The Maunga is on the left hand side representing the link to the whenua. The waves represent the Wellington Harbour and the culmination of these two elements in the tohu symbolize the spiritual journey from Taranaki to Wellington and the link between the two areas.
Foreword

Land acquisition
The Oruaiti Reserve Management Plan (the plan) was approved by Wellington City Council (the Council) on 26 October 2011 and became operative on that date. At the same time, the Council approved the acquisition of more land (Lot 13 DP420813) with the intention of extending the boundary of the reserve. That land was acquired in May 2012.

The process to have Lot 13 designated as reserve under the Reserves Act 1977 is under way but not yet complete. This plan covers the existing reserve and Lot 13 so both can be managed as Oruaiti Reserve.

Reserve name
The existing reserve land has previously been known as Point Dorset Recreation Reserve. During consultation on the draft management plan, the Port Nicholson Block Settlement Trust requested that the reserve be named Oruaiti Reserve and the Council has agreed to this. Although the site is part of the historic military base called Fort Dorset, its earlier name was Oruaiti, being part of Oruaiti Pa. The name change will give appropriate recognition in the ancient stories of Wellington and add to the richness of the city. The process required under section 16(10) of the Reserves Act to change the name is under way.

Once the processes required to designate Lot 13 as reserve and rename the original area of reserve land are complete, a minor plan review will be carried out and approved by the Council to reflect the final status and names of the parcels of land that make up Oruaiti Reserve.

This plan reflects the intention to both classify the newly acquired land as recreation reserve consistent with the original reserve and to name the reserve Oruaiti Reserve.
1. Introduction

1.1 Purpose of this plan
The purpose of the Oruaiti Reserve Management Plan (the plan) is to provide Wellington City Council (the Council) and Port Nicholson Block Settlement Trust (the Trust) with a clear framework for making decisions and managing this reserve for the next 10 years.

The objectives and policies in this plan explain the intended methods for the protection, management, development, operation and public use of Oruaiti Reserve.

This management plan identifies:
- the long-term vision for the reserve
- the natural and cultural features of the reserve and how these will be protected
- recreational activities on the reserve
- general reserve management policies
- actions required to implement this plan.

1.2 Point Dorset
Point Dorset is a prominent, undeveloped, coastal escarpment (steep hillside) at the entrance to Te Whanganui-a-Tara (Wellington Harbour). It is situated between Seatoun and Breaker Bay on Motu Kairangi (Miramar Peninsula, see Map A).

It is the site of Oruaiti Pā. O-rua-iti means ‘place of the small pit’, where the kumara and potatoes cultivated nearby would have been stored.

Point Dorset was named after Dr John Dorset, an early European settler who was a surgeon and local politician.

For many centuries the site has been used by Māori and European to protect Wellington’s harbour entrance. The land was used by the Defence Force between 1905 until 1991, and Fort Dorset provided coastal defence and military training.

The Department of Conservation took over the management of the coastal escarpment in 2000 to protect public access and the historic and ecological features.

In 2009, ownership transferred from the Crown to the Trust via the Port Nicholson Block (Taranaki Whānui ki Te Upoko o Te Ika) Claims Settlement Act 2009. Wellington City Council was appointed to control and manage the land as Recreation Reserve under section 26 of the Reserves Act 1977.

The reserve is culturally and spiritually significant to Taranaki Whānui, being part of Oruaiti Papakainga and a boundary marker for Taranaki Whānui indicating the entrance to the harbour. Pou tohutohu (signposts) guard and protect the entrance of the harbour for the City of Wellington. Taranaki Whānui maintain a kaitiakitanga (guardian) role, fully appreciating and understanding the ecological value and importance of the reserve.

In late 2010 the Council and the Trust invited the community to comment on those features of the site that need protecting and to provide suggestions to assist in the development of this Reserve Management Plan. A summary of this community feedback is provided in Appendix Two.

Through the statutory consultation process, the Port Nicholson Block Settlement Trust requested that the name of the reserve be changed to ‘Oruaiti Reserve’.
The following land is covered by this Reserve Management Plan:

The New Zealand Archaeological Association site records for Oruaiti Pā are R27/115 and R27/116. A midden site, which was probably associated with Oruaiti Pā, is R27/194. All these sites are considered destroyed. The ‘military fortification’ is R27/178.
1.3 **Structure of the Reserve Management Plan**
This management plan looks at the core values of Oruaiti Reserve. These are culture and history, landscape, ecology, and recreation and access. For each, there is discussion about the issues, followed by objectives and policies. The management plan also has administration policies (section 6) and an implementation plan (section 7).

1.4 **Vision**
Ko tō mātou matapae, ko te tiaki, ko te whakamārama, ko te whakaniko, ā, mehemea e hāngai ana, ki te haumanu hoki i ngā āhuatanga ahurea, ngā āhuatanga o nehera, ngā kāinga kanohi, ngā taupuhi kaiao me ngā āhuatanga hākinakina ki Ōruaiti, Oruaiti Recreation Reserve.

Our vision is to protect, interpret, enhance, and where appropriate restore the cultural, historic, landscape, ecological, and recreation features at Oruaiti Reserve.

1.5 **Strategic fit**
In 2005 the Council adopted seven strategies to guide all its activities and business. Two are relevant to this plan.

1.5.1 **Environment Strategy**
The aim of this strategy is to protect and enhance Wellington’s natural environment. This includes:
- protecting sensitive natural areas and resources
- providing high-quality, accessible green spaces.

1.5.2 **Social and Recreation Strategy**
The aim of this strategy is to promote strong, safe and healthy communities. This includes ensuring the infrastructure and services are in place to meet resident and community needs.

1.6 **Key guiding plans**

1.6.1 **Capital Spaces – Open Space Strategy for Wellington Te Whanganui-a-Tara**
This strategy was developed in 1998 and provides directions for an integrated approach to managing the natural and recreational environment, including recognition of important landscape features.

Capital Spaces has an open-space concept that reflects the different characteristic landscapes of the city – from the harbour to the rural hinterland. Point Dorset is included in ‘the bays’ category. This is described as “an accessible urban coastline which is rich in recreational opportunities and cultural meaning, and emphasises the natural character and beauty of the coast through the protection of prominent landforms and indigenous vegetation”.

1.6.2 **Wellington Towards 2040: Smart Capital**
Wellington’s Towards 2040: Smart Capital vision aims to position Wellington as an internationally competitive city with a strong and diverse economy, a high quality of life and healthy communities. It acknowledges and builds on Wellington’s current success.

The vision for Smart Capital will be supported by four Community Outcomes. Based on the city’s competitive advantages these are – **Eco-City; Connected City; People Centred City** and **Dynamic Central City**. These goals inform the Council’s Long Term Plan.
1.7 Other relevant policies and plans

Other plans that provide guidance in the development of this plan are:

1.7.1 District Plan
The District Plan is the primary document that manages land use and development within Wellington City. It has been prepared in line with the Resource Management Act (1991).

1.7.2 South Coast Management Plan (2002)
This management plan covers land from just south of the Oruaiti Reserve and all coastal reserves around to Karori Stream. Its primary objective is “to protect and enhance the coastal character of Wellington’s South Coast”.

1.7.3 Biodiversity Action Plan (2007)
The Biodiversity Action Plan coordinates the Council’s biodiversity activities and identifies local priorities and actions. Biodiversity activities include pest control, revegetation planting, and partnerships with other organisations and groups.

1.7.4 Open Space Access Plan (2008)
This plan sets out the Council’s strategic vision for tracks in and between the city’s parks, reserves and open spaces. There are no specific policies or actions associated with this site.

1.7.5 Heritage Policy (2010)
This policy focuses on the built and non-built heritage and trees in Wellington City. It seeks to protect and promote the use of the city’s historic heritage.

1.8 Co-management
Wellington City Council and the Port Nicholson Block Settlement Trust have developed a series of protocols around co-management of the reserve

- Wellington City Council recognises Taranaki Whānui Mana Whenua status and that Port Nicholson Block Settlement Trust has ownership of Section 1 SO 38155.
- Taranaki Whānui and Wellington City Council agree that to the extent that they are able under the Reserves Act 1977 and the Port Nicholson Block (Taranaki Whānui ki Te Upoko o Te Ika) Claims Settlement Act 2009, and any other relevant legislation they will have particular regard to the Mana Whenua view.
- Taranaki Whānui will recognise the role of Wellington City Council on matters relating to the control and management of the reserve.
- Taranaki Whānui and Wellington City Council will meet annually to review the performance of the management year and proposed work programme for the upcoming year.
- An annual report will be available to Wellington City Council and Taranaki Whānui
2 Culture and history

2.1 Background
Point Dorset has a long history as a coastal defence site. For many centuries, the Point has been used to defend Te Whanganui-a-Tara (Wellington Harbour).

2.1.1 Oruaiti Pā
The palisaded fort Oruaiti Pā was situated on the headland at Point Dorset and was one of a series of pā on Motu Kairangi (Miramar Peninsula, see Map B). The pā would have accommodated around 50 huts. No surface evidence of the pā remains.

Oruaiti Pā was visually connected to the major pā of Te Whetu Kairangi (the site of Worser Bay School) and the headland pā of Rangitatau (above Tarakena Bay). These were established by the descendants of the two half-brothers Tara and Tautoki, sons of the Chief Whatonga. Ethnologist Elsdon Best (1901) estimated Oruaiti Pā was built in 1625AD.

The site was occupied for centuries until Ngāti Ira took over from their Ngāi Tara relations and intermarried with them. In the early 18th century, the heke (migrations) of the Taranaki pou whenua at Oruaiti Pā tribes occurred into and around Te Whanganui-a-Tara.

When New Zealand Company representative William Wakefield arrived in 1839, Te Atiawa Māori were resident on Motu Kairangi (Miramar Peninsula) but it was not considered one of the main areas of occupation as there were no major Te Atiawa pā or kaingā (villages) there.

2.1.2 Fort Dorset
A military reserve was proposed for this site in the 1850s (Cooke 2000). In 1880, Colonel Peter Scratchley surveyed the area and proposed a three-gun battery at Point Dorset.

The land was used by the Defence Force between 1905 until 1991 as Fort Dorset. In 1910, the first guns were installed to protect the entrance to the harbour. This battery had two 6-inch guns but all structures have since been destroyed.

The fort expanded during the 1930s to accommodate more soldiers and prepare for the Second World War. The Steeple Battery was built in 1935 and had two 12-pound guns, but has also been destroyed. An anti-submarine MIL loop was situated off Point Dorset.

The Gap Battery, built in 1936 and in 1939, had four 4-inch guns. Some of these gun emplacements have been partially buried. The Beach Battery was constructed in 1942 and had two 12-pound guns (partially damaged). Roads, observation posts, searchlights, magazines and barracks were also built to support these defensive positions. The coastal defence area remained operational until 1957. The guns were finally removed in 1960/1.

Map C shows the location of the military installations and the year they were built. An asterisk indicates the structure is still standing. A Ministry of Works map of the fort from 1966 also shows the four battery sites (see Map D).

1 Sources of Pā sites - Crawford (1872), Struthers (1975), Wellington City Council (1994)
1. Pillbox (<1942)
2. Searchlight emplacement (ca. 1942)

MAP D  MINISTRY OF WORKS PLAN OF FORT DORSET IN 1966.
Ref: GA 8927. (OPUS 2011)
Fort Dorset was one of many coastal defence sites that operated on Motu Kairangi (Miramar Peninsula, see Map B). The others were:

1. Point Halswell, on the site of the Massey Memorial
2. Kau Point
3. Fort Ballance at Point Gordon, above Scorching Bay
4. A mine station at Worser Bay
5. Shelly Bay Air Force Base
6. Beacon Hill observation post
7. Palmer Heads, south of Strathmore
8. Mt Crawford (anti-aircraft battery)

Most of the remaining military structures from Fort Dorset are in poor condition; they have become overgrown with vegetation and also have graffiti. Some are unsafe. There is no information on-site about the structures and this makes it difficult to understand their purpose and how they operated, and to visualise which parts of the harbour were patrolled.

2.1.3 Shipwrecks
The rugged Wellington coast has damaged some ships and destroyed others. Some, which sank near Point Dorset, provide diving opportunities. The pre-1900 wrecks are protected under the Historic Places Act and it is an offence to remove anything from them.

- SUBRAON: In 1848, the Subraon sank at the southern end of Breaker Bay during a storm.
- TUI: In 1886, the Tui struck Barretts Reef. It rests 500m north of the reef.
- WILLIE McLAREN: In 1889, the Willie McLaren hit the bottom near Steeple Rock. It is 300m from Seatoun Beach.
- WAHINE: In 1968, the interisland ferry Wahine struck Barretts Reef during an extreme storm. 53 lives were lost. It capsized near Steeple Rock and the wreck was cut up and sold as scrap. A memorial to the Wahine is at nearby Churchill Park in Seatoun. One of the propellers is at Wahine Memorial Park, just south of Breaker Bay.

2.2 Issues
Point Dorset is important historically – it was occupied by Māori for several centuries before European colonisation and was the location of a military fort between 1910 and 1991. It is part of a cultural landscape and is directly linked to other sites on Motu Kairanga (Miramar Peninsula, see Map B). Point Dorset is representative of defence sites used by Māori and European and is not unique in Wellington (OPUS 2011).

2.2.1 Stabilising heritage assets
Unfortunately, some of the historic features of Point Dorset have been destroyed (OPUS 2011). Oruaiti Pā was destroyed by the subsequent military installations over the past century. Some of the buildings and structures associated with Fort Dorset are damaged and no repairs have been carried out on the remaining structures for decades. This lack of maintenance has led to some of these structures becoming a danger to public safety.

There are natural and human threats to the asset, including erosion of the cliffs above the Beach Battery, seismic creep (movement of fault line), vandalism and graffiti.

3 Maritime Archaeological Association of New Zealand, Te Ara website (www.teara.govt.nz), Dive webpage (wdg.rexedraген.nz/ships/wrecks)
The Council will obtain engineering advice on the structural integrity of these structures, and advice will also be sought from a defence expert on the regional and national importance of individual structures. This will be used to determine which structures to keep and maintain, repair and strengthen, fence off from the public, or dismantle or consolidate.

2.2.2 Protecting heritage

There is no on-site information to help visitors find out about Oruaiti Pā and the remaining defence buildings, though some guided walks have been organised in the past to help interpret the site.

Current condition of some of the military installations at Oruaiti Reserve

Tauranga waka (waka landing sites) will be located near the Hector Street entrance and at Breaker Bay, near the track to the lookout area (which would be used as a safer landing during northerly winds). A pou whenua (land post) will indicate the tauranga waka.

The policies in 2.4.2 outline some ways to improve understanding and appreciation of the features of Oruaiti Reserve.

2.3 Objective

- Recognise, protect and interpret the historical and cultural features of Oruaiti Reserve.
2.4 Policies

2.4.1 Stabilising heritage assets

- Where appropriate, historical features will be stabilised and made safe for the public. Expert advice from engineers and defence experts will be obtained by the Council and used to identify which structures to:
  - keep and maintain
  - repair and strengthen
  - fence-off from the public
  - dismantle or consolidate. Any removal of existing structures will occur when their impacts on the environment, public safety, heritage significance and recreational uses outweigh the benefits of retaining the structure.

- Significant hazards associated with the remaining historic structures will be identified (eg by signs) and/or avoided (eg fencing, alignment of historic trail) or mitigated.

- Vegetation around the remaining structures will be maintained to protect the historic features (and views) and minimise damage to structures. Any uncommon indigenous plants will be identified and protected.

- Any earthworks will be carried out in line with the archaeological requirements of the New Zealand Historic Places Trust.

- Visitors will be encouraged to keep to the track near Oruaiti Pā to limit future damage.

2.4.2 Protecting heritage

- Work with the Trust as per 1.8: Co-management.
- Work with the New Zealand Historic Places Trust on the management of this historic site.
- Where appropriate, Māori place names will be used, in conjunction with European place names, on signs and maps.
- Develop a route to show the key features including the pā site and its link to other places on Motu Kairangi, the defence installations, the coastal ecology, the views and surrounding landmarks. This may include installing signs or developing a brochure to support this route.
- Interpret tauranga waka sites.
- Allow approved operators to conduct guided walks highlighting the history of this site. Develop protocols for this activity.
3 Landscape

3.1 Background
This coastal headland is an important landscape feature.

3.1.1 Coastal viewpoint
Given Point Dorset was used for defence purposes in the past, it is not surprising that it is a good place for sightseeing. This is a popular, accessible viewpoint that provides good views of the harbour entrance and passing boats, Seatoun and Breaker Bay and the eastern harbour and Hutt Valley.

3.1.2 Landscape
Over the centuries, Point Dorset has been an important geographic feature for people arriving by sea.

Oruaiti Reserve provides a green backdrop to Seatoun. On the Breaker Bay side, the undeveloped coastal escarpment contributes to the natural rugged landscape of this area.

The ridgeline has three peaks, with the highest being 58m above sea level. The seaward side of the point is steep and eroding in places.

Parts of the Point have been modified, to accommodate military use, roads and housing over the past 100 years.

A report on the Open Space features of the Point was prepared for the Council by Boffa Miskell in 2001. The report considered the landscape value of both the private and publicly owned land.

The conclusion was the Point “is a very important landform in the Wellington Harbour landscape, as it has strong natural character and defines the harbour ‘gateway’ ”.

3.2 Issues

3.2.1 Retaining views
Many people visit Oruaiti Reserve to enjoy the views, and want them retained. To maintain these important views, there is a need to consider carefully the plant species and structures near the lookout areas.

The views also hold historic importance. For many centuries the site has been used as a lookout for defence purposes.
3.2.2 Modifications to landscape
People appreciate the ‘naturalness’ of the area and the views of open spaces and developed places. The reserve provides an undeveloped backdrop for the surrounding suburbs and many people want the area left as it is – to retain the rugged wild coast. Some users are concerned about structures being installed at the lookout area, as this may interrupt the area’s natural character.

Utilities within the reserve include a stormwater drain near the Ludlam Street entrance and a telecommunications tower. The existing telecommunications tower interrupts the ridgeline.

3.3 Objectives
• Protect the natural coastal landscape character of Oruaiti Reserve.

3.4 Policies

3.4.1 Retaining views
• Much of the grassed area around the lookout will be retained for the views and to recognise the historic importance of this site for defending the entrance to the harbour.
• Only low-growing eco-sourced native coastal plants will be planted near the lookout area.
• Signs will be provided to explain the key landmarks that can be seen from Oruaiti Reserve.

3.4.2 Modifications to landscape
• Any additional features, such as signs or structures, should aid people’s enjoyment and understanding of Oruaiti Reserve, and be unobtrusive.
• The location, design and materials used for new structures will be carefully considered. No structures will be situated on the ridgeline.
• No utilities, masts or telecommunication structures will be situated on the ridgeline (see 6.2.6).
4 Ecology

4.1 Background
Coastal ecosystems at the entrance to Te Whanganui-a-Tara are exposed to environmental extremes. These ecosystems have been modified as vegetation has been cleared, and pests and weeds have become established.

4.1.1 Coastal environment
There are some historic descriptions of the vegetation on Motu Kairangi (Miramar Peninsula). Te Manihera, of Wairarapa, recalled the establishment of pā and settlement on the peninsula: “There was at that time [of pā building] a little rimu and totara, with a good deal of tawai, etc, on the eastern or Worser Bay-side of the peninsula” (Crawford 1872, p400). Buchanan (1872) provided a list of plants that occupied the sea-side and sandhills. He said “introduced species ... have made little progress towards displacement of the indigenous species; this may be accounted for in some measure by the isolated situation, but mostly by the vigorous growth of the plants in possession; only where the scrub is burnt and nothing useful sown, as on the southern sea slopes, or on blown sand where there is only a sparse vegetation, can even the thistle find a holding ground”.

Despite this early observation, Oruaiti Reserve has some highly modified areas of vegetation. Photographs taken early last century show much of the vegetation on the headland was removed and the Point farmed. The open grassland was maintained for defence purposes. However there are still threatened species to be found across the headland and the area has a significant advantage as it is one of the few sites around the Wellington coast that is not immediately abutted by road or seawall.

The south-facing side (Breaker Bay) has dense regenerating coastal vegetation including wharariki or coastal flax (*Phormium cookianum*) and taupata (*Coprosma repens*). The rocky cliffs at the harbour entrance are sparsely vegetated, in some cases due to erosion but also evidence of the extreme coastal environment. The high winds and salt levels limit what plants will grow at this site. There is a small existing dune containing scattered spinifex or kowhangatara (*Spinifex sericeus*) and pingao (*Ficinia spiralis*) below the cliffs. There are few examples of indigenous dune habitat around the south coast, and most of these are affected by roads and seawalls.

Oruaiti Reserve provides important coastal habitat for little blue penguins or korora (*Eudyptula minor*) and other seabirds, including white-faced herons (*Ardea novaehollandiae*), black-backed gulls (*Larus dominicanus* or karoro), red-billed gulls (*Larus novaehollandiae* or tarapunga) and the uncommon variable oystercatcher (*Haematopus unicolor* or toreapango).

4.2 Issues

4.2.1 Pests and weeds
Some of today’s weeds were present on Motu Kairangi (Miramar Peninsula) in 1872. They were scarce and Buchanan says many were “confined to the sea shore”. Some pasture grasses were “spreading over blown sand, and acting as a binder by its deep rooting” (Buchanan 1872, p 352).

There are a number of non-indigenous plant species present at Oruaiti Reserve. Some were planted or sown and others have arrived through wind and bird dispersal of seed. These plants can cause a problem because they are very successful, even in the harsh growing conditions of the site and they can, in time, predominate over the indigenous vegetation. This can lead to local extinctions of native species, both plants and animals, and damage the natural character of the site.

The vegetation on the north and west-facing slopes is dominated by weedy vegetation, including pine trees, gorse, cape ivy and lupin. Many of the conifers were planted when the area was a defence base.
Particular problems on this site are the South African ice plant (*Carpobrotus edulis*) and the karō (*Pittosporum crassifolium*), which does not naturally occur in Wellington. The South African ice plant is hybridising with the local ice plant (*Dysphyma australe*), which may lead to eventual local extinction of the native species.

The south-facing side is dominated by karō, which has naturalised here and now displaces the species that would have originally grown here. Some pohutukawa (*Metrosideros excelsa*), which is not found naturally in Wellington and is potentially weedy in the Wellington coastal environment, has been planted and is self-seeding.

Other serious weeds needing control are boneseed (*Chrysanthemoides monilifera*), marram (*Ammophila arenaria*), horned poppy (*Glaucium flavum*), cape ivy (*Senecio mikanoides*), and lupin (*Lupinus arboreus*).

The building of houses next to the reserve can create problems if gardens become the source of new weed species. Branches from pine trees have been found dumped over the escarpment onto the dune.

Whilst it is acknowledged that cats can be an issue for native wildlife, the majority of the cats in the reserve are likely to be pets from neighbouring residential areas. The Council will undertake an education programme around being ‘good neighbours’ to the reserve as part of the restoration programme. The issue of cats in the reserve and potential methods to reduce their impact (eg bell wearing, keeping them in at night) will be included in the information provided.

Rabbits are present in high numbers, browsing across the point, and will pose a threat to future plantings. Rats and mice are also present. With the abundance of rabbits and rodents it is very likely that mustelids are present. There are relatively high numbers of weasels at nearby Tarakena Bay and it is also likely that hedgehogs are present. Given the location close to residential housing, there are likely to be cats within the reserve which pose a threat to native wildlife.

All of these introduced mammalian predators threaten native wildlife, in particular, penguins and other seabirds nesting at the site and their eggs and chicks. Controls will need to be established to reduce the numbers of these predatory species.

### 4.2.2 Dying flax

Flax on Oruaiti Reserve has been affected by yellow leaf disease. A native leafhopper spreads the disease, which is caused by a phytoplasma. The concern is that as the flax dies, coastal habitats will be overrun with weeds, and seabirds will lose habitat and cover. The Council has started some research into the extent of this problem and ongoing management options.

### 4.2.3 Ecological restoration

Restoration of the site provides significant challenges.

There are scattered populations of important native species, many of them threatened. There are also fragmented areas of high-value habitat for native sea and shorebirds. Restoration needs to focus on removing weeds and planting to enable the existing populations to link up and become self-sustaining.

Many species originally found on this site are now rare and threatened, largely due to displacement by introduced weeds and habitat loss.
The aim for site restoration is to reduce the weed species, allowing more of the original coastal vegetation to establish. This would be done through natural regeneration and revegetation with eco-sourced coastal plant species that occur naturally around the Wellington coastline (see Map E and Appendix One). The work of Buchanan (1872) has been used to compile this list, although not all the species are still present on the south coast.

Revegetation would include those plant species now rare and threatened around the coast. This should lead to an increase in the numbers of native animals living in and around the site, including little blue penguins, other seabirds and shorebirds and native lizards.

Weed-control would also be undertaken at the reserve, in particular, removing the naturalised plants. This would be consistent with the management of other sites around the south coast. The ecological restoration will focus on three key ecosystems:

**Duneland**

Most of the spinifex and pingao are centered around a dune system where the vegetation has become fragmented, largely due to people trampling on it. The remaining dune vegetation is struggling to survive under these conditions. Erosion of parts of the eastern escarpment has also affected some of the dune habitats. This is making it difficult for dune plants like pingao to establish or maintain a presence. Trying to establish plants on the erosion-prone ground along this escarpment will be difficult. The restoration of the dunes should focus on the large remaining dune by blocking access from the top of the escarpment and planting appropriate eco-sourced species.

The marram from this site needs to be removed before planting. To reduce the further loss of sand from the area, marram can be sprayed in strips and interplanted with pingao, which won’t be affected by future spraying. Spinifex can be planted in areas to the north of the dune where marram does not have a strong presence. As well as spinifex and pingao, sand tussock (*Poa billardiae*), silver tussock (*Poa cita*), ice plant (*Dysphyma australe*) and sand coprosma (*Coprosma acerosa*) will be among the species used.

**Shrubland**

Along the coast, there are patches of existing shrubland, but these are highly fragmented and separated by areas of exotic grasses. These patches have the potential to create substantial habitat for penguins, other shorebirds and native lizards. Planting the areas now covered by exotic grasses will also reduce the habitat available for rabbits and help to prevent reinvasion.

The majority of planting will involve taupata, interspersed with coastal flax, wire vine, mingimingi and thick-leaved mahoe. All of these are low-growing species. In the shrubland area, exotic tree species, including macrocarpa, would be removed as well as karō and pohutukawa.

There will be two areas where shrubland restoration will occur:
1) at the base of the Breaker Bay escarpment (below the track)
2) the flat from Hector Street in the north to the former Beach Battery.

**Coastal cliffs**

In the areas of the escarpments and the ridgetops there would be limited or no ecological planting. Weed control would take priority here, particularly preventing the spread of weeds from the top of the headland down towards the more sensitive coastal area. Key species to target are the introduced ice plant, karō and boneseed. The isolated patches of gorse and cape ivy should also be targeted to prevent their spread.
4.2.4 Human impacts
Members of the public have raised concerns about environmental damage at Oruaiti Reserve. They include the following:

- Use of the reserve and the development of tracks have caused damage and loss of vegetation, for example, the pathway through the fragile dune systems. Some tracks need to be better defined to stop plants being trampled and to reduce erosion.
- Oruaiti Reserve is a popular place to exercise dogs. The reserve is not an off-lead dog exercise area under the Council’s Dog Policy and there are concerns that little blue penguins and other seabirds would be at risk if dogs were off-lead (see 5.2.3).
- Rubbish is left behind by some users of the reserve.
- Overfishing or overharvesting from the rocks off the point is a concern for some; there are, however, no signs indicating the limits on catch or harvests.
- Over the past decade, the area near Oruaiti Reserve has been converted from Fort Dorset (a military base) to housing and a school. There has been confusion about where the reserve boundaries are and the impression that the new houses encroach into the reserve and dune environment because coastal vegetation is being removed to provide views and some residents are planting in the reserve.

4.3 Objectives

- Protect coastal ecosystems so that:
  - biodiversity is protected and enhanced
  - pest plants and animals are controlled effectively
  - changes and influences affecting the health of ecosystems are monitored and acted upon appropriately.
- Restore and enhance coastal ecosystems so that:
  - restoration improves ecological connectivity and enhances existing ecosystems
  - communities are motivated, inspired and educated to get involved in conserving biodiversity.

4.4 Policies

4.4.1 Pests and weeds
- Plant and animal pest management will be carried out in accordance with the relevant policies and priorities set out in the Council’s Pest Management Plan (2005).
- A predator trap line will be installed at Breaker Bay to protect penguins and other seabirds nesting in the area.
- No new pohutukawa trees will be planted. Pohutukawa may be removed to enable restoration.
- Conifers that pose a risk to visitor safety will be removed from the reserve. Conifers may also be removed to enable restoration.
- Work will be done with neighbouring landowners to provide information on the ecological restoration in the reserve and to stop the spread of garden weeds into the reserve and stop the dumping of garden waste.
- A proactive rabbit control programme will be carried out to reduce the population and ensure no harmful effects from these pests on existing vegetation and restoration programmes.

4.4.2 Dying flax
- Monitor the die-back of flax and impact on surrounding plant and animal species.
- Explore management options.
4.4.3 **Ecological restoration**

- All restoration work shall be carried out with eco-sourced plants.
- Planted species will be restricted to those native to the area.
- The Council will support community restoration initiatives with advice and, where possible, plants and other materials.
- Where possible, plant species will be allowed to establish naturally, once weeds have been removed.
- Planting will be carried out to join patches of existing vegetation, replace some grassed areas and reintroduce/support Wellington’s threatened coastal plant species.
- A range of plant growth forms (shrubs, grasses, herbs, etc) will be used.
- To maintain views, only low-growing coastal plants will be used near the lookout area.
- The grassed area in the lookout area will be retained (see 3.4.1).
- The Council shall ensure that Oruaiti Reserve is included in citywide monitoring programmes, and that monitoring is carried out in line with the Biodiversity Action Plan (2007).
- Support will be given to community monitoring programmes, such as Places for Penguins, to increase understanding of the biodiversity at Oruaiti Reserve.
- Community interest groups involved in planting at Oruaiti Reserve will be consulted on specific planting priorities and programmes.

4.4.4 **Human impacts**

- Formalise or mark sections of track (see 5.4.1).
- Close informal or short-cut tracks that go through areas with important ecology, such as the dune.
- Control dog access at Oruaiti Reserve in line with the Council’s Dog Policy (see 5.4.1).
- Work with Places for Penguins on ways to improve habitat for penguins.
- Retain rubbish bins at the Breaker Bay and Hector Street entrances.
- Work with the Ministry of Fisheries on education and/or appropriate signs about shellfish limits.
- Clearly define the reserve boundary, especially the area between Hector Street and Ludlam Street.
- To minimise the fire risk, enforce the ban on open fires on Wellington City Council land, unless authorised by the Council.
5 Recreation and access

5.1 Background
Even though Point Dorset was a defence area, it has been used by the public for informal recreation for many years. There are, however, only a few visitor facilities provided (see Map F). This is because it has been open to the public (ie guaranteed public access) for only a decade. There is a seating area on the boardwalk entrance from Ludlam Street, Seatoun (this is not maintained by Council).

There are no signs and some tracks are of poor quality, especially near the Pass of Branda and behind Seatoun Primary School. A popular coastal walk passing through the reserve can be turned into a loop track via the shoreline. This loop provides an extension to the Eastern Walkway, which goes from Tarakena Bay to the Pass of Branda. The nearest toilets are at Churchill Park.

The area is used by a number of local dog-walkers – who exercise their dogs on a daily basis. Oruaiti Reserve is not an approved off-lead dog exercise area in Council’s Dog Policy 2009.

The coastal environment is a popular location for gathering kaimoana. People have to access the coast through Oruaiti Reserve.

5.2 Issues

5.2.1 Access and track conditions
Many people may be unaware of Oruaiti Reserve. The entrances are not signposted and there is no information on the walking and recreation opportunities at the site. There is also no on-site information about its historic and ecological features.

Some of the tracks follow the old roads built to maintain the guns at Fort Dorset. These roads were maintained by the defence force. The tracks are difficult to negotiate in places due to:

- the steepness of the hills
- slippery surface materials
- overgrown vegetation
- poor drainage
- the narrowness of some sections of track
- eroding sections (access across some sections of reserve may be lost if erosion continues).

These conditions are making it difficult for some people, including young families and the elderly, to visit Oruaiti Reserve. The challenge will be to develop and maintain a standard of track to provide better access without affecting the ‘naturalness’ or ruggedness of the area.

There are a few walking and no mountain-biking opportunities in Seatoun. A footpath runs alongside Marine Parade. There are places where people can drive and park to view the coast.
Oruaiti Reserve had been identified as a potential part of the proposed Great Harbour Way/Te Ara o Pōneke, which involves the development of an off-road shared path around the harbour from Pariwhero/Red Rocks to Pencarrow Head.

Submitters had concerns about the suitability of the steep terrain at Point Dorset for shared-use (walkers and cyclists) and user safety, and the fragile coastal dune environment could be damaged from inappropriate use of bikes. An assessment of the suitability of this track for shared use has been carried out (as required by the Open Space Access Plan). The assessment found the access up the hill behind Seatoun School and Breaker Bay Road (Pass of Branda) is not practical for uphill bike use and would be unsafe for downhill use. There are a number of other points on the current track network where this is also the case. Given the unsafe nature of these areas, bike use would also lead to user group conflict. Based on this finding, Oruaiti Reserve will be closed to biking except for the flat coastal track between Hector Street (near Churchill Park) and the boardwalk off Ludlam Street.

The reserve will provide for people walking the Great Harbour Way/Te Aranui o Pōneke. This will attract new users to the reserve. Cyclists on the Great Harbour Way will use local roads.

5.2.2 Modifications to the ruggedness of the area

There are steep coastal cliffs, including some that are eroding along parts of the walkway and the lookout area. Some users are concerned about man-made structures at the viewpoint, as this will interrupt the natural character of the area. Any additional structures or visitor facilities, such as signs or seating, should have minimal impact on the landscape, ecological and historic features. Many users like the naturalness of this site and want little or no change made.

Any new track development needs to avoid damaging the ecological, archaeological and historic features. The Council should refer to the archaeological assessment (OPUS 2011) and seek advice from heritage experts if required. The Council will require an authority from the Historic Places Trust if there is to be an impact on any pre-1900 features, such as Oruaiti Pā.

5.2.3 Dogs

Oruaiti Reserve is managed as an area where dogs can go on a lead, in line with the Dog Policy and Animal Bylaw. A review of the Dog Policy will be undertaken in 2012/13.

Some local dog-owners want this area to become an off-lead dog area. This is an accessible location for walking dogs, which provides some challenge and good exercise. But there are some concerns about off-lead dogs creating problems for other users and wildlife at Oruaiti Reserve.

South of Point Dorset and Breaker Bay, dogs are prohibited from the coastal side of the road, including Wahine Memorial Park, Tarakena Bay and Moa Point, because penguins nest in the area. Little blue penguins or korora and other seabirds also nest at this reserve, especially at Breaker Bay. The proposal in this plan is to restore and enhance more habitats that would be suitable for penguins and other seabirds near the northern end of the reserve (see 4.4.1 and 4.4.4). Dogs will remain on lead on the beach and dune areas, however consideration will be given during the review of the Dog Policy to providing for an off-lead dog area on the ridgeline tracks.

5.3 Objectives

- To provide outdoor recreational opportunities and experiences that are environmentally and socially sustainable and accessible to communities.
- To provide a track network that does not damage the coastal environment and historic features.
5.4 Policies

5.4.1 Access and track conditions

- All tracks will be physically sustainable and have minimal environmental impact, as far as possible.
- Close informal or short-cut tracks that go through areas of high ecological value.
- Tracks will be signposted and maintained to defined standards.
- Signs and interpretation will be used to tell visitors about recreation opportunities, potential hazards, and the environmental, cultural and historic features of Oruaiti Reserve. Signs will also help to manage the interface between public and private land.
- Consideration will be given to planting areas beside the track above the cliffs to define the track and improve public safety.
- Work with Great Harbour Way/Te Aranui o Pōneke to promote walking opportunities through the reserve.
- The following activities are permitted at this reserve:
  - Walking and running
  - Exercising dogs on-lead (see the Council’s Dog Policy)*
  - Studying plants and bird-watching
  - Sightseeing
- The reserve is closed to the following activities:
  - Motorised vehicles – except for management and emergency services
  - Open fires
  - Camping
  - Hunting
  - Exercising dogs off-lead*
  - Mountain biking (except the track between Hector Street and the boardwalk off Ludlam Street) ♦
- The following activities are permitted at this reserve:
  - Waka landing
  - Mountain biking – only on the track between Hector Street and the boardwalk off Ludlam Street ♦
- The reserve is closed to the following activities:
  - Exercising dogs off-lead*
  - Mountain biking (except the track between Hector Street and the boardwalk off Ludlam Street) ♦
  - Collection and removal of natural and built material – without Council approval

Note

* The Council’s Dog Policy and Animal Bylaws control dog access to Oruaiti Reserve. If a change to dog access is proposed at the next review of the Council’s Dog Policy and Animal Bylaws (next review is planned 2012/13), this will override the policy on dog access listed above.
♦ The Council’s Open Space Access Plan Schedule A will require updating to reflect the tracks at Oruaiti Reserve that are closed to mountain biking.

5.4.2 Modifications to the ruggedness of the area

- Seek to limit new structures on the coast to only those that are necessary.
- The above policy recognises that certain structures are necessary:
  - for the enjoyment of the coast (such as seating)
  - to manage coastal activities (such as signs, litter bins and fences)
  - for the effective functioning of the city’s infrastructure.
- The design of any structures within the reserve should take into account the natural character of the environment. The location, design and materials should be appropriate in the context of the reserve and its environment.
- Ensure that the design of facilities and access ways promotes safe use of the coast while at the same time maintaining or enhancing the coastal environment and scenic experience.
- The landscape plan will identify suitable sites for seating to minimise impacts on the environment. These seats will be installed through implementation of the plan, as part of the Plimmer Bequest funding.
6 Administration

6.1 Objectives
- To manage Oruaiti Reserve in a way that reflects its reserve classification, site values and the vision and objectives of this reserve management plan, while providing for appropriate recreational activities.

6.2 Policies

6.2.1 Plan amendment and review
This plan will be reviewed after 10 years and any review will be initiated by a decision of the relevant Wellington City Council committee, following the process under section 41 of the Reserves Act 1977.

6.2.2 Relationship with other management plans and Wellington City Council policies
In addition to its purpose under the Reserves Act 1977, this plan is also a general policy of Wellington City Council and will be used as relevant information subject to the provisions of the Resource Management Act 1991 and the District Plan, in considering resource consent applications for land use on any reserves.
(Land to the south of Point Dorset is covered by the South Coast Management Plan 2002.)

6.2.3 Community involvement in reserve management
The Council will encourage community environmental groups (either existing or new) to support the ecological restoration programme at Oruaiti Reserve.

6.2.4 Reserve closure and exclusive use
When necessary a reserve(s), or part of it, will be closed to the public subject to the provisions of the Reserves Act 1977.

6.2.5 Encroachments
No new private encroachments will be allowed. All existing encroachments will be removed.

6.2.6 Utilities/infrastructure
The effects of utilities will be minimised by placing only those that are necessary to the normal functioning of the city and which cannot reasonably be located elsewhere.
- All utility structures must be sited to minimise their impact on existing natural and heritage features, wahi tapu sites, visual amenity, recreational facilities and vegetation. No utilities or structures will be placed on the ridgeline.
- In choosing sites for utilities, the Council will give preference to areas not zoned Open Space or Conservation sites and sites where there are already utilities.
- All utility structures (that involve pipes, cables, lines or similar equipment) shall be placed underground where practicable.
- The location of utility structures should not compromise recreation uses or future facilities and landscape restoration work.
- The applicant is responsible for reinstating the ground, vegetation or infrastructure to the Council’s satisfaction.
- The utility structure must be accurately mapped and documented with plans supplied to the Council.
• The applicant is responsible for all costs arising from an application for a utility lease or easement.
• All utility companies with structures on Wellington City Council land will need to negotiate an agreement with the Council setting out the terms and conditions of access and maintenance, where these details are not already provided in a lease or licence document.

6.2.7 Motorised vehicle access
Motorised vehicle access on and through reserves covered by this plan is restricted to:
• appropriate and necessary management under the authority of Wellington City Council’s Manager, Parks and Gardens. This will include Council staff as well as individuals or organisations hired or otherwise by the Council to carry out work at Oruaiti Reserve
• approved or existing legal access by utility companies subject to terms and conditions agreed between the utility company and the Council’s Manager, Parks and Gardens.
• all emergency or civil defence services.

6.2.8 Licences
Future licences to use reserve land shall be made only where the activity undertaken by the organisation applying for the licence is consistent with the objectives of this management plan and the activity is primarily concerned with public recreation or promotes cultural heritage and/or coastal ecology.

6.2.9 Commercial leases
The Council acknowledges there may be demand for commercial recreation uses. Any application will be assessed against the objectives and policies of this plan and other relevant Council policies.
• The Council will not permit commercial recreation or other commercial activities that have significant impact on the natural or built environment or may affect the enjoyment of the reserve.

6.2.10 Commemorative and outdoor structures
The Council acknowledges there may be demand for installing commemorative structures.
• Any proposals to install sculptures or monuments will be assessed against the Public Art Policy (2003). The proposed materials, design and location will all be considered.
• As the provision of seating at Oruaiti Reserve is being covered by the landscape plan, no further commemorative seating will be installed here (see 5.4.2).

6.2.11 Signs
• Event organisers may display temporary signs subject to formal written approval.
• In general, the use of reserves for advertising purposes will be prohibited.
7 Implementation plan

In February 2010, the Council agreed that up to $400,000 from the Plimmer Bequest could be spent on the Oruaiti Reserve/Breaker Bay Restoration project.

7.1 Oruaiti Reserve– landscape concept plan
A landscape concept plan has been developed after consideration of the public responses to the discussion document (see Appendix Three). This includes improving the:

- entrances to the reserve
- accessibility, (including possible track upgrades)
- information on heritage features
- restoring ecosystems
- retaining viewpoints.

APPENDIX TWO: Preliminary feedback on values, issues and ideas for Oruaiti Recreation Reserve (February 2011)

Background

The Council and the Point Nicholson Block Settlement Trust (the Trust) are working together to develop a reserve management plan (requirement of Reserves Act) and a landscape plan for this reserve. In February 2010, the Council agreed that up to $400,000 from the Plimmer Bequest could be spent on the Point Dorset/Breaker Bay Restoration project.

To identify what this work might include, staff sought community feedback on how people use the area and what they value about it. People were also asked how these features could be protected and if they had any ideas on what they would like to see at Point Dorset.

Eighty-three responses were received. Six were from community groups. The majority of responses were from people residing in the Eastern Ward (76 percent).

This report summarises these responses.

What people like about Point Dorset?

- Environment – this includes the coastal environment, the beach, and harbour entrance (over 60 percent).
- Views (around 50 percent).
- Rugged and wild coast, exposed to the elements (40 percent).
- Walking tracks (almost a third).
- Accessibility of the Point (around a third) – its proximity to the city or respondents’ homes.
- History of this site, the pā and defence gun emplacements and bunkers (under 20 percent).
- Undeveloped landscape that provides informal or passive recreation (17 percent).
- Peace and isolation (15 percent).

What people don’t like about Point Dorset?

- Poor track conditions (over a third).
- Rubbish and concrete debris and the absence of rubbish bins (over a quarter).
- Dog access – some want greater enforcement, others want an off-lead dog exercise area (almost 20 percent).
- Weeds and pests, such as rabbits (over 15 percent).

Protecting the heritage and cultural values

More than 80 percent of respondents said it was important or very important that the heritage features are protected. Ideas included:

- provide information on the heritage and cultural features of the site (60 percent)
- clean up the bunkers/gun emplacements, eg by removing graffiti (14 percent)
- carry out more research, eg via an archaeological survey (10 percent)
- retain a natural wild area (30 percent).

Protecting the coastal environment

Almost 90 percent said it was important or very important that the native coastal vegetation is restored. Ideas included:

- controlling weeds and pests including rabbits (almost 40 percent)
- using plants hardy to coastal extremes (23 percent), eg by planting native plants (23 percent)
- limiting erosion (23 percent)
- defining the walking track so plants are not trampled (20 percent).

Some supported doing no planting and letting the Point regenerate naturally, or leaving some existing features (like the pohutukawa trees).
Ideas to improve the lookout area

- Half of those responding want the lookout area to be left as it is (50 percent).
- Some wanted seating (27 percent).
- Some unobtrusive information was wanted about the history of the site and landmarks that can be viewed from here (29 percent).

Recreation facilities

- Half of respondents wanted direction and information signs track entrances/junctions, places of historic interest and at the lookout (over 50 percent).
- Some felt no more recreation facilities are needed (around 40 percent). No structures or buildings are wanted as they will undermine the naturalness of the area or block the views.
- Provide some seats (over 35 percent).
- Provide a shelter (14 percent).

Track upgrades

Seventy percent of respondents mentioned a track, or part of the track network, that requires maintenance or an upgrade, especially the Pass of Branda hill and the thin subsiding track behind Seatoun School.

Point Dorset has been identified as part of the proposed Great Harbour Way Te Ara o Pōneke, which involves the development of an off-road shared path around the harbour. In the Great Harbour Way submission, the group says they are looking at two options – via the reserve or the local road network. The optimum track width would be 3m or the creation of separate tracks for cyclists and walkers. Other submitters have concerns about the suitability of the steep terrain at Point Dorset for shared use (walkers and cyclists) and user safety, and the fragile coastal dune environment could be damaged from inappropriate use of bikes.

Other comments

- Try not to develop this place into an unnatural area.
- The Council should acquire neighbouring private property.
- Define the reserve boundary (to avoid going onto private land and help ensure no encroachment into the reserve).

Visitors

- Two-thirds of respondents visit Point Dorset daily or at least once a week (almost 60 percent lived nearby, in Seatoun and Breaker Bay).
- Eighty-eight percent visited at least once a month.
- Ninety-seven percent visited at least once a year.

Why visit

Walking is the most common activity at Point Dorset, followed by sightseeing.

NOTE: The first three activities on the graph were options on the feedback form. All other activities were listed in the 'other' category.
APPENDIX THREE: LANDSCAPE CONCEPT PLAN

Opportunities for Landscape Improvement

- **ENTRANCES:** Acknowledge entrance points to the Reserve and consider sense of arrival, signage, interpretive/recreational, seating and planting.
  - Main entrances include: Flora Street, Breaker Bay.
  - Minor entrances include: Flora of Bannock, Bannock Street.

- **ACCESSIBILITY:** Review all tracks for ease of access, drainage, main track vs minor track routes and locations. Consideration will be given to using steps or maintaining tracks for better gradients and closing minor, informal or shortcut tracks.
  - Review arrival points, tracks merging, track crossings for interpretive and directional signs.
  - Review areas along all tracks for public safety particularly above cliffs, giving consideration focusing natural or artificial barriers in certain areas.

- **HERITAGE:** Develop interpretive signage for key historic features, possibly as a heritage trail and at key points around the coastal edge.

- **ECOLOGICAL RESTORATION:** Review avenues and prepare proposals for ecological planning and maintenance of the Plant area.
  - Work with Places for Ponies on ways to improve habitat for Little Blue Penguins.

- **LOOKOUTS/STOPPING POINTS:** Review arrival, path launch, plantings, potential for "natural coastal" style of seating or signage for people using the Fort.

- Acknowledge Tauranga Waka Sites (Waka landing) with interpretive signage at key points.

- **NOTE:** All works will be of low impact within the existing landscape. They will use a character or style that fits to the natural coastal and undeveloped spirit of Point Dorset.

---

**Key**
- Entry Points: Sense of arrival, car parking, layout, planting
- Signage: Interpretive/recreational (indicative positions only)
- Signage: Interpretive/recreational (indicative positions only)
- Stopping Points and Lookouts: Review/organize for layout of area, directional and interpretive signage, seating, planting
- Trails: Coastal trails
- Trails: Main Routes - existing, expanded, possibly require upgrading works, stabilization, re-routing, sites
- Trails: Secondary - review for best route/location, may require realignment/realignment
- Trails: Heritage - routes to include interpretive and directional signage
- Existing old Bailey buildings and gazebos
- sites: Locations of removed Bailey buildings and gazebos
- Tauranga Waka Sites (Waka landing)
