	**Consequence or impact** *(Insignificant/ Minor/Moderate/ Severe/Extreme)*	**Risk treatment/ mitigation**
and bike projects within the central city aren't aligned in their scope and timing of delivery, resulting in miscommunication between the project teams and to stakeholders, with multiple projects potentially trying to use the same corridor and road space.			design leads for the central city cycleway projects. Provide regular updates to the central city project teams on progress, likely timing of delivery and stakeholder concerns.
R9: The lack of integration between the design and delivery teams regarding project timelines and other central city projects may lead to increased disruption and confusion for stakeholders and the public.	Possible	Minor	Regular engagement between the design and delivery teams, and with other teams across council (i.e. corridor manager, capital delivery, maintenance, Golden Mile, City Development, etc.) to understand timing and implications of other projects, and opportunities to align delivery timeframes and contractor resource to minimise impact on the public and stakeholders.
R10: During the construction of the Golden Mile, the Harbour Quays corridor will utilize Golden Mile capacity in at least one direction, leading to faster pavement deterioration and potentially requiring remediation while construction is underway.	Possible	Major	Work with maintenance team to understand condition of the pavement, likely replacement timeframe and whether replacement is likely required during Golden Mile construction, if it is, consider bringing this forward to mitigate disruption
R11: The Harbour Quay's preferred option may exceed the WCC and GWRC LTP funding due to additional design changes or unexpected increases in material and labour costs.	Likely	Major	Project team to reminded of need to design to budget, construction risks to be incorporated within cost estimates by the quantity surveyor. Value engineering has been undertaken.

Risk description	**Likelihood of occurrence** *(Rare/Unlikely/ Possible/Likely/ Almost certain)*	**Consequence or impact** *(Insignificant/ Minor/Moderate/ Severe/Extreme)*	**Risk treatment/ mitigation**
R12: If the public opposes the project during consultation, councillors may face pressure to withdraw their support and not approve the traffic resolution.	Possible	Moderate	Have a clear value proposition for the project that can be communicated with stakeholders. Have clear and consistent messaging that is used by both councils duration engagement and consultation. Councillor induction programme for new Councillors.
R13: If the service design becomes more complex than expected and requires specialised staff, the finalisation and implementation of the service may be delayed.	Possible	Major	Have a clear value proposition for the project that can be communicated with stakeholders. Have clear and consistent messaging that is used by both councils duration engagement and consultation. Councillor induction programme for new Councillors.
R14: If the project cannot be completed within the agreed funding due to rising construction costs, amenities at the stops will be reduced	Likely	Major	The Project Manager will work with designers to ensure amenity meeting minimum standards are provided. Additionally, we must work with the community to match expectations on standards.
R15: NZTA SH1 Wellington Improvements Project: If NZTA aren't across the assumptions that have been made for the Harbour Quays, then the future performance might not be as expected.	Unlikely	Moderate	Establish effective engagement at an officer and executive levels
R16: Financial risk of bus infrastructure assets vesting in GWRC initially capitalised by WCC	Likely	Moderate	Agreement to be reached between WCC and GWRC as to asset ownership. The value can’t be quantified until an agreement has been reached.

7.4. Assurance

The planned assurance arrangements are described below:

- A project assurance plan will be prepared for this project.
- As stated above, a Joint Steering Group will oversee project performance and progress. The Joint Steering Group will provide governance and strategic direction, ensuring the project aligns with its objectives and stakeholder expectations. They will monitor progress, manage risks, and make key decisions.
- The Joint Leadership Team will meet fortnightly, with the Project Manager to provide a progress update and bring any emerging risks or issues to the attention of the leadership team. Upcoming Joint Steering Group agenda items and any decisions will also be discussed, prior to taking to the steering group.
- Project team meetings will be held fortnightly to gather feedback from stakeholders and provide them with necessary updates throughout the project's duration.
- During design activities, regular design team meetings will be established for the design team to present their progress and seek guidance from the councils as the design progresses.

Several independent assurance activities will be planned as part of the pre-implementation and implementation phases, these will include the following:

- Safe system assessments at the completion of concept and detailed design, and post construction.
- Design review panel at completion of concept and developed design.
- Quantified risk assessments as part of each cost estimate prepared by the independent quantity surveyor.

7.5. Change control

Project changes are managed using the following processes during the development stage:

- The Project Manager to fill in this template from the IDF Toolkit: WCC Project Change and Exception Report.docx(sharepoint.com)
- The template must be saved into the relevant SharePoint folder and then socialised with the Joint Steering Group before being sent to the SRO for approval.

For the project delivery side, the Project Manager will be notified about all scope changes via verbal communication, followed up by email. The Project Manager will then formalise this in a Project Change Report as per the above process. An assumption is that it is not expected that the scope of the project will change much as the outcome of the design is relatively fixed. Most often, changes to a project will affect its timing and cost.

7.6. Change management approach

The public transport system will be affected, and Metlink will communicate any changes to routes and timetables as part of normal operations.

Expected impact on processes: Internal processes at Metlink will remain unchanged and continue as usual.

Expected impact on people: Some passengers may experience significant changes in travel behaviour perceived as both negative and positive.

Through communication and engagement activities, we will inform the public about the following aspects of introducing the second public transport corridor in the central city:

- Notify the public in advance that a consultation will take place.
- Gather feedback from the community regarding the design options.
- Ensure that the community understand the changes and their implications.
- Develop a comprehensive Communication and Engagement Plan to inform the public and encourage adoption.

Objectives and principles of change communication

Guiding communication will be the construction mitigation planning document, A City in Transition. As a framework for planning and delivering projects in the city, this document contains principles, guidelines, and tools for all parties involved with a specific focus on the central city.

The Project Management Plan will provide a more detailed overview of change management.

7.7. Benefits management approach

The benefits realisation management plan is included as part of the business case and can be found in **Appendix I**. Representatives from both Councils have contributed valuable input to the development of this plan.

7.8. Stakeholder management approach

A comprehensive stakeholder mapping exercise has been undertaken to clarify the engagement process.

We will actively engage with various types of stakeholders to build and maintain relationships. It is essential to involve businesses and services to ensure they are well-informed. Additionally, we will communicate with the wider community to provide them with sufficient information for decision-making, particularly during the consultation stage. The councils will ensure that all interested or affected parties receive the necessary information prior to consultations.

We aim to engage with key stakeholders regularly to provide updates and solicit their feedback as needed. A Communications and Engagement Plan will be in place to support the stakeholder and community management process. Metlink will lead public transport network engagement by informing customers about network changes.

7.9. Climate change risk management

In accordance with the current flood zone information of the councils, the project is in an area that is flood prone. Designing infrastructure in the project area would need to consider the increased frequency and intensity of flood events, e.g., by elevating infrastructure or considering drainage issues in advance.

In addition, trees may be incorporated into the project to provide shading and wind protection.

7.10. Impacts for Māori

In 2024, the project team had a meeting with Mataaho Aronui (Māori Strategic Outcomes Team) to understand the importance of giving effect to Tūpiki Ora Māori Strategy and

Tākai Here (the partnership agreement signed between mana whenua and WCC) when initiating this work.

The following points were highlighted:

- Engage Mataaho Aronui in the project to discuss incorporating cultural aspects.
- Takai Here's procurement aspirations will be understood by the Council.

NB. This scope and funding do not support the integration of Māori history into the design of the project.

A further meeting was held in August 2025.

7.11. Health & Safety approach

The Project Manager will work closely with the Health and Safety (H&S) team to perform a risk analysis and determine the time requirements for preparing a H&S Plan for the project. The H&S team possesses the necessary tools for this analysis and will assist in identifying controls and mitigation strategies to prevent harm.

Additionally, the project team, with support from the H&S team, will review the safety management plans submitted by contractors as part of their tender documentation, paying particular attention to the risks they introduce and those they may face. The Project Manager will address risk allocation to effectively manage these contractor-related risks.

7.12. Schedule and key milestones

A brief explanation of the project schedule is provided below:

Table 33: Key project milestones

Key Project Milestone	Estimated Date
Relevant Committee Decisions on Approval to Consult	September 2025
Public Consultation on Traffic Resolution	November 2025
Relevant Committee Decisions on Traffic Resolutions required	February 2026
Relevant Committee Decisions on Approval of the Business Case	February 2026
Construction Commences	April 2026
Operational Date Confirmed	June 2026
Services Operational on route	December 2026

7.13. Future considerations

As part of developing this business case, Metlink have prepared a service profile (see **Appendix H**), which indicates how services on the Harbour Quays corridor may change over time. This service profile is presented as three phases, with Phase 1 being day one operations, and Phase 3 being sometime beyond 2034, when bus volumes on the Golden Mile require moving more than the peak and regional services to an alternative corridor.

Phase 3 of the service profile considers moving all East/West services to the Harbour Quays corridor. For this to happen passenger transfer capabilities at the Whitmore Street /

Lambton Quay intersection will be required for those on East/West services wishing to connect to the railway station or those buses that run via the Lambton Bus Interchange.

Consideration was made to including stops on Whitmore Street that would enable passenger transfer to occur, however cost considerations, the need to maintain a functioning transport network and to consider changes to the entire length of Whitmore Street and potentially part of Bowen Street, meant that we were unable to include transfer opportunities on Whitmore Street.

The volume of buses likely to be using the Harbour Quays corridor under Phase 3 and the increase in passengers waiting at stops, will require further infrastructure improvements along the corridor, including the provision of additional shelter at existing stops.

Consideration should also be given to the cultural overlay that has been prepared by mana whenua, with this to be incorporated into the infrastructure works.

7.14. Next steps

Upon approval of the business case, the following steps will be taken:

- Completion of the H&S Plan
- Completion of the Assurance Plan
- Completion of the Communications and Engagement Plan
- Completion of the Project Management Plan
- Work with mana whenua to realise any opportunities from the cultural overlay within the constraints of the project
- The design team will finalise the design, incorporating any consultation comments and issue construction drawings
- Ongoing briefings to WCC and GWRC councillors on a regular basis

8. Recommendation

It is recommended that the Committee endorses this business case, increases the joint WCC/GWRC project capital budget to $11.25M and agrees the project proceeds to implementation.

This report provides Wellington City Council (WCC) and Greater Wellington Regional Council (GWRC) with an independent report on the key transport related problems on the Harbour Quays corridor. The report also highlights the broader issues and challenges that will need to be addressed to resolve these problems.

1. Background

Transport and city planning

There are range of interrelated transport, infrastructure and urban development plans and projects underway in the central city area of Wellington. These include:

- Golden Mile Revitalisation Project (WCC lead)
- Changes to the Waterfront (WCC lead)
- Central City Connections projects – (WCC lead)
- Water infrastructure upgrades, including to Wakefield Street (WWL lead)
- Te Ngākau development Plan (WCC lead)
- Road of National Significance: Cross city tunnel (NZTA Waka Kotahi lead)
- Regional Busway Corridors Strategic Business Plan (GWRC lead)
- Integrated Long Term Concepts for Harbour Quays and Eastern MRT (GWRC lead)
- Rapid Transit Bus Corridors outside of Wellington Regional (GWRC / other TA lead)
- Central City Transport Vision
- Wellington City Transport Plan (WCC lead)

Central City Transport Vision

A central city transport vision is expected to be developed and reported back to WCC Councillors by the end of September 2024. It will demonstrate how current and short-term initiatives are integrated with WCC's wider strategic planning framework.

Wellington City Transport Plan

The city's approach to transport is currently set out in the Spatial Plan 2021. The key approach is to move more people with fewer vehicles, or in other words, prioritising walking, cycling and micro-mobility, and public transport over other modes. Through the 2024-34 Long-term Plan, WCC adopted nine strategic priorities including one to "transform our transport system to move more people with fewer vehicles".

© SCOTT CONSULTING

Figure 1 WCC 2024-34 Long-term Plan Vision, Community Outcomes and Strategic Priorities

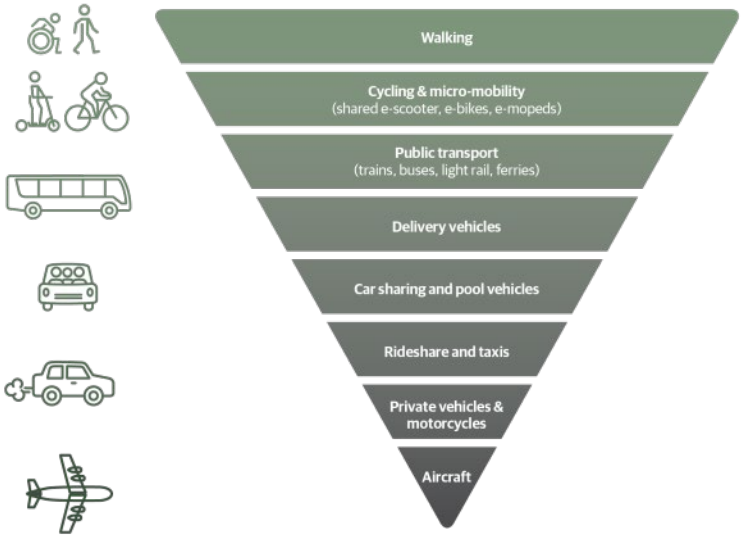

Figure 2 Sustainable Transport Hierarchy

However, primarily due to the cancelling of the Let's Get Wellington Moving programme, there is a need to revise the strategic approach. This work is expected to be progressed throughout 2023/24.

The Wellington City Transport Plan is expected to provide a key framework and vision for the City's transport future and help provide direction to support a range of projects and plans.

Rapid Transit Bus Corridor Programme

Within this context, WCC is working in partnership with GWRC on a programme of work that makes up the *Rapid Transit Bus Corridor Programme*.

Under this programme, funding is being provided by both WCC and GWRC and comprises:

a. Harbour Quays Bus Corridor; and the

b. Eastern Bus Corridor

NZTA – Waka Kotahi is also a potential key investor in this programme.

The partners have established a joint officers Board to establish and oversee this programme. The partners are working to confirm the programme strategy, terms of reference for the Board and scope of projects. The initial priority for the programme is the Harbour Quays corridor (see Map 1 below). This project has a range of interdependencies and challenges, as noted in this report.

The Harbour Quays corridor programme is a high priority for both councils, with funding for both planning and delivery being recently confirmed through the Long Term Plan (LTP) processes of both WCC and GWRC.

MAP 1: indicative extent of Harbour Quays corridor

2. Context and approach

The need for an agreed problem definition

In considering the potential need for investment in this corridor (including through the LTP process), the partners have expressed a range of views on the problems, investment objectives as well as the potential solutions for the Harbour Quays corridor. These views have tended to focus on:

- The need for a second public transport spine through the central city area due to constrained capacity, increased patronage and travel time reliability issues on the Golden Mile.
- Concerns in relation to the disruption to transport and businesses that is anticipated by the construction of the Golden Mile project.
- Lack of quality bike connections across the central city area which would provide better and more suitable connections through the area and to the broader bike network.

While there have been a range of views expressed, the partners recognise that there are differing views on the problems that need to be resolved, there is a need for a compelling and agreed evidence base and for there to be alignment between the partners on how to resolve these problems.

As a result, the programme Board agreed to commission an independently facilitated problem definition workshop process to help set the project up for success. The approach taken for this process, including the workshop and this report includes:

- Based on the principles of the Better Business Case approach, in line with NZTA – Waka Kotahi guidance
- Workshop based on an Intervention Logic Mapping (ILM) methodology. This was held in person at WCC offices on 4 July 2024. See list of attendees, Appendix 1
- Informed by review of relevant background information and pre-workshop discussions with key WCC and GWRC officials, including Board members.
  - WCC: Liam Hodgetts, Siobhan Proctor, Bradley Singh
  - GWRC: Luke Troy, Samantha Gain
- Scope of this report to include not only problem definition, but also highlight the broader contextual issues and challenges that will need to be addressed to resolve these problems. This will ultimately underpin the success of any projects or interventions.
- The report will help inform:
  - Collation and interrogation of the evidence required to support the problems (note: the scope of this report does not include a review of this evidence). This is particularly pressing and will need to have a strong focus on impacts on buses and bus passengers in relation to the problems identified. This should be presented through simple, easy to read graphs or figures to aid understanding of the implications.
  - Confirmation of benefits, and KPIs for investment. This may include a further workshop between the partners, informed by the evidence.
  - Strategic responses and options analysis for the Harbour Quays corridor.
  - Any relevant interdependencies with other projects as outlined above.
  - Responses to the broader issues and challenges that will need to be addressed to resolve these problems.

© SCOTT CONSULTING

3. Key problems, evidence and benefits

Based upon the approach outlined above, the following key problem statements have been identified. These will continue to be refined as the project progresses, including alignment with evidence, benefits and KPIs.

In summary, key problems are:

- **Problem 1:** Parts of the City's central bus spine along the Golden Mile are operating at or exceeding capacity for buses and passengers at peak times and this will worsen due to increased passenger demand and services leading to reduced reliability, increased travel times and impacts on the quality of the central city area for people and businesses (50%)
- **Problem 2:** Multiple transport and urban development projects, including construction of the Golden Mile project over the next 2-3 years in the central city area will result in a loss of network capacity and disruption to all travel modes in the Harbour Quays corridor resulting in travel time delays, poor customer experience and a lack of network resilience (40%)
- **Problem 3:** Substandard level of service connections for bikes across the central city are resulting in increased conflicts between users of shared space on the Waterfront and an inability to optimise investment in the broader bike network (10%)

Table 1 – problems, evidence and benefits

Problem name and weighting	Problem definition and consequence	Evidence to support this problem and source	Potential Benefits of resolving this problem
Problem 1: Lack of peak time capacity for buses on the central spine of the City's bus network along the Golden Mile 50%	Parts of the City's central bus spine along the Golden Mile are operating at or exceeding capacity for buses and passengers at peak times and this will worsen due to increased passenger demand and services leading to reduced reliability, increased travel times and impacts on the quality of the central city area for people and businesses	• Actual and projected Golden Mile bus numbers below based on GWRC LTP forecasting. Nb. These were 120 buses per hour in 2017 and reduced to 2018 with the introduction of high capacity buses, network rationalisation and suburban hubbing. See Figure 3 below • Patronage growth and trip numbers through Golden Mile: GWRC to confirm 1. 75,000 bus trips per week day, XX% of which are on the Golden Mile 2. Bus patronage in XX 2024 is 105% of 2018 levels 3. Projected bus patronage increase due to introduction of bus / rail integrated ticketing is XX increase by… • Travel time reliability evidence – GWRC to provide • Customer experience evidence – GWRC to provide • Evidence of network, service and stop configuration optimisation that has been undertaken – GWRC to provide • Impacts on urban realm and businesses – WCC to provide	• Increased peak bus capacity • Increased travel time reliability for buses and passengers • Quicker bus travel times through the central city leading to increased mode share • Increased quality of central city area for people and businesses

© SCOTT CONSULTING

		• Customer demand for direct cross city centre services – HX route patronage – GWRC to provide • The Golden Mile has a function as the central spine in the wider city's bus network where east-west and north-south services converge. Need evidence to support number / % of bus routes and passengers that use this central spine • Golden Mile design implications for capacity along Golden Mile: project will result in bus travel time improvements due to removing general traffic, closing side streets and optimising bus stops. What evidence is there of any impacts to e.g. capacity issues for buses and passengers? i.e. one lane each direction and inline bus stops, so no passing opportunity. • Modelling: 1. Of journey time benefits of the Harbour Quays – in terms of current express routes journey times down the Golden Mile compared to what journey times would be if they went down the Harbour Quays. 2. Potential journey times on the Golden Mile as a result of some routes being moved to the Harbour Quays. Nb. Tonkin and Taylor are doing modelling work on the Golden Mile current and planned future state. **Relevant reports and background information:** • LGWM Golden Mile Bus Stop Capacity Calculations, Aurecon / Future Group, Jacobs / GHD. September 2021. This noted the capacity constraints of the current Golden Mile at a specific bus stop level. • Wellington City Bus Review, MRCagney, 2011. Report notes the "Golden Mile Capacity problem" which includes identification of the need for a second spine and suggested routing below on Map 2. • Central Area Bus Operational review, Opus, November 2009. Recommended a suite of operational changes to the bus services and the Golden Mile to increase capacity including a recommendation for an "express service model" using a parallel route (second spine) as well as recommendations for suburban hubbing, better utilisation of fleet and other measures. GWRC advise many of which have been implemented since then. Report also recommended a number of measures to optimise capacity of the current Mile noting this could provide capacity for up to 120 buses per hour which is still significantly less than what GWRC are projecting is required by 2034. • Draft bus priority action plan report, GWRC / WCC December 2019. Note this report specifically did not focus on Golden Mile due to this being part of the scope of LGWM	• Increased productivity of buses

© SCOTT CONSULTING

Problem 2: Temporary network disruption for all modes in the Harbour Quays corridor 40%	Multiple transport and urban development projects, including construction of the Golden Mile project over the next 2-3 years in the central city area will result in a loss of network capacity and disruption to all travel modes in the Harbour Quays corridor resulting in travel time delays, poor customer experience and a lack of network resilience	• *For consideration:* Should the problem statement say temporary network disruption for all modes in the city centre rather than just the Harbour Quays corridor network disruption will include the Golden Mile works and Wellington Water works and building strengthening works bus disruption might occur on multiple corridors. • WCC to provide evidence of / data of disruption caused by construction projects / roadworks – both on Harbour Quays and impacts on other cross city corridors e.g. SH1 • Changing Lanes report – WCC to provide • Known and planned projects in the central city area, including Golden Mile, WWL works on Wakefield Street, Te Ngākau re-development, private developments projects	• Minimise loss of travel time reliability for cars and buses • Travel time and customer experience reliability for bus passengers • Minimise loss of service for bus passengers • Central city are remains attractive destination

Problem 3: Poor level of service connections for bikes across the central city area
10%
	Substandard level of service connections for bikes across the central city are resulting in increased conflicts between users of shared space on the Waterfront and an inability to optimise investment in the broader bike network	• Changing Lanes report – WCC to provide
		• Bike network plan – analysis to support increased network optimsation? WCC to provide
		• User conflicts on Waterfront. WCC to provide
			• Greater optimisation of investment in broader cycle network, including:
			  ○ Increased people on bikes
			  ○ Increased mode shift
			• Increased safety for bikes and pedestrians
			• Reduced conflict in shared spaces on the waterfront

4. Broader contextual challenges

In addition to the problems noted above, there are also a range of broader issues and challenges that will need to be addressed to resolve these problems. Some of these will be the focus of the programme Board, some will need to be addressed by projects identified in the Harbour Quays corridor.

These have been identified through the approach noted above including a review of background information, interviews and the workshop process. These have been identified to help set up the programme and any projects for success and *do not* predetermine any particular project or solution.

Table 2: Broader issues and challenges that will need to be addressed to resolve these problems

Challenges, issues and risks	Description and considerations
Political context	• Potential for change to decisions on the Golden Mile creates uncertainty for planning of Harbour Quays and other projects • Significant scrutiny of officer advice by elected members may lead to increased scope, time and costs • Potential lack of trust and different priorities between GWRC and WCC councillors may undermine decision making • Scrutiny of WCC decisions by Government
Economic context	• City and broader economy is currently under significant pressure • Need to recognise challenging economic environment for businesses in central city area and lower ability to withstand or accept impacts of disruption • Current economic challenges are also an opportunity including city centre revitalisation
Focus on people: Why story and social license. The acceptance of disruption is low and potential for significant backlash	• Need for clear and compelling 'why' story – why now, why the Harbour Quay corridor, why action is required (rather than do nothing) – this is key to underpinning any next steps • Public story very important: Needs to be of multi-modal benefits for all users, productivity, city vibe, safety • Need rigor of evidence need for investment including any second spine and that Golden Mile is at capacity or what happens when capacity is exceeded. • Metrics to support change will be important with 'bullet proof' data • Need for joined up communications and engagement with key stakeholders across central city projects including with businesses impacted by disruption • There is a risk that the project, including the reduction of capacity for private vehicles on the Quays, attracts strong public backlash particularly in the context of rising rates and struggling inner city businesses.
Views on what success looks like	• Alignment on the problems / why - avoid jumping to the solution and route • Public transport customers and bike users experiences are at the heart of potential benefits • Compelling evidence base on why we need it now • Multi modal corridor approach

© SCOTT CONSULTING

	• Clear plan for short term delivery • Agreed process for longer term solution(s)

Multi-modal and whole of network approach	• Solutions for Harbour Quays will be key to enable wider network optimisation, resilience and capacity
	• Any solutions will require integrated approach across modes, the network and service provision
	• There is currently no broader agreed transport plan for the city, with a lot of parallel planning processes underway so it is currently unclear how Golden Mile / Harbour Quays fits with broader key projects in City – to be addressed by the Central City Vision
	• Need alignment on the problems / why across projects - avoid jumping to the solution and routes
	• Need clarity of the programme and how projects fit together – spatially, timing, leading organisations to help show and tell the bigger picture
	• Response to the difference problems may drive difference solutions, including timing of these. Need to be clear on what short or longer term options are aiming to achieve.
	• Perception of different priorities
	  ○ WCC perceived as bike focused
	  ○ GWRC perceived as bus focused
	  ○ WCC is the RCA – need to keep city moving
	• Golden Mile construction planned from Jan 2025. Will be staged:
	  ○ Start intersection of Kent / Cambridge and Courtenay
	  ○ Then Courtenay
	  ○ Then Willis / Manners / Lambton
	  ○ Therefore, temporary solutions on Harbour Quays could be staged by way of TTM – learn and adjust
	  ○ Key risk is timing – unless TTM approach a temporary solution would be very challenging to put in place in time for start of construction

Compelling evidence base	• A key next step will be GWRC collating a robust evidence base to support the problems, benefits and KPIs • There is a lack of confidence in what degree of modelling can be used as a basis for decision making in complex networks – as alternative what can be trialled and learnt from and adjusted?
Timing and urgency	• Problems 1 and 2 in particular are *now* problems and there will need to be a temporal or tactical element to solutions such as temporary traffic management. There is a risk that planning for a permanent solution(s) becomes the focus at the expense of short term action. • There is a need for the partners to demonstrate action and the ability to deliver ahead of the problems coming to a head, in particular impacts on buses due to construction projects including the Golden Mile • Need for clear milestones, demonstrate progress – short term solution in place in 12 months?
Governance, partner relationships, programme approach and interdependencies with	• There are a range of known projects and plans in the central city area. While some are well defined, many are in early stages and therefore lack clear scope or timing. The impacts and interdependencies of these need to be better understood

multiple projects in central city area	• An ongoing programme approach and overview will required in order that any specific projects respond to the broader operating context • This is a challenging joint programme and there is a need for agreed programme structure and controls including team set up, decision making rights, meaningful input of both partners, clear scope etc. The approach needs to reduce friction between partners and enhance reputation of both • Both partners are concerned whether there is sufficient capacity and capability for the programme • Yet to agree on detail of funding – WCC lead on project and GWRC will only contribute if involved and aligned on scope and approach • Establishment of the project team important – clarity of accountabilities between GWRC and WCC – intent and need for dedicated project team • Need to drive ownership of IP of the project by councils – so procurement and resourcing model very important • Potential lack of capacity in Metlink to get involved and to be coordinated across teams / functions • Risk that key people from both organisations not involved enough early = not joint project
Bike network	• The bus priority measures and bike priority measures may be difficult to co-exist in the corridor in the short to medium term, due to central city construction activity and dependent projects using the corridor and network, and alternative interim network options are required.
Other risks	• Poor reputation for the delivery of transport projects in Wellington – delays, costs, disruption, changes in direction etc • Timing relative to start of Golden Mile construction. • There is a risk that if NLTP decisions (September 2024) differ from what is indicated in the draft GPS that NZTA-Waka Kotahi funding may be reduced and ability to deliver the current scope of the project is not possible. • The short-term solution becomes the long-term solution due to other construction activity having partial road closures for the next decade which may impact on the preferred route options. • The short-term solution becomes the long-term solution due to lack of future funding being available either within WCC or NZTA.

5. Potential next steps

This report was been provided to WCC and GWRC for feedback. In particular, feedback on the draft report was needed in relation to:

- Do the problem statement accurately convey the key problems to be resolved? Are these compelling?
- What evidence is there to support these problems now?
- What are the potential benefits? How can these be measured?
- Do the broader contextual challenges accurately capture the wider issues that will need to be addressed?

© SCOTT CONSULTING

Following review feedback, the report has been reviewed and reissued, including confirmation of the problems. In support of the findings of the reports, it is recommended that the following actions are undertaken:

- Board endorsement: The report is considered by the project Board for endorsement, including the problems and any responses needed to the broader contextual challenges
- Evidence: The project team (WCC and GWRC) produce a brief overview document that confirms the evidence base in support of the problems for Board endorsement. This includes collation and interrogation of the evidence. This should be presented through simple, easy to read graphs or figures to aid understanding of the implications. This is particularly pressing and will need to have a strong focus on impacts on buses and bus passengers in relation to the problems identified
- Confirmation of benefits, and KPIs for investment by project team for Board endorsement. This may include a further workshop between the partners, informed by the evidence
- Options analysis: the project team undertakes a long list to short list process to consider responses to address the problems and realization of benefits.

6. Limitations and acknowledgements

This report provides WCC and GWRC with an independent report on the key transport related problems on the Harbour Quays corridor. The report also highlights the broader issues and challenges that will need to be addressed to resolve these problems.

The report is based on the approach outlined above and the scope of this report does not include a review of this evidence.

EXECUTIVE SUMMARY

Purpose and background

The purpose of this report is to outline the optioneering process to choose preferred interim and long-term route options for buses and people on bikes along or adjacent to the Harbour Quays.

The identified problems to be addressed in the corridor (and their associated weightings) are:

- Lack of peak time capacity for buses on the central spine of Wellington's bus network along the Golden Mile (50%)
- Temporary network disruption for all modes in the Harbour Quays corridor (40%)
- Poor level of service connections for bikes across the central city area (10%)

Wellington City Council (WCC) and Greater Wellington Regional Council (GWRC) have decided to adopt a staged approach with interim improvements implemented in the short term followed by more permanent improvements in the long-term. The interim improvements may have several stages with the bus route the initial priority.

WCC and GWRC are developing this project in partnership. A series of workshops with representatives of WCC, GWRC, and the NZ Transport Agency (NZTA) were held to determine and assess interim options for short-term implementation, and permanent options for long-term investment.

Interim options

Two interim options were developed:

- T01 – Split Bus Route, which splits northbound and southbound buses between the Harbour Quays and the Featherston route. Bikes are accommodated on the Harbour Quays.
- T02 – Kerbside Bus, which has buses in both directions on the Quays on either side of the road. Bikes are accommodated on the Featherston route.

Permanent options

Eight permanent options were developed:

- P01A – Split Bus Route, which permanently splits northbound and southbound buses between the Harbour Quays and the Featherston route. Bikes are accommodated on the Harbour Quays.
- P01B – Split Bus Route Variant, which is similar to P01A, but has buses travelling on a slightly different route which avoids the City to Sea bridge pinchpoint.
- P02A – Buses Kerbside on Quays, which has buses travelling along kerbside bus lanes on the Harbour Quays, with bikes provided for on the Featherston route.
- P02B – Buses Cityside on Quays, which has buses travelling along a two-way busway on the cityside of the Harbour Quays, with bikes provided for on the Featherston route.
- P02C – Buses Centre-Running on Quays, which has buses travelling along a two-way busway along the centre of the Harbour Quays, with bikes provided for on the Featherston route.
- P03 – Buses on Featherston, which has buses travelling along a two-way busway along the Featherston route, with bikes provided for along the Harbour Quays.

- P04A – Buses and Bikes Cityside on Quays, which has both buses and bike travelling on the Harbour Quays in both directions, reducing traffic capacity to three lanes.
- P04B – Buses Cityside and Bikes Waterfront Side on Quays, which has both buses and bikes travelling on the Harbour Quays in both direction, but with traffic capacity of four lanes

Assessment criteria

Each set of options was assessed against a broad range of criteria divided into seven categories:

- Bus
- Bikes
- Pedestrians
- Place
- Strategic alignment
- Effects
- Implementability

Preferred options

The preferred interim option was T01 – Split bus route. This option avoids the need for bus passengers to cross the Quays to access Golden Mile or nearby destinations. It allows both the Featherston and Quays routes to be tested for traffic and bus travel time impacts. It also avoids the added costs of providing a contra-flow bike facility along the Featherston route.

It is anticipated that this interim option will be implemented in two stages. The first stage will be to implement the bus improvements, given the urgency of having an alternative during Golden Mile construction. Improvements for people on bikes will be implemented as a later stage.

No preferred option was selected for a permanent solution. While options P03, P04A, and P04B scored highest, it was agreed amongst stakeholders that more information is needed to more robustly test the options. It was agreed that all the options tabled through this options assessment process will remain to be considered through a robust Business Case process. No options were fatally flawed based on the available information. However, funding availability may mean some options are not feasible.

While identifying the need for bike provision as part of this process, the addition of bike infrastructure may be done at a later stage of the project.

1 PROJECT BACKGROUND

1.1 PURPOSE

The purpose of this report is to outline the optioneering process to choose a preferred interim and long-term route options for buses and people on bikes along or adjacent to the Harbour Quays.

Options are considered for both an interim solution and a long-term / permanent solution.

1.2 BACKGROUND

Wellington City Council (WCC), in partnership with Greater Wellington Regional Council (GWRC), are investigating the possibilities for an additional bus priority route through the central city parallel to the Golden Mile. Construction on the Golden Mile, expected to begin in 2025[1], will require diversion of buses away from the Golden Mile. Provision of an additional bus priority route could provide an improved level of service for bus users during construction of the Golden Mile and other events which cause disruption on the Golden Mile route. Figure 1-1 shows the project context.

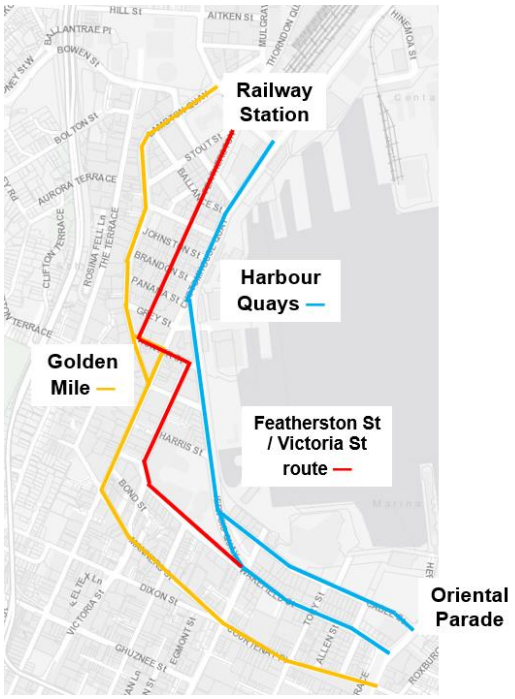

Figure 1-1: Map showing Harbour Quays route in context

[1] https://www.letstalk.wellington.govt.nz/golden-mile

The Harbour Quays route is explicitly mentioned in the Government Policy Statement (GPS) 2024-27 as a priority for public transport funding.[2]

As well providing bus priority, WCC want to implement a north-south facility people on bikes between the Railway Station and Oriental Parade. This was directed by WCC's Environment and Infrastructure Committee on 30 November 2023.[3] Figure 1-2 shows WCC's Paneke Pōneke Bike Network Plan, approved by Councillors in 2022.

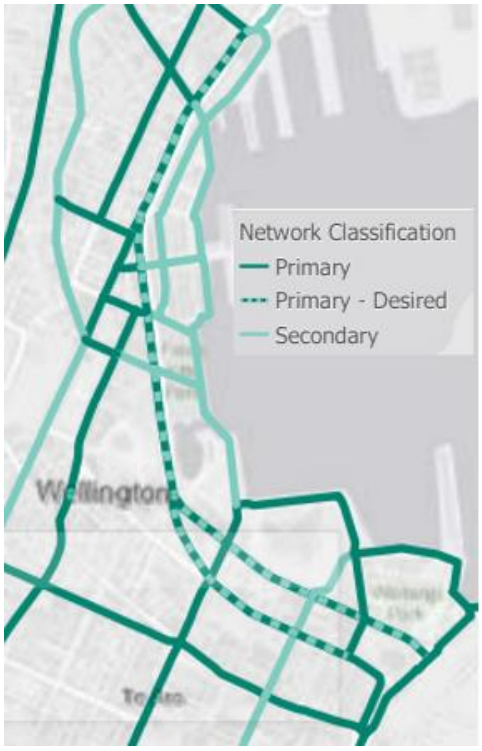

Figure 1-2: Paneke Pōneke - Bike Network Plan along Harbour Quays (Source: WCC)

1.2.1 PROBLEMS TO SOLVE

An integrated transport planning approach is required to deliver the best outcomes for all modes along this important corridor and any adjacent corridors.

At an Investment Logic Mapping (ILM) workshop undertaken by the project partners, it was agreed that the key problems (and their associated weightings) to be solved are:

- Capacity on the Golden Mile for buses at peak times (50%)
- Temporary network disruption for all modes in the corridor (40%)
- Poor bike level of service across the city (10%)

[2] https://www.transport.govt.nz/assets/Uploads/Government-Policy-Statement-on-land-transport-2024-FINAL.pdf

[3] https://wellington.govt.nz/-/media/your-council/meetings/committees/kt-environment-and-infrastructure/2023-11-30-minutes-eic.pdf

The Partners seek to identify the route(s) that can be reconfigured to:

- Reduce bus congestion on the Golden Mile
- Increase the bus capacity through the central city at peak times
- Improve level of service people on bikes travelling between the Wellington Railway Station and Oriental Parade.

1.3 STAGED APPROACH

The improvements for buses and bikes along the Harbour Quays and surrounding streets are expected to be delivered in two or more stages; an interim stage and a long-term / permanent stage. While bike provision has been identified as part of this process, the addition of bike infrastructure may be done at a later stage of the project. The installation of bus priority measures in either the interim or permanent solution is independent of the installation of cycling facilities.

The interim approach will be the first stage and aims to deliver improvements without major civil works within a relatively short timeframe. Some elements (for example bus stops) may be constructed permanently as part of this approach. An interim solution is expected to be implemented in 2025.

The second stage of delivery of bus and bike improvements will be permanent and may involve more substantive civil works, streetscaping, and changes to network circulation. A budget of $57 million has been identified for implementing a permanent solution. The timeframe for the implementation of a permanent solution is to be determined.

1.4 ASSESSMENT APPROACH

Interim and permanent options have been developed and assessed across a series of workshops. Representatives from WCC, GWRC, NZTA, and WSP have attended the following workshops throughout July 2024, as listed in Table 1-1.

Table 1-1: Workshops held throughout the Harbour Quays options assessment

WORKSHOP CONTENT	DATE
Options capture	Tuesday, 2 July
Assessment criteria and options development	Monday, 8 July
Options assessment	Friday, 19 July
Preferred option confirmation	Monday, 29 July

1.5 CONSTRAINTS AND CONSIDERATIONS

This section outlines some of the constraints of implementation along the Harbour Quays and other issues to consider when developing and assessing options.

1.5.1 EXISTING CROSS-SECTIONS

We have selected five locations to demonstrate typical cross-sections of the Harbour Quays corridor and the partly parallel Featherston Street / Victoria Street corridor. Figure 1-3 shows the locations of the five cross-sections.

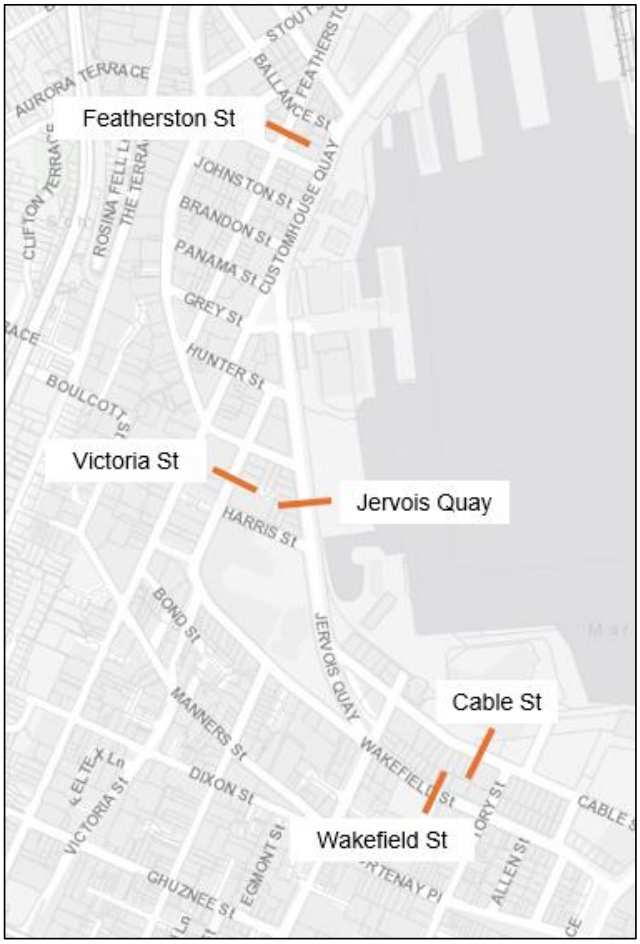

Figure 1-3: Cross-section locations along the Harbour Quays and Featherston Street / Victoria Street corridors

Figure 1-4 shows the existing cross-section for Featherston Street between Ballance Street and Waring Taylor Street. One-way traffic is southbound. This represents a reasonably typical cross-section of Featherston Street, although parking arrangements and footpath widths vary.

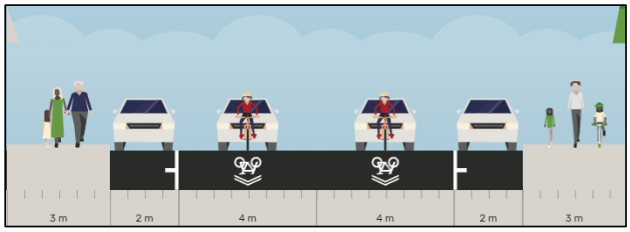

Figure 1-4: Featherston Street existing cross-section

Figure 1-5 shows the existing cross-section for Victoria Street between Harris Street and Hunter Street. One-way traffic is southbound. Note that during re-construction of Te Matapihi Central Library, Victoria Street is temporarily reduced to one southbound traffic lane through the Harris Street intersection as far as Wakefield Street.

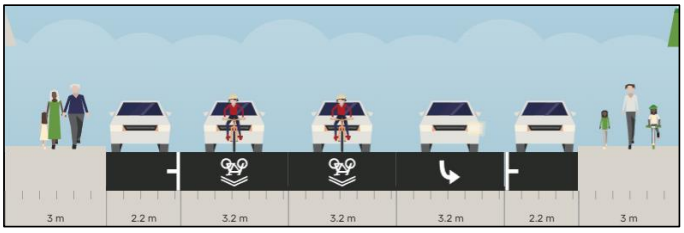

Figure 1-5: Victoria Street existing cross-section

Figure 1-6 shows the existing cross-section for Jervois Quay immediately north of Harris Street. This cross-section is slightly wider than typical two-way sections of the Harbour Quays route which typically have no parking and reduced footpath widths. This section has been chosen as it is a suitable location for bus stops due to the additional width.

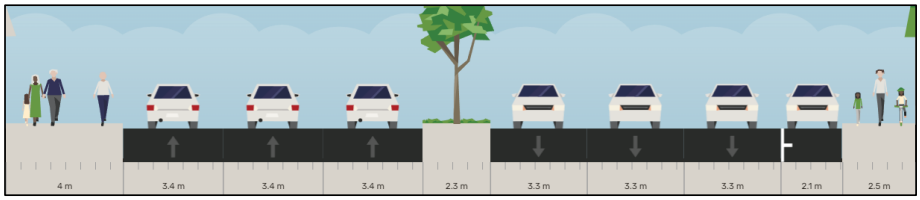

Figure 1-6: Jervois Quay existing cross-section

Figure 1-7 shows the existing cross-section for Cable Street between Taranaki Street and Tory Street. One-way traffic is southbound. This represents a reasonably typical cross-section of Cable Street, although parking arrangements and footpath widths vary. Not shown is the indented parking on the north side between street trees.

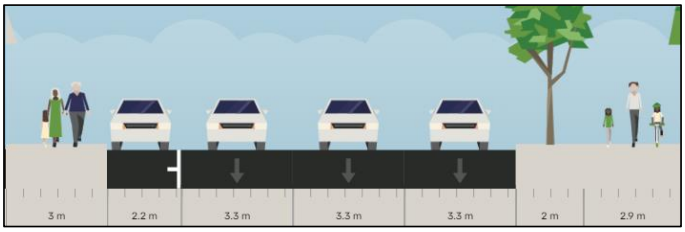

Figure 1-7: Cable Street existing cross-section

Figure 1-8 shows the existing cross-section for Wakefield Street between Taranaki Street and Tory Street. One-way traffic is northbound. This represents a reasonably typical cross-section of Wakefield Street, although parking arrangements and footpath widths vary.

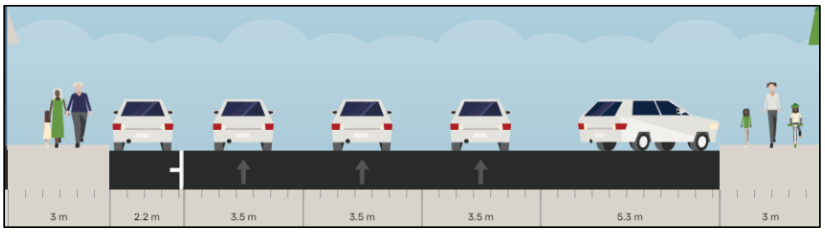

Figure 1-8: Wakefield Street existing cross-section

Table 1-2 displays additional information, such as traffic volumes and speeds, regarding the existing corridors being considered as part of the Harbour Quays option assessment.

Table 1-2: Information regarding corridors under consideration

SEGMENT	ONE NETWORK FRAMEWORK CLASSIFICATION	TRAFFIC VOLUME (AADT)[4]	SPEED LIMIT (KMPH)	MEAN OPERATING SPEED (KMPH)[5]
Waterloo / Customhouse / Jervois Quays	Urban Connector	28,200-36,800 vehicles per day (vpd)	50	40
Wakefield Street (between Jervois Quay and Tory Street)	Main Street	16,600 vpd	50	32
Cable Street	Main Street	20,700 vpd	50	38
Featherston Street (between Bunny St and Whitmore St)	Main Street	11,000-12,000 vpd	30	27

[4] According to Mobile Roads information retrieved July 2024
[5] According to MegaMaps information retrieved July 2024

Featherston Street (between Brandon St and Grey St)	Main Street	8,000-9,000 vpd	30	27
Victoria Street (between Hunter St and Wakefield St)	Main Street	8,000-9,000 vpd	30	29

1.5.2 CITY TO SEA BRIDGE

The City to Sea bridge, shown in Figure 1-9, is a pedestrian bridge over Jervois Quay connecting Te Ngākau Civic Square to the waterfront. Its structure presents a pinch-point for the road corridor which restricts the possibilities for accommodating both buses and people on bikes. It is possible that this bridge will be demolished in future due to its structure being earthquake-prone. Te Ngākau master planning work includes plans for the bridge and the lagoon sea wall which require strengthening. If the bridge is to be demolished, this presents more possibilities for the corridor. Many of the permanent options considered in this report rely on the City to Sea bridge being demolished.

Figure 1-9: City to Sea Bridge over Jervois Quay (Source: Google Maps Streetview and WCC Wellington Maps)

1.5.3 CENTRAL MEDIAN

A central median exists along much of the length Customhouse and Jervois Quays. . Where it exists, the median is built-up and planted with shrubs and pohutakawa trees, as shown in Figure 1-10. The median restricts the ability to quickly implement temporary changes to reallocate road space in the corridor while relocating the median increases the costs for permanent options. The median provides important urban amenity and forms a key green corridor as part of the Green Network

Plan[6] so its removal would be detrimental. Many of the permanent options considered in this report rely on the median being removed or relocated.

Figure 1-10: Median on Jervois Quay

1.5.4 LAND USE DEVELOPMENT

There are developments along the Harbour Quays route and on nearby streets that will limit the ability to implement changes in the short-term. These include:

- Frank Kitts Park redevelopment (including Fale Malae)
- Te Ngākau Civic Square redevelopment (including works to the Central Library, Town Hall and other buildings in the princinct)
- Michael Fowler Centre car park redevelopment
- Large development planned for block between Featherston Street, Balance Street, and Waring Taylor Street
- An expected redevelopment of the Reading Cinema Site on Wakefield Street
- Wellington NZ i-Site relocating to Takina and for the need to accommodate tour coaches, tour vans and cruise ship drop off and pick up on either Cable or Wakefield Streets.

1.5.5 OTHER CONSIDERATIONS

There are a range of policies and strategies to also be considered in the development of options for the corridor. Many of these strategies refer to mode shift as critical to achieving Wellington's goals for a low-carbon future. These include:

[6] https://wellington.govt.nz/your-council/plans-policies-and-bylaws/policies/green-network-plan

- Paneke Pōneke Bike Network Plan (2021)
- Te Atakura First to Zero (updated in 2023)
- Heritage area at Post Office Square
- Te Ara Tatou – Traffic Circulation Plan Investigation (2021)
- Green Network Plan (2022)
- Gehl report (2021)
- Introduction of articulated buses expected in Wellington from 2025 for route #2
- The recommended corridor from the LGWM MRT Business Case

2 OPTION DEVELOPMENT

A workshop to capture interim and permanent options was held on Tuesday 2 July 2024. Options were identified and developed further at a subsequent option development workshop held on Monday 8 July 2024.

For both the interim and permanent options, two high-level road corridors are considered for buses and / or bikes, as shown in Figure 2-1. They are:

- The Harbour Quays route which comprises all or part of Whitmore Street, Customhouse Quay, Jervois Quay, Cable Street, and Wakefield Street. All option will connect to the eastern end of the Golden Mile via Kent and/or Cambridge Terraces
- The Featherston route which comprises all or part of Whitmore Street, Featherston Street, Hunter Street, Victoria Street, and Harris Street before connecting to Jervois Quay and the rest of the Harbour Quays route.

There are some possible variations on these routes as indicated by the dashed lines. Some sections of the route are the same for each option.

Figure 2-1: North-south routes considered for buses and bikes through option development

2.1 INTERIM OPTIONS DEVELOPMENT

There are two interim options; T01 – Split Bus Route and T02 – Buses Kerbside on Quays. No significant civil works are required for either option. Regardless of option, northbound bus priority is the same.

2.1.1 T01 – SPLIT BUS ROUTE

The T01 – Split Bus Route option has northbound buses travelling along the Harbour Quays, with southbound buses travelling via the Featherston route. Bike facilities are provided for along the Harbour Quays. Figure 2-2 shows the indicative alignment and cross-section of this option.

Figure 2-2: T01 – Split Bus Route interim option indicative layout

Table 2-1 provides a description of what this option means for buses, people on bikes, and general traffic.

Table 2-1: T01 - Split Bus Route interim option description

	T01 – SPLIT BUS ROUTE
Buses	— Northbound buses on Wakefield Street, Jervois Quay, Customhouse Quay — Southbound buses on Featherston Street, Victoria Street, Harris Street, Jervois Quay, Cable Street

	— Potential variants around southbound bus route (for example, terminating at Taranaki Street, and use of Willeston Street or Hunter Street) — Indicative bus stops are as shown (red circles)
Bikes	— Bikes on Customhouse Quay, Jervois Quay, Cable Street — Potential for bikes to share southbound bus lane on Featherston Street — Provision of lanes through City to Sea bridge pinch-point to be resolved (potential for bikes to go via existing Whairepo Lagoon bridge)
Traffic	— Four traffic lanes retained on the Quays — No changes to traffic access to the Quays from side streets

2.1.2 T02 – KERBSIDE BUS

The T02 – Kerbside Bus option provides for buses travelling in both directions along the Harbour Quays. Bike facilities are provided via the Featherston route. Figure 2-3 shows the indicative alignment and cross-section of this option.

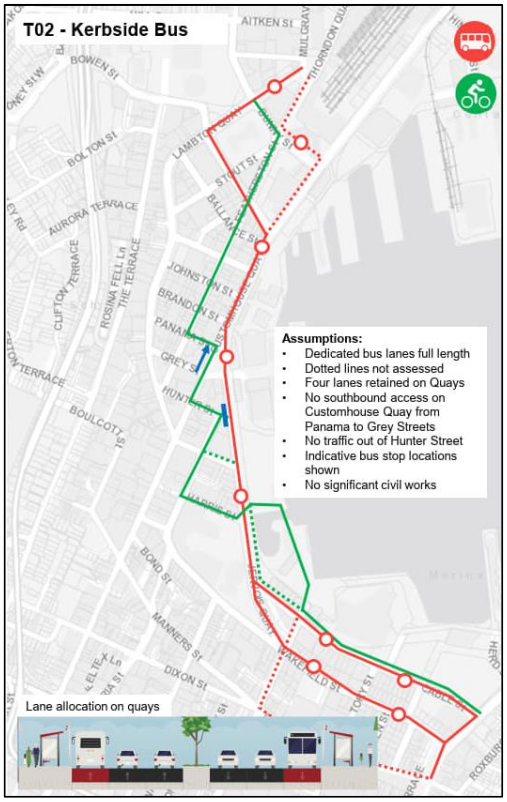

Figure 2-3: T02 –Kerbside Bus option

Table 2-2 provides a description of what this option means for buses, people on bikes, and general traffic.

Table 2-2: T02 – Kerbside Bus option description

	T02 – KERBSIDE BUS
Buses	— Northbound buses on Wakefield Street, Jervois Quay, Customhouse Quay — Southbound buses on Customhouse Quay, Jervois Quay, Cable Street — Indicative bus stops are as shown (red circles)
Bikes	— Bikes on Featherston Street, Victoria Street, Harris Street, Jervois Quay, Cable Street — Potential variants around southbound bike route (for example, use of Willeston Street or Hunter Street) — Provision of lanes through City to Sea bridge pinch-point to be resolved
Traffic	— Four traffic lanes retained on the Quays — No changes to traffic access to the Quays from side streets — No southbound traffic access on Customhouse Quay from Panama to Grey Street — No traffic access out of Hunter Street

2.1.3 SUMMARY OF INTERIM OPTIONS

Table 2-3 provides a summary of which assumptions apply to each of the interim options.

Table 2-3: Application of assumptions to the interim options

ASSUMPTION	T01 – SPLIT BUS ROUTE	T02 –KERBSIDE BUS
Dedicated bus lanes will be provided for the full length	✓	✓
At least four traffic lanes will be retained on the Harbour Quays	✓	✓
No southbound traffic access on Customhouse Quay from Panama St to Grey St		✓
No traffic access out of Hunter St only		✓

2.2 PERMANENT OPTIONS DEVELOPMENT

Eight different options within four option categories were considered for a permanent solution for the Harbour Quays. These options are listed in Table 2-4.

Table 2-4: Permanent options for consideration

OPTION CATEGORY	OPTION
P01 – Split bus route	P01A – Split Bus Route
	P01B – Split Bus Route Variant
P02 – Buses both ways on Quays, bikes on Featherston route	P02A – Buses Kerbside on Quays
	P02B – Buses Cityside on Quays
	P02C – Buses Centre-Running on Quays
P03 – Buses on Featherston	P03 – Buses on Featherston
P04 – Buses and bikes on the Quays	P04A – Buses and Bikes Cityside on Quays
	P04B – Buses Cityside and Bikes Waterfront Side on Quays

Each of these options are described in the following sections.

2.2.1 P01A – SPLIT BUS ROUTE

The permanent P01A – Split Bus Route option is closely aligned with T01 and provides for northbound buses on the Harbour Quays, with southbound buses travelling via the Featherston route. Bike facilities are provided for along the Harbour Quays. Wakefield Street is converted to a two-way busway with traffic access removed. Cable Street is made two-way for general traffic. Road reconstruction and streetscaping are included. Figure 2-4 shows the indicative alignment and cross-section of this option.

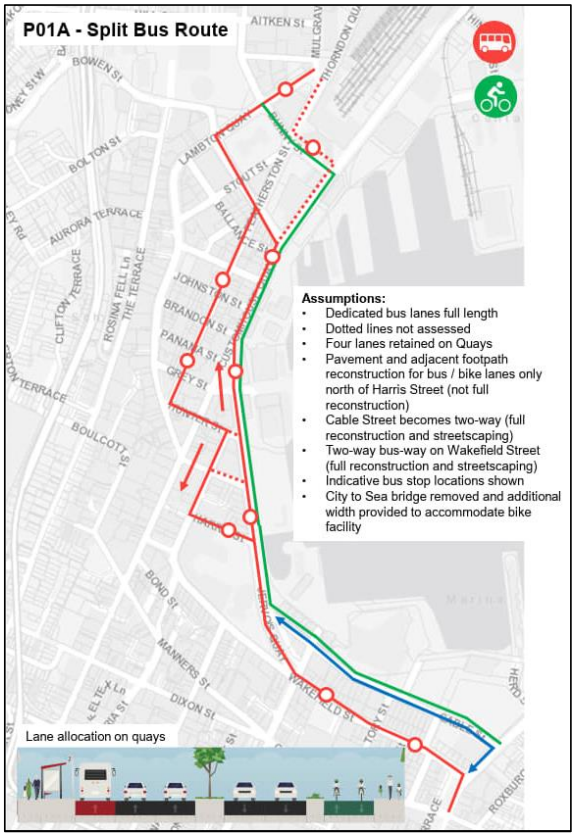

Figure 2-4: P01A – Split Bus Route permanent option indicative layout

Table 2-5 provides a description of what this option means for buses, people on bikes, general traffic and place.

Table 2-5: P01A – Split Bus Route permanent option description

	P01A – SPLIT BUS ROUTE
Buses	— Two-way busway on Wakefield Street — Indicative bus stops are as shown (red circles)
Bikes	— Bikes on Waterloo Quay, Customhouse Quay, Jervois Quay, Cable Street

	— Provision of lanes through City to Sea bridge pinch-point to be resolved (during possible replacement of bridge with at grade crossing)
Traffic / parking	— Four traffic lanes retained on the Quays — Cable Street becomes two-way for general traffic
Place and pedestrians	— Central median with trees retained in its current position — Full reconstruction and streetscaping of Cable Street and Wakefield Street — City to Sea pedestrian bridge removed as part of a separate project, allowing additional width to accommodate a bike facility

2.2.2 P01B – SPLIT BUS ROUTE VARIANT

This option is a variant of the P01 – Split Bus Route option. The variant is that southbound buses travel along Wakefield Street instead of Harris Street. This option does not require the removal of the City to Sea bridge to accommodate a bike facility. Figure 2-5 shows the indicative alignment and cross-section of this option.

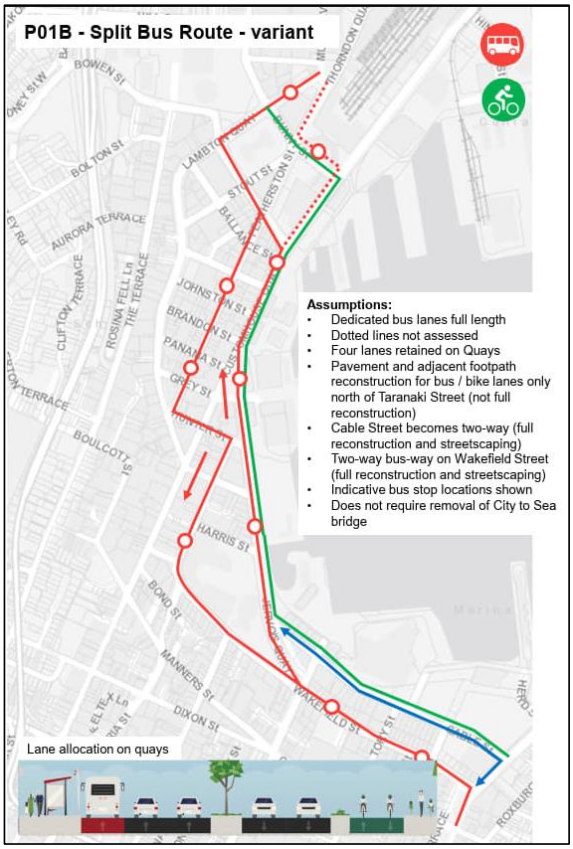

Figure 2-5: P01B – Split Bus Route Variant option indicative layout

Table 2-6 provides a description of what this option means for buses, people on bikes, general traffic, and place.

Table 2-6: P01B –Split Bus Route Variant option description

	P01B – SPLIT BUS ROUTE VARIANT
Buses	— Two-way busway on Wakefield Street — Indicative bus stops are as shown (red circles)
Bikes	— Bikes on Waterloo Quay, Customhouse Quay, Jervois Quay, Cable Street
Traffic	— Four traffic lanes retained on the Quays — Cable Street becomes two-way for general traffic

Place and pedestrians	— Central median with trees retained in its current position — Full reconstruction and streetscaping of Cable Street and Wakefield Street — Removal of City to Sea pedestrian bridge not required

2.2.3 P02A – BUSES KERBSIDE ON QUAYS

The P02A – Buses Kerbside on Quays option provides for buses travelling in both directions along the Harbour Quays and is closely aligned with T02. Bus lanes are located on either side of the street with existing median retained. Bike facilities are provided along the Featherston Street route. Figure 2-6 shows the indicative alignment and cross-section of this option.

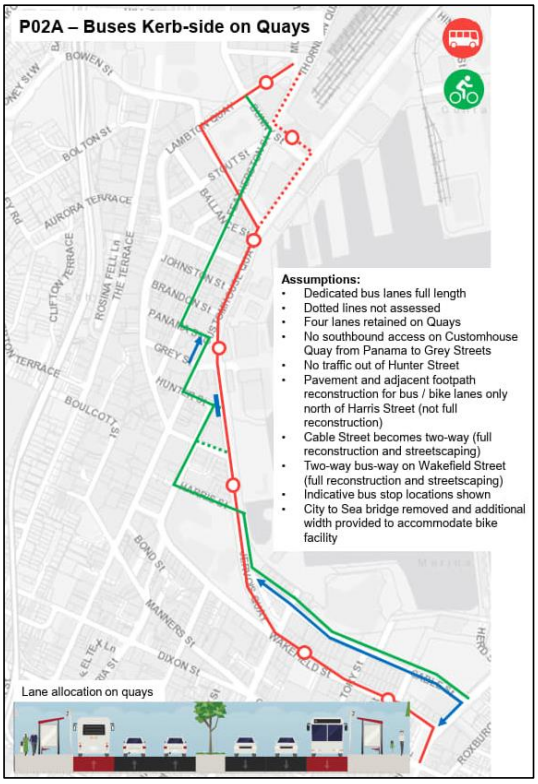

Figure 2-6: P02A – Buses Kerbside on Quays option indicative layout

Table 2-7 provides a description of what this option means for buses, people on bikes, general traffic, and place.

Table 2-7: P02A – Buses Kerbside on Quays option description

	P02A – BUSES KERBSIDE ON QUAYS
Buses	— Two-way buses on Wakefield Street, Jervois Quay, Customhouse Quay
Bikes	— Bikes on Featherston Street, Victoria Street, Harris Street, Jervois Quay, Cable Street — Provision of lanes through City to Sea bridge pinch-point to be resolved — Potential variants around southbound bike route (e.g. use of Willeston Street, Hunter Street or Wakefield Streets)
Traffic	— Four traffic lanes retained on the Quays

	— No southbound traffic access on Customhouse Quay from Panama Street to Grey Street — No traffic access out of Hunter Street — Cable Street becomes two-way for general traffic
Place and pedestrians	— Central median with trees retained in its existing location — Existing footpaths retained — Full reconstruction and streetscaping on Cable Street and Wakefield Street — City to Sea pedestrian bridge removed as part of a separate project, allowing additional width to accommodate a bike facility

2.2.4 P02B – BUSES CITYSIDE ON QUAYS

The P02B – Buses Cityside on Quays option provides a two-way busway along the city side of the Harbour Quays route. Bike facilities are provided along the Featherston route. It requires the closure of several side street accesses. Figure 2-7 shows the indicative alignment and cross-section of this option.

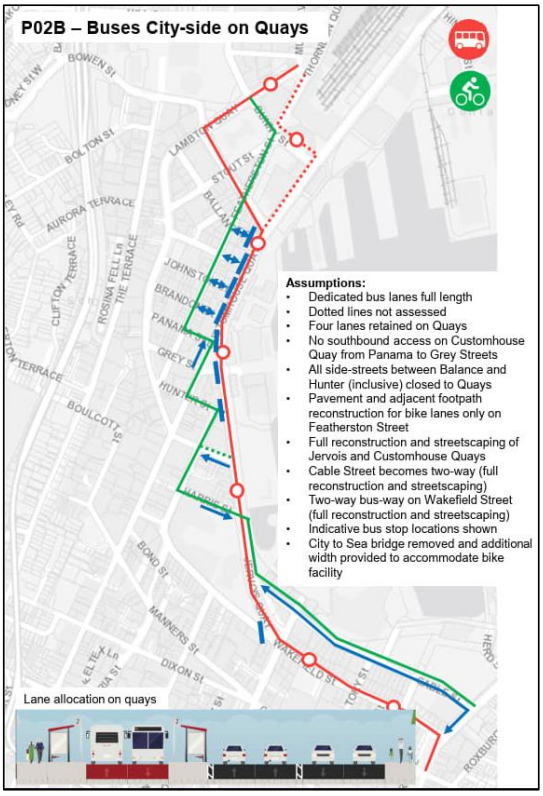

Figure 2-7: P02B – Buses Cityside on Quay option indicative layout

Table 2-8 provides a description of what this option means for buses, people on bikes, general traffic, and place.

Table 2-8: P02B –Buses Cityside on Quays option description

	P02B – BUSES CITYSIDE ON QUAYS
Buses	— Two-way buses on Wakefield Street, Jervois Quay, Customhouse Quay
Bikes	— Bikes on Featherston Street, Victoria Street, Harris Street, Jervois Quay, Cable Street — Provision of lanes through City to Sea bridge pinch-point to be resolved — Potential variants around southbound bike route (e.g. use of Willeston Street, Hunter Street or Wakefield Streets)
Traffic	— Four traffic lanes retained on the Quays

	— No southbound traffic access on Customhouse Quay from Panama Street to Grey Street — All access to and from side streets to and from the Quays between Balance Street and Hunter Street (inclusive) closed — No median separating opposing traffic lanes — Cable Street becomes two-way for general traffic
Place and pedestrians	— Central median with trees moved to be adjacent to busway — Existing footpaths retained — Pavement and adjacent footpath reconstruction for bike lanes only on Featherston Street — Full reconstruction and streetscaping of Jervois Quay, Customhouse Quay, Cable Street, and Wakefield Street — City to Sea pedestrian bridge removed as part of a separate project, allowing additional width to accommodate a bike facility

2.2.5 P02C – BUSES CENTRE-RUNNING ON QUAYS

The P02C – Buses Centre-Running on Quays option provides a two-way busway down the middle of the Harbour Quays, replacing the existing raised median. Bike facilities are provided along the Featherston route. Figure 2-8 shows the indicative alignment and cross-section of this option.

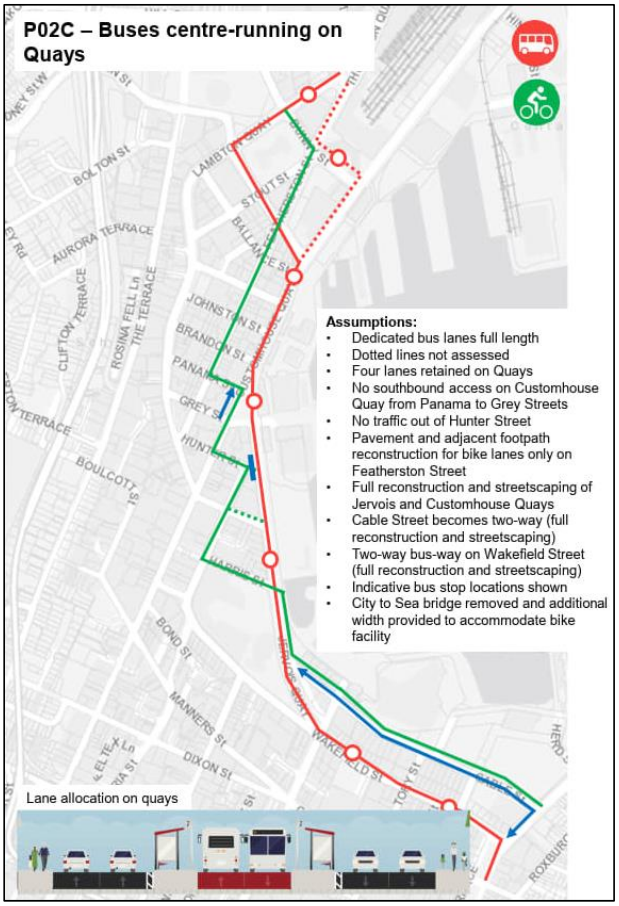

Figure 2-8: P02C – Buses Centre-Running on Quays option indicative layout

Table 2-9 provides a description of what this option means for buses, people on bikes, general traffic, and place.

Table 2-9: P02C – Buses Centre-Running on Quays option description

	P02C – BUSES CENTRE-RUNNING ON QUAYS
Buses	— Two-way buses centre-running on Wakefield Street, Jervois Quay, Customhouse Quay
Bikes	— Bikes on Featherston Street, Victoria Street, Harris Street, Jervois Quay, Cable Street — Provision of lanes through City to Sea bridge pinch-point to be resolved

	— Potential variants around southbound bike route (e.g. use of Willeston Street, Hunter Street or Wakefield Streets)
Traffic	— Four traffic lanes retained on the Quays — Busway separates opposing traffic lanes — No southbound traffic access on Customhouse Quay from Panama Street to Grey Street — No traffic access out of Hunter Street — Cable Street becomes two-way
Place and pedestrians	— Existing central median to be removed and replaced with medians between busway and traffic lanes. Medians will provide room for bus shelters at bus stops and streetscaping between bus stops. — Existing footpaths retained — Pavement and adjacent footpath reconstruction for bike lanes only on Featherston Street — Full reconstruction and streetscaping of Jervois Quay, Customhouse Quay, Cable Street, and Wakefield Street — City to Sea pedestrian bridge removed as part of a separate project, allowing additional width to accommodate a bike facility

2.2.6 P03 – BUSES ON FEATHERSTON

The P03 – Buses on Featherston option provides for buses in both directions along the Featherston Street route. Cycle facilities are provided along the Quays. Figure 2-9 shows the indicative alignment and cross-section of this option.

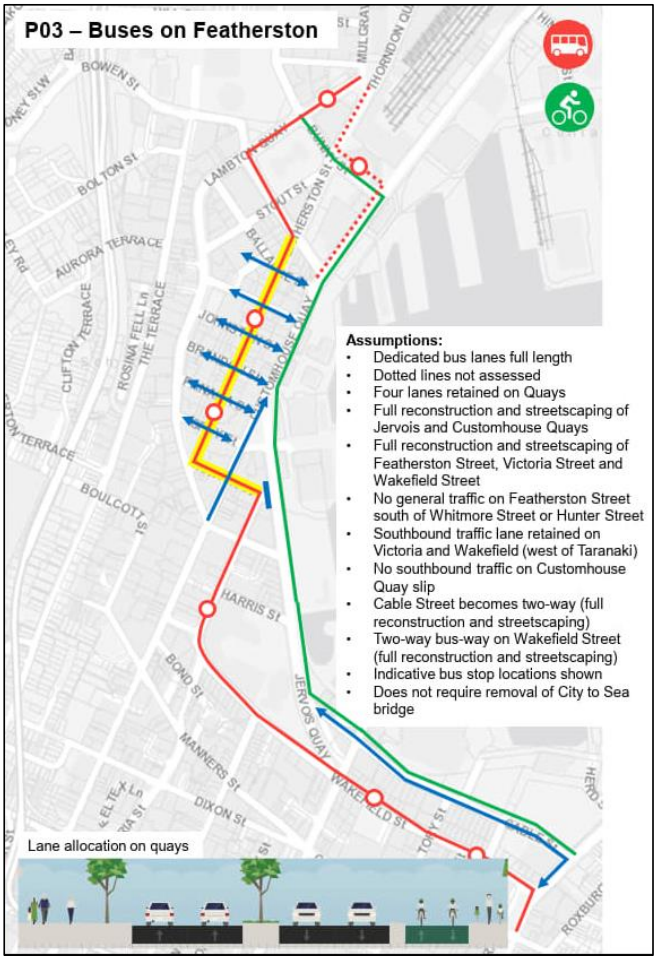

Figure 2-9: P03 – Buses on Featherston Street option indicative layout

Table 2-10 provides a description of what this option means for buses, people on bikes, general traffic and place.

Table 2-10: P03 – Buses on Featherston option description

	P03 – BUSES ON FEATHERSTON
Buses	— Two-way buses on Wakefield Street, Victoria Street, Featherston Street
Bikes	— Bikes waterfront side of the Quays
Traffic	— Four traffic lanes retained on the Quays

	— No general traffic on Featherston Street between Whitmore Street and Hunter Street — No general traffic on Hunter Street — Southbound traffic lane retained on Victoria Street and Wakefield Street — No southbound traffic access on Customhouse Quay slip — Variants with and without converting Cable Street to two-way for general traffic — Cable Street becomes two-way
Place and pedestrians	— Central median with trees retained in its existing location — Footpath reconstruction and streetscaping of Jervois Quay, Customhouse Quay, and Cable Street — Full reconstruction and streetscaping of Featherston Street, Victoria Street, and Wakefield Street — Removal of the City to Sea bridge is not required

2.2.7 P04A – BUSES AND BIKES CITYSIDE ON QUAYS

The P04A – Buses and Bikes Cityside on Quays option provides both a two-way busway and a two-way bike facility on the Harbour Quays. Both are located on the cityside of the Quays corridor. Three traffic lanes are allowed for. Figure 2-10 shows the indicative alignment and cross-section of this option.

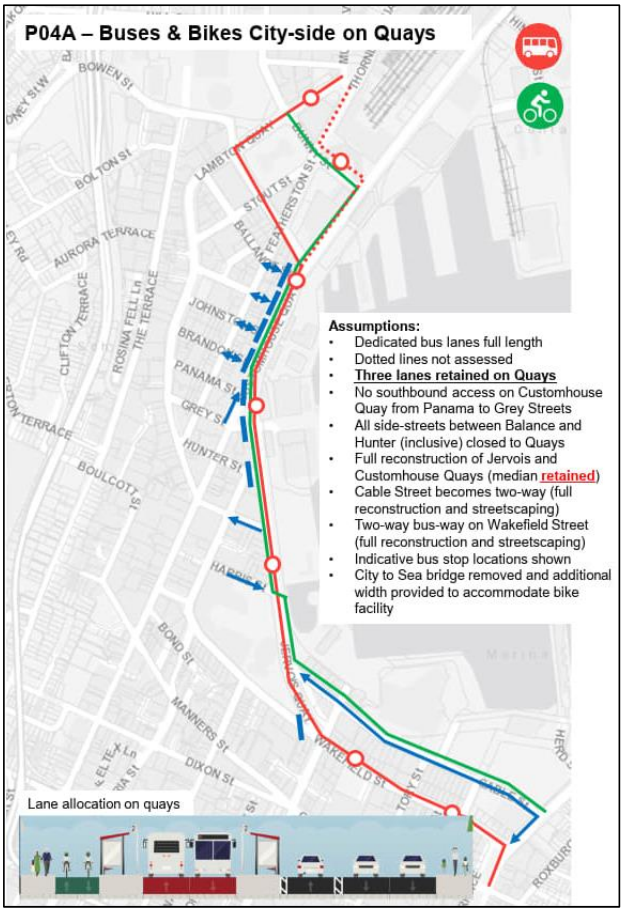

Figure 2-10: P04A – Buses and Bikes Cityside on Quays option indicative layout

Table 2-11 provides a description of what this option means for buses, people on bikes, general traffic and place.

Table 2-11: P04A – Buses and Bikes Cityside on Quays option description

	P04A – BUSES AND BIKES CITYSIDE ON QUAYS
Buses	— Two-way buses cityside on Quays — Two-way busway on Wakefield Street
Bikes	— Bikes cityside of the Quays, between footpath and busway
Traffic	— Three traffic lanes retained on the Quays

	— No southbound access on Customhouse Quay from Panama Street to Grey Street — All side streets between Balance Street and Hunter Street (inclusive) closed to Quays — Cable Street becomes two-way
Place and pedestrians	— Central median with retained in its existing location, but with some tree removal to allow for bus stops — Full reconstruction and streetscaping of Cable Street and Wakefield Street — City to Sea pedestrian bridge removed as part of a separate project, allowing additional width to accommodate a bike facility

2.2.8 P04B – BUSES CITYSIDE AND BIKES WATERFRONT SIDE ON QUAYS

The P04B – Buses Cityside and Bikes Waterfront Side on Quays option provides both a two-way busway and a two-way bike facility on the Harbour Quays. The busway is on the cityside while the bike facility is on the waterfront side of the Quays corridor. The central median is relocated, and four traffic lanes are allowed for. Figure 2-11 shows the indicative alignment and cross-section of this option.

Option P04B has many possible variants – e.g. could include fewer lanes and more trees / footpath etc. This option is a proxy for those many variants.

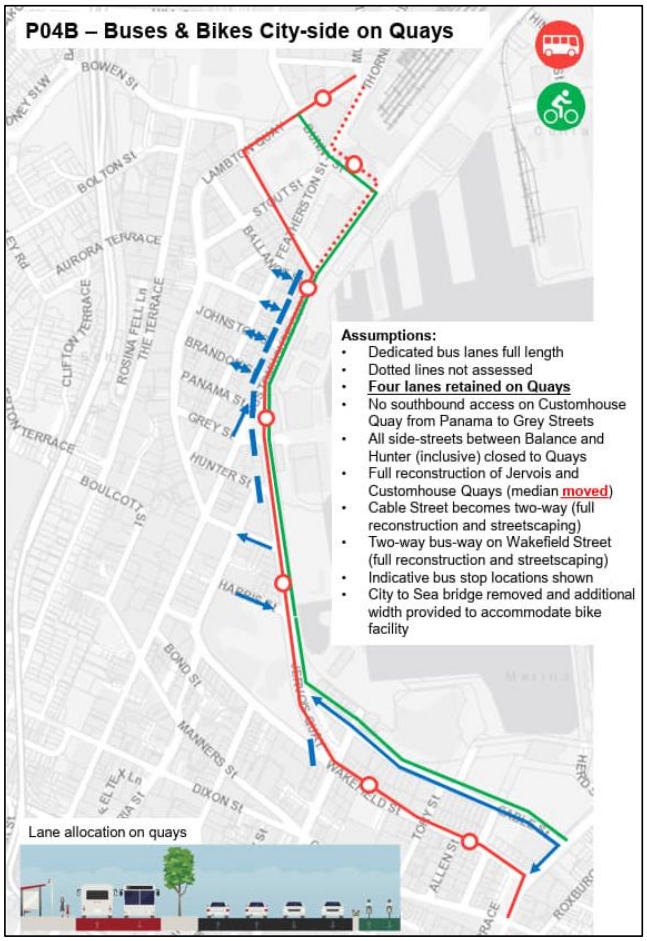

Figure 2-11: P04B – Buses Cityside and Bikes Waterfront Side on the Quays option indicative layout

Table 2-12 provides a description of what this option means for buses, people on bikes, general traffic and place.

Table 2-12: P04B – Buses Cityside and Bikes Waterfront Side on Quays option description

	P04B – BUSES CITYSIDE AND BIKES WATERFRONT SIDE ON QUAYS
Buses	— Two-way buses cityside on Quays

	— Two-way busway on Wakefield Street
Bikes	— Bikes waterfront side of the Quays, adjacent to footpath
Traffic	— Four traffic lanes retained on the Quays — No median between opposing traffic lanes — No southbound access on Customhouse Quay from Panama Street to Grey Street — All side streets between Balance Street and Hunter Street (inclusive) closed to Quays — Cable Street becomes two-way
Place and pedestrians	— Full reconstruction and streetscaping of Jervois Quay and Customhouse Quay — Full reconstruction and streetscaping of Cable Street and Wakefield Street — Existing central median moved city side to provide space for bus stops between busway and general traffic lanes — City to Sea pedestrian bridge removed as part of a separate project, allowing additional width to accommodate a bike facility

2.2.9 SUMMARY OF PERMANENT OPTIONS

Table 2-13 provides a summary of which assumptions apply to each of the permanent options.

Table 2-13: Application of assumptions to the permanent options

ASSUMPTION	P01A	P01B	P02A	P02B	P02C	P03	P04A	P04B
Dedicated bus lanes will be provided for the full length	✓	✓	✓	✓	✓	✓	✓	✓
At least four traffic lanes will be retained on the Harbour Quays	✓	✓	✓	✓	✓	✓		✓[7]
Relocation or removal of Harbour Quays median required with full reconstruction				✓	✓	✓	✓[8]	✓
Full reconstruction of Featherston route required						✓		
Partial reconstruction of Featherston route required to allow contra-flow bike facility			✓	✓	✓			
No general traffic on Featherston St south of Whitmore St and Hunter St						✓		
No southbound traffic access on Customhouse from Panama to Grey		✓						
All access to side streets between Balance St and Hunter St closed				✓			✓	✓
No traffic access out of Hunter St only			✓		✓	✓		
Two-way traffic on Cable St	✓	✓	✓	✓	✓	✓	✓	✓
Two-way busway on Wakefield St	✓	✓	✓	✓	✓	✓	✓	✓
Removal of the City to Sea bridge required	✓		✓	✓	✓		✓	✓

[7] Potential variants with fewer lanes and more provision for amenity / pedestrians could also be considered
[8] The median is retained in this option, though partially reconstruction may be required at bus stops.

3 OPTIONS ASSESSMENT

An options assessment workshop was held on Friday 19 July 2024. The purpose of this workshop was to assess the options against an agreed set of criteria. A number of additional criteria were added by participants during the workshop.

3.1 ASSESSMENT CRITERIA

There were seven broad categories of assessment criteria. They were:

- Bus
- Bike
- Pedestrians
- Place
- Strategic alignment
- Effects
- Implementability

The full list of agreed assessment criteria, and their respective weightings for the interim and permanent options, for assessing the Harbour Quays options are shown in Table 3-1.

Table 3-1: Assessment criteria for interim and permanent Harbour Quays options

CATEGORY	CRITERIA	SUB-CRITERIA	WEIGHTING INTERIM	WEIGHTING (PERMANENT)
Bus	Bus performance	Improved travel time on the new route compared to the Golden Mile	15%	15%
		Improved reliability on the new route compared to the Golden Mile	15%	15%
		Passing ability at bus stops	5%	5%
	Passenger experience	Route legibility	5%	5%
		Safe access between the new route and City destinations	10%	10%
		Safe access between the new route and Waterfront destinations	5%	5%
		Convenient access to City destinations – walking distance from new stops and level of shelter on those routes	10%	10%
		Convenient access to Waterfront destinations –	5%	5%

		walking distance from new stops and level of shelter on those routes		
		General waiting environment at stop locations along the new route	10%	5%
		Seating and shelter at stop locations on the new route	10%	5%
	Other	New route is future proofed for higher-capacity public transit	0%	5%
		Alternative route – ability of the route to provide for disruption from planned and unplanned events on the Golden Mile	10%	5%
		New route increases overall bus network capacity	0%	5%
Bike	Bike connectivity	Provision of a safe and convenient alternative to the Waterfront route (Railway Station to Oriental Bay)	33%	33%
		Provision of a safe and convenient connection between northern and western routes (Thorndon Quay, Thorndon Connections, and Karori) to the wider bike network	33%	33%
		Provision of a safe and convenient connection between southern and eastern routes (Taranaki Street, Cambridge Terrace, and Oriental Parade) to the wider bike network	33%	33%
Pedestrians	Pedestrian level of service	Pedestrian level of service to new bus stop locations	10%	10%
		Pedestrian level of service along and across Featherston Street	20%	20%
		Pedestrian level of service along and across the Quays (including Wakefield and Cable)	20%	20%
	Pedestrian safety	Pedestrian safety (reduced modal conflicts) on the Waterfront	50%	50%

Place	Improved place outcomes	Improved place outcomes along the Featherston Street route	50%	25%
		Improved place outcomes along the Quays route (including Wakefield and Cable)	50%	75%
Strategic alignment	Transport strategies	Te Aro Tatou	13%	10%
		Mode shift / transport choice	50%	40%
		Bike Network Plan	13%	30%
	Place strategies	Green network plan	13%	10%
		Gehl report (2021)	13%	10%
Effects	Traffic network disruption	Traffic network disruption (impact on capacity and queuing which affects adjacent multi-modal routes)	17%	17%
		On-street parking impact	17%	17%
		Traffic safety	17%	17%
	Property access	On-street servicing and mobility	17%	17%
		Business disruption during construction	17%	17%
		Access to off-street parking and servicing	17%	17%
Implementability	Extent of physical works		10%	25%
	Alignment with project budget / ability to implement within project budget		30%	0%
	Long-term retail impact – benefits due to increased activity		0%	10%
	Social license – ability to get approval for Traffic Resolutions		25%	25%
	Alignment with / reliance on other projects (e.g. removal of City to Sea Bridge, lane closure on Wakefield Street at Te Ngākau)		20%	20%
	Construction disruption		10%	15%
	Consentability		5%	5%

3.2 INTERIM OPTIONS ASSESSMENT

Table 3-2 shows the agreed scoring for the two interim options. Option T01 scores better for bus and implementability criteria, while Option T02 scores better for bikes, pedestrians, and effects criteria. There is no score differentiation for place and strategic alignment criteria. Both options score negatively for pedestrian, effects, and implementability criteria.

A more detailed scoring matrix with scoring rationale is provided in Appendix A.

Table 3-2: Scoring matrix for interim options

SCORING CRITERIA CATEGORIES	OPTION T01	OPTION T02
Bus	0.2	-0.1
Bike	0.7	1.0
Pedestrian	-0.2	-0.1
Place	0.5	0.5
Strategic alignment	0.6	0.6
Effects	-1.2	-1.0
Implementability	-1.3	-1.9

3.3 PERMANENT OPTIONS ASSESSMENT

Table 3-3 shows the agreed scoring for the eight permanent options. The highest scoring options were P03, P04A, and P04B. These options score similarly for bus criteria, although P03 has poorer bus travel time but better catchment compared to the P04 variants. All three scored well for bikes and strategic alignment criteria. Regardless of which option is chosen the northbound bus route is the same for the interim stage of the project.

A more detailed scoring matrix with scoring rationale is provided in Appendix B.

Table 3-3: Scoring matrix for permanent options

SCORING CRITERIA CATEGORIES	P01A	P01B	P02A	P02B	P02C	P03	P04A	P04B
Bus	0.2	0.3	-0.1	0.7	0.3	0.6	0.6	0.7
Bike	2.0	2.0	1.7	1.7	1.7	2.0	2.0	2.3
Pedestrian	1.7	1.7	0.8	1.0	0.8	2.1	1.2	1.7
Place	1.3	1.3	1.0	1.8	0.3	2.0	2.3	1.5
Strategic alignment	1.3	1.3	1.3	1.5	1.3	2.0	2.2	1.8
Effects	-1.2	-1.3	-1.2	-1.5	-1.2	-2.0	-1.7	-1.5
Implementability	-1.1	-1.1	-1.7	-1.9	-2.0	-2.0	-1.4	-1.6

4 PREFERRED OPTION CONFIRMATION

A preferred option confirmation workshop was held on Monday, 29 July 2024. The purpose of this workshop was to finalise the scoring and confirmed the preferred interim and permanent options.

4.1 PREFERRED INTERIM OPTION

The preferred interim option is T01 – Split bus route. This option avoids the need for bus passengers to cross the Quays to access Golden Mile or nearby destinations. It allows both the Featherston and Quays routes to be tested for traffic and bus travel time impacts. It also avoids the added costs of providing a contra-flow bike facility along the Featherston route.

This option can proceed to the design stage. It is anticipated that this interim option will be implemented in two stages. The first stage will be to implement the bus improvements, given the urgency of having an alternative during Golden Mile construction. Improvements for people on bikes will be implemented during the second stage.

Key areas of focus for the initial stage of design should include:

- Analysis of preferred southbound route between Hunter Street and Jervois Quay (route variants identified in Figure 2-2)
- Confirm connectivity and provision of dedicated bus facilities on and north / west of Whitmore Street
- Confirm connectivity and provision of dedicated bus facilities south / east of Taranaki Street
- Consider low-cost future proofing for future bike improvements
- Consider opportunities for modal filters to remove turning traffic conflicts with buses.

4.2 PREFERRED PERMANENT OPTION

No preferred option for a permanent solution to the Harbour Quays has been arrived at. While options P03, P04A, and P04B scored highest, it was agreed amongst stakeholders that more information is needed to more robustly test the options. It was agreed that all the options tabled through this options assessment process will remain to be considered through a robust Business Case process. No options were fatally flawed based on the available information. However, available funding may mean that some options are not feasible.

While identifying the need for bike provision as part of this process, the addition of bike infrastructure may be done at a later stage and possibly under a different business case.

5 LIMITATIONS

This report ('Report') has been prepared by WSP New Zealand Limited ('WSP') exclusively for Wellington City Council ('Client') in relation to the Harbour Quays Option Assessment ('Purpose') and in accordance with the AoG Consultancy Services Order with the Client dated 1 July 2024. ('Agreement'). The findings in this Report are based on and are subject to the assumptions specified in the Report. WSP accepts no liability whatsoever for any use or reliance on this Report, in whole or in part, for any purpose other than the Purpose or for any use or reliance on this Report by any third party.

In preparing this Report, WSP has relied upon data, surveys, analyses, designs, plans and other information ('Client Data') provided by or on behalf of the Client. Except as otherwise stated in this Report, WSP has not verified the accuracy or completeness of the Client Data. To the extent that the statements, opinions, facts, information, conclusions and/or recommendations in this Report are based in whole or part on the Client Data, those conclusions are contingent upon the accuracy and completeness of the Client Data. WSP will not be liable for any incorrect conclusions or findings in the Report should any Client Data be incorrect or have been concealed, withheld, misrepresented or otherwise not fully disclosed to WSP.

APPENDIX A

INTERIM OPTIONS FULL SCORING MATRICES

Option T01 Category	Criteria	Sub-Criteria	Score	Discussion
Bus	Bus performance	Improved travel time	1	Minor improvement one direction (compared to GM)
		Improved reliability	1	Dedicated bus lanes but interactions with left turning vehicles
		Passing ability at bus stops	1	Buses can use adjacent lane but likely to be congested
	Passenger experience	Route legibility	-3	split route and directions not logical
		Safe access (City)	0	Similar to existing
		Safe access (Waterfront)	-3	Pedestrians from Waterfront side have to cross both directions of traffic, concerns about safety for people jaywalking to not miss bus
		Convenient access (City)	0	Similar to existing
		Convenient access (Waterfront)	1	Improvement compared to the Golden Mile
		General waiting environment	-1	Worse than Golden Mile, some shelter for both directions
		Seating and shelter	0	Expected to be able to be provided at all indicative locations (will require civil works)
	Other	Future proofing	-1	Traffic sharing lanes not aligned with long term vision
		Alternative route	2	Provides bus priority route separate to Golden Mile
		Network capacity	2	Southbound on Featherston similar capacity to Golden Mile at 60 buses per hour per direction. Northbound Quays higher capacity at 75 buses per hour per direction due to stops being located downstream of intersections
Bike	Bike performance	Alternative Waterfront route	0	Does not provide alternative south of Lagoon
		North / western routes	1	Connects NW routes with Waterfront destinations only
		South / eastern routes	1	Connects E routes with Taranaki Street
Pedestrians	Pedestrian level of service	LoS at bus stops	0	Similar to existing
		LoS Featherston	0	Similar to existing
		LoS Quays	-1	Reduced footpath widths on Cable Street at bus stops
	Pedestrian safety	Reduced conflicts	0	Reduction in bikes on Waterfront, but increase in bikes around Lagoon
Place	Improved Place outcomes	Featherston Street	0	Featherston Street shows to have less space allocated for the private motor vehicle which will improve the cycle experience parking outside bus stops maintained
		Quays	1	Generally the place function is improved across Jervois Quay with the bi-directional cycleway, wider footpaths outside of the bus stops and the introduction of a 1.4 meter wide planting strip between the cycleways and the carriageway. There will be 1 less lane of motorized traffic to cross
Strategic alignment	Transport strategies	Te Aro Tatou	0	No alignment
		Mode shift / travel choice	1	Reduced traffic capacity and improved other modes
		Bike Network Plan	0	Primary route on Quays except for Lagoon diversion
	Place strategies	Green network plan	0	Similar to existing - but creates opportunities
		GEHL Report (2021)	1	Provides for bike on Quays
Effects	Traffic	Transport network disruption	-2	Significant reduction in capacity , LGWM modelling suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-2	Parking removed on both sides of Quays and Cable Street and one side of Featherston and Wakefield
		Traffic safety	0	Similar to existing
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	-2	Bus stops outside businesses on Featherston and Quays
		Off-street parking and servicing	0	Similar to existing
Implementability		Extent of physical works	-1	Targetted works on Featherston and Quays
		Alignment with project budget	-2	Cost of work unknown, potentially outside project budget
		Long term retail impact	0	Not applicable for interim outcomes
		Social licence	-1	Some percieved parking loss on and business disruption on Featherston Street at a time when businesses are struggling, loss of traffic capacity on Quays in favour of bikes
		Alignment with / reliance on other projects	-1	Reliance on two lanes on Featherston Street
		Construction disruption	-1	Moderate disruption
		Consentability	-1	Potential heritage risk at Post Office Square

Option T02				
Category	**Criteria**	**Sub-Criteria**	**Score**	**Discussion**
Bus	Bus performance	Improved travel time	2	Improvement both directions (compared to GM)
		Improved reliability	1	Dedicated bus lanes but interactions with left turning vehicles
		Passing ability at bus stops	1	Buses can use adjacent lane but likely to be congested
	Passenger experience	Route legibility	-1	Partial split route
		Safe access (City)	-3	Pedestrians from city side have to cross both directions of traffic, concerns about safety for people jaywalking to not miss bus
		Safe access (Waterfront)	-3	Pedestrians from Waterfront side have to cross both directions of traffic, concerns about safety for people jaywalking to not miss bus
		Convenient access (City)	-3	Some uncovered routes to new stop locations
		Convenient access (Waterfront)	2	Improvement compared to the Golden Mile
		General waiting environment	-1	Worse than Golden Mile, some shelter for both directions
		Seating and shelter	0	Expected to be able to be provided at all indicative locations (will require civil works)
	Other	Future proofing	-1	Traffic sharing lanes not aligned with long term vision
		Alternative route	2	Provides bus priority route separate to Golden Mile
		Network capacity	3	Quays assessed as having higher capacity than golden mile following transit capacity manual guidance due to stop being located at mid block or downstream of intersections
Bike	Bike performance	Alternative Waterfront route	0	Does not provide effective alternative
		North / western routes	2	Connects NW routes with new Victoria Street route and Golden Mile
		South / eastern routes	1	Connects E routes with Taranaki Street
Pedestrians	Pedestrian level of service	LoS at bus stops	1	Minor improvement due to less pedestrian demand on Quays
		LoS Featherston	0	Similar to existing, longer crossing distance across Featherston but improved access across side roads
		LoS Quays	-1	Reduced footpath widths on Cable Street at bus stops
	Pedestrian safety	Reduced conflicts	0	Similar to existing, minor reduction in bikes on Waterfront
Place	Improved Place outcomes	Featherston Street	0	Featherston Street gets an improved sense of aminity with a landscape strip between the cycle lane and the traffic lane. However 2 lanes of traffic and a bi-directional cycle lane make it still somewhat tricky to cross for pedestrians.
		Quays	1	Place value is slight improved, and there is opportunities for improved place function through amenity planting etc. in between bus stops. However there are still 3 lanes of motorised traffic to cross, to get to the waterfront
Strategic alignment	Transport strategies	Te Aro Tatou	0	No alignment
		Mode shift / travel choice	1	Reduced traffic capacity and improved other modes
		Bike Network Plan	0	Primary route on Featherston except for Lagoon diversion
	Place strategies	Green network plan	0	Similar to existing
		GEHL Report (2021)	1	Provides for buses on the Quays
Effects	Traffic	Transport network disruption	-2	Significant reduction in capacity , LGWM modelling suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-2	Parking removed on both sides of Quays and Cable Street and one side of Featherston and Wakefield
		Traffic safety	0	Similar to existing
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	-1	Bus stops outside businesses on Quays
		Off-street parking and servicing	0	Similar to existing
Implementability		Extent of physical works	-1	Targetted works on Featherston and Quays
		Alignment with project budget	-3	Two-way on Featherston for Bikes (alone) outside expected project budget (based on previous City Street estimates)
		Long term retail impact	0	Not applicable for interim outcomes
		Social licence	-2	High percieved parking loss on and business disruption on Featherston Street at a time when businesses are struggling, loss of traffic capacity on Quays
		Alignment with / reliance on other projects	-1	Reliance on two lanes on Featherston Street
		Construction disruption	-1	Moderate disruption
		Consentability	-1	Potential heritage risk at Post Office Square

APPENDIX B

PERMANENT OPTIONS FULL SCORING MATRICES

Option P01A				
Category	**Criteria**	**Sub-Criteria**	**Score**	**Discussion**
Bus	Bus performance	Improved travel time	1	Minor improvement one direction (compared to GM)
		Improved reliability	1	Dedicated bus lanes but interactions with left turning vehicles
		Passing ability at bus stops	1	Buses can use adjacent lane but likely to be congested
	Passenger experience	Route legibility	-2	Partial split route and directions not logical
		Safe access (City)	0	Similar to existing
		Safe access (Waterfront)	-3	Pedestrians from Waterfront side have to cross both directions of traffic, concerns about safety for people jaywalking to not miss bus
		Convenient access (City)	0	Similar to existing
		Convenient access (Waterfront)	1	Improvement compared to the Golden Mile
		General waiting environment	-1	Worse than Golden Mile, some shelter for both directions
		Seating and shelter	0	Expected to be able to be provided at all indicative locations (will require civil works)
	Other	Future proofing	-1	Traffic sharing lanes not aligned with long term vision
		Alternative route	2	Provides bus priority route separate to Golden Mile
		Network capacity	2	Southbound on Featherston similar capacity to Golden Mile at 60 buses per hour per direction. Northbound Quays higher capacity at 75 buses per hour per direction due to stops being located downstream of intersections
Bike	Bike performance	Alternative Waterfront route	3	Provides direct alternative
		North / western routes	1	Connects NW routes with new Taranaki Street route
		South / eastern routes	2	Connects E routes with Taranaki Street and both S+E routes with northern CBD
Pedestrians	Pedestrian level of service	LoS at bus stops	0	Similar to existing
		LoS Featherston	0	Similar to existing
		LoS Quays	1	Minor improvements in amenity along Quays
	Pedestrian safety	Reduced conflicts	3	Significant reduction in bikes on Waterfront
Place	Improved Place outcomes	Featherston Street	2	Featherston Street shows to have less space allocated for the private motor vehicle which will improve the cycle experience. The footpaths outside of the bus stops can be widened providing opportunities for place improvements, planting etc. However this space should not be used for additional parking, that would lower the score significantly. It will be a lot easier to cross the street.
		Quays	1	Generally the place function is improved across Jervois Quay with the bi-directional cycleway, wider footpaths outside of the bus stops and the introduction of a 1.4 meter wide planting strip between the cycleways and the carriageway. There will be 1 less lane of motorized traffic to cross
Strategic alignment	Transport strategies	Te Aro Tatou	0	No alignment
		Mode shift / travel choice	2	Reduced traffic capacity and improved other modes
		Bike Network Plan	1	Primary route on Quays nothing on Featherston
	Place strategies	Green network plan	1	Opportunity for increased greening on Featherston Street
		GEHL Report (2021)	1	Minor amenity improvements + bikes on Quays
Effects	Traffic	Transport network disruption	-2	Significant reduction in capacity , LGWM modelling suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-2	Parking removed on both sides of Quays and Cable Street and one side of Featherston and Wakefield
		Traffic safety	0	Similar to existing
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	-2	Bus stops outside businesses on Featherston and Quays
		Off-street parking and servicing	0	Similar to existing
Implementability		Extent of physical works	-1	Targetted works on Featherston and Quays, Full reconstruction on Cable and Wakefield
		Alignment with project budget	0	Unknown depedent on outcomes of business case
		Long term retail impact	2	Activation of Featherston Street and south side of Quays and Wakefield Street
		Social licence	-1	Some percieved parking loss on and business disruption on Featherston Street at a time when businesses are struggling, loss of traffic capacity on Quays in favour of bikes
		Alignment with / reliance on other projects	-2	Reliance on two lanes on Featherston Street and removal of City to Sea Bridge
		Construction disruption	-2	Moderate disruption
		Consentability	-1	Potential heritage risk at Post Office Square

Option P01B Category	Criteria	Sub-Criteria	Score	Discussion
Bus	Bus performance	Improved travel time	1	Minor improvement one direction (compared to GM)
		Improved reliability	1	Dedicated bus lanes but interactions with left turning vehicles
		Passing ability at bus stops	1	Buses can use adjacent lane but likely to be congested
	Passenger experience	Route legibility	-2	Partial split route and directions not logical
		Safe access (City)	0	Similar to existing
		Safe access (Waterfront)	-3	Pedestrians from Waterfront side have to cross both directions of traffic, concerns about safety for people jaywalking to not miss bus
		Convenient access (City)	0	Similar to existing
		Convenient access (Waterfront)	1	Improvement compared to the Golden Mile
		General waiting environment	-1	Worse than Golden Mile, some shelter for both directions
		Seating and shelter	0	Expected to be able to be provided at all indicative locations (will require civil works)
	Other	Future proofing	-1	Traffic sharing lanes not aligned with long term vision
		Alternative route	3	Provides three separate bus corridors
		Network capacity	2	Southbound on Featherston similar capacity to Golden Mile at 60 buses per hour per direction. Northbound Quays higher capacity at 75 buses per hour per direction due to stops being located downstream of intersections
Bike	Bike performance	Alternative Waterfront route	3	Provides direct alternative
		North / western routes	1	Connects NW routes with new Taranaki Street route
		South / eastern routes	2	Connects E routes with Taranaki Street and both S+E routes with northern CBD
Pedestrians	Pedestrian level of service	LoS at bus stops	0	Similar to existing
		LoS Featherston	0	Similar to existing
		LoS Quays	1	Minor improvements in amenity along Quays
	Pedestrian safety	Reduced conflicts	3	Significant reduction in bikes on Waterfront
Place	Improved Place outcomes	Featherston Street	2	Featherston Street shows to have less space allocated for the private motor vehicle which will improve the cycle experience. The footpaths outside of the bus stops can be widened providing opportunities for place improvements, planting etc. However this space should not be used for additional parking, that would lower the score significantly. It will be a lot easier to cross the street.
		Quays	1	Generally the place function is improved across Jervois Quay with the bi-directional cycleway, wider footpaths outside of the bus stops and the introduction of a 1.4 meter wide planting strip between the cycleways and the carriageway. There will be 1 less lane of motorized traffic to cross
Strategic alignment	Transport strategies	Te Aro Tatou	0	No alignment
		Mode shift / travel choice	2	Reduced traffic capacity and improved other modes
		Bike Network Plan	1	Primary route on Quays nothing on Featherston
	Place strategies	Green network plan	1	Opportunity for increased greening on Featherston Street
		GEHL Report (2021)	1	Minor amenity improvements + bikes on Quays
Effects	Traffic	Transport network disruption	-2	Significant reduction in capacity , LGWM modelling suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-3	Parking removed on both sides of Quays, Wakefield (north) and Cable Street and one side of Featherston, Victoria and Wakefield
		Traffic safety	0	Similar to existing
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	-2	Bus stops outside businesses on Featherston and Quays
		Off-street parking and servicing	0	Similar to existing
Implementability		Extent of physical works	-1	Targetted works on Featherston and Quays, Full reconstruction on Cable and Wakefield
		Alignment with project budget	0	Unknown depedent on outcomes of business case
		Long term retail impact	2	Activation of Featherston Street and south side of Quays and Wakefield Street
		Social licence	-1	Some percieved parking loss on and business disruption on Featherston Street at a time when businesses are struggling, loss of traffic capacity on Quays in favour of bikes
		Alignment with / reliance on other projects	-2	Reliance on two lanes on Featherston Street, Wakefield Street (north) open and removal of City to Sea Bridge
		Construction disruption	-2	Moderate disruption
		Consentability	-1	Potential heritage risk at Post Office Square

Option P02A				
Category	**Criteria**	**Sub-Criteria**	**Score**	**Discussion**
Bus	Bus performance	Improved travel time	2	Improvement both directions (compared to GM)
		Improved reliability	1	Dedicated bus lanes but interactions with left turning vehicles
		Passing ability at bus stops	1	Buses can use adjacent lane but likely to be congested
	Passenger experience	Route legibility	0	Consistent two-way route on same corridor
		Safe access (City)	-3	Pedestrians from city side have to cross both directions of traffic, concerns about safety for people jaywalking to not miss bus
		Safe access (Waterfront)	-3	Pedestrians from Waterfront side have to cross both directions of traffic, concerns about safety for people jaywalking to not miss bus
		Convenient access (City)	-3	Some uncovered routes to new stop locations
		Convenient access (Waterfront)	2	Improvement compared to the Golden Mile
		General waiting environment	-1	Worse than Golden Mile, some shelter for both directions
		Seating and shelter	0	Expected to be able to be provided at all indicative locations (will require civil works)
	Other	Future proofing	-1	Traffic sharing lanes not aligned with long term vision
		Alternative route	2	Provides bus priority route separate to Golden Mile
		Network capacity	3	Quays assessed as having higher capacity than golden mile following transit capacity manual guidance due to stop being located at mid block or downstream of intersections
Bike	Bike performance	Alternative Waterfront route	1	Provides indirect alternative
		North / western routes	2	Connects NW routes with new Taranaki Street route, Victoria Street route and Golden Mile
		South / eastern routes	2	Connects E routes with Taranaki Street and both S+E routes with northern CBD
Pedestrians	Pedestrian level of service	LoS at bus stops	1	Minor improvement due to less pedestrian demand on Quays
		LoS Featherston	0	Similar to existing, longer crossing distance across Featherston but improved access across side roads
		LoS Quays	1	Minor improvements in amenity along Quays
	Pedestrian safety	Reduced conflicts	1	Minor reduction in bikes on Waterfront
Place	Improved Place outcomes	Featherston Street	1	Featherston Street gets an improved sense of aminity with a landscape strip between the cycle lane and the traffic lane. However 2 lanes of traffic and a bi-directional cycle lane make it still somewhat tricky to cross for pedestrians.
		Quays	1	Place value is slight improved, and there is opportunities for improved place function through amenity planting etc. in between bus stops. However there are still 3 lanes of motorised traffic to cross, to get to the waterfront
Strategic alignment	Transport strategies	Te Aro Tatou	0	No alignment
		Mode shift / travel choice	2	Reduced traffic capacity and improved other modes
		Bike Network Plan	1	Primary route on Featherston nothing on Quays
	Place strategies	Green network plan	1	Opportunity for increased greening on Quays
		GEHL Report (2021)	1	Minor amenity improvements + buses on Quays
Effects	Traffic	Transport network disruption	-2	Significant reduction in capacity , LGWM modelling suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-2	Parking removed on both sides of Quays and Cable Street and one side of Featherston and Wakefield
		Traffic safety	-1	Changes in direction can increase crash risk in short term
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	-1	Bus stops outside businesses on Quays
		Off-street parking and servicing	0	Similar to existing
Implementability		Extent of physical works	-2	Targetted works on Featherston and Quays, Full reconstruction on Cable and Wakefield
		Alignment with project budget	0	Unknown depedent on outcomes of business case
		Long term retail impact	1	Activation of south side of Quays and Wakefield Street
		Social licence	-2	High percieved parking loss on and business disruption on Featherston Street at a time when businesses are struggling, loss of traffic capacity on Quays
		Alignment with / reliance on other projects	-2	Reliance on two lanes on Featherston Street and removal of City to Sea Bridge
		Construction disruption	-2	Moderate disruption
		Consentability	-1	Potential heritage risk at Post Office Square

Option P02B				
Category	**Criteria**	**Sub-Criteria**	**Score**	**Discussion**
Bus	Bus performance	Improved travel time	2	Improvement both directions (compared to GM)
		Improved reliability	3	Improved reliability through dedicated corridor
		Passing ability at bus stops	1	Buses can use adjacent bus lane in event of breakdown
	Passenger experience	Route legibility	0	Consistent two-way route on same corridor
		Safe access (City)	0	Similar to existing
		Safe access (Waterfront)	-3	Pedestrians from Waterfront side have to cross both directions of traffic, concerns about safety for people jaywalking to not miss bus
		Convenient access (City)	-1	Some uncovered routes to new stop locations
		Convenient access (Waterfront)	1	Improvement compared to the Golden Mile
		General waiting environment	-2	Worse than Golden Mile, some shelter for northbound direction, exposed position with median bus boarder
		Seating and shelter	0	Expected to be able to be provided at all indicative locations (will require civil works)
	Other	Future proofing	0	No significant restrictions
		Alternative route	2	Provides bus priority route separate to Golden Mile
		Network capacity	3	Quays assessed as having higher capacity than golden mile following transit capacity manual guidance due to stop being located at mid block or downstream of intersections
Bike	Bike performance	Alternative Waterfront route	1	Provides indirect alternative
		North / western routes	2	Connects NW routes with new Taranaki Street route, Victoria Street route and Golden Mile
		South / eastern routes	2	Connects E routes with Taranaki Street and both S+E routes with northern CBD
Pedestrians	Pedestrian level of service	LoS at bus stops	1	Minor improvement due to less pedestrian demand on Quays
		LoS Featherston	0	Similar to existing, longer crossing distance across Featherston but improved access across side roads
		LoS Quays	2	Assume full corridor reconstruction improves amenity and crossing provision
	Pedestrian safety	Reduced conflicts	1	Minor reduction in bikes on Waterfront
Place	Improved Place outcomes	Featherston Street	1	Featherston Street gets an improved sense of aminity with a landscape strip between the cycle lane and the traffic lane. However 2 lanes of traffic and a bi-directional cycle lane make it still somewhat tricky to cross for pedestrians.
		Quays	2	This option creates a lot of opportunity for improve amenity and place fucntion along the bus corridor bewteen bus stops. Crossing 4 lanes of traffic will be a lot easier. Crossing 2 lanes of busses might not be to hard either. There is however also a loss of planting in the median. However that median planting has no public access.
Strategic alignment	Transport strategies	Te Aro Tatou	2	Restricted vehicle access aligned with principles
		Mode shift / travel choice	2	Reduced traffic capacity and improved other modes
		Bike Network Plan	1	Primary route on Featherston nothing on Quays
	Place strategies	Green network plan	1	Opportunity for increased greening on Quays
		GEHL Report (2021)	1	Minor amenity improvements + buses on Quays
Effects	Traffic	Transport network disruption	-2	Significant reduction in capacity , LGWM modelling suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-2	Parking removed on both sides of Quays and Cable Street and one side of Featherston and Wakefield
		Traffic safety	-1	Changes in direction can increase crash risk in short term
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	-1	Bus stops outside businesses on Quays
		Off-street parking and servicing	-2	Reduced access from Quays (longer routes)
Implementability		Extent of physical works	-3	Targetted works on Featherston, full reconstruction on Quays, Cable and Wakefield
		Alignment with project budget	0	Unknown depedent on outcomes of business case
		Long term retail impact	1	Activation of south side of Quays and Wakefield Street
		Social licence	-2	High percieved parking loss on and business disruption on Featherston Street at a time when businesses are struggling, loss of traffic capacity on Quays
		Alignment with / reliance on other projects	-2	Reliance on two lanes on Featherston Street and removal of City to Sea Bridge
		Construction disruption	-2	High disruption
		Consentability	-1	Potential heritage risk at Post Office Square

Option P02C				
Category	**Criteria**	**Sub-Criteria**	**Score**	**Discussion**
Bus	Bus performance	Improved travel time	2	Improvement both directions (compared to GM)
		Improved reliability	3	Improved reliability through dedicated corridor
		Passing ability at bus stops	1	Buses can use adjacent bus lane in event of breakdown
	Passenger experience	Route legibility	0	Consistent two-way route on same corridor
		Safe access (City)	-2	Pedestrians from city side have to cross one direction of traffic, concerns about safety for people jaywalking to not miss bus
		Safe access (Waterfront)	-2	Pedestrians from Waterfront side have to cross one direction of traffic, concerns about safety for people jaywalking to not miss bus
		Convenient access (City)	-3	Some uncovered routes to new stop locations
		Convenient access (Waterfront)	2	Improvement compared to the Golden Mile
		General waiting environment	-3	Worse than Golden Mile, exposed position with median bus boarder in both directions
		Seating and shelter	0	Expected to be able to be provided at all indicative locations (will require civil works)
	Other	Future proofing	0	No significant restrictions
		Alternative route	2	Provides bus priority route separate to Golden Mile
		Network capacity	3	Quays assessed as having higher capacity than golden mile following transit capacity manual guidance due to stop being located at mid block or downstream of intersections
Bike	Bike performance	Alternative Waterfront route	1	Provides indirect alternative
		North / western routes	2	Connects NW routes with new Taranaki Street route, Victoria Street route and Golden Mile
		South / eastern routes	2	Connects E routes with Taranaki Street and both S+E routes with northern CBD
Pedestrians	Pedestrian level of service	LoS at bus stops	1	Minor improvement due to less pedestrian demand on Quays
		LoS Featherston	0	Similar to existing, longer crossing distance across Featherston but improved access across side roads
		LoS Quays	1	Assume full corridor reconstruction improves amenity and crossing provision but pedestrian still next to traffic
	Pedestrian safety	Reduced conflicts	1	Minor reduction in bikes on Waterfront
Place	Improved Place outcomes	Featherston Street	1	Featherston Street gets an improved sense of aminity with a landscape strip between the cycle lane and the traffic lane. However 2 lanes of traffic and a bi-directional cycle lane make it still somewhat tricky to cross for pedestrians.
		Quays	0	footpath widths on the street edge are reduced and the amenity planting in the centre is removed. There is some opportunity for amenity planting in the centre, but it doesn't really contribute to the footpaths on the street edge.
Strategic alignment	Transport strategies	Te Aro Tatou	0	No alignment
		Mode shift / travel choice	2	Reduced traffic capacity and improved other modes
		Bike Network Plan	1	Primary route on Featherston nothing on Quays
	Place strategies	Green network plan	1	Opportunity for increased greening on Quays
		GEHL Report (2021)	1	Minor amenity improvements + buses on Quays
Effects	Traffic	Transport network disruption	-2	Significant reduction in capacity , LGWM modelling suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-2	Parking removed on both sides of Quays and Cable Street and one side of Featherston and Wakefield
		Traffic safety	-1	Changes in direction can increase crash risk in short term
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	0	No bus stops outside businesses
		Off-street parking and servicing	-1	Reduced access from Quays (right turns) assumed
Implementability		Extent of physical works	-3	Targetted works on Featherston, full reconstruction on Quays, Cable and Wakefield
		Alignment with project budget	0	Unknown depedent on outcomes of business case
		Long term retail impact	0	Limited activation opportunity
		Social licence	-2	High percieved parking loss on and business disruption on Featherston Street at a time when businesses are struggling, loss of traffic capacity on Quays
		Alignment with / reliance on other projects	-2	Reliance on two lanes on Featherston Street and removal of City to Sea Bridge
		Construction disruption	-2	High disruption
		Consentability	-1	Potential heritage risk at Post Office Square

Option P03 Category	Criteria	Sub-Criteria	Score	Discussion
Bus	Bus performance	Improved travel time	1	Minor improvement both directions (compared to GM)
		Improved reliability	2	Improved reliability through dedicated corridor. However frequent intersections along route
		Passing ability at bus stops	1	Buses can use adjacent bus lane in event of breakdown
	Passenger experience	Route legibility	0	Consistent two-way route on same corridor
		Safe access (City)	0	Similar to existing
		Safe access (Waterfront)	-2	Pedestrians from Waterfront side have to cross both directions of traffic
		Convenient access (City)	0	Similar to existing
		Convenient access (Waterfront)	0	Similar to existing
		General waiting environment	0	Similar to Golden Mile
		Seating and shelter	0	Expected to be able to be provided at all indicative locations (will require civil works)
	Other	Future proofing	-1	Tight radii may retrict higher-capacity vehicles
		Alternative route	2	Provides bus priority route separate to Golden Mile
		Network capacity	2	Similar capacity to manners st due to bus stops located close to intersections
Bike	Bike performance	Alternative Waterfront route	3	Provides direct alternative
		North / western routes	1	Connects NW routes with new Taranaki Street route
		South / eastern routes	2	Connects E routes with Taranaki Street and both S+E routes with northern CBD
Pedestrians	Pedestrian level of service	LoS at bus stops	0	Similar to existing
		LoS Featherston	1	Assume full corridor reconstruction improves amenity and crossing provision
		LoS Quays	2	Potential for wider footpaths however could be politically difficult to implement
	Pedestrian safety	Reduced conflicts	3	Significant reduction in bikes on Waterfront
Place	Improved Place outcomes	Featherston Street	2	Significant impovement to the place function of Featherston, Victoria and to a slightly lesser degree for Wakefield. However side streets would still be difficult to cross
		Quays	2	Significant improvement of the Quays, wider footpaths and a lot of opportunity for place improvements. Central median planting is retained.
Strategic alignment	Transport strategies	Te Aro Tatou	1	Restricted vehicle access aligned with principles
		Mode shift / travel choice	3	Significantly reduced traffic capacity and improved other modes
		Bike Network Plan	1	Primary route on Quays nothing on Featherston
	Place strategies	Green network plan	2	Opportunity for increased greening on Quays & Featherston
		GEHL Report (2021)	2	Moderate amenity improvements + bikes on Quays
Effects	Traffic	Transport network disruption	-3	Significant reduction in capacity on Quays + reduced capacity on Featherston Streeet , LGWM modelling of Quays suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-3	Parking removed on both sides of Quays, Featherston, Victoria and Wakefield (north) and one side of Wakefield and Cable
		Traffic safety	-1	Changes in direction can increase crash risk in short term
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	-3	Bus stops outside businesses on Featherston both sides
		Off-street parking and servicing	-1	Changed access to side streets
Implementability		Extent of physical works	-3	Full reconstruction on Featherston, Quays, Cable and Wakefield
		Alignment with project budget	0	Unknown depedent on outcomes of business case
		Long term retail impact	2	Activation of Featherston Street and south side of Quays and Wakefield Street
		Social licence	-3	Significant percieved parking loss on and business disruption on Featherston Street at a time when businesses are struggling, loss of traffic capacity on Quays
		Alignment with / reliance on other projects	-2	Reliance on two lanes on Featherston Street, Wakefield Street (north) open
		Construction disruption	-2	High disruption
		Consentability	0	No risks identified

Option P04A				
Category	**Criteria**	**Sub-Criteria**	**Score**	**Discussion**
Bus	Bus performance	Improved travel time	2	Improvement both directions (compared to GM)
		Improved reliability	3	Improved reliability through dedicated corridor
		Passing ability at bus stops	1	Buses can use adjacent bus lane in event of breakdown
	Passenger experience	Route legibility	0	Consistent two-way route on same corridor
		Safe access (City)	0	Similar to existing

		South / eastern routes	2	Connects E routes with Taranaki Street and both S+E routes with northern CBD
Pedestrians	Pedestrian level of service	LoS at bus stops	0	Minor improvement due to less pedestrian demand on Quays, but footpath narrowing at bus stops
		LoS Featherston	0	Similar to existing
		LoS Quays	1	Reduction in traffic lanes, improved footpath but bus stops using footpath with shop awnings
	Pedestrian safety	Reduced conflicts	3	Significant reduction in bikes on Waterfront
Place	Improved Place outcomes	Featherston Street	0	no change
		Quays	2	Significant reduction in traffic lanes with pedestrianson city side of the Quays being separated from vehicles by cycleway and busway. Opportunity to plant on central median when not used for bus stop/ turning lane
Strategic alignment	Transport strategies	Te Aro Tatou	2	Restricted vehicle access aligned with principles
		Mode shift / travel choice	2	Significantly reduced traffic capacity and improved other modes
		Bike Network Plan	2	Primary route on Waterfribt side of Quays
	Place strategies	Green network plan	0	Net loss of greening on Quays
		GEHL Report (2021)	2	Buses and bikes on Quays (less traffic) with reduced greening
Effects	Traffic	Transport network disruption	-2	Significant reduction in capacity , LGWM modelling suggested 20-30% reduction in demand required, PT capacity not available to take all of the removed traffic.
		On-street parking impact	-2	Parking removed on both sides of Quays and Cable Street and one side of Wakefield
		Traffic safety	-2	Two-way in current southbound carriageway results in increased head-on risk
	Property access	On-street servicing and mobility	-1	Assume located to side streets
		Business disruption	-1	Bus stops outside businesses on Quays
		Off-street parking and servicing	-1	Changed access to side streets
Implementability		Extent of physical works	-2	Full reconstruction on Quays, Cable and Wakefield
		Alignment with project budget	0	Unknown depedent on outcomes of business case
		Long term retail impact	1	Activation of south side of Quays and Wakefield Street
		Social licence	-2	Moderate percieved loss of traffic capacity on Quays, high percieved loss of greening
		Alignment with / reliance on other projects	-1	Reliance on removal of City to Sea Bridge
		Construction disruption	-3	High disruption
		Consentability	-1	Potential heritage risk at Post Office Square

APPENDIX C

VEHICLE TRACKING

We have tested the vehicle tracking of an 18m articulated vehicle traveling at 15kmph southbound along the Featherston Street route. Figure 0-1 shows the intersections where vehicle tracking has been checked. This is an indicative check which can be further verified during the design phase.

Figure 0-1: Intersections where vehicle tracking of an 18m articulated vehicle has been undertaken (blue line represents the preferred interim option bus route)

Lambton Quay / Whitmore Street intersection

Figure 0-2 shows the vehicle tracking of a vehicle turning left from Lambton Quay to Whitmore Street. The vehicle tracking appears to be acceptable with no kerb changes required.

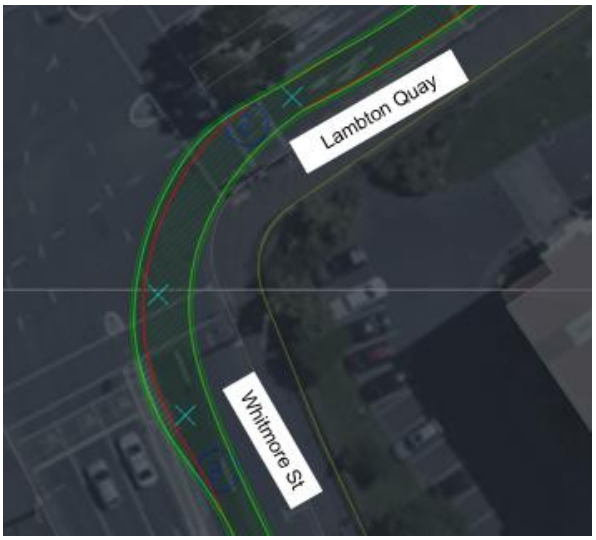

Figure 0-2: Vehicle tracking right-turn from Lambton Quay on to Whitmore Street

Whitmore Street / Featherston Street

Figure 0-3 shows the vehicle tracking of a vehicle turning right from Whitmore Street to Featherston Street. The vehicle tracking appears to be acceptable with no kerb changes required.

Figure 0-3: Vehicle tracking both ways between Whitmore Street and Featherston Street

Featherston Street / Hunter Street

Figure 0-4 shows the vehicle tracking of a vehicle turning left from Featherston Street to Hunter Street. A bus jump signal will likely be required to allow buses a head-start over the adjacent traffic lane.

Figure 0-4: Vehicle tracking for a vehicle turning right from Featherston Street to Hunter Street

Victoria Street / Hunter Street

Figure 0-5 shows the vehicle tracking of a vehicle turning right from Hunter Street to Victoria Street. The vehicle tracking appears to be acceptable with no kerb changes required.

Figure 0-5: Vehicle tracking in both directions between Victoria Street and Hunter Street

Victoria Street / Harris Street

Figure 0-6 shows the vehicle tracking of a vehicle turning left from Victoria Street to Harris Street. Kerb changes will likely be required.

Figure 0-6: Vehicle tracking for vehicles turning left from Victoria Street to Harris Street

1.0 Introduction

1.1 Purpose

The purpose of the Concept Design Report is to outline the concept designs developed for the Harbour Quays Rapid Transit Project (the Project) for Wellington City Council (WCC) and Greater Wellington Regional Council (GWRC) to review and endorse.

Supporting these designs are the following documents:

- Concept Plans
- Bus Stop Strategy.
- Draft Design Philosophy Statement (DPS).
- Draft Safety in Design Register.
- Draft Parking Management Plan Stage 1 (on-street parking stocktake and impacts).
- Draft Consenting Strategy.

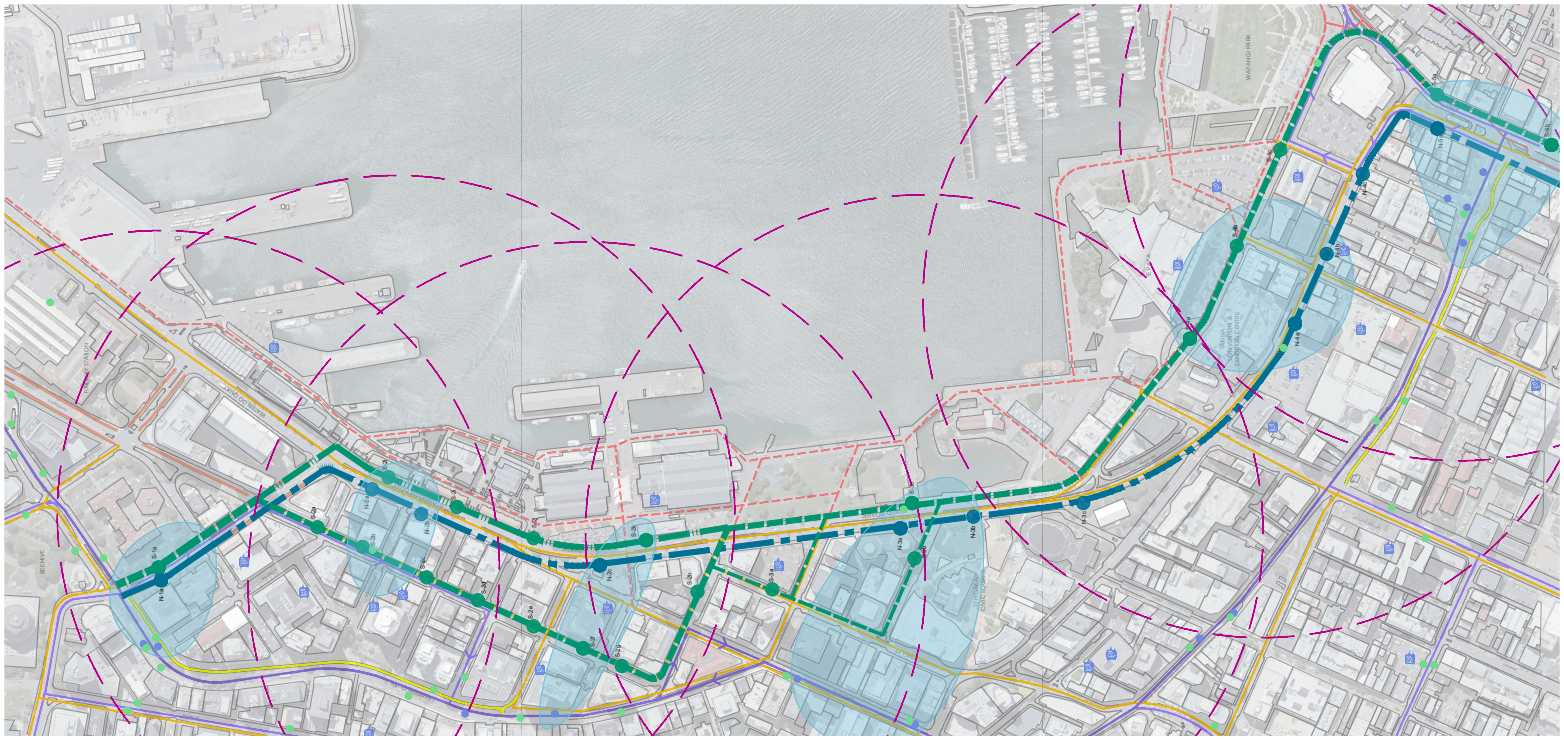
A separate project risk register has also been developed for the Project and can be provided upon request. This register is a 'living document' and will be reviewed regularly throughout the design process.

Harbour Quays Project Area

1.2 Project Geographical Area

The Project will establish a second public transport spine through the central city, complementing existing and future bus operations on the Golden Mile as well as the wider Wellington bus network. It is scheduled for completion by the end of 2026.

4



Harbour Route and Stop Options Overview

1

1.3 Project Investment Objectives

The draft Business Case investment objectives are as follows:

- Investment objective 1: To enhance travel time and operational efficiencies and resilience (in response to planned and unplanned disruptions) through the development of a second public transport corridor by December 2026.
- Investment objective 2: To increase the capacity of the currently constrained bus corridor by creating a second public transport corridor by December 2026.
- Investment objective 3: By 2030, to enhance connectivity and safety along and across the Harbour Quays corridor for all modes of travel, in order to support urban activation.

For the avoidance of doubt, and for the purpose of this project, Investment Objective 3 (active modes) pertains solely to public transport and pedestrian movements at the new bus stop locations. The investment objective(s) related to cycling will be addressed through the Cross City Connections Project.

1.4 Concept Design Approach

The following overarching design principles have informed the design.

- The overall allocation of space and types of facilities along the preferred corridor will be identified through iterative design processes, with multi-criteria assessment processes used to confirm key project decisions. Allocation will also be in accordance with the relevant strategic documents (e.g., transport hierarchies) and is primarily focused on providing safe, dedicated facilities for bus users.
- The corridor improvements are focused on delivering functional public transport (and pedestrian access at new bus stop locations) within the $6M-$8M budget fixed by WCC and GWRC. As a result, betterment of existing facilities/infrastructure or amenity improvements is to be minimised.
- As far as practical, the improvements will be implemented using low-intervention changes. Physical changes to existing carriageways, kerb lines and existing infrastructure (i.e., civil works) are to be minimised.

To inform the development of the concept plan, a Safety in Design register has been prepared. This is attached as Appendix B.

6

1.5 Key Assumptions

The following key assumptions have informed the design.

- The Project needs to be operational prior to construction of the Lambton Quay section of the Golden Mile project in 2027. The Golden Mile project is expected to be fully operational by 2029.
- The Project will provide an alternative corridor to the Golden Mile that will permanently accommodate select bus routes moving through the central city.
- The Project will also accommodate additional bus routes rerouted as a result of construction activities on the Golden Mile for a temporary period (nominally 1–2 years).
- Construction of the Project is scheduled for 2026 and is expected to be operational for up to 15 years.
- The bus capacity for the Project is based on anticipated growth and uptake that has been identified by WCC and GWRC. In summary, it is expected that:
  - 100-150 buses per hour may need to use the Project corridor during Golden Mile construction.
  - 50-70 buses per hour will use the Project corridor post Golden Mile construction (interpeak frequency is to be maintained at around 50 buses per hour).
- Following the Golden Mile upgrades, it is anticipated that express, commuter, and longer-distance regional services will operate along the Project corridor, while regular all-day Wellington city services will continue to focus on the Golden Mile.
- The capital budget for the Project is between $6M and $8M. Accordingly, as a rule of thumb, all physical works are expected to be minimised and contained to the existing carriageways where practical. For example, in-line bus stops rather than indented stops are anticipated in order to reduce the quantum of physical works.
- All sections of the Project (except Featherston Street and Hunter Street if selected) will have a posted speed limit of 50km/h. Featherston and Hunter Street will have a posted speed limit of 30km/h.
- Emergency vehicles will have full, priority access to the Project corridor.
- All new Project assets will be owned by either WCC or GWRC. With respect to the latter, GWRC will own the bus stop shelters, real-time information system, and signage.

Other key Project interfaces to be considered when designing the Project include:

- City to Sea Bridge demolition in 2027
- Fale Malae operational from 2030
- Te Ngakau Civic Square operational from 2027
- Michael Fowler Centre redevelopment underway in 2027/28.
- Thorndon Quay public transport and cycling improvements will be fully operational from late 2025.
- Cross City Cycle Project commencing in 2025.

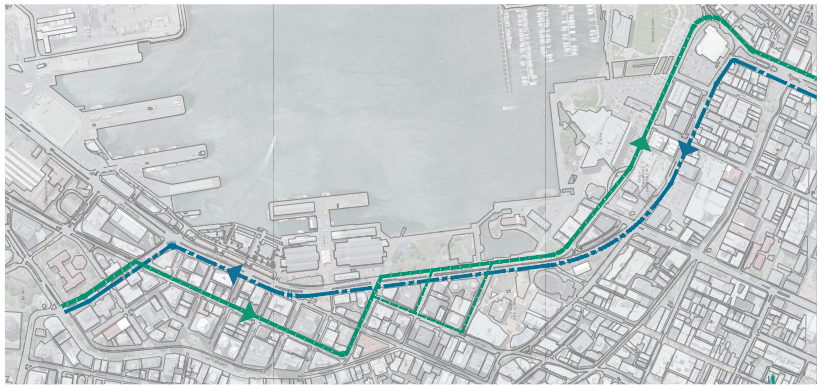
2

2.0 Proposed Bus Route Options

2.1 Route Selection Process

Route option selection began in mid-2024. The first stage of the multi-criteria assessment (MCA) process, conducted in August 2024, shortlisted two southbound interim route options, TO1 and TO2, for further detailed evaluation. The northbound routes for TO1 and TO2 are identical.
Building on the first-stage MCA process, a second, more detailed MCA was conducted in February 2025, focusing on evaluating the performance of both TO1 and TO2. This MCA utilised the assessment criteria identified as key differentiators from the first stage. At the time of writing this report, T02 is emerging as the preferred option. However, as a final decision on the preferred southbound option has yet to be made by WCC and GWRC, this report presents the concept plans for both TO1 and TO2.

Harris St



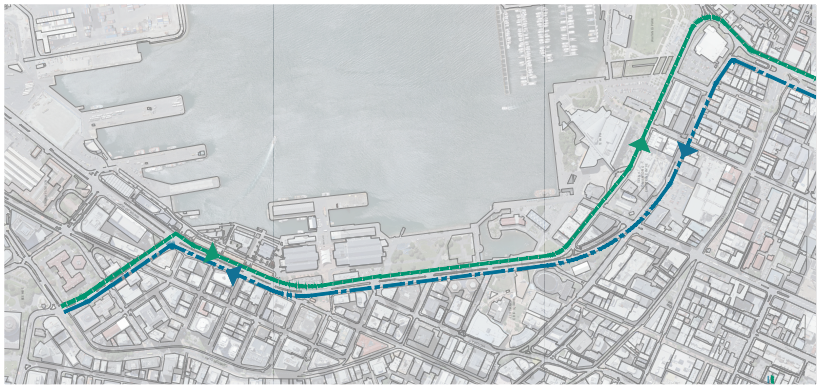
Route Option TO1

2.2 Route Option TO1

In summary, as set out above, Option TO1 follows a southbound route along Whitmore and Featherston Streets before exiting onto Jervois Quay. The exit onto Jervois Quay would occur via Hunter Street, Willeston Street, or Harris Street. The latter two options would necessitate the southbound route also being located along the northern section of Victoria Street. From the final exit, the route continues along Customhouse Quay, Jervois Quay, Cable Street, and Kent Terrace before terminating at the Kent/Cambridge Terraces and Courtenay Place intersection.

For clarity, the final decision on the location of the 'exit' onto Jervois Quay will be made as part of the final decision-making process for the second stage MCA. It is expected that existing vehicle access constraints at each exit location will be important for decision-makers. Decisions on the final exit may not be required if T02 is confirmed as the preferred option.

8



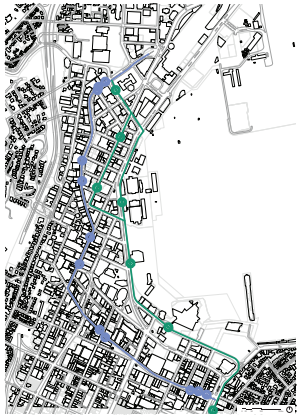
Preferred Route - Option TO2

2.3 Route Option TO2

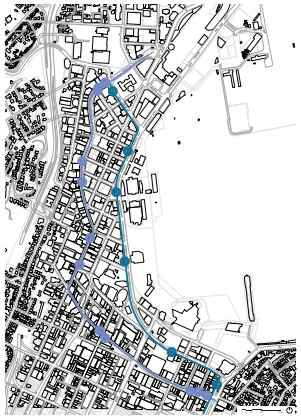
In summary, as set out above, Option TO2 follows a southbound route along Whitmore Street (starting from the Lambton Quay and Whitmore Street intersection) before merging onto Customhouse Quay. The route continues along Customhouse Quay, Jervois Quay, Cable Street, and Kent Terrace before terminating at the Kent/Cambridge Terraces and Courtenay Place intersection.

3

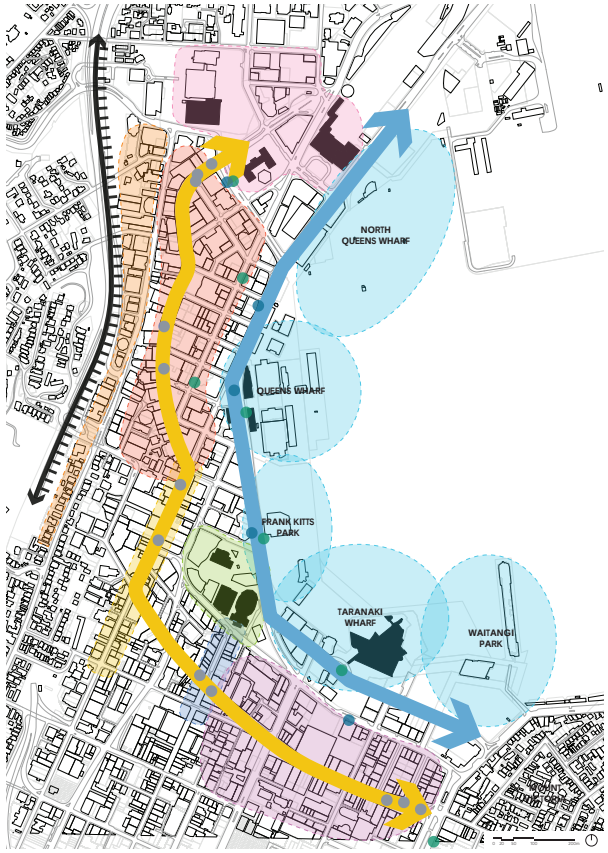
3.0 Urban and Landscape Quality Analysis



T01



T02



3.1 Legibility

Wellington CBD's urban form comprises several areas of differentiated character that enhance legibility and wayfinding across the city centre. Waterfront areas consist of multiple sheds, wharves, and parks, features distinct from inner-city areas. A transition from the adjacent urban core to the coast defines this area of the city's spatial organisation.

The main pathway (the Golden Mile) generally follows the original shoreline, leading from Thorndon in the north towards Mount Victoria in the south. Along the Golden Mile and the quays, a series of landmark buildings and notable areas reinforce these spines. These landmarks serve as focal points and memorable nodes within the city's broader urban form. Proposed bus routes and stops interact effectively with these landmarks, particularly adjacent to Queens Wharf, Fale Malae (proposed), and Te Papa / Tākina, reinforcing city legibility.

The Wellington Urban Motorway creates a strong city edge, which follows the topographical contours of the hills to the west of the CBD, providing clear city containment. The waterfront offers a similar level of containment to the east. Proposed bus stop locations provide access to the waterfront and the urban core, allowing bus routes to interact with both areas. This facilitates greater pedestrian catchment and reduces the perception of separation between these areas.

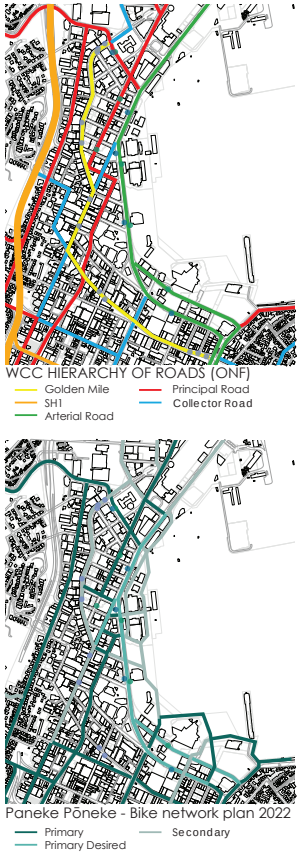
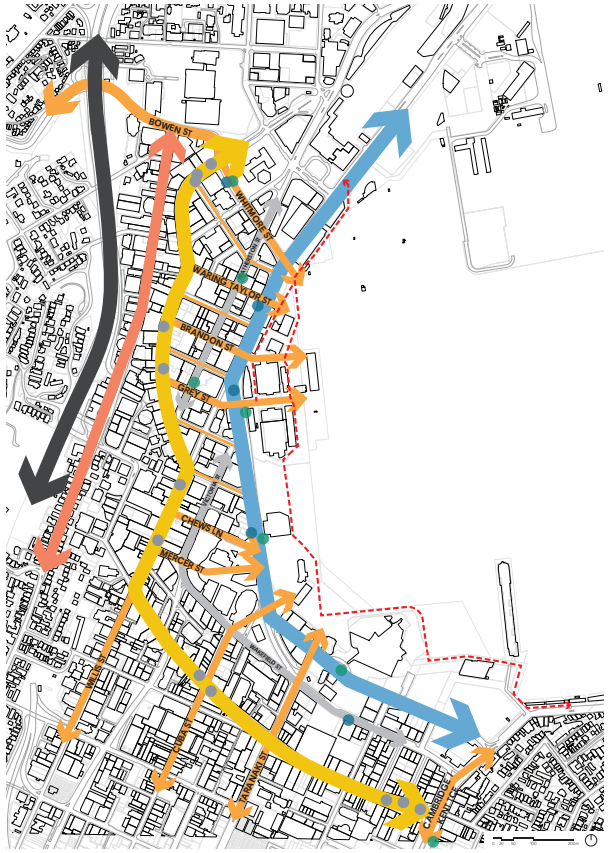
- Path: Golden Mile
- Path: Harbour Quays
- Edge: Topographical / Motorway
- Bus Stop: Golden Mile
- Bus Stop: Northbound
- Bus Stop: Southbound

10





3.2 Movement

Pedestrian movement (north-south) through central Wellington is generally focused around four main spines: Golden Mile, The Terrace, the quays, and the waterfront. Heading south towards Te Aro, these connections lead into main access spines for the Te Aro flat area: Willis Street, Cuba Street, Kent, and Cambridge Terrace. Additionally, secondary pedestrian spines work in collaboration with the main spines, such as Featherston, Victoria, and Wakefield Streets.

Between these spines, a fine-grained network of east-west shorter connections provide physical, visual, and perceptual links between the main activity areas of Golden Mile and the waterfront. Of these, some hold more significance than others, whether that be through a more direct/accessible route to the waterfront or destination or as a well-known route within the city (e.g., Grey Street to Post Office Square). These connections are plentiful towards the northern end of the city centre. A fine grain of connections occurs along Featherston Street and at Te Ngākau Civic Square. Further to the south, this structure of connections is coarser with less frequent options for pedestrians to access the waterfront (the Wakefield St/Cable St corridor is less permeable). Future development, particularly around the Courtenay Place end of the Golden Mile, will assist with this permeability.

Proposed bus stop locations are generally aligned with through connections or key landmark destinations. Pairings are sensibly located around Grey Street, Chews Lane/Harris Street, Te Papa/Taranaki Street, and Kent/ Cambridge Terrace, reinforcing city legibility.

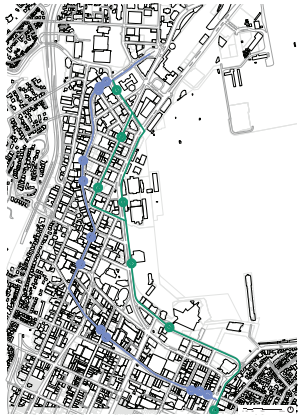
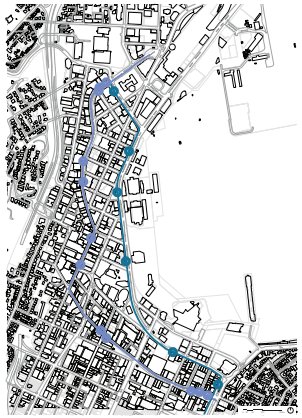
Bus Stop: Northbound
Bus Stop: Southbound

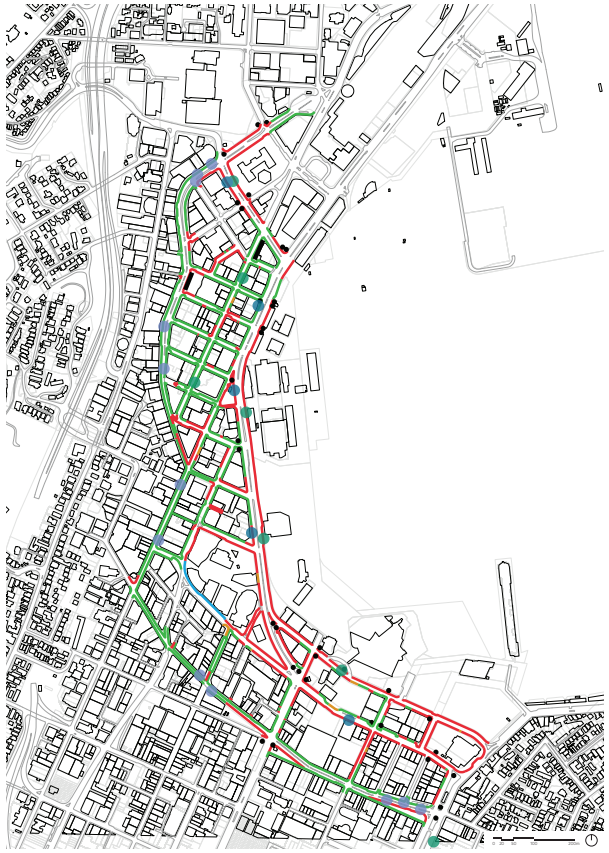
3



T01



T02



3.3 Canopy Cover

Canopy cover along the Golden Mile, the Quays, and the streets connecting the quays to Featherston Street and the Golden Mile is recorded.

Canopy cover is a key contributor to pedestrian environmental comfort and amenity. This is recognised in the Wellington District Plan. The Golden Mile has very good levels of shelter for pedestrians. Similarly, Featherston Street features reasonably continuous canopy cover, though some exceptions occur with high-level cover (e.g., Inspire House & Zebrano).

In contrast, the quays route has a noticeable lack of shelter southbound, while the northbound route has more continuous cover between Harris and Whitmore Streets. As a result, many—if not all—stops along the southern quays route will require pedestrians to move along streets that do not offer the same level of cover as the Golden Mile. These stops will also need to rely more heavily on dedicated stop shelters to provide bus users some level of environmental comfort.

The connector streets between the Golden Mile and the quays generally provide a good level of shelter. We note particularly the stop location pairing along Grey Street provides good levels of cover until Post Office Square. The stop pairing at Te Papa and Tākina will be less sheltered; however, the redevelopment of Reading may provide covered options in the future. Tākina will offer an indoor connection from Wakefield Street to Cable Street; however, this is semi-public and is compromised by the opening hours of the venue.

3.4 Pedestrian Amenity

The quality of pedestrian amenity within Wellington's CBD has been assessed in relation to a number of factors, including active frontages, shelter/canopies, general landscape/pavement conditions, and traffic dominance. This assessment is based on an on-site and desktop study undertaken by the consultant and reflects the existing conditions at the time of the survey with the exception of the proposed Golden Mile upgrade works, which have been considered.

The highest level of pedestrian amenity includes the proposed Golden Mile from Lambton Quay to Courtenay Place. These areas feature well-sheltered streets with vibrant, activated street edge conditions, contributing to a quality pedestrian experience. The adjacent, parallel Featherston Street and east-west connecting streets from Lambton Quay to the waterfront also maintain good quality pedestrian environments. North-south waterfront connections from Courtenay Place are weaker, with relatively diminished quality. In contrast, the Quays display poor pedestrian quality due to the vehicle-orientated, six-lane carriageway, lack of shelter, and reduced activation.

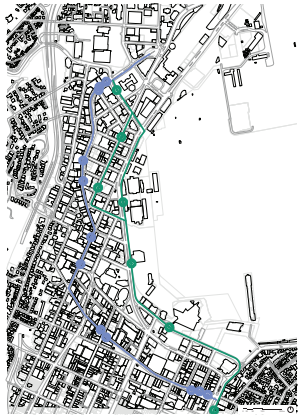
Route option T01 northern stop locations follow Featherston Street (southbound). This street is of high pedestrian quality. Its proximity to Lambton Quay further enhances its appeal as a wider quality pedestrian catchment for a retail/commercial precinct. However, for route option T02 (without Featherston Street), there is a notable reduction in pedestrian amenity and therefore a lack of consistency across these north-south connections.

High Pedestrian Quality

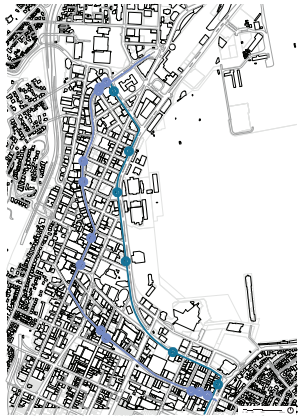
Low Pedestrian Quality

Bus Stop: Golden Mile
Bus Stop: Northbound
Bus Stop: Southbound

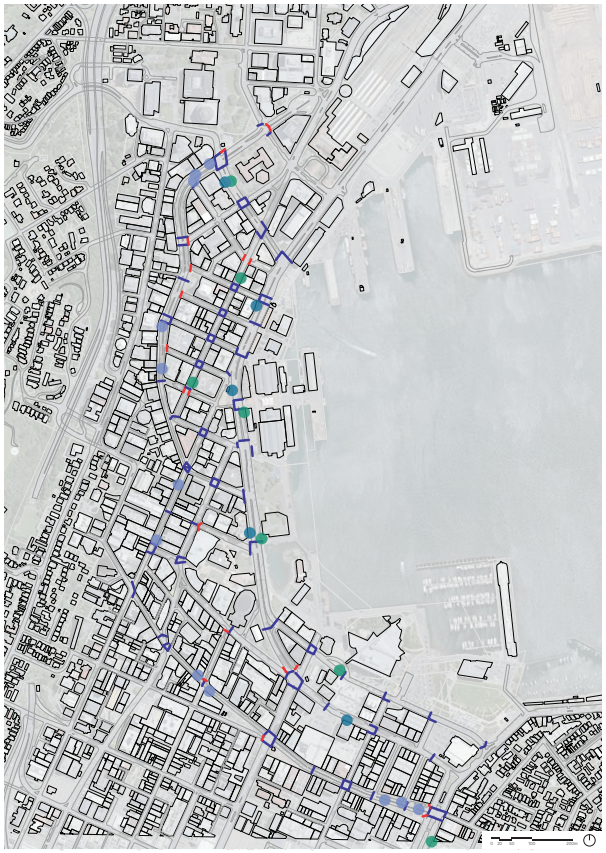
3



T01



T02



3.5 Pedestrian Crossings

Pedestrian crossing location and type affect the actual and perceived safety of walking journeys. This is particularly relevant to the proposed bus stops along the eastern side of the quays (southbound), as these stops require pedestrians to cross between 4-6 lanes of vehicular traffic in exposed environments.

The location of safe crossing points will affect the perceived attractiveness and quality of the journey to a stop. A pedestrian route will be perceived to be increasingly difficult or undesirable the more that route deviates from the most direct path.

Stop pairs along Whitmore Street, the Quays, and Featherston Street are generally well-located in relation to crossing points. The Post Office Square/Queens Wharf Stops are located in close proximity to the paired Post Office Square signalised pedestrian crossings. The Harris Street/Fale Malae pairing is located near an existing overbridge, though this will be taken down as part of the planned Fale Malae development. Some uncertainty exists around the treatment of this crossing and the planned works at the City to Sea Bridge / Te Ngākau.

A stop pair by Te Papa is well-served by a crossing outside the Cable Street entrance of Tākina and also by crossings at Taranaki Street (given the access constraints of Tākina).

The Central City pedestrian improvements project has upgraded some crossings along the Quays, Whitmore Street, and Kent/Cambridge Terraces.

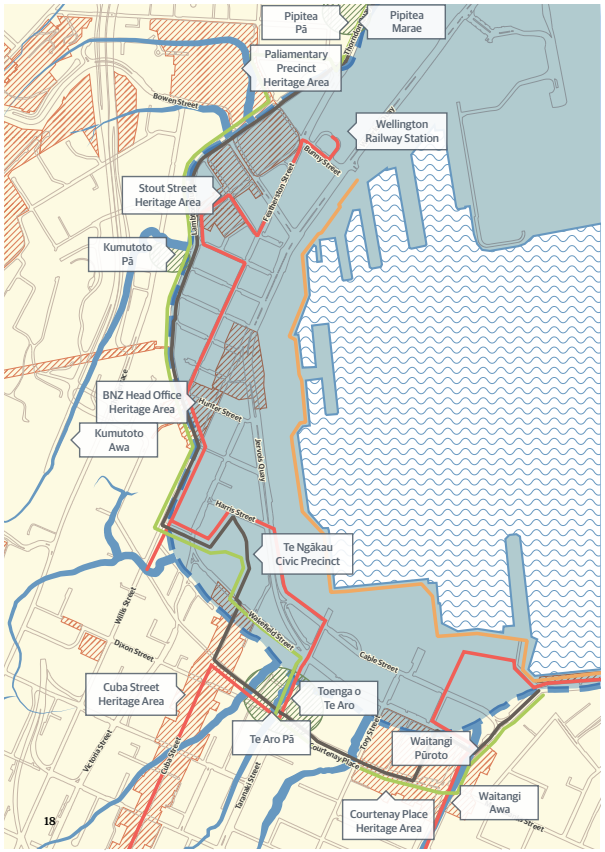
Signal Crossing
Zebra Crossing

14



3.6 Heritage and Viewshafts

Both TO1 and TO2 are proposed to be located in Heritage Areas or near Heritage Buildings/ Items as identified in the WCC District Plan. Some bus stop locations are also within the District Plan's identified viewshafts. Accordingly, the district plan's heritage and viewshaft requirements will need to be considered as design progresses.

The below heritage areas and buildings are within the Harbour Quays project area (this information and the adjacent plan are from the Draft Harbour Quays Contextual Analysis prepared by WCC December 2024):

- The landmark Neo-Classical Revival style Wellington
- The Railway Station defines the Waterloo Quay, Featherston, and Bunny Street area and is used by thousands of commuters daily.
- The Parliamentary Precinct Heritage Area, together with the nearby Government Buildings, Cenotaph, and Waititi Landing Park, is a site of national significance.
- The Stout Street Heritage Area on reclaimed land intersects Lambton Quay and features a nationally significant collection of heritage buildings built from 1879 to 1940.
- The heritage buildings that form the BNZ Head Office Heritage Area create one of the most significant streetscapes in Aotearoa New Zealand and include a stretch of southern Lambton Quay that has been permanently settled since 1840.
- Te Ngākau Civic Precinct holds the city's library, art gallery, events centre, and key developments: the Town Hall (future home of VUW School of Music) and WCC buildings to be constructed as part of a thriving precinct of culture, democracy, discovery, and arts experiences.
- Surveyed in the 1840s, Cuba Street Heritage Area is one of the city's earliest streets and best-known heritage areas, celebrated for its character and social life.
- The Courtenay Place Heritage Area features a long and unbroken vista of rare and highly significant heritage buildings, adjacent to Edwardian low-rise industrial warehouse streetscapes.

4

4.0 Design Considerations

4.1 Corridor Requirements

The key bus corridor requirements for the design are summarised in this section.

Further information on the functional requirements for the Project can be found in the Design Philosophy Statement attached as Appendix C.

4.1.1 Bus lanes

Base design assumptions include:

- At concept design, it is assumed that there will be no dedicated bus lanes. This will require further investigation during developed design.

4.1.2 Bus stop box

Base design assumptions include:

- Minimum stop length = 14m per bus. Generally three buses per stop.
- Waka Kotahi Public Transport Design Guide taper lengths to be provided to ensure buses can stop parallel to the kerb and allow accessible boarding.

4.1.3 General traffic lane widths

Base design assumptions include:

- The minimum lane width for general traffic lanes shall be 2.9m.

4.1.4 Vehicle Tracking

The key design requirements for vehicle tracking are described below.

- 12.6m tour coach used as minimum standard (covers FENZ and bus tracking needs).
- No tracking into adjacent lanes for main routes.
- Tracking permitted into adjacent/ opposing lanes for low-volume/low-speed streets (e.g., Hunter Street).
- A specific Metlink bus fleet vehicle arrangement will be used in addition to the tour coach at the detailed design stage.
- 19.0m Semi-trailer used as a minimum standard. Tracking permitted into adjacent lanes for turning movements.

4.1.5 Signal changes and priority

Changes to signal controls, including signal phasing adjustments and/or additional bus priority treatments, may be required to facilitate the movement of buses and/or mitigate impacts to general traffic. These treatments will be investigated in detail in the developed design but could include:

- Signal phase adjustments, such as green time extensions.
- Introduction of, or extensions to, pedestrian crossing phasing.
- Introduction of additional bus-only phasing (B-phases).
- Bus priority, including queue jump facilities and investigations into the application of bus lanes (part-time or full-time).

The application of bus lanes has not been considered in detail at concept design, as further work is required to understand the specific locations where such treatments may be applicable, as well as the form and function of such treatments (full-time vs. part-time, etc.). Given the complexity of the operating environment, including the short intervals between signalised intersections and the requirement to manage parking at some locations on the corridor, a uniform bus lane treatment is unlikely to be feasible along the entire length of each corridor. A detailed investigation on the appropriate mix of bus priority, including the use of bus lanes, will be undertaken in the developed design.

4.1.6 Building Access and Servicing (Parking)

The key design requirements for building access and servicing (parking) are described below:

- All design will be in accordance with WCC's Parking Policy (2020) and with the Project's Parking Management Plan (under development.
- Where possible, on-street high-priority stopping spaces (as defined by the Wellington City Council Parking Policy) will be maintained; where it is not possible to maintain high-priority parking in the same location, the following options will be considered:
    - Alternative location on the same street.
    - Time-restricted parking (e.g., clearways to provide parking outside peak times).
    - Relocation to side streets.
- High-priority parking will include:
    - Mobility.
    - Taxi Stands.
    - Bike/micro-mobility.
    - Loading zone.
    - Short stay.
    - Car share.
- Lowest (long-stay) and lower priority (commuters and residents) parking will be removed where:
    - Required to provide for higher-priority parking.
    - The space is required for bus movement functions.
- Vehicle access to all properties will be maintained, and opportunities to improve safety or consolidate access will be identified through the design process.
- High-use or access points with restricted sight lines will be identified during detailed design, and appropriate mitigation will be identified to minimise conflicts.

4

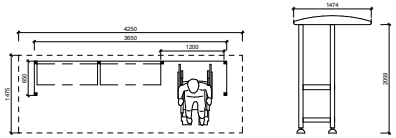
4.2 Stop Requirements

The key bus stop requirements for the design of bus facilities are summarised in this section. Further information on the functional requirements for the Project can be found in the Design Philosophy Statement attached as Appendix C.

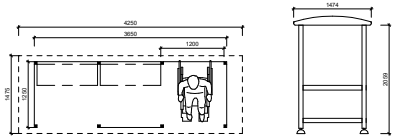
Base design assumptions include:

- Where new bus stops are to be provided, new bus shelters will be provided as per Metlink Bus Shelter Drawing Standards.
- Real-time information will be provided at each bus stop.
- Real-time information facilities will be as per Metlink real-time information standards.

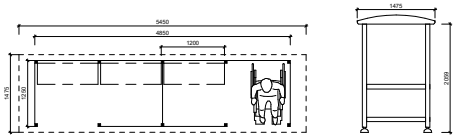
The following guidance was used to assist initial site selection by providing minimum dimension and design standards based on the GWRC standard shelter types. They do not yet address more detailed design aspects such as CPTED, shelter amenity and urban design, which will be addressed during the developed design.



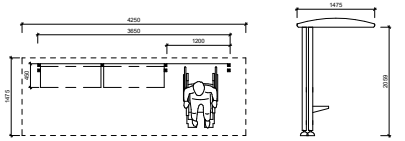
DESIGN BRAND SLIM 3 BAY



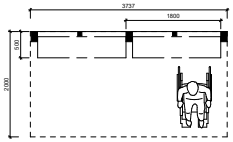
DESIGN BRAND STANDARD 3 BAY

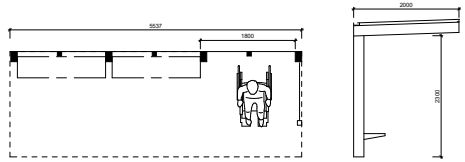


DESIGN BRAND STANDARD 4 BAY



DESIGN BRAND CANTILEVER 3 BAY





GWRC 2m CANTILEVER 2/3 BAY

18

4.2.1 Existing Constraints

Bus shelter layouts that facilitate expected bus types and passenger volumes and consider existing conditions such as local hazards, stop visibility, and approaching bus sight lines.

Guidance: Priority should be given to sites that allow sufficient footpath width for a separate wait area at the kerb line off the building line and enough length to provide shelter with appropriate capacity for the maximum number of passengers waiting at any one time.

4.2.2 Safety & Accessibility

Bus layout geometries, including best practice bus stop design and safety considerations, including kerb setbacks, accessible bays, safe loading clearances, and hazard warning strips. Bus stops are situated proximate to pedestrian crossing facilities wherever possible in order to provide passengers with safe and convenient access to and from the stop. All shelters should include CCTV; where no shelters are provided, WCC's existing CCTV coverage shall be assessed to ensure adequate coverage is achieved.

Guidance: GWRC has a minimum 900mm kerb setback of shelter canopies (bus collision). NZTA bus stop standards offer a useful minimum standard of 1800mm for kerb setbacks to vertical shelter elements (safety/ accessibility). These, however, assume no separate wait area. The setback can be reduced to 1500mm minimum if the wait area is not shared with pedestrian traffic.

4.2.3 Customer Experience

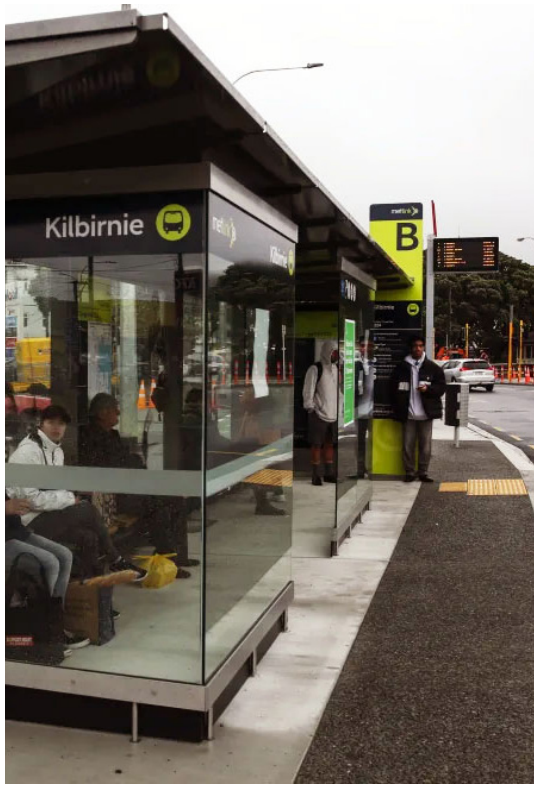
Customer experience is a core part of the project's success, capturing the provision of shelter appropriate to each location, CPTED including lighting and visibility, seating, accessibility, and wayfinding.

Guidance: Selection of shelter types should be based on the degree of exposure and amount of locally available existing cover. In general, the Design Brand shelters are too shallow to meet full accessibility standards and have limited passenger capacity. Care is needed in exposed sites to select shelter types that provide adequate protection from wind/wind-driven rain in general and specifically to the most vulnerable of passengers. The GWRC 2m cantilevered shelter is preferred where practical to use, subject to additional end screens in more exposed sites.

4.2.4 Bus Network Efficiency

Efficient bus layouts that provide separate wait areas with loading geometries and account for human factors such as crowding that can affect the efficiency of the bus loading times and ultimately the entire network.

Guidance: Shelter layouts that are linear and parallel to the footpath provide sufficient capacity at the head of the stop while allowing passengers to spread out along the length of the shelter. This prevents crowding and provides passengers with a clear line of sight to arriving buses. The shelter shouldn't be too far from the bus loading point, as it requires passengers to queue in the rain.



4.2.5 Where bikes pass behind bus stops

Provision for dedicated cycle bypass facilities will only be made where proposed stop locations impact an existing bicycle facility.

All cycle bypass facilities will be designed in accordance with NZTA's guidance on the design of bus and bicycle infrastructure.

4.2.6 Universal Access and Design

Bus stops are public infrastructure and must ensure the accessibility, safety, and comfort of all users, regardless of age, ability, or mobility. Universal design is a design approach that seeks to provide infrastructure that is equally accessible to all users, regardless of physical attributes or disability. The approach incorporates a mix of features, including level boarding platforms, tactile indicators for the visually impaired, clear signage, seating, and storage for wheelchairs and other mobility aids. Shelters should provide adequate weather protection while allowing visibility for security and navigation. By prioritising inclusive design practices, bus networks may be made accessible to a diverse population, promoting independent and equitable public transport access.

The principles of universal design have been considered in the location and design of bus stops along the Harbour Quays corridor, including:

- The relationship of bus stops to safe, controlled pedestrian crossings.
- The configuration of shelters and other infrastructure, including the positioning of shelters to minimise conflict with pedestrians.
- The use of tactile ground surface indicators and audio/visual communication tools.
- The use of signage and audio-visual communication systems.

A more detailed Crime Prevention Through Environmental Design (CPTED) assessment and inputs will be integrated into the Developed Design.

4.2.7 Pedestrian Facilities

The current footpath widths vary across the different streets within the preferred corridor. The general design approach is as follows:

- The starting position is that changes to footpath widths will be minimised
- To remain within budgets, it is assumed that civil works, kerb and channel, and stormwater changes are minimal.
- Except for specific lengths or to improve crossing conditions or remove critical constraints, footways will not be widened.
- No shared path (bike/micro-mobility and pedestrians) facilities will be built.
- In some locations, pedestrian buildouts may need to be removed to provide space for bus facilities.
- Accessibility: All new pedestrian facilities should comply with best practice requirements for accessibility, including grades, ramps, tactiles, etc.

4.2.8 Civil and Drainage Works

The key design requirements for civil and drainage works include:

- Standard kerb and channel to be used for all new kerbs except at bus stops where Kassel Kerb may be provided. Need to allow appropriate transition length to reach new height
- All clashes with existing stormwater sumps/catchpits are to be identified in the developed design phase drawings.
- Bus stop bypass design is assumed to maintain kerb and channel conveyance through approved channel covers or through proprietary drainage products.
- If applicable, all areas with substantial footpath widening are assumed to include a slot drain or other proprietary drainage product to avoid road-level construction.
- No stormwater upgrades are proposed as part of the Project to address existing issues along the routes.
- All new stormwater sump/catchpit grates to be a bike-friendly design.

4.2.9 Signs and Markings

The key design requirements for signs and markings:

- Signage and markings will comply with the Traffic Control Devices (TCD) manual and the Manual of Traffic Signs and Markings (MoTSAM).

Additionally, signage and markings will also refer to best practice guidance such as NZTA's Public Transport Design Guide.

4.2.10 Kassel Kerbs

The use of Kassel Kerbs will be limited to stops only where physical works are required to the kerbline associated with the stop.

4.2.11 Real-time information boards

Base design assumptions include:

- Standard real-time information boards will be supplied by GWRC.

4.2.12 Bus Wayfinding Signage

Base design assumptions include:

- Standard bus wayfinding signage will be supplied by GWRC.

Design Review Notes: to be investigated during Developed Design.

- *Design team to investigate alternative kerb options to minimise construction costs while still achieving accessibility.*

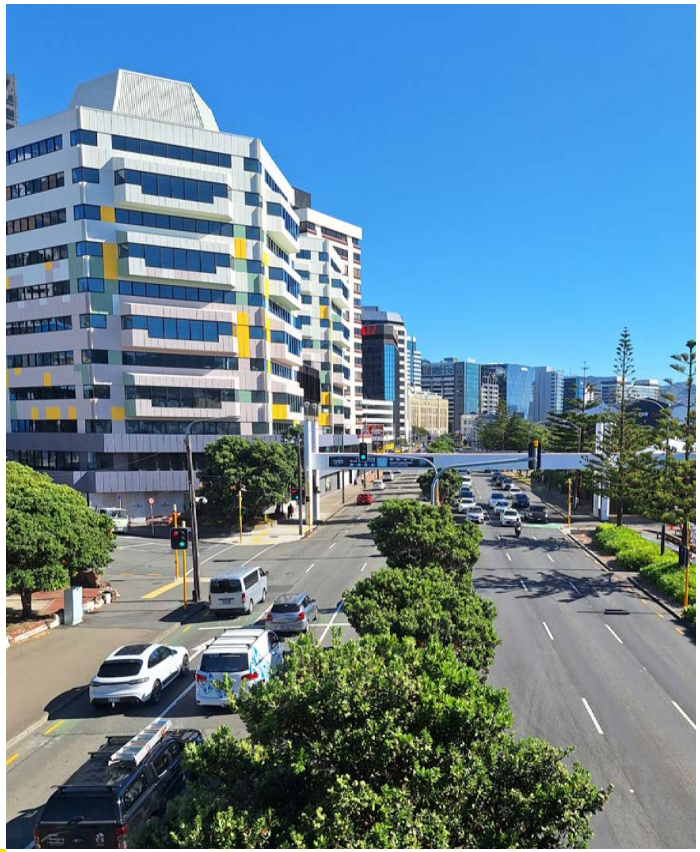
Section_Scale: 1:10 @ A3

5

5.0 Bus Stop Design Concepts



22

5.1 Approach to the identification of bus stops

The location and position of bus stops along the Harbour Quays corridor(s) must balance passenger and pedestrian convenience, operational efficiency, and safety. Bus stops must be positioned to provide convenient access to major destinations along the corridor while maintaining or improving journey times and reliability for public transport services. Bus stops that are closely positioned compromise the performance of bus services, resulting in delays and the platooning of buses as they move along the corridor. Conversely, stops that are widely spaced or inappropriately positioned may result in passengers choosing other services or modes.

A bus stop strategy (see Appendix D) has been developed to strike a balance between these competing tensions, with the strategy considering:

- An ideal spacing of between 250m and 400m.
- Locations and connection to major destinations along the corridor.
- Connection to other transport interchanges, including stops on the Golden Mile.
- Pedestrian connectivity, including proximity to safe pedestrian crossing points.
- Bus accessibility and manoeuvrability.
- Impacts to general traffic.
- Potential infrastructure requirements, including ease of construction.

The application of this strategy identified five optimal locations for bus stops (northbound and southbound) on corridors TO1 and TO2.

An additional bus stop location was also identified proximate to Waring Taylor, which will be explored further in the Developed Design.

5

Stop 1 Southbound (S_{1A})

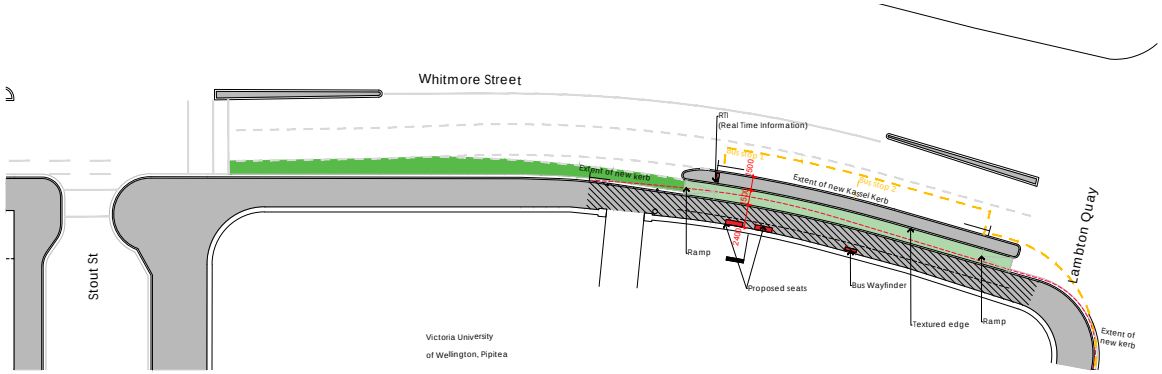
Overview

Located on Whitmore Street outside of the Old Government Buildings, this area is well connected to Lambton Quay and Parliament.

It is anticipated that this stop would only cater to incoming services from the west and be primarily used for drop-off/ alighting buses.

Key urban design considerations

- Proposed stop relationship with Schedule 1 Heritage Building 'Government Buildings' (DP Ref# 179) and HNZPT Cat 1, 37 will influence the exact position and design of the stop. Part of the Parliamentary Precinct Heritage Area (DP Ref# 14, Schedule 3).
- Sensitivity and appropriate design response to the heritage railings will need to be addressed. Take into account the existing landscape—trees and hedging along the back edge of the pavement within the Government Buildings grounds. Unlikely to affect the Peter Fraser statue (heritage structure).
- District Plan View Shaft 'VS3 North Queens Wharf and Inner Town Belt—Whitmore Street' is likely to be affected. Mitigation will be required to minimise the effect on VS3.
- District Plan View Shaft 'VS4 The Beehive and The Cenotaph—Whitmore Street' is likely to be affected. Mitigation will be required to minimise the effect on VS4.
- Overall environmental quality and pedestrian amenity at the stop is limited due to the exposed location and lack of building edges providing activation and shelter.
- Walking connections to the stop are exposed with no canopy cover or edge activation.



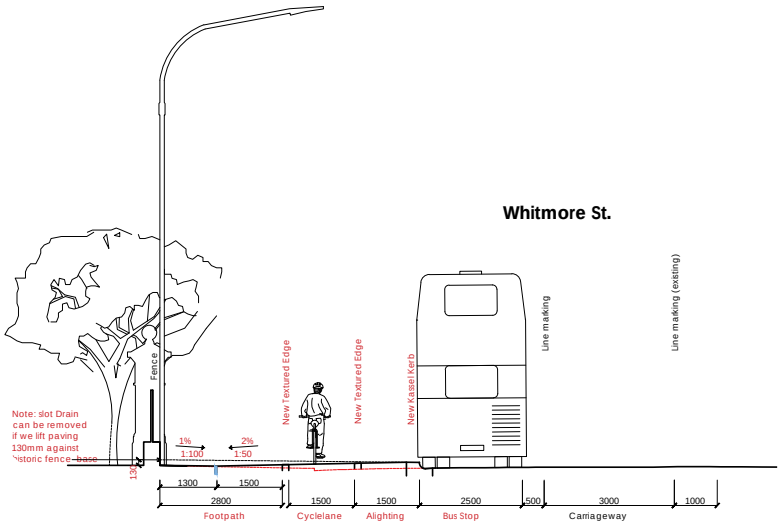
Whitmore Street, outside VUW Pipitea

Design Review Notes: to be investigated during Developed Design.

- *Shelter removed from this stop as part of review of concept design.*

Technical Considerations

- The site is exposed to northerly wind.
- Stop is predominantly a drop-off, so less shelter may be appropriate.
- Some conflict between pedestrians and the cycleway can be mitigated by placing seating or shelter against the fenceline.
- Curved layout of bus boarding area to be tested during developed design to ensure buses can get close enough to kerbs to allow for accessible boarding.



5

Stop 1 Northbound (N_{1A})

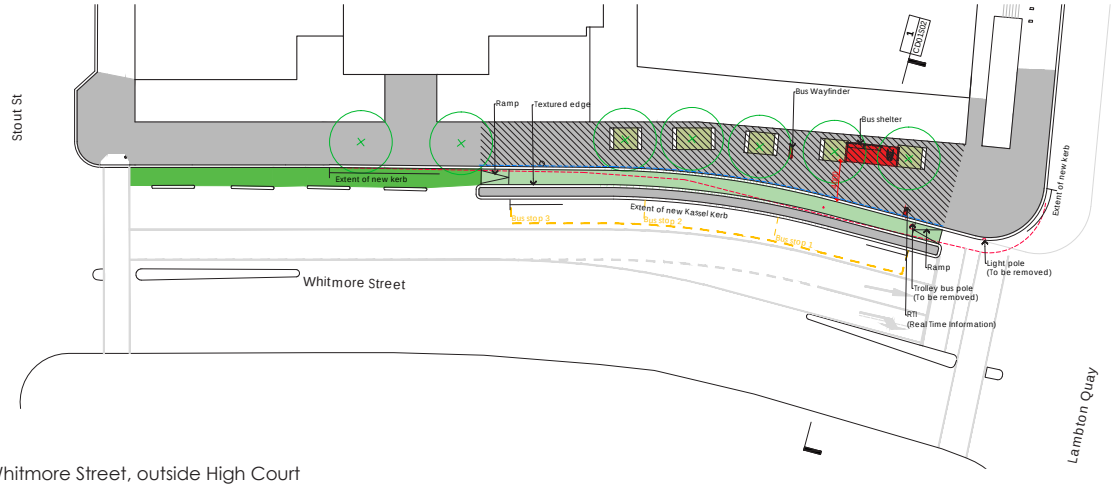
Overview

Located on Whitmore Street outside of the Supreme Court, this area is well connected to Lambton Quay and Parliament.

It is anticipated that this stop would only cater to westbound services.

Key urban design considerations

- Part of Stout Street Precinct Heritage Area (DP Ref# 14, Schedule 3).
- Relationship with the Supreme Court—particularly facade arrangement, internal activity, and plinth surrounds—will influence the exact position and design of the stop location and shelter. As proposed, the stop is positioned adjacent to service/utility space within the court and will limit impact on outlook for court staff.
- Existing landscape and streetscape features—particularly the seating and trees—will need to be integrated into the stop design. As proposed, the stop utilises the gap between seats and consolidates these elements in a coherent location.
- Existing footpath and carriageway space is generous, and width will be adequate to accommodate passersby and stop customers.
- District Plan View Shaft 'VS3 North Queens Wharf and Inner Town Belt—Whitmore Street' is likely to be affected. Mitigation will be required to minimise the effect on VS3

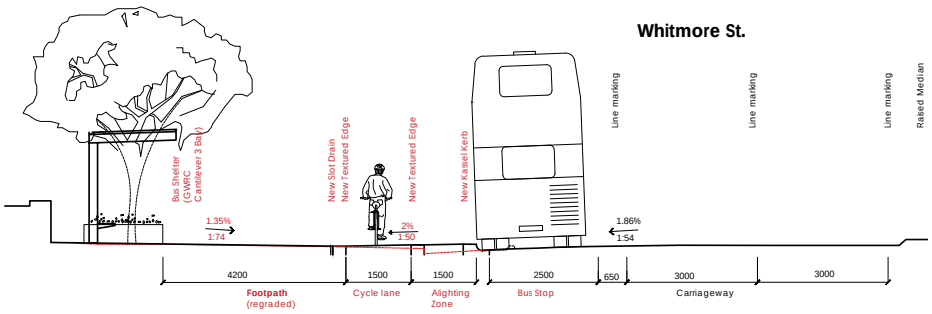


Whitmore Street, outside High Court

- District Plan View Shaft 'VS4 The Beehive and The Cenotaph—Whitmore Street' is likely to be affected. Mitigation will be required to minimise the effect on VS4.
- Overall environmental quality and pedestrian amenity at the stop is low-medium: amenity from seating, planting, and footpath width is good, but building edge activation is limited, and no canopies exist, reducing amenity for stop users. Consider a second shelter to increase sheltered capacity and vertical structure to mitigate wind/ rain exposure.
- Accessibility to the stop is reasonable with nearby signalled crossings at Lambton Quay and Stout St.

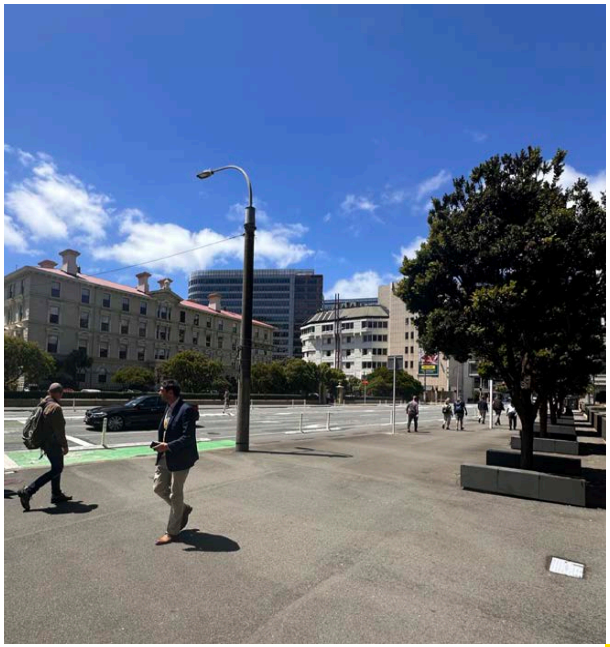
Technical considerations

- The site is exposed to the northerly wind and requires shelter.
- Some conflict between pedestrians and the cycleway can be mitigated by placing shelter against the building line.
- Curved layout of bus boarding area to be tested during developed design to ensure buses can get close enough to kerbs to allow for accessible boarding.



Design Review Notes: to be investigated during Developed Design.

- *Alternative option showing the cycle lane passing behind the stop and shelter was discounted previosly due to indirect nature of cycle route and conflicts with Golden Mile pedestrian movements.*
- *Shelter will need to be visually permeable for CPTED considerations, as potential entrapment risk between shelter and water feature.*
- *Proximity of stop to to key intersection could mean that cyclists aren't looking for boarding/alighting passengers. Recommend shifting head of stop south.*
- *Is there likley to be a need for further shelters for more capacity? This positioning would require them to be split between tree bays.*



5

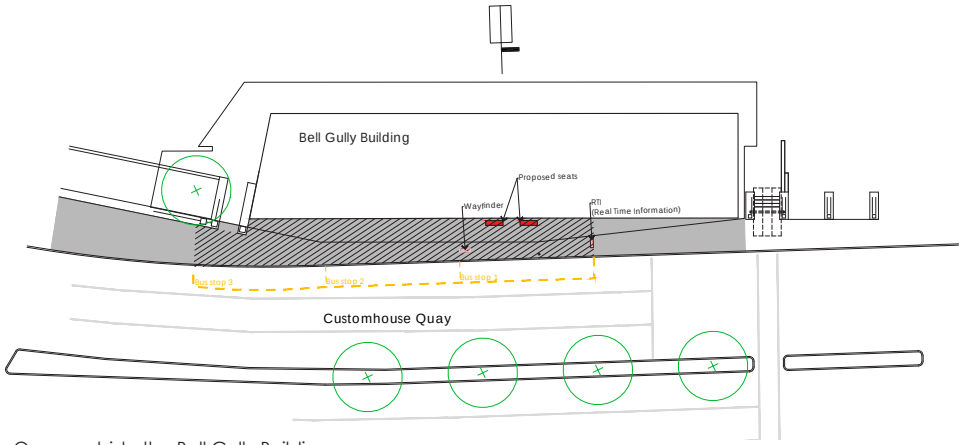
Stop 2 Southbound (S_{2L})

Overview

Located on Customhouse Quay, adjacent to the new development on Wellington Waterfront, this is one of the few stop opportunities before Queens Wharf.

Key urban design considerations

- The proposed stop is located adjacent to the Servcorp-Bell Gully Building, southbound along Customhouse Quay.
- Access to the stop from the city is via the signalled Waring Taylor intersection. From the waterfront, access is via Lady Elizabeth Lane. Both these approaches lack continuous canopy or building edge protection/activation for users connecting to the stop. Crossing of the quays is required for city movements, and while exposed, canopies do exist along Waring Taylor Street, and a free-standing canopy is located on the eastern side of the quays.
- At the stop, the blank ground-level facade of the S-BG Building does not offer activation or amenity for users. However, the presence of the stop will offer some level of increased activity at that location, improving an otherwise inactive edge.



Customhouse Quay, outside the Bell Gully Building

28

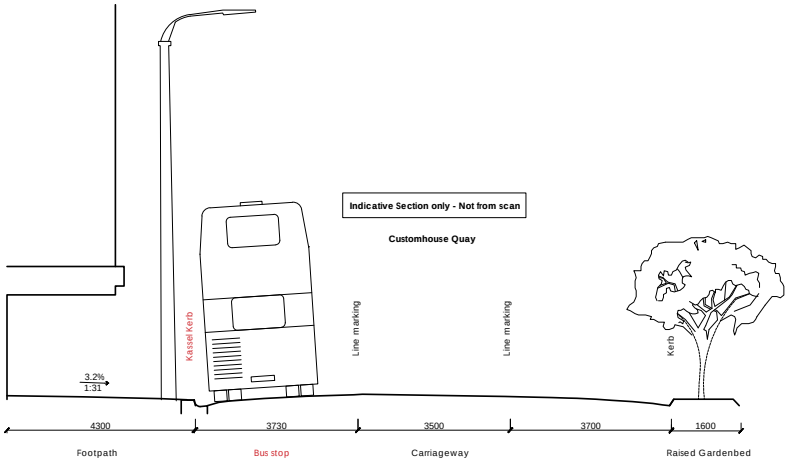
Design Review Notes: to be investigated during Developed Design.

- *Increased lateral shelter to be provided.*
- *Potential safety issues with jaywalking as passengers run across traffic to catch their waiting bus.*

- As proposed, the stop will utilise the building canopy and remove the need for a standalone shelter. This will occupy less of the footpath and reduce conflicts between passers-by and stop customers. We also note the likely lower numbers of passers-by using this footpath relative to the waterfront.
- Environmental quality and pedestrian amenity at the stop is low given the proximity to traffic, lack of building activation, and absence of planting. Consider vertical structure at the stop to mitigate wind/rain exposure.

Technical Considerations

- The existing building canopy sits close to the kerb and may conflict with the bus sweep. To be investigated further.



5

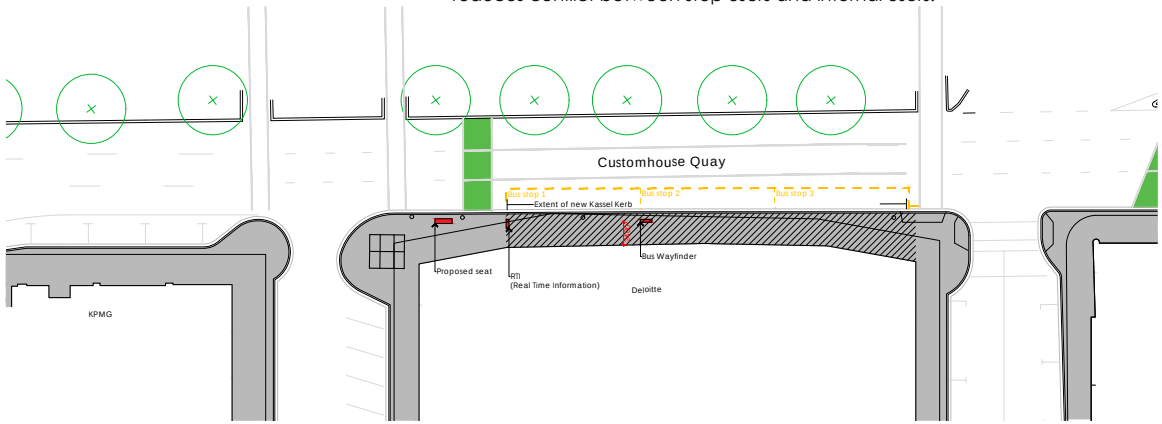
Stop 2 Northbound (N_{2B})

Overview

The proposed stop is located adjacent to the Deloitte Building, northbound along Customhouse Quay.

Key urban design considerations

- Access to the stop from the city is via Waring Taylor Street and Johnston Street. The former offers covered connections (canopies). From the waterfront, access is via signalled crossings at both Waring Taylor Street and Johnston Street. These approaches lack continuous canopy or building edge protection for users connecting to the stop. Crossing of the quays is required (exposed).
- At the stop, the blank ground-level facade of the S-BG Building does not offer activation or amenity for users. However, the presence of the stop will offer some level of increased activity at that location, improving an otherwise inactive edge.
- The stop will utilise the building canopy and remove the need for a standalone shelter. This will occupy less of the footpath and reduce conflicts between passers-by and stop customers. Environmental quality and pedestrian amenity at the stop is low given the proximity to traffic and absence of planting.
- Building provides good levels of activation, particularly towards the northern end with internal cafe space. Building front (glazing) set back behind the low-level plinth reduces conflict between stop users and internal users.



Customhouse Quay, outside Deloitte

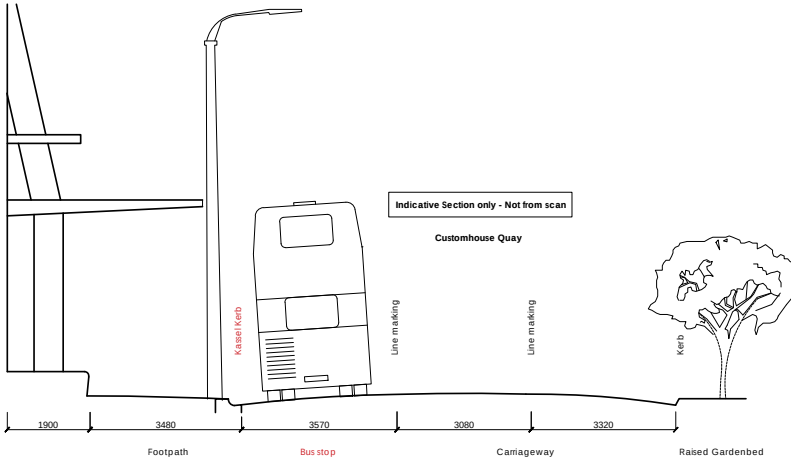
30

Design Review Notes: to be investigated during Developed Design.

- *Additional seat (not under shelter) added during concept review.*
- *Note the adjacent building is base isolated and we can not place any furniture within 1.5m of the structure without impacting on the buildings performance during an earthquake.*

Technical Considerations

- The existing building plinth provides informal seating.
- The site is exposed to the northwesterly but protected by the large existing canopy.
- RTI location to be confirmed. If there is conflict with the building canopy, the RTI can be relocated further west.
- Consider vertical structure at the stop to mitigate wind/rain exposure.



31

5

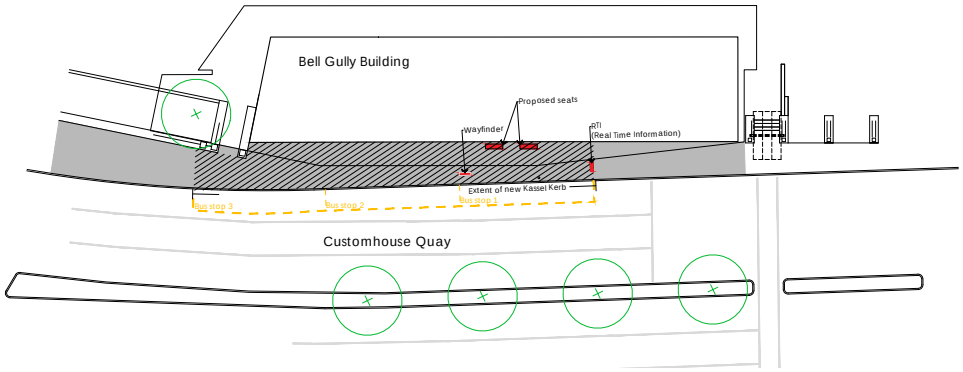
Stop 3 Southbound (S_{2K})

Overview

Located on Jervois Quay Outside of the Wellington Museum, this stop is ideally located for the TSB Arena and Queens Wharf.

Key urban design considerations

- The future stop will reinforce access and city-wide legibility for the museum and Queens Wharf, resulting in positive outcomes for both route options TO1/TO2.
- The relationship with Schedule 1 Heritage Building 'Wellington Harbour Board Head Office and Bond Store' (DP Ref# 160) and HNZPT Cat 1, 234 will influence the exact position and design of the stop location and shelter.
- Sensitivity and appropriate design response to the heritage building will need to be addressed, taking into account facade arrangement and fenestration.
- Existing shrub and tree planting along the street edge will be affected/need to be removed, reducing buffering from traffic and reducing amenity for pedestrians.
- As proposed, the stop occupies a large proportion of the existing footpath width, with a small gap between the rear of the shelter and Wellington Museum. Therefore, conflicts between passers-by and stop customers may occur. This will be mitigated by the likely lower numbers of passersby using this footpath relative to the waterfront.
- Environmental quality and pedestrian amenity at the stop is low given the proximity to traffic, lack of building canopy, narrow footpath, lack of activation, and absence of planting. Consider vertical structures at the stop to mitigate wind/rain exposure.



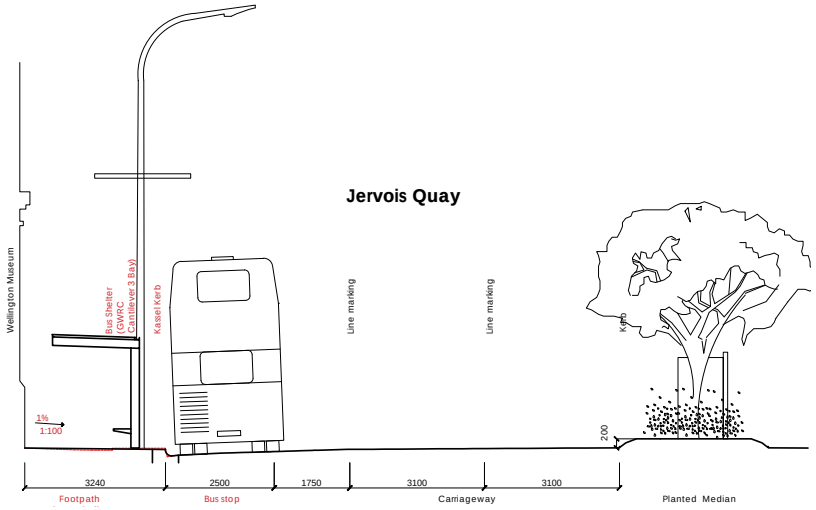
Jervois Quay, Outside Wellington Museum

32

- Poorly sheltered and activated connections for customers getting to the stop. Requires crossing Harbour Quays (exposed) and lack of canopy shelter along local building edges.
- Improved pedestrian crossing across the Queens Wharf vehicle access will improve access to the stop.

Technical considerations

- The narrow existing footpath and heritage building restrict the opportunity for shelter against the building line. Shelter to be reversed against kerb provided CPTED requirements and sight lines can be achieved.
- The site has poor existing lighting and poor oversight—a detailed lighting study is required for this area.



Design Review Notes: to be investigated during Developed Design.

- *Perceptions of exposure to weather compounded by additional uncovered walking distance from Post Office Square is noted.*
- *Potential safety issues with jaywalking as passengers run across traffic to catch their waiting bus.*
- *Shelter to be placed to minimise impact on heritage facade (acknowledging that building footings, emergency panel, windows, and loading door are limiting factors).*
- *Also, noting there are a number of constraints to providing a comfortable pedestrian experience and footpath width (lighting column and traffic control boxes in the pathway at the northern end, Powerco pit in the garden bed, metal footing plates).*
- *Sheltered enclosure for waiting passengers will be extremely important at this location (glazing all sides), with a high level of visual permeability. Increased lateral shelter is to be provided.*
- *RTI on the building edge potentially pushes pedestrians out to the road edge; is there an option for a kerb-edge option?*
- *Can we change the alignment of the main pedestrian travel route next to the heritage gates so it doesn't cross the existing drainage grate?*
- *Is there an opportunity to offset planting loss due to partial/total removal of the garden bed?*

5

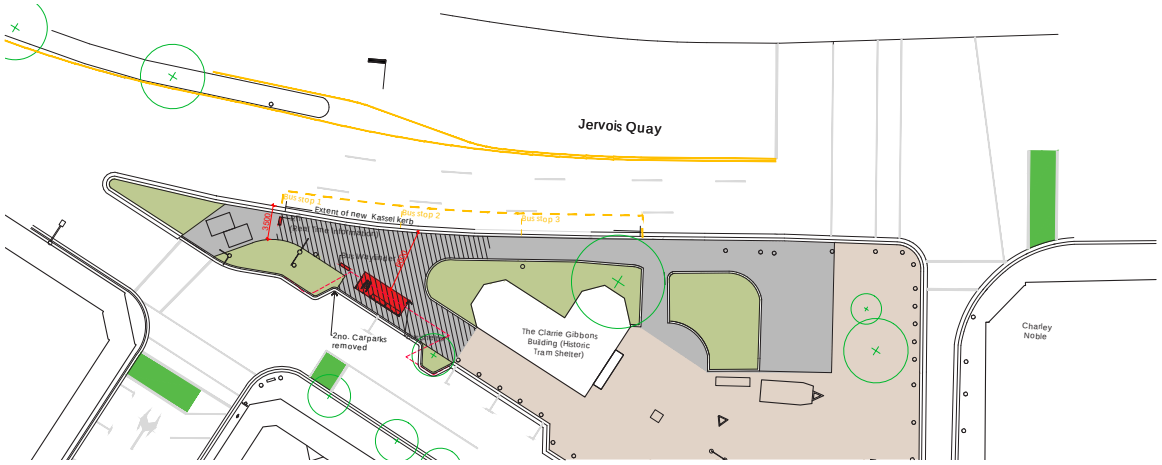
Stop 3 Northbound (N_{2C})

Overview

Located on Post Office Square, this stop is ideally located for the TSB Arena and Queens Wharf.

Key urban design considerations

- The proposed stop sits within DP Heritage Area DP re #16. Also Clarrie Gibbons Building (Clarrie's) (Heritage Building ref 159).
- The proposed stop location utilises an area where angled parking has been replaced with parallel parking. This location is somewhat disconnected from Clarrie's, utilising a tongue of land between Customhouse Quay and Jervois Quay.
- The proposed stop will enhance activation and 'purpose' for this area and will reinforce access and city-wide legibility for Queens Wharf, resulting in positive outcomes for both route options TO1/TO2.
- Physical separation from Clarrie's will reduce visual impacts on this structure.
- The existing shrub landscape along the street edge will be affected.
- Occupying an existing parking area, the shelter is unlikely to create conflicts between passersby and stop customers.



Jervois Quay, outside Clarrie Gibbons Building

34

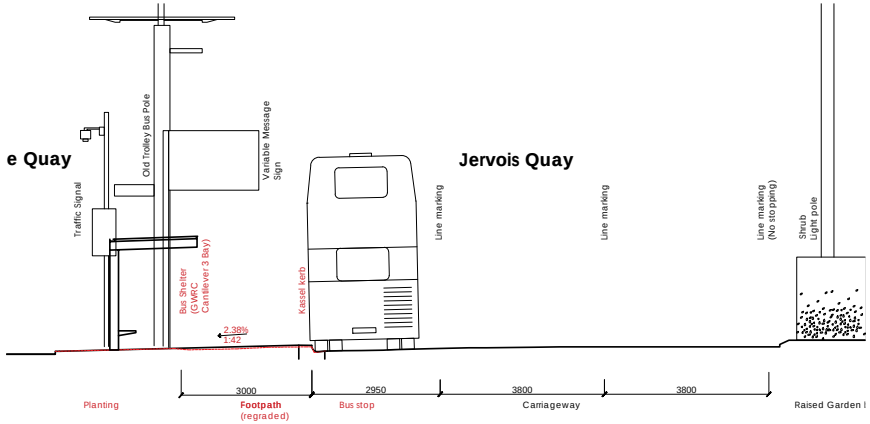
Design Review Notes: to be investigated during Developed Design.

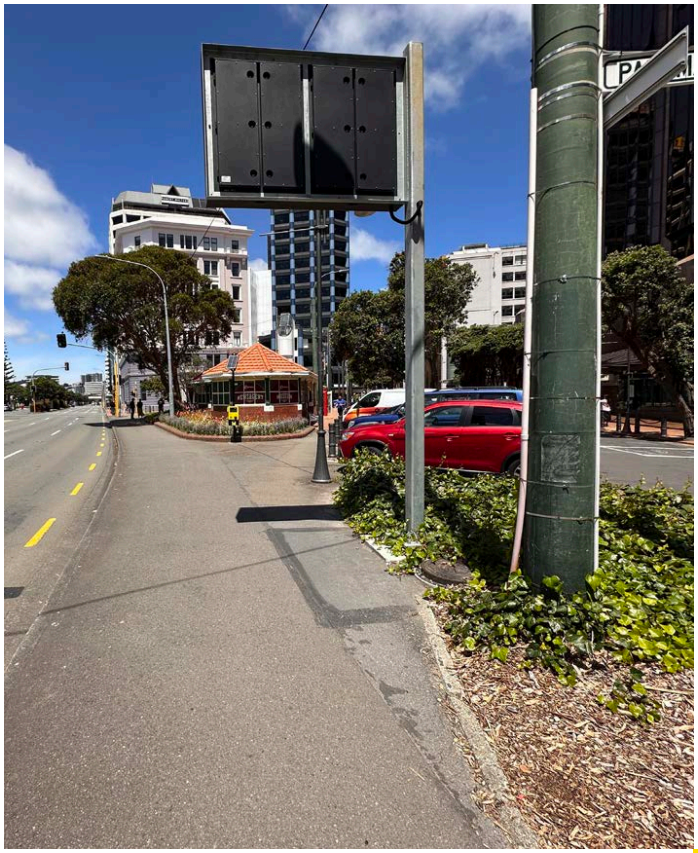
- *Refine shelter location to move it closer to stop head if possible.*
- *While placement of this shelter offers plenty of room for waiting customers away from flow of pedestrians, there is a risk it is out of the sightline of buses/people wanting to check RTI.*

- Overall environmental quality and pedestrian amenity at the stop is low given the proximity to traffic, lack of building canopy, lack of activation, and somewhat isolated position. Consider vertical structure at the stop to mitigate wind/rain exposure.
- Poorly sheltered and activated connections for customers getting to the stop from the waterfront. Generally covered connections from the city (west).
- Requires crossing Customhouse and Jervois Quays (exposed).

Technical Considerations

- This site is exposed to the northerly wind and requires additional shelter.
- Realigning car parks provides an opportunity to achieve simple access and circulation in an otherwise congested corner.
- Clearance from the historic tram shelter allows use of the standard bus shelter.
- Curved layout of bus boarding area to be tested during developed design to ensure buses can get close enough to kerbs to allow for accessible boarding.Curved layout of bus boarding area to be tested during developed design to ensure busses can get close enough to kerbs to allow for accessible boarding.





5

Stop 4 Southbound (S_{3C})

Overview

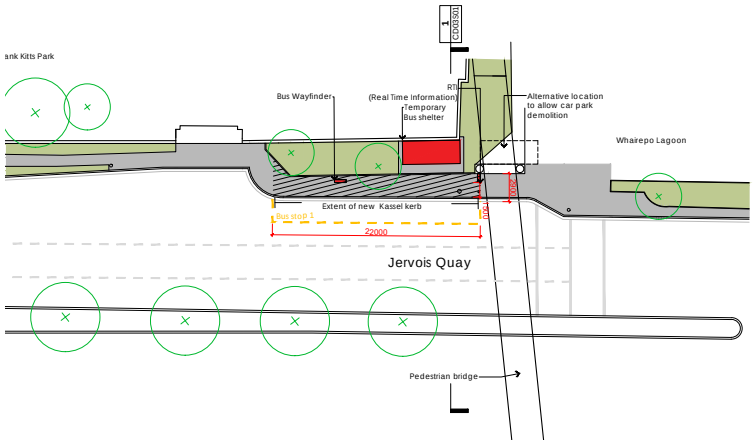
As part of our assessment of stop catchments, a stop pair located adjacent to/opposite Frank Kitts Park on Jervois Quay was identified. Alternative locations for stops proximate to this location were considered, including the use of Harris, Willeston, or Hunter as part of the appraisal of corridor TO1. These alternative locations were found to have significant challenges, including limited access, conflicts with emergency services, or safety concerns.

Frank Kitts Park is scheduled for redevelopment in the near future, which will impact both the configuration of the park and its relationship with Jervois Quay. Given that these changes will impact the bus stop and its supporting infrastructure, it is proposed to defer the construction of permanent infrastructure until after redevelopment works have concluded. A temporary stop will be provided until such time as redevelopment works to Frank Kitts Park have concluded. Bus stops immediately upstream and downstream will be fully installed, with shelters and other infrastructure.

This approach provides improved access for passengers seeking access to destinations proximate to Jervois Quay while providing the option for passengers to walk to the adjacent stop should they desire more shelter.

Key urban design considerations

- Proposed temporary stop. The future final stop location and design will need to interface with the redevelopment of Frank Kitts Park/Fale Malae, particularly reconciling any layby/drop-off access to the malae.
- The future stop will reinforce access and city-wide legibility for the malae, lagoon, and Te Ngākau, resulting in positive outcomes for both route options TO1/TO2.
- This stop location will utilise an underused area of low-quality landscape adjacent to the blank wall/facade of the FKP car park.
- Existing mature trees (Norfolk Pine and Cabbage) are retained for the temporary proposal and will help maintain some level of amenity at the stop.
- The proposed stop will enhance activation and 'purpose' for this area.



Jervois Quay, outside Frank Kitts Park

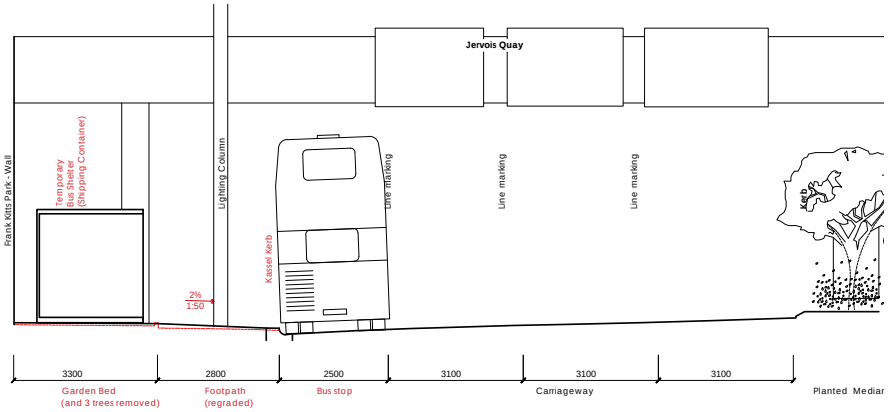
Design Review Notes: to be investigated during Developed Design.

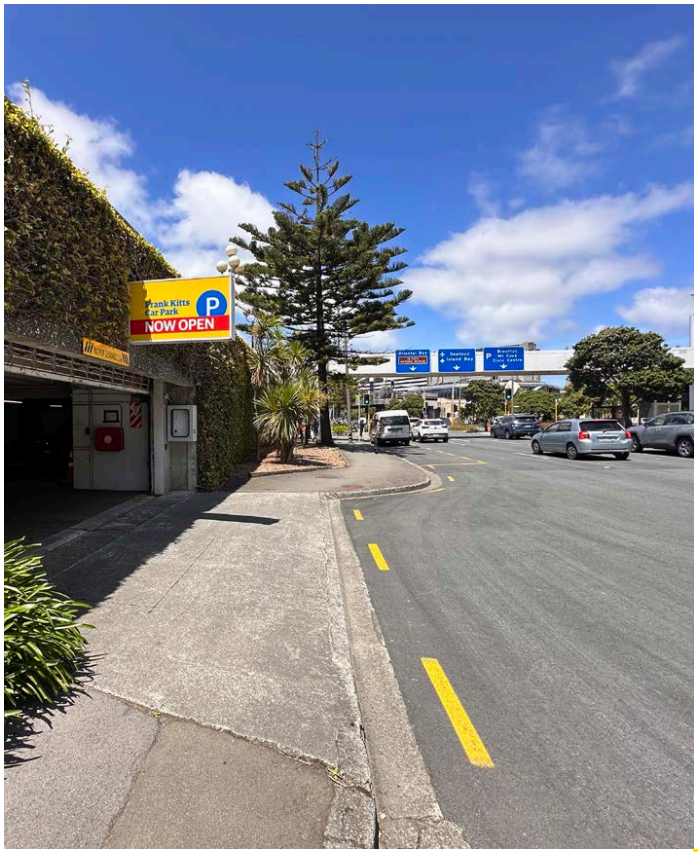
- *Comfortable with use of temporary shelter in the interim here. However, need to ensure there is good visual permeability as there have been some issues around anti-social behaviour in adjacent area.*
- *Stop needs to be attractive so any temporary structures need to be 'more' than a standard shipping container.*

- Occupying an existing planted area, the shelter is unlikely to create conflicts between passersby and stop customers.
- Overall environmental quality and pedestrian amenity at the stop is low given the proximity to traffic, lack of building canopy, lack of activation, and somewhat isolated position.
- Poorly sheltered and activated connections for customers getting to the stop from the waterfront or city.
- Access to this location from the city requires crossing Jervois Quay (exposed).

Technical Considerations

- This site is very exposed to weather, and additional shelter is required.
- A strategy to allow for future demolition of the bridge and car park is required.





5

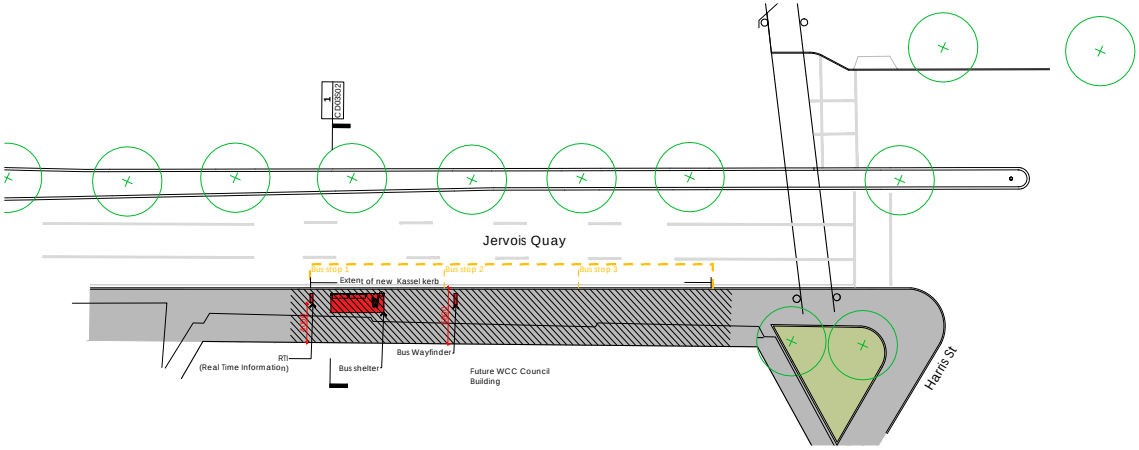
Stop 4 Northbound (N_{3A})

Overview

Located on Jervois Quay outside of the soon-to-be-occupied WCC buildings.

Key urban design considerations

- Proposed stop design and location adjacent to the future Wellington City Council (WCC) office building. WCC refurbishment plans are unknown at this stage, and therefore the precise stop location will need to be confirmed once WCC plans are known.
- Signage is to be sensitively integrated along the future WCC facade, taking into account access/entry, windows, and facade features.
- This stop will reinforce access and city-wide legibility for the malae, lagoon, Te Ngākau, and Council offices, resulting in positive outcomes for both route options T01/T02.
- No existing planted landscape occurs in the vicinity of the stop.
- The proposed bus shelter will sit beyond the existing canopy cover.
- The stop may create conflicts between passers-by and stop customers given the relatively shallow building canopy (for users during adverse weather). The introduction of a stop shelter will create a pinch point in footpath width.



Jervois Quay, outside Future WCC Council Buildings

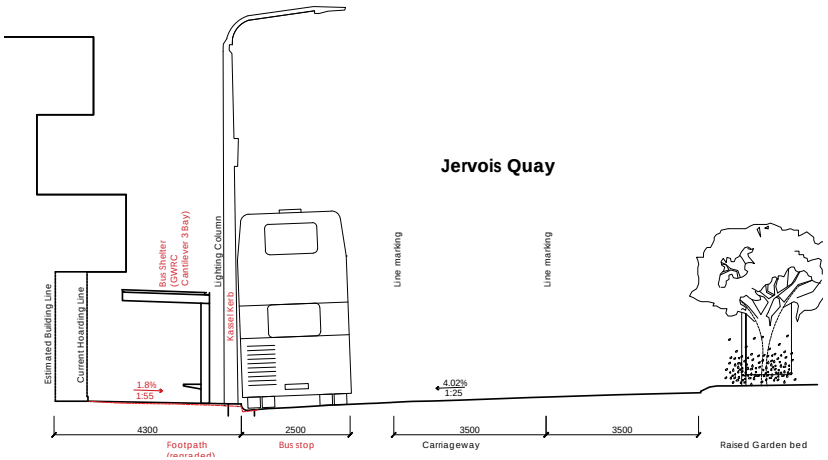
Design Review Notes: to be investigated during Developed Design.

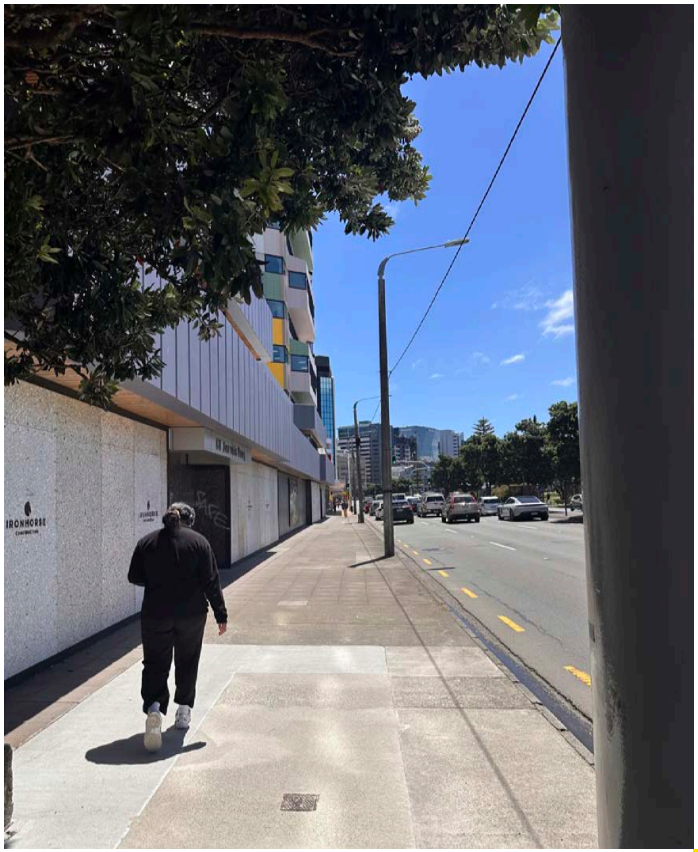
- *Increased lateral shelter to be provided.*

- Environmental quality and pedestrian amenity at the stop is low-medium given the proximity to traffic; however, the building canopy and potential WCC office edge activation are positive.
- Connections for customers getting to the stop from the city benefit from shelter and reasonable activation. Close proximity to the Harris Street-signalled intersection is noted.
- Connections from the waterfront are exposed and require crossing Jervois Quay (existing over-bridge).

Technical Considerations

- This site is very exposed to weather, and additional shelter is required.





5

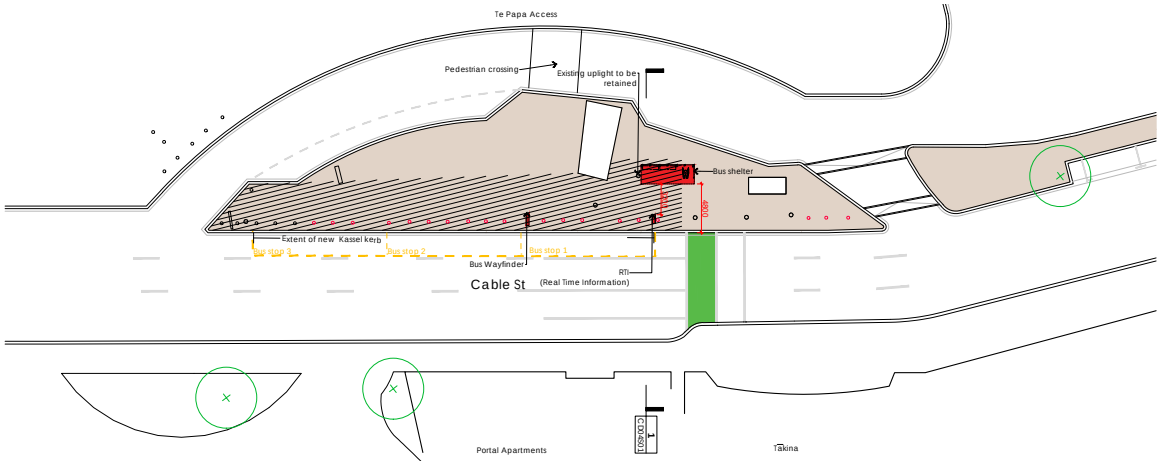
Stop 5 Southbound (S_{4A})

Overview

Located on Cable Street in front of Te Papa and opposite Tākina.

Key urban design considerations

- The future stop will reinforce access and city-wide legibility for Te Papa and Tākina Wellington Convention and Exhibition Centre Queens Wharf, resulting in positive outcomes for both route options TO1/TO2.
- The relationship with Schedule 1 Heritage Building 'Circa Theatre' (DP Ref# 408) may influence the position and design of the stop location and shelter (though note the stop is not directly adjacent to Circa Theatre).
- An appropriate design response as a forecourt element to Te Papa, including Te Papa signage, will need to be considered as well as design integration into the crescent-shaped drop-off area.
- Pedestrian movements across the forecourt of Te Papa will be a matter to consider
- No existing planted landscape exists, and the opportunity for further landscape improvements should be considered for this stop/local area.



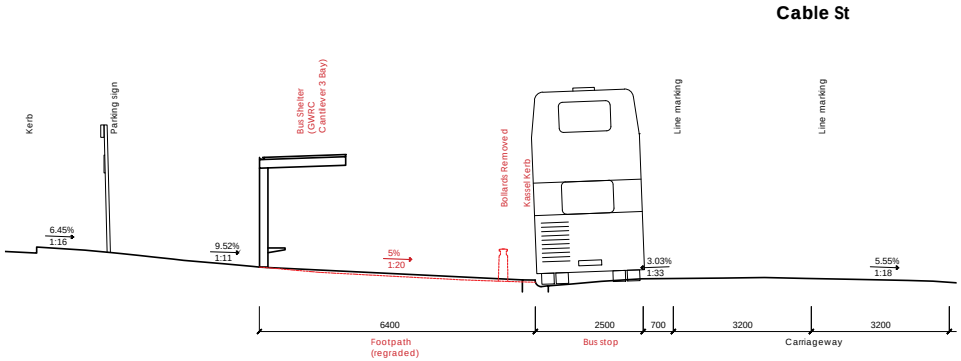
Cable Street, outside Te Papa

40

- As proposed, the stop occupies a relatively small part of the site location, and conflicts between passersby and stop customers are unlikely to be a concern.
- Environmental quality and pedestrian amenity at the stop is low given the proximity to traffic, lack of building canopy, lack of activation, and absence of planting. Consider vertical structure at the stop to mitigate wind/rain exposure.
- Poorly sheltered and activated connections for customers getting to the stop. Requires crossing Cable Street (exposed) and lack of canopy shelter along local building edges.
- Signalled crossings at Taranaki Street offer reasonable access for this stop.

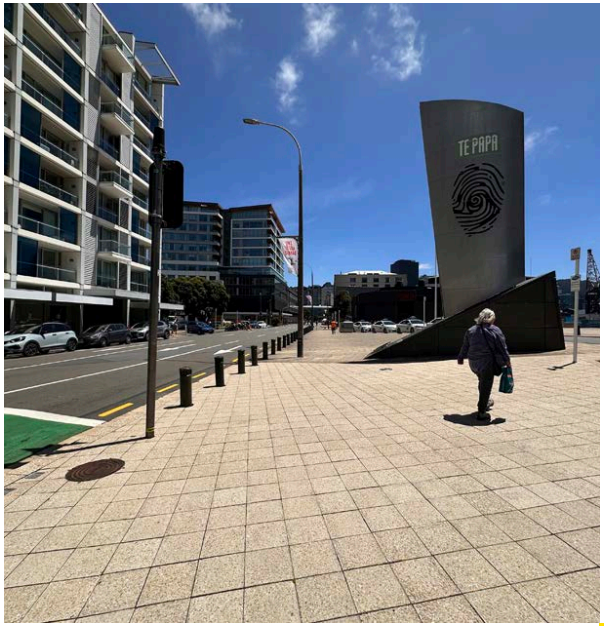
Technical Considerations

- The shelter and signage are located to work with Te Papa signage and the existing pedestrian shelter.
- The quality of structures needs to match that of the surrounding space.
- The structure and location require consideration of the existing steep crossfall.



Design Review Notes: to be investigated during Developed Design.

- *Risk this shelter location may not be acceptable to TePapa and/or Tākina. There is also an impact on potential for wayfinding from Taranaki St/Waterfront.*
- *May require a bespoke shelter that can be integrated with pedestrian shelter at adjacent crossing.*
- *Wayfinding will need to acknowledge that pedestrian access through Tākina is only available for daytime use.*
- *Need to better understand the interface of the stop with the Te Papa bypass (particularly vehicle crossings) and the impact this has on walking routes to/from the stop.*
- *The existing footpath crossfall does not meet accessibility standards and should be reviewed as part of the developed design.*



5

Stop 5 Northbound (N_{4A})

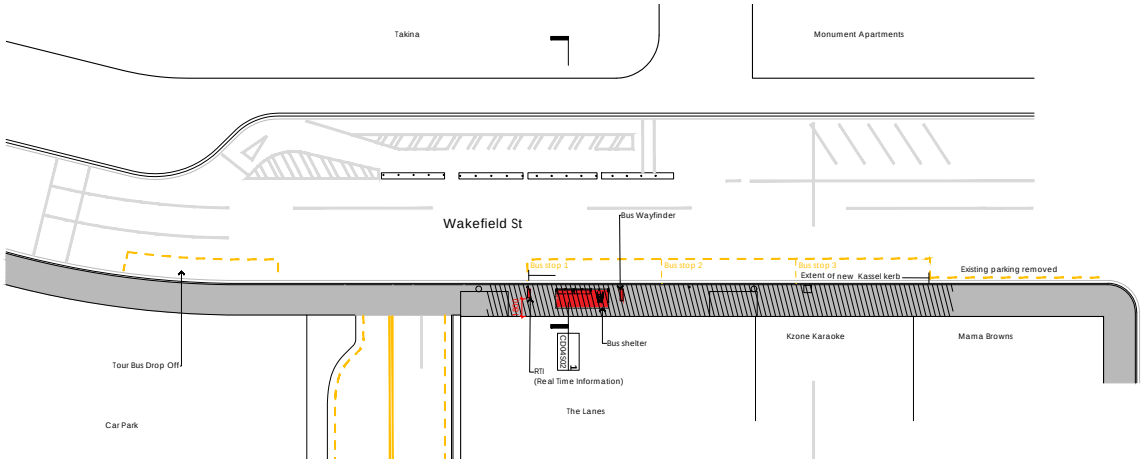
Overview

The proposed stop location utilises the footpath in front of 234 Wakefield Street (The Lanes). This area is located mid-block between Tory Street and Taranaki Street, opposite Tākina.

Additional space for tour buses has also been considered.

Key urban design considerations

- Building frontages feature multiple entrances and fenestration; 234 Wakefield Street has shopfront glazing to ground level, with seismic frames obstructing part of these elements, though it presents an active frontage. 246 and 250 Wakefield Street feature lower levels of glazing and have lower levels of activation.
- As proposed, the stop utilises the existing footpath with no canopy, and no new stop shelter is provided.
- Overall environmental quality and pedestrian amenity at the stop is low: No existing building canopy is present to provide shelter for stop users. Relatively constrained footpath space is further constrained by required RTI and wayfinding elements. The proposed shelter will occupy the majority of the existing footpath width, and therefore conflicts between passers-by and stop customers may occur.
- The adjacent car park at the rear of Reading is visually unappealing. Close proximity to high traffic volumes will also negatively affect amenity.

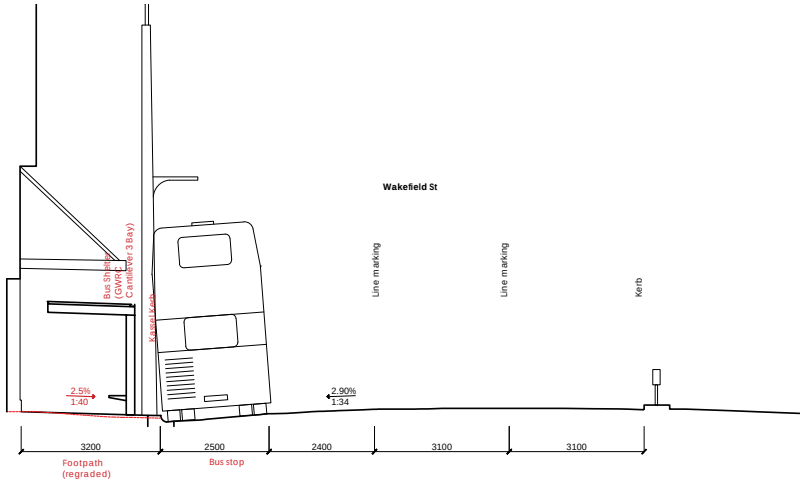


Wakefield Street, outside The Lanes

- Accessibility to the stop is compromised. Currently limited/controlled access north-south is provided towards Te Papa through Tākina. A signalised intersection provides access across the street. Reading redevelopment reduces connection mid-block towards Courtenay Place, although it provides an opportunity for additional connections in the future. Access will primarily be from Tory Street or Taranaki Street, requiring pedestrians to walk along the block.

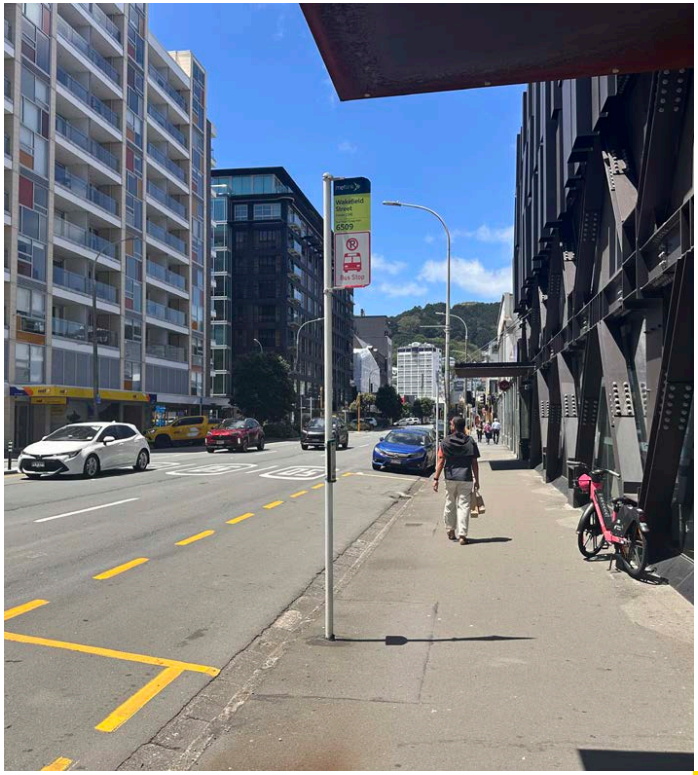
Technical Considerations

- A relatively constrained footpath width is further constrained by any shelters, RTI, and wayfinding elements.
- Additional building canopy at the stop location could be considered if the bus shelter is not possible.



Design Review Notes: to be investigated during Developed Design.

- *Shelter was added to this stop as part of the concept design review.*
- *Increased lateral shelter is to be provided.*
- *The design team is to test pavement widths to ensure adequate space is available for waiting and movement as part of the developed design.*
- *If footpath widths are too narrow, consideration to building the stop out should be given during developed design.*



5

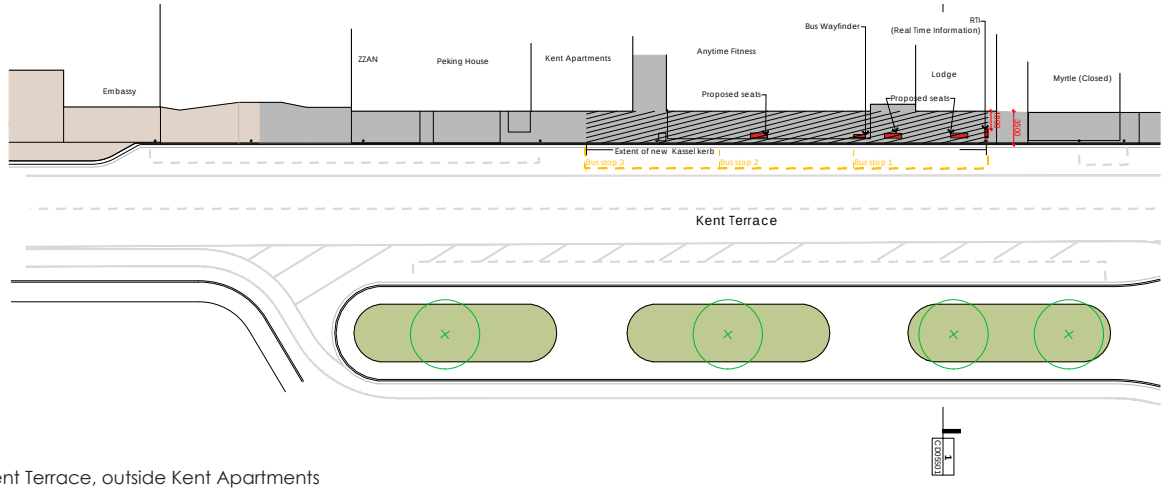
Stop 6 Southbound (S_{5B})

Overview

Located on Kent Terrace at an existing school bus stop, this site will have improved links to Courtenay Place through the Golden Mile works.

Key urban design considerations

- The proposed stop location utilises the footpath in front of 20 and 22 Kent Terrace. This area is close to the end of Courtenay Place, although this area of pavement is less utilised beyond the draw of the embassy and Majoribanks Street. The proposed stop will increase the patronage and use of this area.
- Building frontages feature multiple entrances and fenestration. 20 Kent Terrace has shopfront glazing to ground level and presents an active frontage. Halswell Lodge is set back from the street and has a raised floor level, which 'removes it' from the street. Low-quality planting in the front yard provides some level of amenity.
- As proposed, the stop utilises the existing footpath and canopy of 20 Kent Terrace.
- Overall environmental quality and pedestrian amenity at the stop is low-medium: The existing building canopy will provide shelter for stop users. Relatively constrained footpath space is further constrained by required RTI and wayfinding elements. Close



Kent Terrace, outside Kent Apartments

Design Review Notes: to be investigated during Developed Design.

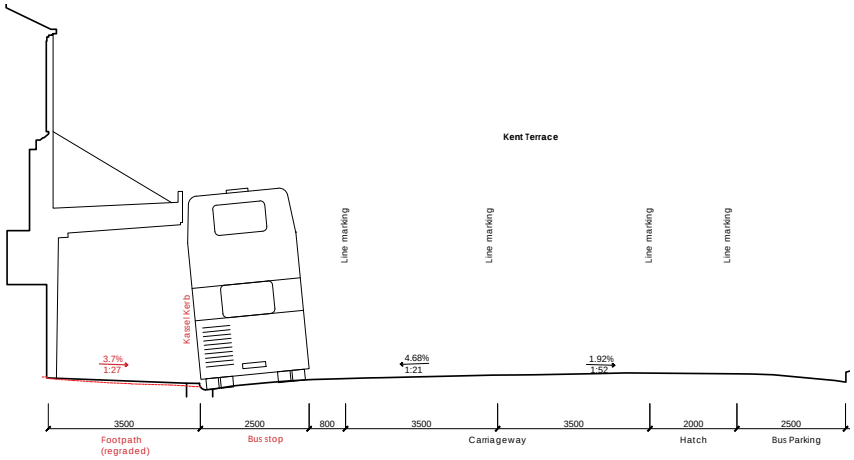
- *Moving the stop slightly closer to the Embassy Theatre to be tested/considered.*
- *The design will need to reinforce wayfinding interventions to connect the K&C stop with the Courtenay Place Hub.*

proximity to high traffic volumes will also affect amenity.

- Accessibility to the stop is fair, being located in close proximity to the major intersection of Courtenay Place, Kent and Cambridge Terraces, and Majoribanks Street. However, the offset from this intersection and crossing will reduce visibility and introduce additional walking from the main Golden Mile area. Additionally, the stop location effectively becomes mid-block with crossings at Cortenay Place and Elizabeth Street. This location may encourage crossing mid-block.

Technical Considerations

- Seats are preferably aligned to allow a separate waiting area. This is subject to achieving clearances.



5

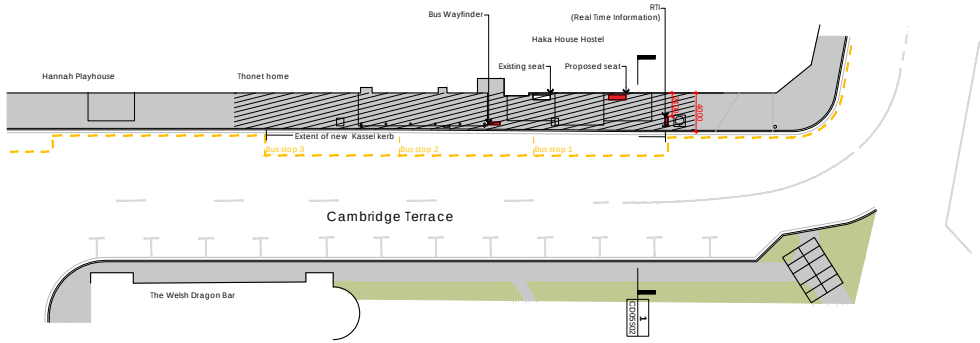
Stop 6 Northbound (N_{5A})

Overview

Located on Cambridge Terrace at an existing tour bus stop, this site has good links to Courtenay Place.

Key urban design considerations

- The proposed stop location utilises the footpath in front of 8 Cambridge Terrace and 292 Wakefield Street. This area is close to the end of Courtenay Place, although this area of pavement is less utilised. The proposed stop will increase the patronage and use of this area.
- Building frontage features multiple entrances and fenestration; however, current activity within the buildings limits activation, and window areas read as blank.
- Few existing streetscape features are present in this location, with an existing seat and canopy supports for 8 Cambridge Terrace as the most notable. The stop utilises the existing footpath and canopies.
- Both buildings are identified as contributing buildings to the Courtenay Place Heritage Area (SCHED3).



Cambridge Terrace, outside The Welsh Dragon

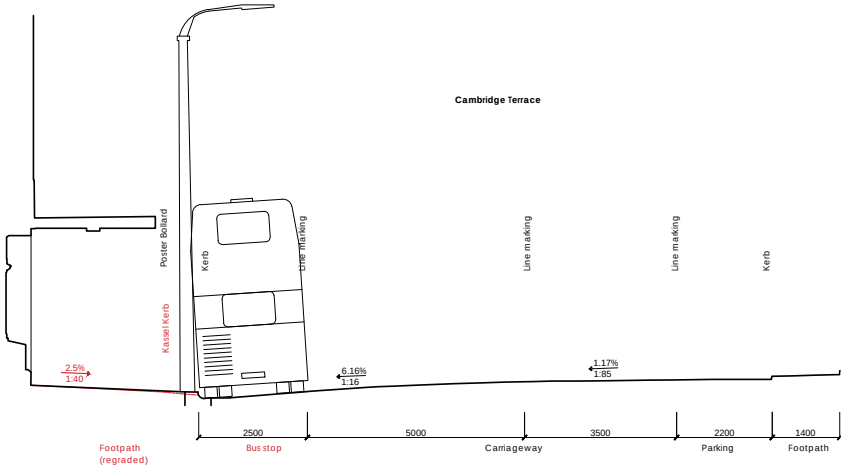
Design Review Notes: to be investigated during Developed Design.

- *Check for any conflicts between the building canopy and buses*
- *Check vehicle tracking from stop to Wakefield St.*
- *The design will need to reinforce wayfinding interventions to connect the K&C stop with the Courtenay Place Hub.*

- Overall environmental quality and pedestrian amenity at the stop is low-medium: The existing building canopy will provide shelter for stop users. Relatively constrained footpath space could result in conflict. Close proximity to high traffic volumes will also affect amenity.
- Accessibility to the stop is good, being located around the corner with no crossings from Courtenay Place and in close proximity to the signalised crossing to Chafers New World.

Technical Considerations

- Existing buildings provide sufficient shelter, and some existing seating is provided.
- This site is less exposed and provides an opportunity for shelter at the building line.
- The wayfinder could potentially be relocated to the building line.
- The existing building canopy is 545mm from the kerb. The design team is to check at developed design that there is enough clearance/no clash with bus movements.



5

TO1 Alternative Stop 2 Southbound (S_{2B})

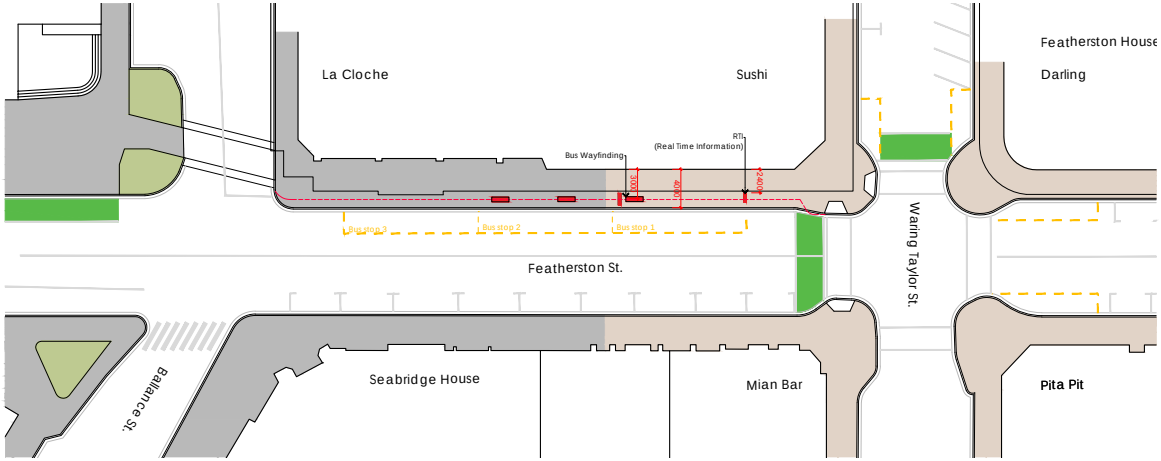
Overview

This is an alternative stop on Featherston Street, only required if the TO1 route is selected, in the same location as the existing bus stop.

Key urban design considerations

- The proposed stop location provides building canopy cover and a high level of frontage activation, resulting in a good level of pedestrian amenity at the stop.
- There is a good level of canopy cover along Featherston Street, providing access to the stop from the south. From the north, cover is interrupted by significant road crossings. The wider activation of street edges supports pedestrian amenity in walk journeys to the stop.
- Nearby signalled crossings (at Whitmore St and Waring Taylor St) provide good levels of accessibility to the stop.
- No standalone stop shelter is required, thereby limiting the intrusion of/requirement for a new structure in the footpath.

Note: this stop Replaces Stop 2 Southbound if route TO1 is Selected



Featherston Street, outside Seabridge House

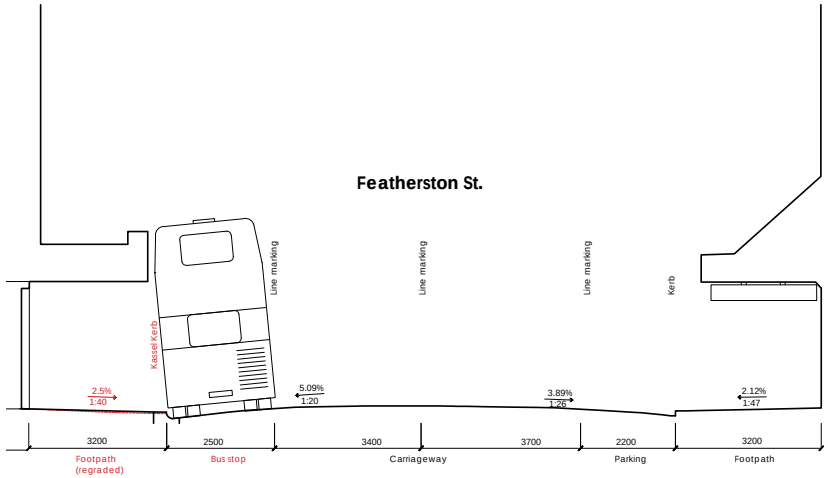
Design Review Notes: to be investigated during Developed Design.

- *Refine seat locations to provide more shelter for those waiting.*

- A slight increase in footpath width allows for RTI and wayfinding elements while only having a minor impact on pedestrian space.
- Relatively narrow footpath space could introduce a conflict between stop users and pedestrians through movement.

Technical Considerations

- The existing building canopy is located close to the kerb and may conflict with the bus sweep. To be investigated further.
- This area has a high pedestrian flow and is a popular commuter route. It is preferable to locate seats along the kerb line, creating a separate waiting zone.



5

TO1 Alternative Stop 3 Southbound (S_{2F})

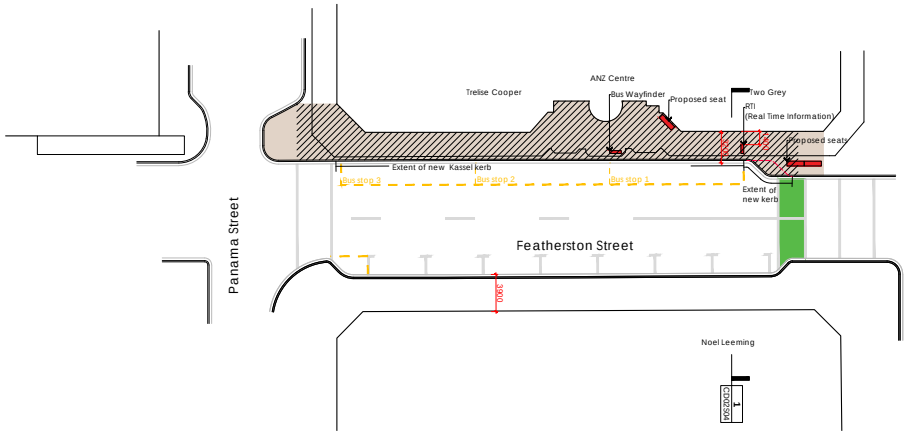
Overview

This is an alternative stop on Featherston Street, only required if the TO1 route is selected. This stop would be paired with the Northbound Stop on Post Office Squ

Key urban design considerations

- The proposed stop location provides building canopy cover and a high level of frontage activation, resulting in a good level of pedestrian amenity at the stop
- Continuous cover connections to the stop exist as a result of a good level of canopy cover along Featherston Street. Equally, the wider activation of street edges supports pedestrian amenity in walk journeys to the stop.
- Nearby signalled crossings (at Panama St and Grey St) provide good levels of accessibility to the stop.
- No standalone stop shelter is required, thereby limiting the intrusion of/requirement for a new shelter structure in the footpath.
- However, the proposed location of the RTI panel creates a pinch point that may adversely affect pedestrian movements along the footpath. Investigate whether the RTI panel could be repositioned.

Note: this stop Replaces Stop 3 Southbound if route TO1 is Selected

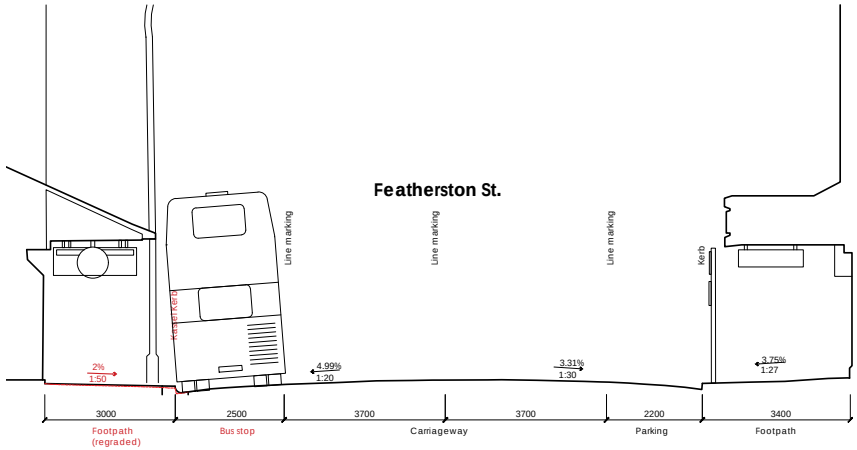


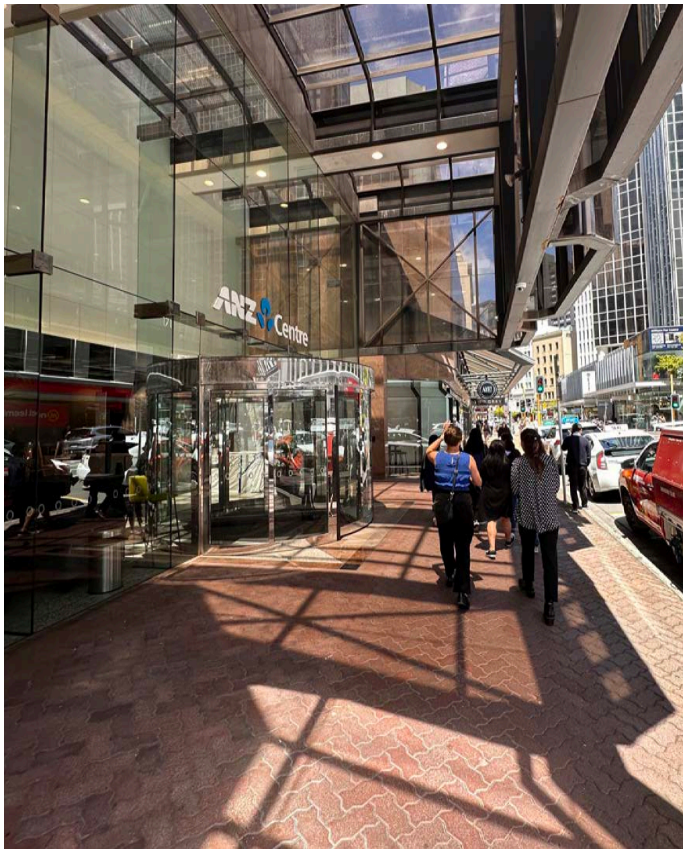
Featherston Street, outside of ANZ Centre

50

Technical Considerations

- The existing building canopy sits close to the kerb and may conflict with the bus sweep. To be investigated further.
- This area has a high pedestrian flow and is a popular commuter route. It is preferable to locate seats along the kerb line, creating a separate waiting zone.
- Seat locations are potentially private land and may conflict with basement construction below. These seats can alternatively be located north of the stop.





51

6

6.0 Other Considerations

6.1 Consenting Strategy

A draft consenting strategy has been prepared for the emerging preferred option, TO2, and is attached as Appendix E.

In summary, the strategy identifies that a restricted discretionary consent will be required for the installation of bus stops under Rule INF-OL-R66.

- Additional resource consents may also be necessary for bus shelter lighting and signage as well as construction noise if compliance with relevant rule standards cannot be achieved. However, the need for these consents will not be confirmed until the detailed design phase is complete.

6.2 Network Utility Operators

Investigations into existing utilities will need to continue throughout the Developed and Detailed Design phases. To support the development of this DPS (see Appendix C), the following potentially impacted utility providers have been identified:

- Powerco Ltd and Nova Gas.
- Wellington Electricity.
- Chorus Ltd.
- CityLink Ltd.
- Vocus Ltd.
- One NZ Ltd.
- Wellington Water Ltd.
- LINZ.

The initial step in identifying utility locations and potential conflicts involved reviewing WCC's Underground Asset Register. This online GIS portal visually represents known assets and their locations, along with data on operational status, criticality, asset ownership, and contact details.

One notable omission from the register is communication cables, which, despite being included in the map legend, are known to be present throughout the city.

6.3 Utility Clash Detection

The next steps for utility identification and clash detection involve extracting utility data from the WCC database and overlaying it onto the design plans. This data should be available in GIS or CAD formats, either directly from the database or from historical Let's Get Wellington Moving files. WCC is responsible for providing this data.

This process will help identify potential conflicts between the proposed works and existing utilities. Once clashes are identified, it is recommended that invasive investigations, such as hydro excavation, be carried out to accurately locate utilities. The design can then be adjusted to eliminate conflicts, or the scope of necessary utility diversions can be determined.

6.4 On-street Parking Impacts

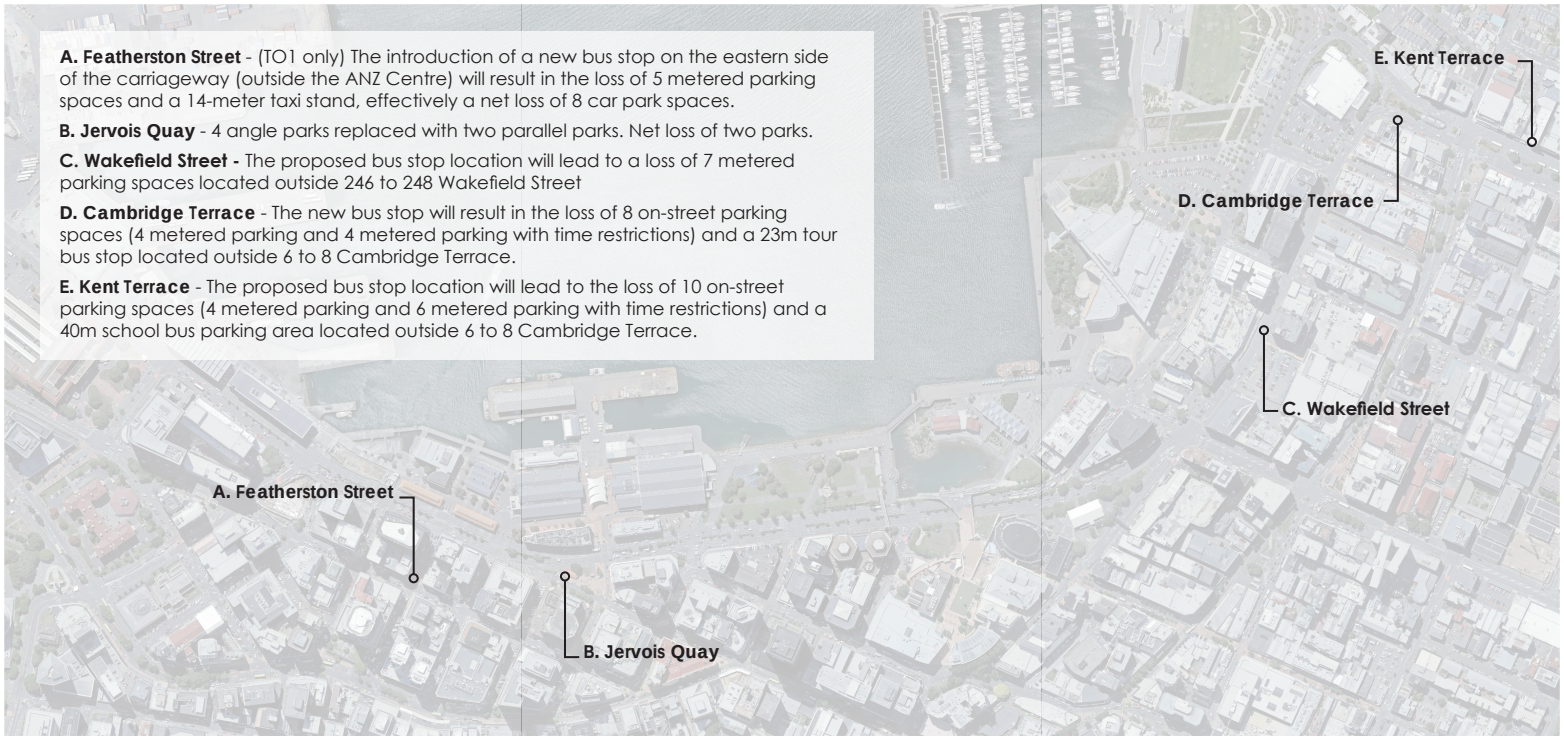
Stage 1 of the Parking Management Plan has been completed and is attached as Appendix F. This stage provides an overview of existing parking conditions and evaluates the impacts of implementing either TO1 or TO2.

The adoption of TO1 or TO2 will require modifications to existing on-street parking arrangements. A summary of potential parking losses and gains is outlined opposite.

A comparative analysis of the two design options, T01 and T02, indicates the following total parking losses:

- Option TO1: A total loss of **35** spaces.
- Option TO2: A total loss of **27** spaces.

Stage 2: A mitigation plan for the preferred option will outline measures to balance transport efficiency with parking needs. This stage will be developed as part of the Developed Design phase and will inform the preparation of the required traffic resolutions for the preferred option.



A. Featherston Street - (TO1 only) The introduction of a new bus stop on the eastern side of the carriageway (outside the ANZ Centre) will result in the loss of 5 metered parking spaces and a 14-meter taxi stand, effectively a net loss of 8 car park spaces.
B. Jervois Quay - 4 angle parks replaced with two parallel parks. Net loss of two parks.
C. Wakefield Street - The proposed bus stop location will lead to a loss of 7 metered parking spaces located outside 246 to 248 Wakefield Street
D. Cambridge Terrace - The new bus stop will result in the loss of 8 on-street parking spaces (4 metered parking and 4 metered parking with time restrictions) and a 23m tour bus stop located outside 6 to 8 Cambridge Terrace.
E. Kent Terrace - The proposed bus stop location will lead to the loss of 10 on-street parking spaces (4 metered parking and 6 metered parking with time restrictions) and a 40m school bus parking area located outside 6 to 8 Cambridge Terrace.
E. Kent Terrace
D. Cambridge Terrace
C. Wakefield Street
A. Featherston Street
B. Jervois Quay

7

7.0 Next Steps

8.1.1 Timeline and Design Milestones

Following the endorsement of the Concept Design Report and confirmation from WCC and GWRC of the required design changes, the project will progress to the Developed Design Phase. This phase is scheduled to be completed by mid-April 2025 and will include:

- Developed designs for the preferred design option.
- Updated DPS, incorporating revised network utility information.
- Comprehensive Parking Management Plan.
- Updated Consenting Strategy.
- Draft Traffic Resolutions.

After submission of the Developed Design Report, the project will proceed through the following key milestones:

- Consultation: Late 2025.
- Detailed Design: early 2026.
- Construction Start: early 2026.
- Construction Completion: end of 2026.

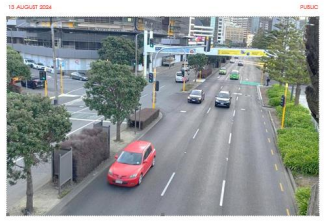
August 2024 MCA Report Options

HARBOUR QUAYS OPTIONS ASSESSMENT



wsp

2.1.1 T01 – SPLIT BUS ROUTE

The T01 – Split Bus Route option has northbound buses travelling along the Harbour Quays, with southbound buses travelling via the Featherston route. Bike facilities are provided for along the Harbour Quays. Figure 2-2 shows the indicative alignment and cross-section of this option.

Figure 2-2: T01 – Split Bus Route interim option indicative layout

2.1.2 T02 – KERBSIDE BUS

The T02 – Kerbside Bus option provides for buses travelling in both directions along the Harbour Quays. Bike facilities are provided via the Featherston route. Figure 2-3 shows the indicative alignment and cross-section of this option.

Figure 2-3: T02 -Kerbside Bus option

August 2024 MCA Report Options

4.1 PREFERRED INTERIM OPTION

The preferred interim option is T01 – Split bus route. This option avoids the need for bus passengers to cross the Quays to access Golden Mile or nearby destinations. It allows both the Featherston and Quays routes to be tested for traffic and bus travel time impacts. It also avoids the added costs of providing a contra-flow bike facility along the Featherston route.

This option can proceed to the design stage. It is anticipated that this interim option will be implemented in two stages. The first stage will be to implement the bus improvements, given the urgency of having an alternative during Golden Mile construction. Improvements for people on bikes will be implemented during the second stage.

Key areas of focus for the initial stage of design should include:

- Analysis of preferred southbound route between Hunter Street and Jervois Quay (route variants identified in Figure 2-2)
- Confirm connectivity and provision of dedicated bus facilities on and north / west of Whitmore Street
- Confirm connectivity and provision of dedicated bus facilities south / east of Taranaki Street
- Consider low-cost future proofing for future bike improvements
- Consider opportunities for modal filters to remove turning traffic conflicts with buses.

3.2 INTERIM OPTIONS ASSESSMENT

Table 3-2 shows the agreed scoring for the two interim options. Option T01 scores better for bus and implementability criteria, while Option T02 scores better for bikes, pedestrians, and effects criteria. There is no score differentiation for place and strategic alignment criteria. Both options score negatively for pedestrian, effects, and implementability criteria.

A more detailed scoring matrix with scoring rationale is provided in Appendix A.

Table 3-2: Scoring matrix for interim options

SCORING CRITERIA CATEGORIES	OPTION T01	OPTION T02
Bus	0.2	-0.1
Bike	0.7	1.0
Pedestrian	-0.2	-0.1
Place	0.5	0.5
Strategic alignment	0.6	0.6
Effects	-1.2	-1.0
Implementability	-1.3	-1.9

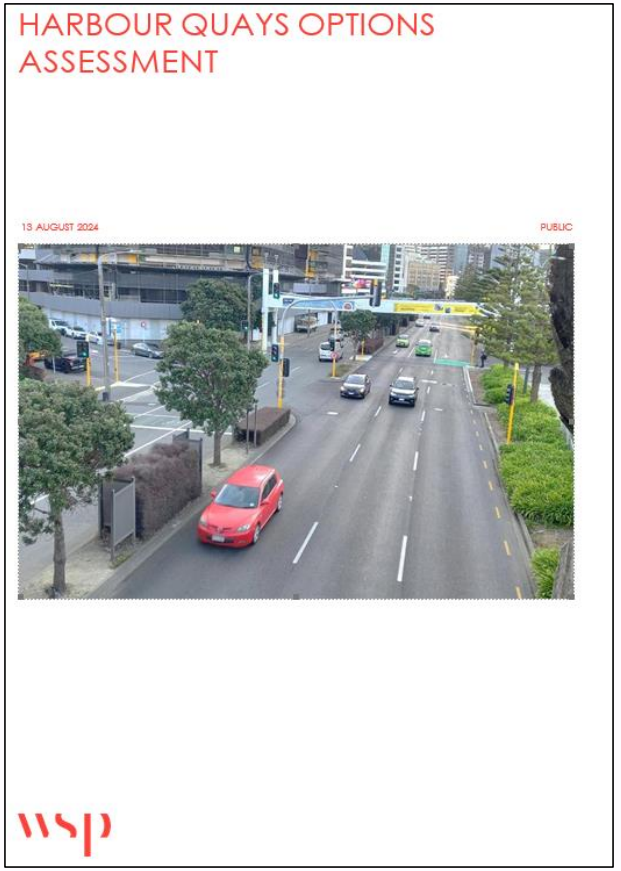
LTP Project Scope Changes following August 2024 MCA

- Interim option will now be permanent
- Construction cost: 6M - $8M
- Needs to be in place before Golden Mile's construction starts on Lambton Quay (2027)
- Project to address longer term bus capacity on Golden Mile (likely to be in place for the next 10-15 years)

Approach to the Route MCA

- Elements of the August 2024 MCA require further investigation before a final decision could be made between TO1 and TO2.

- The approach to the final MCA builds on the August 2024 MCA process; however, only the assessment criteria that are significant and help differentiate between the options will be evaluated.



MCA Process Assumptions

- MCA evaluations will be conducted by LocalGroup and WCC
- Weighting scenarios yet to be defined
- Evaluations will use a 7-point scoring scale
- A "0" score reflects the current situation in 2025.

- A "do minimum" score is needed, considering future demands (note modelling provided will be for 2033).
- Scores for T01 and T02 are also needed, considering future demands

Magnitude	Score	Definition
Large Positive	+3	Major positive impacts resulting in substantial and long-term improvements or enhancements of the existing environment.
Moderate Positive	+2	Moderate positive impact, possibly of short-, medium- or long-term duration. Positive impacts may be in terms of new opportunities and outcomes of enhancement or improvement.
Slight positive	+1	Minimal positive impact, possibly only lasting over the short term. May be confined to a limited area.
Neutral	0	Neutral – no discernible or predicted positive or negative impact. Counterfactual could be the do-minimum or do-nothing,
Slight negative	-1	Minimal negative impact, possibly only lasting over the short term, and definitely able to be managed or mitigated. May be confined to a small area.
Moderate Negative	-2	Moderate negative impact. Impacts may be short-, medium- or long term and are highly likely to respond to management actions.
Large Negative	-3	Impacts with serious, long-term and possibly irreversible effect leading to serious damage, degradation or deterioration of the physical, economic, cultural or social environment. Required major rescope of concept, design, location and justification, or requires major commitment to extensive management strategies to mitigate the effect.

Assessment Criteria

August 2024 MCA Assessment Category	Sub Criteria Assessment	Matters to be considered		Assessment Method	Key Assessment Inputs	Lead MCA Assessor	Council SME Review
Bus	• Bus Travel Times and Reliability (Note this is a proxy for investment objective 1)	• Travel time and reliability on the new route • Travel time and reliability on Golden Mile • Wider bus network impacts		• Traffic modelling results • Professional Judgement	• Aimsun Model • VivaCity Results from SuperWeek (6 Jan GM closure)	• Rowan Schwyn	• Alex Campbell
	• Route Legibility	• Likely passenger experience of network with two spines		Professional Judgment		• Rowan Schwyn	• Alex Cambell • David Boyd
	• Network Capacity (Note this is a proxy for investment objective 2)	• Ability to cater for higher-capacity public transit in the future • Ability to provide for disruption from planned and unplanned events on the Golden Mile • Overall bus network capacity • Passing ability at bus stops • Bus performance during Golden Mile construction		Professional Judgement	• VivaCity Results from SuperWeek (6 Jan GM closure) • Golden Mile Capacity Report 2024	• Rowan Schwyn	• Alex Campbell
Pedestrians	• Safe and Convenient Pedestrian Access and Movement (Note proxy for investment objective 3)	• Safe and convenient access between the route and city destinations • Safe and convenient access between the route and waterfront destinations • Pedestrian level of service along and across Featherston Street • Pedestrian level of service along and across the Quays (including Wakefield and Cable)		Professional Judgement	• Urban and Landscape Assessment • Aimsun Model	• Andrew Burns	• David Boyd • Emily Alleway • Daniel Cairncross
	• Pedestrian LoS at Bus Stops	• Pedestrian level of service at new bus stop locations (Comments to be made on ped LoS		Professional Judgement	• Bus Stop Strategy	• Andrew Burns	• David Boyd • Emily Alleway

Assessment Criteria

August 2024 MCA Assessment Category	Sub Criteria Assessment	Matters to be considered	Assessment Method	Key Assessment Inputs	Lead MCA Assessor	Council SME Review
Bike	• Does not preclude future cycle routes or connections to existing routes	• Cross City Connections Project • Impacts on cycle LoS	Professional Judgement	• Cross City Connections Project (WSP)	Nicola Mitchell	Daniel Cairncross
Effects	• Impact on general traffic	• Impact on general traffic travel times • Impact on traffic network which could affect adjacent multi-modal routes	Traffic modelling	• Aimsun model	Bob Hu	Andy Ford
	• On-street parking impact	• Net loss per option • Location of location, taxi, accessible and diplomatic parks	On street parking loss	• PMP Parking Stocktake (Stage 1)	Bob Hu	Paul Barker
	• Business impact	• Short-term retail impact during construction • Long-term retail impact – including benefits due to increased activity	Professional Judgement		Prak Sritharan	Hamish Lobb
	• Construction and Constructability	• Ease of construction • Transport network impacts during construction • Pedestrian/bus user impacts during construction of bus stops	Professional Judgement		Amanda Wolfaardt	Hamish Lobb

Process and Deliverables

Task	Date
Assessors receive MCA process and option information	Tuesday 28 January
Assessors meet with Council SME Reviewer to discuss draft scores and rationale	W/C Monday 3 February
Draft PowerPoint Scoring Record	EOB Friday 7 February
MCA Workshop	Monday 10 February
Final Scoring Record	EOB Wednesday 12 February
MCA Summary Report, reviewed by Council SME Reviewer	EOB Wednesday 12 February

Options

Consistent Elements

- Assume routes are not "bus lanes"
- No toll or congestion charge
- Assume Golden Mile is in place, but also consider impacts before and during construction and note these in your reporting.
- No other local or regional projects in place.
- Bus Stop Locations here and here.

Elements to be considered later

- If is T01 preferred, we will subsequently decide on Hunter, Willeston or Harris Streets
- Detailed positioning of Bus Stops (within the block)
- Bus priority, including bus lane resolution

Do Minimum

Key Assumptions

- The Golden Mile project will be concluded, including the closure of Brandon Street.
- All bus route currently terminating at Brandon Street will be rerouted onto the Golden Mile, including routes 13, 26, 33, 34 and 37.
- Bus volumes in AM and PM peak in excess of 120 vph (TBC).
- Operational performance of buses will be impaired with high incidence of platooning in peak – queue lengths likely to be in excess of 6 bus lengths.
- Bus stops along the Golden Mile will accommodate all patronage from rerouted services.

Assessment assumptions for T01 and T02

- All services currently terminating in Brandon Street will be rerouted in the new corridor, inclusive of routes 13, 26,33,34 and 37.
- For the purposes of assessment, the corridor is expected to accommodate the following bus volumes:
  - Northbound – 63 buses per peak hour
  - Southbound – 72 buses per peak hour
- The route will predominantly accommodate a mix of standard and double decker vehicles.
- Physical works and infrastructure will be avoided wherever possible.

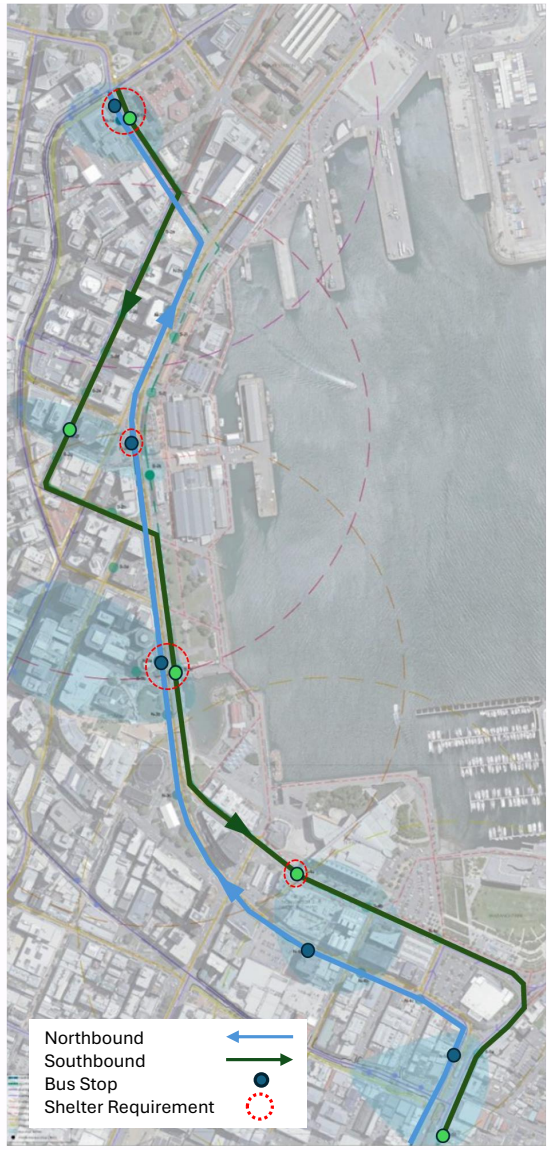
T01 – Featherston Street Corridor

Key Assumptions:

- T01 uses Featherston to move south before using Hunter to join the Quays
- The northbound route is the same for both corridors.
- No dedicated bus lane in either direction
- Some bus priority measures (B phase and/or signal phase adjustments) may be required
- Bus Stop locations provided in separate plans.
- Bus stops will be inline
- Some locations do not require shelters (as indicated)

Early Assessment

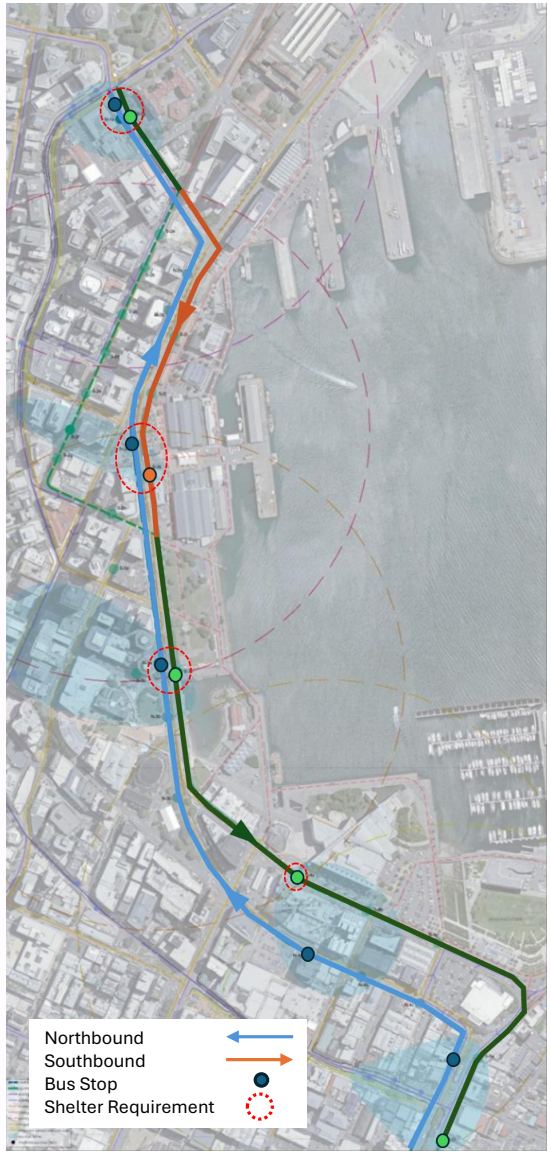
- Performance of Whitmore Street between Featherston and Stout Streets is being assessed in detail
- Performance of Hunter Street is being assessed in detail
- There are additional route sub-options under consideration for T01 which will be investigated if T01 is the preferred route option.



T02 – The Quays Corridor

Key Assumptions:

- T02 uses Whitmore and Jervois Quay to travel south
- The northbound route is the same for both corridors.
- No dedicated bus lane in either direction
- Some bus priority measures (B phase and/or signal phase adjustments) may be required
- Bus stops will be inline
- Some locations do not require shelters (as indicated)
- Bus Stop Locations provided in separate plans.
- Only one stop pair is different across the corridors



Both Options – Bus Stop Locations
