COMPOST

15L bag \$4
40L bag \$7.50
Bulk \$85/m³

Main use:

Compost revitalises soil and enhances the growth and health of plants, while promoting pest and disease resistance.

It stores moisture and nutrients, reducing plant stress from drought or neglect. It should be dug into the top 50–100mm of surface soil to improve soil structure. Spread up to 50mm around flower beds, trees and shrubs.

How to use:

Vegetables and flowers:	Before planting, mix a 25–50mm layer of compost into the soil.
Lawn maintenance:	Spread to a 10mm thickness over existing lawns and rake in.

GARDEN MIX

40L bag \$9
Bulk \$99/m³

Main use:

Garden Mix is the easy way to garden. Use Garden Mix as you would topsoil and plant directly into it. It will break down clay while encouraging earthworm activity – and saves all the hard work of digging up existing soil.

Nutrients will last six weeks, then a liquid fertiliser or a fertiliser, such as blood and bone, should be applied.

How to use:

Simply apply a layer 200mm or more on existing soil and plant directly onto it.	
New gardens	Apply 150–300mm deep over existing soil or clay.
Planting trees and shrubs	Dig a hole four times the size of the root ball and surround the roots with Garden Mix. Cover with a layer of Mulch to conserve soil moisture.

VEGGIE MIX

40L bag \$9.50
Bulk \$101.50/m³

Veggie Mix is a special blend of compost, bark, organic fertilisers and pumice.

Main use:

Veggie Mix is a specially formulated blend for encouraging healthy growth specifically for growing vegetable crops. It promotes strong healthy root development and retains moisture. It can be applied directly into clay.

How to use:

For new and existing vegetable gardens, remove all weeds and unwanted plants. Break any soil compaction by cultivating the soil to a depth of 15cm.

Add Veggie Mix to the surface of the garden (2 x 40 litre bags for every square metre) and apply to a minimum depth of 100mm.

Sow vegetable seeds or plants directly into the mix and apply liquid compost three weeks after planting.

LAWN MIX

25L bag \$8.50
Bulk \$103/m³

Main use:

Lawn Mix is ideal for establishing and repairing lawns. The blend of ingredients ensures excellent drainage during wet periods, yet retains moisture during drier periods.

The nutrients will last for about three months.

How to use:

New lawns	Remove weeds, dead turf and debris. Cultivate to a depth of 150mm. Apply Lawn Mix to a depth of 30–50mm and lightly compact lawn seeds at the recommended rate. Thoroughly water and keep moist for up to 14 days or until grass is well established.
Repairing lawns	Repair site by lightly digging and thinning old lawn or dead grass. Apply a 20–30mm layer of Lawn Mix. Sow seeds and keep continually moist for up to 14 days or until grass is well established.

MULCH

40L bag \$7.50
Bulk \$63.50/m³

Main use:

Mulch will conserve soil moisture, suppress weeds and promote earthworm activity. It contains up to 20 percent compost to help feed plants.

How to use:

Flower beds	Spread Mulch around annuals and perennials to a depth of 50–70mm.
Trees and shrubs	Spread Mulch around established trees and shrubs to a depth of 100mm.
House plants	Spread mulch up to a depth of 30mm.

POTTING MIX

15L bag \$5.50
40L bag \$11
Bulk \$231/m³

Main use:

Potting Mix is the complete all-purpose mix for growing healthy plants inside and outside the home or office. It contains compost, bark, pumice, and controlled-release fertilisers which encourages water retention and provides roots with the essential oxygen and drainage they need.

The nutrients last for about six months.

How to use:

Thoroughly water each plant and leave to drain. Partly fill the new container with potting mix. Position the plant in the container leaving space at the top for watering. Fill firmly with potting mix to add stability, and water thoroughly. After five to six months, apply a fertiliser/plant food.
