The Adelaide Road Framework sets out a long-term vision for future growth and development in the Adelaide Road area.

Feedback received through public consultation on the Framework emphasised the need for attractive public space, improved connections between green spaces and a pedestrian-friendly street environment. An upgrade of Drummond Street featured high in the Framework’s priorities.

Work on the upgrade is set to begin in late April 2010 and finish by the end of June 2010. The design shown covers some of the things people told us were important during the consultation.

The key concepts are:
- an expanded green space on the corner of Drummond and King streets
- new deciduous trees giving Drummond Street its own character
- a raised pedestrian crossing at Adelaide Road intersection
- an improved pedestrian walkway between Tasman Street and Hanson Street.

A key part of the project is improving the pedestrian walkway from Tasman Street to Hanson Street. The new design will open up access, create a better view from top to bottom and result in a much better-lit and safer environment. It will be of particular interest to residents whose properties front on to the walkway, as it makes provision for each property to have separate access, rather than the shared access many have at present.
