

Flipper

THE IDEA

Flipper is a duo of pre-cast concrete components; The **Dolphin** (1,000mm length) and The **Penguin** (500mm length). Designed to work in unison the two components can be arranged in a multitude of combinations and runs to provide visually compelling cycle path edge protection. The simple, but crafted, faceting of the precast elements affords a **variable ridgeline** that lends itself to multiple readings – **spiny reptile, surfacing sea-creature or abstracted river rock**.

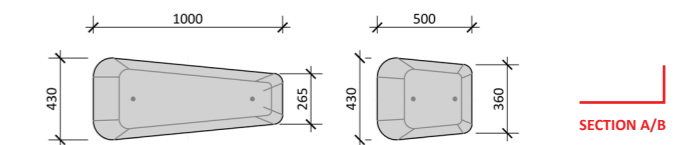

INSTALLATION

Flipper is designed to be installed in one of two ways- surface mounted or plant mounted.

PLANT MOUNT: depend precast element set on compacted basecourse or site concrete prior to surfacing installation

SURFACE MOUNT: Epoxy mortared threaded rod inserts drilled into cycle path surfacing and base. Silaflex plug to top of precast cavities.

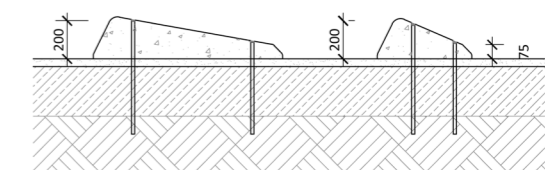

COST EST : \$350-450/m + initial mould fabrication
