Confirmation of required policies and statements

Summary of Assessment of Water and Sanitary Services

The Council completed its Assessment of Water and Sanitary Services in October 2005. It comprises an assessment of water supply (drinking water), wastewater and stormwater drainage, cemeteries and public conveniences. Its primary focus is on public health risks. It captures much of what is contained in relevant asset management plans, but the assessment is not limited to Council services or reticulated areas. It covers services in both urban and rural areas and systems that are not owned by the Council.

The assessment highlighted a lack of information available on several systems. It was recommended that additional information be collected for the next assessment which was proposed to be completed for the Long Term Council Community Plan, however it has been decided to wait for Council's water, stormwater and wastewater strategies to be completed (due October 2009).

These strategies will assist in more clearly identifying the level of public risk the services pose and includes:

non-reticulated potable water source, treatment and quality

• • the number and type of non-reticulated wastewater treatment facilities and their efficiency.

Below are the key findings and recommendations for each service, with the progress for each service.

WATER			
Key Findings	Recommendations	Progress	
Based on recent population growth rates, Greater Wellington would be unable to supply sufficient potable water during 50	Contribute to Greater Wellington Water Management Plan to consider water demand issues and water conservation.	Greater Wellington Regional Council WRC has prepared a draft Regional Water Strategy which is out for comment now. Council will consider water management options when the strategy is finalised.	
Council is unable to determine whether water collected for domestic purposes from roofs, bores or streams meets current Ministry of Health guidelines as there is no long	Compile database of non-reticulated supplies. Consider code of practice for private rainwater systems. Undertake education regarding safe drinking water. Consider applying Ministry of Health/Ministry for the Environment national environment standard for human drinking water sources.	No action

contamination of receiving waters.	ensure their effective operation.	

STORMWATER			
Key Findings	Recommendations	Progress	
More buildings, gardens and roads are being flooded than Council's agreed level of service.	Complete catchment management plans and subsequent upgrade works. Integrate Sustainable Urban Design and Low Impact Urban Drainage Design principles into development practices.	Catchment planning work is on going. The work on Low Impact Design is being progressed through Council projects were applicable.	
Lack of information regarding what level of stormwater quality and treatment is acceptable to the public.	With Greater Wellington, determine appropriate water quality standards. Monitor effects of stormwater contaminants in streams, harbour and south coast. Consult on stormwater quality and impacts.	Through the regional Stormwater Action Plan, and other investigations, GWRC are reviewing freshwater and coastal monitoring programmes to ensure that sampling/monitoring strategies can effectively identify and characterise the effects of stormwater discharges. This information will provide a basis for future planning.	

CEMETERIES, PUBLIC CONVENIENCES AND WASTE DISPOSAL
