## How to use **沙 íNaturalist**

Guide to making your first wildlife record on the iNaturalist app - for **iPhone** users

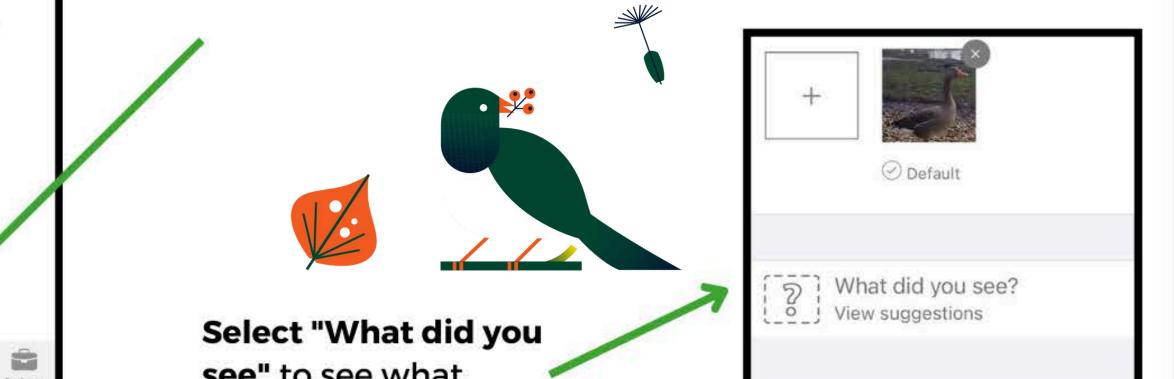

Use iNaturalist to record wildlife! It's great way to learn more about about the nature you see. It can also help scientists and conservationists get a better understanding of where our wildlife is.

## Step 1: Uploading a picture or sound

**Download the free iNaturalist app** onto your mobile device & **log in** or create an account.

**Press the Solution** You can then choose to **take a photograph**, upload an image, or record a sound of wildlife.

Choose the best match. Alternatively, you can type in the name of a species where it says "look up a sepcies by name".

Don't worry if you're not sure - other iNaturalist users will verify your record.

**Top tip!** You can add up to 4 photos per record. More photos make it easier for experts to confirm your record. Remember to take photos from different angles, and include photos of different and distinctive parts, for example, if you're recording a plant, take pictures of the flower or fruit, and the leaves.

Hooray! Your upload is made, and you are now part of the iNaturalist recording community.

Tevlag Goose

Other iNaturalist users will look at your record, and confirm it is correct, or they might suggest it as something else. Now all you have to do is keep on recording!

By uploading your photos of plants and animals you can support local conservation and international research.

## Step 3: Option to make your records more accessible

Your iNaturalist records will be used by researchers - which is great for scientific research!

However, if you'd like your records to be of **even greater use** to an even wider variety of organisations, you need to change the observation settings to be **"open copyright"**. This means anyone can use the observation for any purpose. You can do this by logging onto <u>https://inaturalist.nz.</u> Go to **Account Settings** under your profile picture. Select **Content and Display**, then under Licensing change your Default Observation License to **No Copyright (CCO) or Attribution**.

Thank you for making your data count.
