## Re: Cobham Drive and SH1 Speeds, Have Your Say

### 1. About the Chamber

The Wellington Chamber of Commerce (the Chamber) has been the voice of business in the Wellington region for 165 years since 1856 and advocates for policies that reflect the interest of the Wellington region's business community and that support the development of the Wellington economy as a whole. The Chamber is accredited through the New Zealand Chambers of Commerce network and as part of our wider organisation is also one of the four regional organisations of BusinessNZ.

Through our three membership brands, the Wellington Chamber of Commerce, Business Central and ExportNZ, our organisation represents around **3,500 businesses across the central and lower North Island**. In Wellington, our organisation represents **over 1,300 businesses and organisations, accounting for 50,000 employees**.

The Chamber has worked closely with Let's Get Wellington Moving (LGWM) since 2017, and prior to this in the programme's various forms, to ensure Wellington's business communities' views on the changes proposed and impacts are front of mind. Our advocacy remains consistent and we continue to play a constructive role in the future development of Wellington's transport infrastructure.

### 2. Introduction

Wellington faces numerous challenges as it continues to grow, including our roading and transport infrastructure. The Chamber fully supports Let's Get Wellington Moving's original objectives to support the growth of the city and to make it easier and safer for goods and people to get around.

But instead of getting Wellington moving, the current programme is doing the opposite. This proposal is, in plain speaking, putting a speed bump right on State Highway 1 (SH1). LGWM's focus and progress continue to concern us. We urge LGWM to return to its original vision and progress the major aspects of the indicative package, such as the Mt Victoria tunnel and Basin Reserve improvements – which will get Wellington moving.

Te Motu Kairangi (the Miramar peninsula) is an important part of Wellington City. It is home to an estimated 10,000 Wellingtonians, Weta Workshop, and the main airport for the lower North Island.

Wellington's newly adopted spatial plan also lists suburbs such as Miramar, Mapua, and Strathmore Park as opportunity sites for densification and development.

High-growth areas, such as this, need a well-functioning road and public transport network. With the expected growth in the opportunity sites and the increased usage of the airport, a fluid, well-maintained transport system should be the top priority for the infrastructure in this area.

### 3. [Summary](#)

The route from SH1 from the Wellington Airport to the Mt Victoria tunnel is crucial for Wellingtonians in the eastern suburbs and those travelling to and from Wellington's airport. According to the research, 35,000 road users travel on the road, daily. The Airport also has 6 million users annually, that will use the road to connect with the rest of New Zealand and in many cases, the world.

As Wellington Airport's submission puts plainly:

*"Cobham Drive is an excellent stretch of State Highway. It is long, straight, four lanes wide, and median separated, with a gold standard cycling and walking path. There are existing crossing points through the Lyall Bay underpass and at the major Evans Bay intersection, an appropriate place for traffic lights. It is not sensible to place an additional pedestrian crossing further along the road, particularly not a raised crossing that will function as a speed bump."*

The Chamber writes in **strong support** of the submissions made by **Wellington International Airport Ltd (the Airport)** and the **Road Transport Forum (RTF)**. Our submission will reference a number of the points raised by these groups and we find ourselves in strong agreement with them. These submissions, including ours, should be weighted accordingly, given the interest in the outcome, direct impacts proposed, and the number of members held by both the Chamber and RTF.

The weight of views from key stakeholders is so significant that it obliges the Council to look afresh at these issues and take a pragmatic approach to a solution. There are better, longer term alternatives than that which is proposed. The proposed solution is at odds with the publication of a Long-Term Plan and assertions from the Council that the quality of planning is very much about the long term.

We are concerned the LGWM has, on two recent occasions, used the notion of safety as the reason for advancing its proposals when the reasons for change appear to be more complex and the empirically 'safest' option is not necessarily the preferred or ultimate option. This is a concerning trend that we will watch closely. We would be seriously concerned to see repeated attempts from LGWM to adopt safety as a systematic template rationale for their actions.

The reason concerns are raised about safety is that outcomes are inconsistent with the claim. If safety is the key consideration for LGWM, it should prioritise the safest option available, instead of the cheapest? The best option in regard to safety would surely be to keep the different modes of transport from directly interacting with one another.

We also urge LGWM to be more proactive in the release of information critical to its decision-making processes. These are important, wide-reaching decisions being made by the LGWM team and stakeholders in the Wellington community have expressed a view that significant information is being withheld from them. Whether reality or perception, the Council must orient to this concern and be highly transparent (and appear to be so) in the information it provides the public.

The RTF and Airport both have considerable expertise in transport infrastructure, planning and management. They also understand the environment under consideration. Their expertise and contextual knowledge of Wellington's roads should not be ignored.

The Chamber would like to thank LGWM for the opportunity to submit on the *Have Your Say: Cobham Drive & SH1 Speeds*. We would also like to thank Siobhan Proctor, Seb Bishop, and the LGWM team for the opportunities to engage with them directly.

#### 4. Proposed Crossing on Cobham Drive

The Chamber **does not support the at-grade crossing on Cobham Drive** as it is currently proposed by LGWM. Safety on our roads and footpaths is a high priority for the Chamber, therefore we would appreciate the opportunity to look at alternative solutions to the at-grade crossing currently proposed.

The Chamber urges LGWM to **do it once and do it right**. It cannot and should not look for the "quick" wins, only to revisit the project again in five years' time. Wellington deserves a high-quality corridor from the city to the airport, as well as first-class cycling and walking facilities.

#### ***Public Feedback on the Cobham Drive Crossing Proposal***

Engagement with the public shows a less than convincing argument in favour of the current crossing proposal. As of writing this submission, there had been just over 3,400 responses to LGWM's survey and despite (what we would consider being) a skewed questionnaire, there is strong opposition to the current plan;

- 51 per cent believe the proposal will have no change to their current behaviour.
- 23 per cent of respondents think it would make them **less likely** to walk, run, cycle, or scooter. Note that 80 per cent of respondents are road users.
- 57 per cent of respondents also disagreed with the location of the proposed crossing, with only a quarter agreeing with its location.

It is important to note that a majority of respondents (51 per cent) do think it is important to make changes to improve safety on SH1. It will be interesting to see how these results are taken into consideration by LGWM.

The Chamber **expects to see the raw data from the consultation survey**, specifically how many of those respondents requested an overbridge or underpass – options that had been disregarded by LGWM.

### **Chamber Support for Other Group's Submissions**

Rather than relitigate points made in other submissions for which we have expressed support, we wish to highlight the key points made by both the RTF and the Airport. While the support the submissions as a whole, these are the points we believe LGWM need to focus on;

Road Transport Forum's key comments regarding the proposed Cobham Drive Crossing:

- *Earlier feedback does not appear to have been captured in the various LGWM summaries to date. Given our earlier view that LGWM is not thoroughly considering the risks, trade-offs and opportunity costs we question the authenticity of the consultation. We urge LGWM to give genuine consideration to these matters before forging ahead regardless.*
- *Little evidence base has been provided by LGWM to support its proposals, in particular the Cobham Drive crossing. As far as we are aware LGWM has not provided any robust evidence, such as benefit-cost analyses to underpin its latest ideas.... With our data provided in this submission from external sources.*
- *As a general observation, there are a number of recent initiatives being presented under the guise of safety initiatives and we are deeply concerned that the likes of LGWM and Waka Kotahi NZ Transport Agency are exploiting the transport sector's broad support of Road to Zero and these agencies are now blindly applying a safety at any cost approach. Our understanding is that this approach is not what New Zealanders signed up for and it is certainly not what we signed up for.*

Wellington Airport's key comments regarding the proposed Cobham Drive Crossing:

- *An overpass is the best safety solution, and the one supported by the community. We strongly believe LGWM should choose the best solution, not the fastest or cheapest.*
- *The proposed crossing prioritises 250 walkers and cyclists (at best) over 35,000 daily motorists. Congestion on Cobham Drive is already unacceptable, and the crossing will further increase congestion and delays. Our analysis shows LGWM has not adequately accounted for these delays and has not considered the issue of tailbacks into the Troy St roundabout and along Calabar Road.*
- *We are not able to support proposals on the airport access route that would significantly worsen congestion and delays which are already at intolerable levels.*

- *Wellington Airport has reviewed the LGWM technical report supporting the proposed corridor changes. We are disappointed at the level of rigour that the evaluation has undertaken, which we suspect is related to the small capital costs of the project (circa \$1M for the at-grade crossing, \$10-17M for grade-separated). As with many smaller transport projects, the level of detail/analysis needs to be more rigorous to fully appreciate localised impacts across the transport network; particularly the impact on road users of which this corridor has many.*
- *For the at-grade crossing to work, the speed limit of Cobham Drive would have to be reduced (from 70km/h to 60km/h) as traffic will need to slow to approximately 40km/h to drive over the raised crossing platform even when the crossing is not in use. In other words, while the technical team has separated the speed limit changes from the crossing, the two are actually linked along Cobham Drive, and so the economic summary presented in Table 6 should also include the cost to road users of the speed limit reduction from 70 to 60km/hr. This is particularly so given there are no grounds for the speed limit reduction for safety reasons on their own.*

## 5. Proposed Speed Limit Changes

At this stage, the Chamber also **does not support the reduction to the speed limit** on Ruahine Street, Cobham Drive, and Calabar Road. As we would prefer to be consulted on alternative options for a crossing over SH1, there is no need to decrease speed limits on the highway.

LGWM was intended to ensure local roads and highway routes were grade-separated and fit for purpose. Anything other than this intent is simply a ‘Karo Drive compromise’ that does not fully meet any of the expectations of the public.

The focus on this stretch of road (from Mt Victoria tunnel to the Airport) should be about making it fit for its purpose. This is a critical route to both the city’s airport and eastern suburbs and must be fit to be worthy of its current SH1 designation.

As the Airport says;

*“The speed limit proposal is another example of short-term thinking. While Ruahine St in its current state is less than ideal, the original LGWM package envisaged widening the street to four lanes and removal of residential access and turning bays.”*

We agree with the Airport and do not believe the case has been made for speed limit changes. The analysis of both the crossing and speed limit proposals is flawed. We regret that we cannot support the initial projects being advanced by LGWM, as we have worked hard to understand and support LGWM’s requirements for mass transit and access to the airport.

## 6. Conclusion

The Chamber hopes that the points raised by our submission and the submissions made by the Airport and RTF are taken into consideration and that the current proposal is not a done deal as some assume.

We look forward to continuing our discussion with LGWM regarding this proposal and future projects.

## Introducing Disabled Persons Assembly NZ

---

The Disabled Persons Assembly NZ (DPA) is a pan-impairment disabled person's organisation that works to realise an equitable society, where all disabled people (of all impairment types and including women, Māori, Pasifika, young people) are able to direct their own lives. DPA works to improve social indicators for disabled people and for disabled people to be recognised as valued members of society. DPA and its members work with the wider disability community, other DPOs, government agencies, service providers, international disability organisations, and the public by:

- telling our stories and identifying systemic barriers
- developing and advocating for solutions
- celebrating innovation and good practice

## The submission

---

DPA welcomes the opportunity to submit on the Let's Get Wellington Moving (LGWM) Cobham Drive pedestrian crossing and speed restrictions plan. Broadly speaking, this submission has been discussed with our membership and elicited divergent views from those who responded. The vast majority of those who provided feedback were in favour of the pedestrianisation and speed reduction proposals. However, two of our members objected to the proposals on the basis that the speed lowering could significantly disrupt traffic flows in the area and produce high risks for pedestrians, motorists and public transport users along Cobham Drive if it proceeded and they therefore favoured the building of an overbridge (or similar structure) near Wellington Airport for that reason. Others supported the Cobham Drive pedestrianisation proposal but not the overbridge due to the general accessibility issues posed by overbridges to disabled people, particularly those with mobility impairments and the general safety issues that this would present.

Therefore, on the basis of the comments received from our Wellington members, we cautiously support the pedestrian crossing proposal on the basis that safety and access considerations are taken into full account. Also addressing traffic management issues along Cobham Drive and encouraging the use of accessible public transport options, for example, buses and ride share services for people travelling into and out of the area, should be fully canvassed as part of moves to reduce traffic flows in the area over time.

We will also recommend that in order to seek the widest range of views from the disability community and to seek consensus that a public hui/forum be held to address these and other issues that LGWM will be mooting in the months and years ahead.

The United Nations Convention on the Rights of Persons with disabilities (UNCRPD) Articles most relevant to our submission are:

- Article 4.3 Involving disabled people and our organisations in decisions that affect us
- Article 5: Equality and non-discrimination
- Article 7: Children with disabilities
- Article 9: Accessibility
- Article 19: Living independently and being included in the community
- Article 20: Personal mobility
- Article 30: Participation in cultural life, recreation, leisure and sport

The New Zealand Government policies and strategies which are relevant to this submission are as follows:

New Zealand Disability Strategy 2016-2026:

- Outcome 5 - Accessibility

## Recommendations

---

DPA recommends that should the pedestrian crossing proposal be adopted that it contains (as in the design) good barrier fencing between the road and footpath, sufficient crossing time for pedestrians through adequate regulation of traffic light speeds as well as clear and auditory signals for when it is safe to cross. Good street lighting and road signage would need to be placed within reasonable proximity of both sides of the crossing to warn oncoming traffic as well. Moreover, good, sizeable traffic islands should be inserted into the centre of the road. These signals, signs and islands should be pre-tested prior to any pedestrian crossing opening to the public with children, older people and disabled people being the key target groups for this exercise, thereby allowing for any adjustments to be made beforehand. Any road crossings need to be as level as possible for everyone (including wheelchair and mobility aid users) to access and grates need to be placed over drainage channels rather than kerb cuts which can sometimes have too steeper gradients on them. In this respect, one member commented, for example, “that the kerb cuts at the intersection of Cobham Drive and Evans Bay Parade are difficult and that those on the south-east corner are entirely inaccessible.”

DPA recommends that any pedestrian crossing be placed in a safe area where traffic is more inclined to slow down. The current proposed site near the ASB Centre and the traffic roundabout has been cited as ideal for this reason by one of our members. Another member, though, was concerned about placing a pedestrian crossing anywhere on Cobham Drive due to the safety issues that would present for pedestrians, motorists, cyclists and public transport users alike.

Furthermore, DPA cautiously recommends that further discussion is needed around the idea of a pedestrian overbridge either at or near Wellington Airport. At first glance, this idea might sound a good proposition in seeking to address the issues outlined above – however, there are still concerns about this from a disability perspective. Chief amongst them is that overbridges can present accessibility issues

for mobility impaired people as well as safety issues for people who would be in enclosed spaces and more likely to be physically attacked or robbed as a result. Therefore, the need to only cross the road into the main airport terminals (as at present) is still the best option as the addition of any steps into the process would impede this.

Stemming from all of the above, DPA cautiously recommends that lower speed limits (especially near the pedestrian crossing point) be introduced on the proviso that LGWM actively look into initiatives to incentivise greater public transport use, such as buses and ride share services both into and out of the area, so that individual car travel can be reduced over time, thereby reducing traffic flows to and from the airport and bay communities and increasing opportunities for cyclists and pedestrians to access the area safely. As part of this, LGWM should look at re-establishing the City to Airport bus service which has been terminated due to lack of demand. Therefore, if any of these initiatives were introduced, they would constitute a win-win for every transport mode user. It would also potentially mean that the need for a pedestrian overbridge or underpass near the airport would become redundant.

DPA strongly recommends the holding of a hui/forum with the wider disability community in Wellington to ascertain the widest range of views and to gain consensus going forward.

## Conclusion

---

DPA provides a cautious welcome to the pedestrianisation proposal on the basis that other matters are addressed, such as improving public transport accessibility and provision into the Cobham Drive area and airport precincts. Addressing issues such as the lack of accessible public transport and ride share options would be one way of tackling the high traffic volumes which plague the area. Another is to ensure the safety of everyone who uses various modes of transport be they cars, bicycles, e-scooters, wheelchairs, mobility aids, or feet.

## Let's Get Wellington Moving

### SH1 Cobham Crossing and Proposed Speed Reductions

Email [info@lgwm.nz](mailto:info@lgwm.nz)

This submission is made by the Wellington District Council of the New Zealand Automobile Association (AA).

1. The Wellington District Council of the NZ Automobile Association represents over 210,000 members. Although we are an organisation representing motorists all of our members are on occasions pedestrians and an increasing number are cyclists. We recognise and support the LGWM vision of creating an integrated package of transport improvements for all road users.
2. We also support separate facilities for vulnerable road users to encourage greater use of these active modes.
3. However, as a motoring organization we are concerned that the proposed changes on this section of SH1 will lead to increased congestion. As this is an arterial route carrying 35,000 vehicles per day any changes (including construction delays) need to be carefully considered. Otherwise perverse effects may eventuate like more traffic using Constable Street to access the city. This route already carries 25,000 vehicles per day due to the lack of a second Mt Victoria Tunnel and Basin Reserve improvements.
4. We note the LGWM objective of making travel by bus to and through the central city faster and more reliable but alas, currently the bus system is less reliable than it used to be. Cancellations are frequent, and the hub system has resulted in some direct routes being cancelled. This has resulted in multiple eastern suburb residents driving to Kilbirnie and parking all day which has increased private vehicle numbers in peak hours.
5. There is currently no bus direct to the airport. This means all passengers currently have to travel by private car, taxi or Uber. Consequently, it is critical that any changes do not increase congestion to this section of SH1.
6. Thank you for meeting with us to discuss the proposed Cobham Drive Crossing. This is our greatest concern regarding increased congestion. We acknowledge there is the potential need for a safe crossing in this area although we also note that the existing subway under the airport is heavily used and that the new crossing will only save 1 minute for a cyclist going to the ASB centre.

7. We note that 57% of respondents to the LGWM website survey say that the crossing is in the wrong place. This is concerning as the only fatal pedestrian accident on Cobham Drive was north of the Calabar Road roundabout. Google maps shows at least 3 informal crossing points in the median on Cobham Drive between the Calabar Road and Troy Street roundabouts. In our view this appears to be the most logical place for a crossing yet your consultation document rejects this option as it would also involve a crossing of Troy Street.
8. However, LGWM have not provided any breakdown of the number of users of the proposed Cobham Drive crossing who wished to go to Kilbirnie shops or the ASB stadium. Therefore as 57% of respondents consider the proposed crossing point to be in the wrong place we consider LGWM needs to reconsider the position of any proposed crossing.
9. From a safety perspective we consider a grade separated crossing of Cobham Drive to be the preferred option for both vulnerable users and the 35,000 vehicles per day using Cobham Drive. The crossing users have no wait time and the crossing is 100% safe. For the vehicles a grade separated crossing results in no congestion or safety issues such as jay walking.
10. We have doubts regarding the comment on page 21 of the Case for Change that a raised pedestrian crossing will result in a 40% reduction in deaths and serious injuries. The first pedestrian fatality was near the Calabar Road roundabout and the second one was a teenage driver of a stolen car who hit a tree by St Pats College. Neither of these deaths would be influenced by a raised crossing at north of ASB. There is no breakdown provided of where other pedestrian or cyclist accidents occurred but we suspect some of them will be at the two existing sets of traffic lights, so again unless treatments like red light cameras are introduced, these accidents will continue. Also, if the 40% reduction in accidents is too high this affects the Benefit/Cost Safety savings which are currently shown at \$2M. If the accident reductions are only 20% the B/C ratio could actually be less than 1.0.
11. LGWM have advised there is no budget for a grade separated crossing (e.g. bridge or overpass) which is estimated to cost \$10M to \$17M. However LGWM have not considered an at grade underpass (with the road moved over the top) which could be built with no risk of flooding.
12. The AA District Council acknowledge that LGWM currently have no budget for a grade separated option, but if the delays due to an at grade crossing are significant, we consider that LGWM must have a plan B to ultimately construct a grade separated crossing. Therefore, if an at grade crossing is built, we request a review after 12 months use with a full analysis before and after construction of travel times, congestion, etc.
13. LGWM have proposed a 4-metre-wide traffic light-controlled crossing with a raised safety platform north of the ASB centre. AA is concerned that the predicted delays averaging 1 minute are under estimated and that at certain times there will be significant increased congestion.
14. The AA District Council also raised at the meeting with LGWM the NZTA Pedestrian Crossing Guide. Page 12 of this guide states "Raised Pedestrian Platforms are only suitable for local roads and possibly collector roads. They are not for arterials except in major shopping centres where this function exceeds the arterial function." Also the roadway width should be no more than two live lanes of traffic, one in each direction with a speed limit of 50km/h or less. As Cobham Drive is 4 lanes wide, an arterial route with a proposed speed of 60km/h the proposed raised crossing fails to meet 3 of these important criteria.

15. LGWM responded to this non-compliance by stating the pedestrian planning guide was being revised. This response is surprising and concerning, as the NZTA pedestrian planning guide is an important 30-page guide with carefully considered designs and recommendations.
16. The AA District Council is also concerned that the proposed at-grade crossing will result in an increase in carbon emissions due to additional congestion. We note that the LGWM vision, objectives and weightings has a high 40% rating on reducing carbon emissions, yet there is no consideration of increased carbon emissions in the Benefit Cost Analysis.
17. Consequently, the AA District Council is totally against any at grade pedestrian crossing with a raised safety platform on Cobham Drive. We do not accept that delays will be minimal as nervous motorists or those cars with low front skirts will crawl over the platform and delay everyone else. We do not consider the proposal in accordance with either best practice for highway design or the control of emissions.
18. LGWM could not provide any predictions of how many people would use the crossing when it was first built citing suppressed demand. On page 9 of the Case for Change document LGWM estimate that in the future up to 250 people per day will be using this crossing. We question this figure as there was no evidence provided as to how this number was made up.
19. We now comment on the proposal to reduce speeds on sections of SH1 from Ruahine St to Calabar Road. LGWM stated on slide 6 of your presentation that from 2011 to 2020 there had been two fatal accidents and 16 serious injury crashes east of Mt Victoria Tunnel on SH1. We have already explained the circumstances of the two fatal accidents in para 10. Excluding the two fatal accidents there has therefore been an average of 1.6 serious injury accidents per year on this stretch of SH1. Considering there are over 10 million vehicle movements per year this does not seem a high figure and we would be interested in how this route compares with other sections of SH1 and SH2.
20. Naturally, like LGWM, the AA District Council is a strong supporter of taking appropriate measures to reduce all accidents. We also support the Road to Zero strategy which aims to reduce road trauma and also acknowledges that human beings make mistakes.
21. We acknowledge that reducing the proposed speed limits on this section of SH1 may reduce the severity of accidents but we are disappointed that LGWM has not looked at the causes of the accidents over the past 10 years. For example the intersection of the corner of Ruahine St and Wellington Road is a known accident spot yet no treatment is proposed such as closing the intersection to right-turning in and out traffic. Similarly, at the two existing sets of traffic lights, red light running is endemic. AA has been advocating for more than 10 years for the introduction of large numbers of red light cameras yet successive governments have failed to listen to our views. This is despite overseas evidence showing they are a proven reducer of accidents and Melbourne City has them installed at over 200 traffic light intersections.
22. Regarding the proposed reduction on SH1 Ruahine St from 70km/h to 50km/h the AA District Council discussed this issue at length and concluded that they would support this speed reduction to 50km/h in the interests of consistency with the existing 50km/h limit on Wellington Road.

23. With Cobham Drive and Calabar Road the current speed limit is 70km/h which we consider is suitable for this major arterial route carrying 35,000 vehicles per day and with a separate cycleway on the seaward side. Reluctantly, we accept that if an at grade crossing is built the speed limit needs to reduce to 60km/h. However, if the at grade crossing is not built, we consider the speed limit should remain at 70km/h.
24. For the speed limit on Calabar Road we consider it should remain at 70km/h and do not support the LGWM proposal to reduce it to 60km/h.
25. We request the opportunity to meet again with LGWM to discuss our concerns regarding both the Cobham Drive crossing and the proposed reduction in speed limits.

Yours sincerely

A handwritten signature in blue ink, appearing to read 'Geordie Cassin', with a stylized flourish at the end.

Geordie Cassin

Wellington District Chairman

**RE: Cobham Drive crossing and Safer Speeds Consultation**

Dear Seb

I refer to your correspondence of 21 June 2021 to Inspector Wade Jennings in relation to the proposed speed limit changes for Ruahine Street, Cobham Drive and Calabar Road and the proposed pedestrian and cycle crossing on Cobham Drive in Wellington.

Your correspondence has been referred to me as the Director of the National Road Policing Centre and I have consulted Inspector Jennings, as the District Road Policing Manager, for his operational knowledge of the stretches of road in question.

The Government's road safety strategy, Road to Zero, identifies that in the event of a crash, there are physical limits to the amount of force the human body can be subjected to and our chances of survival or avoiding serious injury decrease rapidly above critical impact speeds. For a pedestrian or cyclist hit by a car, it's around 30-40 km/h. In a side impact collision involving two cars, it's around 50 km/h. And in a head-on crash involving two cars, it's around 70-80 km/h.

One of New Zealand Police's goals is Safe Roads – preventing death and injury with our partners. Police supports the setting of speed limits to align with safe system principles and the need for our transport system to be forgiving in the event that a mistake is made and a crash should occur.

Pedestrians and wheeled pedestrians are highly vulnerable and improving the safety, and feeling of safety, for such road users is important. Police supports a safe system approach to enhancing and introducing infrastructure that will improve the safety of all road users, particularly those most vulnerable.

Accordingly, Police fully supports this proposal.

Yours sincerely

**Superintendent Steve Greally**

## **Submission to Let's Get Wellington Moving Consultation: Safer Speeds SH1 East of Mt Victoria and Cobham Drive pedestrian crossing.**

By email – [info@lgwm.nz](mailto:info@lgwm.nz)

This submission is made by the Wellington Regional Road Transport Association.

The contact person for this submission is the Branch President, Martin Robertson, telephone 0274 574 973 email [m.f.robertson@hotmail.com](mailto:m.f.robertson@hotmail.com)

### **1. Wellington Regional Road Transport Association**

The Wellington Regional Road Transport Association (WRRTA) represents the interests of individuals and organisations who move goods<sup>1</sup> by road within the Wellington area. By default, we also represent the interests of the customers who are served by our industry and others for whom easy and speedy access to our roading network is an essential part of the service they provide to the community, example those who operate Small Passenger Service Vehicles, (SPSVs). Also by default we represent all road users for whom the road is an essential component their workplace.

WRRTA is a branch of the Central Area Road Transport Association (CARTA). CARTA is a member association of the Road Transport Forum New Zealand (RTF). The RTF is the national body that represents the commercial road freight industry.

### **2. The importance of road freight to the Wellington economy**

The safe and efficient movement of freight by road is the lifeblood of Wellington and its economy, restricting the flow of goods or putting barriers in place that reduces the efficiency of the movement of these goods will strangle Wellington.

Everyday members of WRRTA and others deliver vitally needed goods around Wellington. These goods include stock replacement to hospitals, medical centres, supermarkets, building and construction sites and retail outlets, and they remove the rubbish.

As more and more businesses switch their stock holdings to just-in-time delivery this will have to be met by moving more goods on the road increasing the delivery frequency of these movements.

Most people who use on-line shopping have their goods delivered by road but have little appreciation for the chain of events they are starting when they click the "Buy-now" button. All that concerns them is the item(s) they have ordered are delivered promptly and in good order and condition not how the goods are delivered.

---

<sup>1</sup> **goods** means all kinds of movable personal property; and includes articles sent by post, and animals. Definition included in the Land Transport Act 1998.

Those who use roads as their workplace have an expectation that their views on any changes to the roading network that could impact on the services they provide will be afforded equal consideration alongside the views of others who use the network primarily for leisure and/or recreation.

Those that manage and maintain the roads have a Duty-of-Care to ensure the network is safe and does not impose unnecessary risk or impediments to all road users.

Stifling the efficient use of roads will strangle Wellington's economy.

### **3. This submission**

This submission relates to the proposal that will:

1. Install a traffic light controlled pedestrian crossing on Cobham Drive west of the Troy Street intersection, and
2. Reduce the speed limits on the section of State Highway 1 between the Eastern portal of the Mt Victoria road tunnel and Wellington Airport.

The justification for these changes is included in the "Cobham Drive Crossing and Speed – Case for Change" document released for public consultation under the overall Let's Get Wellington Moving project.

Our submission is in two parts:

Part One comments on the overall proposal; we see both parts are intrinsically linked to each other.

Part Two comments on each part of the proposal separately that are not already covered in Part One.

### **4. Part One – The overall proposal**

Reading through the proposal we question the sincerity of its contents.

The proposal purports to be for consultation with the public but it appears the decision to go ahead with both parts of the proposal has already been made, example "We plan to start construction by the end of this year [2021]".

We note that a do-nothing option is not included in the proposal. Maintenance of the status quo should always be a choice when considering changes of this nature, not to do so is a denial of the rights of the public to open and unbiased consultation. The absence of keeping the status-quo option gives us the impression that this consultation is not much more than a window dressing exercise by those who have a jaundiced view of who uses the roading network and why they use it.

Without exception all those who live in the Eastern suburbs are either direct or indirect customers of those who deliver goods to these areas. These goods are delivered by truck or by van; they are not delivered by walkers, cyclists or by bus.

Wellington Airport is the catalyst for a significant amount of the travel by road along the route covered by the proposal. Most people who travel to or from the airport do so by private car or by SPSV as there is no other way, the document does not attempt to quantify these users.

The consultation document does not identify the number of vehicles who transit the section of the State Highway network affected by the proposals and whose sole purpose is to get to/from the airport and/or deliver goods in the Eastern suburbs. It makes no attempt to identify those road users who may make multiple daily trips along this network in the course of their work, example courier drivers. In this respect we question the veracity of the document.

Given the decision to go ahead with the proposals appears to have been already made we question if this decision meets the guidelines for good decision making in Government as set out in the Crown Law Office publication "The Judge Over Your Shoulder" in particular the guidance provided for making a decision with an open mind and inherent duty of fairness that should prevail in all decision-making processes. Although this publication was aimed at National Government the principles it describes also apply to Local Government.

#### **4.1 The consultation document.**

Beginning on page 6, Section 2 of the consultation document tries to put a transport context around the proposals.

Clause 2.1 suggests the road network covered in the proposal has a poor safety record.

Clause 3.1 document says the between 2011 and 2021 there was one fatal and one serious pedestrian crossing crashes and one serious and four minor injury cycle crashes on this section of highway. A brief examination however of the on-line NZTA Crash Analysis System (CAS), suggests the reported accident record in this area is far less than other parts of the central city, the dedicated bus route on Manners Street between Victoria and Willis Streets is one example.

WRRTA believes that if the goal of the proposal is to improve the "poor" accident rate in this area the proposals outlined are flawed; the proposal will not prevent people from crossing the roadway. The only way to achieve this with a high degree of confidence that the intervention will succeed is to prevent direct pedestrian/cyclist direct interaction with traffic. This could be done by putting a pool style mesh fence along each side of the roadway thus preventing any direct interaction. Placing a fence down the median strip will not work as many would likely see the median strip as a safe area and from which they may then try to climb over the fence to continue their crossing.

International best practice for highway design, and we cannot ignore the roads in the proposal are State Highway 1, is to separate vulnerable road users including pedestrians and cyclists from motor vehicles. The proposal looks to do the opposite by putting some road users directly in the path of vehicles albeit on a controlled crossing. The proposal seeks to mitigate some of this risk by reducing the speed of vehicles in this area, this suggests the proposed pedestrian crossing will not have the significant impact on the potential for vehicle/pedestrian related accidents the proposals envisage. The justification for a reduction in speed is that the New Zealand Transport Agency has identified the roads named in this proposal as ones where a reduction in speed could be expected to significantly reduce deaths and serious injuries, page 23, no data is provided to support this claim. Whilst any road related trauma is unacceptable there are roads within Wellington that have a higher trauma rate than these roads, Manners Street between Victoria Street and Willis Street is one of these.

We question if the road design in this area, trees planted in the median strip, has ever been considered as a contributing factor to vehicle/pedestrian related crashes in this area. These trees may well be obstacles to the vision of people who choose to cross the highway, they could also be vision obstructors for traffic to see people crossing or who are about to cross.

Clause 2.2 and its accompanying chart shows the weekday and weekend current travel demand for Cobham Drive based upon NZTA traffic count data. We note that demand is similar for weekdays and weekends with similar peaks. We suggest therefore that this data shows traffic activity in the area is more likely to be associated with activity at the airport and goods delivery in

the Eastern suburbs than people using private cars to travel to the Kilbirnie shops or commuting to work as the document claims.

Clause 2.2 also says that southbound traffic is often higher than northbound traffic and suggests a possible reason for this is congestion on SH1 resulting in traffic taking alternative routes. Whilst not specifically mentioned it is assumed that one of these routes includes travel along Kemp Street, through Kilbirnie and over Crawford Hill and through Newtown. These roads all through residential areas which should not be subjected to increased traffic flow caused by deficiencies in the State Highway network. These deficiencies not only cause traffic to seek alternative routes to bypass congested roads but also contribute to increased emissions as vehicles are forced to operate in a mode that is not conducive to optimum fuel use. Despite the increase in operating costs including paying more road user charges because of the extra distance travelled, commercial operators live with these alternative routes because of the need to meet customer service expectations. There is no evidence that these proposals will reduce traffic congestion on the affected roads. The reality is congestion will increase as further barriers to efficient traffic flow are added. Traffic congestion is a known contributor to road rage resulting in inappropriate road user behaviour and mental stress.

Clause 2.4 cites Calabar Road as a barrier to safe crossing. This is hard to fathom as the barrier depicted in Figure 3 passes directly over the subway the runs under the airport and which was refurbished by the City Council in 2010 and is quoted in a Press Release from the Council on 18<sup>th</sup> September 2010 as providing "quick access from Coutts St, Kilbirnie and Rongotai to Miro St, Miramar, Strathmore and points East". We question why there is little publicity given to using this subway and its availability as a safe travel route and why there is little mention of this alternative route in the consultation document.

Clause 3.1 lists the problem statements that underpin this proposal. These statements correctly identify Cobham Drive as a critical link connecting the Wellington CDB to the airport. What it fails to identify however is that many who use the airport begin their journey from areas outside of the city and only transit the CBD because they have no option. For many of these road users walking, cycling or public transport is not an option, the only option is SPSVs or private cars.

The problem statements do not recognise those who use the roads affected by the proposal to deliver goods to businesses and households throughout the Eastern suburbs. With the predicted rise in on-line shopping and the planned developments around Shelly Bay the need for greater and more frequent deliveries by road will materialise.

International best practice for highway design points towards reducing side of the road fittings such as lamp posts, and roadside signs as one way to reduce road user trauma, this proposal goes against this practice.

## **4.2 Economic assessment**

Section 4 considers crossing options assessments.

Clause 4.2.3 provides a cost benefits analysis: Table 6 within this clause provides an economic summary using the Austroads pedestrian tool.

We believe this analysis is flawed. It does not factor in maintenance of the status-quo on this section of highway nor does consider the economic loss to commercial operators using this road and who will be impacted by increased travel time and fuel consumption.

 WRRTA request that the economic impact of these proposed changes be included in the cost benefit analysis shown on page 16 of the consultation document and that WRRTA is provided with a copy of this revised analysis.

### 4.3 No reference to increased emissions.

Despite Government policy to reduce overall transport related emissions we can find no reference to the probability that if the proposal goes ahead there will be an increase in vehicle related emissions. This will happen because vehicles will be operated outside of their optimum fuel efficiency range, that is at a lower road speed but at a higher engine operating speed. Fuel efficiency is also affected by the need to slow down or stop such as for a pedestrian crossing and when driving over a raised safety platform.

 WRRTA request that an independent and unbiased fact-based assessment be undertaken of the potential of this project to affect emissions.

### 4.4 The consultation process.

WRRTA is concerned that the on-line consultation process fetters the potential for unbiased outcomes. There is no provision to identify any person who makes frequent use of the roads affected by the proposal and who do so because the road is their workplace and they are there because they are providing a service requested by their customers.

One question asks if the crossing is in the right spot to help you get to where you want to go in the area. This question suggests that the installation of a crossing is fait accompli and all that needs to be decided is its location.

Another question asks how important it is to make changes to improve safety on State Highway 1. This question is biased because it has a wider application than just the roads East of Mt Victoria.

Despite the style of questioning, it is noted that on 19 June 2021 51% of the 2,429 respondents say the proposed crossing will not make them more likely to change their behaviour to include walking, running, cycling or use a scooter for trips around the area. We therefore question the methodology used to justify this proposal.

## 5. Part Two - The proposed pedestrian crossing.

The impression given by the on-line before and after view of the pedestrian crossing gives a biased view of the outcomes of the installation of this crossing. It shows a view with no pedestrians and compares this to one that includes several cyclists and pedestrians including a number waiting on the median strip to complete their crossing. The impression gained by this is that the crossing will result in a significant increase in people wishing to cross Cobham Drive. No hard data is provided to support this impression however.

It is fantasy to believe that people who want to cross Cobham Drive will do so only at the controlled crossing. Human nature is that people will do what they believe is best for them at that time. If a person decides they must cross Cobham Drive they are more likely to do so when they believe they can do this safely rather than to seek the closest designated safe crossing point. The road trauma that followed the opening of the Western end of Manners Street to buses only is evidence of this despite safe crossing points at either end of this stretch of road.

Despite the depiction in the on-line view this area is not known for ideal weather conditions. There is no shelter from inclement weather in this area. Given this, if a person wishes to cross Cobham Drive they will attempt to do so where they can and as quickly as possible, more so if there is inclement weather. They are unlikely to pause their crossing in the safe median even if the traffic signals are against them. If they believe it is safe to cross they will do so.

### 5.1 Reduction in speed limits

Vehicle speed in this area is very dependent on traffic density at the time. The roads in this area are heavily congestion at peak time and congested at most other times. The chart, Figure 2 in the

document, shows traffic volume over a 24-hour period. We believe that similar data analysis that considers road speed over the same time frame would show that at the times of higher traffic volume the road speed would be no greater than that proposed in the document, i.e. road speed in this area is largely self-regulating.

We believe that this data exists and request a copy of this be sent to us.

Motor vehicle manufacturers spend millions of dollars annually on research to make internal combustion engines more efficient. This research and its consequential application in vehicles optimises economic engine speed against road speed.

Organisations, such as the Automobile Association who have an interest in advising drivers of fuel-efficient driving techniques, encourage drivers to drive at a constant safe speed as steady driving is more conducive to fuel efficiency than varying speeds. The Government's own heavy vehicle fuel efficiency programme, SAFED NZ [safednz.govt.nz](http://safednz.govt.nz), encourages the same approach to fuel efficient driving. Fuel efficient driving is safe driving and reduces overall transport emissions. The reduction and varying speed limit proposals are contrary to international research and this advice.

## 6. Summary

WRRTA is not opposed to change however any changes that are made must be made to improve what already exists; changes that will stifle activity or have negative economic outcomes for many are not good changes. Similarly changes that are made must benefit the entire community, changes must not be made for the benefit one sector whilst impacting on the ability of other sectors to efficiently go about their lawful business.

WRRTA oppose both these proposals because:

1. The proposals are contrary to the overall theme of the Lets Get Wellington Moving project, rather than improve movement they will suppress it.
2. The consultation document is biased towards an outcome that has already been decided and takes a jaundiced view of the alleged benefits.
3. The information supplied is flawed in that it does not consider the detail of who travel this section of the state highway network and the purpose for their travel.
4. No consideration has been given on the potential effects of these proposals for whom these roads are part of their workplace.
5. The proposals are contrary to best practice for highway design and reducing transport emissions.
6. The proposals will increase traffic congestion on a section of state highway that is already heavily congested at peak travel time.
7. Safer vehicle/pedestrian, including cyclist, interaction in this area will only be achieved by total separation of the two transport modes, vehicle movement from pedestrian.
8. The cost benefit analysis does not consider the economic impact on road users who ply this section of highway pursuant to providing a service to their customers.
9. The proposals do not address the fundamental causes of traffic congestion along the Ruahine St and Wellington Road corridor instead they will add to it.

WRRTA look forward to further discussions with those responsible for the Let's Get Wellington Moving project about the matters raised in our submission.

Thank you

R W Walsh

# COBHAM DRIVE AND SH1 SPEEDS

## CYCLE WELLINGTON SUBMISSION

Please contact Alex Dyer [REDACTED]

### Key points of our submission

- We support plans for the new crossing
- We support lower speeds. There should be a consistent 50 kmh speed limit on SH1 in the urban sections of Wellington.
- This is consistent with [Road to Zero](#).

### Crossing urgently needed

We've been waiting far too long for a safe crossing. The sports centre opened in 2011 – but there's been no convenient way to cross Cobham Drive. That's unacceptable.

The sports centre, St Patrick's College, and EBIS are adjacent to Cobham Drive, but students cannot easily cross the road to Miramar. There is currently no safe crossing point anywhere on Cobham Drive from the Miramar Cutting to the traffic lights at Evans Bay Parade.

Installing this crossing will reduce the travel time considerably for people using active modes of transport.

At present, the detour under the airport runway can provide a shorter journey to locations such as the sports centre than travelling to the crossing at Evans Bay Parade. This means it is more difficult for people in Miramar to walk or bike to destinations like the sports centre, the beach at Lyall Bay, or the shops in Kilbirnie. It also means it is harder for people in Rongotai or Kilbirnie to get on to the Tahitai paths.

### The case for change

It's good to see a strong statement in the consultation material about the case for change:

“Speed is a factor in every crash. No matter what the cause of the crash is, the faster the vehicle is travelling, the more likely it is that somebody will be hurt or die. People make mistakes, and we will never eliminate crashes, but speed can be the factor that determines whether you are killed, seriously injured or walk away unharmed.”

### 50, not 60 or 70 kmh

SH1 speed limits should be 50 kmh in an urban setting, where traffic mixes with people on foot and bikes. This is consistent with other parts of SH1 in Wellington.

To make these speeds credible, we suggest the SH1 lanes are narrowed to induce lower traffic speeds. If a street looks like a highway, people go faster.

We ask you to add speed feedback signs, speed cameras, red light cameras, and effective enforcement on SH1 from the Mt Victoria Tunnel through to the Airport.

On a busy street, traffic flows more smoothly at 50 kmh than at faster speeds, so consistent travel times are likely for people who are using the roads in vehicles.

### Level of service

It will be critical for people using the crossings to have a short wait time at the beg buttons.

The proposal sketch shows a light post right in the middle, which should definitely not be in the way.

## ABOUT CYCLE WELLINGTON

Cycle Wellington is a voluntary, not-for-profit organisation aimed at improving conditions for existing cyclists and encouraging more people to bike more often. We advocate for cyclists who use their bikes for recreation and transport. Since 1994, we've worked constructively with local and central government, NZTA, businesses, and the community on a wide variety of cycle projects. We represent around 2,000 members and supporters.

Phone: [REDACTED]

Date: **28 July 2021**

### 1. Our Submission

Thank you for the opportunity to comment on these proposals. We strongly support LGWM's objectives, and view the proposals in the consultation as an important step on the way to achieving them.

We support improvements that make a more safer, more pleasant and convenient walk along and across Calabar Road, Cobham Drive and Ruahine Street, and which will make this stretch of road safer for everyone.

Currently these high-speed busy roads cause significant severance for the adjoining suburbs, preventing safe or convenient access between Miramar and the ASB Sports Centre/Kilbirnie, and to the Town Belt, the shops and the beach. The proposed crossing and safer speed limit are a step forward to address these issues.

### 2. Safer speeds

As noted in the Case for Change report<sup>1</sup> there is significant severance for the communities in this area from daily and desired routes. We note that most Wellington roads have a speed limit of 50km/h, which is 20km/h faster than a safer for pedestrians speed of 30km/h.

We have the following specific comments on Table 7:

- a) there is only one section of this route that is even considered safe at 60km/h and that does not account for increased use by pedestrians and other more vulnerable road users. This will add to the confusion for drivers if there are several speed changes in what is for vehicle users a relatively short distance;

<sup>1</sup> <https://lgwm-prod-public.s3.ap-southeast-2.amazonaws.com/public/Documents/Cobham-Dr-2021/Cobham-Crossing-Speed-Tech-Report-1.37MB.pdf>.

- b) as noted in footnote 28, the safe and appropriate speed for Calabar Rd south of Caledonia St is 50km/h, not 60km/h as proposed. The existing 50km/h limit should therefore clearly be extended from the Broadway/Stewart Duff Drive roundabout northwards along Calabar Rd to north of this intersection.
- c) the same table says that Cobham Drive is median separated with a 70km/h speed limit and limited access, and that the proposed 60km/h limit will apply to the sections controlled both by Waka Kotahi and Wellington City Council (footnote 30). But the section controlled by WCC is very different in character, a single carriageway with on-road parking on one side and just a painted median, already having a 50km/h limit for about half its length. (It also appears not to be included in the speed analysis in Table 2.) Given the mischaracterisation of this stretch of road and associated lack of analysis, it makes more sense to extend the existing 50km/h limit so that it applies to the whole of the WCC stretch.

Given these comments, it makes sense to minimise confusion and maximise safety to make the whole of the stretch of SH1 under consideration a 50km/h zone, and **we recommend a continuous 50km/h** safer speed limit for the entire route consistent with most of the rest of urban Wellington.

In addition, Ruahine Street should design features at the Goa St intersection to slow vehicle traffic and allow pedestrians to cross safely to the Town Belt, netball courts etc. from southern Hataitai.

### 3. Cobham Drive crossing

**Living Streets Aotearoa strongly support an at-grade crossing** of Cobham Drive, as an equitable and much safer way for people to walk across this road, reducing the severance. We support this proposal in particular because of the speed and ease of implementation.

We do NOT support a crossing that diverts pedestrians from road level and desire line via an underpass or bridge, neither of which are suitable at this site.

**We recommend that separated pedestrian and cycle crossings** are provided. It is unrealistic to expect that pedestrians and cyclists will use the crossing without conflict or that they will use it in the same manner (as can be seen from other 'shared' crossings in Wellington). This should be possible to achieve and we note the AustRoads crossing design assessment used is for pedestrians only.

The cycle lane at the pedestrian crossing should be part of the traffic light signals so that pedestrians can safely access the crossing from a safer waiting area away from all traffic.

We note the detail of how the crossing will operate, and suggest that in addition there should be an immediate response to the beg button being pressed, subject only to a minimum green period for traffic. We suggest that adequate shelter for people waiting to cross needs to be provided.

We expect that best practise pedestrian crossing technology will be used, such as Puffin crossings, where pedestrians are detected waiting, there is forward-call for the other side of the road, there is a short wait time (maximum <15 seconds), and there is adequate cross time tailored to the person crossing that does not assume a fast 5km/h walk speed.

We do not support a footbridge for the reasons given in Table 5, which we suggest should be amended as follows:

- the *Travel time for pedestrians and people on bikes* section should take into account that a footbridge or subway will impose a longer distance and time than an at-grade route in order to walk/bike the 70-odd steps or 400m of ramps, which on at least one side will probably not be on the relevant desire line;
- the *Personal Safety* section should be expanded to include convenience and attractiveness, noting that ramps and steps will require expenditure of considerable personal energy, and a footbridge (unless fully enclosed) will be very exposed to the prevailing northerly winds.

These factors will be significant disincentives to the use of a footbridge, particularly for people who have disabilities or are elderly. The crossing facilities must allow for universal accessibility (as an at-grade platformed crossing does). Anything that does not meet this standard is unacceptable.

On the south side of the proposed crossing, the current path through to Kemp St and the access to the ASB Sports Centre are substandard, and these will need to be upgraded and mode-separated to meet the standards set by the new Cobham Drive paths. The connection through to Kilbirnie as marked by the green arrows in Figure 6 is also substandard, and needs to be completed with pedestrian crossings on all legs of the Rongotai Rd/Evans Bay Parade/Onepu Rd intersection.

A more preferred option would be that the Troy St/Cobham Drive roundabout be converted to a signalised intersection with pedestrian crossings on each leg, which would provide much better pedestrian access. A further pedestrian crossing is required across Calabar Rd at the Cobham Drive roundabout.

#### **4. Conclusion**

We support these proposals, with recommended changes as above, as the positive benefits will be transformational for people on foot.

In addition to the above points we strongly support every opportunity to generate mode shift to help New Zealand reach its climate targets.

With respect to consultation responses, we note that the proposals can be seen as affecting many current users negatively, while affecting fewer positively. This could well mean that negative responses outnumber positive ones, and we would ask you to bear in mind that the individual negative effects are likely to be small but the positive effects will be

transformational, particularly for people wanting to avoid the need to drive between Miramar shops and the ASB Sports Centre or Kilbirnie. As the Ministry of Transport has noted, *pedestrians [and cyclists] are legally entitled to be on the road. Motorists have a duty to pay for the facilities needed to keep them safe from motor vehicles*<sup>2</sup>

Finally, we suggest that counts of pedestrian usage along and across SH1 Cobham Drive are taken before and after implementation.

We3 would like to be heard in support of this submission.

### **About Living Streets Aotearoa**

Living Streets Aotearoa is New Zealand’s national walking and pedestrian organisation, providing a positive voice for people on foot and working to promote walking friendly planning and development around the country. Our vision is “More people choosing to walk more often and enjoying public places”.

The objectives of Living Streets Aotearoa are:

- to promote walking as a healthy, environmentally friendly and universal means of transport and recreation
- to promote the social and economic benefits of pedestrian-friendly communities
- to work for improved access and conditions for walkers, pedestrians and runners, including walking surfaces, traffic flows, speed and safety
- to advocate for greater representation of pedestrian concerns in national, regional and urban land use and transport planning.

For more information, please see: [www.livingstreets.org.nz](http://www.livingstreets.org.nz).

## **SH1 Cobham Drive Crossing and Speed Restrictions – Impact on Heavy Haulage and Oversize Operations**

Submission made by: NZ Heavy Haulage Association, PO Box 3873, Wellington 6140

---

This Association is the national representative organisation for specialised transport operators that move large indivisible freight items that are overdimension and overweight.

The Association has been advocating for our industry for over 50 years and we have a wide range of experience in ensuring that the roading system in NZ is fit for the purpose of transporting large loads around the nation.

While the number of these large loads may be small as a proportion of the total traffic that uses the roading network, the ability to transport oversize loads is a necessity as these loads are often key to infrastructure projects, are used in important industries (such as commercial or civil construction), or are pre-fabricated items that are being transported to the final location. In addition, the use of recycled houses and buildings contributes to the nation's houses stock, while new homes are able to be delivered straight to site.

The Association advocates for the maintenance and preservation of current oversize routes. In many places around NZ there is only one haul route suitable for oversize loads, and it is crucial that these routes are retained and where possible envelope clearances are improved.

### **1. Cobham Drive Crossing**

This section of SH1 is the prime oversize route used by operators to transport large wide, high, long and heavy loads to and from the eastern suburbs of Wellington.

Examples of oversize loads that are transported along this section of road for clients include:

- relocatable classrooms for schools,
- houses that are being recycled onto a new site,
- new pre-fabricated homes that are being transported to their final location,
- prefabricated construction units – such as for the Rydges Hotel at the Airport, and
- large construction equipment for the development past and future – such as the Moa Point Treatment Plant, the Shelley Bay development, and the possible future extension of the Wellington Airport Runway.

Therefore it is crucial to maintain this section of State Highway in both directions as a route that is physically capable of transporting oversize loads. The best solution from an oversize freight perspective would be for the crossing point not to be provided. However if one has to be provided somewhere then it is very pleasing to see that the information specifically indicates that this route is an oversize route, and therefore that an envelope of 10m wide and 6m high is to be provided. We strongly support the provision of this envelope along this route.

This Association advocates that the actual width distance between restrictions is slightly wider than 10.0m, as if an envelope for a load 10m in width is to be provided then it needs between 300mm 500mm on each side to be able to negotiate a wide load between the poles safely, without impacting them. Note that these dimensions are less than what we would normally seek for an overdimension route – however in this location the 10m wide by 6m high dimension is acceptable.

We prefer an at grade solution for the crossing, as preferred to other options, as this gives the most liberty for overweight loads and overdimension loads to travel without restriction. We note that an underpass can normally be constructed so that it can be of suitable strength to enable overweight loads to travel over the structure, and an overbridge can be constructed to provide suitable height and width clearances, but there can be significant engineering and cost involved in this.

The design of the traffic signals on each side of the road needs to allow for the 10m width (plus tolerance) and it is key that this is provided without the need to lay down these poles.

The proposal includes a raised pedestrian crossing as part of the design. We would not be in support of this design feature. A raised crossing unnecessarily slows down the traffic driving along here, when there are no pedestrians crossing. When people do need to cross at this point, then the traffic signals provide suitable warning to stop – the raised pedestrian crossing is not needed.

For those users on wheels, then ramps within the footpath would provide a smooth access to the road – as they do in most other crossing points around Wellington.

If it is decided that a raised pedestrian crossing is to be provided in both directions then they need to be of suitable overall height and ramp angle to be suitable for low-loader transporters to mount, namely:

- 75mm in height above the road surface
- A ramp angle of 15 degrees

This is so that low loaders with a ground clearance of 100mm can mount over them, without impacting on the raised pavement. The Swedish style of raised crossings is a potential solution for enabling a less intrusive crossing in the roadway.

## **2. Speed Limit Consultation**

This Association supports improved road safety on our roads, but we also seek efficiency for freight delivery.

The issue that we have with the lowering of speeds, is that they operate 24/7; at the times when there is congested traffic through this section of road, then speeds will often be lower than the speed limits prescribed, at other times the current speed limits are suitable for moving people and freight from one place to another.

Then at off peak times, and overnight, when most of the oversize freight is moved, there is very little traffic on the roads, and fewer (or no) vulnerable road users. The current speed limits are suitable for the overnight travel of freight, and it would be an unnecessary reduction to limit speeds to that which is proposed.

As a result, unless there is a way to implement time-based speed limits, eg overnight speeds to stay as they are, then we would advocate to keep the limits as they currently stand, and generally traffic flows will dictate what speeds can be travelled in the peak periods.

## Road Transport Forum (RTF) submission on **Let's Get Wellington Moving** (LGWM) proposals on SH1 east of Mount Victoria

### 1. Representation

- 1.1 Road Transport Forum New Zealand (RTF) is made up of several RTF members include Road Transport Association NZ, National Road Carriers, and NZ Trucking Association. The affiliated representation of the RTF is some 3,000 individual road transport companies which in turn operate 16-18,000 trucks involved in commercial road freight transport, as well as companies that provide services allied to road freight transport.
- 1.2 The road freight transport **industry is 3.0% of New Zealand's** gross domestic product (GDP) and it **carries 93% of the nation's freight**. We employ around 26,000 people and vocational education is of growing importance in our industry due to a shortage of drivers and other workers.

### 2. Introduction

- 2.1 The RTF provides sector leadership and believes we all need to operate in an environment where the following must be managed and co-exist:
  - 2.1.1 The safety and wellbeing of our drivers and other road users. Our drivers are our most valuable asset.
  - 2.1.2 The impacts of transport on our environment.
  - 2.1.3 The transport of goods by road is economically feasible and viable and it contributes the best way it can to benefit our economy.
- 2.2 **Let's Get Wellington Moving (LGWM)** is seeking feedback on its proposals to reduce speed limits on some sections of road east of Mount Victoria and build a signals controlled crossing on Cobham Drive.
- 2.3 The RTF has been proactively participating in LGWM conversations since the latter started in 2016 and some of our most recent formal feedback includes:
  - 2.3.1 Golden Mile Improvement proposals in July 2020.
  - 2.3.2 Thorndon Quay and Hutt Road proposals in June 2021.

- 2.4 The RTF is also mindful that its earlier feedback does not appear to have been captured in the various LGWM summaries to date. Given our earlier view that LGWM is not thoroughly considering the risks, trade-offs and opportunity costs we question the authenticity of the consultation. We urge LGWM to give genuine consideration to these matters before forging ahead regardless.
- 2.5 We would like to acknowledge at the LGWM team that engaged directly and provided RTF with a face-to-face briefing on these changes in their Wellington office on 6 July 2021.
- 2.6 The lens and scope of our submission is predominantly:
- 2.6.1 The quality of policy development and decision making.
- 2.6.2 The impacts and risks related to commercial (road freight) traffic and the economy that traffic serves.
- 2.7 Given a significant part of this LGWM proposal relates to speed management, we would like to remind it that over the past decade or so, many operators in the road freight transport industry have proactively taken steps to better manage heavy vehicle speed, for example speed limiting their vehicles. More recently, given the advancement in vehicle tracking telematics and digitised speed limit mapping, heavy vehicle speed compliance reporting and associated driver coaching and reward programmes are not uncommon.
- 2.8 To supplement this submission the regional trucking associations for which the RTF provides unified national representation will, at their discretion, provide explicit submissions on changes in their respective locations.

### 3. Comments on policy making process

- 3.1 We are concerned that so little evidence base has been provided by LGWM to support its proposals, in particular the Cobham Drive crossing. As far as we are aware, LGWM has not provided any robust evidence, such as benefit cost analyses, to underpin its latest ideas.
- 3.2 According to **LGWM's Consultation Document, in essence the** rationale for the crossing is because some people make dangerous crossings, and other people may choose to drive, even for short trips. We also heard at our LGWM briefing that the Cobham Drive crossing construction will cost in the order of \$1 million, excluding associated externalities.

- 3.3 While we appreciate that there have been a number of injury incidents including a tragic fatality in 2016, and we support the aspiration of Road to Zero, we do not support the approach of safety at any cost.
- 3.4 We agree that the crossing will provide a safer alternative for cyclists and pedestrians to use. However, it does not follow that the presence of a facility means everyone will use it. Therefore, we believe LGWM is being overly optimistic with its rhetoric on the road safety benefits associated with the proposed crossing.
- 3.5 We acknowledge that LGWM has undertaken an options analysis on four scenarios of where a crossing could be positioned and various construction forms, namely at road level, over-road bridge or a tunnel. However, in our opinion where LGWM has failed is that it has not thoroughly considered the option of doing nothing, or any opportunity costs, and instead it has jumped straight to a starting point of delivering a crossing regardless of justification.
- 3.6 As a general observation, there are a number of recent initiatives being presented under the guise of safety initiatives and we are deeply concerned that the likes of LGWM and Waka Kotahi NZ Transport Agency are **exploiting the transport sector's** broad support of Road to Zero and these agencies are now blindly applying a safety at any cost approach. Each time a project such as the Cobham Drive crossing proceeds, it sets a worrying precedent. Our understanding is that this approach is not what New Zealanders signed up for and it is certainly not what we signed up for.
- 3.7 As an example of the issue raised in 3.6 above, we agree that creating a controlled crossing provides a potential solution however, the installation of a raised platform is very much in the diminishing returns space. The raised platform will enable a smoother crossing for the likes of people on mobility devices and wheelchairs however, it will also adversely impact the 35,000<sup>1</sup> vehicle movements that typically use Cobham Drive every day. Every driver will need to slow down on their approach to the crossing even when the traffic signals are green. We believe there needs to be a better balance between adversely impacting tens of thousands of people for the benefit of a few.
- 3.8 Further to 3.7 above, we believe that unless a better balance is introduced to LGWM thinking then there is risk that the minorities benefiting will become increasingly marginalised.
- 3.9 We urge LGWM to develop and provide a more balanced case on the impacts of its proposal on all parties, and in particular provide quality

---

<sup>1</sup> Mt Victoria to Cobham Drive Scoping Study - Technical Report – Traffic and Transport Assessment and Evaluation, Waka Kotahi NZ Transport Agency and Wellington Tunnels Alliance 2011

data on the economic and social benefits and disbenefits. This would enable much more meaningful discussion on the return on investment, the opportunity costs, the winners and losers, and the risks associated with the proposal. We believe LGWM has a fundamental responsibility to not only our members but the wider New Zealand public, to bring more transparency to these changes before forging ahead regardless.

#### 4. Technical comments on the proposals

##### 4.1 Lowering the speed limits:

4.1.1 We agree that the physics associated with reducing the speed could contribute to safer outcomes.

4.1.2 In our view there are a number of differences in the build environment of Cobham Drive and Calabar Road (refer Figures 1 and 2 and 4.1.3 below) therefore we are concerned that in the event a driver misses seeing a speed limit sign they may become confused and distracted while trying to establish the applicable limit. In addition to the adverse risk to safety, that also puts those drivers at risk of either receiving an infringement notice or being penalised by their employers in their internal safety assurance speed management programmes.

Figure 1: Cobham Drive

Figure 2: Calabar Road

- 4.1.3 Cobham Drive is median divided, and either side of the carriage way is relatively free of clutter whereas, Calabar Road generally has narrower shoulder width, a variable median definition and includes access points to Caledonia Road. In our view, it would not be unreasonable that a driver having just travelled north on Calabar Road would, upon transitioning onto Cobham Drive, expect that the speed limit is higher given the change in development and the road geometric characteristics.
- 4.1.4 In the event the speed reductions proceed, we suggest that to help with implementation of changes there should be a considerable amnesty period when changes to speed occur, and furthermore, there should be agreement that enforcement does not occur within several hundred metres of the boundary where the speed limit is reduced.
- 4.1.5 We would also like LGWM/Waka Kotahi to work more closely with telematic providers so any changes are widely publicised and drivers get a fair and reasonable chance to adapt to the changes.
- 4.1.6 When undertaking future consultation on speed limit changes we request LGWM provide the mean free flowing speed and 85<sup>th</sup> percentile speed for the respective sections of road as this will give parties a much better understanding of the impact of any change.
- 4.2 The Crossing
- 4.2.1 **We note LGWM's justification for the crossing** suggests that this crossing will make it easier for people in Miramar to walk or bike to

destinations like ASB Sports Centre, the beach at Lyall Bay, or the shops in Kilbirnie.

- 4.2.1.1 We agree that the crossing should increase the safety of cyclists and pedestrians accessing ASB Sport Centre however, that is contingent on them using that crossing.
- 4.2.1.2 Jay-walking is a well-known phenomenon in Wellington and other parts of the world and a similar risk applies with other vulnerable road users such as, but not limited to, cyclists and mobility scooters. It is not a sign of well-behaved versus less well-behaved pedestrians, but merely a sign of a traffic system which is not laid out to meet pedestrian requirements for short waiting periods at lights and easily accessible crossings at level<sup>2</sup>. For people travelling from Miramar, the proposed crossing is north of the ASB Sport Centre which means they must travel past their final destination and then backtrack. Therefore, it appears quite predictable to us that some people will cross Cobham Drive before reaching the proposed crossing and that those people will face the same risks as with the status quo. LGWM do not appear to have considered this and its rhetoric implies that had the crossing been there earlier, it would have prevented the previous injury incidents. Unfortunately, that is simply not the case.
- 4.2.1.3 In the event LGWM proceed with having a crossing we suggest it consider effective ways to make road users obligated to use it.
- 4.2.1.4 Our other concern **regards LGWM's view that this crossing will make** it easier for pedestrians and cyclists from Miramar to access the shops in Kilbirnie. It appears to us that there are three obvious routes:
- via Kemp Street near Troy Street roundabout and the crossing;
  - via Rongotai Road near Troy Street roundabout and the crossing; and
  - remain northbound on the newly built facilities on Cobham Drive and access Kilbirnie via Evans Bay Parade.
- 4.2.1.5 Presuming one of the three routes in 4.2.1.4 is safer than the others, and in the event the safest route is to remain on Cobham Drive until Evans Bay Parade, which is also the best way of promoting maximum use of the new cycleway and pedestrian facilities, then the crossing creates a risk of promoting and diverting those road users to a less safe route. We suggest LGWM consider the risk of perverse outcomes.

---

<sup>2</sup>City to Waterfront- Public Spaces and Public Life Study: October 2004 Wellington City Council.

- 4.2.1.6 Our concern is that LGWM has become myopically obsessed with simply installing a crossing without more strategically considering and planning the safest routes for the cyclists and pedestrians and use of the new facilities.
- 4.2.1.7 If LGWM do not consider the issue in 4.2.1.6 more comprehensively, then our fear is that the perverse outcomes will further escalate and LGWM will then propose the likes of Kemp Street and Rongotai Road needing similar treatment to Cobham Drive to make safer cycling and pedestrian facilities. In our view, that would be an extremely poor use of public money.
- 4.2.1.8 We understand that to provide a smooth crossing for wheel chair users and mobility scooters LGWM proposes that the crossing will be a raised platform design. We also understand from information at our briefing with LGWM that to maintain good car control and ride comfort while traversing the platform it is envisaged that all free flowing (off peak travel) car drivers will slow from 60 km/h to approximately 40 km/h regardless of the signals requiring the traffic to stop or not. We agree that raised platform crossings have that effect.
- 4.2.1.9 Introducing a traffic device that will slow the 35,000 vehicles that typically travel on Cobham Drive each day has negative impacts on vehicle emissions, both CO<sub>2</sub> and harmful emissions (nitric oxides and particulate matter) and noise. We request LGWM provide evidence justifying that the benefits of a smooth crossing for a relatively minute number of people exceeds the costs associated the vehicle related negative externalities.
- 4.2.1.10 In the absence of evidence justifying it, we do not support the proposal to use a raised platform.

## 5. Concluding comments

- 5.1 As a general observation, there are a number of recent initiatives being presented under the guise of safety initiatives. We are deeply concerned that the likes of LGWM and Waka Kotahi NZ Transport Agency **are exploiting the transport sector's broad support** for Road to Zero and these agencies are now blindly applying a safety at any cost approach. We do not believe that this is what New Zealanders signed up for.
- 5.2 We do not support safety at any cost and we believe that approach places considerable risk to public money. Decision making using public money must come from an evidence base and the evidentiary rigour is

sadly lacking in this proposal from both a road safety for all road users and economic benefits and disbenefits perspectives.

- 5.3 We are concerned that LGWM has become ideologically obsessed with Road to Zero and it is myopically focussed on installing a crossing as soon as possible. Each time a project such as the Cobham Drive crossing proceeds without being supported by good quality policy development and decision making it sets a worrying precedent.
- 5.4 We urge LGWM to develop and provide a more balanced case on the impacts of its proposals on all parties, and in particular provide quality data on the economic and social benefits and disbenefits. This would enable much more meaningful discussion on the return on investment, the opportunity costs, the winners and losers and the risks associated with the proposal. We believe LGWM has a fundamental responsibility to not only our members but the wider New Zealand public, to bring more transparency to these changes before forging ahead regardless.

**Cobham Drive and SH1 Speed Limit Submission**  
**Save The Basin Campaign**

28/7/2021

Thank you for this opportunity to make a submission on behalf of Save The Basin on this LGWM proposal. **We strongly support** both initiatives as well overdue and congratulate LGWM for making this stretch of SH1 safer for pedestrians, cyclists and other road users.

It is completely unacceptable that there is no place for pedestrians to cross safely between Evans Bay Parade and Miramar and sadly note after a recent fatality that it is well overdue to have a crossing and agree with the location as the most appropriate. We **do not agree** with other suggestions such as a bridge or tunnel for safety and accessibility reasons.

For the same reasons we **wholeheartedly support** the reduction in speed limits on Cobham Drive and Calabar Rd. It is crucial to make all of our roads, state highways or suburban, in Inner Wellington suburbs, safer and user friendly for all users regardless of mode of transport. Any initiative that will encourage people out their cars relieving traffic congestion is welcome and we agree that both proposals will help along with the improvements for cyclists and walkers already completed. This will reduce pressure on points closer to town such as at the Basin Reserve.

## Let's Get Wellington Moving – Cobham Drive & SH1 Speeds Consultation: Submission

### Introduction

Wellington Airport welcomes the opportunity to submit on the Cobham Drive Crossing and SH1 Safer Speeds project. Thank you for meeting with us and for engaging with us during the submissions period.

State Highway 1, connecting Wellington's CBD and Northern suburbs with the airport and Eastern suburbs, is a critical piece of infrastructure not just for the city and region but for New Zealand as a whole.

More than 6 million passengers per year use Wellington Airport to connect with the rest of New Zealand and international cities. This stretch of road is the first experience visitors have of the city. In addition, Wellington Airport is becoming a more significant cargo port, with the move to parcel and just-in-time goods, and the airport in the process of expanding its freight facilities to cater for future growth.

This submission is informed by our expertise in infrastructure and transport planning, an understanding of our surrounding environment, and concern for the traffic situation in the Eastern suburbs, which is delivering increasingly poor outcomes for our customers, employees, stakeholders, and surrounding community.

---

### Executive Summary

Wellington Airport agrees walking and cycling access and safety is important. However, an overpass is the best safety solution, and the one supported by the community. We strongly believe LGWM should choose the best solution, not a suboptimal alternative just because it is perceived to be cheaper or quicker to implement.

Cobham Drive is an excellent stretch of State Highway. It is long, straight, four lanes wide, and median separated, with a gold standard cycling and walking path. There are existing crossing points through the runway underpass and at the nearby Cobham Drive/Evans Bay Parade intersection, an appropriate place for traffic lights. It is not sensible to place an additional pedestrian crossing further along the road, particularly not a raised crossing that will function as a speed bump.

LGWM's own analysis acknowledges that an overpass would have better safety outcomes, by completely separating walkers and cyclists from vehicle traffic along State Highway 1, and would align with best practice traffic design. The overpass is clearly desired by the community, with more than 8,000 signatures on a petition calling for this solution. This superior alternative has not been properly considered in

LGWM's haste to proceed with perceived faster, cheaper options. We urge LGWM to consider an overpass in more detail before progressing a final decision.

The proposed crossing will compromise the usability of Cobham Drive as an essential arterial route for over 35,000 motorists, for the sake of questionable benefits to (at best) 250 walkers and cyclists per day. Congestion on Cobham Drive is already unacceptable, and the crossing will further increase congestion and delays. Our analysis shows LGWM has not accounted for these delays and has not conducted the necessary analysis to assess the issue of tailbacks into the Troy Street roundabout and along Calabar Road.

We understand that LGWM is determined to progress some early projects, given the delays and reprioritisations that have beset the LGWM programme as a whole. However, this is the wrong way to achieve a short-term safety outcome. If safety improvements are desired in the short term, LGWM should consider alternative options such as signage, planting and other barriers to deter informal crossings.

Finally, we do not believe the case has been made for speed limit changes. The analysis of both the crossing and speed limit proposals is flawed; and there is no case for a speed limit change if the crossing is not progressed.

We regret that we cannot support the initial projects being advanced by LGWM, as we have worked hard to understand and support LGWM's requirements for mass transit and access to the airport, and have endeavoured to be as supportive of LGWM as possible.

We urge LGWM to return to its vision and progress the major aspects of the indicative package, such as the Mount Victoria Tunnel and Basin Reserve improvements. Projects which slow traffic down would be more tolerable if LGWM had first made the major improvements to public transport and traffic choke points that Wellingtonians were promised. As it stands, we are not able to support proposals on the airport access route that would significantly worsen congestion and delays which are already at intolerable levels.

## **We agree safety is important, but the best safety solution is an overpass**

### ***We strongly support walking and cycling access and safety...***

Wellington Airport strongly supports walking and cycling access and safety. The aviation industry has a strong focus on safety, as does the infrastructure and construction sector in which we operate. As such, we recognise the importance of safety and the potential negative consequences when safety measures are not implemented properly. The proposal under consideration is a safety project, with speed limit reductions through the corridor, and a level crossing point to enable easier and safer access between the new Tahitai cycling/walking path and Kilbirnie.

We are impressed by the Cobham Drive section of the Tahitai path, which is a beautiful and useful asset for Eastern suburbs commuters and families. We have also worked to improve cycling access to the airport via Kilbirnie, including better signage from the runway underpass and better bicycle parking facilities.

### ***... but an overpass is the best safety solution***

Cobham Drive currently meets the gold standard of both state highway and cycleway design. The stretch of road is straight, is separated at the median, and allows for pedestrian crossing only at obvious

intersections. The walking and cycleway is completely separated from vehicle traffic, making it safe and user-friendly. We do not understand why this gold standard mode separation should be undermined by a pedestrian crossing which creates conflict of pedestrian and cycling traffic with motor vehicles and heavy traffic.

We note that further along State Highway 1, adjacent to the Mt Victoria tunnel, is a pedestrian overbridge that was built for the purpose of pedestrian access to sport facilities. We cannot understand why the preferred solution on Cobham Drive, a four-lane urban arterial road, is a pedestrian crossing, while an overbridge has been preferred for a two-lane stretch of road with the same traffic volume. In fact, this overbridge was built several decades ago with much lower traffic volumes.

We agree that a small number of walkers attempt unsafe crossings on Cobham Drive; this is undesirable and should be addressed. However, Let's Get Wellington Moving has not considered other options including an overpass in the medium term, and improved barriers and signage in the short term while an overpass is developed.

An overpass would completely separate bicycle and foot traffic from motorists. LGWM's own analysis acknowledges that an overpass meets a higher safety standard than an at-grade crossing.

***LGWM should choose the best solution, not the perceived fastest or cheapest solution***

We understand from our conversations with LGWM that an overbridge has not been ruled out as a long-term solution; this is encouraging. We also understand that key drivers for the Cobham Drive crossing are the perception that it is a fast and cheap solution which will demonstrate progress in the short-term.

We urge LGWM to do it once and do it right. Reaching for short-term progress will make it more difficult to reach a long term outcome, and will have a negative impact on road users in the meantime.

We understand that LGWM has taken the view that an overbridge design is dependent on the final shape of other road improvements and mass transit. We are alarmed by LGWM's suggestion that these decisions are too far in the future to inform an overpass design in the near term. We urge LGWM to proceed with the major projects in its portfolio (the Mount Victoria Tunnel, Basin Reserve improvements and mass transit) promptly so that an overbridge design can be incorporated into them, rather than adopting an inferior stopgap measure and further delaying the progression of an integrated plan. We note in particular that the overbridge may be used by rapid/mass transit users or enable more efficient road connections between the CBD and Eastern suburbs.

The fact that LGWM has been slow to make key decisions cannot be a reason to implement suboptimal projects in the meantime for the appearance of progress. Wellington Airport is very supportive of the LGWM indicative package. However, since its announcement in May 2019, the package appears to have regressed rather than progressed. We are concerned by the general deprioritisation of the airport and Eastern suburbs, including suggestions that mass transit will now focus on Island Bay as a destination, and the scaling back of the Mount Victoria tunnel. As outlined below, congestion from the Eastern suburbs is already unacceptable. We would like to see progress on projects that genuinely get Wellington moving rather than slowing it down.

***The community wants an overpass***

The community overwhelmingly desires an overpass. While the technical document refers to "community, stakeholder and political requests for a crossing" it is not at all clear that there is community support for an at-grade crossing. We understand the "community" support referred to by LGWM is a change.org

petition titled "Safe crossing from ASB Sports Centre to Cobham Drive". This has received close to 8,000 signatures. However, this petition clearly calls for an overpass, not an at-grade crossing.

The questions asked by the LGWM consultation documents are leading, and not designed to elicit information about the impact of an at-grade crossing on road users. Even so, 74% of respondents at the time of writing say the crossing will not make them more likely to walk or bike in the area; and only 25% agree the crossing is in the right place. Respondents have not been asked for their view on the impact of a raised crossing on vehicle journeys, and have not been asked to rank different options, including an overpass. This is a major deficiency in LGWM's consultation. LGWM must seek more genuine community feedback before proceeding.

We believe submissions, if genuinely sought, would clearly demonstrate support for an overpass rather than a crossing; and opposition to a raised at-grade crossing from local residents and key land transport stakeholders.

### ***The overpass option has not been adequately considered***

LGWM's design and costing of an overpass alternative is both underdeveloped and overwrought. We query the necessity of building an overpass that is 200m long, 6m high, and \$10-17m in cost. We are concerned that alternative, simpler design solutions have not been considered; and believe based on our extensive engineering and infrastructure expertise that even a larger structure could be built for around \$6m. We understand from conversation with LGWM that its costs are not based on any actual design or business case, but are only an estimate. Unfortunately, this is true of many other aspects of LGWM's analysis, including community appetite for a crossing, and the number of people who would regularly use it.

The reasons cited by LGWM for not choosing an overpass also include the need for property purchases (we understand the property on either side is GWRC and WCC owned), and the visual impact (which can be mitigated through good design). Neither of these is a compelling reason.

### ***A crossing and speed bump raises its own safety concerns***

For the at-grade crossing to work, the speed limit of Cobham Drive would have to be reduced (from 70km/h to 60km/h) as traffic will need to slow to approximately 40km/h to drive over the raised crossing platform even when the crossing is not in use. In other words, while the technical team has separated the speed limit changes from the crossing, the two are actually linked along Cobham Drive, and so the economic summary presented in Table 6 (of the LGWM technical document) should also include the cost to road users of the speed limit reduction from 70km/h to 60km/h. This is particularly so given there are no grounds for the speed limit reduction for safety reasons on their own.

According to the technical document (Figure 2), during the day between 1,000 and 1,600 vehicles per hour use Cobham Drive in each direction, representing a vehicle every 2 to 4 seconds in each direction (on average). When the crossing is in use traffic will very quickly queue backwards, and depending on the cycle times of the crossing and frequency of use, there is a risk that traffic will spill back into the Troy Street roundabout which in turn will restrict vehicles travelling from South to East around the roundabout.

The best solution to support a safe and efficient transport system is to separate different modes of transport as much as possible, particularly vehicles and walking/cycling where there is a high vulnerability of active modes, and significant inertia of a large fast-moving car or truck. An at grade crossing puts road users and walkers/cyclists into direct conflict which a grade separated solution does not.

We also see the raised crossing platform has the potential to increase accidents on Cobham Drive when the crossing is not in use. The road is four lanes and straight, and unfamiliar users would not be expecting to see a raised crossing in the middle of State Highway 1.

We also note Cobham Drive is a target for boy racers and stolen vehicle use, which has caused a number of the safety incidents referred to by LGWM. We would like to see LGWM analyse the impact of a raised speed bump on a long, straight stretch of road on illegal activity, with input from Police. The raised crossing could become a target or, alternatively, an unseen obstacle for vehicles travelling at high speed, creating new safety issues.

---

## **A crossing is a suboptimal solution which prioritises 250 walkers and cyclists over 35,000 motorists**

### ***Congestion on Cobham Drive is already unacceptable***

NZTA's Annual Average Daily Traffic (AADT) shows that in the period 2015-2019<sup>1</sup> traffic counts on Cobham Drive (both directions) ranged between 35,237 – 36,465, an increase of 2% over the period.

Average journey times obtained from one of our key transport stakeholders for the same period, shows that from the CBD to the airport average journey time has increased by 11% in the morning peak and 10% for the afternoon/evening peak. In the opposite direction, from the airport to the CBD, the average journey time has increased by 18% in the morning peak and 14% for the afternoon/evening peak. Data also shows a steady increase, not only in the morning and evening peak periods but across the weekends.

It is interesting to note however, that vehicles on the road have not increased to the same extent.

Also, interestingly, in the 2020-2021 'Covid period' where traffic volumes on Cobham Drive have decreased (NZTA data indicates by as much as 23%), average journey times have not changed significantly – for the peak morning and afternoon periods the changes are +/- 1 minute. There are also at least 600 heavy vehicles using Cobham Drive each day. The proposed changes will make use of this road difficult for heavy vehicles.

Recent roadworks on Wellington Road have further added to congestion and delays, demonstrating the flow-on impact of one small change on this part of the roading network.

Given the importance of the corridor in providing fast and reliable access to and from the airport/Eastern suburbs, and the significant deterioration in travel times experienced over the last several years, Wellington Airport is very supportive of sensible transport solutions based on strong empirical evidence and reliable assessment.

As an international airport we strive to provide our passengers with a range of transportation options and that includes fast, direct and reliable transport modes.

In morning peak periods, Wellington Airport's taxi operators struggle to service the taxi rank and demand due to congestion on the airport to CBD corridor, leaving passengers queuing and waiting for the next available taxi to arrive back from the CBD.

---

<sup>1</sup> Period selected to remove traffic volume reduction due to Covid-19

This is a very common complaint and point of frustration for the airport, taxi operators and inbound passengers to Wellington. This is an example of one mode of transport that is impacted, but there are many more.

The proposed Cobham Drive pedestrian crossing will only increase these journey times more making Wellington an undesirable travel destination, particularly for time-sensitive business travellers.

***The crossing will further increase congestion and delays for 35,000 motorists a day***

There is a wide range of expected delays due to the signalised crossing. The technical document refers to an average 15 second delay for vehicles (Section 5.4.2) although LGWM has since clarified this represents a worst-case scenario, and that the actual delay will only be 1 second. We are concerned by this shifting narrative and the uncertainty it suggests. We are also concerned by the difference in impacts under the two scenarios – conservatively the impact of a 1 second delay is a \$1.4m cost over the life of the project (\$90k per annum over 40-years discounted by 6%) which is higher than the cost presented in Table 6, but under the worst case scenario the cost could be as high as \$21.7m over the project (\$1.4m per annum). Below, we show that even a conservative estimate would have a \$5.7m cost over the life of the project.

According to LGWM’s analysis, the expected use of the crossing is 250 people per day. We are concerned this estimate is inaccurate, for the following reasons:

- The projection is not based on current usage data, and assumes a certain number of additional people will cross on foot to the ASB indoor sports centre;
- The number of current attempted illegal crossings has not been adequately identified;
- LGWM has not attempted to understand the number of Cobham Drive walkers and cyclists who are taking the specific journey from Miramar North to Kilbirnie or the ASB centre;
- LGWM cites the need to access “Rongotai College” and “the beach at Lyall Bay” without acknowledging the existing underpass which would remain the best direct route to these locations;
- LGWM does not appear to have surveyed users of the ASB centre to determine families’ desire to walk or cycle for 20-30 minutes before and after indoor sports games.

These factors mean the safety and time benefits for pedestrians are possibly over-inflated.

However, if we assume the 250 figure is correct, with on average two people using the crossing at each time, the crossing may be used 125 times a day or 10 times an hour assuming it is used predominantly during daytime. While we do not know the exact signal times of the crossing, we understand there is a five second delay between vehicle restriction and green time, and then 10 seconds of green time (15 seconds for the crossing). We would expect adding phasing to red for traffic and then the reaction time and queue clearance time once the crossing is open again would add a further 15 seconds in delay – so an average delay of a cycle of 30 seconds per vehicle impacted. This equates to an average delay for all vehicles in the corridor of around 4 seconds or \$5.7m over the life of the project.

***Vehicles will be delayed even when the crossing is not in use***

When the crossing is not in use, vehicles will continue to be impacted by the raised platform which will require speeds to reduce from the proposed 60km/h to 40km/h, which has been estimated to increase delay by one second per vehicle. We think this delay is under-estimated – while the first vehicle will decelerate to 40km/h just before the crossing, given the number of vehicles using the road (one every two to four seconds during the day) we anticipate other cars will have to decelerate further back resulting in a “shock” effect where short queues will start to form when the road is busy. Travelling eastbound, vehicles

will likely choose not to accelerate back to 60km/h with the roundabout around 100m away, and so we anticipate no acceleration in that direction. Also, approximately 600 heavy vehicles use the road and up to 10 coaches access the airport every day, who will have a much more cautious approach to the crossing than other private vehicles.

That said, even a one second delay because of the raised platform adds an additional \$1.4m in cost to road users that appear to have inexplicably not been included in LGWM's analysis.

### **The realistic impact on congestion and delay has not been considered**

Wellington Airport has reviewed the LGWM technical document supporting the proposed corridor changes. We are disappointed at the lack of rigour that the evaluation has undertaken, which we suspect is related to the small capital cost of the project (circa \$1m for the at-grade crossing, \$10-17m for grade separated). As with many smaller transport projects, the level of detail/analysis needs to be more rigorous to fully appreciate localised impacts across the transport network; particularly the impact on road users of which this corridor has many.

#### ***The reality of the impacts needs to be recognised***

While the projects proposed suggest a "small" inconvenience for road users on average; 33 seconds for speed reductions, one to 15 seconds for stopping at the crossing, and a further one second impact for the raised crossing, the corridor is a heavily used road corridor and so small changes add up to big impacts. The project looks to delay the 12.8 million vehicles (or 16.6 million drivers and passengers) that use the corridor each year by up to 50 seconds each, for the sake of 90,000 annual users of the crossing (250 users x 365 days).

#### ***The economic evaluation should be revised***

We believe that an accurate economic evaluation of the proposal looks very different to that proposed in Table 6 of the technical document once all the relevant parameters and considerations are taken into account, and an appropriate methodology is applied.

In our view, the evaluation:

- Should include the corridor speed reduction benefits and costs;
- Should include the travel time reductions associated with the raised crossing when not in use;
- Takes a conservative view on the delay cost when the crossing is in use;
- Should include adjustments to the value of time as outlined below.

A revised economic summary would show that the safety benefits calculated are far outweighed by the costs to achieve those benefits.

#### ***The value of time used is too low for road users, and too high for pedestrian/cyclists***

We note that the evaluation appears to have assumed the same value of time for road users and pedestrian/cyclists. The value of time (VOT usually \$/hr) is used to convert time savings (or losses) into a monetary value to be directly compared with benefits to safety and the cost of the project. NZTA has a series of recommended values of time used for travel time savings within its monetised benefits and costs manual. Values are given for a July 2002 equivalent time, and escalation factors are provided to bring these values up to current day. Values are segmented by purpose of trip and mode of transport,

with the purpose of trip providing by far the most significant variation. For example, a car driver travelling for business has a value of \$23.85/hr, but only a value of \$7.80/hr when commuting - a pedestrian/cyclist traveling for business has a similar value to a car driver at \$21.70/hr.

According to the crossing facility selection analysis provided by the LGWM team, the same VOT has been used for a vehicle and pedestrian user of \$16.27/hr (July 2002). The value is based on Table 17 in the NZTA manual which is an all-day urban arterial for all vehicle types (car, commercial vehicles, bus). First, using the average value for road users in this corridor is not appropriate, given the relatively high proportion of airport and business travel that will be occurring on the corridor. Secondly, we believe using the same value of time for pedestrians as road users is flawed. Pedestrians and cyclists will have a much higher proportion of commuting and non-work trip purposes which have values of time that are less than a third of business travellers. In addition, the vehicle VOT assumes a vehicle occupancy (typically 1.3-1.5) which should not be included for a pedestrian.

We anticipate that using more appropriate values of time would reduce the benefits of the proposed improvements as travel time costs for road users would increase and travel time savings for pedestrian/cyclists would reduce.

### **State Highway 1 is not the place for a speed bump**

State Highway 1, connecting Wellington's CBD and Northern suburbs with the airport and Eastern suburbs, is a critical piece of infrastructure not just for the city and region but for New Zealand as a whole.

More than 6 million passengers per year use Wellington Airport to connect with the rest of New Zealand and international cities. This stretch of road is the first experience visitors have of the city. In addition, Wellington Airport is becoming a more significant cargo port with the move to parcel and just-in-time goods, with the airport in the process of expanding its freight facilities to cater for future growth.

Cobham Drive is an excellent stretch of State Highway. It is long, straight, four lanes wide, and median separated, with a gold standard cycling and walking path. There are existing crossing points through the Lyall Bay underpass and at the major Evans Bay intersection, an appropriate place for traffic lights. It is not sensible to place an additional pedestrian crossing further along the road, particularly not a raised crossing that will function as a speed bump.

### ***Further detuning of SH1 will increase rat running***

As noted above, we already know that traffic avoids the compromised SH1 corridor between the airport and Mount Victoria Tunnel by "rat running" (looking for longer alternative routes usually through local communities to save time). Vehicles will travel around the south coast through Island Bay or Owhiro Bay, around Oriental Parade, or through Kilbirnie, to avoid congestion at the Basin Reserve or Wellington Road merge. The proposed project will further reduce the attractiveness of SH1 (which should be the main arterial to the eastern suburbs) resulting in more vehicles using local suburban roads to avoid the corridor.

The region should be looking to develop one high quality road corridor linking North of the CBD to the South and East which would be used by all vehicles, removing through traffic from the CBD and local community roads that are at the moment looking for ways to avoid congestion. This project does the complete opposite.

### ***Existing walking and cycling routes are adequate in the meantime***

We agree with LGWM that an overbridge cannot be progressed immediately due to the need to first finalise decisions on other road improvements and mass transit. The fact that LGWM has not advanced these decisions since the indicative package was announced in May 2019 cannot be an excuse now to proceed with sub-optimal “quick” improvements.

While we agree with LGWM it would be ideal to improve walking and cycling access from Miramar to Kilbirnie where possible, the best solution should be sought rather than the most immediate solution. In the meantime, pedestrian and cycling links are adequate. LGWM’s own analysis notes that the cycling route is only one minute longer when the crossing at Evans Bay is used. There are also sufficient pedestrian links, other than for a small number of very particular journeys.

The LGWM documents variously cite the need to access “the ASB Sports Centre”, “Rongotai College”, the “beach at Lyall Bay” or the “shops in Kilbirnie” from Miramar. Lyall Bay beach and Rongotai College can be more easily reached from Miramar via the existing underpass, which is frequently used for both purposes. The Kilbirnie shops can be reached from the Evans Bay crossing with a marginally longer journey. As noted above, LGWM does not appear to have done any survey of users of the centre to determine families’ desire to walk or cycle for 20-30 minutes before and after indoor sports games.

### ***Safety has already been improved, and can be improved further without a crossing***

According to the LGWM technical document, over the last 10 years there have been one fatal and one serious injury, as well as one serious and four minor cycle crashes. While we do not have access to the detail of these incidents, we assume the cycling-related risks have already been mitigated by the completion of the new walking/cycling facility.

We ask LGWM to pause the Cobham Drive crossing proposal until wider decisions on the corridor are finalised. In the intervening period, we believe the risk of serious safety incidents is small, and does not justify the disbenefit to road users of an at-grade crossing. However, in order to mitigate this risk further we suggest LGWM take the following approach:

- Improve signage and wayfinding within the area to encourage use of safe crossing points (Evans Bay Parade, airport runway underpass);
- Introduce new barriers or planting along Cobham Drive to discourage unsafe crossing practices;
- Undertake a detailed costing of a grade-separated solution;
- Consider/include the best crossing solution as part of the wider corridor transport solution.

The LGWM team have advised that the at-grade solution may only be an interim answer until the rest of the corridor is enhanced. We are concerned by the significant disbenefits in the meantime; given the risks of inertia and slow progress that we have seen to date, what is intended to be an interim solution might end up becoming semi-permanent. Any interim decisions should find a balance between the needs of road users and the safety of cyclists and pedestrians.

### **Speed limits**

In addition to the crossing, LGWM proposes to reduce the speed limit from 70 to 50km/h along Ruahine Street, and 70 to 60km/h along Cobham Drive/Calabar Road.

### ***There is no case for reducing the speed on Cobham/Calabar Roads***

As outlined in the technical document (Table 2), road users are generally using Cobham Drive at the posted speed limit of 70km/h as illustrated by the 85th percentile speed southbound at St Patrick's college at that level. The other locations, where the 85th percentile speed is lower than 70km/h reflect locations adjacent to both the Troy Street and Calabar Road roundabout where vehicles will be accelerating/decelerating. Road users do not perceive the road as being dangerous road to drive – if the facility wasn't supportive of a 70km/h speed limit, users would adjust their speed accordingly. In fact, the assessment of the road in Table 8 highlights the lower risk nature of these roads, with no side access and significant median strip along Cobham Drive, and limited side access along Calabar Road. As noted above, the new walking/cycling facility along Cobham Drive removes the mixture of road and active modes along the road making it an inherently safe road for all users. If NZTA was going to design the safest possible urban arterial road, it is hard to envisage anything more appropriate than Cobham Drive in its current state.

### ***The case for reducing the Ruahine Street speed limit is stronger than Cobham/Calabar, but still isn't strong***

We recognise that the risks associated with users of Ruahine Street are higher than the rest of the corridor. Ruahine Street is one lane in each direction with a couple of narrow turning bays and access points particularly on the eastern side of the road. As noted above, this road has a pedestrian overbridge when the preferred solution on a four-lane urban arterial is an at-grade solution for the same volume of traffic.

We were surprised that the LGWM technical document does not evaluate the costs and benefits of the speed reduction as it has for the crossing options. Table 9 refers to a travel time increase of up to 33 seconds when road is at freeflow (14 on Ruahine Street, 19 on Cobham Drive) along the corridor, and presents existing travel times (from TomTom) that suggest the proposed speed limits are not achieved in practice. Unfortunately, we do not know the basis for the existing travel times, but we surmise that these times will include the impact of intersections along the corridor (one set of traffic lights, two roundabouts), various merges along Ruahine Street, and other road geometry impacts, as well as congestion at points along the corridor; and as such the proposed and actual travel times are not directly comparable. It is flawed to take the view that because the average travel time is aligned with a lower speed limit then that limit should be reduced. The average travel time is comprised of vehicles traveling just above to significantly slower than speed limit even in freeflow conditions based on driver behaviour as well as acceleration/deceleration at intersections, and so a lower speed limit will lower the average speed (increase travel time) along the corridor.

It is disappointing that the technical documentation does not provide an estimate of the expected increase in travel time, instead providing a range of "33 seconds or less". As a worst case, multiplying the average daily traffic volume of 35,000 by the average delay of 33 seconds results in an annual delay for vehicles of around \$3m per annum (assuming the value of time used in the crossing assessment).

Even a travel time delay which is half the worst case (around 16 seconds) reflects a delay worth \$1.5m per annum.

Traffic (A)	35,000	AADT
Travel Time Savings (B)	-33 seconds	14 seconds Ruahine, 19 seconds Cobham

Annual Travel Time Increase (C)	-117,104	Hours, A x B / 60 /60 x 365
Value of Time per Vehicle (D)	\$25.54	Per hour, based on 2002 \$16.27 factored to current prices from technical analysis
Total Value of Delay per Annum	-\$2.99m	C x D
Safety Benefit	\$0.13m	
Benefit of Speed Reduction	-\$2.86m	

Based on the information provided by the LGWM technical team, there is no economic justification for the speed limit reductions along the corridor. The safety issue is small, and can be more effectively addressed in other ways. The proposed solution will have a negative impact across a wide number of corridor users which far outweigh any potential benefits.

The speed limit proposal is another example of short-term thinking. While Ruahine Street in its current state is less than ideal, the original LGWM package envisaged widening the street to four lanes and removal of residential access and turning bays. Again, LGWM is reaching for short-term solutions which slow traffic down, rather than progressing long-term projects which improve both safety and traffic flow.

## Conclusion

Wellington Airport is a strong supporter of LGWM as a whole. However, the analysis of both the crossing and speed limit proposals is flawed. We regret that we cannot support the initial projects being advanced by LGWM, as we have worked hard to understand and support LGWM's requirements for mass transit and access to the airport, and have endeavoured to be as supportive as possible throughout.

We urge LGWM to return to its vision and progress the major aspects of the indicative package. Projects which slow traffic down would be more tolerable if LGWM had first made the major improvements to public transport and traffic choke points that Wellingtonians were promised.

Cobham Drive/SH1 Speeds – September 2021

**Feedback****12**

<b>NAME:</b> Werdam Latchman Sami	<b>SUBURB:</b> Other - Lower Hutt	<b>ON BEHALF OF:</b> Hutt and City Taxis Ltd	<b>ORAL SUBMISSION:</b> No
---	--------------------------------------	---	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Congestion of traffic.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Build a overpass

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I regularly travel through the area to get to work or school

"Right now, there is no safe crossing point between Miramar and the Evans Bay Parade traffic lights. This means that some people make dangerous crossings, and other people may choose to drive, even for short trips. This adds to congestion and emissions.

We plan to provide a safe crossing, controlled by traffic lights, that connects the new Tahitai Cobham Drive paths near ASB Sports Centre. This will make it easier for people in Miramar to walk or bike to the sports centre and to Kilbirnie town centre. It will also help people in Kilbirnie, Lyall Bay and Rongotai to get onto the new paths, which will soon provide a safe walking and biking route all the way to the city centre."

We, the board of directors at Hutt and City Taxis do not agree with the crossing controlled by the traffic lights that connects the new Tahitai Cobham Drive paths near the ASB Sports Centre.

The reasons for the objection are as follows;

1. It will add to congestion. Miramar and the Evans Bay Parade traffic lights already cause a bottleneck point for traffic and a pedestrian crossing will make it worse. The people travelling to and from the airport or from the Eastern suburbs will have to spend longer periods stuck in traffic, which will add to the emissions.

The taxis won't be able to service the airport efficiently because of this congestion and customers would be left waiting a lot longer to get a taxi, even in off-peak hours.

In morning peak periods, the taxi operators already struggle to service taxi demand and the ranks due to congestion from the airport to the CBD corridor, leaving passengers queuing for long periods for the next available taxi to arrive back from the CBD.

1. Pedestrians and/or cyclists safety at risk. A crossing controlled by traffic lights would be far less safe than an overbridge or overpass etc. Especially in bad weather, pedestrians and cyclists can get impatient and try to cross the pedestrian crossing even when the lights have gone red from green. We see this behaviour all too often when people keep crossing the road in a queue even when the pedestrian crossing light has gone red.

It would be completely unsafe and irresponsible to put a crossing at such a busy stretch of the road.

3. Unsafe and discomfort for motorists:-

People visiting Wellington from different parts of the world being welcomed by speed bumps on this crossing would leave a very bad impression of Wellington to the rest of the world, especially from the airport to Wellington city.

One would be hard-pressed to find speed bumps so close to the airports in other cities around the world.

The solution:

1. Put up barriers or signage to prevent people from crossing the road, and improved signage and wayfinding within the area would encourage to the use of safe crossing points ie Evans Bay Parade, airport runway underpass.
2. Build an overpass. This is by far is the safest option and the best solution for both motorists and pedestrians.

“After completing a review of the current speed limits, we propose to change the limits on Ruahine Street (70km/h changing to 50km/h); and on Cobham Drive and Calabar Road (70km/h changing to 60km/h)”

We also oppose these speed limit changes because it will add to the congestion and build-up of traffic. Currently, the traffic is so bad that the existing road network often gets clogged, reduced speed limits it will only make this problem worse.

The Airport and Eastern suburbs will become less accessible.

It will also add to more confusion among motorists having different speed limits and could potentially make driving conditions unsafe.

Solution:

1. Make improvements to the public transport and traffic choke points.
2. Build an overpass to keep traffic and pedestrians and cyclists separate.
3. Invest in infrastructure to widen the roads and make improvements to the Mount Victoria Tunnel and Basin Reserve.

Conclusion:

These proposals are shortsighted and detrimental to motorists while providing a risky option to pedestrians crossing a busy road. Also, the proposed different speed limits will only add confusion and more congestion. An overpass for pedestrians and cyclists is by far, a safer solution.

Cobham Drive/SH1 Speeds – September 2021

**Feedback****13**

Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits  
on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter  
for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the  
area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

n/a

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to  
the Airport?**

n/a

Overall, the “Let’s get Wellington Moving “is a poorly conceived concept which does not cater for the needs of all users. It emphasises the needs of a vocal minority of cyclists and pedestrians. Therefore, Wellington Combined Taxis does not support the LGWM as a whole.

### **The Golden Mile**

The main part of the concept appears to be beautifying of the ‘golden mile’ and making it more user friendly for cyclists and pedestrians to the detriment of car owners and shop keepers. Probably, the bright minds planning the concept failed to factor in the uncertainties that the Wellington microclimate presents to Wellingtonians and visitors alike. For Wellington Weather, they say, you must live in Wellington for a nice day!

The need for people to be able to drive to their door or get dropped off in taxis when it is raining horizontally and the gales are blowing to the best of its reputation, has totally been ignored. Also, any consultation for facilitating taxis dropping off passengers on broken yellow lines has not been considered either. In simple terms, the ‘golden mile’ concept will cause undue hardship to people who are depending on their own transport or taxis to get from A to B.

### **Cobham Drive**

We will now focus on our submission for provision of a crossing on SH1 Cobham Drive.

Whether the proposed crossing enhances safety for pedestrians and cyclists or not, it is quite likely to put our infrastructure in direct comparison with that existing in developing countries. Where else in the modern world, do we see pedestrian crossings on State Highways especially when it is numbered 1 due to its National significance?

Reducing the speed limit to accommodate the crossing is an admission that there are likely to be safety concerns for pedestrians and cyclists at the crossing. Moreover, reducing the speed when we are talking about better traffic movement is counterproductive to LGWM which we are led to understand is all about better movement.

The proposed crossing ,for the use of 250 cyclists and pedestrians, is around 2.8 km from a busy airport and on a stretch of road which records over 35,000 vehicles passing through each day Our taxis when added with other taxi company vehicles and ride share small passenger service vehicles constitute roughly 10 % of that number. On a given day, we face insufficient vehicles to meet the demands of passengers arriving at the airport and the delay, due to the proposed crossing and reduced speed limits, is only going to make it more challenging for us to be able to service the airport.

It is quite likely that on some days, the vehicles leaving the airport ,added with the vehicles of Wellingtonians living in eastern areas who choose to drive to work, would clog the entire stretch of 2.8 km resulting in a grid lock of traffic. Has it been thought that for a driver to avoid queuing up indefinitely while waiting to join the grid lock will result in the only other option of clogging the interior streets in the adjoining suburbs?

There are numerous schools including 2 colleges within the vicinity of the busy stretch, which are likely to add to the congestion and at the same time witness undue delays for their own students in reaching the schools/colleges .Add to this the traffic from the adjoining stadium.

Given that there are traffic lights some few hundred meters north of the proposed crossing, which currently allow pedestrians/cyclists to safely cross over from one side to the other, we don't believe there is need of another crossing. If at all, the traffic data warrants it, and there needs to be some thought given to infrastructure development, providing a subway/underpass is the option that needs to be considered.

We must not compromise on our infrastructure by implementing "quick wins" instead of good, safe solutions. Spending on infrastructure is nothing but investment in the future. Conversely reducing speed limits to put pedestrian crossings where they are not required is not progress.

Dave Clyma

Chairman, Wellington Combined Taxis.

## WE CAN'T AFFORD TO IGNORE SPEEDING ON OUR ROADS

Excess and inappropriate speed on our roads is the single biggest road safety issue in New Zealand today. And yet the seriousness of speeding is still lost on many people. Hundreds of New Zealanders are killed or injured each year, but many people openly admit to enjoying driving fast on the open road; a view which sadly seems to reflect a widespread tolerance of speeding as an acceptable social behaviour. ACC is concerned about the deadly attitude to speeding that New Zealanders are taking to our roads. With research assistance from the Land Transport Safety Authority, ACC wants to dispel some myths, and provide new information about speeding which New Zealanders simply can't afford to ignore.

# 1

### HIGHER SPEEDS RESULT IN MORE CRASHES

The faster a driver travels on a road, the more likely the driver is to crash. A driver travelling on a road at 90 kph, for example, is more likely to be involved in a crash resulting in an injury than if the driver were travelling at 80 kph. As speed increases, the stopping distance increases, there is greater probability of exceeding the critical speed on a curve, and there is greater chance other road users will misjudge how fast the speeding driver is travelling.

# 2

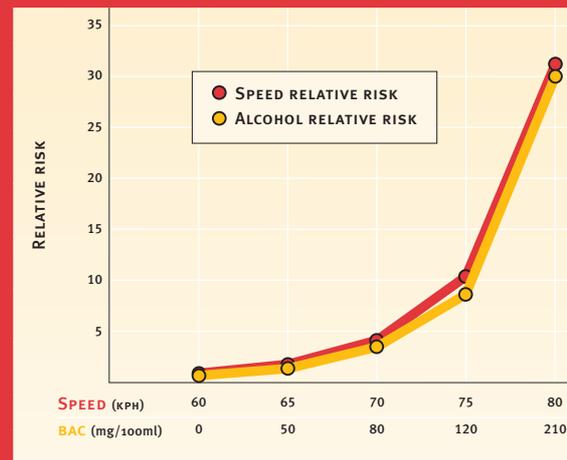

### HIGHER SPEEDS RESULT IN MORE SEVERE INJURIES

The severity of injuries resulting from a crash is directly related to the pre-crash speed of the vehicle, whether or not speeding was a factor in the crash. When a vehicle crashes, it undergoes a rapid change of speed. But the occupants keep moving at the vehicle's previous speed until stopped, either having been thrown from the vehicle and hitting an external object, having smashed into the vehicle interior, or having been restrained by a safety belt or airbag. The faster the speed at which the human body must absorb the energy released in the crash, the greater the severity of the resulting injury.

2

RELATIVE RISKS OF INVOLVEMENT IN A CASUALTY CRASH FOR SPEED AND ALCOHOL

### SPEEDING IS JUST AS DANGEROUS AS DRINK-DRIVING

New research from Australia shows there is a comparable relative risk for drink-driving crashes and for speeding crashes. A 5-kph increase in speed above 60 kph in a 60-kph zone increases the risk of a crash resulting in a casualty by about the same amount as an increase in blood alcohol concentration (BAC) of 50 mg/100 ml.

There are large differences between penalties for speeding and drink-driving, despite the similarity in a driver's risk of crashing, and injuring or killing themselves or someone else.

	BASE OFFENCE	RELATIVE RISK FOR OFFENCE	PENALTY
DRINK-DRIVING	EXCEEDING 80 MG/100 ML BLOOD ALCOHOL CONCENTRATION	3.2	<ul style="list-style-type: none"> <li>▶ MAXIMUM 3 MONTHS PRISON OR \$4,500 FINE (MAXIMUM 6 MONTHS PRISON OR \$6,000 FINE FOR THIRD OR SUBSEQUENT OFFENCE) AND</li> <li>▶ 6 MONTHS LICENCE DISQUALIFICATION (12 MONTHS FOR THIRD OR SUBSEQUENT OFFENCE), EXCEPT IN SPECIAL CIRCUMSTANCES</li> </ul>
SPEEDING	TRAVELLING 70 KPH IN A 60-KPH ZONE (SPEED LIMIT EXCEEDED BY NOT MORE THAN 10 KPH)	4.2	<ul style="list-style-type: none"> <li>▶ FINE OF \$30 AND</li> <li>▶ 10 DEMERIT POINTS (UNLESS A SPEED CAMERA OFFENCE)</li> <li>▶ 100 DEMERIT POINTS IN 2 YEARS RESULTS IN 3 MONTH LICENCE SUSPENSION</li> </ul>

COMPARISON OF PENALTIES FOR SIMILAR DRINK-DRIVING AND SPEEDING OFFENCES IN NEW ZEALAND, FOR A SIMILAR RELATIVE RISK OF INVOLVEMENT IN A CASUALTY CRASH

### FEWER NEW ZEALANDERS WOULD BE KILLED AND INJURED IF WE ALL SLOWED DOWN

The speed we drive on our roads is a major public safety and health issue in New Zealand. 162 deaths, 539 reported serious injuries, and 1,896 reported minor injuries on the road were attributed to speeding in 1998. This is likely to be an underestimate of the impact of speed-related crashes and injuries.

If we reduced average speed on New Zealand's rural roads by just 4 kph – that is, from 102 to 98 kph – it is estimated that 52 fatalities, 133 serious injuries, and 257 minor injuries would be saved.

## 5

## NEW ZEALAND'S RURAL ROADS AREN'T GENERALLY BUILT FOR SPEEDS OVER 100 KPH

A significant part of New Zealand's rural road network was constructed under an 80-kph open-road speed-limit regime. Where roads have been rebuilt, these design speeds have generally been increased to 100 kph. Similar road networks in other developed countries often have speed limits of 80 or 90 kph.

The roading system in New Zealand is not built to safely sustain vehicle speeds over 100 kph. We are consistently driving too fast on our rural roads.

### NATIONAL WINTER RURAL SPEED SURVEY, 1999

RURAL SPEED, AVERAGE	102.1KPH
RURAL SPEED, 85TH PERCENTILE	113KPH
PERCENTAGE OF VEHICLES EXCEEDING 100KPH	55.6%

Note: The 85th percentile speed indicates that 15% of vehicles travelled above this speed.

## VEHICLE DESIGN CAN AFFECT HOW FAST WE DRIVE

Modern vehicle design has created less noise, less vibration, less tilting when taking corners, and more comfort. These design features insulate drivers from the perception of danger when speeding and influences speeding behaviour. Vehicle safety initiatives have focused on reducing the severity of injuries arising from road crashes (secondary prevention) rather than on reducing the incidence of crashes (primary prevention) through measures aimed at reducing vehicle speed, such as speed limiters.

## 6

## 7

## THE ROADING ENVIRONMENT CAN BE ALTERED TO SLOW US DOWN

How drivers perceive the road is a critical factor in speed reduction. Roadside development tends to slow traffic down, so drivers will tend to travel faster on open rural roads and slower on built-up urban roads. Speed humps, road narrowing, and chicanes, as well as road markings, can help reduce speed. To be effective, speed limits should be consistent with the design speed of the road and be backed up by enforcement.

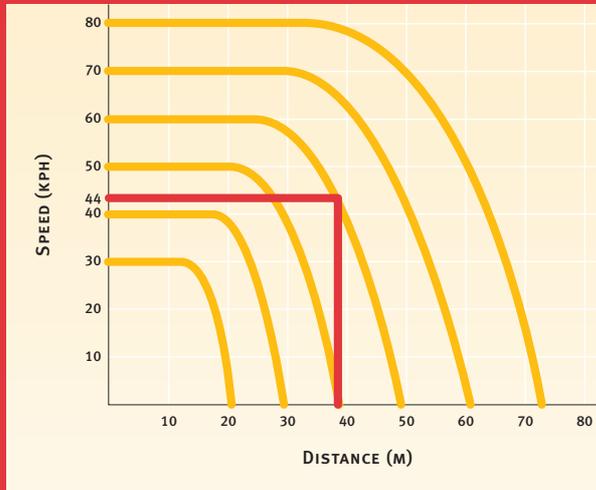

# 8

## PEOPLE CAN'T BEAT THE LAWS OF PHYSICS

75

The faster a driver travels on the road, the greater the risk the driver has of missing critical hazard cues. Upon recognising the hazard at the faster speed, the driver will travel further before applying brakes, and will travel further once the brakes are applied.

SPEED VERSUS DISTANCE FOR EMERGENCY BRAKING FROM TIME=0

An example: Two cars travelling side by side, one car travelling at 50 kph and the other overtaking at 60 kph. A child runs onto the road at a point just beyond that at which the car travelling at 50 kph can stop. The other car will still be travelling at 44 kph at that point, a collision speed at which a pedestrian has more than a 50% probability of being killed or severely injured.

NATIONAL WINTER URBAN SPEED SURVEY, 1999

Note: The 85th percentile speed indicates that 15% of vehicles travelled above this speed.

URBAN SPEED, AVERAGE	55.8 KPH
URBAN SPEED, 85TH PERCENTILE	62.5 KPH
PERCENTAGE OF VEHICLES EXCEEDING 50 KPH	80.3%

## SLOWING DOWN LOSES VERY LITTLE TIME, IT SAVES MONEY, AND IT IS GOOD FOR THE ENVIRONMENT

# 9

Reducing average speed from 90 to 85 kph on a 10-km trip adds just another 23 seconds to travel time. Fuel efficiency starts to reduce noticeably at speeds above 90 kph. At high speeds and acceleration, the emission of several major pollutants rise due to increased power demands on the engine.

# 10

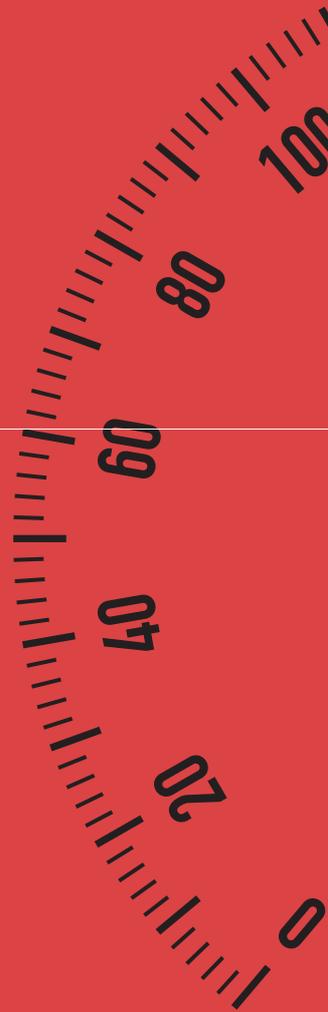

## ENFORCEMENT PROTECTS NEW ZEALANDERS FROM SPEEDING DRIVERS

Rigorous enforcement of speed limits not only leads to speeding drivers being apprehended and punished, but it also increases their perceived risk of being caught and deters them from speeding. Speed cameras can increase the certainty of apprehension and in New Zealand have reduced speeds and crashes in areas where they are deployed.

5

# INTRODUCTION

---

The Accident Compensation Corporation (ACC) is committed to reducing both the number and severity of injuries on the road. With research assistance from the Land Transport Safety Authority (LTSA), ACC wants to dispel some myths about the impact of speed on New Zealanders' health and well-being.

This document provides a substantial research base to New Zealand's consideration of speeding as a safety issue, and the sorts of strategies that can be employed to reduce speed. It draws conclusions based on research and on injury prevention principles, and is the key resource for ACC's Down With Speed Programme.

The ten points outlined at the front of this document are being used as the basis for a series of presentations, and a supporting leaflet, promoted by ACC to a range of organisations within the community. Through the Down With Speed Programme, ACC hopes to increase understanding of the harmful impact that speeding has on our lives, and to encourage New Zealanders to do more to reduce that impact.

We need first to recognise that motor vehicles have provided individuals and communities with very high levels of mobility, by increasing the distance that is able to be travelled during any given period and decreasing the time it takes to get from one place to another. The increasing mobility that the world has seen over the last hundred years has, however, brought with it a terrific loss of life on the road. Tragically for those who survive road crashes, one of the greatest losses is often physical mobility itself. The mobility that motor vehicles provide comes at a very high cost to personal and community safety.

Speed is the central factor in any consideration of the trade-off between safety and mobility within the road transport system. This is because speed affects every part of the system. Roads are generally designed to safely facilitate travel at a

specific speed. Vehicles are designed to allow people and goods to move at a range of different speeds depending on the circumstance. And people constantly make choices about the speed they drive a vehicle on a road.

In this document, speed is considered in terms of "excess speed and inappropriate speed". "Excess speed" refers to instances when vehicles travel in excess of the legally declared speed limit. "Inappropriate speed" refers to instances when vehicles travel at a speed that is unsuitable for the road and traffic conditions. As the European Transport Safety Council noted in its 1995 report, *"the distinction is important because a speed limit... declares [only] higher speeds to be illegal, and it remains for each driver to decide what speed, within the limit, is appropriate"* (p10).

Speed lies at the very heart of the road toll in New Zealand, and indeed in every other motorised country in the world. It is a core contributing factor to road crashes and the resulting death and injury toll. Even when speed is not necessarily a contributing factor in a road crash, however, it is a very important factor in determining the severity of the injuries, fatal or otherwise, resulting from the crash.

Reductions in the road toll over the last decade in New Zealand and around the motorised world have come from an increasingly scientific approach to road safety. This document is based explicitly on the quantitative research that has developed over the last thirty to forty years on the impact of vehicle speed on the safety of our road transport system. The primary reason for concentrating on quantitative research is to extract the essential elements from the area in such a way that leaves little room for argument that is not based on fact. This is because, unfortunately, we do not appear to adequately understand the nature of the problem, and discussion on speeding gets sidetracked away from the core safety problem.

The core safety problem is that we are simply driving too fast on our roads. Without the research information in front of us, we can explain our speeding by referring to the long, flat, straight piece of road that we were driving on. Without the research information, we can explain our speeding by referring to our above-average capacity to detect and respond to hazards. Without the research information, we can explain our speeding by referring to the superior occupant safety features in our car. Without the research information, we can explain our speeding by referring to our need to get from A to B "as soon as possible".

This document has been developed to put our research understanding at the front of our thinking about speeding. With the research information in front of us, we can start to recognise the limitations that New Zealand's roading network places on how fast we can safely drive. With the research information, we can start to recognise the limitations that our mental and physical functions place on the speed that we drive. We can also start to recognise the incongruity within the road transport system of motor vehicles that can drive twice as fast as the maximum speed limit. While based on scientific principles, therefore, this is not intended as an abstract document. It is intended to provide New Zealanders with the capacity to think again about how fast we drive on our roads, and about what we can do to reduce deaths and injuries on the road associated with speeding.

To prompt that rethink, we must first consider speeding as a safety issue, beginning with the basic principles of risk as they apply to speed. Part A of this document outlines the relationship between the speed we drive and the risk of crashing, before discussing the most beneficial means of managing the speed-crash risk. Part A also investigates the risk relationship between the speed we drive and the severity of the injury that will occur in a crash. We then examine the essential elements within the system that impact on our speeding behaviour – vehicles, roads, and people.

Part B focuses on design and engineering issues as they relate to vehicles and to roads. Our discussion on vehicle safety reviews improvements in occupant protection, which is relevant in terms of injury severity, and also considers safety benefits from reducing speed through engineering initiatives. This is followed by a discussion on road and traffic design and engineering. Relevant research issues here involve the application of speed limits and, particularly on rural roads, the design speed of the roading network. Some roadway treatments that have been shown to reduce speed are outlined.

After having examined basic issues associated with risk, and how the built environment of the vehicle and the road impacts upon speeding, Part C turns to how people respond in motor vehicles on roads. This discussion begins by looking at driver capability in identifying and responding to hazards

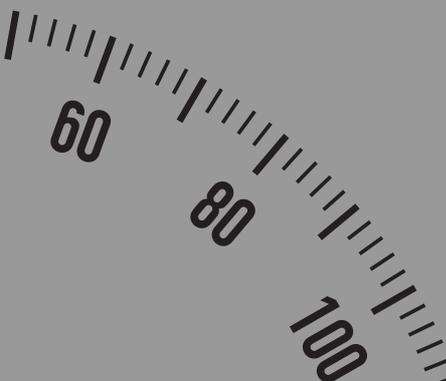

at different vehicle speeds, and then moves on to examining the use of enforcement as a response to drivers exceeding speed limits. The remaining sections in Part C address means of improving the effectiveness of enforcement activity.

Given the central role of speed within the road transport system, it is necessary to look beyond the central safety issue to develop a more complete understanding of speed. Part D addresses time considerations, fuel efficiency, and environmental impacts of speeding. Finally, Part E addresses speeding within a specifically New Zealand context. The breadth of research addressed in this literature review attests to the international recognition of speeding as a safety issue. It should also be acknowledged that New Zealand's roading environment presents a very particular set of issues regarding how fast we drive on our roads. The document concludes by laying these issues bare and providing a national overview of the trauma that speeding imposes on New Zealanders and of our attitudes towards this behaviour.

**PART**

**RISK, SPEED, CRASHES,  
AND INJURIES**

Vehicle speed has a twofold effect on the safety of New Zealanders on our roads – it affects the risk of involvement in an injury crash and it affects the severity of the consequences of a crash.

To aid our understanding of the role speeding plays in the continuing toll of injury and death on our roads, it is useful to relate it to the role played by alcohol. Most New Zealanders have a basic understanding of the fact that a driver who is affected by alcohol is more likely to be involved in an injury crash than a driver not affected by alcohol. Similarly, at any point in time, a driver travelling at an excess or inappropriate speed is more likely to be involved in an injury crash than a driver travelling below the speed limit or at a speed that is more appropriate for the conditions.

The purpose of Part A of this review is to explain the scientific research and understanding that has built up over the years to inform us about the effects of increased speed on crash risk. As we shall see, there have been a number of approaches to studying this topic, and a number of different, sometimes conflicting, conclusions have been reached over the years. With the value of hindsight, re-examination of old studies, and introduction of new research findings, we explain the increased risk to road users that comes with increased traffic speed.

Speeding is directly linked to the severity of injuries that arise from crashes, regardless of whether speed was a reported cause in the crash. This opening discussion on risk therefore concludes with an examination of the direct link between the speed of vehicles involved in crashes and the severity of injuries resulting from those crashes.

The research findings discussed in this Part allow us to develop a clearer perspective on how to reduce the risk that vehicle speed contributes to New Zealanders being killed and injured on our roads. Ways to reduce this risk will be taken up in later Parts of this document.

# 1: THE RELATIONSHIP BETWEEN VEHICLE SPEED AND CRASH RISK

---

The relationship between vehicle speed and the risk of involvement in a crash has been a topic of interest for some time in the road safety literature<sup>1</sup>. One useful explanatory research approach has been to compare the speeds of vehicles involved in crashes with the speeds of control vehicles (those not involved in a crash). Another approach has been to investigate the relationship between crash risk and variations in the speeds of vehicles on stretches of road. The findings from these approaches are set out below, along with the findings of two further approaches, evaluating the relationship between driver speed and crash history and discussing the principles of physics in relation to speed.

An important point to bear in mind when considering the data that follow is the distinction between urban roads, rural roads, and motorways/highways. The urban roads in these international studies are those in cities and residential areas and tend to have speed limits of around 50 to 60 kph. The rural roads referred to are those between cities and towns, with open-road speed limits (generally 80 kph and above). Motorways and highways have speed limits that range from 100 to 130 kph. German autobahns are not subject to a national speed limit, but some have a local speed limit, some sections are subject to variable speed limits (such as speed limits in bad weather), and there is an advisory speed limit of 130 kph. The distinction between data from these road types is important because different patterns are sometimes found.

## 1a: Comparing Speeds of Vehicles Involved in Crashes and Control Vehicles

---

The earliest research approach to examining the relationship between vehicle speed and crash involvement was to obtain data on the speeds of crash-involved vehicles prior to the crash (for example, from police reports or by interviewing the driver). These data were then compared with data on the speeds of control vehicles that were not involved in a crash but were in similar circumstances to the crash-involved vehicles (for example, they were on the same

road at the same time of day). Although Kloeden, McLean, Moore, and Ponte (1997) considered this approach to be the strongest theoretically, there are practical problems inherent in the approach – particularly, in accurately determining the pre-crash speeds of vehicles and in finding an appropriate control group – that have limited its usage. Furthermore, once the results are obtained, careful interpretation is needed that takes into account the complexities of the road and traffic environment<sup>2</sup>.

### SOLOMON AND THE U-SHAPED CURVE

The first significant study using an approach that allowed an examination of the relationship between vehicle speed and crash risk was conducted in the USA in the 1950s (Solomon, 1964). Solomon examined the reports of 10,000 crashes that occurred on 35 sections of rural highway (a total of 600 miles) from 1955 to 1958. In most cases, the crash reports contained an estimate of the pre-crash speed of the crash-involved vehicle<sup>3</sup>, as obtained from the driver, the police, or witnesses (in 20% of cases, vehicle speed was estimated based on details in the report). To obtain the control vehicle speed, the speeds of 290,000 vehicles not involved in crashes were measured (in 1957 and 1958) at one location on each of the 35 sections of highway, and the mean speed for each section was calculated. Solomon then calculated the degree to which the estimated pre-crash speed of each crash-involved vehicle deviated from the mean speed of the control vehicles<sup>4</sup> on the section of highway where the crash occurred. When deviation from mean speed was plotted against crash involvement rate per hundred million vehicle-miles of travel<sup>5</sup>, a U-shaped curve was found. That is, where speeds deviated greatly from the mean speed – either faster or slower than the mean speed – crash involvement rates were high, whereas speeds close to the mean speed had low crash involvement rates<sup>6</sup>.

The highways on which the crashes occurred had a number of access points (including intersections and

driveways) and were likely at times to experience congestion. The crashes at low speeds were generally due to these factors. For example, of the low-speed daytime crashes (at 22 mph (35 kph) or less), 47% were rear-end crashes (which are typical of congested conditions) and 38% were angle crashes (which typically occur at intersections). In these crashes, the drivers were not travelling at free speeds – that is, the driver's speed was impeded by the congestion or the controls at the intersection and was not necessarily the driver's chosen speed of travel on the rural highway. Hence, the high crash involvement rate found at slow speeds cannot be interpreted as indicating there is a high chance of crashing when a driver chooses a slow travel speed along a rural highway. Instead, it may be interpreted as indicating that a high number of crashes occur when travel speed is slowed by congestion or a high number of access points.

This problem with the interpretation of these data does not occur with the high-speed data. Solomon found, for example, that, as the speed of the crash-involved vehicles increased, particularly above 50 mph (80 kph), the number of single-vehicle crashes increased. As will be discussed later, single-vehicle crashes typically occur at high speeds, when the driver loses control of the vehicle. Unlike many of the drivers travelling at low speeds, those travelling at high speeds are able to choose their speed of travel, as their choice of speed is not restricted by the traffic conditions. Thus, the high crash rate at speeds above the mean can be more appropriately interpreted as indicating there is a high crash rate when drivers choose to travel at high speeds.

### INJURY RISK

As well as a high crash risk when drivers choose to travel at a high speed, there is also a high risk of injury if involved in a crash. For example, when Solomon analysed the number of people injured per 100 crash-involved vehicles by the speed of the vehicle, the left side of the previously U-shaped curve was eliminated, leaving only the right side

1 The following summary is based primarily on reviews conducted by Kloeden, McLean, Moore, and Ponte (1997), Fildes and Lee (1992), and the Transportation Research Board (1998). Generally, these reviews cited and discussed the same research papers and reached the same conclusions. In cases where a paper was cited in only one of these reviews, attempts were made to obtain that paper. In some cases, the paper concerned could not be obtained in time for inclusion in the present review.

2 For example, Maycock, Brocklebank, and Hall (1998) found that 77% of the variation in observed speeds on different trunk roads in Great Britain was due to

road type, road geometry, and weather and road surface conditions. In the following studies, it is not always clear whether different road factors have been controlled for when comparing crash-involved and control vehicles.

3 The pre-crash speed of the crash-involved vehicle is the speed at which the vehicle was travelling before the driver became aware of the impending crash.

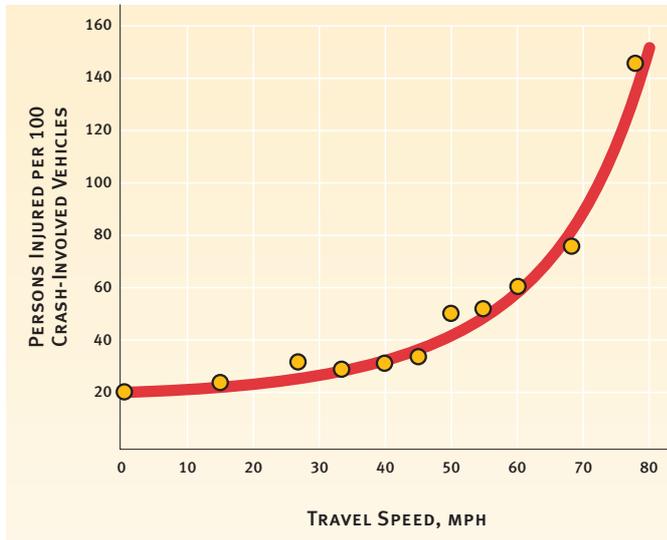

4 The deviation from the mean (or average) speed for each section of highway included vehicles travelling slower than, as well as faster than, the mean speed. A crash-involved vehicle travelling at the mean speed had a deviation score of zero, those travelling

faster than the mean speed had positive scores, and those travelling slower than the mean speed had negative scores.

5 The crash involvement rate per hundred million vehicle-miles of travel took into account the measured traffic volume on each section of highway.

6 The way Solomon calculated the mean speed (and hence each crash-involved vehicle's variation from the mean) is an important point to note as it indicates a methodological flaw in his study. This is discussed in more detail later in this sub-section.

of the curve, or a consistently increasing slope (see Figure A1). That is, the number of people injured per 100 crash-involved vehicles increased with increasing speed.

**Figure A1 – Number of people injured per 100 crash-involved vehicles**

Source: Solomon (1964, p11).

#### FURTHER RESEARCH ON THE U-SHAPED CURVE

The U-shaped relationship between deviation from mean traffic speed and crash involvement was also found by Cirillo (1968). Cirillo examined speeds and multiple-vehicle crashes on rural and urban interstate highways in the USA. Cirillo used Solomon's method of measuring the speeds of control vehicles at one location on each highway, calculating the mean speeds, and calculating speed variation as the deviation of the speed of each crash-involved vehicle from the mean for that section of highway. As with Solomon's study, Cirillo's data showed a very high crash rate at speeds much slower than the mean (as well as above it). Cirillo also found, however, that crash rates were highest for sections of the highways closest to interchanges. This finding was taken

to (at least partly) explain the high number of crashes at low actual speeds.

There are a number of flaws in Solomon's and Cirillo's studies that limit the conclusions that can be drawn from them. For example, because the pre-crash speeds were often estimated by the drivers or the police, the accuracy of the estimates of vehicle speeds is doubtful, and the estimates used are likely to be underestimates of actual crash speeds<sup>7</sup>.

The Research Triangle Institute (RTI, 1970) attempted to reduce the weaknesses in Solomon and Cirillo's approach. They obtained more reliable speed estimates of the crash-involved vehicles on state highways and county roads in Indiana<sup>8</sup>. Also, because turning vehicles tend to have to slow down or stop in order to turn (and hence their crash rates are not representative of drivers choosing to travel at a slow speed<sup>9</sup>), crashes involving turning manoeuvres were excluded from the analysis. Although a U-shaped pattern was found, crash involvement rates at speeds lower than the mean speed were not as high as those of Solomon's study.

West and Dunn (1971) analysed the data from the RTI (1970) study further, by including only the crash-involved vehicles for which there was a measurement of speed prior to the crash. For purposes of comparison with the RTI study, all crashes involving turning vehicles were also removed from the analysis. With the less accurate speed data and data on turning vehicles removed, a weakened U-shaped curve was found and the elevated crash risk at speeds much lower than the mean disappeared.

In addition to the criticisms of the Solomon and Cirillo studies referred to above, a number of other reviewers (Fildes and Lee, 1992; Kloeden et al, 1997; Transportation Research Board, 1998) have identified other biases and methodological flaws in these studies. Some of the flaws arose because they did not use a matched control group<sup>10</sup>. Matched control group data would comprise the measured mean traffic speed

7 Furthermore, in Solomon's study, in 20% of the crash reports there was no estimate of vehicle speeds, and the speeds had to be deduced from the information given.

8 For the first eight months of the study, speed estimates for crash-involved vehicles were obtained from experts' on-site assessment of the crash. At that time, however, a new computer-sensor system was developed that enabled the measurement of the speed of traffic and of individual vehicles. The sensors were embedded at 16 points along the main highway in Indiana. So, during the last few months of the study, it was possible for the researchers to

use this computer system to identify crash-involved vehicles or the platoon in which they had been travelling and obtain their respective pre-crash speeds.

9 Crashes involving turning vehicles may occur, not as a result of the turning vehicle's (slow) speed, but instead because the driver misjudged the gap required to turn across the path of an approaching vehicle that was travelling at excess speed. In this scenario, the crash is due to driver misjudgement and the excess speed of the other vehicle. Hence, including vehicles turning at low speeds in an analysis of crash involvement by speed may falsely give the impression that vehicles travelling at low speeds

have a high risk of crashing due to their speed.

10 Research designs that included matched control groups were not in common use in the 1950s when Solomon undertook his study. Given that his study included data from 10,000 crashes, obtaining a matched control would have been a huge undertaking.

at each location where each crash included in the crash data had occurred. Where possible, the mean speeds would be measured at the same time of day and day of week as the crashes had occurred (and under the same road and weather conditions). Deviation from the mean speed would then be calculated individually for each crash-involved vehicle and aggregated to show the risk of crash involvement at each degree of variation from mean traffic speed. West and Dunn's (1971) attempt to remove the bias towards crashes at speeds greatly below the mean by removing the data on turning vehicles did not fully address the issue<sup>11</sup> but did highlight the extent to which these crashes are over-represented in the data.

Overall, the weaknesses in the early research gave the impression that drivers travelling at low speeds have a high risk of crashing **because** of this low speed. As discussed, the relatively high crash-involvement rate of these drivers is often due to other factors, such as congestion and intersection points. However, the weaknesses in the studies did not diminish the finding that the risk of crash involvement on rural highways increases with increased speed above the mean traffic speed. Another unchallenged finding of the early research was that the number of injuries from a road crash increases with the increasing speed of the crash-involved vehicles.

### RECENT AUSTRALIAN RESEARCH

A more recent study examined the relationship between speed and crash risk on urban roads in Australia. Kloeden, McLean, Moore, and Ponte (1997) conducted a study in Adelaide's 60-kph metropolitan area, using crash data and matched control data. The main criterion for inclusion of crash-involved vehicles in the data was involvement in a crash where at least one vehicle occupant was transported from the crash scene by ambulance. Crashes involving illegal manoeuvres and those in which alcohol was a factor were excluded from the study, as were crash-involved vehicles

not travelling at free speeds<sup>12</sup>. The control vehicles were four vehicles travelling at free speeds in the same direction as the crash-involved vehicle, at the same location, at the same time of day, on the same day of week, and under the same weather conditions as the crash. The speeds of the crash-involved vehicles were estimated using crash reconstruction techniques<sup>13</sup> and compared to the control vehicle speeds<sup>14</sup>. Only vehicles in crashes in which there was sufficient information to carry out the computer-aided crash reconstruction could be included.

Kloeden et al (1997) found that, in general, the crash-involved vehicles were travelling faster than the control vehicles. Figure A2 shows how travelling speed affects the risk of involvement in a crash in which casualties occurred, relative to a speed of 60 kph (the speed limit). Significantly, Kloeden et al found that above 60 kph the risk of involvement in a casualty crash increases exponentially; that is, with each 5 kph increase in travelling speed, the risk of involvement in a casualty crash approximately doubles. The researchers estimated that a large proportion of the crashes in the study could have been avoided had the crash-involved vehicle been travelling at a slower speed.

Kloeden et al's (1997) study represents a new understanding of the relationship between speed and crashes on urban roads<sup>15</sup>. It is important to note, however, that the relationship relates only to crashes in which there was an injury severe enough to require hospitalisation; hence the study is biased towards high-speed crashes and the crash rates at low speeds may be understated. Another weakness, acknowledged by Kloeden et al, was that the pre-crash speeds were estimated rather than measured. Hence, despite the high reliability of the crash reconstruction technique, there may be an unknown bias. Overall, though, the study by Kloeden et al demonstrated that the higher the speeds in urban areas, the higher the risk of crashing.

<sup>11</sup> To fully address this issue, it would be necessary to select control vehicles that were performing the same turning manoeuvre as the crash-involved vehicle, measure the speeds of those vehicles, and compare the speed of the crash-involved vehicle with the mean speed of the control vehicles.

<sup>12</sup> That is, vehicles slowed by traffic, vehicles slowing to execute a manoeuvre, and vehicles accelerating away were not included. These exclusions "aimed to ensure that the association between travelling speed and crash involvement was not confused by the inclusion of vehicles executing (necessarily slow) manoeuvres or [giving way]" (Kloeden et al, 1997,

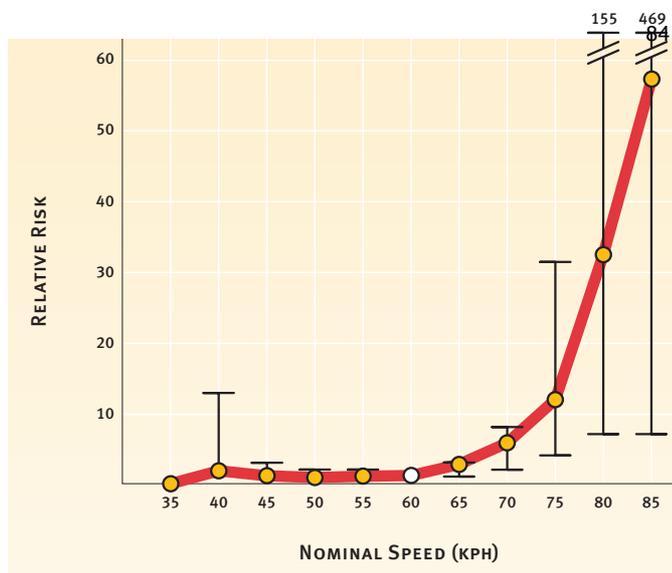

p27). Vehicles involved in rear-end crashes were also not included in the study; these crashes are usually due to drivers misjudging safe following distances for the speed travelled rather than to speed per se. Further, physical conditions were controlled for as far as possible by not including crashes that occurred while it was raining, and not including crashes on sections of road with advisory speed signs (advising motorists to travel at less than 60 kph).

<sup>13</sup> The crash reconstruction technique used was "SMAC" (Simulation Model of Automobile Collisions). SMAC is a computer reconstruction

program developed on the basis of physical testing and studies of vehicle dynamics.

<sup>14</sup> The control vehicle speeds were measured with a laser speed gun. Checks were made to ensure motorists were not warning others about the presence of the laser gun.

<sup>15</sup> The study specifically relates to 60-kph speed limit areas. A more extensive study involving a variety of speed limits would be needed to enable generalisation of the results to all speed limit areas.

**Figure A2: Travelling speed and the risk of involvement in a casualty crash relative to travelling at 60 kph in a 60-kph speed-limit zone**

Source: Data for figure generated from Kloeden et al (1997, Table 4.3, p37).  
 Notes: Relative risk at 60 kph set at 1.00. 95% confidence intervals are shown by the vertical lines.

**EXPLAINING TRAVEL SPEED AND CRASH RISK**

Kloeden et al (1997) went on to analyse why increased travel speed increases crash risk. The most common crash types they observed were an oncoming vehicle turning right across the path of vehicles travelling at free speeds and a vehicle turning right from a side street across the path of vehicles travelling at free speeds. Kloeden et al hypothesised that these crashes occurred because the approaching vehicle was travelling at excess speed and the turning driver misjudged the gap because he or she mistakenly assumed the approaching vehicle was travelling at about the same speed as the other free-flowing traffic on the road.

Kloeden et al stated that related vehicle speed factors “often have a cumulative... effect on the risk of involvement in a casualty crash. For example, a speeding vehicle is likely to have its speed misjudged by another driver, thereby creating a crash situation, in which the speeding vehicle will travel further during the reaction time of its driver, will lose less speed under emergency braking, and will crash at a comparatively greater speed with much greater crash energy” (p48).

Another finding by Kloeden et al (1997) was that drivers travelling at very high speeds (above 90 kph in a 60-kph zone) had an extremely high risk of losing control of the vehicle and of subsequent crashes and injuries. In New Zealand, loss of control is the most common type of crash in which speed is identified as a contributing factor, in both urban and rural environments (see Part E).

**COMPARING SPEED RISKS AND ALCOHOL RISKS**

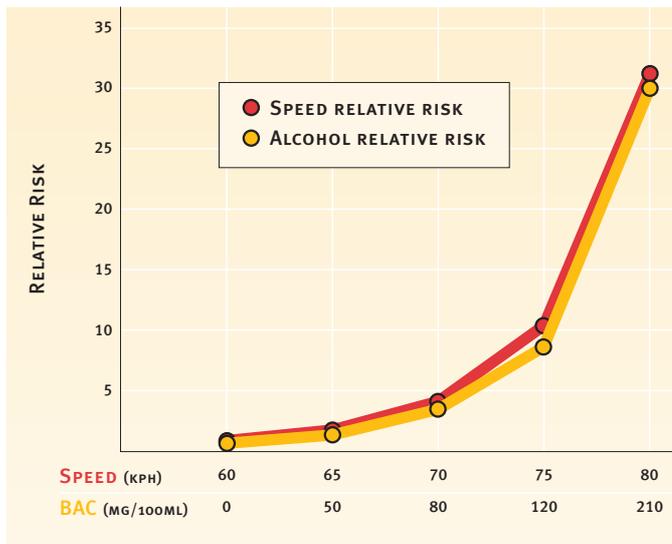

A further significant element that Kloeden et al (1997) explored was the crash risk of speeding in a 60-kph speed limit zone compared with the crash risk of driving after consuming alcohol. They reported a previous study conducted in Adelaide by McLean, Holubowycz, and Sandow (1980, cited in Kloeden et al, 1997) that related the risk of crash involvement to a driver’s blood alcohol concentration (BAC)<sup>16</sup>. Kloeden et al concluded that quite small increases in speed result in an increase in the relative risk of crash involvement that is comparable to illegal blood alcohol levels. A 5-kph increase in speed above 60 kph (in a 60-kph zone) increases the risk of a casualty crash by roughly the same amount as an increase in blood alcohol concentration from 0 to 50 mg/100 ml. The results are summarised in Table A1 and Figure A3 below. An example of comparable relative risk is the risk of involvement in a casualty crash when travelling at 70 kph in a 60-kph zone or when driving with a BAC of 80 mg/100 ml.

SPEED (KPH)	SPEED RELATIVE RISK	BAC (MG/100ML)	BAC RELATIVE RISK
60	1.0	0	1.0
65	2.0	50	1.8
70	4.2	80	3.2
75	10.6	120	7.1
80	31.8	210	30.4

**Table A1 – Comparing relative risks of involvement in a casualty crash for speed and alcohol**

Source: Adapted from data in Kloeden et al (1997, p54).  
 Notes: BAC = blood alcohol concentration. The relative risk for speed is relative to 60 kph in a 60-kph zone; the relative risk for BAC is relative to zero mg/100 ml. Blood alcohol concentration is converted to New Zealand units (milligrams of alcohol per 100 millilitres of blood, mg/100 ml). 80 mg/100 ml is the legal limit in New Zealand.

<sup>16</sup> In the speed data, the researchers excluded the crash data of alcohol-affected drivers (in fact, they recorded the data during the day and found few such cases). It is not known whether speed was controlled for in the alcohol data.

**Figure A3 – Relative risks of involvement in a casualty crash for certain speeds and with certain levels of blood alcohol concentration (BAC)**

Source: Data for figure generated from Kloeden et al (1997, Table 5.2, p54).  
Notes: The relative risk for speed is relative to 60 kph in a 60-kph zone; the relative risk for BAC is relative to zero mg/100 ml.

Although there are useful parallels to be drawn in the relationship between driver consumption of alcohol and crash risk and the relationship between vehicle speed and crash risk, it is important to bear in mind that alcohol and speed increase crash risk for quite different reasons.

Alcohol increases crash risk through a combination of factors. For example, alcohol-affected drivers are unable to perform multiple tasks; therefore, they have difficulty responding to hazards that appear in their path. The crash risk for alcohol-affected drivers is also increased because they are less risk-adverse and less able to withstand peer pressure. Furthermore, alcohol-affected drivers have slower reaction times, which affects both their risk of crashing and the consequences of a crash.

Speed also increases crash risk through a combination of factors – such as the reduced time available to detect and respond to hazards in the driving environment and the increased stopping distance. Furthermore, if there is a small deviation in the direction of travel, then the risk of leaving the road and crashing increases with increased speed. As will be discussed later, the consequences of a crash also increase with increasing speed.

A further difference between alcohol and speed in terms of crash risk is the length of time that the increased

risk exists. After a person drinks alcohol, the blood alcohol concentration remains elevated until the body is able to process the alcohol and remove it from the blood (this process can take several hours). Thus, an alcohol-affected driver will present a higher crash risk over a sustained period of time – generally for the entire journey. By contrast, a speeding driver can increase the crash risk in a more transient manner. Through changing his or her speed over a journey, a driver can increase the crash risk significantly over short periods of time and can maintain a relatively low level of risk at other times during the journey.

### 1b: Comparing Crash Rates after Changes in Mean Speed and Speed Variation

Another approach to understanding and explaining the relationship between speed and crash risk is to examine crash rates before and after a change in speed limit. One of the criticisms levelled at this approach is that the studies have often not taken into account other factors (aside from the speed limit change) that may affect crash rates, particularly the level of enforcement of and compliance with the new speed limits (Kloeden et al, 1997), and this may weaken the findings to a degree. In spite of any weaknesses in the studies, however, this approach adds to our overall understanding of the speed-crash relationship through use of actual crash data and formulae to show the expected effects of a traffic speed change on crash rates.

#### THE NEW ZEALAND EXPERIENCE

During December 1973, New Zealand imposed an open-road speed limit of 50 miles per hour (mph) (80 kph) as a fuel-saving measure. Before this time, the speed limit was set at either 55 or 60 mph (88 or 97 kph). Due to concern over the fuel shortages, compliance with the new speed limit was high; hence there was an 8- to 10-mph reduction in rural mean speeds when the limit was imposed. The drop in speeds led to a significant reduction in injuries compared to roads unaffected by the speed limit change (that is, urban roads) (Frith and Toomath, 1982). The drop in mean speeds was also associated with a sharp contraction in the distribution of speeds.

Following the oil crisis, mean speeds on the open road began to increase again to pre-1973 levels. On 1 July 1985, the open-road speed limit was increased to 100 kph. Since speeds prior to the increase had been high, the change in

speed limit did not result in a subsequent increase in crashes (Jones, Derby, and Frith, 1986). These findings suggest that speed limit increases or decreases are only likely to change crash rates if they are accompanied by mean speed changes.

### INTERNATIONAL EXPERIENCES

Interstate highways in the USA have been the largest area of study of changes in speed limits. In 1974, again in response to the oil crisis, the National Maximum Speed Limit (NMSL) for highways was introduced and set at 55 mph (88 kph). Before the introduction of the NMSL, states set their own speed limits, and these were generally higher than 55 mph. Several studies examined the effect of the new speed limit on road safety. The Transportation Research Board (TRB, 1984) reviewed these studies and found that the lower speed limit reduced both travel speeds and fatalities, but that compliance with the speed limit decreased over time.

The NMSL was raised to 65 mph (105 kph) in 1987. Following the change, 40 states raised their speed limits to the new maximum. The effect of the change was examined by a large number of studies at both the national and state level. A review of these studies by the TRB (1998) concluded that “*raising the speed limit led to an increase in both rural interstate fatalities and fatal crashes*” (p118). For example, one study conducted by Garber and Graham (1989, cited in TRB, 1998) that controlled for many other variables that affected highway safety found that, across the 40 states that raised their speed limits, there was a 15% increase in fatalities on interstate highways.

Finch et al (1994) also reviewed the NMSL change from 55 to 65 mph. They concluded that “*the immediate effect [of] raising the limit has been to increase average car speeds by about 3 mph; the effect is not constant, but varies from state to state*” (p12). They found that this mean speed change increased fatalities by about 20% to 25%, which was estimated to correspond to an extra 500 lives lost per year.

In 1995, the NMSL was repealed, again allowing states to set their own speed limits. Several states raised their speed limits almost immediately. An evaluation by the National Highway Traffic Safety Administration (NHTSA, 1998)

reported that “*it is estimated that... the 32 states that increased [interstate] speed limits experienced approximately 350 more fatalities than would have been expected based on historical trends, about nine percent above expectations*” (p56).

Other countries have conducted similar studies on speed limit changes. A review of the studies from several countries (South Africa, Belgium, Finland, France, Great Britain, Germany, USA, and New Zealand) where a speed limit was reduced or established prior to 1981 found a reduction in road crashes ranging from eight percent to 40% (Fieldwick, 1981, cited in Fildes and Lee, 1994).

One of the most recent evaluations of changes in speed limits examined the change from 100 to 110 kph on Melbourne’s rural and outer freeway network in 1987 and the change back to 100 kph in 1989. Sliogeris (1992) found that, compared to a control group of all other roads in Victoria that remained at 100 kph between 1987 and 1989, the injury crash rate per kilometre travelled increased by 24.6% following the change from 100 to 110 kph, and decreased by 19.3% following the change back to 100 kph.

There is a consistent finding from the studies referred to above that shows that increasing the speed limit increases crash, injury, and fatality rates and that decreasing the speed limit can reduce these rates.

### NILSSON AND THE FOURTH POWER OF SPEED

One highly reported piece of research comparing speeds and the risks of crash involvement before and after a speed limit change was undertaken by Nilsson (1982). Nilsson combined a number of evaluations of increases and decreases in speed limits in Sweden between 1968 and 1972 to validate a model for estimating the effect of changes in traffic speed on road safety. The model was further validated by applying it to data from other studies of speed limit changes in Sweden, Denmark, and the USA.

The model used the physics law<sup>17</sup> relating to kinetic energy (the energy that something has by virtue of being in motion) – that is:

$$\text{kinetic energy} = \frac{1}{2} \times \text{mass} \times (\text{speed})^2.$$

17 The physics law is based on the following probabilities:  
(a) The probability of a personal injury accident in the road system reported by the police is proportional to the square of the speed ( $v^2$ ), which is a shortened formula for the kinetic energy.

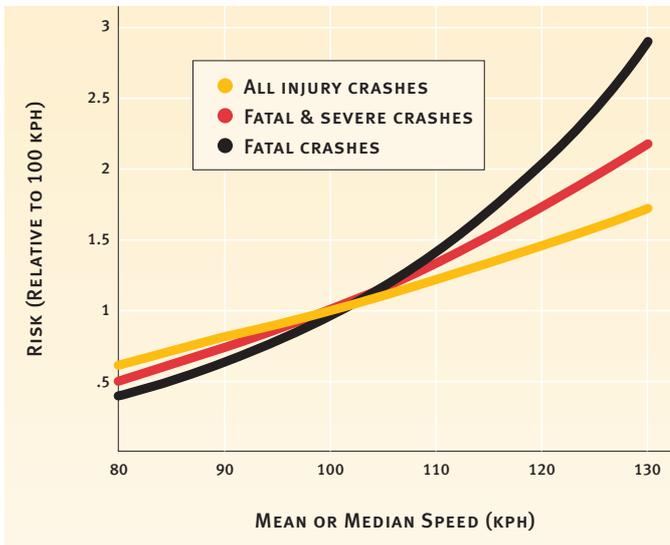

(b) The probability of a fatal accident resulting from a personal injury accident is also proportional to the square of the speed ( $v^2$ ), which means that the number of fatal accidents is proportional to the fourth power of the speed ( $v^4$ ) (cited in Andersson and Nilsson, 1997, p6).

Nilsson's model was that, if  $v_a$  = mean or median traffic speed before the change of speed limit and  $v_b$  = mean or median traffic speed after the speed limit change, then:

- the number of all injury crashes after the change =  $(v_b/v_a)^2$  x the number of all injury crashes before;
- the number of fatal and severe crashes after the change =  $(v_b/v_a)^3$  x the number of fatal and severe crashes before;
- the number of fatal crashes after the change =  $(v_b/v_a)^4$  x the number of fatal crashes before.

Figure A4 below, which plots Nilsson's formula, demonstrates that there will be twice as many fatal crashes when the mean speed is 120 kph than when it is 100 kph.

More information about the effects of crashes, including their impact on the human body, will be discussed in Section 3 of this Part of the present review.

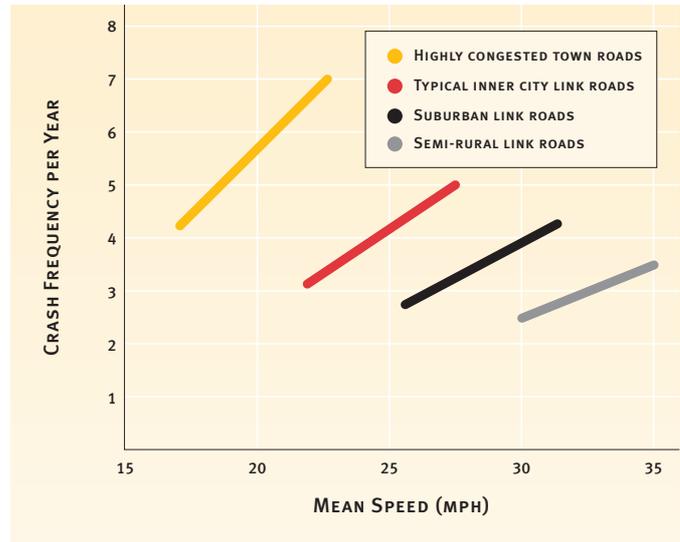

**Figure A4 – Risk of crashing relative to a mean or median speed of 100 kph**

Source: The figure was generated using Nilsson's (1982) formula.

Another statistical relationship between mean speed and crash risk was reported by Finch et al (1994). They examined studies from Finland, Germany, Switzerland, and the USA in which there was a change in mean traffic speed. Using multivariate linear and non-linear regression techniques on the data in the studies, they found that "for every 1 mph rise in the mean traffic speed, the percentage change in [crashes] rises by about five percent" (p18). This relationship applied to both urban and rural roads.

More recently, the Transport Research Laboratory (TRL) conducted extensive research into the statistical relationship between speed and crash frequency (Lynam, Baruya, Taylor, and Finch, 1999, cited in Silcock, Smith, Knox, and Beuret, 1999). They demonstrated that a 1 kph reduction in mean

87 speed can produce up to a three-percent reduction in crashes. This finding was consistent with many studies of speed changes. They reported, however, that the risk of crashing varies depending on the road type (see Figure A5). For example, the elevated crash risk occurs at higher speeds on semi-rural link roads than it typically does on inner city link roads. This finding very much reflects the design speeds of the different road types and, therefore, the safe travel speeds on those roads.

**Figure A5 – Speed-crash relationship on UK urban roads**

Source: Lynam et al (1999, cited in Silcock et al, 1999, p3).

Note: The speeds in the figure, when converted to kilometres per hour, are approximately as follows: 15 mph = 24 kph, 20 mph = 32 kph, 25 mph = 40 kph, 30 mph = 48 kph, 35 mph = 56 kph.

The evaluations of speed limit changes have indicated that increasing a speed limit can increase crash rates, while decreasing a speed limit may decrease crash rates. The effect is, however, very much dependent on the mean speeds before and after the speed limit change. Formulae have been developed by Nilsson, Finch et al, and Lynam et al to show the relationship between the change in the mean or median speed and crash data. Although the formulae are not exactly the same, they all indicate that an increase in the mean speed of traffic produces an increase in crash rates. Nilsson's formula also indicates that a decrease in the mean speed will produce a reduction in crash rates.

### MEAN SPEED AND TRAFFIC SPEED VARIATION AS CRASH FACTORS

In Section 1a, we discussed how some researchers have investigated the relationship between crash risk and the degree to which the speed of the crash-involved vehicle deviated from the speed of surrounding traffic. Other researchers have looked at speed variation in a different way; that is, they have looked at the distribution of speeds at a point on a stretch of road.

It is important to understand that speed variation in this context refers to variability in a stream of traffic. Therefore, it can only be a factor in crash risk if there are at least two vehicles interacting (and travelling in the same direction) on a stretch of road. When there is only one vehicle on the stretch of road, there is no speed variation. On New Zealand's rural roads, for example, it is not unusual for there to be only one vehicle using a particular stretch of road. However, a large number of crashes still occur when the crash-involved vehicle is the only vehicle on the road, but these single-vehicle crashes are not due to variations in the speeds of vehicles on the road. Hence, traffic speed variation can never account for 100% of the crash risk in a stream of traffic. Andersson and Nilsson (1997) point out that, when using statistical measures of mean speed and speed variation to explain or predict crash risk, it is very difficult to isolate the relative effects of these two factors. They go on to state: *“The speed variance can be attributed to a limited part of the road [crash] problem, while the [mean] speed level affects every [crash], particularly [in terms of] injury consequences”* (p9).

Early research on speed variation found that crashes were more likely to occur on roads with skewed speed distributions than on roads with normal speed distributions<sup>18</sup> (for example, Taylor, 1965, and Krzeminski, 1976, both cited in Kloeden et al, 1997). However, these findings have been criticised for the absence of important information that may have influenced the crash pattern, such as the causes of the skewed distribution or whether the skewness was positive or negative (Kloeden et al, 1997).

More recently, Garber and Gadirau (1988, cited in Kloeden et al, 1997) measured crash rates, speed variation, and mean speed on 36 sections of interstate highways in Virginia. Each section of highway had a posted speed limit of 55 mph, but the design speeds<sup>19</sup> across the sections ranged from 40 to 70 mph. Garber and Gadirau found overall that, as mean speed increased, crash rates decreased. That is, the sections of highway with the highest mean speeds were safer than the sections with lower mean speeds. This finding is explained by the observation that the sections of highway with the highest mean speeds were those with the higher design speeds (that is, these sections were designed to

accommodate higher speeds). They also found that crash rates increased with increasing speed variation. However, Kloeden et al suggest this relationship may also be related to the design features of the road. That is, better designed roads have low crash rates because provision is made for overtaking and turning vehicles, therefore lessening the situations that lead to large speed variation. A further criticism of the study made by Kloeden et al was that the measure of speed variation appeared to be dependent on a small number of slow vehicles at a site. At one location, the slowest two percent of vehicles accounted for 47% of the speed variance.

In his analysis of speed variation effects across a range of road classes in 48 states of the USA, Lave (1985, cited in TRB, 1998) defined speed variation as the difference between the mean speed and the 85th percentile speed (the speed at or below which 85% of vehicles were travelling). Using multiple regression, Lave found that speed variation was significantly related to fatality rates for rural interstate highways and rural and urban arterial routes; that is, the greater the speed variation, the higher the fatality rate. This finding is not surprising given that speed variation was measured as the difference between the 85th percentile speed and the mean speed. That is, when this difference was large, it meant that the fastest vehicles were travelling at very high speeds compared to when the difference was small, and, as we have seen, with higher travel speeds, the fatality rate is higher. Kloeden et al (1997) criticised Lave's study because the regression model did not fit these data very well. Furthermore, the regression approach may have given more weight to speed variation than to mean speed for purely mathematical reasons, which leaves some doubt as to which of the two variables is the primary causal variable.

Baruya and Finch (1994, cited in Kloeden et al, 1997) studied crash rates on Britain's rural roads and looked at whether mean speed or speed variation was the stronger contributing factor to crashes. In investigating this relationship, they found that the coefficient of variation (the standard deviation of the distribution divided by the mean speed) and mean speed had a counterbalancing effect – that is, on roads where mean speed was relatively high, the coefficient

<sup>18</sup> Normal distributions are symmetric, single-peaked, bell-shaped density curves (Moore and McCabe, 1993). The mean is located at the centre of the symmetric curve and is the same as the median. A skewed distribution, however, is asymmetric so that it peaks at one end of the graph and has a tail

that trails off at the other end. The mean is pulled towards the long tail of a skewed distribution more than is the median because of the influence of values far out in the tail.

<sup>19</sup> Design speed is the speed judged to be the maximum safe travel speed under favourable conditions. It was used in the study to reflect the geometric characteristics of a section of highway.

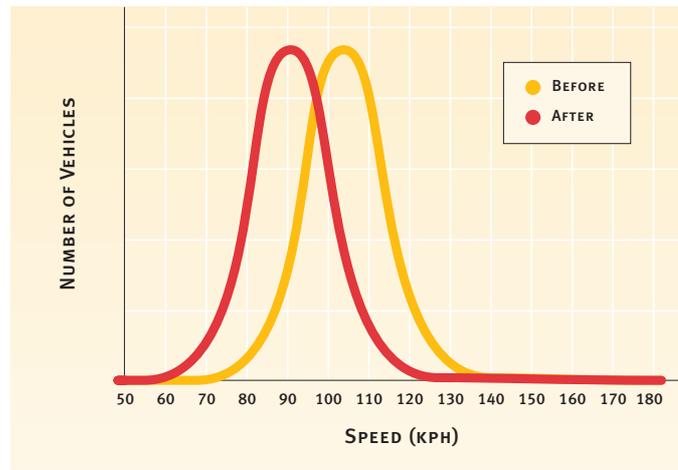

of variation tended to be comparatively low. This finding is not surprising given that there are natural and mechanical limits on the speed at which people can travel on a road. Significantly, however, Baruya and Finch found that the effect of mean speed on crash rates was stronger than the effect of speed variation. This was particularly true when the distribution on the road was non-normal, as it often is in low-speed urban environments because of situational factors such as junctions, crossings, or congestion.

One methodological problem with Baruya and Finch's study, identified by the Transportation Research Board (TRB, 1998), may limit their hypothesis of the relationship between mean speed and speed variation – the speed data were collected in 1992 and 1993, but the crash data were collected from 1983 to 1988. A more recent study does, however, provide some support for their hypothesis. Schmidt (1996, cited in Kloeden et al, 1997) used statistical modelling to examine crash rates on two-lane rural roads in Germany. The alignment and width of the carriageway<sup>20</sup> and the median traffic speed explained approximately half the variance in crash rates on the different roads. Speed variation (the standard deviation of the speed distribution) did not contribute any additional predictive capacity to the model.

#### CHANGES IN MEAN SPEED AND SPEED VARIATION

The above studies focused on the importance of speed variance over mean speed on crash rates. A more meaningful approach is to discuss the combined effects of mean speed and speed variance on crash rates, since they are inter-related. Although approaches to managing mean speed and speed variation will be discussed further in Section 2, it is useful here to illustrate graphically the effect on the speed distribution of reducing mean speed and/or speed variance.

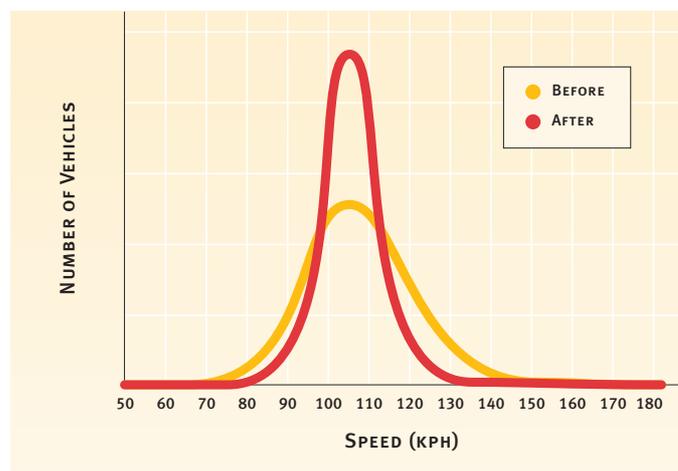

Figure A6 demonstrates graphically the effect of a reduction in mean speed on a speed distribution, when the speed variance remains constant. As discussed in detail in Section 1b, a reduction in mean speed, such as that indicated in Figure A6, will reduce crash rates.

**Figure A6 – A change in mean speed from a high mean speed (before) to a lower mean speed (after)**

Note: The figure has been produced for illustrative purposes and does not represent any real data.

Another approach is to reduce the variability of the speed distribution without changing the mean speed (see Figure A7). This approach means there are fewer drivers travelling excessively above the mean speed, which reduces the crash risk, particularly for those drivers.

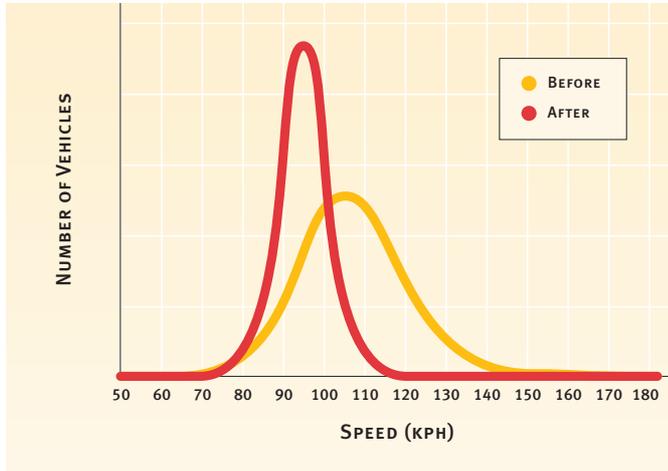

**Figure A7 – A change in speed distribution from a wide speed distribution (before) to a slimmer speed distribution (after)**

Note: The figure has been produced for illustrative purposes and does not represent any real data.

<sup>20</sup> The carriageway is the part of the road (or lane) on which vehicles travel. The carriageway does not include the shoulders of the road (the edges) or any median strip (space in the centre of a two-way road).

Instead of reducing only the mean speed or only the speed variance, it is possible to reduce both at once. Figure A8 demonstrates graphically the effect of a reduction in both mean speed and speed variance. As can be seen from the figure, when mean speed and speed variance are reduced, there are even fewer drivers travelling at speeds excessively above the rest of the distribution.

**Figure A8 – Changes in both mean speed and speed distribution from a high mean speed and wide speed distribution (before) to a lower mean speed and a slimmer distribution (after)**

Note: The figure has been produced for illustrative purposes and does not represent any real data.

### 1c: The Relationship between a Driver’s Speed and Crash History

A third approach to examining the speed-crash relationship has seen researchers measuring a driver’s speed in a specific setting and then examining the driver’s crash history (both injury and non-injury crashes were studied). Generally, these studies indicate that the higher the driver’s speed, the greater the likelihood that the driver had been involved in a previous crash. The largest problem with this approach is the potential bias in the sample due to the exclusion of drivers who were killed in past crashes (Kloeden et al, 1997) or who are no longer able to drive because of injury. In addition, a driver’s speeding behaviour may change after a crash. A further bias is that the crash history of drivers is often obtained by self-report.

The first study of this kind was conducted by Munden (1967), who measured the speeds and recorded the registration numbers of vehicles during evening peak traffic flow on rural main roads in England during 1962. The registration numbers of the vehicles were matched to crash records for crashes that occurred in 1961 or 1962. When graphed, a U-shaped curve was found; that is, owners of vehicles travelling one standard deviation above or below the mean speed had an inflated crash rate<sup>21</sup>. The results should be interpreted with caution, however, particularly as there was large variability in the speed ratio (see footnote) and the study relied on small numbers. Also, there is no guarantee that the driver of the car at the time of the study was either the currently registered owner or the same driver as in an earlier crash<sup>22</sup>. Furthermore, Munden cautioned that other factors, such as driver traits, may have caused the elevated crash risk at low and high speeds.

Hauer (1971) provided an interpretation of Munden’s findings in terms of the rate of overtaking, although the interpretation can apply only to two-lane, two-way roads. Drivers travelling at slow speeds are overtaken most, hence these drivers may have an inflated crash risk because of [their proximity to the overtaking vehicle (which is travelling at a higher speed)]. These findings have been interpreted as meaning it is unsafe to travel at slow speeds, but this interpretation ignores the fact that drivers involved in crashes at higher speeds are at greater risk of injury than those driving at lower speeds (see Section 2 for a discussion of the safety implications in requiring slow drivers to speed up and Section 3 for a discussion of the increased injury risk at high speeds). Furthermore, in New Zealand, overtaking crashes represent a small proportion of all speeding crashes, and the vehicle being overtaken is involved in the crash in only approximately half of the cases.

Wilson and Greensmith (1983) used a similar approach to Munden’s study; however, driver speeds were measured using a “drivometer”, a mechanical device fitted to a car to record speed information. From data on drivers who had had moderate driving experience, the researchers found that those who reported previous crashes recorded higher speeds than those who reported no previous crashes. A similar result was found by West, French, Kemp, and Elander (1993).

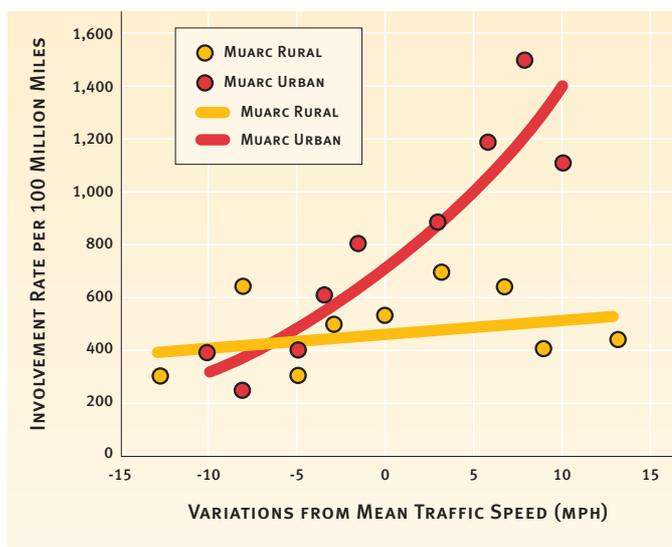

21 Owners whose speeds were recorded at least twice were included in the data. Each vehicle’s speed was compared to the speed of traffic around it at the same time to give a “speed ratio” for each vehicle

(a matched control). The crashes on record were not necessarily on the roads on which the speeds were measured.

22 The car may have been driven by someone other than the registered owner, or the car may have been sold between the time of the earlier crash(es) and the time of the study.

Fildes, Rumbold, and Leening (1991) unobtrusively measured the speeds of vehicles on two urban arterial roads and two rural undivided highways in Melbourne. The vehicles whose speeds were measured were subsequently stopped and their drivers interviewed about, among other things, their crash history over the past five years. Fildes et al found that the self-reported crash involvement rate rose as a function of the measured vehicle speed (see Figure A9). They also found that young drivers tended to be the fastest drivers and to have a high self-reported crash history.

**Figure A9 – Involvement rate by variation from the mean traffic speed**

Source: Adapted from Fildes et al (1991), with permission.  
Note: 15 mph is approximately 24 kph.

Recently, Maycock, Brocklebank, and Hall (1998) measured the speeds of vehicles on 43 sections of single and dual carriageways and motorways in Great Britain, and a questionnaire was sent to the drivers<sup>23</sup>. The measured speeds for individual drivers were compared to their self-reported crash frequencies. In general, drivers with high measured speeds had high crash liabilities.

When crash frequencies for individual drivers were modelled against speed for the drivers, they found that a

“one-percent change in an individual driver’s choice of speed is associated with a 13.1% change in that individual’s [crash] liability” (Maycock et al, 1998, p14). They caution, however, that the result does not necessarily mean there is a causal link between speed and crashes. It could be due to “the fact that both speed and [crashes] are related in similar ways to the same variables – particularly age, experience, and exposure” (p14).

## 1d: Principles of Physics

Applying the principles of physics can also demonstrate the relationship between vehicle speed and crash rates. For example, a central factor in the relationship is stopping distance. Stopping distance is affected by vehicle speed, and influences whether or not a crash occurs. There are two components to stopping distance – (1) the distance travelled by the vehicle during the reaction time of the driver and (2) the distance travelled once the brakes are applied. The reaction time of the driver is generally the same regardless of travelling speed; therefore, the greater the speed, the greater the distance travelled during the driver’s reaction time. The stopping distance of a vehicle once the brakes are applied is roughly proportional to the square of the pre-braking speed (TRB, 1998), although in reality the formula is much more complicated.

Therefore, because both components of stopping distance increase as vehicle speed increases (and because distance travelled while braking is proportional to the square of the speed, rather than proportional to the absolute speed), total stopping distance increases disproportionately<sup>24</sup> with vehicle speed. The probability of a collision increases similarly, although it also depends on the distance between the vehicle and the hazard when the hazard is first detected. In general, though, the faster the vehicle is travelling when a hazard presents itself, the greater the stopping distance, and the higher the likelihood that the vehicle will collide with the hazard (or another object in attempting to avoid the hazard) before coming to a stop.

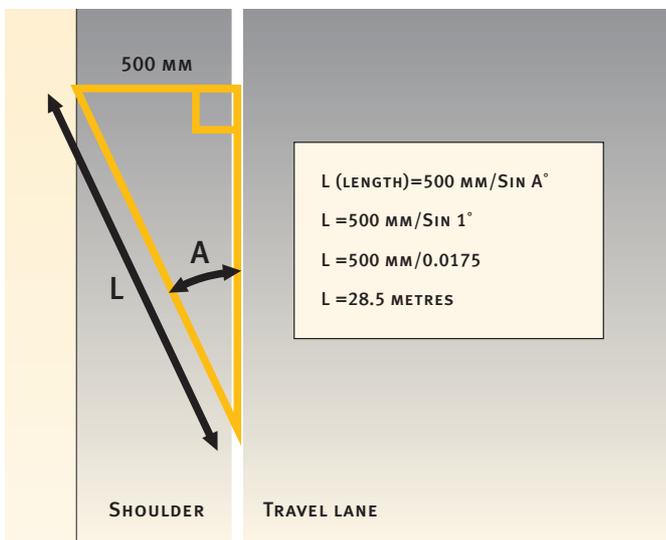

Another situation that is affected by speed is the driver’s ability to recover from running off the road or to manoeuvre

<sup>23</sup> Forty-six percent of the 14,050 questionnaires sent were completed and returned. Seventy-seven percent of the variation in absolute (measured) speeds was due to the site features such as road type. When site-to-site variation was reduced by looking at each site separately (that is, comparing a driver’s

absolute speed with all other drivers at the same site), they found that the faster drivers were more likely to be young and to drive a high number of miles annually. The number of self-reported crashes during the past three years for drivers who had at least three years’ driving experience were also

examined. They found that crash frequencies were higher for young drivers and that crash frequencies fell rapidly with more experienced drivers.  
<sup>24</sup> That is, the relationship is not linear, but follows an upward sloping curve.

to avoid a hazard. Donald and Cairney (1997) provide an example of the distance travelled during the reaction time and recovery time of a driver in a situation where the driver's vehicle runs off the road at one degree (1°) (see Figure A10). If a road has a sealed shoulder 500 mm wide, a vehicle running off the road at this angle would travel 28.5 metres before leaving the sealed surface. A vehicle travelling at 105 kph (29.2 metres per second (m/s)) would cover this distance in just under one second (0.98 s); however, a vehicle travelling at 120 kph (33.3 m/s) would cover the distance in only 0.85 seconds. Research has shown the fastest reaction time of unalerted drivers to be about one second (Triggs, 1981, cited in Donald and Cairney, 1997). Therefore, the driver travelling at 120 kph is unlikely to be able to recover before running off the road. Donald and Cairney note that recovery is much more difficult once vehicles have left the sealed surface, leading to a higher crash risk.

**Figure A10 – Run-off-the-road crashes**

Source: Donald and Cairney (1997, p24).

Another factor in the relationship between vehicle speed and crash rates is following distance. Because stopping distance increases as speed increases, drivers require a greater distance between their vehicle and the vehicle in front of them when they are travelling at higher speeds. The crash risk for vehicles travelling at high speeds is increased because drivers do not always compensate for their high speed by reducing their following distances (O'Flaherty, 1974). This means that, if the vehicle in front is required to suddenly slow down or stop, there is a high chance of a rear-end crash.

Another factor that increases with vehicle speed is the probability of exceeding the critical speed on a curve. This, combined with the increased braking distance at high speeds, also increases the risk of a crash.

## Conclusions

- The research comparing the reported (or measured) pre-crash speeds of vehicles with mean traffic speeds has shown that, in both urban and rural environments, the risk of crashing increases as the pre-crash speed increases above the mean.
- Studies of changes in speed limits have shown that increasing the speed limit leads to increases in crash rates when the speed limit change is accompanied by a mean speed increase. Similarly, decreasing a speed limit can reduce crash rates when the speed limit change is accompanied by a mean speed decrease.
- Researchers have postulated the following relationships:
  - there will be twice as many fatal crashes when the mean speed is 120 kph than when it is 100 kph;
  - for every 1 mph rise in the mean traffic speed, the percentage change in crashes rises by about five percent;
  - a 1-kph reduction in mean speed can produce up to a three percent reduction in crashes.
- Crash risk increases with increasing mean traffic speed. Speed variation also has some effect on crash risk. A slower mean speed is safer than a faster one.
- There is a comparable relative risk for drink-driving crashes and for speeding crashes. A 5 kph increase in speed above 60 kph in a 60-kph zone increases the risk of a casualty crash by about the same amount as an increase in blood alcohol concentration from 0 to 50 mg/100 ml.
- As speed increases, there is an increase in the following factors and, in turn, an associated increase in the risk of crash involvement:
  - stopping distance – both distance travelled during reaction time and distance travelled after brakes are applied;
  - the probability of exceeding the critical speed on a curve;
  - the chance of other road users misjudging how fast the speeding driver is travelling;
  - the probability of a rear-end crash if the driver has not accounted for their increased speed by increasing their following distance.

## 2: MANAGING MEAN SPEED AND VARIATIONS IN VEHICLE SPEED

---

The focus of road safety campaigns and enforcement strategies on reducing the mean speed of traffic on our roads is supported by the research findings discussed. However, despite the greater importance to road safety of mean traffic speed, there is some suggestion in the literature that speed variation should also be targeted through enforcement strategies (for example, Lave, 1985, cited in Zaal, 1994). The strategies available for controlling mean traffic speed are discussed at some length in subsequent Parts of this report. In this section, we continue our discussion of how mean speed and speed variation are related, taking up later in more detail some of the matters discussed in relation to enforcement.

### APPROACHES TO MANAGING VARIATIONS IN VEHICLE SPEED

If we accept that it is desirable to reduce speed variation, there are two obvious approaches to doing so – encouraging drivers who travel at the slowest end of the speed distribution to increase their speed or encouraging drivers who travel at the fastest end of the speed distribution to decrease their speed. (Another approach is to use both strategies at once.)

It has been argued that some ways of targeting speed variance would not be beneficial for road safety (Zaal, 1994) – encouraging the slowest drivers to speed up is clearly in that category. Such a strategy may actually increase the crash risk of the slow drivers. Slow drivers may choose to travel at a slower speed in the face of probable peer pressure to go faster because they feel less comfortable with travelling faster (Evans, 1991). This in turn is likely to be related to driver or vehicle capabilities or the driver's confidence level. For example, older drivers may slow down to compensate for their reduced vision and visual acuity or to allow for their slower reactions.

Encouraging or forcing slow drivers to speed up beyond their comfort level is contrary to road safety wisdom. Not only is this strategy likely to increase the crash risk of the slowest drivers, but, if these drivers subsequently became involved in a crash, any injuries would be much more severe than if they had travelled at slower speeds (Fildes and Lee, 1993). (This matter will be explored further in Section 3.) Thus, rather than encouraging slow drivers to increase their speed and expose themselves to greater risk, a more beneficial road safety measure would be to encourage them to pull over periodically at safe locations if they hold up traffic.

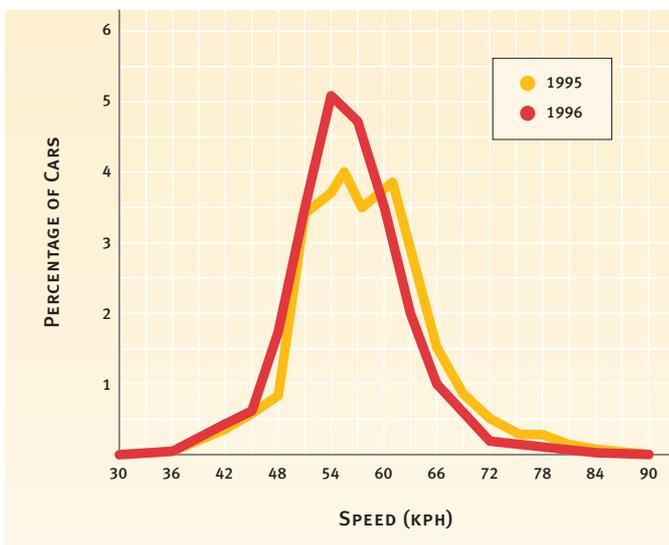

It is fast drivers, rather than slow drivers, however, who comprise the core safety problem, and encouraging all speeding drivers to slow down would have great benefits for overall road safety. There are no increased risks associated with this approach. One strategy for achieving this aim is to place more emphasis on the drivers who travel at speeds that are excessively above the speed limit than on those who travel at speeds that are moderately above the speed limit. This strategy is already being used worldwide through targeting all speeding drivers and having an increasing penalty rate for increasing speeds – that is, excessive speeders receive higher penalties than moderate speeders.

The overall aim of targeting speeders is to reduce the number of drivers travelling at excess or inappropriate speeds. If successful, this strategy reduces both the mean traffic speed and the degree of variations from the mean speed – that is, the slow drivers do not speed up, but the fast drivers slow down, giving a reduction in the overall distribution of speeds.

### MEAN SPEED AND SPEED VARIATION

In contrast to some of the findings discussed in the previous section, studies in New Zealand have demonstrated that, when mean speed is reduced, speed variation also reduces. For example, Frith and Toomath (1982) found that, when the New Zealand open-road speed limit was reduced to 50 mph in December 1973, there was a sharp drop in mean speeds. This drop in mean speeds was accompanied by a sharp contraction in the distribution of these speeds.

Similarly, Keall and Frith (1997) found a significant decrease in the New Zealand national mean speed in urban areas from 1995 to 1996. This reduction was associated with a significant decrease in the spread of speeds at the top end of the distribution; that is, a decrease in the 85th, 90th, and 95th percentiles<sup>25</sup>. In other words, the spread of speeds reduced at the high end of the speed distribution, hence contracting the overall speed distribution (see Figure A11). A similar result was found when mean speeds reduced in the police's Midland region of New Zealand following the introduction of hidden cameras in the area (Keall, Povey, and Frith, 1999 – see Part C for details of the study).

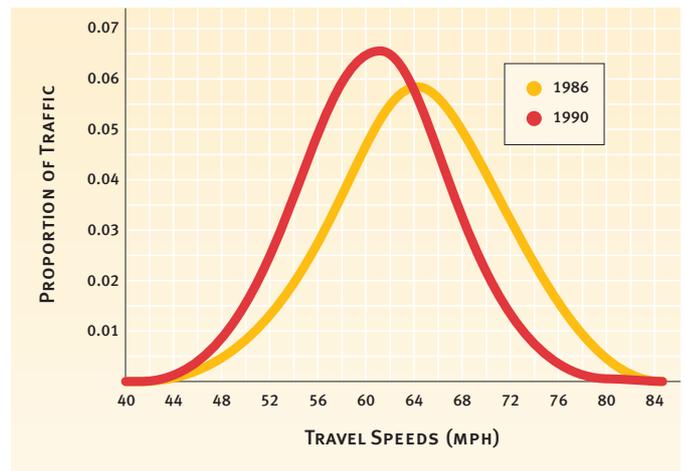

**Figure A11 – Estimated distribution of urban speeds, 1995 and 1996**

Source: Keall and Frith (1997, p12).

Conversely, increases in mean speed may be associated with increases in speed variation. For example, the National Highway Traffic Safety Administration (NHTSA, 1992, cited in TRB, 1998) examined the speed distribution between 1986 and 1990 on rural interstate highways in the 18 USA states that raised their speed limit when the National Maximum Speed Limit (NMSL) increased from 55 to 65 mph. They found that, following the speed limit change, there was an increase in mean speeds. This increase in mean speeds was

accompanied by a wider speed distribution. This came about because some of the fastest drivers increased their travel speeds, hence extending the top end of the distribution, while many of the drivers at the slow end of the distribution did not change their speeds (see Figure A12 below).

**Figure A12 – Estimated changes in the distribution of rural interstate highway travel speeds between the fourth quarter of 1986 and the fourth quarter of 1990 in the 18 states that raised speed limits in 1987**

Source: NHTSA (1992, cited from TRB, 1998, p117).

These studies demonstrate that mean speed and speed variation are highly correlated. Therefore, care needs to be taken when considering which is of greater importance in improving road safety.

It should be noted that the results above all relate to normal speed distributions. When the distribution is not normal, a different result may emerge. Urban areas often have non-normal distributions, especially at peak times, because of congestion; therefore, reducing the mean speed in such situations may have quite a different effect on the speed variation (Lynam et al, 1999).

<sup>25</sup> The 85th percentile decreased from 65.5 to 63.5 kph, the 90th from 67.5 to 65.5 kph, and the 95th from 71 to 69 kph.

### Conclusions

- Slowing the speed of drivers travelling at excess or inappropriate speeds will tend to reduce the mean speed of traffic as well as reduce the number of drivers at the top end of the speed distribution.
- Encouraging slow drivers to speed up would lead to more crashes and injuries. Slow drivers could instead be encouraged to pull over at safe locations if they hold up traffic.
- Fast drivers rather than slow drivers comprise the core safety problem, and encouraging all speeding drivers to slow down would have greater benefits for overall road safety than targeting the speed of slower drivers.

## 3: THE IMPACT ON THE HUMAN BODY OF DIFFERENT CRASH SPEEDS

In the discussions so far in this Part, we have seen that increased speed increases crash risk. Crashes place intense physical pressure on the human body, whether that body is an occupant in a crashed vehicle or is another road user such as a pedestrian. The human body usually has no capacity to cushion the effects of a crash once it occurs, and so is left to the mercy of the physical forces that are at play to determine the severity of the resulting injury.

As we shall see later on, excess and inappropriate speed is recorded as contributing to a large number of road crashes in New Zealand. This has been assessed in terms of reduced stopping distances, the driver exceeding the critical speed on a curve, the loss of friction between the vehicle's tyres and the road, and the reduced capacity of the driver to detect and respond to hazards. But this is only one part of the speed story.

For every crash where speed is an identifiable factor in contributing to the crash, there are many other crashes where speed may not be identified as a direct crash factor, but where it is a direct injury factor. This distinction between speed as a crash factor and speed as an injury factor is fundamental to our understanding of the critical role that speed plays in the toll of injury and death on our roads.

In general, as driving speed increases, so does the impact speed of a vehicle in a collision (TRB, 1998). Similarly, the higher the speed at which a vehicle crashes, the more severe the injuries for the vehicle occupants and for other persons affected by the collision. For example, the Peugeot-Renault biomechanics laboratory conducted a study of injuries sustained in crashes by 100,000 occupants of small cars fitted with seatbelts. They found that at speeds up to 35 kph there were practically no fatalities. However, at speeds of 70 kph almost 50% of the occupants were killed (European Conference of Ministers of Transport (ECMT), 1996).

### THE SEVERITY OF INJURIES TO VEHICLE OCCUPANTS

Evans (1991) provides a detailed description of what happens to vehicle occupants during a collision:

*“When a vehicle crashes, it undergoes a rapid change in speed. Occupants continue to move at the vehicle’s previous speed until stopped, either by impact with objects external to the vehicle if ejected, by striking the interior of the vehicle, or by being restrained in some other way (through, for example, airbags or seatbelts)”* (p247).

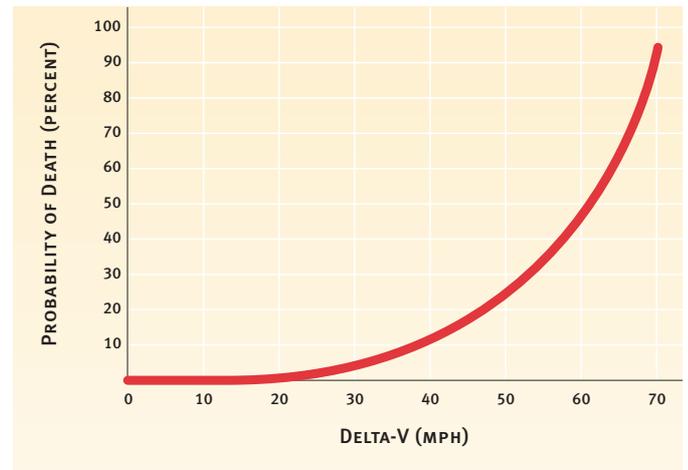

The rapid change in speed that a vehicle undergoes in a crash is known as “Delta-V” and is an important measure of crash severity (TRB, 1998).

The injury severity to occupants in a crash increases non-linearly with impact speed, because of the relationship between the energy released in the crash and the speed of the vehicle. In the first section to this Part, we referred to the formula for kinetic energy – that is,  $\frac{1}{2} \times \text{mass} \times (\text{speed})^2$ . Fildes and Lee (1994) illustrate how this formula relates to the crash situation – “a 20% increase in speed will, for example, result in a 44% increase in kinetic energy to be dissipated” (p10).

Also, as the TRB (1998) stated, “The greater the speed at which occupants must absorb the energy released by the vehicle at impact, the greater the probability and severity of injury” (p63).

Several studies have been conducted on injury severity with differing Delta-V or impact speed<sup>26</sup>. For example, O’Day and Flora (1982, cited in TRB, 1998) conducted an intensive investigation of approximately 10,000 crashes that occurred between 1977 and 1979. The probability of a fatality increased dramatically with impact speed. For example, a driver crashing with an impact speed of 80 kph was twice as likely to be killed as crashing with an impact speed of 64 kph. “At impact speeds above 50 mph [80 kph], the probability of death exceeded 50%” (TRB, 1998, p64).

Joksch (1993) examined crashes of all severity levels between 1980 and 1986 from the National Analysis Sampling System (NASS) database<sup>27</sup> in the USA. He found that the probability of a fatality is related (approximately) to the fourth power of Delta-V (see Figure A13).

**Figure A13 – Fatality risk for car drivers in relation to Delta-V**

Source: Data for figure generated using Joksch’s (1993) formula:  $(\text{Delta-V}/71)^4$ .

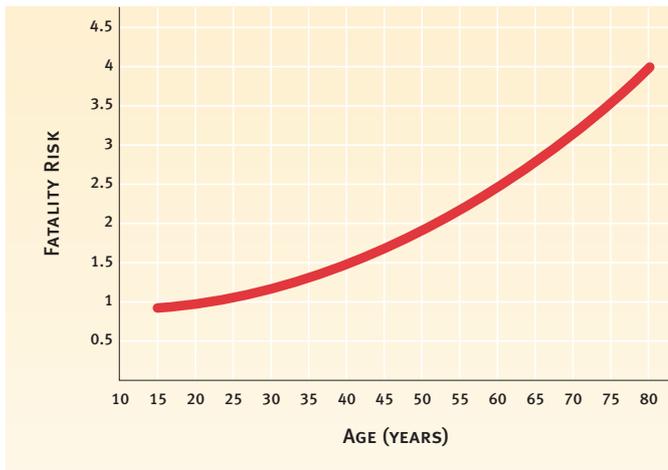

Bowie and Walz (1994, cited in TRB, 1998) also used the NASS data, this time from 1982 to 1989, as well as the Abbreviated Injury Scale (AIS), which rates injury severity levels from 1 (minor injury) to 6 (injury not currently survivable). They found a dramatic increase in injury severity as Delta-V increased.

The risk of injury for older people involved in collisions is generally a lot higher than the risk for younger people, because of their greater frailty. For example, analyses by Wouters (1989, cited in Maycock, 1997) and Evans (1991) on the vulnerability of vehicle occupants indicate that a male driver aged between 70 and 80 would be three times more likely to be killed in a crash than would a 20-year-old male (for women in this age group, the risk is approximately 20% higher than for the men). Evans obtained this relationship by examining fatal injuries of drivers from crashes of similar severity – that is, he examined crashes with the same physical impact and determined the fatality risk for all driver ages relative to age 20.

Evans (1991) also examined the fatality risk for all male car occupants and motorcycle riders relative to age 20. From his analysis, he generated a formula of the fatality risk from similar physical (crash-related) assaults relative to age 20 (see Figure A14).

<sup>26</sup> Note that the results of these studies depend on the use of restraints (particularly seatbelts). Since these studies were conducted in the USA where the rate of restraint use is low, the risk may be over-estimated for New Zealand, which has a relatively high restraint wearing rate.

<sup>27</sup> The NASS database contains data on inspections of crashed vehicles in the USA.

**Figure A14 – Fatality risk for similar physical (crash-related) assaults for males of different ages relative to the risk for 20-year-old males**

Source: Data for figure generated from formula in Evans (1991, p26).

#### THE SEVERITY OF INJURIES TO PEDESTRIANS

The severity of injuries to vehicle occupants is clearly related to the impact speed of the vehicle, although the injuries are lessened by vehicle factors, such as energy-absorbing characteristics and mass and also by the restraints on the vehicle occupants. The severity of the injury sustained by a pedestrian hit by a vehicle is also related to the impact speed. However, pedestrians do not have any protection factors to absorb the energy of the collision. Therefore, an impact speed that may injure a vehicle occupant will kill a pedestrian. For example, a formula was developed from a case study by Ashton (1982, cited in Pasanen and Salmivaara, 1993, p308) on the risk of death to pedestrians hit by a vehicle. Figure A15 plots the formula for speeds between 0 and 100 kph.

**Figure A15 – The influence of the collision speed on the probability of death of a pedestrian**

Source: Data for the figure generated using Ashton's 1982 formula (cited in Pasanen and Salmivaara, 1993).

As can be seen from Figure A15, the risk of death for a pedestrian hit by a vehicle increases dramatically at collision speeds from 40 to 60 kph. Similar findings have been reported elsewhere in the literature. For example, the European Transport Safety Council (ETSC, 1995) reviewed several studies of pedestrian-vehicle crashes. They concluded that the probability of death for a pedestrian is five percent if hit by a vehicle travelling at 32 kph, 45% if hit by a vehicle travelling at 48 kph, and 85% if hit by a vehicle travelling at 64 kph.

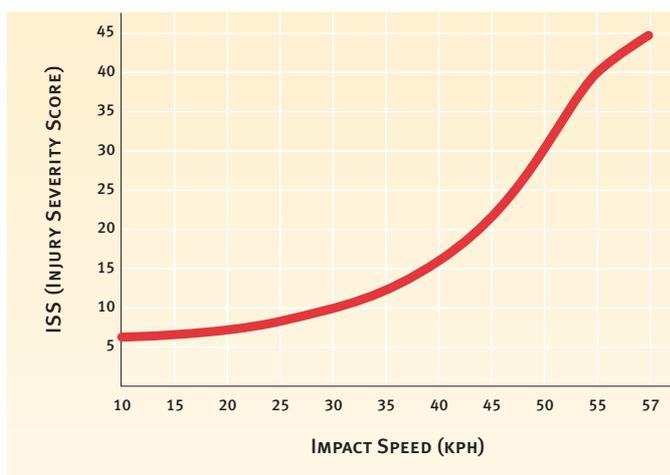

The risks of killing weaker members of the population, such as the elderly, are even higher. Similarly, young children are particularly vulnerable to injury in a pedestrian-car collision because of their small stature – that is, their heads are more likely to be hit directly by the rigid front of the car. Once children are tall enough that their heads are clear of the landing edge of the bonnet, the risk is much reduced.

Evidence of the increased risk for the elderly was demonstrated by Glaeser (1993, cited in McLean, Anderson, Farmer, Lee, and Brooks, 1994). Glaeser examined 522 cases in which a pedestrian was struck by the front of a passenger car. The pedestrian's head injuries were given an Abbreviated Injury Score (AIS) rating<sup>28</sup>. Glaeser found that high AIS ratings for head injuries occurred at impact speeds above

<sup>28</sup> AIS assesses severity of injury in relation to probability of death: 1 = minor, 2 = moderate, 3 = serious, 4 = severe, 5 critical, and 6 = maximum.

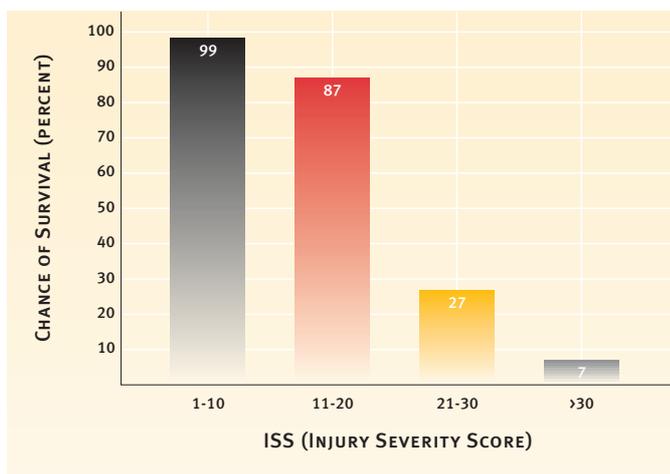

30 kph, and that these high ratings are very frequent at speeds <sup>98</sup> over 50 kph, especially among elderly pedestrians.

Further evidence of the effect of speed on all pedestrian injuries has been demonstrated in a study by Walz et al (1983, cited in McLean et al, 1994). They investigated the reduction in the Zurich urban speed limit, from 60 to 50 kph, and found that the number of pedestrian-vehicle collisions in the first year after the change fell by 16%, resulting in a 25% decrease in pedestrian fatalities. The Injury Severity Score (ISS)<sup>29</sup> of the pedestrians involved in the collisions also decreased. Furthermore, fractures to the pelvis and ribs of the pedestrians were reduced by 50%.

**Figure A16 – Impact speed and injury severity (ISS)**

Source: Walz et al (1993, cited in McLean et al, 1994, p8).

**Figure A17 – Probability of survival as a function of ISS**

Source: Walz et al (1993, cited in McLean et al, 1994, p9).

Walz et al (1993, cited in McLean et al, 1994) also compared the distribution of impact speeds in their data with the distributions from five other studies. The potential pedestrian injury severity was then related to the impact speed of the vehicle (see Figure A16). The probability of survival for a given ISS was then estimated from 952 cases (see Figure A17).

### THE COMBINATION OF COLLISION RISK AND INJURY SEVERITY TO PEDESTRIANS

It is important to note that reducing the travel speed of vehicles in an area, through such measures as reducing a speed limit with associated enforcement, can have two effects for pedestrians. It can reduce the chances of a collision between a vehicle and a pedestrian and it can reduce the severity of injuries to the pedestrian should such a collision occur. That is, at a slower speed, a driver has a greater chance of being able to stop under emergency braking and avoid colliding with a pedestrian in his or her view. Furthermore, if the vehicle is travelling at a slower speed, the pedestrian has a greater chance of seeing the approaching vehicle in time to move to avoid the collision. Even if the driver and pedestrian are unable to avoid the impending collision, at a slower speed the impact is less; hence the pedestrian receives less severe injuries than if hit at a higher speed.

McLean et al (1994) determined the relationship between initial speed and stopping distance from an examination of 176 fatal pedestrian collisions in the Adelaide area between 1983 and 1991. (This study is discussed in more detail in Part C.) Using the analysis of these fatal collisions, the researchers determined what effect a reduction in vehicle travelling speeds would have on the incidence of fatal pedestrian-vehicle collisions in the Adelaide area. Several speed reduction scenarios were considered. For example, in the scenario of a uniform speed reduction of 10 kph in 60-kph speed limit zones, McLean et al predicted that the incidence of fatal pedestrian-vehicle collisions would reduce by 48%. Furthermore, in this scenario, 22% of the pedestrian-vehicle collision cases would have been avoided altogether. Hence, small reductions in speed can lead to large safety benefits for pedestrians as well as for other road users.

<sup>29</sup> ISS is the sum of the square of the highest AIS score for each of the three most severely injured body regions.

## Conclusions

- The research into the relationship between vehicle speed and injury severity has consistently shown that, as a vehicle's speed increases, its impact speed in a crash increases, which in turn dramatically increases the severity of the resulting injury.
- If the crash involves a pedestrian, the probability of death for the pedestrian also increases dramatically with impact speed. However, the risk of death for pedestrians involved in a collision is greater at lower speeds than the risk for vehicle occupants. Also young and older pedestrians are at greatest risk of injury if involved in a pedestrian-vehicle crash.
- The probability of death for a vehicle occupant is related to the fourth power of Delta-V (the rapid change in speed that a vehicle undergoes in a crash).
- The severity of an injury for vehicle occupants increases dramatically as Delta-V increases.
- The risk of death to a pedestrian increases dramatically from an impact speed of 40 to 60 kph.

# PART B

## COUNTERMEASURES: VEHICLE AND ROAD DESIGN

We know that increased vehicle speed increases the risk of crashing and the severity of injuries arising from those crashes – we discussed these issues in Part A. We know also that increased mean traffic speed increases the number of minor, serious, and fatal injuries on the road. With this information, we need to begin assessing how we can control – and reduce – speed. A significant barrier to reducing speed is the increasing performance and speed capacity that is being built into the traffic system. This Part addresses design and engineering matters that are relevant to the speed problem, in relation to both the roads that provide the foundation of the traffic system and the vehicles that drive on those roads.

Design and engineering play a fundamental role in the safety of our traffic system, in terms of both the physical and performance characteristics of roads and vehicles and drivers' responses to these characteristics in terms of their perceptions of danger. New vehicle design, for example, often seeks increased mechanical performance in terms of both power and speed, and increased consumer comfort, even though some “enhancements” may negatively impact on the safety of road users. (For example, if a driver chooses to travel at a higher speed due to the increased comfort at high speeds in new vehicles, then his or her crash risk is increased and the severity of injuries sustained in a crash is increased.) And yet, vehicle safety standards have been instrumental over the last 20 years in saving lives and in reducing the severity of injuries suffered by vehicle occupants when crashes occur.

New road design can have a similar effect. In terms of physical capacity, new road building generally allows for increased capacity and mobility. This can reduce driver perceptions of danger in the roading environment and increase speed. However, improved roading design and traffic engineering provide a significant means to reduce speed (particularly in urban areas), reducing crashes, deaths, and injuries.

Better road design can also reduce the chances of a crash at any speed. However, this may be outweighed if the better road design increases the number of vehicles travelling at high speeds. That is, despite the better road design, vehicles travelling at high speeds have a high crash risk. Furthermore, if a vehicle travelling at high speeds is involved in a collision, the occupants are likely to receive more severe injuries than occupants involved in crashes at lower speeds.

In the context of a safety discussion about the impact of speed, therefore, design and engineering are seen as a two-edged sword – a pivotal part of the speed equation. On one side, improved mechanical or physical properties improve the ease with which road users move on the roading network. On the other side, increasing the ease of use might reduce the perceptions of real danger in the use of the network. This discussion of design and engineering issues focuses on the role that vehicles and roads play in driver speed behaviour and on measures to improve that behaviour.

# 1: VEHICLE DESIGN

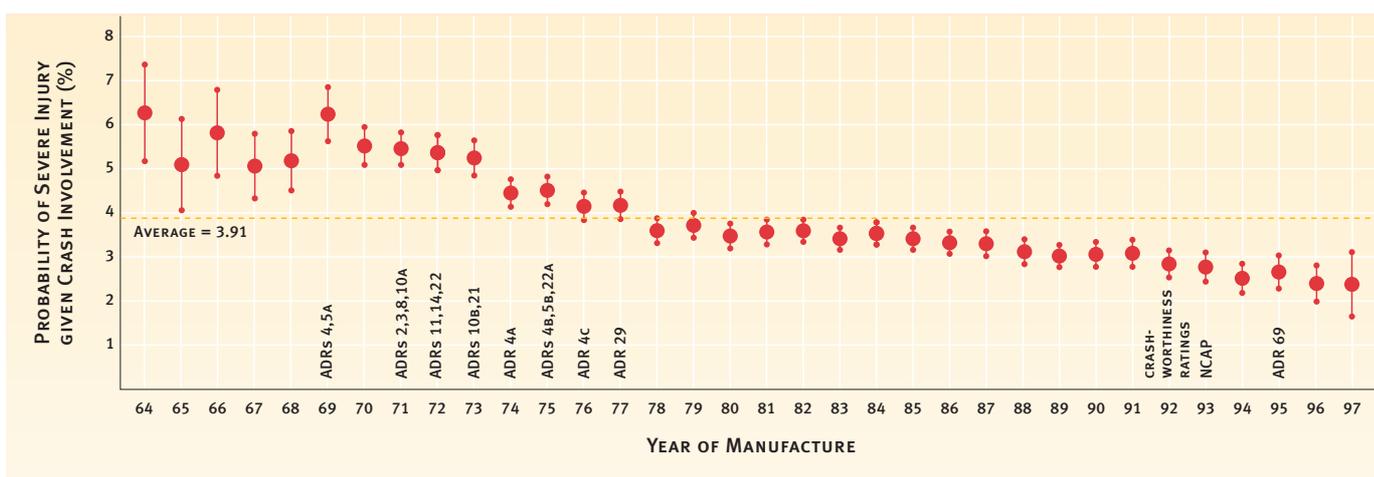

Motor vehicles provide an exceptionally high level of mobility, primarily because of the speed at which they can move at any one time. That development and that mobility has, of course, also come at an exceptionally high cost in human life, and a primary factor in the human cost is the speed at which these vehicles travel.

## VEHICLE DESIGN AND THE RISK OF INJURY

It is important to recognise firstly the considerable progress that has been made in reducing the risk of injury through vehicle design. This is illustrated by Figure B1 below, which shows the increasing crashworthiness<sup>30</sup> of the Australian vehicle fleet over the last 30 years, and maps this against the introduction of Australian Design Rules (ADR).

New vehicle design is continuing to decrease the number and/or degree of injuries sustained in a crash (through secondary prevention measures). However, new vehicle design has not focused a great deal on decreasing the chances of a crash (that is, through primary prevention measures) and, even when it has, the measure has not been shown to be completely effective. For example, the anti-lock braking system (ABS)

was designed to decrease the chances of a crash through more effective braking (Evans, 1991). Unfortunately, ABS does not appear to have been effective at reducing the incidence of crashes as much as its advantages over vehicles fitted with non-ABS brakes would predict (Evans, 1991; Highway Loss Data Institute in the USA, 1994, cited in Várhelyi, 1996). Behavioural changes by drivers with ABS brakes are the suggested reason for their weakened effectiveness. For example, drivers driving on ice and snow in vehicles equipped with ABS took risks that were greater than the advantages ABS gave (Biehl, Aschenbrenner, and Wurm, 1987, cited in Evans, 1991). Similarly, Aschenbrenner et al (1992, 1993, cited in Várhelyi, 1996) found that drivers with ABS-equipped cars drove with smaller safety margins than drivers of cars without ABS. Furthermore, the effectiveness of ABS brakes differs depending on whether or not the road is sealed. On an unsealed road, ABS brakes lead to a longer stopping distance than other types of brakes. Despite the less than expected benefit of ABS brakes for vehicle occupants, ABS brakes are likely to provide safety benefits for road users outside the vehicle, such as pedestrians and cyclists. For example, a driver with ABS brakes may be able to stop the vehicle sooner than a driver without ABS brakes when encountering a pedestrian in his or her path.

<sup>30</sup> A vehicle's crashworthiness is its ability to protect its occupants from serious injury given crash involvement.

In terms of secondary prevention, there are two types of occupant protection devices designed to prevent injury should a crash occur – active devices, which require the user to perform a specific act (such as put on their safety belt), and passive devices (such as airbags), which protect the user without requiring the user to perform an action. As discussed in Part A, during a collision a vehicle undergoes a rapid change in speed, known as Delta-V, and unrestrained vehicle occupants will continue to travel at the speed the vehicle was travelling before the collision. Safety belts, used in tandem with airbags, decelerate the occupant to either avoid or minimise the occupant's impact with the vehicle's interior. As well as reducing the likelihood and severity of injuries to users, safety belts have the major benefit of reducing the chance that the occupants will be thrown from the vehicle (where they would travel close to the pre-crash speed until striking something in the environment).

Passive occupant protection devices in use that continue to be improved include side impact protection, frontal crash protection, offset front crash protection, padded head impact areas, improved safety belt systems, and “intelligent” airbags that adjust deployment rate to crash severity and restraint status of occupants. All of these are designed to reduce the injury severity of occupants involved in crashes by reducing the immediate impact on the occupant.

Design attention has also turned to vehicles that are “pedestrian friendly”. Pedestrian-friendly vehicles are designed – with sloping fronts, for instance – to reduce the injuries to a pedestrian involved in a pedestrian-vehicle collision. Once a collision occurs, the main aggravator of pedestrian injuries is the impact on the human body by parts of the vehicle that are too stiff. In some cases, the skin of the vehicle may be soft enough in itself, but to protect the pedestrian there also needs to be a crush space underneath the skin of the vehicle; for example, between the bonnet and stiff engine components. Pedestrian-friendly vehicles are also designed to be free of sharp and protruding objects.

#### **VEHICLE DESIGN AND ITS IMPACT ON SPEED**

Despite such improvements to vehicle design, particularly in relation to the protection and comfort of vehicle occupants, vehicle speed will always be the central factor in injury risk to road users, whether they are motor vehicle occupants, pedestrians, cyclists, or motorcyclists.

It has been argued that recent developments in vehicle design are insulating vehicle drivers from the perception of danger when speeding, and influencing speeding behaviour. For example, physical cues about speed such as the noise and vibration of the road and the tilting motion on sharp curves that were more obvious in older vehicles are muted by improved vehicle handling, high-performance tyres, and air-conditioning systems in modern vehicles (Comte et al, 1997, cited in TRB, 1998). The sound of the air stream passing over and around the moving vehicle is also reduced by improved seals on windows and doors, while improvements in the quality and performance of car stereo systems can also effectively mask auditory cues about speed. As well, drivers report that, with more comfort, the sensation of speeding is reduced, leading to subconscious speeding (Nilsson, 1986, cited in Várhelyi, 1996). Evidence for this was provided more recently by Horswill and McKenna (1996). They found that drivers on a driving simulator drove faster when the volume control regulating engine and traffic noise on the simulator was turned down than when the volume was set at its normal level; however, the drivers were unaware that the simulator volume was lowered.

While driver perception of speed may be affected by these comfort factors, the European Conference of Ministers of Transport (ECMT) concluded that performance remained the main objective of new design for vehicle manufacturers (ECMT, 1996). Vehicles are designed to travel much faster than the speed limit, and the newer the vehicle, the greater the performance. Fildes, Rumbold, and Leening (1991) found that drivers of newer vehicles travel faster than drivers of older vehicles. In both urban and rural environments, drivers of vehicles less than four years old were more likely to exceed the speed limit and travel at excessive speeds than drivers of older vehicles. More recently, Fitzgerald, Harrison, Pronk, and Fildes (1998) found that large, relatively new vehicles not owned by the driver tended to be driven at high speeds. Furthermore, the greater the performance of the vehicle in terms of engine size, the higher the speed. Quimby, Maycock, Palmer, and Butress (1999) found that drivers of a car with an engine size of 2,000 cc (cubic centimetres) drove four percent faster than drivers of a car with an engine size of less than 1,000 cc.

In terms of primary prevention, new perception-based technologies can help to reduce the speed at which drivers choose to travel. For example, devices such as “heads-up display speedometers”, which display the vehicle’s current speed in the driver’s normal field of vision rather than on the dashboard, are designed to make it easier for drivers to monitor their speed, although their safety value is questionable, as it is unknown whether the devices negatively affect the driving task (Comte et al, 1997, cited in TRB, 1998). Other devices are designed to detect hazardous situations and warn drivers to adjust their speed. For example, systems have been designed that warn drivers when they get too close to the vehicle in front given their current speed or when a sharp curve is approaching and a reduction in speed is needed (TRB, 1998). Recent global positioning technology can help drivers who unintentionally exceed the speed limit by telling drivers where they are and what the speed limit is in that area.

More sophisticated technology is also addressing physical separation of vehicles in order to reduce crashes. These new technologies include advanced cruise-control systems, which maintain safe following distances, and “smart cards”, which determine maximum driving speeds based on the user of the car (TRB, 1998). Such technologies do not address the more fundamental problem of how fast vehicles are designed to travel.

The most direct means of reducing vehicle speed and crash risk appears to be speed limiters, which limit the top speed of the vehicle to a predefined value regardless of the user. Several field and simulation studies have been conducted to examine the effectiveness and acceptability of speed limiters in Europe. For example, Várhelyi and Mäkinen (1998) conducted a study in which drivers drove a car equipped with a speed limiter around a pre-defined route in one of three European cities<sup>31</sup>. Driving behaviour in the vehicle fitted with the speed limiter was compared to driving behaviour over the same route in a vehicle without a speed limiter. Várhelyi and Mäkinen found that the speed limiter reduced speeds, particularly in free driving conditions (that is, when unimpeded by other vehicles). The speed limiter also decreased individual speed variation and led to smoother approach speeds at roundabouts, intersections, and curves. Hence, as well as reducing speeds, speed limiters have the potential to make traffic flow smoother. The drivers were

also asked their opinions on speed limiters before and after the two test drives. The drivers tended to show increased acceptance towards using a speed limiter after having driven with one. A frequent comment from the drivers was that the speed limiter would be “useful” or “ideal” if all vehicles were equipped with one, presumably because there would be less pressure from other traffic to travel above the speed limit. The results of this study and others on speed limiters indicate that they are likely to be effective in built-up areas. However, further research is needed in rural conditions.

These mechanical limitations on speed are in use on heavy vehicles in Australia. However, the use of speed limiters within a national vehicle fleet has not yet been implemented anywhere. This seems to be because car manufacturers are not generally supplying speed limiters as a safety feature, new car consumers are not demanding speed limiters as a safety feature, and governments are not regulating their use except in relation to heavy vehicles. Speed reduction mechanisms in themselves do not appear to be a desirable safety feature in new vehicles.

## Conclusions

- Significant progress has been made in vehicle design to reduce the injury impact on vehicle occupants.
- In terms of reducing the effect of vehicle speed, vehicle safety design has concentrated on secondary rather than primary injury prevention. That is, greater emphasis has been placed on design features that reduce the severity of the injury, rather than on features that reduce the incidence of crashes that lead to the injury.
- Specifically, recent vehicle design has:
  - tended to insulate the driver of the vehicle from the perception of danger when speeding, thereby facilitating an increase in driving speeds;
  - improved vehicle performance, thereby facilitating increased driving speed.
- European studies have shown that direct speed reduction, through mechanisms such as speed limiters, is likely to be effective in reducing speeds.

<sup>31</sup> The speed limiter was automatically triggered by transmitters attached to speed-limit signs. Thus, the speed the vehicle was limited to depended on the speed limit.

## 2: ROADING FACTORS AND THEIR IMPACT ON SPEED

Vehicle safety improvements take time to work through vehicle fleets and impact in a significant way on the level of injury and death on the road, often taking between 10 and 20 years to have an effect. Changes in public attitudes can take even longer to produce a substantial gain in road safety. By comparison, safety improvements to the roading environment can take place in a matter of weeks and months, rather than years. Indeed, the most crucial factors appear to lie in diagnosing the road or traffic factor that may be affecting safety on a piece of road, and developing an appropriate solution that improves safety and does not simply shift the safety problem from one point to another or replace one safety problem with another. This section outlines the roading techniques that can be used to improve safety, and reports on evaluations of those techniques<sup>32</sup>.

### 2a: The Impact of the Environment on Speed and Perceptions of Safety

As we shall see, psychology plays a part in much of the following discussion on the use of road and traffic design to reduce speed. Before progressing further, therefore, we should recognise that a driver's choice of travel speed is dependent on both sensory perception and cognitive processing. Sensory perception determines what information is available to the driver, while cognitive processing determines what the driver will do with the incoming information. Therefore, the environment the driver travels in is a very important factor in determining his or her choice of speed. In particular, as we shall see, a driver makes a judgement about the relative "safety" of a stretch of road based on his or her perception of the roading environment. Generally, where drivers perceive a stretch of road to be "safe", travel speeds tend to be higher. Below, we discuss environment and road factors that influence perception and, hence, speed choice.

#### ROADSIDE DEVELOPMENTS

In general, more extensive roadside development tends to reduce speed, and drivers travelling on roads through open farmland could be expected to drive faster than they would through a built-up urban area. Roadside development is a critical factor in the development of speed limits, and speed limits tend to be lower on urban than on rural roads, a factor that in itself influences (or even reinforces) drivers' speed choice. Overall, rural roads tend to have higher speeds, lower traffic volumes, and higher crash severity than urban roads (Hungerford and Rockwell, 1980; Jennings and Demetsky, 1983). The design of the two different road types also has a major effect on speed perception.

Fildes and Lee (1993) define roadside development as "*any aspect of the environment close enough to the roadway to influence driving*" (p59), whether on four-lane highways or on urban roads. Houses set close to the road in urban environments have been found to reduce speed, and trees on the side of rural roads have been found to influence the perception of speed and safety. For example, Fildes, Fletcher, and Corrigan (1987) found that roads without roadside trees were perceived to be safer and travel speeds were underestimated much more than was the case for roads that had a large number of roadside trees. However, this perceptual effect disappeared in semi-rural environments.

Two studies have analysed the perception of safety on curves with different roadside developments. Fildes, Leening, and Corrigan (1989) reported that speeds for curves that had a small radius, that were walled, or that had a gravel surface were judged to be more unsafe than the same speeds on curves without these features. Vaniotou (1990) found that bends with immediate surroundings that contained any or a combination of safety rails, fences and walls, vegetation, poles, overhead cables, or reflective posts gave different perceptions of safety to bends with essentially similar bend geometry but without the immediate surroundings material or with a different combination of surroundings material (although which combinations gave the greatest perceptions of safety was not reported in Fildes and Lee, 1993). These differences in

<sup>32</sup> Fildes and Lee (1993, chapter 5) provide an excellent summary of the influence of the environment and road on speed perception and related speeding behaviour. The following is an outline of their review

with, wherever available, the inclusion of more recent literature. Unless otherwise indicated, all references prior to 1993 are cited from Fildes and Lee (1993).

perceptions of safety are broadly in line with the real levels of safety in the different environments.

### PHYSICAL ATTRIBUTES OF THE ROAD

The physical attributes of the road have also been shown to have an effect on speed. These attributes are outlined below, but they all relate to the overall standard of the road, and ultimately to design speed. In general, the higher the road standard, the greater the proportion of drivers who exceed the speed limit. For example, Grime (1987, cited in Várhelyi, 1996) found that the proportion of drivers exceeding the speed limit was five percent on two-lane roads with a speed limit of 60 mph (97 kph), 12% on dual carriageways with a speed limit of 70 mph (113 kph), and 40% on motorways with a speed limit of 70 mph (113 kph) (see also O’Cinnéide and Murphy, 1994, cited in Várhelyi, 1996). A driver’s perception of safe speeds is also influenced by the category of the road. For example, Fildes et al (1989) found that high speeds on median-divided roads were judged safer than high speeds on two-lane, undivided, two-way roads.

Several studies have found a relationship between vehicle speed and road width. For example, Vey and Ferrari (1968) found that speeds on 3.4 metre lanes on a bridge in Philadelphia were higher than speeds on 3.0 metre lanes on a comparable bridge. Nilsson (1989, cited in Várhelyi, 1996) reported that, for each metre increase of paved road width, speeds increased by 0.4 kph.

Although road markings are generally used to define lane width, several studies have examined the effects of different variations of markings on vehicle speed. Edge lines on curves have been shown to keep vehicle speeds on curves appropriate. For example, Witt and Hoyos (1976) found that drivers in a simulator adopted a more suitable speed profile while negotiating a curve where edge lines were varied, rather than being in a uniform configuration. Varying edge lines on straight sections of road do not appear to affect vehicle speeds, however (Lum, 1984; Cottrell, 1985); edge lines on straight sections of road are more useful for guidance within the lane (Triggs and Wisom, 1979; Triggs, 1986). In terms of guiding vehicles along the road, a study in Finland discovered that reflector posts designed to assist guidance during darkness increased vehicle speeds on two-lane rural roads (Kallberg, 1993, cited in Várhelyi, 1996). For example, “reflector posts on roads with an 80-kph speed limit and relatively low geometric standard increased driving speeds in darkness by up to 10 kph” (Várhelyi, 1996, p10).

Also relevant in this context is road geometry. Road geometry refers to the bends and curves (“horizontal curvature”) and the hills and raised sections (“vertical curvature”) of a road. Speeds on curves appear to be dependent on how the driver perceives a curve before entering it. For example, Milosevic and Milic (1990) found that drivers underestimated their speeds on curves. However, drivers’ estimations were more accurate if they had seen warning and speed limit signs. Matthews and Barnes (1988, cited in Matthews, 1988) found that a high proportion of night-time crashes in New Zealand occur on curves on rural roads, particularly on curves with a short radius (that is, sharp corners) in isolated areas. Matthews (1988) suggested these crashes were due to drivers failing “to perceive the curve or the particular demands of the curve” (p276) and not adjusting their speed accordingly. Matthews (1988) conducted a study that examined the effect of placing a red flashing chevron before a curve to alert the driver to the presence of the curve. He found that “the speeds of vehicles entering curves were substantially reduced by supplementing the standard advisory signs and chevrons with a red flashing chevron” (p286).

Regarding “vertical curvature”, researchers have found an over-representation of crashes on graded sections of road compared to flat sections (Agent and Deen, 1975; Cooper, 1980). However, there is an under-representation of crashes at curve crests. Cooper (1980) suggested the result is due to vehicle speeds increasing on the downgrade, which may lead to the driver losing control. Wright and Zador (1981) and Hall and Zador (1981) reported an increased risk of single-vehicle fatal roll-over crashes on downhill slopes than on level or uphill sections. Speeds are likely to be less on curve crests because of a restricted sight distance (that is, the driver does not know what is over the curve crest).

Several studies have examined the relationship between sight distance and vehicle speed. Some have shown no relationship (for example, Yagar and van Aerde, 1983, cited in Várhelyi, 1996), while others have found that sight distance restrictions induce a small reduction in speeds, although only for the faster travelling drivers. However, a recent study by Hogema and van der Horst (1994, cited in Várhelyi, 1996) on a two-lane motorway in the Netherlands has shown clear reductions in vehicle speed depending on visibility range (that is, depending on whether fog or bad weather was present). Compared to clear visibility (defined as visibility of over 1,000 metres), when the visibility range was 300 metres, free-driving speeds reduced by about five

percent in the left lane of the motorway and by eight percent in the right lane. Speeds remained relatively constant when visibility was between 140 and 300 metres. When visibility reduced to less than 100 metres, speeds dropped drastically. However, the researchers reported that, when visibility ranged from 40 to 120 metres, *“even in an extreme case of hard braking... , the speeds of the free driving vehicles... were too high to avoid a collision if suddenly confronted with a stationary obstacle”* (p13). Fildes and Lee (1993) reported that *“it is difficult to separate the effects of gradient [or curvature] alone from sight distance in the speed literature”* (p65), as the horizontal and vertical curvature of a road are primary causes of sight distance restrictions.

Finally, the smoothness of the road surface also appears to be directly related to vehicle speed (for example, Oppenlander, 1966; McLean, 1982). Anund (1992, cited in Várhelyi, 1996) measured the roughness of the road surface using the International Roughness Index (IRI). As IRI increased for a road, the mean speed of passenger cars travelling on the road decreased, although no difference in speed was detected for trucks. These findings are likely to be partly due to the higher noise level (caused by friction between the tyres and the road) as roughness increases.

All of the above physical attributes affect the standard of the road, and the overall standard of the road is itself related to the design speed of the road (that is, the travel speed that the road has been designed for). The design speed is based on factors such as curvature and sight distance.

### **TRAFFIC FACTORS**

Beyond the physical attributes of the road, other traffic related factors can also influence vehicle speed. In general, as traffic volume and density increases, travel speed decreases (Oppenlander, 1973; Rankin and Hill, 1974; Armour, 1983). Crash rates also tend to increase with increasing traffic volume, although there is a threshold effect at high volumes (for example, Raff, 1953; Peter Casey and Associates, 1979), presumably because traffic flow becomes severely restricted. This has been demonstrated on multi-lane highways, where flow rates over 1,400 passenger cars per hour per lane have been shown to result in speed decreases (Highway Capacity Manual, 1985, cited in Várhelyi, 1996).

Encountering an intersection affects a driver's speed. A Hungarian study showed that drivers approaching a minor road intersection regulated by a give-way sign began to slow

down on average 30 to 50 metres before the intersection (Bank and Draskóczy, 1982, cited in Várhelyi, 1996). When visibility at the intersection was good, drivers slowed down much earlier and passed through at higher speeds (when there was no traffic on the major road) than at intersections with poor sight. That is, with good sight distance, drivers could travel at higher speeds through an intersection than they could with poor sight distance.

A study in the Netherlands (van der Horst, 1990, cited in Várhelyi, 1996) observed that drivers approaching the give-way sign on the minor road, in an encounter with another road user on the main road, started braking about three seconds before the intersection, regardless of their approach speed, the type of intended manoeuvre, and the type of road user on the main road. Car drivers on the main road generally did not reduce their speed when encountering a car on the minor road.

At least two studies have been conducted on the effect of parked vehicles on speed. Research on the effect of parked vehicles has produced mixed results. For example, Smith and Appleyard (1981) found that vehicle speeds increased as the width of the road increased. Road width was affected by the presence of parked vehicles; therefore, when parked vehicles were present, speeds decreased. Joscelyn et al (1970) found that speeds were affected by the presence of objects, such as vehicles, on the road shoulder when lanes were up to 6.2 metres wide (speeds were unaffected at or above this lane width).

The presence of pedestrians on the roadside has been found in some studies to have little effect on driver speed. For example, the presence of children on the roadside had no effect on vehicle speed in the UK, although speed was reduced slightly when large groups of pedestrians were present (Thompson, Fraser, and Howarth, 1985). Even when a neighbourhood road safety campaign was conducted in New South Wales, there were only minor speed reductions on residential streets, and these reductions could have been due to factors other than the campaign (for example, weather). Várhelyi (1996) also conducted a review of vehicle speeds at zebra crossings when pedestrians were present (but not crossing) and found that the presence of pedestrians on the roadside had little or no influence on the speed of approaching vehicles. Unfortunately, the presence of pedestrians does lead to a high number of collisions in which a pedestrian is injured (see Part E). Hence, keeping speeds low in the presence of pedestrians is very important.

### TIME OF DAY AND WEATHER

In spite of the road environment, speeds tend to be higher at night than during the day in Sweden (for example, Norrish, 1991; Nilsson et al, 1992, cited in Várhelyi, 1996). This may be because higher traffic congestion during the day may restrict a driver's choice of speeds. Perceptions of speed also differ between daylight and darkness. For example, more accurate judgements of rural road speeds are made at night than during the day (Triggs and Berenyi, 1982). This was attributed to *“the increased angular speed of elements visible to the driver which, under headlights, [appear]... much closer than normal and form streaming patterns produced by reflectorised road delineators”* (Fildes and Lee, 1993, p66). However, rural roads were perceived as less “safe” at night than during the day (Fildes et al, 1989), although perceptions of safety during the day and at night were similar when the roadside environment had a “walled” surrounding (such as trees close to the road). This is presumably because driving in a walled environment is similar to driving at night because of the restricted peripheral vision. The findings relating to perceptions of safe speeds and speed travelled during the day versus at night may seem contradictory, but if traffic congestion during the day was similar to congestion levels at night, it is likely that speeds would be higher during the day when drivers feel safer and are less accurate at estimating their speed.

Both road conditions and visibility are affected by weather, and speeds tend to reduce as weather deteriorates. For example, Kolstrud (1984, cited in Várhelyi, 1996) found that the mean speeds of passenger cars on straight and horizontal stretches of different types of roads in Sweden decreased on average by 2 kph when the roads were wet and by 8 kph when the roads were icy or snowy, compared to when they were dry. A review by Öberg (1994, cited in Várhelyi, 1996) of studies in Sweden of the mean speeds on icy or snowy roads compared to dry roads showed a 10-kph decrease in mean speeds on the icy or snowy roads. When the road is icy or snowy and there is also snowfall or snow-drift present, the mean speeds reduced by up to 20-25 kph compared to dry roads. Recently, Edwards (1999) found that traffic on the M4 motorway in south Wales travelled at a

lower speed both in wet weather and in misty conditions than it did in dry conditions. However, the size of the speed reduction was not large enough to make up for the increased hazard from the weather, when considering required braking distance and loss of grip on the road surface.

## 2b: Controlling Traffic Speed

To a certain extent, road safety relies on the driver's willingness and ability to monitor and regulate his or her own driving behaviour. A number of speed control measures have been developed to assist drivers to monitor and regulate their speed.

### SPEED LIMITS

The primary method of managing travel speed is by imposing speed limits. To be effective, speed limits should be compatible with the design speed of the road, although the design speed tends to have a greater effect on a driver's choice of speed than does the speed limit (Várhelyi, 1996). For example, if the speed limit is lower than the design speed, this can lead to a general disregard for the limit. The effectiveness of speed limits in improving road safety was discussed in Part A. In general, a speed limit increase results in slightly increased speeds, which in turn increases fatalities, although the magnitude of these increases depends on the mean speeds before the speed limit change<sup>33</sup> (TRB, 1998). The opposite effect generally occurs following a decrease in speed limits.

It is important to recognise that speed limits alone do not tend to control driver speed effectively. They need to be supported with enforcement and engineering measures to keep drivers at a safe speed (TRB, 1998). Engineering measures are discussed in the following subsections, and enforcement issues are covered in Part C.

### ADVISORY SPEED SIGNS

To provide speed related information to drivers beyond the speed limit itself, advisory speed signs are sometimes posted at hazards, such as narrow curves, to slow drivers from their travel speed, without changing the speed limit at the location. However, recent research has indicated that the

<sup>33</sup> That is, if the mean speed is already close to the new speed limit, mean speeds may change only slightly or not at all.

presence or absence of these signs has little effect on driver speeds, particularly for drivers who are familiar with the road, and that the signs are no more effective at slowing speeds than a curve warning sign on its own (Graham-Migletz Enterprises Inc, 1996, cited in TRB, 1998; Zwahlen, 1987, cited in Várhelyi, 1996). The poor compliance with advisory speed signs may arise because they are set unrealistically low (Chowdhury et al, 1998, cited in TRB, 1998) or based on engineering criteria rather than on human factors. Evidence for this has been provided in a recent survey by Transit NZ, which indicated that a large proportion of the New Zealand drivers surveyed believed that advisory speed signs were set at a speed much lower than the curve could be safely travelled (McCormick, 1998). This survey was conducted when there was a shortage in New Zealand of side thrust gauges (devices used to measure the sideways force as a car is driven along a road). However, when advisory speeds signs on curves were first set in New Zealand, using a side thrust gauge, they were found to reduce crashes on curves (Palmer, 1962). Thus, if advisory speeds are set using side thrust gauges, they may be more effective.

#### **NEW TECHNOLOGY**

Drivers' speeds in certain situations in the USA have recently been affected by new road-based technologies such as variable message signs. These electronic signs allow roading authorities to inform and warn drivers of crashes, adverse road and weather conditions, and other factors that require drivers to adjust their speed, as these conditions occur (Dudek, 1997, cited in TRB, 1998). Unfortunately, the effectiveness of the latest versions of these signs on speed reduction has not been studied. One use is as variable speed-limit signs, which inform the driver of the appropriate speed limit for the given conditions. Preliminary evaluations of the use of variable speed limits on autobahns in Germany have indicated they have reduced crash rates (Coleman et al, 1996, cited in TRB, 1998).

Mobile roadside speedometers are another new road-based technology. These devices measure a vehicle's speed and display the speed to the driver on a changeable message sign as the vehicle passes. Traffic speed in the vicinity of a mobile speedometer and a short distance downstream tends to reduce, compared to traffic speed without a speedometer present (Casey and Lund, 1993, cited in TRB, 1998). The device is particularly effective at reducing the speed of those exceeding the speed limit by at least 10 mph (16 kph) and reducing traffic speed in school zones. However, both enforce-

ment and supporting publicity are needed for this speed reduction to occur (Comte et al, 1997, cited in TRB, 1998).

Devices similar to mobile speedometers, known as automatic speed warning signs, have proven effective in Norfolk, England (Farmer, Barker, and Mayhew, 1998). These signs display the speed limit to drivers who have exceeded a pre-set speed threshold. The aim is to warn drivers that the limit has been exceeded and to encourage them to slow down. A trial of the signs placed at entrances to rural villages in Norfolk found that the signs substantially reduced the mean speeds of vehicles travelling into the villages (the mean speed reduction over all sites was 4.3 mph). Furthermore, these speed reductions were maintained over a period of 12 months.

#### **2c: Environmental Speed Control Devices**

Measures to control traffic speed tend to rely on enforcement to be effective at maintaining safe driving speeds. Since it is not practical for enforcement authorities to oversee every section of road, engineering methods that keep speeds down have been developed. These engineering methods need to be designed according to the type of traffic on the roadway. For example, treatments used on local (urban) roads to reduce speeds are not necessarily useful for arterial routes that carry large volumes of traffic (Fildes and Lee, 1993).

Recently, the Dutch government has adopted a policy and implementation programme known as "sustainable" road safety, in which roads are clearly distinguished by their primary function, such as traffic flow, traffic distribution, and access (TRB, 1998). Speed design measures are used to reflect these primary functions. For example, residential environments are designed for the safety of vulnerable road users, such as pedestrians, whereas rural environments are designed for the safety of vehicles travelling long distances, taking into account travel time. Travel time is considered further in Part D. Whatever the function of the road, its design separates different road users, thereby reducing the risk of contact between vehicles travelling at different speeds.

Measures used to control the speeds of through traffic on residential roads are known as Local Area Traffic Management (LATM) measures. One of the earliest LATM devices, developed in the Netherlands, was the "Woonerf design" (Fildes and Lee, 1993). The "Woonerf design" involves pedestrians and vehicles moving in the same space, but with pedestrians having the right of way. Vehicle speeds

are reduced to walking pace through different engineering methods. Some shopping areas in New Zealand cities use a similar concept. The following are some types of engineering methods for reducing speeds, with an emphasis on LATM devices. These devices are normally used in area-wide schemes.

### **SPEED HUMPS**

Speed humps are designed to “give the driver a clear physical feedback to keep a low speed” (Várhelyi, 1996, p116). They are used on residential streets. They differ from bumps, which are designed for use in carparks and the like. Humps have “dimensions in the order of a 4 metre radius and 10 cm height”, whereas bumps have “a radius [of] between 0.1 and 1.0 metre and height variations from 5 cm to 15 cm” (Stephens, 1986, cited in Fildes and Lee, 1993, p70).

A review of studies on the effectiveness of speed humps found them to be very effective in reducing speeds, particularly at sites where speeds prior to hump installation were high (Stephens, 1986, cited in Fildes and Lee, 1993). Speeds tended to reduce by 40-45 kph when pre-installation speeds were 65-70 kph, and tended to reduce by 10 kph when pre-installation speeds were 30-40 kph. Engel and Thomsen (1992, cited in Fildes and Lee, 1993) concluded that speed humps were responsible for speed reductions of 1 kph for every 1 cm of height of the hump, although, presumably, there was a minimum and maximum height beyond which this was not true. Overall, speed humps have been shown to be an efficient speed-reducing physical measure (Várhelyi, 1996).

### **ROAD NARROWING, CHICANES, AND GATEWAY TREATMENTS**

Another effective means of reducing speed is use of “diagonal slow points” or chicanes, which narrow the road and force the driver to change direction in order to manoeuvre through traffic islands on either side of the road. The optimal configuration of chicanes, suggested by Bowers (1986, cited in Fildes and Lee, 1993, p71), is that they “should create 45 [degree] changes in direction of the carriageway approximately every 50 metres, with an offset of the full width of the carriageway” (p61). A study of chicanes by Taylor and Rutherford (1986, cited in Fildes and Lee, 1993) showed that they reduced speed from above 50 kph to under 30 kph, although speeds were reduced for only about 40 metres on

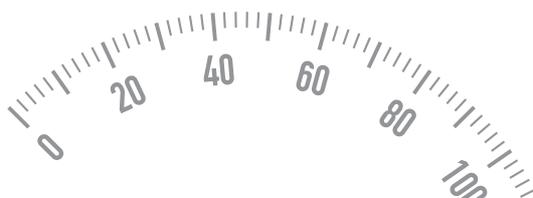

either side of the chicane. A Swedish study produced a similar finding; however, the chicanes were found to have caused some contact or potential contact between passing vehicles and to have generated some irritation from the public (TSV, 1985, cited in Várhelyi, 1996).

Similarly, gateway treatments produce the effect of passing through a constricted “gateway” opening by road narrowing combined with vertical elements such as trees and lamps (Fildes and Lee, 1993). A gateway treatment on rural roads at entrances to villages in Germany reduced the mean speed on the roads from 77 to 66 kph, although speeds were still well above the 50-kph speed limit (Alink and Otten, 1990, cited in Várhelyi, 1996).

Road narrowing alone, whether implemented along the whole road (or large sections of it) or at certain points through the use of traffic islands on either side of the road, can also reduce speeds. However, a Swedish study found that road narrowing had the smallest effect on speed reduction compared to humps and chicanes (Hydén et al, 1983, cited in Várhelyi, 1996). In Hydén et al’s study, mean speeds reduced from 38-45 kph to 32-40 kph following road narrowing in Sweden. Similarly, in Denmark, road narrowing on residential streets produced a speed reduction of 4.7 kph (Engel and Thomsen, 1990, cited in Várhelyi, 1996).

### **ROUNDABOUTS**

Studies have indicated that roundabouts are effective at keeping vehicle speeds down on straight roads (for example, Lynam, 1987, Schnull and Lange, 1990, Davies, 1988, all cited in Fildes and Lee, 1993). However, their effectiveness depends on the extent to which drivers are forced into a roundabout manoeuvre. For example, a large roundabout at the entrance to a town was more effective at slowing traffic than a mini-roundabout (Herrstedt, 1992, cited in Fildes and Lee, 1993). However, if properly designed, mini-roundabouts can also be effective at reducing speeds. For example, mini-roundabouts on arterial routes in a Swedish town reduced mean speeds through the intersections to 30-35 kph and reduced the risk of injury crashes by 40% (Hydén et al, 1995, cited in Várhelyi, 1996). Mini-roundabouts are often part of LATM measures.

## SYSTEM-WIDE EFFECTS

A through road in a built-up area can be environmentally adapted by using combinations of devices (for example, a gateway, chicanes, and general road narrowing) to reduce traffic speed. Elvik et al (1996, cited in Várhelyi, 1996) reviewed the findings of several studies that examined the effects of environmentally adapted through roads. The technique reduced the number of injury crashes by between 30% and 50% and, on average, mean speeds decreased from 53.7 to 44.4 kph. Herrstedt (1992, cited in Fildes and Lee, 1993) also reported speed reductions of 10 kph in 40-kph and 50-kph zones when a combination of devices was used.

In general, the overall benefits of LATM measures in reducing speeds and crashes in urban areas are clear and exceed the costs<sup>34</sup>. Fildes and Lee (1993) caution, however, that research has not explained the effects of the treatments on the entire roading system. One such effect is traffic migration, evidence for which was found by Vis, Dijkstra, and Slop (1990, cited in Fildes and Lee, 1993). They measured traffic volumes before and after the introduction of LATM devices in 15 areas in the Netherlands and observed reductions of five percent to 30% in traffic volumes using the adapted roads. If the speeding drivers use alternative routes, then there can be crash migration to these areas.

There are some other suggested problems with LATM measures (Fildes and Lee, 1993). For example, McKee and Mattingly (1977) found that environmental traffic schemes can disadvantage the elderly by increasing journey times and distances to shopping and recreational destinations. They also disadvantage older drivers by increasing the complexity of the driving task in their local area. They may also disadvantage the entire road user population by increasing the number of crashes because of their physical obstruction of the roadway. Furthermore, they may restrict the mobility and ease of access of emergency services such as ambulances. Unsafe driving behaviour due to frustration at the devices is another suggested problem. However, it appears that no research has been conducted to demonstrate the full extent of these problems.

## 2d: Perceptual Countermeasures to Speeding

Because drivers tend to choose their travel speed based on their perceptions of relative “safety” of a stretch of road, some roading measures have attempted to reduce drivers’ perceptions of safety without actually reducing the safety of the road. The effectiveness of these “perceptual” countermeasures in reducing speeds is variable. Fildes, Leening, and Corrigan (1989) argued that these countermeasures are more likely to be successful in environments perceived as unsafe (for example, narrow walled environments) than in environments perceived as safe. In “safe” environments, speed choice is more dependent on social and enforcement factors, whereas in “unsafe” environments it is more dependent on perceptual factors. Some of the measures that have been shown to be effective are outlined below, but generally more research appears necessary in this area.

Transverse road markings are lines painted or adhered across the road surface. One use of this perceptual countermeasure is to place these markings (usually with decreasing spacing between the lines) to give the illusion that vehicle speed is increasing (Várhelyi, 1996). They are suggested for use at locations where drivers have been travelling at high speeds for some time and are then required to slow down, such as at motorway exits. Researchers have found transverse road markings to be effective at reducing speeds in the long term in both the UK (Helliard-Symons, 1981, cited in Fildes and Lee, 1993) and Australia (Jarvis, 1989, cited in Fildes and Lee, 1993). However, in a study by Rutley (1975, cited in Várhelyi, 1996), they lost some effectiveness after one year (possibly as drivers became aware of the illusion). Initially, these markings reduced mean speeds by 23%, but one year later the speeds were reduced by only eight percent from the initial mean. As well as producing the illusion of increasing vehicle speed, the markings may be effective because drivers are reacting to them as a warning device.

Another perceptual countermeasure is a narrowing of the width of the vehicle lane. A narrowing of the lane to a width of 3.0 metres or less is required to produce the perceptual effects needed for speed reductions (Fildes and Lee,

<sup>34</sup> Several studies other than those already cited have shown crash reduction benefits and/or speed benefits from treatments on residential streets (for example,

Kraay et al, 1984, Engel and Thomsen, 1990, Hydén et al, 1983, all cited in Várhelyi, 1996; Fisher and Van den Dool, 1989, Chua and Fisher, 1991, Kjemtrup

and Herrstedt, 1992, Engel, Krosgaard, and Thomsen, 1989, Engel and Thomsen, 1992, Bowers, 1986, Engel, 1990, all cited in Fildes and Lee, 1993).

1993), although there is a minimum possible lane width through which vehicles can travel safely. Similarly, intensive road treatments are used in some locations to severely restrict the number and size of travel lanes through the use of wide white gravel medians with edge-line markings. These treatments have been shown to reduce travel speed in some locations.

A device that allows drivers to monitor their own driving behaviour through auditory rather than visual cues is an audible edge line. This is a strip along the edge of the road with evenly spaced, raised ridges that cause vibration and associated rumbling within the vehicle if the vehicle drives along or across it. Thus, speeding (or distracted) drivers will be alerted that they are leaving the carriageway and that they must lower their speed and/or correct their vehicle direction. Trial stretches of audible edge lines have been laid in New Zealand, but no research is available on their effectiveness. Queensland Transport in Australia found that fatal crashes on two sections of highway in Queensland fell by 39% over 12 months as a result of the introduction of audible edge lines (Queensland Government, 1997).

## Conclusions

- Generally, drivers travel faster on stretches of road they perceive to be “safe” for higher travel speeds, regardless of whether this perception is accurate.
- Roadside development, such as trees in rural environments or houses in urban environments, play a significant role in the speed drivers perceive to be safe, and hence how fast they drive. There are a range of other environmental factors – such as the width, surface, and marking of the road, sight distance, traffic volume, time of day, and weather – that affect how fast vehicles travel on the road.
- Many of these factors themselves are dependent, particularly for new road developments, on the speed that the road was designed to be driven on.
- Speed limits alone are not effective in reducing vehicle speed. They need to be reinforced either through engineering (or environmental) measures or through enforcement activity.
- A range of perceptual and physical road and traffic measures are available to reduce speeds on the road. The use of these measures needs to be assessed on a case-by-case basis to minimise the risk that the devices become hazards in their own right, and to ensure that speed management problems do not simply migrate to other parts of the road network.
- Most is known about Local Area Traffic Management (LATM) devices that place physical barriers in front of vehicles to slow their speed in urban areas.

## PART

### COUNTERMEASURES: ENFORCEMENT, PUBLICITY, AND PENALTIES

---

The focus of Part C is on reducing speed by targeting those who drive at excess and inappropriate speeds. The more common, traditional approach to controlling vehicle speeds – that is, by focusing on changing the attitudes and behaviours of speeding drivers through enforcement, publicity, and a system of penalties – is discussed.

The first point of discussion addresses the continuing but misguided view among some individual drivers that they have superior driving skills such that they are able to drive at increased and inappropriate speeds on public roads without endangering themselves or other road users. Consistent with this view is a lack of support for strict police enforcement of laws relating to speeding. Such attitudes are in sharp contrast to our demands as a society for further police enforcement presence to protect our interests in almost any other area, whether that be in relation to burglary, rape, murder, fraud, domestic violence, or drink-driving. In many ways, this reflects the heart of the problem of speed on our roads – the denial that speeding is a fundamental safety issue.

The poor attitude of communities towards speeding needs to be addressed by a community attitude change programme. Such programmes have been successful in other areas, such as drink-driving, anti-smoking, and cancer prevention (sun-smart) campaigns. A similar success can be achieved with speeding; however, it requires an intensive and sustained campaign of education, enforcement, and publicity. Behavioural change is possible but does not happen overnight.

Enforcement is a fundamental mechanism for improving safety on our roads, and this Part also attempts to show the role that enforcement plays in reducing speed-related trauma. However, enforcement is just one strategy that needs to be employed. Just as important are publicising the enforcement and having a penalties system that reinforces safer behaviour. Part C concludes by returning to the comparisons, made in earlier sections of this review, of the relative risks of crashing when exceeding the speed limit or when under the influence of alcohol. Penalties for behaviours with similar relative risks are contrasted.

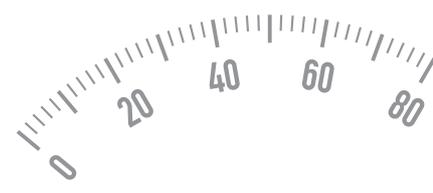

## 1: DRIVER CAPABILITY AT DIFFERENT VEHICLE SPEEDS

### IDENTIFYING AND RESPONDING TO HAZARDS

As noted earlier, safe driving relies on two important human functions: perception and cognition. Drivers must not only observe and respond to the constant and predictable features of the road, but must also identify and respond to potential hazards in the traffic system. There is a wide range of potential hazards – for example, the vehicle in front stopping suddenly, a pedestrian stepping out, a vehicle turning in from a side street, a child running out, a cyclist swerving to avoid a pothole, or an animal sitting on the road. The detection of hazards or potential hazards requires constant vigilance on behalf of the driver. The ability to detect hazards is one of the skills that differentiates experienced from novice drivers (McKenna, 1999).

Once a hazard has been detected, the driver then has to make a decision about how to respond and to act accordingly. Várhelyi (1996) likened the driver to a complex “information processing system”, continuously monitoring the traffic situation and reacting accordingly. In order to drive safely, the driver has to “*perceive, attend to, and comprehend relevant information, make decisions, and have the necessary skills and motivation to carry out the necessary manoeuvres*” (p21).

As a driver’s vehicle speed increases, so does the speed with which the traffic situation “approaches” the driver. In addition, the higher the speed, the further ahead the driver has to monitor. Therefore, with the speed increase, the driver has to deal with more information and make more decisions per unit of time. There is, however, a limit to our information-processing capacity, and, if the amount of information presented in a certain space of time exceeds that capacity, not all of the information will be able to be processed. Therefore, given the same level of driving experience, a driver travelling at higher speeds has a greater risk of missing or misinterpreting visual or auditory information about potential hazards – or of even missing the critical cues altogether – than a driver travelling at lower speeds (Várhelyi, 1996).

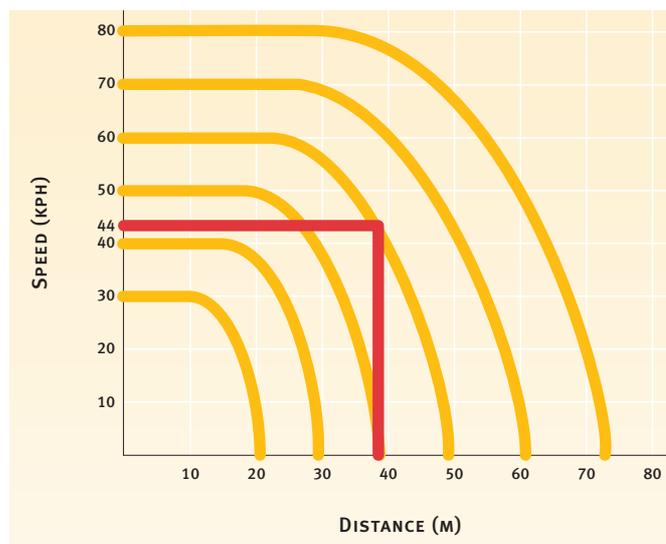

Not only does a limited information-processing capacity affect the ability to detect hazards at high speeds, but so does the way the eyes are focused at high speeds. Häkkinen (1979, cited in Várhelyi, 1996) observed that, as speed increased, drivers' eyes tended to focus further ahead in the distance, giving less attention to peripheral observation. Hence, the detection of hazards, such as approaching pedestrians, in the peripheral view became more difficult.

Furthermore, when travelling at higher speeds, there is less time to make the appropriate response in order to avoid a hazard than there is at lower speeds. In Part A, we discussed how stopping distance factored into the relationship between speed and the risk of crashing. That is, a speeding vehicle will not only travel further than a slower-moving vehicle during the driver's reaction time, but it will take longer to come to a stop once the brakes are applied. Another way of looking at this is to compare sight distance – that is, the distance from a hazard at the time it is first viewed – with total stopping distance. At low speeds, the sight distance usually far exceeds the total stopping distance (given normal levels of friction). However, at high speeds, the sight distance may well be less than the total stopping distance required and, in such cases, a collision with the hazard (or another object in the attempt to avoid the hazard) is almost certain. Fildes and Lee (1993) termed driving at speeds where the stopping distance exceeds the sight distance “over-driving” (p17).

McLean et al (1994) determined the relationship between initial speed and stopping distance from an examination of 176 fatal pedestrian-vehicle collisions in the Adelaide area between 1983 and 1991. The relationship is presented in Figure C1 below. The straight, horizontal sections of each curve represent the distance covered during the driver's reaction time; that is, from the time the driver first views a pedestrian to the time the brakes are applied. During this time, the vehicle travels at the same speed as the initial travelling speed. Once the brakes are applied, the vehicle's speed decreases with distance travelled, slowly at first then more rapidly. McLean et al use Figure C1 to demonstrate the following example:

*“Consider two cars travelling side by side at a given instant, one car travelling at 50 kph and the other overtaking at 60 kph. Suppose that a child runs onto the road at a point just beyond that at which the car travelling at 50 kph can stop. The other car will still be travelling at 44 kph at that point, a collision speed at which a pedestrian has more than a 50% probability of being fatally injured” (p40-41).*

**Figure C1 – The relationship between speed and distance travelled under emergency braking once the hazard is first viewed**

Source: McLean et al, 1994, p40.

Notes: The straight, horizontal part of the curve represents reaction time. In the example, represented by the red line, the car travelling at 60 kph is still travelling at 44 kph at the point where the first car is stopped.

Even if a driver believes he or she is such a good driver that he or she can control a vehicle at high speeds, the distance required to stop follows the laws of physics and is not related to driver skill. Therefore, if a driver encounters a hazard on the road that necessitates emergency braking, the driver's ability to control the vehicle at high speeds will have no bearing on how quickly he or she can stop. Drivers may believe they can avoid a hazard altogether through skilled manoeuvring; however, often there is not enough space to manoeuvre around a hazard, particularly on New Zealand's narrow roads.

McKenna (1999) recently provided evidence that the ability to detect hazards influences driving speed in a simulated situation. He trained a group of drivers so that their hazard perception skills were improved. Following the training, the drivers were given a (laboratory) task that assessed the speed at which they chose to travel. McKenna found that the drivers with the hazard perception training chose a lower speed on the task than a control group who had not received any training. A likely reason for the lower speed choice was that the drivers trained in hazard perception skills had learnt that to reliably detect hazards they needed to travel at a speed that was reasonable, and not too fast. The control group, however, who were perhaps less aware of the importance of detecting hazards, were also not taking into

account that higher speeds reduced the time available for hazard detection. It is important to note, however, that these results were conducted within a laboratory and may not necessarily transfer to the on-road environment.

In addition to limiting their own ability to detect hazards and make the appropriate response, drivers travelling at high speeds also affect other road users' risk of crashing. In particular, because of the speed at which the speeding vehicle approaches other road users, these other road users will have less time to react to the speeding vehicle (Lay, 1984, cited in Zaal, 1994). The speeding driver may also endanger other road users because they underestimate the speeding driver's speed. For example, as discussed in Section 1 of Part A, Kloeden et al (1997) found that the most common types of crashes in their Adelaide study were those in which a vehicle turned right, either from the primary road itself or from a side street, across the path of vehicles travelling at free speeds on a primary road. Kloeden et al hypothesised that these crashes occurred because the approaching vehicle was travelling at excess speed and the turning driver misjudged the gap because he or she mistakenly assumed the approaching vehicle was travelling at about the same speed as the other free-flowing traffic on the road.

The findings by Kloeden et al (1997) demonstrate people's poor ability to judge the speed of approaching vehicles. Our sensory system was not designed to judge such high speeds, since such a skill is not ecologically necessary for walking or even running. Unfortunately, we overestimate our ability to judge the speed of traffic travelling at high speeds. Recent research at Monash University in Melbourne by Jennie Oxley and Andrea Dale (Fildes, 1999) has found that this poor ability to judge speeds is even worse in older people than in younger people, especially older pedestrians who are less mobile. These researchers hypothesise that a pedestrian's first judgement of whether it is safe to cross the road or a driver's first judgement of whether it is safe to execute a turn across traffic is based on the distance away from approaching vehicles, then this judgement is modified by the speed of the approaching vehicle. Since older people are much slower than younger people at making decisions, and also have poor judgement of speed, they may rely on distance alone and consequently get caught out by speeding vehicles.

### **SPEED ADAPTATION**

Another situation in which speed influences the risk to a driver and other road users is when the driver has been travelling at high speed for some time and then has to slow down to a lower speed – for example, when travelling on a rural road and then an urban road or when exiting a motorway into a residential area. At the lower speed, the driver tends to greatly underestimate his or her speed. This perceptual phenomenon, known as “speed adaptation” (for example, Fildes and Lee, 1993, p58), can lead to drivers travelling at speeds well above the speed limit in reduced speed areas, without being aware of it, hence creating a dangerous situation for themselves and other road users.

### **Conclusions**

- Safe driving relies on two important human functions: perception and cognition. To drive safely, drivers must be able to identify and respond in a timely manner to potential hazards in the traffic system.
- Increased speed tends to decrease drivers' abilities to detect hazards and to make the appropriate response to them.
- When a hazard is encountered, the distance required to stop to avoid the hazard increases with increasing speed.
- Travelling at high speeds endangers other road users by increasing their risk of crashing, since other road users have less time to react to a speeding vehicle and may also underestimate the speed of a fast travelling vehicle.
- Travelling at a higher speed and then slowing to a lower speed (such as when moving to an area with a lower speed limit) can lead to an underestimation of the level of the reduced speed. Travelling at high speeds in areas requiring low speeds increases the crash risk to the driver and to other road users.

## 2: THE IMPACT OF ENFORCEMENT ON VEHICLE SPEED

---

Enforcement of speeding laws is based on the assumption that a driver chooses the speed at which to travel and that that choice is made through a rational process of weighing the perceived advantages and disadvantages of exceeding the speed limit (Fildes and Lee, 1993). Perceived advantages may include time savings and thrill gains; perceived disadvantages may include the possibility of being caught by enforcement authorities and/or an increased chance of a crash. The aim of enforcement is to deter the driver from driving too quickly by increasing one of the disadvantages of speeding – the perceived likelihood of being caught. Enforcement is also used to detect and apprehend the speeding drivers for whom the increased risk of apprehension alone does not act as sufficient deterrent.

### 2a: Deterrence

---

Detering the driver from speeding can be achieved by two different police enforcement mechanisms: specific deterrence and general deterrence (Fildes and Lee, 1993). In the speeding context, **specific deterrence** is targeted at the individual speeding driver and aims to change the specific individual's behaviour by catching and imposing some penalty (or punishment) upon that individual. Specific deterrence “is based on the assumption that drivers who are caught and punished for speeding will be discouraged from committing further speeding offences” (Fildes and Lee, 1993, p37). It often deters a driver from speeding at a particular site.

**General deterrence** targets the general population and aims to have a widespread effect on speeding by increasing public perception that speeding drivers will be caught, regardless of whether or not there is an actual increase in enforcement activities. The perception that enforcement is of a high intensity is encouraged when members of the population observe enforcement activities occurring (for example, seeing police apprehend a speeding driver) and when there is associated publicity about enforcement activity. General deterrence “is based on the assumption that those exposed to the enforcement, apprehended or not, will be discouraged from speeding for fear of detection and punishment” (Fildes and Lee, 1993, p37).

The effect of deterrence on the driver's decision to speed or not is dependent on the driver's perception of the risk of being caught, the driver's fear of being caught, and the driver's fear of the likely punishment (Zaal, 1994). The perceived risk of being caught has been identified as the most important factor in deterring the driver from speeding (Shinar and McKnight, 1985). For example, a study of the effects of a two-week police strike in Finland, during which time there was effectively no traffic enforcement, observed a 50% to 100% increase in the number of serious speeding offences (Summala, Naatanen, and Roine, 1980, cited in Fildes and Lee, 1993).

Contrary to expectations, some attitudinal studies conducted in the 1970s demonstrated that changes in the level of perceived risk of being caught when speeding do not necessarily correlate well with changes in enforcement levels. Ostvik and Elvik (1990) reviewed a number of the Scandinavian studies conducted in the 1970s in which enforcement levels in a region changed. They found that, when enforcement levels were increased on a given road, the perceived risk of being caught did not increase to the same extent that enforcement levels had. However, what is unknown is what questions were asked in the attitude surveys and the extent to which publicity associated with the increased enforcement also increased. More recent evaluations have demonstrated clearly that enforcement must be combined with publicity to have an effect on the perceived risk of apprehension (Havard, 1990).

The effectiveness of deterrence is also dependent on three punishment factors: the perceived certainty, the severity, and the swiftness (immediacy) of punishment. Evidence that the **perceived certainty** of punishment deters inappropriate driving behaviour was shown with the reduction in drink-driving crashes during the Random Breath-Testing campaign in Australia (Fildes and Lee, 1993). The campaign increased the probability of a drink-driver being caught and therefore incurring the associated penalty. Fildes and Lee (1993) also suggest the ongoing campaign led to a change in attitudes about drink-driving. However, Fildes and Lee (1993) caution that the threat of punishment alone is unlikely to have achieved the change in drink-driving attitudes during the campaign. For example, publicity, education, and penalties would have played some part in the attitude change.

The **severity** of punishment appears not to have as important an influence on behaviour as the certainty of

punishment. For example, in 1982, the fines for speeding in Sweden were doubled. Even though one-third of drivers knew of the new fine amounts, no changes in speeding behaviour were observed following the change (Aberg, Engdahl, and Nilsson, 1989, cited in Fildes and Lee, 1993). Similarly, no change in speeding behaviour was found when the fines were raised again in 1987 (Andersson, 1989). However, the effectiveness of the severity of punishment is dependent on the perceived risk of being caught. Therefore, if the perceived risk is higher, the severity of the punishment may play a larger role in deterring speeding drivers. For example, the evaluation of the intensive speed camera programme in Victoria between 1990 and 1991 found that receiving a traffic infringement notice in the mail affected speed behaviour for approximately two weeks (Rogerson, Newstead, and Cameron, 1994).

The effect on speeding behaviour of the **swiftness** of the punishment does not appear to have been studied; however, it will be discussed in the subsection on automated speed enforcement that follows.

Overall, the aim of speed enforcement is to apprehend speeding drivers and to deter all drivers from speeding. The methods used to enforce speed restrictions were reviewed extensively by Zaal (1994). Zaal divided the review into two enforcement approaches: traditional speed enforcement and automated speed enforcement. A discussion of each of these approaches follows.

## 2b: Traditional Speed Enforcement

The traditional approach to speed enforcement is to catch and punish the speeding driver at the site where the speeding offence occurred (or was detected). Usually, this involves the use of some form of speed measuring device – for example, a radar device operated from a parked police vehicle, or the police vehicle itself in the traffic stream – to detect the speeding offence. The offending driver is then stopped by the police at the nearest possible location, and is issued with some form of penalty notice, depending upon the severity of the speeding offence committed (Zaal, 1994).

### HALO EFFECTS

A difficulty with traditional enforcement is in ensuring that the deterrence effect does not occur only at the site of enforcement (TRB, 1998). The distance or time that the deterrence effects last from the enforcement site or activity

are known as “halo effects” (Fildes and Lee, 1993). The **distance halo effect** refers to the distance (usually measured in kilometres) on either side of the enforcement site over which there is a reduction in speeding behaviour. The **time halo effect** typically refers to the time (in days) from the enforcement activity during which speeds at the enforcement site are reduced.

Barnes (1984, cited in Zaal, 1994) examined the extent of distance halo effects around enforcement from a marked police car in New Zealand. Reduced speeds began more than two kilometres before the site (due to headlight flashing, radar detectors, and so on) and lasted between four and six kilometres after the site – a total of up to eight kilometres. When the enforcement is more strategically used, the distance halo effect is estimated to be larger. For example, Brackett and Edwards (1977, cited in Ostvik and Elvik, 1990) evaluated the effects of an American study in which a stationary police car was randomly moved from place to place along a long stretch of road. The aim was to create the impression that there was a massive concentration of enforcement along that road. They found that speeds were reduced up to 20 kilometres from the stationary car.

Hauer, Ahlin, and Bowser (1982) examined both distance and time halo effects at enforcement sites. They found that mean speeds at the enforcement sites were reduced, but that the effect of the enforcement – the level of the reduction in mean speeds – reduced by half every 900 metres downstream from the enforcement site. The time halo effect was examined by observing individual vehicles over several days during and after enforcement. They found that vehicles exposed to enforcement at a site only once reduced their speeds at the site for up to three days following the enforcement. Vehicles that encountered enforcement at a site over five days reduced their speeds at the site for at least six days after the last day of the enforcement.

Nilsson and Sjorgen (1982, cited in Fildes and Lee, 1993) compared time halo effects after repeated exposure to a site and after a single exposure. A number of different types of enforcement procedures were examined: marked and unmarked police cars, radars, and helicopters. They found a significant difference in speeds over time between vehicles exposed only once to the radar or marked police car and vehicles repeatedly exposed to the enforcement over six days. Also, for those exposed to six days of radar or marked police car enforcement, the reduction in speeds remained

for an average of 10 days, and six days of helicopter surveillance led to a time halo effect of 17 days. However, there was no time halo effect for exposure to the unmarked police car.

More recently, Vaa (1997) examined the time halo effects of six weeks of very high enforcement levels (averaging nine hours per day) on a 35-kilometre length of highway in Norway. Speeds were measured (unobtrusively) in 60- and 80-kph speed-limit zones for two weeks before the enforcement, again during the enforcement, and again for eight weeks afterwards. In the 60-kph zone, “speeding” was defined as exceeding 70 kph; while, in the 80-kph zone, it was defined as exceeding 80 kph<sup>35</sup>. During the enforcement period, there was a reduction in the proportion of drivers who were speeding in both of the speed zones. In the 60-kph zone, this reduction lasted up to eight weeks after the enforcement period. In the 80-kph zone, the reduction in the proportion of speeding drivers lasted up to six weeks.

In summary, the size of the time and distance halo effects appears to depend on the enforcement strategy. When enforcement is of a high intensity, the effects can last up to eight weeks. When enforcement is of a high intensity and randomly placed, a reduction in speed behaviour can extend up to 20 kilometres from the site.

#### ENFORCEMENT VISIBILITY

Traditional speed enforcement can be based on either a high-visibility or a low-visibility approach (Zaal, 1994). The **high-visibility approach** aims to reduce speeds by deterring drivers from speeding at the site of the enforcement and by increasing the overall perceived risk of being caught. The **low-visibility approach** aims to reduce speeds by making drivers aware that enforcement is not predictable and, hence, they cannot predict when to slow down to avoid being caught. Both approaches rely on high levels of publicity about the presence of enforcement.

Some evidence of the effectiveness of the high-visibility approach was demonstrated in a study of crash “black spots” (sites involving a high crash history) on a sample of New Zealand rural highways (Graham, Bean, and Matthews, 1992). The study involved measuring vehicles’ speeds at six sites from November 1988 to April 1989 and from late November 1989 to March 1990. At three of the sites, traffic patrols were placed in random, highly visible positions and required to patrol the sites for one- and two-hour periods on 13 days each month from December 1988 to March 1990. The

119 remaining three sites were used as control sites. All sites were about 18 to 30 kilometres in length, without towns, major intersections, or terrain that would affect normal open-road speeds. Graham et al found small reductions in median speeds at the test sites compared to the control sites<sup>36</sup>. The size of the speed reduction at each site was dependent on the level of enforcement activity.

A similar enforcement approach to that of Graham et al (1992) was conducted throughout Queensland, Australia (Newstead, Cameron, and Leggett, 1999). The approach, known as the Queensland Random Road Watch programme, involved dividing each police jurisdiction in Queensland into a number of sectors and the week into a number of time blocks. Enforcement was then randomly assigned to a sector for an entire week, with the time of day of the enforcement also randomly assigned. Enforcement involved a conspicuous stationary marked vehicle undertaking general road safety enforcement duties during the randomly assigned time in the randomly selected sector. Newstead et al (1999) found that in the first year of the programme there was a reduction in crashes of all severities in all police jurisdictions (this reduction was statistically significant for all but one police jurisdiction), with the largest reduction occurring for fatal crashes. For example, outside metropolitan Brisbane there was an estimated 31% reduction in fatal crashes and an estimated 13% reduction in serious injury crashes. A broadly similar programme to the Queensland Random Road Watch programme, known as “Bullseye”, is currently being conducted in New Zealand (see Garvitch, 1999, for details).

The low-visibility approach, when utilising traditional enforcement methods, tends to be less effective at deterring drivers from speeding than the high-visibility approach. For example, Galizio, Jackson, and Steele (1979, cited in Fildes and Lee, 1993) found that the presence of a marked police vehicle resulted in a significant speed reduction, but the presence of an unmarked police car resulted in no change in traffic speed. However, as Parker and Tsuchiyama (1985, cited in Zaal, 1994) stated, the effectiveness of an unmarked police vehicle on speed reduction is dependent on the perception by road users that any vehicle could be an unmarked police vehicle. This perception can be encouraged by high levels of publicity regarding the use of unmarked vehicles in enforcement programmes, as well as increasing the visibility of situations in which an unmarked police vehicle stops a speeding motorist. For example, visibility can be increased if

35 The definitions differed between speed-limit zones because of software constraints.

36 Relative to the changes at the control sites, the median speeds decreased at the test sites by 1.8 kph, 0.3 kph, and 1.1 kph in the mornings, afternoons, and evenings respectively.

a police car uses flashing lights when apprehending a speeding driver. The low-visibility approach has been found to be effective in the area of automated speed enforcement. This will be discussed later in this section.

### ENFORCEMENT MOBILITY

Whether to use stationary or moving police vehicles has been another area of research on enforcement. Shinar and Steibel (1986) compared the speeds of vehicles in the presence of stationary or moving police vehicles. They found that the presence of either type of enforcement reduced speeding by 95% at the enforcement sites. The magnitude of the initial speed reduction was the same when encountering either the stationary or the moving police vehicle. However, police vehicles moving within the traffic stream had a greater effect on the speeding behaviour of individual road users for a longer time and over a longer distance.

Armour (1984) has suggested that moving police vehicles are more effective overall because of the limitations in the use of stationary vehicles, such as the limited number of suitable sites and the rarity of road users encountering more than one stationary vehicle on a journey. Southgate and Mirrlees-Black (1991, cited in Zaal, 1994) have suggested that stationary speed enforcement could be more effective if there was tactical placement of stationary vehicles. For example, using two or more vehicles located short distances apart would increase the distance halo effect and increase the overall perception of the risk of being caught.

Overall, it has been suggested (Bailey, 1987, cited in Zaal, 1994) that stationary vehicles should be used at locations with high crash rates, because of their effect on speed reduction at a site. Also, moving vehicles should be used on stretches of road where speeds are higher than appropriate, because of their effect on the speeds of drivers over a long distance. This type of approach is less relevant now with the availability of speed cameras (see Section 2c).

### OPTIMISING TRADITIONAL ENFORCEMENT

It appears from the research that traditional enforcement may be effective if it is employed strategically. Jernigan (1986, cited in TRB, 1998) reviewed selective enforcement programmes in the United States and found that the most successful programmes were:

- *“deployed at specific locations and at times when unwanted behaviour is most likely to occur;*
- *made highly visible to the public; and*

- *maintained for more than a single year”* (cited from TRB, 1998, p151).

Hunt, McKenzie, and Edgar (1992) conducted a study in New Zealand that aimed to optimise traditional enforcement. They developed an enforcement programme for six urban and five rural sites in the Manawatu area of New Zealand that had a high crash history (“speed black spots”). The sites were subjected to intensive enforcement over a two-month period. Along with low-visibility enforcement techniques (such as the use of unmarked police vehicles), there was a large publicity campaign at both the national and local level. At the national level, the campaign was conducted during the middle four weeks of the enforcement period. The aim of the campaign was to educate the public about “speed black spots” and about the intent to vigorously enforce speed limits in such areas. At the local level (Manawatu area), education was provided – for example, through newspaper advertisements – about where the speed back spots were. In addition, a new traffic sign was erected at each of the black spot areas, printed with the words “SPEED BLACK SPOT”.

Speed surveys were conducted at the enforcement sites and at eight control sites, both before and after the trial. A public attitude survey was also conducted both before and during the trial. Hunt et al (1992) found decreases in mean speed from before to after the trial at all enforcement sites, ranging from 1.8 to 4.6 kph. The difference in mean speeds between the enforcement and control sites was significant for urban areas. Using Nilsson’s (1982) formula (discussed in Part A), Hunt et al calculated that the speed reductions of the magnitude obtained could result in a 17% reduction in urban injury crashes and a seven-percent reduction in rural injury crashes. Results from the public attitude survey indicated that the publicity about black spots increased the public’s understanding of the term and increased awareness of the speed enforcement.

A small subsequent study was conducted by Hunt et al (1992) in the Bay of Plenty region, in which the “SPEED BLACK SPOT” signs were displayed at local black spot areas; however, there was no associated enforcement. They found that vehicle speeds did not decrease at the sites even when the drivers knew what the signs referred to. Together, these studies demonstrate that, to achieve a reduction in speeds, both targeted, visible enforcement and supporting publicity about the enforcement are needed.

## PROBLEMS WITH TRADITIONAL ENFORCEMENT

*“The problem with traditional enforcement methods is that [the] limited policing resources available, as compared to the relatively high number of speeding motorists, results in a low perceived risk of apprehension”* (Zaal, 1994, p79). As reported earlier, the perceived risk (or the perceived certainty) of being caught has been identified as the most important factor in deterring the driver from speeding (Shinar and McKnight, 1985). Zaal (1994) reported that the *“perceived risk [of being caught] is dependent upon the level of enforcement activity, the use of associated publicity, and whether or not motorists actually observe the reported increase in enforcement”* (p79). Thus, although publicity is important, if enforcement levels are low, publicity tends not to deter drivers from speeding in the long term (Harvard, 1990). Hence, low enforcement activity and low levels of publicity lead to a low perception of being caught, which, in turn, leads to an increase (or at least no reduction) in speeding behaviour. Unfortunately, because of limited policing resources, it is difficult to increase and maintain the increase of speeding enforcement activity. Recent developments in enforcement technology can, however, overcome these problems.

## 2c: Recent Enforcement Technology: Automated Speed Enforcement

Automated speed enforcement technology typically consists of a detection device (such as a radar device), a processing unit, and an image recording device (such as a still camera or a video camera). The detection device measures the speed of each oncoming vehicle and feeds this information to the processing unit. If the vehicle's speed exceeds a predetermined level, the recording device records an image of the vehicle and the driver. Also typically recorded on the image is the time and date of the offence and the speed of the vehicle. The information is then used to identify the owner and, if necessary, the driver of the vehicle. An infringement notice or warning letter is then mailed to the registered owner of the vehicle (Zaal, 1994).

### ADVANTAGES OF AUTOMATED ENFORCEMENT

Automated speed enforcement devices have several advantages over traditional enforcement (Zaal, 1994; Rothengatter, 1990; TRB, 1998). For example:

- 1 They increase the probability of detection without overextending front-line police resources, since the

- 121 police do not have to spend long periods of time detecting and apprehending speeders. This also means that the “enforcement pause” is eliminated; that is, the device does not need to temporarily cease operation while the speeding driver is apprehended.
- 2 They increase road users' perceptions of the risk of getting caught, through direct observation, associated publicity, and/or receiving a ticket when they were unaware they had been detected. Hence, the devices have a higher deterrence effect.
- 3 They increase the fairness of enforcement by taking “officer discretion” out of the equation.
- 4 They have been reported to lead to less dispute by motorists regarding their fine and, hence, provide a more efficient ticketing and payment process.
- 5 They can be used in locations where patrol vehicles cannot be safely and effectively deployed.

Overall, the largest benefit of automated speed detection devices appears to be in increasing the perceived risk of apprehension (Rothengatter, 1990). This is most effectively achieved through the widespread and highly publicised use of the devices.

The most common automated speed enforcement device is the speed camera. Several studies have examined the effectiveness of these devices.

### INTERNATIONAL SPEED CAMERA USE

The first study that examined the use of speed cameras, conducted in West London, demonstrated that speed cameras were very successful at reducing speeds (Winnett, 1994). Another early study examined the effect of speed cameras introduced on a section of German autobahn (motorway) (Lamm and Kloeckner, 1984). German autobahns are not subject to a national speed limit, although approximately 30% have a local speed limit. The section of highway on which the speed cameras were introduced had a very high crash rate<sup>37</sup> and in 1972, the year before the introduction of the speed cameras, the section was given a speed limit of 100 kph<sup>38</sup>. The imposition of the speed limit led to an immediate 30-kph reduction in mean speeds, and the introduction of speed cameras reduced mean speeds by a further 20 kph. The combined effect of the speed limit and the cameras reduced crashes on the autobahn by 91%. This compared to a 56% reduction on the entire autobahn network in the same period (Ostvik and Elvik, 1990).

<sup>37</sup> The section of highway had a steep downgrade with a design speed of 100 kph. There were about 200 crashes per year in 1970 and 1971 on a section 7.2 kilometres in length.

<sup>38</sup> Prior to 1972, there was no speed limit for passenger vehicles on the autobahn. The majority of vehicles on the studied section exceeded 100 kph during this time.

Since the early study, speed cameras have been further introduced and evaluated in England. For example, the introduction of 32 fixed speed camera sites in Oxfordshire resulted in an overall reduction in fatal and serious injury crashes at the speed cameras sites (and up to 1 km each side of the site) of 23% (Hook, Kirkwood, and Evans, 1995). Corbett (1995) also evaluated the introduction of fixed speed cameras in England. In the first six months, mean speeds reduced by 10% (Darbyshire, 1993; cited in Corbett, 1995) and crashes dropped by 22%. Furthermore, 29% of drivers surveyed reported driving more slowly in general, although these drivers tended to be those who reported they did not know the camera locations.

Norway is another country that has introduced speed cameras and found a positive effect. For example, Elvik (1997) found that the introduction of speed cameras (known as photo radars in Norway) at permanent sites resulted in a decline of 20% in the number of injury crashes, when controlling for general trends in the number of crashes and “regression to the mean effects”<sup>39</sup>.

Australasia appears to be an area where speed camera programmes have been used extensively. There have been several evaluations of these programmes in Australia. For example, a study of the introduction of speed cameras in New South Wales found they were associated with a 22% reduction in crashes at the speed camera locations (Loyola College, 1995).

Cameron, Cavallo, and Gilbert (1992) conducted an evaluation of the speed camera programme in Victoria (Australia). Speed cameras were introduced extensively in 1989 in response to a rising road toll<sup>40</sup>. The speed cameras were supported by an intensive mass media publicity campaign. In the first two years of the programme, every vehicle in the state of Victoria was on average having its speed checked by the cameras once in every six-week period (Ogden, Bodinnar, Lane, and Moloney, 1992). The number of measured vehicles exceeding the enforcement threshold was 23.9% in December 1989, the year the programme was first introduced; this had declined to 13% by December 1990, and it declined further to 9.4% by December 1991 (Bourke and Cooke, 1991, cited

in Zaal, 1994). An analysis of the change in casualty crashes due to speed cameras during times of the day when alcohol consumption was low<sup>41</sup> revealed a 32% reduction in such crashes on Melbourne’s arterial roads, a 20% reduction in country towns, and a 14% reduction on rural highways. The severity of injuries resulting from casualty crashes reduced across Victoria by between 28%, between July 1990 and February 1991, and 40%, between March and December 1991.

An evaluation of the localised effects of the Victorian speed camera programme found a significant reduction in casualty crashes within one kilometre of a speed camera site (Rogerson et al, 1994). They also found that speeding behaviour was reduced for approximately two weeks after a speed camera ticket was received.

#### THE NEW ZEALAND SPEED CAMERA PROGRAMME

In New Zealand, speed cameras were introduced in October 1993. They were placed on stretches of road with a record of speed-related crashes. The stretches of road (or “sites”) were signposted with “SPEED CAMERA AREA”, and the cameras were highly visible. At rural sites, the cameras were mobile and vehicle-mounted. At urban sites, the cameras were either mobile and vehicle-mounted or fixed and mounted on poles. Thirteen fixed cameras were rotated around the 55 urban sites. The cameras at all sites were set to deploy when vehicles travelled at greater than the 85th percentile speed for the site, as measured unobtrusively (Mara, Davies, and Frith, 1996). There was substantial publicity both before and after the introduction of speed cameras.

Mara et al (1996) examined the effects of the New Zealand speed camera programme. They calculated that the programme resulted in significant reductions of 23% in fatal and serious crashes at urban speed camera sites and 11% in fatal and serious crashes at rural speed camera sites. However, they failed to detect any significant effects outside speed camera sites, except at urban sites at low alcohol times<sup>42</sup>. They suggested that the speed camera programme needed to be examined to determine how the effects could be generalised to areas where cameras were not in operation.

<sup>39</sup> Regression to the mean effects refer to a high number of crashes one year followed by a number closer to the mean number of crashes (lower) the following year (or vice versa).

<sup>40</sup> The Random Breath Testing programme was also introduced in response to the rising road toll.

<sup>41</sup> Eighty-two percent of the speed camera enforcement was conducted during times of low alcohol consumption.

<sup>42</sup> Low alcohol times are between 3am and 10pm. Approximately 96% of speed camera enforcement was conducted during low alcohol times.

A suggested variation in the New Zealand speed camera programme that was predicted to generalise its effectiveness past the limits of the speed camera sites was to use hidden cameras rather than visible ones. Hidden cameras with publicity have the potential to reduce the predictability of the cameras and hence have a more generalised effect. A trial of hidden cameras was therefore conducted on open roads in the Midland<sup>43</sup> police region of New Zealand from July 1997. All of the speed camera sites in the Midland region that had previously used visible speed cameras were signposted with “HIDDEN CAMERAS MAY OPERATE” and enforced with hidden cameras that could be operated from a free-standing tripod or a hidden vehicle. In other parts of New Zealand, visible cameras continued to be operated<sup>44</sup>. Substantial publicity was given about the trial, particularly in the month before it.

Keall, Povey, and Frith (in press) evaluated the effectiveness of the hidden cameras, during their first year of operation in the Midland region, compared to the visible speed cameras operated outside the Midland region. They calculated that mean speeds in the Midland region fell by 2.3 kph at speed camera sites and 1.6 kph outside speed camera sites, compared to the rest of the country. The speed reductions at the speed camera sites were associated with a 22% reduction in crashes and a 29% reduction in casualties at the sites. Furthermore, in the Midland region, there was an 11% reduction in the open-road crash rate and a 19% reduction in the casualty rate. The greater effect on casualties than on crashes indicates an effect on crash severity. The findings of an effect on crashes at the sites and throughout Midland indicate that the hidden speed cameras in the Midland region had both a specific and a general deterrence effect. Attitudes by the public in the trial region, as measured by the Annual Public Attitudes Survey (Land Transport Safety Authority, 1999a), initially indicated a growing acceptance of hidden cameras and a recognition that drivers did not seem to be speeding as much as before. However, this effect weakened to pre-trial levels after the first year of the trial.

Overall, speed cameras have reduced crash rates and speeds in the many countries that have employed them (Elvik, 1997). However, the full potential of speed cameras is as yet untested as, in many jurisdictions, political considerations have limited their usage.

#### **ISSUES RELATING TO THE USE OF AUTOMATED ENFORCEMENT**

One issue regarding automated enforcement is the delay between the offence and punishment (Zaal, 1994). In New Zealand, the delay tends to be between approximately two and three weeks. Automated enforcement tends to create a high level of punishment certainty (Zaal, 1994) and, combined with the high level of perceived risk of being caught that speed cameras generate, punishment swiftness is probably less important in the process of deterring drivers from speeding. Furthermore, studies of speed camera programmes have found significant reductions in speeding behaviour, indicating that they are effective at deterring drivers despite the delay in punishment.

Another identified problem with automated enforcement is that the speeding driver often does not immediately realise that his or her offence has been detected (Rothengatter, 1990). However, this problem may be reduced by prompt ticketing of offenders and by other visible means such as the use of flashes on the cameras. Oei (1993, cited in Zaal, 1994) indicated that another way this problem may be overcome is by placing a board several hundred metres after the enforcement site that displays information regarding the driver's speeding offence. However, this mechanism will only be effective if all drivers detected speeding are given an infringement notice.

Community acceptance of speed cameras is also identified as a potential problem with their use (Zaal, 1994). However, in New Zealand, the Annual Public Attitudes Survey (Land Transport Safety Authority, 1999a) found the support for speed cameras was high (see Part E).

<sup>43</sup> The Midland police region includes the Waikato, Bay of Plenty, and Gisborne local government regions, plus the Wairoa District.

<sup>44</sup> There was a net increase in camera hours of 26% in the Midland region relative to the rest of the country.

## Conclusions

- Enforcement activities aim to deter drivers from speeding.
- Specific deterrence aims to change a specific individual's speeding behaviour, often at a particular site; general deterrence aims to have a widespread effect on speeding behaviour.
- The effect of deterrence on the driver's decision to speed or not is dependent on:
  - the driver's perception of the risk of being caught;
  - the driver's fear of being caught;
  - the driver's fear of the likely punishment.
- The most important of these seems to be the driver's perception of the risk of being caught, which is boosted by publicity about the enforcement activities.
- The effect of deterrence appears to also be dependent on the severity and swiftness of the associated punishment, although these effects can be rather subtle and unpredictable.
- Traditional approaches to speed enforcement usually involve activities associated with the on-site detection, apprehension, and punishment of the speeding driver.
- The distance halo effect refers to the distance in kilometres from an enforcement site within which speeds are reduced. The time halo effect refers to the days from enforcement activities that speeds at the enforcement site are reduced.
- Under certain police operational conditions, time and distance halos of two weeks and 20 kilometres, respectively, can be expected.
- Traditional speed enforcement can take a high-visibility or low-visibility approach; however, there must be a high level of associated publicity to increase the perceived risk of being caught, particularly with the low-visibility approach.
- A randomised visible traditional enforcement approach has produced large reductions in crash levels in Queensland, Australia.
- Careful planning of traditional speed enforcement approaches can optimise its effectiveness.
- Research supports the suggestion that stationary enforcement vehicles be used at known crash locations and moving enforcement vehicles be used on stretches of road where speeds are high.
- Traditional enforcement tends to result in a low level of perceived risk of being caught when police resources are low.
- Automated speed enforcement typically involves recording the image of a vehicle exceeding a predetermined speed limit. The image is used to identify the vehicle owner, who is mailed a speed infringement notice.
- The largest benefit of automated speed detection devices is that of increasing the perceived risk of being caught.
- Speed cameras have had positive effects on crash rates and speeds in the many countries that have employed them.
- Hiding site-based speed cameras, and widely publicising their potential presence, has shown benefits in the Midland police district of New Zealand, producing general as well as specific deterrence.

### 3: PUBLICITY

Throughout the above discussion of enforcement effectiveness, the use of publicity has been mentioned. In the context of speed enforcement, publicity is often used to inform road users of the likelihood of being caught and punished for committing a speeding violation. Hence, it aims to increase the perceived risk of being caught. Publicity is, however, only effective in the long term when it realistically portrays enforcement levels. Publicity alone, without enforcement, tends not to deter drivers in the long term from committing a speeding offence (Havard, 1990). Similarly, enforcement without publicity is less effective at deterring speeding in the long term.

Several studies have examined the combined use of publicity and speed enforcement. For example, Riedel, Rothengatter, and de Bruin (1988) examined speeding behaviour on the open road following publicity and enforcement. They found that publicity alone produced some speed reductions. However, the combined use of publicity and enforcement had a much larger effect.

Cameron et al (1992) examined the effect of a speed camera programme combined with publicity in Victoria, Australia. They found that, when the publicity began, there was an initial significant reduction in the frequency of casualty crashes. This reduction occurred independently of the actual increase in the level of speed camera enforcement. However, greater reductions occurred during periods when high levels of publicity were combined with high levels of enforcement. Zaal (1994) concluded from the study that *“media publicity can be an effective means of initially raising and then maintaining community awareness of speed camera enforcement operations, but... [that] the greatest speed reduction benefits result from the enforcement operations themselves”* (p96).

As well as increasing the perceived risk of being caught, publicity has the benefit of increasing community awareness of and support for an enforcement programme (Zaal, 1994). For example, Freedman et al (1990, cited in Zaal, 1994) found that publicity associated with the introduction of speed cameras resulted in high levels of awareness of and community support for the use of speed cameras.

Recent publicity to reduce speeding behaviour in New Zealand has focused on both enforcement activities and the consequences of a crash. For example, the advertising side of the Supplementary Road Safety Package (SRSP) in New Zealand comprises advertisements about enforcement as well as graphic advertisements about the physical and emotional consequences of a crash. The SRSP was introduced in 1995/96 to build on the success of the high-intensity Compulsory Breath Testing (CBT) and speed camera interventions, which it supplemented with additional enforcement resources and hard-hitting national advertising. Vulcan and Cameron (1998) conducted an independent evaluation of the SRSP. They estimated the savings in road casualties associated with the SRSP during its first two years were 109 fatalities and 1,029 serious injuries. The analysis of the effectiveness of the components of the SRSP aimed at speeding indicated that, during low alcohol hours, there was a 14% reduction in serious casualty crashes in urban areas (but no reduction for rural areas) during the first year of the SRSP. During the second year, however, there was a 26% reduction in serious casualty crashes in the urban areas and a 14% reduction in such crashes in the rural areas (again, during low alcohol hours).

#### Conclusions

- Publicity is very important for increasing the effectiveness of enforcement.
- Publicity alone can reduce speeds in the short term; however, publicity without enforcement will not have long-lasting speed reduction effects. Likewise, enforcement without publicity will not have long-lasting speed reduction effects.
- Hard-hitting publicity can be based on the emotional and physical consequences of a crash as well as on enforcement activities. Some campaigns have successfully combined these approaches.
- New Zealand's Supplementary Road Safety Package, for example, has been shown to be very effective in reducing the death and injury toll on our roads.

## 4: TOLERANCE LEVELS ON SPEED LIMITS

A speed tolerance represents “a margin above the maximum speed limit within which drivers are not apprehended or punished” (Fildes and Lee, 1993, p49). Most speed enforcement agencies employ speed tolerances, although the level of the tolerance varies across agencies due to legal requirements or equipment constraints. “In Australia, speed tolerance levels of 10% plus 3 kph above the posted speed limits or a fixed margin of 10 kph are common policing practice” (Zaal, 1994, p97).

The rationale for enforcing above a speed tolerance is to allow for errors in a vehicle’s speedometer, as well as inaccuracies in the speed measurement equipment and procedure, that could be used as a challenge to a penalty in the courts (Fildes and Lee, 1993). Furthermore, since a speed tolerance means enforcement is concentrated on the fastest speeders, public acceptance of the enforcement is more likely. However, the other side to using a speed tolerance is that, as the public become aware of the tolerance level, they may use it as the de facto speed limit (Fildes and Lee, 1993). Furthermore, the tolerance level may for some drivers become the desired speed of travel, or even a guide to the minimum speed at which to travel (Nilsson, 1990).

Evidence that the public use the tolerance levels in deciding their choice of travel speed was demonstrated in a study by Andersson (1989). Andersson evaluated the effects of a 3- to 6-kph reduction in tolerance levels in the urban areas of two Swedish cities. There was a high level of publicity about the reduction in tolerance levels. Four cities in which the tolerance did not change were used as a control. During the year of the reduced tolerance, vehicle speeds fell in the two cities by approximately 1 kph, whereas at the control sites vehicle speeds increased by 0.5 kph. Andersson suggested that the lower speed was due to the increased risk of detection, which affected a large group of motorists.

Speed tolerances cannot be eliminated entirely, because of the possibility of technical challenges in courts. However, Fildes and Lee (1993) suggest that “the only realistic solution seems to be... [to adopt] minimal tolerance levels in conjunction with rationalised speed limits based on what is an appropriate and acceptable travel speed” (p50).

## 5: PENALTIES

The threat of incurring a penalty for committing a speeding offence is a crucial component of the deterrence process. The following describes some types of penalties and their effectiveness.

### FINES

The most common penalty imposed on drivers who are caught committing a speeding offence is a fine (Zaal, 1994). Table C1 displays the current fines for speeding within New Zealand.

OFFENCE: EXCEEDING THE SPEED LIMIT BY...	INFRINGEMENT FEE (\$)	DEMERIT POINTS
UP TO 10 KPH	30	10
11 - 15 KPH	80	20
16 - 20 KPH	120	20
21 - 25 KPH	170	35
26 - 30 KPH	230	35
31 - 35 KPH	300	40
36 - 40 KPH	400	50
41 - 45 KPH	510	50
46 - 50 KPH	630	50

**Table C1 – Current fines, and demerit points, for exceeding the speed limit by up to 50 kph in New Zealand**

Sources: LTSA (1999b) and Schedule 4, Part II of the Land Transport Act, 1998.

Note: Demerit points do not apply to speeding offences detected by a speed camera.

Fines are an important enforcement tool. The effect of the size of the fine is less clear. For example, as discussed above, when the size of the fine was increased in Sweden, there was no detectable change in speeding behaviour (Aberg et al, 1989; Andersson, 1989, cited in Fildes and Lee, 1993). However, Fildes and Lee (1993) suggest that there is likely to be a floor limit, above which the size of the fine does have an effect on speeding behaviour. They predict this limit was not reached in the Swedish studies.

### DEMERIT POINT SCHEMES

Another system of penalties is the allocation of demerit points. Every time an individual commits a speeding offence (or another relevant traffic infringement), a number of points are allocated and recorded against that person's driving record. If the driver accumulates more than the maximum number of points permitted within a specified period of time, additional penalties, such as licence suspension, are imposed (Zaal, 1994).

In New Zealand, demerit points are given for all speeding infringements other than speeding offences detected by a speed camera. If a driver accumulates 100 points within two years, he or she will be suspended from driving for three months. Also displayed in Table C1 above are the demerit points allocated to each speeding offence.

Dingle (1985, cited in Zaal, 1994) indicated that the benefits of a demerit point scheme are:

- 1 It provides positive feedback for those drivers who rarely speed, and may provide additional motivation to maintain a good driving record.
- 2 It provides drivers who occasionally commit some form of minor speeding offence with *“the necessary incentive to modify their driving behaviour in order to avoid obtaining further points and risking the chance of receiving a more severe penalty”* (p103).
- 3 It quickly affects drivers who regularly exceed the speed limit and are regularly caught doing so.

The effectiveness of the demerit point scheme has been demonstrated in a study by Haque (1987, cited in Zaal, 1994) of the scheme in Victoria. Haque found a statistically significant increase in the time between committing a second and third speeding offence, compared to between the first and second speeding offence. The results indicated that road users were modifying their behaviour as the threat of more severe penalties increased.

### LICENCE SUSPENSION

Licence suspensions are typically given to repeat speed offenders and those drivers who commit more serious speeding violations (Zaal, 1994). In New Zealand, licence suspension occurs for drivers who receive 100 demerit points within two years or who are apprehended for exceeding the speed limit by more than 50 kph. Drivers who exceed the speed limit by more than 50 kph receive an immediate suspension of their licence for a 28-day period. If the driver attempts to

drive during these 28 days and is detected by the police, his or her vehicle is impounded.

Licence suspension has three main advantages (Zaal, 1994). First, it deprives drivers of the ability to drive lawfully. Second, it deters drivers who commit serious speeding offences, or who regularly speed, from speeding. Third, since drivers who have received a licence suspension are not permitted to drive, it reduces the number of high-risk drivers in the traffic stream. Several studies have found, however, that some suspended drivers do drive during their period of licence suspension (Duncan et al, 1990, cited in Zaal, 1994).

Evidence that licence suspension deters speeding was provided by Berland et al (1989, cited in Zaal, 1994). They compared the speeding offence records of drivers who had in the past received a period of licence disqualification compared to a control group who had received a fixed fine. The researchers reported that the licence disqualification group had 38% fewer subsequent speeding offences than the control group. A follow-up survey found that 65% of the drivers who had been disqualified had modified their speeding behaviour in some way as a result of the licence disqualification, compared to only 24% of the control group.

### COMPARISON OF SPEEDING PENALTIES WITH DRINK-DRIVING PENALTIES

In Part A, we reported Kloeden et al's (1997) study. The study demonstrated that the risk of involvement in a casualty crash when travelling at 70 kph in a 60-kph speed-limit zone in Adelaide was similar to that for a blood alcohol concentration (BAC) of 80 mg/100 ml (the legal limit in New Zealand). Kloeden et al reported that, despite the similarity in risk, the penalties for these two offences in South Australia are very different. For example, a driver without previous drink-driving convictions who is caught driving with a BAC between 80 and 149 mg/100 ml receives a A\$500 to A\$900 fine and has their licence suspended for six or more months. By contrast, a driver travelling at between 61 and 74 kph in a 60-kph zone receives a fine of A\$110.

In New Zealand, there are even larger differences between the base penalties for speeding and drink-driving (see Table C2). A driver apprehended with an excess blood or breath alcohol level will appear in court. If convicted, the maximum penalty is a three-month prison sentence or a \$4,500 fine, and mandatory licence disqualification for at least six months (except in special circumstances). A third or

subsequent excess blood or breath alcohol conviction results in a maximum penalty of a six-month prison sentence or a \$6,000 fine, and mandatory licence disqualification for at least one year (except in special circumstances).

Despite the similar relative risk of crashing, and injuring or killing themselves or someone else, the driver travelling at 70 kph in a 60-kph zone will receive a roadside ticket, or a ticket will be sent to the owner of the vehicle through the Police Infringement Bureau. The fine for exceeding the speed limit by up to 10 kph<sup>45</sup> is \$30 (see Table C1). A speeding driver apprehended by the police will receive 10 demerit points, and needs to accumulate 100 demerit points before the driver's licence is suspended for three months. A speeding driver apprehended through use of a speed camera does not receive any demerit points.

### Conclusions

- Legal sanctions such as fines, demerit points and licence suspension increase the effectiveness of enforcement by their presence, when the relative risk is sufficiently large.
- There is, however, a disparity in the severity of punishment for speeding and for drink-driving, despite the risks of crash involvement are similar.

	BASE OFFENCE	RELATIVE RISK FOR OFFENCE*	PENALTY
DRINK-DRIVING	EXCEEDING 80 MG/100 ML BLOOD ALCOHOL CONCENTRATION (IF 20 YEARS OR OLDER)	3.2#	<ul style="list-style-type: none"> <li>• MAXIMUM 3 MONTHS PRISON OR \$4,500 FINE (MAXIMUM 6 MONTHS PRISON OR \$6,000 FINE FOR THIRD OR SUBSEQUENT OFFENCE) AND</li> <li>• 6 MONTHS LICENCE DISQUALIFICATION (12 MONTHS FOR THIRD OR SUBSEQUENT OFFENCE), EXCEPT IN SPECIAL CIRCUMSTANCES</li> </ul>
SPEEDING	TRAVELLING 70 KPH IN A 60-KPH ZONE (SPEED LIMIT EXCEEDED BY NOT MORE THAN 10 KPH)	4.2	<ul style="list-style-type: none"> <li>• FINE OF \$30 AND</li> <li>• 10 DEMERIT POINTS (UNLESS A SPEED CAMERA OFFENCE)</li> <li>• 100 DEMERIT POINTS IN 2 YEARS RESULTS IN A 3-MONTH LICENCE SUSPENSION</li> </ul>

**Table C2 – Comparison of penalties for similar drink-driving and speeding offences in New Zealand, for a similar relative risk of involvement in a casualty crash**

Sources: LTSA (1999b), Kloeden et al (1997).

Notes: \*Relative risk of BAC is compared to zero; for speeds, it is relative to travelling 60 kph in a 60-kph zone (from Kloeden et al, 1997). #Relative risk is for all drivers, not separated by age.

<sup>45</sup> The fine for exceeding the speed limit by 10 kph is the same regardless of the speed-limit zone. For example, despite the different crash and injury risk, a driver travelling at 110 kph in a 100-kph zone will receive the same fine as a driver travelling 60 kph in a 50-kph zone.

# PART D

## TIME, FUEL, ENVIRONMENT

The previous Parts of this review have discussed the “costs” of excessive vehicle speed in terms of the resultant increase in crash risk and injury severity. In this Part, other costs of vehicle speed will be discussed, such as increased fuel use and the effect on the environment. A perceived benefit of increased vehicle speed – decreased travel time – will also be discussed.

By deliberately looking beyond the central safety issue, it is recognised that the speed at which we drive on our roads is linked directly with other factors, wider costs, and benefits. Particularly in the area of travel time, the discussion soon reduces to the trade-off between using motor vehicles to increase our mobility and our interaction with the world, and restricting that mobility in order to manage the associated risks<sup>46</sup>.

If we see our possible responses to this trade-off as positions along a continuum, at one end is the suggestion that we reduce the speeds of motor vehicles to a walking pace, or even slower – however, this would entirely defeat the useful purpose of the available technology. At the other end of the continuum is the proposition that we remove all design and human restrictions on speed and let motor vehicles travel as fast as they can and their drivers wish. From our current position on that continuum, one of the questions to consider is the extent to which we are prepared to restrict mobility and speed in order to reduce the toll of injury and death from excess and inappropriate speed. A discussion of travel time is important in this context.

There are also wider benefits and costs in environmental terms associated with the speed at which we drive. Fuel consumption, particularly in terms of the dollar cost associated with high speeds, and vehicle emissions are distinct issues on their own. Together with travel time, these issues provide a perspective on speed as a general road transport issue, not just an issue to do with our safety on the road.

## 1: TRAVEL TIME

The time available to travel a specified distance often influences a driver's choice of speed. It is usually assumed that the faster the speed, the less time the journey takes. However, this is not always true; for example, the increased crash risk at high speeds increases the probability that the journey will not be completed. Also, in urban environments, where the motorist must frequently stop or slow down for controls at intersections (traffic lights, stop and give-way signs, roundabouts, etc), for pedestrians, and for other disruptions, a faster speed may not necessarily lead to a shorter journey. In general, though, in rural environments, where travel speed can be more constant, the travel speed does affect travel time.

As discussed in Part A, the National Maximum Speed Limit (NMSL) was introduced in the USA in 1974 for all highways (rural roads) and was set at 55 mph at that time. The TRB (1984) compared data gathered (in 1982) after this change came into effect with data from 1973, before the NMSL existed (when states set their own speed limits, which tended to be higher than 55 mph). The TRB calculated the extra time spent travelling on highways in 1982 compared to the time taken for the same travel given pre-1974 speed limits. They found that motorists spent 1 billion extra hours travelling the same distance under the 1982 mean speed than the 1973 mean speed.

The majority of the increased travel time calculated by the TRB (1984) was by passengers in personal vehicles<sup>47</sup>. Since most personal travel trips are short, the increased travel time for each trip was small, but, when the data from across the entire USA were added together, these small increases in travel time led to a large overall increase. There is, however, a great deal of debate about whether it is appropriate or meaningful to add such small increments in time (Ward, Robertson, and Allsop, 1998). For example, adding the travel time increases of 3,600 different road users, where each road user's travel time increase is one second, gives one hour of extra travel time overall. A problem with the approach, then,

<sup>46</sup> Restricting mobility is only one way of reducing crashes. An alternative is to maintain mobility and reduce an individual's risk of crashing.

<sup>47</sup> It is very difficult to determine the cost of “private” travel.

is whether one second is a significant or meaningful increase in travel time for each individual road user. An individual's tasks or activities will generally not be affected by travel time increases – or decreases – of this magnitude. For example, the shopping time of a road user travelling to town to shop will not be noticeably reduced by an additional few seconds of travel. Or, if a road user's travel time was decreased by a few seconds, this would not usually allow him or her to complete a task he or she would not normally have done, such as mowing the lawns. Since small increments in travel time are relatively insignificant, in some countries in Europe these small increases in travel time are disregarded when calculating a nationwide travel time increase (Ward et al, 1998). That is, travel time increases below a certain threshold are disregarded in determining the increased travel time due to lower speeds.

Speed limit changes affect travel times through changes in mean speed. However, travel time is more dependent on congestion and roadway geometry than on speed limits. In the USA, the 55-mph NMSL had a greater travel time effect on roads with low congestion and good geometry, such as rural interstate highways, than on more congested roads, such as rural collectors. Similarly, congestion played a larger part than the speed limit change on travel time for commuter drivers in peak-hour traffic (TRB, 1994).

In general, the main road user group who had their travel time affected by the 55-mph speed limit change were passenger vehicles, although their short trip distances meant the effect was not large (TRB, 1994). In comparison, commercial truckers, who have long trip distances, did have their travel time adversely affected. However, the lower speed limit also had major benefits for commercial truckers, such as lower fuel and maintenance costs.

Overall, the effect of reduced speed limits in the USA had some effect on motorists' travel time. However, the relationship between speed limits and travel time is not straightforward. For example, travel speed is dependent on road type and congestion. Furthermore, the road user is generally only affected by a small increase in travel time (see Table D1), particularly since the majority of trips are short.

For example, the New Zealand Household Travel Survey, conducted between July 1989 and July 1990, found that only 7.7% of trips made in light four-wheeled vehicles were over 20 kilometres in length (Ministry of Transport, 1990). Similarly, a study in Germany found that 80% of journeys are shorter than 10 kilometres (Kloas, 1993, cited in Robertson and Ward, 1998). Furthermore, even when the trip distance is relatively large, the travel time savings from increased speed are small. For example, a driver travelling consistently at 120 kph for 100 kilometres compared to another driver travelling at 100 kph for 100 kilometres would save only 10 minutes<sup>48</sup>. In reality, it is very difficult in New Zealand to travel consistently at 100 kph or higher for 100 kilometres, given road type and other traffic; therefore the actual difference between these two hypothetical drivers is likely to be even smaller.

ORIGINAL SPEED (KPH)	50	70	90	110	130
REDUCED SPEED (KPH)	45	65	85	105	125
EXTRA TRAVEL TIME (MINUTES:SECONDS)	1:20	0:40	0:23	0:16	0:11

**Table D1 – Extra travel time on a journey of 10 km when average speed is reduced by 5 kph**

Source: Adapted from ETSC (1995).

The example given above of saving 10 minutes travel time by travelling at 120 kph instead of 100 kph over a 100-kilometre journey raises the philosophical question of whether mobility should be traded for safety. For example, is the increased risk of crashing acceptable in the interests of saving 10 minutes travelling time? Or, in an urban environment, is the increased risk of killing a pedestrian acceptable in the interests of saving time?

In areas of transport outside the road environment, the transport user never considers mobility more important than safety. For example, in air travel the safety of the aircraft before it leaves the ground is given top priority – the time spent waiting on the ground for safety reasons is fully accepted by passengers. In contrast, in the road transport system, health losses from crashes *“are major, but to some extent acceptable,*

<sup>48</sup> A driver travelling at 120 kph for 100 kilometres would take 0.83 of an hour (100 km divided by 120 kph), or 50 minutes, to complete the journey. In comparison, a driver travelling at 100 kph would take one hour (100 km divided by 100 kph).

consequences of mobility” (Tingvall, 1999, p1). Sweden has recently taken the important step of not tolerating such a philosophy in road transport. In October 1997, the Swedish parliament developed their “Vision Zero” strategy, which envisions moving to a transport system that is designed so that fatalities, and injuries where the victim does not recover, do not occur. “*This means that safety is more important... than other issues in the road transport system (except for health related environmental issues)*” (Tingvall, 1999, p4) and that mobility must always come second to road safety.

One means offered for implementing Vision Zero is to lower speed limits so that they do not exceed the capacity of the human body to survive a crash (see Part A). For example, speed limits on undivided lanes outside built-up areas could be reduced to 70 kph (Tingvall, 1999). Another possible means of implementing the strategy is to reconstruct road environments (for example, by dividing roads or adding effective roadside barriers) so that severe crashes do not occur, but still allow travel speeds between 90 and 110 kph.

In spite of whether increased travel time is perceived as an advantage or disadvantage, the European Transport Safety Council (ETSC, 1995) summarises the effects of speed on travel time by stating that the overall costs – such as increased crash risk and injury severity, as well as fuel and environment costs (discussed below) – of an increase in speed above appropriate levels clearly outweigh any advantage of decreases in journey times.

### Conclusions

- As vehicle speed increases, travel time tends to decrease somewhat, although this also increases crash and injury risks.
- Trips in passenger vehicles are less affected by increased travel time because they tend to be short trips, and the total increase in travel time tends not to be substantial.
- Long haul freight operators are more affected by increased travel time, but lower speeds also provide fuel and maintenance savings for operators.
- Reducing the travel speed of a 10-kilometre trip from 90 to 85 kph increases travel time by only 23 seconds.

## 2: FUEL USE AND OTHER VEHICLE OPERATING COSTS

The relationship between fuel use and vehicle speed has been well known for some time. For example, in response to the oil crisis of the early 1970s, New Zealand imposed an open-road speed limit of 50 mph (80 kph) in December 1973 as a fuel-saving measure. Similarly, in 1974, the USA imposed the 55-mph (89-kph) NMSL to conserve oil.

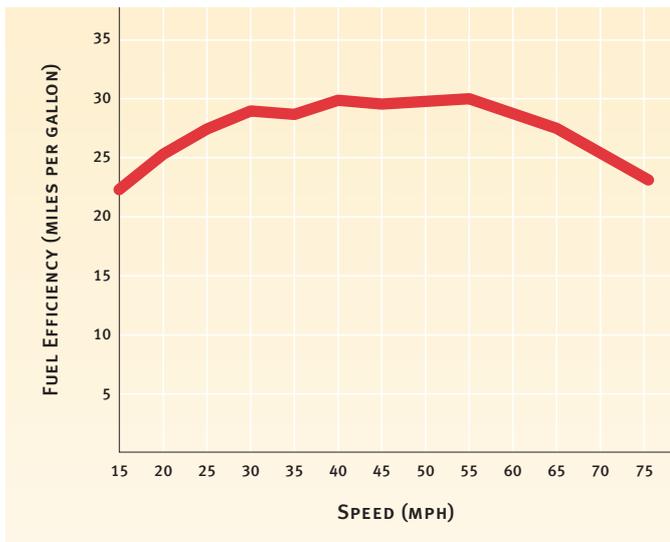

Several studies have been conducted to estimate the reduction in fuel consumption after a reduction in vehicle speed. For example, the European Conference of Ministers of Transport (ECMT, 1996) reported that the results of several German studies have estimated that, “*for a car fleet of the type found in Germany, a reduction of x percent in average driving speeds on rural road networks can reduce fuel consumption by 0.8 [times] x percent*” (p17).

In France, it has been estimated that, if the speed limits were strictly complied with, there would be a saving of 350,000 tonnes (1.4%) of oil out of the 25 million tonnes consumed annually by car drivers (ECMT, 1996). In the Netherlands, when speeds on motorways with a 100-kph speed limit were heavily enforced so that mean speeds fell from 111 to 104 kph, there was a saving of 40 million litres of petrol and 40 million litres of LPG (ECMT, 1996).

A study in the USA calculated the effect on fuel use when steady driving speeds increased from 55 mph (89 kph) to 70 mph (113 kph). The result was a 17% increase in fuel consumption (ECMT, 1996). In New Zealand in 1996, it was estimated that an increase in speed limits from 100 to 110 kph would increase fuel consumption by around 10% (Waring, 1996).

The reason for the changes in fuel consumption at different vehicle speeds is due to variation in the fuel efficiency of the vehicle. Recently, West et al (1997, cited in TRB, 1998) examined the relationship between fuel efficiency and driving speed of a small sample of 1988 to 1995 model automobiles

and light duty trucks<sup>49</sup>. Figure D1 below shows the results. Fuel efficiency was shown to peak at about 55 mph (89 kph). The drop in fuel efficiency after 55 mph is due primarily to the effect of aerodynamic drag (that is, the engine has to work harder to account for this). The low fuel efficiency at low speeds occurs because of engine friction, tyres, and accessories (such as power steering)<sup>50</sup> (TRB, 1995, cited in TRB, 1998).

**Figure D1 – Fuel efficiency as a function of speed – model year 1988-1995, automobiles and light-duty trucks**

Source: Davis (1997, p3-51, cited in TRB, 1998, p69).

Note: 1 mph = 1.609 kph; 1 gal = 3.8 L.

For heavy duty diesel trucks, fuel efficiency tends to decline sharply at speeds above 50 mph (80 kph) (TRB, 1995, cited in TRB, 1998). The decline is largely due to aerodynamic drag. Fuel efficiency also tends to be poorer for sport utility vehicles, mini-vans, and pick-up trucks (TRB, 1998). Aside from fuel efficiency, tyre wear tends to increase with increasing speed (TRB, 1998). However, the cost is minor compared to the increased fuel cost with increased speed.

Overall, the relationship between increased vehicle speed and increased fuel use is well known. As the mean speed on the open road decreases, fuel efficiency also improves. The following section looks at the effect on the environment of decreasing fuel consumption.

### Conclusions

- At high vehicle speeds, fuel use increases due to poorer fuel efficiency of the vehicle.
- Fuel efficiency has been estimated to peak at 89 kph for cars and light trucks and at 80 kph for heavy diesel trucks.

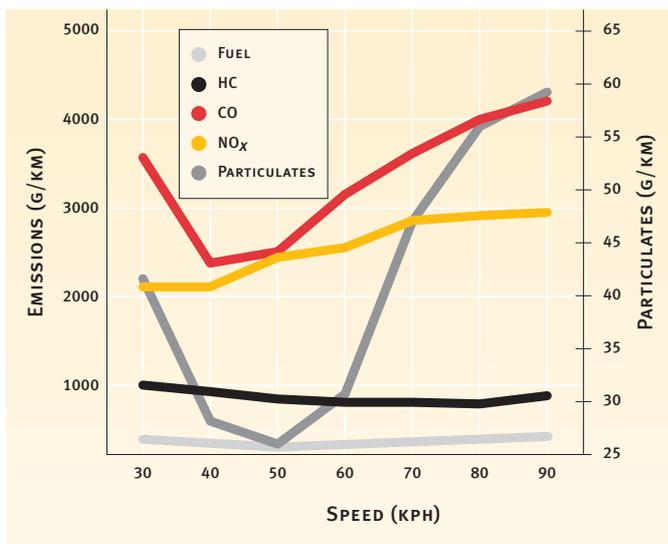

<sup>49</sup> The vehicles were examined under steady-state cruise type driving conditions. (Note that it is very difficult to measure fuel efficiency.)

<sup>50</sup> Energy is required to overcome air resistance, tyre rolling resistance, and the power taken to drive such accessories as the cooling fan, the alternator, the fuel and oil pumps, etc. The energy required does not increase linearly with speed, but as some power

of the speed. These energy losses require the expenditure of fuel other than in just moving the vehicle, and thus cause fuel efficiency to be low at low speeds and also to reduce as speed increases above a certain level (55 mph in Figure D1).

“A clear link exists between high vehicle speeds and the volume of gaseous emissions from vehicles” (ECMT, 1996, p17). The major pollutants from vehicles are carbon monoxide (CO), hydrocarbons (HC), oxides of nitrogen (NO<sub>x</sub>)<sup>51</sup>, and particulates<sup>52</sup> (Ward et al, 1998). These pollutants are produced in different quantities at different speeds.

Several models have been developed to describe the interaction between different emissions at different speeds. Figure D2 gives an example application of the model VETO, which demonstrates “how the estimated levels of emissions vary with speed for a stream of vehicles (85% cars, 10% heavy lorries [that is, trucks], and 5% medium lorries) at steady speeds between 30 and 90 kph on flat roads” (Hammarström and Karlsson, 1987, cited in Ward et al, 1998, p4). Figure D2 indicates that fuel use and emissions of both CO and NO<sub>x</sub> are minimised at 40 kph, whereas particulate emissions are minimised at 50 kph and HC emissions at approximately 70 kph. As speed increases above 50 kph, the level of emissions of CO, NO<sub>x</sub>, and particulates increases.

**Figure D2 – Gaseous emissions as a function of speed**

Source: Ward et al (1998, p5).  
 Notes: Data based on 2,000 vehicles per day, of which 15% are trucks and 80% use catalysts. “g/km” = grams per kilometre.

Emissions also vary under different conditions. Emissions increase greatly when the engine is cold (Ward et al, 1998), and emissions such as CO and Volatile Organic Compounds (VOCs) are very high in heavily congested stop-and-go traffic (TRB, 1995, cited in TRB, 1998). Another finding is that harsh acceleration increases vehicle emissions sharply. For example, De Vlieger (1997, cited in Ward et al, 1998) compared the emissions of seven cars in Belgium under “calm”, “normal”, and “aggressive” driving conditions<sup>53</sup> and found emissions were generally higher during aggressive driving than normal driving.

The substances such as CO and NO<sub>x</sub> degrade air quality. Another substance emitted from motor vehicles, which is not toxic but does have other adverse effects, is carbon dioxide (CO<sub>2</sub>). CO<sub>2</sub> is a gas that traps heat in the upper atmosphere, thus warming the earth; this global warming, principally as a result of CO<sub>2</sub> emissions, is known as the Greenhouse Effect. CO<sub>2</sub> is produced in proportion to fuel consumption. Unfortunately, motor vehicles are the largest source of CO<sub>2</sub> emissions in New Zealand and the USA, and these emissions are highest at high speeds as a result of the poorer fuel efficiency at high speeds<sup>54</sup>. The TRB (1997, cited in TRB, 1998) claimed that, “in 1994, motor vehicles accounted for about one-quarter of all US CO<sub>2</sub> emissions. The United States, in turn, is the largest emitter of CO<sub>2</sub>, accounting for one-quarter of global emissions” (p71). In New Zealand in 1997, domestic transport accounted for 40.3% of the 28 million tonnes of CO<sub>2</sub> produced (Ministry of Commerce, 1998).

A small number of studies have examined the relationship between changes in speed limits or mean speeds, and vehicle emissions. When the speed limit was lowered from 130 to 100 kph in Austria, there was a 17% reduction in NO<sub>x</sub> emissions and a 25% reduction in CO<sub>2</sub> emissions (ECMT, 1996). Similarly, when the mean speeds on motorways in the Netherlands decreased from 111 to 104 kph, CO<sub>2</sub> emissions decreased by 34% and NO<sub>x</sub> emissions by five percent.

Gaseous emissions are controlled by vehicle catalysts. Vehicle catalysts are substances that promote (speed up) chemical changes in exhaust gases without being changed in any way themselves<sup>55</sup>. Unfortunately, the catalysts are generally only tested in urban environments; hence their effectiveness at high speeds is unknown. Furthermore, the

51 CO is a poisonous gas, HC causes photochemical smog, and NO<sub>x</sub> causes acid rain.

52 Particulates are substances emerging from the exhaust that are solids, not gases. From diesel engines, they are largely particles of carbon resulting from incomplete combustion of the fuel. From petrol engines, they are carbon particles and also metals

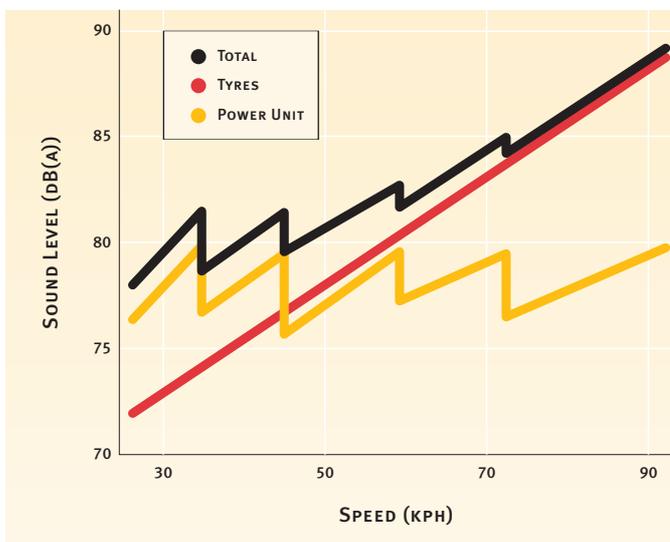

and metal compounds resulting from combustion of fuel and lubricating oil. The dangerous particles are those less than two microns in size, though sub-10-micron particles are also considered undesirable. The danger to health comes from (a) the carcinogens trapped on their surfaces, particularly from diesel fuel combustion, and (b) the inability of the lungs to clear

sub-two-micron particles from deep in the lungs, so that carcinogenic chemicals remain in contact with the tissues for long periods of time.

53 “Calm driving” was anticipating movements of other drivers. “Normal driving” had moderate acceleration and braking. “Aggressive driving” was sudden acceleration and heavy braking.

catalysts are not effective when the vehicle is cold<sup>56</sup>. Since the majority of trips in New Zealand are short, the catalyst is unlikely to be effective because the vehicle remains cold for the duration of the journey.

Another environmental effect of speed is noise. Traffic noise is produced by two main sources: the power unit of vehicles and the interaction between vehicle tyres and the road (Ward et al, 1998). Figure D3 demonstrates the general relationship between vehicle speed and the noise from these two main sources. As shown in Figure D3, the noise from the tyre-road interaction increases with increasing speed, whereas the power unit noise remains reasonably constant across speeds. In new cars, the noise from the tyre-road interaction dominates the noise from the power unit of the vehicle above the speed range 20 to 40 kph. For new trucks, this occurs between 30 and 60 kph, whereas for older vehicles the tyre-road noise dominates at about 10 kph higher, due to the higher power unit noise (Ward et al, 1998). Overall, though, vehicle noise increases with increasing speed.

**Figure D3 – Effect of speed on noise produced by a vehicle**

Source: Ward et al (1998, p7).

Note: "dB(A)" stands for A-weighted decibel, which is the normal measurement of human response to traffic noise.

The relationship between noise and speed limits was examined on a German autobahn when the speed limit was reduced from 100 to 80 kph. The noise level for those living near the autobahn reduced by 3.9 dB (decibels) following the speed limit change (ECMT, 1996, p17).

## Conclusions

- As speed increases above 50 kph, the level of emissions of CO, NO<sub>x</sub>, and particulates increases.
- At low speeds in congested traffic, gaseous emissions such as VOCs and CO are high.
- At high speeds, emissions of CO<sub>2</sub> are high, which contributes to the Greenhouse Effect. Motor vehicles are the largest source of CO<sub>2</sub> emissions in New Zealand.
- Reducing the mean speed of vehicles reduces the level of gaseous emissions.
- Vehicle noise increases with increasing speed due to noise from the tyre-road interaction.

<sup>54</sup> Carbon dioxide emissions are linearly proportional to the fuel used – about 3.7 kilograms of carbon dioxide is produced for every kilogram of fuel used. As explained in footnote 50, more fuel is used to cover a given distance at high speed than at low speed, primarily due to increased wind resistance, but also because of increased tyre rolling resistance and unnecessary extra power used by accessories.

<sup>55</sup> What is needed is rapid oxidation of unburned hydrocarbons and carbon monoxide, to carbon dioxide and water, and rapid reduction of oxides of nitrogen to nitrogen and oxygen. Typically, the only catalysts that meet the requirements are mixtures of rare (and costly) metals (such as platinum, palladium, rhodium, and so on). Platinum is the best, usually, because it starts working at a lower temperature than the others. The metal is distributed (as thinly as possible) on

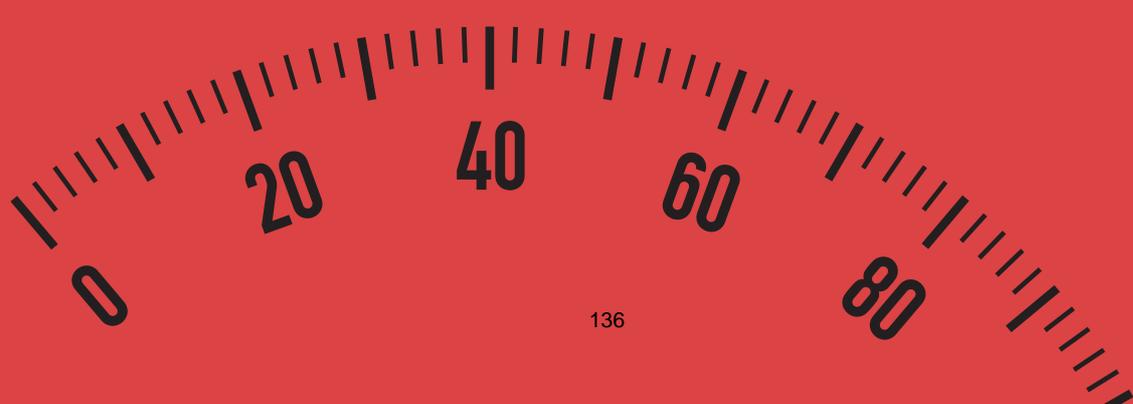

a ceramic substrate, which provides the largest possible surface in contact with the exhaust gas.

<sup>56</sup> Generally, catalysts only start to work at upwards of 250 degrees Celsius. The average New Zealand car trip is not long enough to heat the catalyst up so that it starts to work. Hence, putting catalysts on every car will not solve our pollution problems until pre-heated catalysts are available.

# **PART** **E**

## **NEW ZEALAND AND THE SPEEDING PROBLEM**

Speeding lies at the core of the road safety problem throughout the motorised world. This is because, as we have seen, excess and inappropriate vehicle speed increases the risk of crashes, and increases the severity of injuries resulting from crashes, regardless of whether speed was a contributing factor in the crash. These risks are not peculiar to New Zealand, and so, to better understand these risks, and the measures available to reduce them, the analysis so far has been undertaken from a predominantly international perspective.

The speeding problem in New Zealand has some unique aspects. Our geography, our weather, our roadside environment, our spread of population – all are factors in our roading network that make our speeding problem unique to New Zealand. In a more fundamental sense, however, the speed problem in New Zealand is anything but unique, because of the consistent way in which speed impacts on safety. New Zealand conditions compound the problem, but they are not the problem in themselves. We do not have interstates or autobahns as they do in the USA and Germany, and we do not have a large proportion of flat, straight roads as they do in Australia. The first section of Part E looks at features of our roading environment and associated crash statistics.

We need to better adapt to our roading environment by reducing our speed. If we do not reduce travel speed generally in New Zealand, the injury and death toll will remain the same and will even increase with a growing population, growing motor vehicle registrations, and growing traffic volumes.

This Part of this review also examines current New Zealand data related to speeding. As we have seen, speeding both increases the chances of being involved in a crash and increases the chances of being injured or killed in a crash. However, the effect of excess or inappropriate speed on crashes cannot always be “captured”, because speed may not be identified as the main cause of the crash. For example, if a motorist is faced with an oncoming vehicle on the wrong side of the road, his or her travel speed may make the difference between avoiding the vehicle and crashing, between suffering severe injuries and not being injured at all, or between suffering a fatality and living to tell the tale. What we can capture is how New Zealanders perceive speeding as a safety issue.

As a community, there is a slow dawning of understanding emerging about the effects of speeding. However, twice as many New Zealanders still believe they can drive safely while speeding, as believe they can drive safely after drinking alcohol. We can and must do more to change New Zealanders’ attitudes towards speed and reduce the impact of vehicle speed on our lives.

# 1: THE IMPACT OF NEW ZEALAND CONDITIONS ON VEHICLE SPEED

In New Zealand, there are about 92,000 kilometres of road, over 2.3 million vehicles, and over two million licensed drivers. A breakdown of the network by road type is shown in Table E1. Vehicle ownership levels are second only to the USA. With a wide spread of metropolitan and provincial cities, there are high volumes of inter-regional traffic north of Taupo and north of Wellington. Some major two-lane, two-way roads in Auckland, the Waikato, and the Bay of Plenty frequently approach or exceed capacity, and this over-capacity relative to the state of the roading network is contributing to the road toll, with little likelihood of major relief in the immediate future. Achievement of improved road safety performance will require a major capital works programme to improve road design by increasing the length of divided highways and improving the overall standard of other roads. However, even if such a programme started tomorrow, it would take some years before the changes had a major impact on the road toll. In the meantime, it is necessary to look at additional ways of improving the safety of the roading infrastructure, such as applying black spot treatments and using any of the other road and traffic design features listed in Part B. Most importantly, New Zealand drivers must drive safely by avoiding speeds that are excessive or inappropriate for the road conditions. This section looks at New Zealand's different road conditions and their relationships with crash rates.

## ROAD TYPE

The New Zealand roading system is made up of six major road types (see Table E1). The motorways and divided state highways are based around the major cities, particularly Auckland. The other open roads – mostly two-lane, two-way roads – are spread throughout the country. The risk of head-on crashes is increased on roads such as these, because drivers may cross the centre line on a road (for example,

by swinging wide on a bend) and crash into an oncoming vehicle. The severity of the crash is dependent on the speeds of the vehicles involved. In 1998, approximately 27% of fatal crashes on rural roads involved head-on collisions (see Figure E1).

ROAD TYPE	LENGTH (IN KILOMETRES)*	APPROXIMATE PERCENTAGE OF TOTAL ROAD LENGTH
MOTORWAY	335	0.3
DIVIDED STATE HIGHWAY	61	0.1
OTHER STATE HIGHWAY	10,005	10.1
OTHER OPEN ROAD	73,271	73.9
MAJOR URBAN	5,519	5.6
MINOR URBAN	10,019	10.1

**Table E1 – Length of New Zealand roads by road type**

Source: LTSA Crash Analysis System.

Note: \*The lengths of road are calculated from vectors in the Crash Analysis System. On dual carriageways, there are parallel vectors, hence the length on both sides of the road is counted. This approach means the total of the lengths of road given above is slightly higher than the actual total of 92,000 km of road in New Zealand.

In addition to increasing the risk of head-on crashes caused by a driver inadvertently crossing the centre line, two-lane, two-way roads also increase the risk of overtaking crashes, in which a driver has deliberately crossed the centre line. On these two-lane, two-way roads, drivers are often slowed by vehicles travelling in front of them at a slower speed. When this occurs, the driver who wants to travel faster than the vehicle in front may attempt to overtake that vehicle by crossing into the lane used by the oncoming traffic. Because of the nature of our roading system, therefore, a high number of overtaking manoeuvres are undertaken on New Zealand roads. In general, overtaking vehicles have to travel at high speeds during the manoeuvre, and this fact increases both the risk of a crash and the crash severity. In 1998, in approximately six percent of the fatal crashes and two percent of the injury crashes, the driver action of overtaking was identified as a factor contributing to the crash<sup>57</sup> (see Figure E2).

<sup>57</sup> For these statistics, the driver action of overtaking includes changing lanes on multiple lane roads as well as overtaking on two-way, two-lane roads.

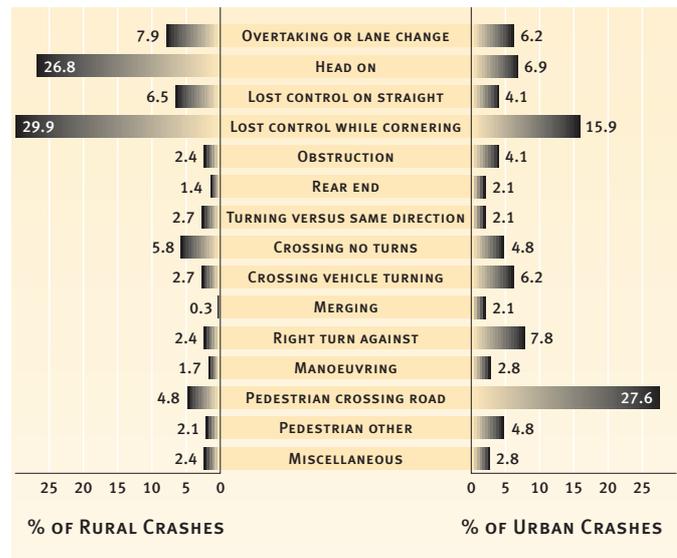

The overtaking and head-on crash rate could be reduced significantly if New Zealand could afford to upgrade main roads that are not already divided to four lanes (two lanes each way), with the addition of a median divider. Also, the provision of suitable passing opportunities is a significant countermeasure in reducing overtaking crashes. Transit New Zealand has a policy for passing lanes that is currently being examined by two research projects, which indicates the importance placed on this area. Another approach to reducing overtaking crashes is to reduce the number of drivers travelling at excess speed. That is, if these drivers travel at a lower speed, their need to overtake other vehicles would be reduced.

Urban environments consist of major roads, such as arterials, and minor roads, such as residential streets. Some arterial routes travel through residential areas, which contain a large number of access points, such as driveways. Because of this, on some arterial roads there is a high risk of crashes involving children running onto the road or vehicles entering or exiting the road via a driveway. From 1996 to 1998, for example, there was an average of 10 fatal crashes and 460 injury crashes per year involving a vehicle entering or exiting a driveway in an urban area (including pedestrian casualties).

Evidence that the number of access points affects the crash rate was demonstrated by Jackett (1992). He conducted an analysis of urban crashes in the areas between intersections, known as “mid-blocks”, and found that the crash rate per vehicle-kilometre travelled was higher for residential/industrial mid-blocks, which contain a high number of access points, than for mid-blocks with no development. Access to all main roads should, therefore, be limited as much as possible to reduce the number of potential conflict points.

**BASIC STATISTICS ON ROAD CRASHES**

The following are some basic statistics on road crashes produced annually by the Land Transport Safety Authority (LTSA, 1999c). These statistics give an indication of the types of crashes that occur in New Zealand each year.

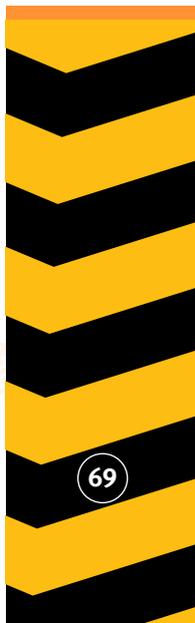

**Figure E1 – Movement classification of fatal crashes in 1998**

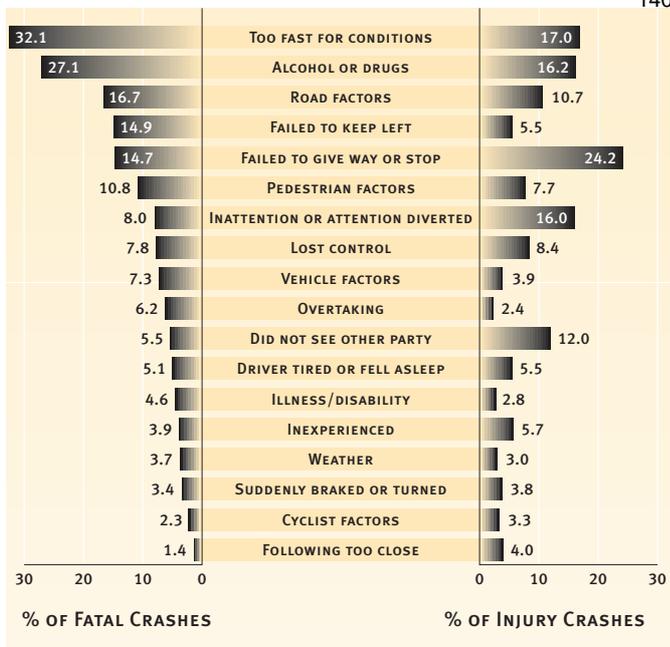

Source: Generated from LTSA (1999c, Tables 16 & 17, p41).  
 Notes: “Urban” refers to all speed limit areas of 70 kph and under, and to limited speed zones; “Rural” refers to all speed limit areas of over 70 kph.

Figure E1 demonstrates that, in 1998, fatal crashes on rural roads were most likely to involve loss of control while cornering (29.9%) and were almost as likely to involve a head-on collision (26.8%). Loss of control while cornering typically occurs when the driver is travelling too fast for the conditions or is a drink-driver<sup>58</sup>, the same is also often true for the (usually) inadvertent crossing of the centre line that leads to head-on collisions. In urban environments in 1998, fatal crashes were most likely to involve a pedestrian crossing the road (27.6%). This demonstrates that pedestrians are vulnerable even to the lower speeds in urban environments. A smaller but sizeable proportion (15.9%) of the fatal crashes in urban areas involved loss of control while cornering.

Figure E2 shows the factors identified as probably contributing to crashes in 1998, separated according to whether the crash was fatal or involved injury (but no fatality). The figure demonstrates that travelling too fast for the conditions was the factor contributing to the largest proportion of fatal crashes (32%) and was a major contributor to injury crashes (17%).

<sup>58</sup> Part of the reason drink-drivers are over-represented in this type of crash is because they make inappropriate decisions about travelling speed.

**Figure E2 – Factors probably contributing to crashes in 1998**

Source: LTSA (1999c, p49).

**DESIGN SPEED**

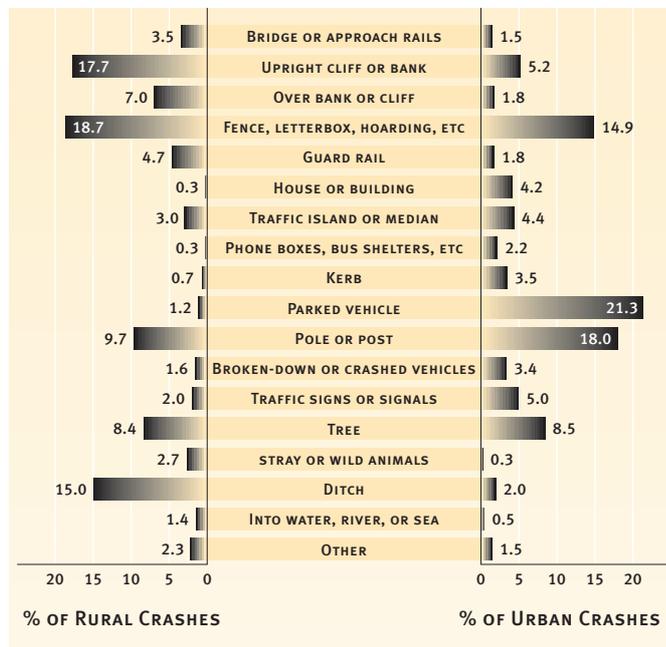

The design speed of a road is the maximum speed for which the road is designed. It is based on such factors as curvature and sight distance. In New Zealand, a significant proportion of the rural roading network was constructed under a 50-mph/80-kph open-road speed-limit regime. Improvements to some parts of the network have been made since it was constructed, to bring the design speed up to 100 kph. Similar road networks in other developed countries often have speed limits of 80 or 90 kph. Thus, rural roads in New Zealand tend to have much lower design speeds than the speeds at which modern vehicles are capable of travelling and do indeed travel. Unfortunately, with the increased in-vehicle comfort even when travelling at high speeds, there is the temptation for road users to travel at high speeds on roads that appear appropriate for high speeds, when, in fact, such speeds are not appropriate.

The safe travel speed in urban areas generally has as much to do with roadside development and access as with road design.

**ROADSIDE ENVIRONMENT**

Compared with Australia, for example, New Zealand's rural roadsides are much less forgiving. For instance, there are often ditches<sup>59</sup> on the side of our rural roads, many of

which are not easily visible from the road, despite their proximity. A vehicle leaving the road at high speeds would almost certainly enter the ditch, most likely still at close to full speed, causing a serious crash with severe injuries to the vehicle's occupants. In 1998, for instance, 15% of the injury crashes in which an object was struck on rural roads involved a vehicle running into a ditch (see Figure E3).

**Figure E3 – Objects collided with in injury crashes on rural and urban roads in 1998**

Source: Generated from LTSA (1999c, Table 22, p45).

Notes: A crash will appear more than once in this figure if the vehicle(s) involved struck more than one object. The percentages given are as a proportion of only those crashes in which an object (other than a moving vehicle) was struck. "Urban" refers to all speed limit areas of 70 kph and under, and to limited speed zones; "Rural" refers to all speed limit areas of over 70 kph. Fatal crashes are not included in this figure.

Figure E3 demonstrates that, in injury crashes where an object was struck, the following are among those struck most frequently: upright cliffs or banks, fences or letterboxes, poles or posts, and trees<sup>60</sup>. All of these objects are common on New Zealand's roadside, and, as with ditches, the higher the speed at which the object is struck, the more severe the crash consequences. The incidence of striking these objects could be reduced with the addition of "audible edge lines", which let drivers know immediately that they are leaving the road and, hence, allow earlier responses. Also, the road shoulders could be widened to allow more room for vehicles that travel off the carriageway to recover. Another modification that would reduce crashes is the use of hard shoulders rather than gravel, as this would give drivers better control when

<sup>59</sup> Usually water races.

<sup>60</sup> In fatal crashes in which an object was struck, the most frequently struck objects were the same as for injury crashes.

they leave the road. In 1997 and 1998, there were, on average, 12 fatal crashes and 124 injury crashes per year in which a driver lost control when returning to seal from an unsealed shoulder (LTSA, 1999c).

Of the objects struck in urban environments, parked vehicles are also commonly struck. For example, in 1998, there were nine fatal and 410 injury crashes in which a parked vehicle was struck.

### RURAL ROADING ENVIRONMENT

Rural roads in New Zealand frequently pass through farming areas, such as sheep and dairy farms. This can be a problem if an animal escapes onto the roadway, particularly at night. Crashes with wandering stock tend to be rare, but, when they do occur, there is high potential for death or serious injury. For example, from 1996 to 1998, there were, on average, three fatal crashes and 58 injury crashes per year in which it was identified that a farm animal probably contributed to the crash<sup>61</sup>. High speeds exacerbate this risk, because the driver has less time to react when encountering an animal on the road, the stopping distance will be greater, and the severity of the collision with the animal increases with higher speeds.

### ROAD GEOMETRY

Road geometry includes the horizontal curvature (bends and curves) and vertical curvature (hills and raised sections) of a road. New Zealand roads often pass through mountainous terrain, and these mountain roads tend to be very narrow and windy with steep gradients. The problems associated with these road geometry features are compounded by poor weather conditions, such as rain and ice. To overcome these problems, the entire roading network needs appropriate skid resistance, and the design of the roads needs to be carefully considered to ensure that the curvature and width of the road are appropriate to the geometry of the terrain, typical weather patterns, and traffic volume.

### EMERGENCY SERVICES

The population of New Zealand is small and, particularly in rural areas, is spread over a large area. Because of this, the nearest town may be some distance away from a

crash site and the time taken for emergency services to attend can sometimes be large. In serious crashes, this increases the chance that crash victims will die from their injuries before the emergency services arrive or that their injuries will worsen to the extent that they will be seriously affected for the rest of their lives. As McVey, Atkin, and Vulcan (1988) stated, “*some injuries are time critical and, although they may be the minority of cases, outcome does relate to the time interval between injury and the commencement of appropriate definitive treatment*” (p51). Brain injuries and injuries involving severe blood loss are examples of injuries for which the time between injury and initial treatment is important. Thus, the response and transportation times for emergency services can be very important in determining the long-term outcome for crash victims.

### Conclusions

- Apart from very small lengths of motorway and divided highway, New Zealand’s rural road network comprises two-way, two-lane roads, often passing through mountainous country. The risk of head-on crashes on these roads is increased; the severity of these crashes is dependent upon the speed of the vehicles involved.
- The most common types of fatal crashes in New Zealand are those in which a driver has lost control, a situation that is usually associated with excess or inappropriate speed. Overtaking crashes are also associated with excess and inappropriate speed. The most common urban crash involves a pedestrian crossing the road.
- New Zealand’s rural roading environment is quite unforgiving, with cliffs, fences or letterboxes, posts, trees, and ditches the most frequently struck objects. Parked vehicles are also commonly struck in urban environments.

<sup>61</sup> These statistics refer only to farm animals, not household pets, wild, or other animals. When looking at all animals, in 1996 to 1998 there were, on average, six fatal and 72 injury crashes per year that were

identified as probably caused by animals. These animals may not necessarily have been struck in the crash, but were identified as having caused the crash.

## 2: DATA ANALYSIS

### CRASH DATA

The numbers of deaths and reported injuries from road crashes within New Zealand have, generally, declined fairly steadily in recent years (see Table E2). Despite the decline, the numbers of deaths and injuries on New Zealand roads – and the associated social cost<sup>62</sup> of these – are very high. In 1998, the social cost of fatal and reported injury crashes was approximately \$2.77 billion (costed at 1999 prices).

Excess or inappropriate speed is a major contributing factor in road crashes (see Table E2). For example, in 1998, it probably contributed to 32% of fatal crashes and 20% of injury crashes. However, it is often difficult to determine if speed was a factor in a crash – it is rare for a driver to admit he or she was speeding. This means that the identification of speed as a factor

in a crash often depends on physical and/or witness evidence, and this may be inconclusive or unavailable. In general, speed is identified as a contributing factor in a crash if:

- either the police officer attending the crash reports that the driver was travelling at excess or inappropriate speed, and the Land Transport Safety Authority, whose staff code crash reports, agree with the officer and code the report with the factor “travelling too fast for the conditions”;
- or the Land Transport Safety Authority staff who code crash reports determine from the evidence in the crash report, and based on their experience, that speed probably contributed to the crash.

Overall, it is assumed that speed is under-reported in data on crash factors because of the difficulty identifying it. That is, it is assumed that there are a substantial number of crashes in which excess or inappropriate speed was a contributing factor but which could not be identified as speed-

**Table E2 – Casualties from all road crashes and where excess or inappropriate speed was identified as a contributing factor, 1995-1998**

Source: LTSA Crash Analysis System.

<sup>62</sup> “Social cost” includes all loss of life and life quality, medical treatment, related enforcement, and property damage. The cost of loss of life and life quality is the amount people are willing to pay to avoid the risk of death or injury from motor vehicle crashes.

related crashes. Furthermore, it is expected that there are a substantial number of crashes that are not coded as involving excess or inappropriate speed, but for which the injuries sustained in the crash would have been considerably less had the vehicle(s) involved been travelling at a lower speed.

Despite the limitations of the speed data, Table E2 demonstrates that, over the years 1995 to 1998, the number of injuries from crashes in which excess or inappropriate speed was identified as a contributing factor has declined slightly. However, the number is still very high and represents a significant proportion of the road toll.

The majority of deaths from crashes involving excess or inappropriate speed occur on rural roads. For example, 68% of the deaths from crashes involving speed in 1998 occurred on rural roads (see Table E3), whereas the minor injuries from crashes involving excess or inappropriate speed were approximately equally likely to occur on urban or rural roads. A similar proportion of rural to urban casualties occurs for crashes in which speed was not identified as a contributing factor. The higher speeds on rural roads are part of the reason there are more people killed on these roads. As we discussed in Part A of this review, this is because the higher the speed of a vehicle involved in a crash, the greater the injury severity for the vehicle occupants.

**Table E3 – Casualties from rural and urban crashes with and without excess or inappropriate speed identified as a contributing factor, 1998**

Source: LTSA Crash Analysis System.

Notes: "Urban" refers to all speed limit areas of 70 kph and under, and to limited speed zones; "Rural" refers to all speed limit areas of over 70 kph. The data refer to the number of casualties, not the number of crashes.

The proportion of all road deaths that occur outside urban areas (that is, in rural areas) in New Zealand is particularly high internationally. For example, 73% of the road crash deaths in New Zealand in 1997 occurred outside urban areas (Figure E4). Only in Norway, Spain, Austria, and Germany did a higher proportion (up to 80%) of deaths from road crashes occur outside urban areas in 1997. By comparison, in Japan, Poland, and Iceland, only just over 50% of road fatalities occurred outside urban areas.

**Figure E4 – International comparison of percentage of road deaths that occur outside urban areas**

Source: LTSA (1999c, Table 7, p157).

It is important to note that in urban environments there are high numbers of vulnerable road users, such as pedestrians. Therefore, despite the lower speed in urban environments, these vulnerable road users have a high likelihood of being killed if hit by a vehicle. From 1996 to 1998, there were 132 pedestrians killed in crashes with a motor vehicle in urban areas. Of these 132 pedestrians, 13 were killed in crashes in which excessive speed was identified as a contributing factor (Table E4).

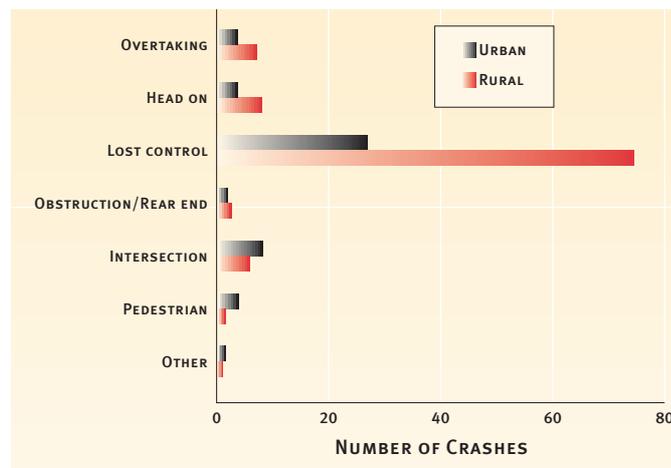

ROAD USER KILLED	RURAL	URBAN	TOTAL
SPEEDING DRIVER*	165	52	217
PASSENGER WITH SPEEDING DRIVER*	111	48	159
SPEEDING MOTORCYCLE RIDER	32	25	57
PILLION WITH SPEEDING MOTORCYCLE RIDER	4	5	9
PEDESTRIAN	3	13	16
OTHER ROAD USERS	32	10	42
TOTAL	347	153	500

**Table E4 – Type of road user killed in crashes where excess or inappropriate speed was identified as a contributing factor, 1996-1998**

Source: LTSA Crash Analysis System.  
 Notes: \*Excludes motorcycle riders/pillions. “Urban” refers to all speed limit areas of 70 kph and under, and to limited speed zones; “Rural” refers to all speed limit areas of over 70 kph.

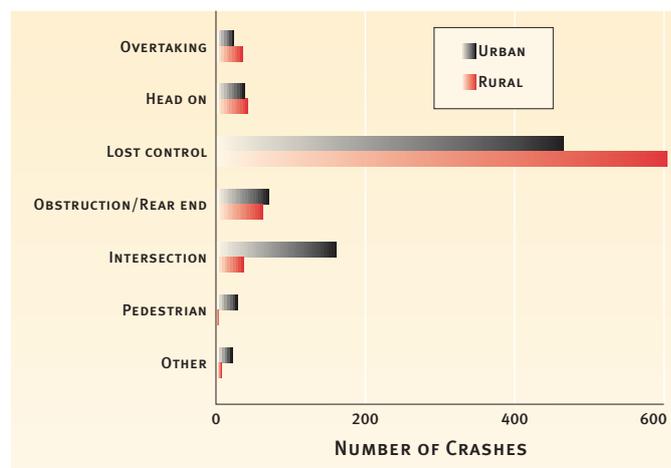

In crashes in which excess or inappropriate speed was identified as contributing to the crash, the speeding driver and his or her passengers are the road users most likely to be killed (Table E4). Speeding motorcycle riders also represent a high number of those killed in crashes in which excessive speed was identified as contributing to a crash.

In fatal and injury crashes involving excessive speed, by far the most common type of crash is one in which the driver lost control of the vehicle (see Figures E5 and E6). The data shown in Figures E5 and E6 include both single-vehicle and multi-vehicle crashes. Single-vehicle crashes are those in which the driver lost control of the vehicle either on a straight or when cornering and collided with an object (or pedestrian) in the roadside environment; multi-vehicle crashes are those in which the driver lost control and crashed into another vehicle. The majority of crashes are, however, single-vehicle crashes. For example, of the fatal rural crashes in which excessive speed was a contributing factor and the driver lost control of the vehicle, 72% were single-vehicle crashes. Similarly, 76% of the fatal urban lost-control crashes involving excessive speed were single-vehicle crashes.

**Figure E5 – Types of fatal crashes with excess or inappropriate speed identified as a contributing factor (annual average 1996-1998)**

Source: LTSA Crash Analysis System.  
 Notes: “Urban” refers to all speed limit areas of 70 kph and under, and to limited speed zones; “Rural” refers to all speed limit areas of over 70 kph.

**Figure E6 – Types of injury crashes with excess or inappropriate speed identified as a contributing factor (annual average 1996-1998)**

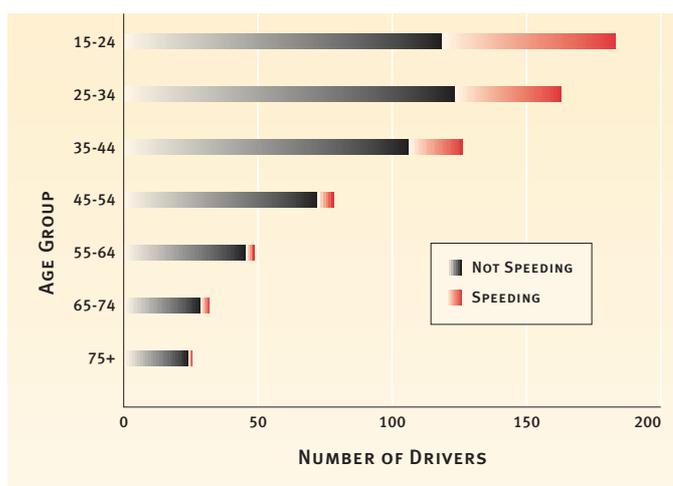

Source: LTSA Crash Analysis System.  
 Notes: “Urban” refers to all speed limit areas of 70 kph and under, and to limited speed zones; “Rural” refers to all speed limit areas of over 70 kph.

The 15- to 24-year-old age group has the greatest number of drivers identified as travelling at excess or inappropriate speeds in fatal crashes (see Figure E7). Of the 15- to 24-year-old drivers involved in fatal crashes between 1996 and 1998, 35% were identified as travelling at excess or inappropriate speeds, compared to 17% for 25- to

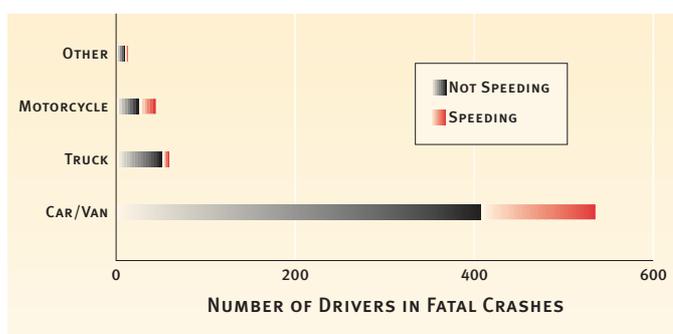

64-year-old drivers. Hence, speed is disproportionately represented in crashes involving a young driver. Across all age groups, male drivers involved in fatal crashes are also more likely to have been travelling too fast for the conditions than are female drivers. For example, 77% of the drivers involved in fatal crashes from 1996 to 1998 were males, and 85% of the drivers in fatal crashes involving excessive speed were males.

**Figure E7 – Drivers identified as travelling at excess or inappropriate speeds in fatal crashes by age group (annual average 1996-1998)**

Source: LTSA Crash Analysis System.

From 1996 to 1998, 21% of car and van drivers and 39% of motorcyclists involved in fatal crashes were identified as travelling at excess or inappropriate speeds (see Figure E8). Only eight percent of truck drivers involved in fatal crashes were identified as travelling at excess or inappropriate speeds.

**Figure E8 – Drivers involved in fatal crashes by vehicle type and by whether excess or inappropriate speed was identified as a contributing factor (annual average 1996-1998)**

Source: LTSA Crash Analysis System.

Of the car or van and truck drivers identified as travelling at excess or inappropriate speeds in fatal crashes from 1996 to 1998, just over half (58% and 60% respectively) were killed in the crash. However, of the motorcycle riders identified as travelling at excess or inappropriate speeds in fatal crashes, the vast majority (89%) were killed in the crash. This illustrates the greater vulnerability of motorcyclists over other vehicle occupants.

**TRAVEL SPEED DATA**

The Land Transport Safety Authority conducts surveys of driver speeds at a sample of sites around New Zealand each year during winter. The survey involves unobtrusive roadside measurements of vehicle speeds over a period of about two hours. The speeds measured are for cars travelling at “free” speeds, unimpeded by other vehicles or by the road environment (the sites at which vehicle speeds are measured are on straight sections of road, away from traffic lights and intersections).

Table E5 displays the national results of the speed surveys since 1995. At the national level, rural mean speeds remained relatively constant from 1995 to 1999, with the exception of a decrease in speed in 1997 (the increase in mean speed from 1997 to 1998 was statistically significant at the five-percent level). In contrast, national urban mean speeds appear to have fallen each year since 1995 (although the differences from one year to the next are not necessarily statistically significant).

SPEED	1995	1996	1997	1998	1999
RURAL, MEAN	102.4	102.3	101.6	102.2	102.1
RURAL, 85TH PERCENTILE	115	115	113	113	113
URBAN, MEAN	57.4	56.5	56.3	55.9	55.8
URBAN, 85TH PERCENTILE	65.5	63.5	63.0	63.0	62.5

**Table E5 – Speed data from the annual national winter speed surveys, 1995-1999**

Source: LTSA Crash Analysis System.

Notes: The speed at the 85th percentile is the speed at or below which 85% of the vehicles travelled; that is, 15% of vehicles travelled above this speed. “Urban” refers to 50-kph speed-limit zones. “Rural” refers to 100-kph speed-limit zones.

Overall, from 1995 to 1999, mean speeds in both rural and urban environments at the national level were above the speed limit. The mean speed in the urban areas was further

above the limit than the mean speed in the rural areas. Furthermore, the speeds at the top end of the speed distribution (above the 85th percentile) were very high, particularly in rural areas. This is a concern because, as discussed in the first section of this Part, the open road in New Zealand was designed for speeds of approximately 80 kph, with some sections of road upgraded to a 100-kph design speed. A large proportion of drivers are therefore travelling at speeds above the speed for which the road was designed to be safely travelled on. This means that drivers travelling above the design speed who encounter objects on the road in the distance will have less chance of stopping under emergency braking and avoiding a collision with the object. Also, by travelling above the design speed, there is a high chance of losing control of the vehicle on curves. As seen above, the loss of control scenario represented a large proportion of the crashes in which excessive speed was a contributing factor.

The high mean speed in urban areas is also of concern because of the presence of vulnerable road users. For example, a pedestrian hit by a vehicle at the 1999 mean speed of 55.8 kph would have over an 80% chance of being killed (see Figure A15, in Part A). Furthermore, the chance of a pedestrian being killed if hit by the fastest 15% of urban traffic before their brakes are applied is close to 100%.

It is estimated that, if the rural mean speed could be reduced by 4 kph, from 102 to 98 kph, there would be fewer people killed and injured on New Zealand's rural roads each year. Nilsson's formulae from Section 1a of Part A can be used to calculate the size of the reduction in deaths and injuries from reducing the rural mean speed. Although the formulae apply to crash reductions, they can be generalised to injury reductions because the ratio of casualties to crashes remains approximately constant.

Table E6 displays the injury savings when the mean speed is reduced from 102 to 98 kph. For example, in 1998 350 people were killed on New Zealand's rural roads. Applying Nilsson's formula, we can see that the number of people killed if the mean speed was reduced from 102 to 98 kph would be 298. Hence 52 people's lives would have been saved if the mean speed was reduced by 4 kph. Similarly applying Nilsson's formula, the 4-kph mean speed reduction would save 185 people from being fatally or seriously injured, and would save 442 people from being injured in a crash.

INJURY TYPE	NUMBER OF INJURIES IN 1998 (RURAL ROADS)	NILSSON'S FORMULAE: NUMBER OF INJURIES IF MEAN SPEED REDUCED FROM 102 TO 98 KPH	NUMBER OF INJURIES SAVED
FATAL	350	$(98/102)^4 \times 350 = 298$	52
FATAL AND SERIOUS	1,634	$(98/102)^3 \times 1,634 = 1,449$	185
ALL INJURIES	5,753	$(98/102)^2 \times 5,753 = 5,311$	442

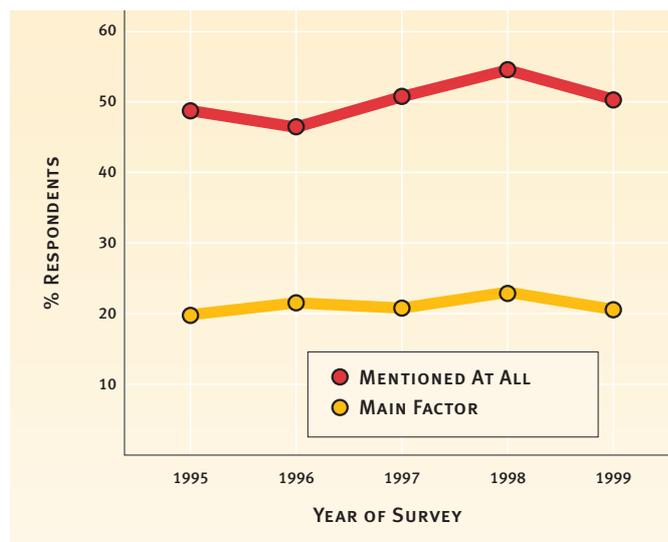

**Table E6 – Injury savings on rural roads in 1998 given a reduction in the mean speed from 102 to 98 kph**

Source: LTSA Crash Analysis System.

**ATTITUDE DATA**

The New Zealand Public Attitudes Survey has been undertaken periodically since 1974, and annually since 1994, to evaluate attitudes to road safety issues, primarily alcohol-impaired driving and speed. Face-to-face interviews about these issues are conducted in May and June of each year with respondents aged 15 and over, in towns, cities, and rural areas throughout New Zealand. In 1999, 1,645 people were interviewed, including 1,417 who held drivers' licences (LTSA, 1999a).

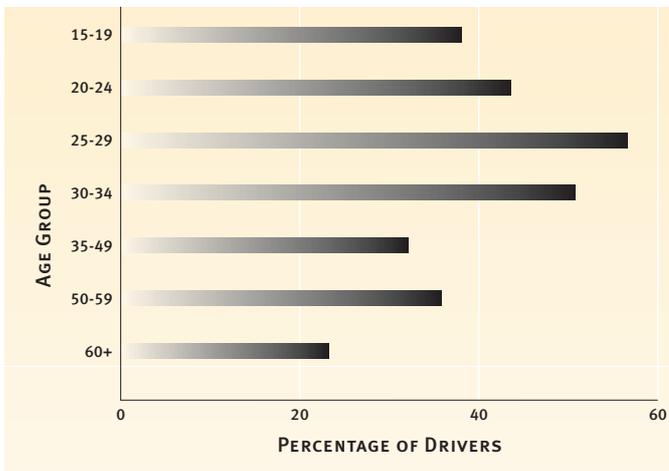

New Zealanders' awareness of speed as a road safety issue in 1999 has dropped slightly since 1998, returning to 1997 levels. When asked what factors make travelling on New Zealand roads unsafe, just over half spontaneously mentioned speeding (see Figure E9). One fifth (21%) identified speed as the **main** factor that made New Zealand roads unsafe.

**Figure E9 – Things that make travelling on NZ roads unsafe: speed**

Source: LTSA (1999a).

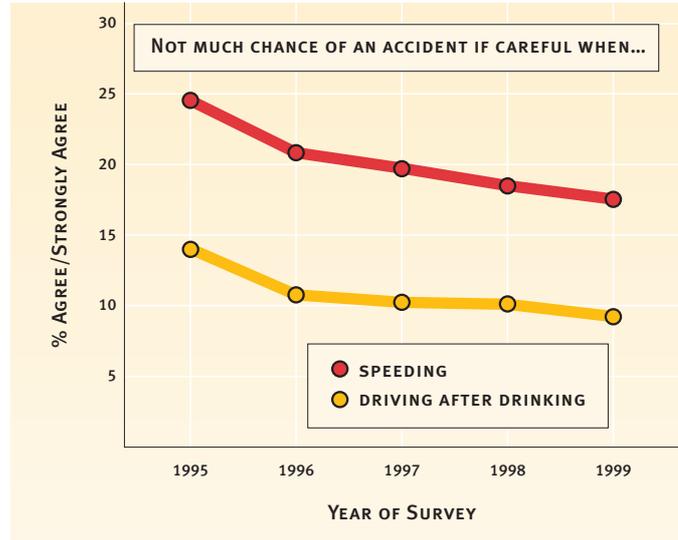

Despite this recognition of speed as a major road safety issue, the speeding culture is still strong. For example, 44% of male drivers and 32% of female drivers say that they enjoy driving fast on the open road. This attitude is particularly strong among drivers under 35 years (see Figure E10). For example, 56% of 25- to 29-year-olds say that they enjoy driving fast on the open road.

**Figure E10 – Percentage of drivers in each age group that said they enjoy driving fast on the open road.**

Source: LTSA (1999a).

The perceived risk of a crash when speeding is not understood as well as the perceived risk of a crash when drink-driving (see Figure E11). For example, 22% of male drivers and 14% of female drivers agree that “there isn’t much chance of an accident when speeding if you are careful”. In comparison, 10% of male drivers and six percent of female drivers agree that “there isn’t much chance of an accident when driving after drinking if you are careful”. Drivers in the 50-plus age group are more likely to agree with the statement “there isn’t much chance of an accident when speeding if you are careful” than younger drivers. For example, 26% of drivers in the 60-plus age group agreed with the statement, compared to 13% of 20- to 24-year-old drivers.

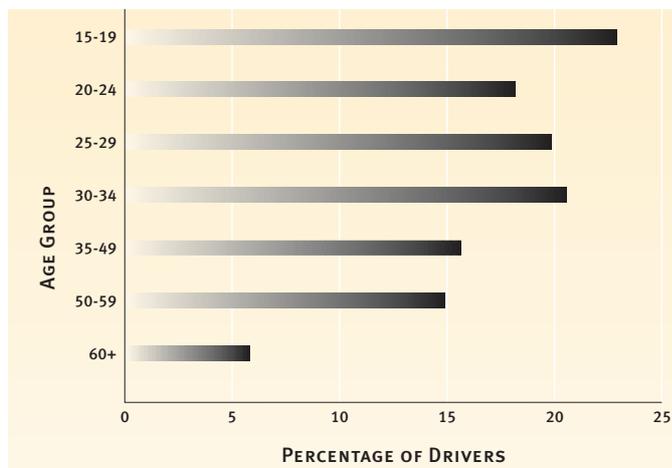

**Figure E11 – Percentage of New Zealanders who agreed or strongly agreed with the statements “There is not much chance of an accident if you’re careful when speeding” or “when driving after drinking”**

Source: LTSA (1999a).

The findings relating to speed enforcement were generally positive. They were:

- Three-quarters of New Zealand adults agree that **enforcing the speed limit** helps to reduce the road toll. However, 41% think that the risk of being caught speeding is small.
- Fewer New Zealanders now believe that **penalties for speeding** are not very severe. In 1997, 38% of people agreed with this statement, but by 1999 this had reduced to 32%.
- Sixteen percent of drivers (18% of males and 13% of females) reported receiving a **speeding ticket** in the previous year. Drivers under the age of 35 years were most likely to report receiving a speeding ticket (see Figure E12). For example, 23% of 15- to 19-year-old drivers reported receiving a speeding ticket in the previous year.

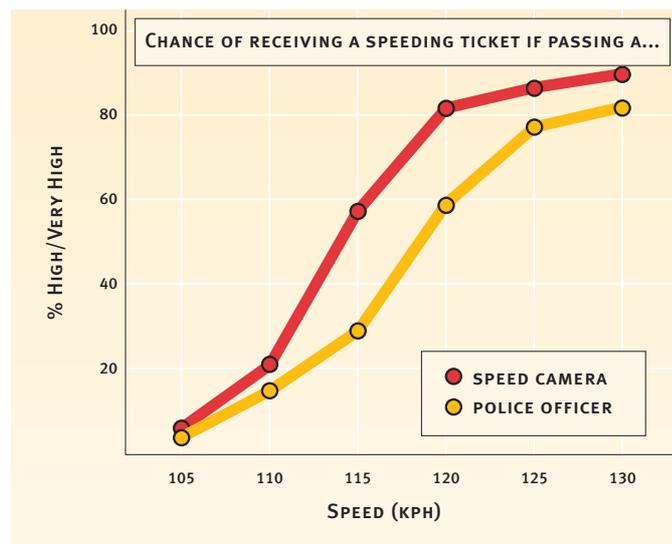

**Figure E12 – Percentage of drivers in each age group that reported receiving a speeding ticket in the previous year**

Source: LTSA (1999a).

- Most people find **extremely high speeds** unacceptable. Eighty-five percent supported automatic loss of licence for drivers caught speeding at 150 kph on the open road and 88% supported this for drivers caught at 90 kph in a 50-kph zone.
- Support for **retaining speed limits** at current levels was high (71% for open roads and 77% for 50-kph zones). There was less support than in previous years for introducing additional 60-kph and 80-kph speed limits for some roads (52% support in 1999, compared to 58% in 1998 and 64% in 1995). These speed limits have been introduced in some areas over the last four years.
- Support for **speed cameras** has reduced slightly since 1998, back to 1997 levels. Sixty percent of New Zealanders agree that the use of speed cameras helps lower the road toll and 63% think that they are operated fairly (compared to 68% and 70% respectively in 1998). Opinion is fairly evenly divided over whether speed cameras should be hidden or in full view, with many people supporting a mixture of the two modes.
- More people think that they would be likely to **receive a ticket** from a speed camera than from a police officer (see Figure E13). For instance, when driving at 120 kph

in a 100-kph zone, 83% would expect to receive a ticket from a speed camera<sup>63</sup>, but only 59% (an increase from 50% last year) would expect a ticket from a police officer who was present. The higher perceived risk of detection for speed cameras over police officers was discussed in Part C.

**Figure E13 – Percentage of New Zealanders who felt that the chance of receiving a speeding ticket if passing a speed camera or a police officer was high or very high**

Source: LTSA (1999a).

Note: The question relating to the speed camera implied that the speed camera was operational at the time.

<sup>63</sup>The question about receiving a ticket if passing a speed camera implied that the speed camera was operational at the time.

## Conclusions

- Speeding contributed to 162 deaths, 539 serious injuries, and 1,896 minor injuries in 1998. Speeding is likely to be under-reported in data on crash factors because of the difficulty in identifying it.
- The majority of speed-related crashes in which someone dies occur on rural roads, whereas minor injury crashes involving speed are almost equally likely to occur on urban or rural roads.
- The 15- to 24-year-old age group has the greatest proportion of drivers identified as travelling too fast for the conditions in fatal crashes.
- From 1996 to 1998, 21% of car and van drivers and 39% of motorcyclists involved in fatal crashes were identified as travelling too fast for the conditions.
- From 1995 to 1999, national surveys have indicated that mean speeds in both rural and urban environments are above the speed limit.
- Attitudinal surveys indicate that:
  - one-quarter of respondents identified speeding as the main factor that made New Zealand's roads unsafe.
  - 44% of male drivers and 32% of female drivers say that they enjoy driving fast on the open road.
  - 16% of drivers reported receiving a speeding ticket in the previous year.

Cobham Drive/SH1 Speeds – September 2021

**Feedback****15**

<b>NAME:</b> Andrew Shann	<b>SUBURB:</b> Other - Lower Hutt	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> Yes
------------------------------	--------------------------------------	------------------------------------	--------------------------------

**Please provide your comments on the short section of local road:****Cobham Drive 100m north of Calabar Road roundabout**

This section of road is already subject to massive bottlenecks and any further obstacles like a pedestrian crossing would be catastrophic when there are other options that could be considered. It must be realized that this section of road is SH1 and one of the busiest roads in the region.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There are massive bottlenecks in the Cobham Drive traffic flows already. Reducing the speed limit will make the situation even worse. Tens of thousands of business people travel to and from the airport each day and already face delays during peak times. These people are going to be held up even further for the sake of a few hundred pedestrians who may wish to cross the road. I am a cyclist myself but I do not believe that thousands of business people should be delayed to allow a handful of pedestrians to cross the road. Again, I see a pedestrian/cycle over-bridge as the logical solution.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

There are many issues that need to be considered. Stats have shown that well over 30,000 vehicles use Cobham Drive each day, yet only a few hundred cyclists and pedestrians will use the crossing on a daily basis. There are huge bottlenecks along Cobham Drive as it is –especially for people trying to get to and from the airport at peak times. Putting a controlled pedestrian crossing in the area will make the traffic flow even worse. The most logical solution is to build a pedestrian over-bridge.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

LGWM has stated that the cost of a pedestrian over-bridge is substantial and not justifiable in relation to the number of pedestrians that will use the crossing. However, little thought seems to have been given to the cost of lost time tens of thousands of business people will face each week due to delays and slower speed limits at the crossing area. The cost of this lost time will soon add up to many times the cost of a simple pedestrian over-bridge. Accordingly, building an over-bridge is the most logical solution.

### **Other factors to consider**

If pedestrians and cyclists are coming from the city to the ASB Arena area they could cross the road at the Evans Bay Pde/Cobham Dr traffic lights. If they are coming from Kilbirnie or Lyall Bay they will be on the correct side of the road anyway. If they are coming from Seaton or Strathmore they could use the airport subway and come out at Coutts St without having to cross SH1. It seems that it is only people from Miramar who are in most need of a pedestrian crossing as they do not have any way of crossing the road to get to the ASB Arena. Therefore, it is clear that tens of thousands of business people are going to be held up in getting to and from the airport for the sake of a few people who actually need to cross the road at the ASB Arena. Again, if something needs to be done then a pedestrian over-bridge is the most logical solution.

Cobham Drive/SH1 Speeds – September 2021

**Feedback****16**

<b>NAME:</b> Richard Scales	<b>SUBURB:</b> Breaker Bay	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> Yes
--------------------------------	-------------------------------	------------------------------------	--------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There is no cause for pedestrians to cross this road, housing to the east is not close and the airport has an embankment to the west. Have you a measure of how many cyclists use it? I travel the road at least 2x per day and have NEVER seen one. What an earth makes you think cyclists will use it any more than they do now because you reduce the speed by 10kph?

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes. We can reduce speed to zero and have much safer roads. I have NEVER felt that 70 was an unsafe speed on these roads.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes. IF you MUST have a crossing, instead of interfering with the traffic flow from the international airport to the country's capital, bite the bullet and put in a bridge or a subway. This isn't a third world country!! If you go ahead with this nonsense, traffic will simply use Rongotai Road and cause massive jams at the Kilbirnie lights and bus hub. Come ON council, get real!!

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

Cobham Drive/SH1 Speeds – September 2021

**Feedback****17**

<b>NAME:</b> Truis Ormsby-Martin	<b>SUBURB:</b> Miramar	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
-------------------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The Wellington-blowing-away sign on the hill above this stretch of road mean that a lot of drivers stop to take photos along this stretch. I believe it's feasible and wise to implement a 50km speed limit in this area. Since changes to the Calabar Rd roundabout several years ago, I have observed that many drivers travel from the roundabout along here closer to 50km already. The current limit of 70km for such a short distance is pointless, when vehicles must already have slowed for the roundabout.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I agree with the change on Cobham Dr and Calabar Rd. I believe that Ruahine St needs a much wider solution than a speed change. With the current congestion levels and road layout, access between Ruahine St and Goa St, Hataitai Park, the Badminton Club, and Wellington Rd will still be a hazard for all traffic. I believe a speed limit change will have only a minimal effect on the daredevil choices that drivers find themselves having to make at these intersections.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I disagree that a controlled crossing will adequately control the safety risks – pedestrians and cars will still come into direct contact, especially as drivers get used to the change. If you instead built a pedestrian overbridge (or underpass), pedestrians could move across the road even more safely, avoid potential problems with electrical failure of the control lights, and allow traffic to travel smoothly on a route that's already troubled by congestion. An overbridge with ramps arranged in an X-shape would add very little extra travel distance for pedestrians, compared to a right-angled crossing. A creatively designed overbridge could also provide another opportunity for a further iconic landmark along the scenic approach to our airport. If you are committed to only considering a light-controlled crossing, then I believe it should be further east, to encourage users of the ASB Sports Centre, and Rongotai College students to also use this route toward the Miramar peninsula.

The roundabout works very well

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Ruahine Street keep at 70 It is a safe Road Cobham Drive keep at 70 Build an overhead bridge Calabar Road 70 - Make up for all the time lost

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I thought this was about Getting Wellington Moving. Airport and Eastern Suburbs need top keep the motor traffic moving. What is wrong with a overhead ramp that is used in most parts of the world. Imagine the chaos when the lights go out. There a lot of elderly residents in the area who cannot cycle, scooter and will be driving. They are ratepayers as well and on top of that pay for the use of the road which is more than the fit energetic do. Plan for the future - spend the money and build overhead

Cobham Drive 100m north of Calabar Road roundabout**

No speed limit reduction is necessary here. This area is mostly an empty wasteland most of the time, especially since the wharf was closed off.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Consider that present speed limits are fine. The statistics put forward as thin justification contain no detail of the circumstances of fatalities and injuries and ergo are seemingly more empty spin than justification. As with the proposed crossing this is opposite of "Getting Wellington Moving" and makes a joke of the name. Essentially this is a move to slow down Wellington and stop it moving.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Consider that this idea is ill conceived nonsense and you are making the term "getting Wellington moving" into the exact definition of an oxymoron. This is a backward step to 'getting things moving'. Any crossing in this area, if not many areas like this, should be an over bridge that does not impede traffic. Cost is not a factor for a Council that wastes money on silly projects like it grows on trees and it can cut a silly project to pay for it. Frankly this is a ridiculous action to impede traffic for a few cyclists an hour and I say this as a cyclist in that area.

**What is the primary way you travel through and around the area?**

## Lip service

I am cynical about this so called consultation. As with many previous consultations over the years this is just empty lip service to the public and I am absolutely sure you intend to go through with preconceived notions based on minority activist noise, environmental socialist ideology and fluffy fantasies of Denmark from middle class elites who are out of touch with reality like you do on all other proposals.

Signed,

A ratepayer tired of being bled dry with exorbitant rates to fund a city grinding to a halt, dying and decaying because of WCC ineptitude, deceit, fluffy and unrealistic politically correct ideas, neglect and just plain stupidity.

Just make the speed limit 50 all the way to miramar to save confusion. This section is more likely to have cyclists on the road so in particular should be reduced to 50.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

A speed limit rising from 50 to 60 then a pedestrian crossing in the 60 zone doesn't make sense to me. Why not just make it 50 all the way?

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Currently there is no straightforward cycling connection from the east end of Rongotai Rd to this crossing. If I was coming back to my house on Lonsdale Crescent from the Cobham drive cycle path I would have to back track down Kemp street, then ride along Rongotai rd, joining fast flowing traffic moving towards the roundabout before turning right in to fast flowing traffic coming off the roundabout and finally left in to the tail end of Rongotai Rd. If that sounds confusing, it is. Traffic calming and /or cycle specific infrastructure is needed. Please pay attention to these connections because that's what makes a usable network. Further, pedestrian access around the Kilbirnie shops is appalling, confusing, unsafe and unpleasant.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

You guys are completely ignoring the middle section between Ruahime Street and Cobham Drive. It is the only connection between east suburbs ( Miramar, Kilbirnie, Hataitai ) to Newtown and the only propose is slow down? Where pedestrians can cross safely in that area? I am a Hataitai resident and I've seen several near misses and pedestrian ( workers, nurses ) trying to safely cross to go to Newtown. I have photos and videos available! Heaps of them.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Reduce the speed in a location like SH1 east of Mt Vic does not help 100% residents from Hataitai to be safe to cross to Newtown. There are no pedestrian crossing lane or courtesy pedestrian lane connecting Hataitai / Kilbirnie to Newtown. Very dangerous at SH1 for a pedestrian to cross ( aroh f the badminton club ) and cars are fast and don't stop, apart from the worst car intersection in the Wellington city.

I'm sure all ideas have been considered and cost is a major factor. How about a pedestrian over bridge exactly where you have the proposed crossing now, with elevators for people who are unable to climb the stairs? eg. Mum's with pushchairs. Alternatively and this is probably even more major, raise the road so cars drive over a bridge with pedestrians able to cross safely underneath. Both of these options would not impact traffic or cyclists.

## Additional Feedback on Proposed Traffic Crossing on Cobham Drive

I agree that a safe crossing should be provided in that area, to allow access from the waterfront to the ASB, Kilbirnie, and the schools in the area. However, the proposed traffic light system defies logic if the goal is to get people cycling or walking in the area. Having to stand and wait at the lights is hardly going to encourage school children and most car-bound adults to get onto their bikes. Why not make it really easy for people to cycle, walk or scoot?

Stopping the large flow of traffic in the mornings is going to seriously compromise everyone's safety on the other roundabouts and intersections in the area.

Traffic already backs up towards the airport and back into the Miramar cutting daily as it is, and this will significantly compound the problems our already stressed bus system faces, worsening their commute times and efficiency.

Stopping the smooth flow of traffic will also worsen the efficiency of cars and busses, adding to the already increased levels of pollution Miramar and Kilbirnie residents live with since the trolley busses were removed and replaced with diesel ones.

I have two high School aged children who attended Evans Bay Intermediate, and they both used bikes for a short time to get to that school. They stopped cycling due to the many scary trips to school caused by bus, car and adult cyclist behaviour, and the issues faced passing through the airport underpass when its full of school children of all ages.

I can assure you many, many more children in the Miramar area would use the coastal route to get to schools in that area on bicycle or scooter if it were easy to do so. Let's hope the improvements in the Miramar cutting and Miramar Ave area help. I can also assure you that they would not think that two extra sets of traffic light crossings would be useful, but a bridge with no traffic lights would be.

A bridge in the proposed site would encourage a lot of people, myself included, to consider cycling that route.

If I am not mistaken, previous studies have also shown that a bridge was the preferred option for residents in the area, I remember such a proposal when my kids were at primary school.

Gary Sheppard

Miramar Resident.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Only that I think you need to monitor the impact that has on traffic flow. The more you impact, negatively, on traffic flows along your "main" highway between the Eastern Suburbs and town, the more drivers will look to taking "short cuts" through Rongotai/Kilbirnie. The more they do that the more you are actually going to impact on your (existing) newly upgraded cycleways along Rongotai Road and Bay Road, and your accident numbers will increase.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This must be purely for those travelling between the ASB centre location and Miramar. Surely, with the work undertaken on the cycleway extension already along Bay and Rongotai Roads, those travelling from Seatoun, Strathmore Park, Rongotai, Lyall Bay, and Kilbirnie are catered for already, heading to town around the bays, or coming the other way. That being the case surely the "safer" option would be to put an overbridge, for pedestrian/cycle traffic, across from the Cobham Drive track to the ASB side. Doing that would mean you are not disrupting the vehicle traffic (see below) and you are offering a safe avenue for the target users. Putting traffic lights in only 50-100m west of the ASB roundabout is going to create mayhem on that roundabout every time someone presses the button to cross the road on the newly propose crossing. That roundabout will become blocked and those wishing to drive from Rongotai around to Miramar/Seatoun will not be blocked up by the traffic sitting on the roundabout trying to head into town. More drivers will take risks to get across there and you will find accident frequencies will increase accordingly. So that's not very "safe" really, or I'm missing something. This smacks of another instance where the Council has not done due diligence on the actual need, almost a "build it and they will come" mentality. I have no strong view on the speed reductions, we will have to wait and see what effect that will have on the traffic flow.

## Submission on Proposed changes to SH1/Cobham Drive: June 2021

Prior to the cycleway/walkway upgrades work along Cobham Drive Wellingtonians were given the opportunity to make submissions to the Council on that initiative. I, like many others, did so at the time. My argument was that as a regular runner and cyclist between my home in Strathmore Park and town I felt the safest option was to make use of the existing airport subway and upgrade the paths at each end of that (North to Miramar, East to Strathmore and Seatoun, and at the West end of the subway out to Rongotai Road). That was a safe way of keeping non-motorised traffic away from SH1, and by safe I am not only referring to the traffic but I might add I have been blown sideways off my bike when riding along Cobham Drive by the airport. The council decided to push ahead with the project on Cobham Drive, which we all know took many months to complete (and I would hate to see how over-budget that project was in the end).

However the “improvements” to the cycle network did not stop there, at the same time cycleway work was completed along Bay Road and into Rongotai Road. So in effect those travelling now between Rongotai (and I would argue Strathmore Park and Seatoun areas), Kilbirnie, Lyall Bay, and town, can use the new cycleways created to get to the traffic lights at Bay Road/Cobham Drive, and then to/from town. Those travelling on those routes do NOT need the newly proposed traffic lights, and in fact any plans to include them in the business case are effectively admitting the work undertaken on Rongotai Road and Bay Road was not actually required at all. Obviously with three sets of pedestrian crossings along Rongotai Road those wishing to get to the ASB Centre from those suburbs, either walking or on a bike or scooter, can do so today very safely. As a side note, I noticed that on the map displayed on the Council web site for this latest proposal that those cycle lanes were NOT highlighted.

So if we then establish that the main requirement now is to allow those travelling to or from Miramar (or Shelley Bay!), Maupuia, then surely a far less disruptive (and safer “overall”, see below) option would be to provide a foot-bridge across the roundabout at the ASB centre. There is already a raised section on the Cobham Drive side which could be used as a ‘starting point’. Putting that bridge in would surely create as much disruption in construction as creating a pedestrian crossing, but thereafter the disruption to traffic would be zero.

Which leads me to the concerns on safety.

The installation of traffic lights within only 50-100m west of the ASB roundabout is going to create mayhem on that roundabout every time someone presses the button to cross the road on the newly proposed crossing. That roundabout will become blocked and those wishing to drive from Rongotai around to Miramar/Seatoun will now be blocked up by the traffic sitting on the roundabout trying to head into town. More drivers will take risks to get across there and you will find accident frequencies will increase accordingly. On top of that those held up heading to town will then start heading through Rongotai and Kilbirnie in the hope of getting “around” the hold ups, human nature being what it is. That will increase the traffic levels along Rongotai Road and Bay Road, and increase the risk levels to pedestrians and cyclists trying to use the newly created paths on those routes.

This smacks of another instance where the Council has not done due diligence on the actual need, almost a "build it and they will come" mentality, with no consideration really given to what is already in place, and the effects it will have on ALL users of the road network, be they walkers, cyclists, or those in vehicles. A cynical view would be that the more disruption to motorised traffic the better, as it will only "coerce" more people to look at cycling or walking options, and hence make the case for all the work completed along Cobham Drive appear more warranted. Being a not-so frequent passenger on the bus services to this area I could extend that out to the relative service level the Peninsula gets compared with other areas, particularly Island Bay. But that is another issue.

Surely the aim is to, as much as possible, try to keep your vehicle traffic separate from your walkers, runners, and cyclists? If there is a state highway, a major vehicle thoroughfare, what is the benefit in trying to increase pedestrian traffic on that route? I get that those in the Northern regions of the Miramar peninsula will want to use Cobham Drive, but everyone else doesn't need to, in fact your aim should always have been to try to minimise the co-existence on as much of the road network as you can, surely. Yes, I see the secondary motivation (behind the clearly stated safety issue) which is to influence more Wellingtonians into considering NOT using the cars, but there is no reason why you cannot provide safe and effective cycleways and at the same time NOT negatively impact on your motorised users. You have already shown a precedent for this in the considerations given to putting in tracks at the back of Wakefield Park in Island Bay to try to avoid the main road network.

As stated above, deal with your actual needs, which in this case is clearly Miramar across to Kilbirnie/Rongotai/Lyall Bay, which will be easily served by an overbridge at the ASB Centre roundabout.

Thanks

James Heffernan  
Strathmore Park

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Instead of interrupting the flow on State Highway 1, from airport and eastern suburb traffic, consideration should be given to a pedestrian overbridge (as per the bridge at Plimmerton). Bike traffic can still use the nearby existing controlled crossing at the intersection of Cobham Drive and Evans Bay Parade.

Submission on proposed pedestrian crossing on Cobham Drive.

The lack of a safe crossing on this stretch of very busy road has long been of concern to residents of Maupuia, the Miramar Peninsula and Kilbirnie. Having waited decades for something to be done to enable pedestrians to safely cross this busy stretch of road, it is a relief to know that moves are afoot to finally do something.

That said, I think the creation of a pedestrian crossing shows a lack of imagination, vision and common sense. A crossing would be expensive to create, have limited value and the volume of foot traffic likely to benefit would be also likely to be minimal. A lot of money has recently been spent creating a pleasing environment along the harbour shore, and the intent is to encourage people to use that area for recreational purposes as well as for moving to and from the peninsula and Kilbirnie/Hataitai. But a pedestrian crossing would necessarily limit the use of that waterside facility for many.

As well, because the nearest other pedestrian crossing is on Rongotai Road, it would still be difficult for pedestrians to cross both the double lanes of Troy Street to access those houses on the Fire Station side of the roads, or for residents from that side of the streets to cross to Kemp Street. Perhaps most importantly, a pedestrian crossing, even one 'controlled' by traffic lights, still affords pedestrians scant protection from the road traffic.

The most active forms of transportation which have the lowest impacts on the environment are walking, electric scooters and cycling. The most common problem impeding the preference for walking, cycling and scootering is traffic safety. Pedestrians are most at risk when they are crossing the road – a significant percentage of all fatalities among pedestrians occur at these crossing points. The most frequent reason for these fatalities is a failure of drivers to give way – and we all know how terrible New Zealand drivers can be.

The Council's stated aim is to provide better connections and safe crossing close to the Sports Centre.

The **only safe solution** that affords pedestrian safety and does not impede traffic flow, is a footbridge. Much more beneficial, surely, than the proposed crossing would be the creation of a footbridge anchored on the traffic island at the junction of Cobham Drive and Troy Street. Bridges connect destinations in communities and therefore should be both functional and aesthetic.

There should be two access ramps provided on the water side of Cobham Drive - one from the Evans Bay end of the walkway, the other from the Miramar end of the walkway, across a central walkway above the traffic and across the traffic island, leading to two ramps down onto each side of Troy Street, one on the Fire Station side, the other on the stadium side.

By using ramps, access is eased for pedestrians, cyclists, scooter users, parents using prams and pushchairs, disabled people using wheelchairs – all of whom can cross at their own pace and not be intimidated or hurried by changing traffic lights or feel threatened by speeding or impatient drivers.

Traffic flow to and from the airport and Miramar Peninsula can still be regulated to reduce speed, but by creating a footbridge, the road network capacity would remain unimpeded as would happen if the proposed traffic lights and a crossing were introduced on Cobham Drive. There are already lengthy delays both ways on that stretch of road and it's a certainty that commuters would not appreciate additional delays.

A footbridge, the only safe solution to enable crossing of Cobham Drive, will allow easy and safe access to all sides of the junction and facilitate easier access for all to the walkways and conversely, to Kilbirnie and environs. As a local investment, it is bound to garner praise from all local users and easily outweigh the inconvenience for everyone of traffic lights and a crossing, which will only compound the already high levels of driver frustration evident on this road.

The traffic island as it is, is isolated and cannot be enjoyed or used by residents of the area in any useful or recreational way. But it is ideally placed to enable the erection of a pedestrian accessway to be anchored on this island, which will benefit the whole community. Such a construction need not be an eyesore and could, in fact, be an opportunity for engineers, designers and architects to compete with designs for the project, with the community being the judges and selectors, symbolically drawing the community together - as will the bridge itself.

I believe this proposal deserves serious consideration and ought not to be dismissed out of hand. Opportunities to introduce progressive and creative solutions do not come around very often. Wasting money on a crossing would be unconscionable when common sense clearly indicates the safest and most practical all-around solution can only be an overhead footbridge.

On road speed limit markings

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes. On the Kilbirnie side of the crossing there is no clear route that pedestrians and cyclists would use to connect to Kilbirnie other than Cobham Drive. We suggest creating a sealed pathway that already partially exists next to Geeks on Wheels (currently it's a narrow white stone cut through and visible on Google Maps Street View). This could either connect to the end of Tacy Street or better yet to a new pathway through the ASB Carpark to connect to the existing cycle way between Kemp street and Rongotai Road.

Cobham Drive/SH1 Speeds – September 2021

**Feedback****29**

<b>NAME:</b> James Sergeant	<b>SUBURB:</b> Karori	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
--------------------------------	--------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Think about whether it is really sensible to have two different speed limits on Ruahine St/Cobham Drive. Surely more sensible to have both at 50 or 60, but not a change on what are very similar roads.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Should make it a 'straight across' crossing rather than two stages to make it easier for cyclists and less waiting for pedestrians. See crossings on Customhouse Quay etc.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

Other

What is your **main relationship** to State Highway 1 from the Mount Victoria Tunnel to the Airport?

- My home or business is accessed directly from the SH1 route
- I visit the area (e.g. to shop or visit friends)
- I go to school or drop my kids at school or daycare in the area
- I regularly travel through the area to get to work or school
- I only travel through the area when I'm going to the airport
- I have no relationship to the area

### **SUBMISSION: COBHAM DRIVE PEDESTRIAN CROSSING FACILITY**

I welcome LGWM's proposal for an at-grade pedestrian crossing.

Thank you for the opportunity to be involved in commenting on this proposal.

I support the submission of Living Streets Wellington branch.

I support the establishment of an at-grade, traffic-light-controlled pedestrian crossing of Cobham Drive north of the ASB Arena, with traffic lights responding to pedestrians pushing 'beg-buttons' on either side of the road.

I recommend that in the absence of traffic coming in either direction, the traffic lights should automatically show red.

I would oppose the following possibilities for pedestrians and for people in wheel-chairs or pushing prams:

1. **a bridge over Cobham Drive.** This would involve many steps for able-bodied people, and long ramps for people in wheel-chairs or pushing prams. This would be wholly impractical and very expensive, in addition to being most unpleasant to traverse in a gale on a wet day.
2. **a tunnel under Cobham Drive.** This would involve excavation at or just below present sea level. It would require the construction of steps for able-bodied people and ramps for people in wheel chairs and prams. As in 1 above, this would be wholly impractical and very expensive. Also given the strong possibility of rising sea level, the chance of inundation rendering the tunnel impassible would be likely to increase as climate change continues with the associated rise in sea level.

### **Speed limit on Ruahine Street, Wellington Road, Cobham Drive, Calabar Road.**

I recommend that the speed limit in this corridor be reduced to 30 km/hr. This would:

- increase the capacity of the corridor because the reduced speed limit would result in shorter safe following distances between vehicles;
- make walking and travel by wheel chair or pram quieter and, in the event of a motor vehicle inadvertently mounting a footpath, possibly reduce the chances of people on the footpaths being injured or killed.

When hearings are held, I would like to speak in support of my submission.

Yours sincerely  
Chris Horne.

You may as well put one of Trumps walls there instead of a pedestrian crossing. A crossing would create massive delays to and from the airport and would be viewed at best as "ANOTHER SICK JOKE"

You have <profanity> up letting shelly bay go ahead. Do you have any idea of the current state of traffic? It's going to be an absolute nightmare. How about you build infrastructure before bringing more people in? State highway 1 from airport to town hasn't changed in 20 years because of mismanagement, stupidity, arrogance and lefty scum that are trying to degrade out city. learn to walk before you run. Live in reality not some acedemic hypothetical idealist world. Joke, slap in the face to the Wellingtonians that have lived here all their life. appease the extreme left student population who contribute the least. CBD is a joke people get stabbed and assaulted. Take responsibility.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Don't change the speed. Build a small over bridge then everyone is happy

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Yes, there is no need to reduce the speed limit in these areas. It isn't not a high crash area and the speed levels are self limiting when traffic builds anyway. This is change for changes sake and shouldn't happen.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes, there is no need to reduce the speed limit in these areas. It isn't not a high crash area and the speed levels are self limiting when traffic builds anyway. This is change for changes sake and shouldn't happen.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes, don't do it. A complete waste of money and will create further congestion in an already nightly congested area. A terrible idea that should not be implemented. If it is believed that a crossing is a must then the only suitable option would be an over bridge. Listen to the people, do not follow through with this plan.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Yes, the road runs east west, so what's this north thing. Have you done studies on pedestrian use as I'd say it'd be less than 20 people a day. What's the people to car ratio on this stretch of road.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Consider the flow back effect that will cause delays getting to the airport.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Consider traffic flow. Stopping and starting traffic causes delays and wastes fuel and causes increased green house gasses. This isn't a "green" solution to a problem.

Would like to see more detail on why reduction in speeds is being considered. The analysis was so high level that no conclusions can be drawn. This sort of analysis is not compelling and could apply to any road in NZ. Typically traffic is so congested anyway that you need to adjust to the congestion.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Strongly agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

A better option would be an overbridge. Additional traffic lights on that part of SH1 would add significantly delays. The traffic congestion is already ridiculous and needs to be resolved as a priority. People do need a way to get to the ASB Centre. I would totally disagree that Rongotai College students would use the crossing as its much easier and shorter to use the tunnel under the airport. You may get a few people out for a walk. Really need to understand the number and what type of people would use the crossing to determine viability. Not sure why the crossing needs to be raised on SH1, this would make it dangerous for cars when no one is at the crossing. We need a future proof solution so an overbridge make complete sense and when SH1 is improved as part of Airport to Ngauranga Gorge its still useable. a crossing is a temporary throw away solution.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Why would the traffic speed need to decrease in this zone? It is a wide stretch of road that has accessible bike routes etc. and will be even more accessible once the Cutting roadworks/bike lanes are finished. I have often walked in this area and have not felt unsafe in any way. People are already reducing speed and aware of bikers/pedestrians and other road users. Why fix something that isn't broke, and is actually more free flowing than some other areas!

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I have no idea why reducing the speed will improve anything. In heavier traffic (i.e. main commuting times), it is hard to get to nor maintain 70kmh, but in off-peak traffic, this is really helpful in reducing travel times into the CBD etc. I am not sure

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

There are other options that could be explored that do not slow down traffic. This is already an extremely congested route with the two sets of traffic lights/crossings further up - to add an additional set of lights/crossings will just further congest traffic and slow down commutes. A flyover similar to the one of Wellington Road would be perfectly adequate and not affect traffic at all.

**What is the primary way you travel through and around the area?**

Car

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

There needs to be a crossing but does the crossing need to be raised? Wouldn't the lights be sufficient?? Pleased it's not an overbridge - you couldn't get a wheelchair, bikes, pushchairs across therefore this is more accessible. Like that the crossing from one side to the next is zig-zagged. Less likelihood of people dashing across (in theory , anyway).

Cobham Drive 100m north of Calabar Road roundabout**

Why not consider better road layout and road markings, instead of these ideas that seem to show a complete lack of creative thinking.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

It has been working well. I don't know why you people keep making things worse in this city.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I cannot believe how utterly short sighted and uncreative all these options from LGWM are. WHY are you proposing something to create traffic congestion? WHY can you not build a bridge over this busy and vitally important road? This is clearly the main route between the city and the airport and you are proposing to create traffic hold ups. Build a bridge!!!!

**What is the primary way you travel through and around the area?**

Running

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Why make the speed limit on this portion of road different to the to Cobham Drive and Calabar Road? Are you trying create a speed trap to gather ticket revenue? The existing layout offers road users the chance to reduce speed by the time they reach Miramar wharf or the cutting so unless you can give a good reason backed by appropriate data you're just wasting time and money with this exercise.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

your speed proposal link is dead (page not found) the current limits work so why change them?

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Consider not wasting public money on a vanity project that is poorly placed for and will only be used by fraction of Tee Motu Kairangi residents. Have the decision makers considered this is a horrible location for pedestrian facilities as its very exposed to the elements, would they consider instead access through Coutts Street via the runway tunnel as crossing infrastructure already exists on Rongotai Road which currently services the ASB arena and Kilbirnie with excess land available for expansion(Rongotai Rd. Runway tunnel terminus). the proposed alternate route provides superior shelter from both Northerly and southerly winds which could be a major deterrent to foot traffic along Cobham Drive.

**What is the primary way you travel through and around the area?**

Cobham Drive 100m north of Calabar Road roundabout**

Where Shelly Bay road meets the road through the Cutting it needs to have a left turning lane so that at busy times cars attempting a right turn from Shelly Bay road can go left and use the roundabout outside Z service station.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

If a bridge is built there is no need to change the speed limits. Cyclists from Seatoun and Strathmore could also use the the tunnel under the airport to avoid Cobham Drive.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Need to consider an overhead pedestrian bridge. It should not be necessary to allow cyclists to cross, but if volumes suggest so there will need to be ramp access.

**What is the primary way you travel through and around the area?**

What is the proposed pedestrian walkway from Rongotai to Miramar to the cutting? - So, no direct comment on this road section, rather wondering about the approach if not from Evans Bay/The Cutting.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Consider the accident statistics for the roundabouts

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

a) a link from the crossing to the residential areas of Rongotai/Kilbirnie - e.g. on the west side of the Sports Centre b) a synchronised/timed crossing between both parts of the crossing, preventing waiting time in a pretty boring (if not even hostile) pedestrian/cycling area c) keep the road traffic lights on even in less busy times to remind drivers of their existence d) consider the future need for a second crossing for pedestrian/cyclist commutes from Miramar to Rongotai and/or from Evans bay to Strathmore (not via tunnel).

**What is the primary way you travel through and around the area?**

Bicycle

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

What a complete waste of time and money. Practically no one will comply with a change which is 100m long and over such a short distance police will not do any enforcement as their instructions are to not enforce speed within 200m of a change of speed sign. What exactly is it you think you'll achieve through this unnecessary spending?

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Your "View the speed proposal" link leads to a page which says "Page not found" - why is it so difficult for you lot to get even really basic right?

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes. The amount of extra pollution you're going to cause by unnecessarily stopping traffic on SH1 by building an environmentally unfriendly road level crossing. Let's Get Wellington Moving is about improving traffic flows not making them worse. Build an overpass like they do all over Australia - rounded ramps at either end which make it easy for pedestrians, wheelchair users, pram pushers, and cyclists to cross the road.

**What is the primary way you travel through and around the area?**

Car

WCC have already spent money on the walkway and cycle way along this stretch of road. Why wasn't this considered during the design. It appears that the council are clueless when it comes to town planning.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Again research the number of accidents caused solely by speed and you'll find it negligible. If safety is your concern reducing the speed limit by 10kph won't matter a damn if you hit by a car.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Until the cycle way is finished - merging into the traffic at the end of this stretch is really precarious.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Don't know

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It is essential that's for sure but make sure it's in the right place. You should note the crossing put in at the Strathmore roundabout - this is in a terrible position and I often see pedestrians being hit by cars as there are too many things to focus on. They need to make sure that cars from the left are actually going to stop (as they are going over a crossing as well) and then if someone is crossing (Strathmore AVE) they are stopped in the middle of the roundabout in the way of the traffic coming through from Seatoun. It's extremely dangerous due to this bad planning.

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I regularly travel through the area to get to work or school

Cobham Drive/SH1 Speeds – September 2021

Tunnel or bridge is both safer and faster for all users when there is already major traffic issues when users most likely to use the facilities

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The road system to airport is already terrible and needs to be sped up from the city with extra lanes not slowed down for the few pedestrians/cyclists. A tunnel or bridge makes it both safer and faster for everyone

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Traffic speed does not need to be changed. A highly quality decision is needed, please supply the data points which have been assessed eg safety issue data points that may indicate why safety is an issue.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The traffic speed works well now, it is not a problem. Keep current speeds. Traffic adjusts speed as traffic density changes. It is not a safety issue.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Stunning madness to put lights in Cobham Drive and reduce speed limits. I'd understand if it was an underused side road but this is a highly used state highway that needs to cope with increased traffic for years to come as more housing is built. Build a tunnel or bridge so you keep traffic flowing as best as it can.

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Not important

Cobham Drive 100m north of Calabar Road roundabout**

Traffic needs to be reduce in flow and speed in this area. Being a resident on Akaroa Drive, it is almost impossible to exit during rush hr, and non peak times. Traffic tends to speed from Cbhran drive around to Mirarmar 1st roundabout.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The speed needs to be reduced further. Traffic tuning left into Miramar should be 40 km 50 km from Cochran. Traffic speed is horrendous from roundabout to 1st roundabout in miramar. Making it extremely Y dangerous to exit Shelly bay and Akaroa drive.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Have you considered a slim line air bridge to go up and over the road instead. I do not support traffic lights for the benefit of so few a number and the disruption to so many others far out ways each other. There are so many other problem areas in Wellington that need your focus and this is not one of them. The traffic coming off the motorway out of the Terrace tunnel down the stretch of SH1 road to Cambridge Terrace is of much more importance and dire need of restructuring, concentrate your efforts on a solution here instead of wasting time and creating a further choke point 3km away down Cobham drive.

**What is the primary way you travel through and around the area?**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I do not feel a crossing with traffic lights is the best option for a State Highway. Already traffic is congested along this route, and having traffic lights will only worsen this, especially being the main route to the Airport. I feel pedestrians safety will be greatly endangered. With the proposed increase of traffic due to housing being built at Shelly Bay and on the old prison site, we do not need even more reasons to have congested/banked up traffic. Please - consider a bridge over the road - much more safer for pedestrians and keeps them moving (ie - not having to stop in rain and wind and wait for lights to turn green) . Keep Wellington MOVING by building an overbridge that will keep traffic MOVING and allow pedestrians to keep MOVING.

To be honest a change is speed limit along this road is ridiculous. The amount of traffic that goes along this route daily vs the accidents that happen is minimal. The stats you gave us is under 2 per year. Have you seen the number of cars on this route daily?? I know for a fact that one accident (not sure if this was in your stats as it was 2020) was a young kid who stole a car, had no drivers license and at a time with not traffic. No speed limit change was going to save him. What are you trying to achieve? "Lets get Wellington Moving" by slowing it down all we can. It's ridiculous

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

You need to consider alternatives to sticking a crossing across the road and stopping the traffic. An over bridge would be the best option. I would actually say an under bridge but this can become unsafe at times with unsavourily type people lingering, squatting, urinating etc. This road is congested at the best of times. It's mostly due to the airport , school traffic and people travelling from the other side of town to the Eastern suburbs and their home. A crossing will not ease congestion. You will be causing more congestion and slowing/stopping traffic. For a group that is called "lets get Wellington Moving" it s a ridiculous thought to even think about stopping traffic from moving freely along this road. Do any of you live in the Eastern Suburbs and experience this road multiple times a day/week? I suggest you start before you make any decision.

---------------------	-----------------------------------	--	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This you can slow to 60 or 50. Its starting to enter a town, a tight corner with a higher risk bay road adjoining, high amount of cars parked on the left. So here a speed to 50 or 60 would be not a bad idea..

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

This would get wellington to slow down not move. Make a bridge and keep the speeds the same. Its already takes a long time to get across town. Slowing this down will push people away from these areas...

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Building a bridge over the road would be much more suitable. Keep the busy road traffic flowing. The speed the same due to the long dual lane road. Introducing a crossing on dual lanes would likely increases the risk for traffic crashes.

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This won't make much difference to safety as half the time the traffic is traveling at the proposed speeds or slower. Perhaps the entrance across the Calabar road should from Caledonia St should be blocked off so no lanes can be crossed. I've witnessed a number of near misses etc. Further to the above Ruahine St needs to be urgently 2 lanes and a second Mt Vic tunnel built along with sorting the traffic flows around the basin and across town, particularly travelling east to west. Further more along with an improved foot path thru the Mt Vic tunnel is urgently required as I've been using this route for decades and its just getting busier and busier, and sometimes is unsafe particularly when there are cyclists coming from ether side and pedestrians many with head phones on get between them.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I think the road needs to be double laned and a second tunnel built thru Mt Vic ASAP. I'm don't believe the speed changes will make much difference as often the traffic is travelling at the reduced speeds at best

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

How does this crossing connect to the cycle way that goes under the airport runway and connect to the cycle way that runs thru Kilbirnie etc . Frankly I think this proposal is nuts as an underpass should be built for cyclists and pedestrians for convenience and safety, plus also quicker pass of vehicles, noting the previous roundabout changes have increased the travel time from the airport along this section of road. From what I can see this whole " lets get Wellington moving" consultation process has enabled a long dely in improving vehicle, pedestrian and cyclist travel times. Frankly slowing the traffic, adding a couple more cycle lanes and pedestrian crossings hardly amounts to the promise of sorting the traffic flow across Wellington to the motorway. No wonder Wellington is falling way behind Auckland and Christchurch in its central city's growth

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This stretch of road that connects the City to the Airport is always going to be dangerous for Pedestrians and cyclists. The only sensible and safe way to do this is by building an overbridge. People can still be hit by traffic even when there is a crossing or set of lights. To eliminate the danger you must go over the top of the traffic.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There needs to be four lanes of traffic ( two each way) from the Basin Reserve to the Airport. This needs to be done urgently before Shelley bay is built otherwise it will be quicker to walk to the City from the Eastern Suburbs to the City. Whilst in summ

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

An overbridge is the sensible way to address any crossing issues. This area of road is already severely congested throughout the week and certainly don't need another set of traffic lights to slow things down further.

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This stretch of road is fine and doesn't need to be changed. Neither does any of the other ones.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Changing to 50 at Ruahine street is a possible idea as there is often traffic build up so you are hardly ever going 70 anyway. Won't have to change the speed on Cobham drive because the idea for a crossing is silly so no change needed.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The amount of traffic build up is already ridiculous at peak hours. Adding this proposed crossing is going to add to make this much worse. There is already the path under the airport available for people walking/biking or the crossing down at St Pat's College.

**What is the primary way you travel through and around the area?**

Cobham Drive 100m north of Calabar Road roundabout**

This speed change will not have any meaning full positive impact for anyone, however it will have a negative impact on the high volume of road traffic in the area. In the last 20 years there have only been 4 deaths and 9 serious crashes which is already exceedingly low and does not justify the negative change that lowering the speed limit could create.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

-------------------------------	-----------------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This should have some kind of active speed reduction as it is cars get driven around this section very quickly and yet it is one where cyclists are trying to cross, where tourists are wandering around photographing the sign and where fishers are walking back n forth. When heading south on a bike trying to get across great care needs to be taken with on coming traffic. And that oncoming traffic is about to have to slow down anyway.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Make them all 50kmhr... the time difference for such short distances is minimal and yet would change the entire feel of the environment from one where the motor vehicle rules to one where there is a human element.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

<b>NAME:</b> Jane Dawson	<b>SUBURB:</b> Newtown	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
-----------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This should go down to 50 km/hr. There is virtually no advantage in having it at 60, given it is such a short stretch. The Calabar Road roundabout should be reduced to 50, because (a) cyclists have to navigate it to get to Strathmore and (b) it is unsafe for everyone to have vehicles circulating at 60.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Good to see the reductions to 50 km/hr. Would be good to see the whole route going down to 50, so drivers don't get confused by the changed limits.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It isn't clear whether the crossing point will be easily accessible from Kemp St (or maybe Tacy St). It should be, with good facilities on those streets to link to the crossing. Otherwise the crossing will be awkward to get to and little-used as a result.

**What is the primary way you travel through and around the area?**

Walk

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This should be 50 km limit as well, as the surrounding streets. south and west of the roundabout. You are in an urban setting with a significant junction to Shelly Bay road, along with visitors stopping looking at the Wellington sign on the hill.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

SH1 speed limits should be 50 kmh in an urban setting, where traffic mixes with people on foot and bikes. This is consistent with other parts of SH1 in Wellington City. To make these speeds credible, we suggest the SH1 lanes are narrowed to induce lowe

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The connection to the ASB arena and Kemp Street

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

Cobham Drive/SH1 Speeds – September 2021

<b>NAME:</b> Geraint Scott	<b>SUBURB:</b> Khandallah	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
-------------------------------	------------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This should be 40km/hr.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The risk of death for pedestrians begins to rapidly increase above 40km/hr. All three of these areas should be reduced to 50km/hr rather than just Ruahine.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It needs to be accessible for people with disabilities and easy to use for parents with kids and cyclists.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This short stretch should remain the same speed limit as surrounding roads calabar and cobham to prevent confusion and delays in traffic. Slowing down this road will create congestion on the roundabouts with cars coming in at different speeds.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Slower speeds on ruahine road i believe is not necessary as this isnt a high foot traffic area and from my understanding not many incedents have occurred. If the speed is changed i believe 60kph is a reasonable change for saftey reasons without slowing do

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Probably more costly but i think it would be better to build a small bridge or small tunnel to prevent further congestion on the road by adding another set of unecessary lights which we all know slows down traffic. I think its better to invest more in the project and do it right then spend less and make something worse.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I regularly travel through the area to get to work or school

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This section of road should remain at 70km/h to ensure a smooth transition into the 70km/h zone on Cobham Drive, which hopefully NZTA will have the sense to maintain.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

You need to consider the fact that very few accidents take place on this stretch of road, and that the speed limit needs to remain at 70 as an absolute minimum to ensure smooth traffic flow outside of peak congestion.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Build a bridge. A street-level crossing on any part of this road will severely disrupt traffic, which will stop Wellington moving.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This section of road has been made narrow and has become dangerous. The narrowing of the short piece of road into Maupuia has become dangerous and also the road works there has become very dangerous with narrowing the road, badly layout. This will increase traffic delays. The movement of bus stop up Maupuia rd is even more dangerous due to no footpath.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

More traffic jams. This is not getting wellington moving

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This section of road flows freely with almost nil walking traffic and all cycling traffic now on the Tahital pathway so should be left alone.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The current speed limits are perfectly adequate and safe for this area. They keep the traffic flowing freely and definitely should not be reduced.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is state Highway1 the main route to Wellington airport and to the Miramar Peninsular. Traffic has already been slowed with the narrowing of the Evans Bay route especially for heavy vehicles and public buses. This road works perfectly well in its current form and it would cause unnecessary congestion to place a crossing in this area. This road is used by many hundreds of vehicles every day and we need to keep Wellington MOVING not SLOWING. Can you imagine the congestion at the Fire Station roundabout if traffic stopped at such a crossing. As a regular user of this road it is most unusual to spot a pedestrian walking from Miramar down the new Tahtai pathway and I would suggest the number heading for the ASB stadium would be exceedingly small. As a sensible suggestion why don't we offer a free bus trip for the 1 section from Miramar cutting stop to the stop adjacent to the stadium. The few cyclists could use the new multi million \$ pathway via the St Patricks traffic lights. To install an expensive crossing would be financially ridiculous and cause unnecessary congestion. Perhaps you should publish the result of your most recent survey of walking/cycling activity over this route to the ASB stadium as this may help your decision. The speed limits keep traffic flowing freely and should not be changed.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This section is getting busier, it's getting harder to enter the roundabout when leaving the cutting, if there are proposed works on this section which slows or stops vehicles entering the cutting then it's likely to impact the roundabout with traffic possibly backing up to there.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yeah, keep the speed the same, build a bridge for pedestrians and everyone wins.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Build a bridge, a crossing will create chaos for drivers during peak times, I would still be nervous with crossing at road level as this is still a state highway, and vehicles dont want three stops on that road. Lastly, seems dumb to stop vehicles on a state highway anyway.

**What is the primary way you travel through and around the area?**

Bicycle

this road has a wide median barrier. It is safe for 70kph. With the crossing there is no need to lower the speed

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Dont do it - the current faster speed allows blocks to clear fast.It's not a accident black spot and slowing traffic down reduces the roads capacity

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The Crossing is in the wrong location - It needs to be in direct line between Miramar and Kilbirnie, that is located in front of the Airport runway The problem with the current location is if you're travelling between Kilbirnie to Miramar, you have to go past Troy St (by Fire Station) and up Cobham Drive to reach the crossing adding distance to your travel. The biggest issue is people waiting to cross are standing in the cycle lane with fast cyclists that dont always look ahead. Same applies to once you have crossed.Build a y shaped bridge at roundabout with arms to fire station and ASB

**What is the primary way you travel through and around the area?**

This road barely gets over 60 as it is

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

This will hugely affect traffics flow from the airport - generally terrible idea. Build a bridge and leave traffic speeds as they are.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Pedestrians don't have right of way in New Zealand. Until they do this is a dangerous idea and it should be a bridge across not lights and a crosswalk. Also this affects the flow of traffic from the city to the airport (and vice versa) which can be very busy and should be kept moving. Traffics will back up to the tunnel which it does now. If doing this go up and over make it safe for everyone involved.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

My home or business is accessed directly from the SH1 route

---------------------------------	-------------------------------	------------------------------------	--------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This piece of road shouldn't be interrupted by a crossing. The pressure on road with traffic is enough without another point of delay. Are you all nuts?.. a bridge would make for better flow, and more in tune with the "go Wellington" incentive

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Doesn't need to change if it's a bridge

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It should be a overpass bridge . A crossing is going to make the roundabout and stretch of road ridiculous

**What is the primary way you travel through and around the area?**

Car

<b>NAME:</b> Kay Jennings	<b>SUBURB:</b>	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
------------------------------	----------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This piece of road is too short to go fast on so is not a danger so no need to change limit

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The point of having all the disruption we've had to put up with to build the cycle lanes is to get the bikes off the road and allow cars free movement. There is **NO NEED TO REDUCE SPEED LIMITS** once the cyclists are off of the road. Motorists will be huge!

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I agree a crossing would be good for pedestrians but there is no need to reduce speed limit on SH1 if you put this crossing in.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

-----------------------------------	---------------------------	------------------------------------	--------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This needs to stay as it is with a tunnel built under the road to provide safe, weather proof, accessible crossing and not further impede speed and flow of traffic as well as still allowing for large trucks to service the airport and the eastern suburbs.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

This road is already overloaded, speed limit reduction will only add to congestion, with cars backing up at the roundabout when having to stop at another point as well. You need to consider accessibility. This would not be a safe crossing for people with

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

That this is the totally wrong direction, it needs to be a tunnel under or close to the roundabout, just like the tunnel under the runway. This would then not impede traffic flow or speed limits. This road is already a bottle neck which will only be further negatively impacted by stopping. I think that it will decrease safety not increase it. I strongly support a pedestrian/cycle crossing but not in this format in any way shape or form. I have a child with vision issues that I would never encourage to use this crossing if it goes ahead. Accessibility needs to strongly considered for this crossing.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Listen to what the residents of Eastern suburbs want. Why not leave traffic speed same & build an over bridge. The sighting for crossing & lights does not really help Miramar as you have to cross Cobham Dr before to be on the right side of the road. Also the cross is very close to Fire Service what happens when the brigade is called. A bridge would cause far less disruption

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Traffic is already a nightmare. A crossing the the worst possible option here. An under or over bridge is would not create more of a nightmare on an already crazily busy road and state highway at that. Especially if the Shelly bay development moves ahead it will take so much longer to get places from this side of town. Why not focus the traffic at the evans bay intersection where there is already a traffic light and it does not interfere anymore that bus already does and do some work under, over or around the roundabout instead. People can still get places then. This is going to be a nightmare if it goes ahead and I am very opposed to it doing so.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Think about how the traffic doesn't flow as it is in mornings. Instead of "reduce speed" mentality, build a bridge across the roads! Look at the Pararaumu Expressway - it has bridges for pedestrians and cyclists. Traffic should be encouraged to flow rather than bottleneck. This is Wellington's biggest traffic problem - there is no flowing road to and from the airport. It's hindered with lights and mergings through short-sighted narrow tunnels. Fix the problem instead of bandaids and creating new problems and frustrations.

This is a very safe stretch of rd, with a grass berm separating the oncoming lanes, and with little to no accident history. Lowering the speed limit by 10kmh is not going to help make it 'safer. When a road is designed for higher speeds (such as this one), people are going to naturally drive at those speeds which feel comfortable for the rd. If the speed limit is lowered, there will inevitably be drivers who still do 70kph, which will create more dangerous situations than if everyone drove at 70.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Adding a set of traffic lights isn't going to reduce congestion, it will make it considerably worse. A pedestrian bridge is the only logical solution.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This is a key route from the airport and is already congested. This route is only getting more busier with planned Greta point apartments and planned expansion of Wellington airport. We should be focusing on 4 lanes thought to State highway 1 not reducing flows. This issue is something I always look at when voting for local elections.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is a four lane route. The safest option is an overbridge. This will also not restrict traffic on a key route from the airport. Also this route is only getting more busier with planned Greta point apartments and expansion of Wellington airport.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This is a dangerous high use road. To maintain flow do not impede traffic with traffic lights for pedestrians.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

If you put in traffic lights to control pedestrian crossing this is too fast

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This "crossing" is the wrong solution for the problem. It needs to be either an over or underpass... The reason for this opinion is that placing yet another obstruction on a busy transit route will further slow down the huge volumes of traffic. We already have significant delays and bottlenecks and this will be just another hazard. People on a road even on controlled crossings are in danger especially when the speed limit along here is currently 70km per hour. The most sustainable solution is an overpass where pedestrians are totally safe, traffic flow is not impeded and when road layout changes there will be little impact on the route across the road. In most modern countries design thinkers do not put in additional lights across high usage carriage ways for pedestrians. Please open your minds...

-------------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

This funny little stretch of road seems like nothing, but it's actually the location of a lot of character for the area. Food trucks set up shop on the bend turning into Miramar, cyclists and motorists come out here after a leisurely trip to Chocolate Fish or the long way to Scorching Bay to take in the amazing views, and when there are dolphins and whales in the harbour, lots of people stop and watch at this spot. These are lovely aspects of our neighbourhood that give it character and help it not be a soulless commuter suburb. So please keep in mind these lovely, humanistic, mixed-use purposes when considering this little stretch of road. It's not just about getting people through as quick as possible.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

People might be concerned lower speed limits will lengthen their travel time. But the real delays here are caused by traffic congestion, not speed limits. Anyone who makes this commute would rather drive 50 along the whole stretch than be stuck in the tra

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Will cars waiting at the light back up into the roundabout? Would moving it further west prevent this?

This doesn't need changing at all.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

This is an unexplainable idea. It's a dual carriage way, with a divider, and part of a state highway, in an area with very little populated space on either side. It makes 0 sense to be a 60 limit. The number of accidents is minimal compared to over areas

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

This bit of road is fine at the moment - but rumour has it that traffic lights are going in just past this for the shelly bay development - if this happens as well as the traffic lights you are suggesting we're just going to end up sitting in traffic all day every day.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

yes, sort out the worsening traffic issue (ie the bottlenecks between cobham drive and the tunnel). If you did an overbridge rather than traffic lights there's no need to reduce the speed.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Don't know

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

i'm not sure the crossing is in the right place - people wanting to get into kilbirnie/lyall bay/kilbirnie will, I think, probably still try to cross earlier than that. Unless you make a walk-through possible to kilbirnie near to where the crossing is (ie through past the ASB rather than having to walk around past the roundabout). Also we already battle traffic build-up along cobham drive - putting traffic lights on this section is going to make this a lot worse (as is the case when there are any road works). Surely a better solution is to have an overbridge for bikes and pedestrians to safely cross the road without stopping the traffic. I'm not convinced by the reduction in speed limit either.

Cobham Drive 100m north of Calabar Road roundabout**

This area is also poorly laid out and is not suited for coming onto a main stretch of State Highway 1. The signage is poor and this has caused crashes in the past.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

This is going to cause more traffic congestion as you aren't resolving the main problem - the congestion is being caused by adding more traffic restrictions.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

That this is pure stupidity, will get people killed and cause more congestion and crashes. Whoever came up with this concept needs to consider other options first, like basic ones such as an overbridge or an underpass. This is State Highway 1 still, and there should be no pedestrian crossings on this.

There's no reason to treat local and SH roads differently, and they should all be at safe urban speed levels. I.e. 30-50 kph. Not 60 kph.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

60 is unacceptably high for a suburban road. Forget the nonsense idea that being a SH makes a difference. It's a commuter and local trips road, not an intercity route. At 30 kph 80% of struck pedestrians (roughly) live. At 50kph 80% die. And that's NZTA's

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There may be possible congestion backing up to the round about.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

They seem fair.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Obviously there will be a build up of traffic at the lights and possibly more congestion.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There is only going to be more traffic in the eastern suburbs in the future, not less. The weather means that the fantasy of people always walking or riding bikes is often just not possible.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Not necessary if you build a bridge and not a crossing.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Honestly it's a bad idea. Congestion is a problem already with traffic in this area. A bridge or tunnel are the best option.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There is no need to reduce the speed limit on this stretch of road. No one would walk or cycle from Miramar and cross this road to get to the foreshore. They would all move on the other side of the road, thus crossing Shelly Bay Rd. Therefore, there is no safety imperative for a speed reduction.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

When you realise that the proposed new traffic lights need to be discarded, then you will realise that there is no need to lower speed limits. This used to be a LSZ and even at 100 km/h was reasonably safe. I did not support a reduction to 70 km/h, but

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I cannot believe you are seriously considering this!!! There is a perfectly safe crossing a few hundred metres west at the intersection with Evans Bay Parade. It is hardly an extra imposition for a cyclist to ride to this safe crossing and neither is it a serious imposition to walk to it, as I have frequently done. Worse, you are proposing to put in a speed bump in a 60 km/h area by building a raised crossing. Is it your intention to achieve your objective of reducing reliance on private vehicle travel by damaging as many cars as possible? Have you considered how such a crossing will increase the number of times that traffic is banked up to and around the Troy St roundabout? Such a more frequent hazardous situation will almost certainly increase the damage and injury from more frequent nose-to-tail crashes. If you absolutely must put in a crossing, for the miniscule number of walkers and cyclists compared to the roughly 35,000 daily vehicle movements, then put a bridge in! This is a part of State Highway 1. You should be focused on facilitating vehicle movement, not further impeding it. With thinking like this, it's no wonder there's been no progress on improving access to the eastern suburbs and airport!

There is no need to reduce the speed here. You will create gridlock and congestion unnecessarily. I don't need to speak to you, you don't listen.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Don't build a crossing here. It makes no sense to add another stop on the road to the airport. The road is so badly thought out already with so many stops on the way, it is a joke. Build over bridges or tunnels under, stop messing up the commuter trip with multiple stops when there are so many other solutions. It really makes me wonder if any of your organisation have any idea whatsoever about how to make traffic flow while also providing for other modes of transport, cycling, walking etc. Better planning is needed. Back to the drawing board.

-----------------------------	---------------------------	------------------------------------	--------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There is no need to keep reducing speeds. These roads and the cumulative length add to travel times. They are straight and have good space. Slower speeds are unnecessary and offer no amenity when the roads are free after peak hour. During peak hour they are self managing and terribly slow anyway.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

this stretch of road was 100km not to long ago then it was moved to 70km/hr, now 60km/hr. What part of get Wellington moving in in that sentence? Please install a pedestrian bridge that can also act as a lookout over beautiful bay, separate vulnerable mod

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Um.. where has the bridge idea got to? A bridge would a much better permanent solution. Traffic lights will already cost hundreds of thousand dollars so why not invest in a pedestrian bridge. If It was Auckland a bridge would have already appeared 10 years ago. Wellington's money for transport infrastructure has been going north for years, it is time we got some of our taxes back (we pay more per capita than all other centers). Despite the pedestrian crossing at least being a crossing long overdue, you are mixing pedestrians and cars again on SH1. are we not supposed to be moving away from this? It is not good practice. This idea is still a major risk and ultimately will also slow the flow of traffic for residents in the Miramar peninsular who find it diffucult already to come and go from their suburb when they need to drive. I live in the Miramar area, cycle commute along this route also every morning and this is just a dumb idea unless it is a bridge. Get on with a bridge. Bridge bridge. did I mention bridge. This is what the Miramar and Kilbirnie residents want. What you are proposing is what NZTA want, so they can take their budgets north again and build billion dollar motorways on top of the other billion dollar motorways they have already received, while Wellington grinds to a halt. No to lights please- next.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There is no need to change this speed limit, the road is clogged most of the time and when its free flowing 70km/h is the right speed. I don't believe there is any accident issue with this area historically.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Please do not proceed with this option, if there is 12No activations per hour at approx 1 minute each, that is a 20% reduction of capacity. The round about will get completely clogged and the road will become unusable during busy times - note busy times are all morning and evening and all weekends. Please reconsider this solution and provide a proper solution via an over pass for pedestrians

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There is no need to alter this road. It flows well at present.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There should be a 70-80 km/hr road connecting Airport to the City motorway - this is supposed to be SH1, not some back street. Crossings need to go under or over and anything that impedes traffic flow should be avoided.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Crossings like this cause a build up of traffic. This would result in a situation diametrically opposite to what LGWM is supposed to be achieving. Better to build an under or over pass like has been done in Auckland.

**What is the primary way you travel through and around the area?**

E scooter, skateboard etc

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

Cobham Drive 100m north of Calabar Road roundabout**

There is no need to alter the speed limit here

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

No need to change the speed on Ruahine St, traffic will just build up even more

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

As an eastern suburbs resident, the traffic is bad enough at peak times (especially once flights have landed in the morning and in the weekends. Adding traffic lights and a crossing will significantly add to travel time, congestion and even riskier driving on Cobham Drive (suggest you observe taxis and ubers changing lanes and pushing in). The build up of traffic will be so significant, residents will be even more reluctant to travel into the city at the weekends. Has consideration been given to building an underpass, be much better

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I think this is a cheap solution that will disrupt the flow of traffic on the only route to the airport and eastern suburbs. The cost to the community and the people who use the airport is considerable. A better idea would be an overbridge or tunnel under Cobham Drive. I think that the survey above is biased in favour of the proposal since it doesn't ask any questions about the effect of this daft proposal on those who currently use the road.

**What is the primary way you travel through and around the area?**

There is enough speed impediments already, by providing a safe grade segregated crossing, a speed reduction would not be needed

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes. 1 crossing to facilitate access to Lyal bay shops also would be better located at the round about. This crossing only grants access to ASB and not much else in the Rongotai/kilbernie area. While I support cycling and walking initiatives, I don't support impeding the flow of other transport in their favour, particularly on a major travel corridor. A tunnel or over bridge over the road would be a better solution and also provide elevation for sightseeing when walking or cycling.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There is absolutely no need to change this stretch of road. It will do nothing but cause problems.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Totally unnecessary to reduce the speed limit. It will have minimal impact on safety but will impact on travel times.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is an absolute joke and will do nothing to help traffic flow. I regularly travel between the eastern suburbs and town and this would only slow down my journey. An over bridge or under pass is the only logical answer.

**What is the primary way you travel through and around the area?**

Truck

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I regularly travel through the area to get to work or school

Cobham Drive 100m north of Calabar Road roundabout**

There are so many nose to tail hits at the roundabouts. Road safety signs need to also be put up saying .. Watch The Car In Front First. Being big roundabouts to many people look to the traffic coming round too early and think the car infrastructure decided to take the gap, but didn't then that second car rear-ends the first car so many have done this.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Traffic lights are a bad idea there

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Lights are a terrible idea there. There will be too many rear end collisions. You need a BIG SWEEPING CURLY RAMP BRIDGE. Make it a piece of art, a sculpture and bike pram friendly going up above the traffic.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

There are already bottle necks here every day of the week and particularly when schools begin and end which are also when peak hour flights are so something needs to be done? The plans for trains, trams, cycle lanes, added buss's will still not be enough when the airport and population of Miramar Peninsula increases.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Lowering speed limits doesn't bother me although the amount of accidents are minor unless the drivers are well over the limits of aren't paying attention.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

An overhead bridge would make much more sense as this is SH1 and the only access to Wgtn Airport!

The width of the footpath is excessive and pointless. This part of the road should be 2 lanes, the left lane will be needed Shelley Bay users and constructors in the very near future

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The issue of speed is not a problem, it is the sheer number of vehicles using Cobham Drive that is the issue. This road is jammed up already for hours each day

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Don't know

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Don't know

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Cobham Rd is already backed up due to airport and ASB traffic, particularly on weekends when ASB is extremely busy. A crossing will make the traffic jam even worse. An underpass built using waterproof concrete would be a sensible option that will actually futureproof access to ASB. The underpass could be built as a trench in the road with temporary covers so traffic is not disturbed in the process. Both steps and sloping access could be built on either side of cobham drive parallel to the road. This would allow access for bikes, escooters and disabled people. With a sea wall on the Evan's Bay side to ensure waves don't break into the underpass. Please let us be sensible, we have the technology, we have the engineers and we have the builders to do this. This is State Highway 1, already jammed up, I live on Miramar Peninsula and it is extremely difficult to get along Cobham Drive at the moment, forcing us to drive through Kilbernie, also backed up, or around Lyall Bay. Surely in a time when we want to save fuel and carbon emissions, helping people to keep their movements in cars, buses and service vehicles to a minimum. Lyall Bay shopping area is expanding as well and requires access for shopper's cars and delivery vehicles.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The whole area around the 70kph works relatively well. Traffic moving to the airport and Miramar has increased substantially. the Calabar Road section is wide and safe and enables people to move quickly to the airport. This has worked successfully for years - why change it??

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The movement of the traffic in this area succeeds at present due to the 70kph speed limit. reducing the speed will not achieve anything other than clogging up an already very busy area. This proposal will impact traffic flows right back into the CBD. Stup

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It is absurd to put a crossing in the middle of this road. There are very few people who cross the road there. I have lived in the area for over 17 years and only ever seen one or two people crossing - and do so safely. holding up thousands of people for a few is ridiculous, as is the unnecessary expense.

**What is the primary way you travel through and around the area?**

Bus

Cobham Drive 100m north of Calabar Road roundabout**

The weather in Wellington means that visions of this stretch of road as some sort Riviera are ridiculous. Nine months of the year, strong winds, rain and hail make it an undesirable location for anyone not in a vehicle.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Better separating pedestrian and vehicular traffic would negate the need for lowering speed. There is plenty of width to do so.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I can't believe this needs saying... the fact that traffic throughout Wellington already slows to a crawl partly because of poorly designed intersections.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The traffic congestion to and from the airport and the eastern suburbs is a significant problem. Planners need to not only address this current state but also look to the future - expansion of airport services and eastern suburb growth should be a key consideration for planning. (The proposed traffic stop concept does nothing to address this - does in fact the opposite). A speedy solution is short sighted. Solve the issue properly, not quickly. Other modes of transport should be thought of and planned for - but not in a way that is a quick fix and adds to congestion Wellington deserves government funding, as is allocated to other cities.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

If reduced speed helps the traffic flow then a good idea.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Completely disagree with this proposal - the impact on the traffic flow would be to generate significantly MORE congestion. It is a short sighted response to the desire to cross people and bikes etc across what is a key arterial road.

The speed should be the same as the rest of Cobham Drive/Calabar road ie 70km

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Reducing speed limits on these roads should be based on actual safety benefits. To the best of my knowledge (as a reasonably informed Wellingtonian) there has not been a spate of accident/deaths along this stretch so why the need to change. This proposal

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Putting another set of traffic lights on Cobham Drive is not in the best interests of all users. Traffic lights will have a small impact on a minority of users while the vast majority will be disadvantaged. A crossing is needed but it should be an overbridge.

**What is the primary way you travel through and around the area?**

Bicycle

Cobham Drive 100m north of Calabar Road roundabout**

The speed limits on this section of road should remain as they are.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes. The current 70 km speed limit is a traffic flow enabler along these routes. Slowing the traffic will only increase congestion and carbon emissions.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This proposal is the wrong solution. It will cause major traffic congestion in both directions and also increase carbon emissions. An over bridge would be a far better solution. This is an opportunity to build an iconic looking over bridge on the gateway route into Wellington from the airport.

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The speed limit should be increased to lessen congestion and facilitate more effective business for those heading around Miramar. Lowering speed limits will waste more time of people who live and work in the eastern suburbs and make us less competitive.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I strongly disagree. Traffic is already congested enough between the eastern suburbs and the city, and the last thing we need is another set of lights slowing things down. Pedestrians typically head east and west and don't need a crossing here -- they have the lights intersection in Evan's bay to cross if needed.

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The speed limit should be 50 kmh in an urban setting, where traffic mixes with people on foot and bikes. To make these speeds credible, the lanes should be narrowed to induce lower traffic speeds. If a street looks like a highway, people go faster. You need to add speed feedback signs and effective enforcement. On a busy street, traffic flows more smoothly at 50 kmh than at faster speeds, so consistent travel times are likely for people who are using the roads in vehicles.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

SH1 speed limits should be 50 kmh in an urban setting, where traffic mixes with people on foot and bikes. This is consistent with other parts of SH1 in Wellington. To make these speeds credible, the SH1 lanes should be narrowed to induce lower traffic

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

There should be a proper pedestrian crossing (with the orange bubbles) in front of the ASB on Kemp St so kids can safely cross. This town is designed for drivers, not for pedestrians and this needs to change urgently. In addition, based on the replies you have already received, how is it possible that NO ONE under the age of 19 has submitted their views? They are going to be amongst the main users of the new pedestrian crossing. How have you approached them? Have you done public meetings in schools and at the ASB at times when kids are there? Some of the answers appear to have been made by people who have not read the questions. I am not sure it is possible that the proposed crossing would make people "much less likely" (17% of respondents) to walk, run, bike or use scooters around the area. Is there a reason why the crossing would be in two parts: you cross one side of the road, then wait in the middle, surrounded by the fumes and moving cars (I can see the railing on the images for safety) until the second light turns green? I mean, people who are crossing the road won't have a cuppa in the middle of the road. They just want to cross the road so why make them wait in the middle? Is it for the convenience of the cars so they don't have to wait few extra seconds before the people can start crossing on the other side of the road? Again, that sounds like a design to

please drivers with no valid reason. If you decide to maintain that approach of a 2-step crossing, you would need to make the space in the middle all clear so people can easily cross each other. I can see a light post in the middle which would make things more complicated once you have several bikes/buggies/scooters in the middle of the road.

Cobham Drive 100m north of Calabar Road roundabout**

The speed limit on this section of road should remain as it currently is.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

These are relatively straight roads and therefore the current speed limits are ok. Slowing the traffic may encourage more pedestrians to cross the road at inappropriate places. Now that the cycling and walking path has finally been finished cyclists should

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It's not clear that there is a business case for the new crossing. People using the ASB stadium could come from Miramar via the tunnel under the airport runway and people going to Kilbirnie can also use that route or cross by the Wind Wand. This looks like solving a problem which doesn't exist and in the process making an already congested road system even worse. What source of data have you used to determine that there are pedestrians who will actually use the crossing. There are 2 existing routes between Miramar and Kilbirnie and the crossing appears to primarily be servicing the stadium. Parents will continue to drop their children at the stadium in the majority of cases.

The speed limit is fine, safe and is not impacted by Cyclists or pedestrians.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The speed limit is fine I am not aware of any issues, in reduction would have a significant impact on the movement of vehicles in the area. The link to view the proposals does not work

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

On a rare occasion ( I travel this road daily for 20+ years) I have seen a person crossing Cobham Drive opposite Carters Building, I assume they are crossing here as they are heading down to Rongotai, and not to ASB or Kilbirnie. The crossing will impact on the traffic flows and likely to impact the traffic flow from Kilbirnie to the eastern suburbs using the round about between the fire station and the ASB centre. What is needed is an overpass in a more useful location. Some vegetation could be removed from opposite Carters to improve visability for the occasional pedestrian crossing at this point.

**What is the primary way you travel through and around the area?**

-------------------------------	----------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The speed limit here should be 50k, and there should be a safe way for kids to cross to get to sports practice. This is much more important than any small changes to travel time for people in cars and we need to make active transport a preferred choice for our congestion and climate aspirations.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

This looks great. I think it would be better to make it all 50k instead of the confusing jump to 60k. The roundabouts here could be made much smaller too, even potentially reusing some of the space for a building, they're ridiculously large.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The plan looks really good. The new walkway and sports centre need to be connected. Further safe crossings towards Miramar would be good too. Kids should be able to walk or cycle to sports practice. This is much more important than any small changes to travel time for people in cars and we need to make active transport a preferred choice for our congestion and climate aspirations. People shouldn't be taking cars to the airport as much - need reliable public transport to the airport, light rail etc. The fact that the public transport directions now are like "yeah ahh, walk until the bk and hope for the best" is a bit embarrassing, yeah?

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The roads are currently inadequate for the volume of traffic. It is only going to get worse. Please do not slow the traffic down. It is unrealistic to think that building cycle ways and providing crossings will encourage people out of their cars and on to bikes or scooters. We do not have good enough weather in Wellington for most of the year to allow the average person to ride a bike to and from work etc. I'm speaking from experience. I gave it a go for 4 months over summer. There were many days I was just about blown off the bike along Cobham Drive.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Do not disrupt the traffic more than it already is. The roads are not adequate as they are now. Do not slow traffic down.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Do not build a crossing on SH1! Traffic is bad enough as it is. Build an overbridge please.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Don't know

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The road was fine till it was narrowed, next there'll be a wire crash divider put in. None of the changes were needed, the original foot path was plenty wide enough for pedestrians and bikers.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

SH1 60km, seriously?

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

More traffic lights on state highway 1 will definitely not get Wellington moving.

**What is the primary way you travel through and around the area?**

Walk

**How important is it to make changes to improve safety on State Highway 1?**

Very important

<b>NAME:</b> Joanna laurenson	<b>SUBURB:</b> Miramar	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
----------------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The road speeds should be reduced to 50kph along this section of road. This is a residential area and this road is part of a network of local 50kph roads, so a higher speed limit is inappropriate. It is also part of a road network that both connects (by car) and separates (in terms of access for other transport modes) the two suburbs of miramar and kilbirnie. Increased speed limits here just lead to dangerous driving as people accelerate hard and then slam on the brakes. I notice that drivers frequently speed along this section of road as they are entering miramar. A lower speed limit would create a safer local street (this road is currently scary to cross as a pedestrian near the Wellywood sign, but plenty of people do cross here).

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I support this, but the road speeds should be reduced to 50kph along Cobham Drive as well. This is a suburban residential area, and open road speed limits are inappropriate. Additionally, the actual road areas with the increased speed limits are very sho

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I'm absolutely supportive of this proposal, and prioritising safety and the movement of people instead of the movement of cars, great stuff! but it needs to go much further to effectively improve safety along this stretch of road. I have seen so many near misses. You see people cross on a daily basis. I've seen someone walk their bike on the road and against the traffic to get the to sports centre. It's so dangerous. If you are putting in just one crossing, then actually I think it's in the wrong place. It should replace the roundabout beside the ASB centre. That would mean as a pedestrian that you could safety cross the road in four different directions, and that the crossing point was in the right place to get you to where you need to go. If that's not an option there needs to be AT LEAST one more crossing point for pedestrians and cyclists added to this proposal. This should go either on the eastern section of cobham drive or on Troy Street. The eastern section of cobham drive is actually where you see the most people try to cross the road. quite a few people in southern miramar/Strathmore will walk along by the airport and then run across cobham drive on the eastern section. There is no safe crossing in

Troy street, so the proposal does not resolve the issue for this commuters. I am a bit concerned with the current proposal that if there isnt another crossing added (or if the roundabout isn't replaced with traffic lights) that people will still continue to risk their lives and run cross along the southern section of cobham drive. I think the best solution would be to add traffic lights to the oundabout by the asb centre (like you have at the basin reserve). In addition, and regardless of the above, a crossing has to be added at the Ruahine street/Wellington road intersection. This is another area of sh1 which is dangerous and you very often see people running across the road at what is already a very difficult intersection at the top of the hill. that intersection is awful and I've seen so many near misses for car crashes as well.

**What is the primary way you travel through and around the area?**

Bus

There should be an over pass there is ample room for the ramp in the new area that has been landscaped and can connect into the asb stadium. A crossing where it is proposed will not help anyone - there is another dangerous crossing 200m down the road!!!! This shouldn't be about money it should be about making things safer for people a crossing with lights will not do this!!!

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I did a calculation of the distance and time difference from the Miramar Cutting to Kilbirnie Shops. By two routes. First using the new crossing and second using the crossing at Evans Bay Parade near St Pats. The new crossing shorten the time of the ride by half a minute and 150 meters. This is not taking into account the time waiting at the new crossing for them to engage. I ride most places and try to avoid busy roads. If there is lots of traffic on Cobham Drive I normally cross at Evans Bay Road or ride to the Airport Subway. The route to the airport subway from the north could be improved as at present I have to ride across many intersections

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The last stretch of road before the Miramar cutting should only be 50km/hr and it needs a safe pedestrian crossing point so walkers and cyclists coming from Miramar can actually cross over to the sea side (to and access the new cycleway). Note this road stretch is not a SH and has recreational activity against the harbour (people parking and getting out of cars etc). It is totally inappropriate to have a 60km speed here.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Not enough information has been provided about key pedestrian and cycle desire lines and movements are in the area. Where are people needing to go? Is it to cross the road to access the ASB centre? And if so the crossing needs to be in the place that enables the most convenient access to the ASB building. I.e. will there be direct access up to the ASB centre from the footpath on the building's Northern boundary, or will people have to go all the way around to the south boundary. If not then it probably needs to move closer to the round about.

The kerb here needs divits so that bike can come off the road and join the bike lane. If i come from the airport and take the Calabar Road roundabout, there is no way to get on the bike lane. And please dont consider that people shouldnt use the round abouts on bikes, because some people will always take the fastest way. If you make bikes go round in circles to avoid the cars, some people will just take the dangerous road.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Its still too high, make it 30. The round abouts are very dangerous for bikes. On a bike im not going to go on the footpath wait for two traffic lights and then bike with pedestrians if i want to turn south. Its just too slow! Bikes must get at least t

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The increase from 50kph doesn't really seem warranted. This area of road leads in to a very tight bend and it can be quite difficult for traffic pulling in to, or out of, Shelly Bay road. Increasing the speed will most likely make this even worse and I don't see any value in I'm reading the speed on that small stretch of road.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The decrease from 70 to 60 kilometres seems unnecessary. That stretch of Cobham Drive, to me, seems like a safe area of road. There is clear visibility as the road is, for the most part, straight and well constructed.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The amount of traffic that will be created between this proposed intersection and the intersection of Cobham Drive and Evans Bay Parade. That area is already quite notorious for being a bottle neck at peak hours. This pedestrian crossing will only exacerbate this issue.

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The evidence for lowering the speed limit on this short section of road is completely absent. There have been no injury crashes on this section of road according to the Waka Kotahi Crash Analysis System database, indicating there is no sound reason to change the speed limit.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The objectives behind the speed proposals are highly generalised. Of course, higher speeds do generate more severe accidents, but the evidence behind the proposals to lower the speed limits on ALL of these sections of road is very poor, and there is no e

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The objective is stated as “We want to make it safer and more convenient to get around the Eastern Suburbs by bike or by foot, to help reduce congestion and emissions from short car trips”. The Eastern Suburbs is a much wider area, and there are many cycling and walking trips in this part of Wellington, with potential for improved outcomes especially focused on retail centres, schools and other major facilities. However, this proposal would cater for a tiny proportion of such trips, so its impact on getting around the Eastern Suburbs would be minimal. Tahitai is a useful corridor for cycling from the Eastern Suburbs to the CBD, but it is much less useful as a corridor between Kilbirnie and the Eastern Suburbs. There IS of course a relatively safe cycling and walking route between Miramar South and Kilbirnie via the Coutts Street airport subway. It is a longer route than the path beside Cobham Drive for those living north of Miramar Avenue, but is similar for those between Miramar Avenue and Caledonia Street, and faster for any south or southeast of that location (which includes all of Seatoun and Strathmore, and Miramar south). Given that Tahitai is already a longer route than cycling/walking through Hataitai and Mt Victoria Tunnel, this suggests that LGWM is not averse to enabling safer, albeit moderately longer routes. Steps could be taken to make the airport subway a safer route, through lighting, paint and security measures, and there are sound reasons to make Coutts St a safer corridor for cycling, given school proximity, but this has all been ignored, and is unclear why. Strategically, the purpose of this crossing appears very limited. For trips from Kilbirnie

and Lyall Bay to the CBD on Tahitai, it is clear those would proceed along Evans Bay Parade. For trips from Strathmore, Seatoun and Miramar south, these would proceed through the Coutts Street subway. For trips from the remainder of Miramar to the CBD, Tahitai serves that purpose. This is only for trips from Miramar central to north to Kilbirnie. The length of such a trip is at least 1km and for many will be 2-3kms. Except for recreational purposes (dependent on climate), this is highly unlikely to be used as a regular transport route for pedestrians. There are no properties between the crossing and Miramar Wharf, so any trip has to be for at least 1km, and no evidence has been presented as to how many people might be expected to walk from Miramar to Kilbirnie, suggesting that it is likely to be low. The potential for cycling appears greater, although again no evidence has been given as to the likely attractiveness of this in generating trips, particularly modal shift. The goal of “reducing congestion and emissions from short car trips” is laudable, but no evidence is given of the proportion or numbers of short car trips expected to shift modes because of this proposal. There are no statistics about current total trips from Miramar central/north to Kilbirnie, the modal split and the expected impacts, suggesting that this proposal will contribute little to meeting this objective. No evidence has been given as to the existing congestion for such trips, which does exist, primarily on the Cobham Drive roundabouts. It is far from clear that this proposal will relieve this materially. It appears to be highly speculative to assume that placing a pedestrian crossing at this location will generate meaningful modal shift from private cars to cycling or walking. It is as likely to generate mode shift from buses, which is not an objective. It may generate new recreational trips, but that is not an objective either, as pleasant as this may be. The location of the crossing is problematic as well. Given that the only trips this proposal can conceivably support are from Miramar to Kilbirnie, it goes past Troy Street (which provides wide and safe access towards Kilbirnie, Rongotai and Lyall Bay via adjoining streets), so there is some likelihood that some pedestrians and cyclists will seek to shortcut towards Troy Street rather than use this crossing to backtrack towards Rongotai and parts of Kilbirnie. Indeed at the AM peak, congestion makes this a more feasible option, given how slow traffic moves westbound at AM, as slow traffic encourages pedestrians and cyclists to informally cross expecting motorists to give them courtesy to cross. It’s notable that this crossing would be expected to attract very little usage from the west, given the crossing at Evans Bay Parade enables a much more pleasant access into Kilbirnie, Lyall Bay and Rongotai. In short, this proposal looks like an engineering-based solution looking for a problem that largely does not exist other than “there isn’t a connection here”. Will it result in fewer car trips? Are there serious access issues between Miramar and Kilbirnie that this will address? These questions are not answered, and appear not to have been asked, perhaps because the answer is that this proposal will have very little impact. The primary evidence given as to the merits of this crossing is that one person was killed crossing Cobham Drive five years ago. It will never be known if the crossing would have saved that life, as the crossing would not prevent unsafe crossing elsewhere along the route. A single fatality is a poor basis to install traffic signals given the impact this would have on 35,000 vehicles a day. The negative impact is forecast to be a travel time cost of 15 seconds (separate from the speed limit changes), which is considered to be minimal, but the impact is greater than suggested. The impact of a raised crossing on a section of straight multi-lane highway is that it means ALL vehicles will brake and accelerate to drive over this crossing, which is not just wasteful on time, but also fuel (and emissions). This makes the drive notably less pleasant, given none of the intersections have a raised crossing. Making driving less pleasant (regardless of the vehicle type) might be an objective, but if it is that should be explicit. One impact of adding traffic signals will be to generate nose to tail accidents (although the analysis indicates bizarrely that it will reduce accidents, even though accidents at present are incredibly rare). This is the last traffic signal before the peninsula for westbound traffic, so drivers will be incentivised to avoid stopping and may crash into vehicles that stop abruptly. Such accidents rarely cause serious injuries, but they do generate significant delays, none of this

appears to have been factored into the appraisal. It would be useful to consider the impacts of removing traffic signals on major highways to consider the costs of introducing them. It is noted that a bridge has been rejected due to cost, which is fair enough, but this indicates that the benefits are very low for a bridge or a crossing. In conclusion, the crossing proposal has very little merit and strategic value. There is little evidence of significant unmet demand to walk or cycle from the northern half of the Miramar peninsula to Kilbirnie, or that this facility would either result in noticeable modal shift or a reduction in (the already rare) level of accidents for cyclist and pedestrians along this corridor. It would be preferable to focus on the Coutts St subway as an active mode corridor, and to treat Tahitai as a key route towards the CBD, rather than trying to use it to justify a crossing to nowhere. Cobham Drive is a high quality, fast and efficient arterial road, that carries large volumes of traffic efficiently, and is primarily constrained by the lack of capacity from Wellington Road through to the Basin Reserve. To introduce traffic signals and worse yet, a speed bump at this location significantly undermines its efficiency and effectiveness for demand that is unproven, at a location that is far from optimal.

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

The design for the cycle path and walking path at this intersection is unclear. This intersection needs to ensure that people turning down the local road section have to give way to the cycling and pedestrian route. The light rail route through this section also has to be incorporated before the design is finalised.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The above link is dead.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

The current speed limits work well. There is no need for change.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Speed limits on Cobham Drive were reduced some years ago from an LSZ to a 70kph area. There are very few accidents here and there is no need to change the speeds as proposed.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is an insane proposal. It will significantly increase congestion on the only major road to the airport. If you want to build a crossing, make it an overpass or an underpass.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Building a crossing at Cobham Drive is NOT a well thought idea from the Council. If anything, the Council needs to think on how to release the traffic congestion that happens EVERYDAY in that road, not to add another burden to the flow which would definitely be a nightmare by building a crossing. It is a high speed 70km/hour area, and it is not suitable for pedestrian/biking crossing. Would you build a pedestrian/biking crossing in high way??

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

What a ridiculous idea to add more lights to our roads especially there. All you will do is clog and congest the traffic even more. I live in the eastern suburbs and what you are planning to do is the cheap option. Traffic is already at a stand still, at times, due to congestion at the Basin and poor roading. Do it properly and use an over pass for pedestrians and cyclists so traffic is able to travel freely.

Surely an overbridge is the correct means of getting across the road. Traffic congestion in that area at peak times and weekends is extreme and will only be exacerbated by a pedestrian crossing.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Stop parking around with speed limits on our roads. They are there to get to and from places at a reasonable pace . Stop summing down the city to accommodate half wits who can't follow the road rules or cross a road safely. And no I dont want to waste my time speaking to moronic councilors who'll waste my time then do what ever they already planned to do anyway.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes don't chang the current speed limits. And stop this changing up down up again. Trying to keep track of the speed limit on each peace of road is a pain in the ass. At least at the moment it makes sence and is easy to remember.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Fark off with these stupid ideas. Theres hundreds of thousands of cars passing up and down that road. You want to add delays and speed restrictions for a hand full of pedestrians that want to cross the road at that exact spot. Waste our money on an over bridge and stop being part of the problem you truck wits

Stop catering to the minority. Any crossing should be over head and not impede traffic. After all, traffic is by the far the majority user and the main means of accessing the airport. Provide REAL alternatives to the likes of the airport of hospital before restricting current methods.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Slowing traffic does not support getting Wgtn moving. Slow traffic adds to congestion. LGWM should be focusing on increasing speeds and removing traffic lights.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The crossing should be over head and LGWM should avoid adding traffic lights as way to fix anything. Traffic lights are contrary to getting Wgtn 'moving'!

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I have walked and cycled to my Strathmore Park home to/from CBD. This crossing will not benefit that journey - how do pedestrians get to Calabar Road from the new cycle/walkway in order to take a route through to Broadway? Reconsider the underpass or bridge - this will give people safer alternatives. The slowing of traffic for traffic lights does nothing to enhance the journey of pedestrians/cyclists it will create more points of congestion all the way back to Miramar and Strathmore - more pollution to breathe in etc., even more animosity between road user groups. The plan to irritate drivers to the point of getting out of their cars will not work. City planners need to create safe and reliable public transport alternatives. The roundabout at ASB will be permanently blocked as cars queue for the traffic lights. Currently this roundabout becomes exceedingly dangerous whenever there is a blockage caused by incidents further along SH1 e.g Terrace tunnel.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

A pedestrian crossing on an already busy traffic route is a terrible idea. Congestion will get even worse with repeated stops for traffic lights. This is the exact reason that lights were removed at McKays Crossing and the Naguranga / Newlands intersection. The only sensible option is an overbridge.

Speed limit is problem, additionally confusing multi lane roundabouts. If putting a crossing in suggest additional changes to this stretch of road to make it safer / less confusing and less congested. More crossings to makes sure vehicles keep speed low and people walking running or cycling have numerous options along the shorefront to access. Consider alternative means of affordable, comfortable public transport, considering light rail or increased buses, rather than priority always being small motor vehicles. Would be a much more inviting prospect for people visiting wellington for the first time.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Speed limit here should be reduced to 50km as at present the tendency is for many vehicles to be doing in excess of 60km when entering the Miramar Cutting.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

If traffic lights are installed the likelihood is traffic speed will be at a crawl during a good part of the day anyway.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is complete insanity and not what the residents are asking for or expecting. Traffic movement is the number one issue in the Eastern Suburbs at the moment and this will do nothing to alleviate the problems we are experience but will increase tailbacks during peak hours in all directions.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

My home or business is accessed directly from the SH1 route

<b>NAME:</b> S	<b>SUBURB:</b> Newlands	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
-------------------	----------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Speed changes at this spot are unnecessary. Visibility at the roundabout is blocked for traffic heading to the city by overgrown gardens. This is the biggest danger in the zone

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I haven't experienced or seen any accidents on my trips through this area. This stretch of road is well suited to a higher speed to more traffic through to the airport faster

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is a main route to the airport and a crossing will disrupt traffic and guests to our city even more. Traffic near the asb stadium is already terrible on weekends so this will just further disrupt the flow of traffic and deter people from the area

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I regularly travel through the area to get to work or school

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Sometimes cyclists merge on the road when the shared path terminates (especially near the corner where the quality of the track is suboptimal for riding, sharp bend with broken glass, etc., which encourages riders to take to the road), thus having a speed reduction will improve safety, although making improvements to this area will be welcomed.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I understand the rationale from a public health perspective and agree 100% with the proposed speed reduction.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

<b>NAME:</b> Andrew Bartlett	<b>SUBURB:</b> Miramar	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
---------------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Slowing the speed here will reduce the bunching effect that makes turns more difficult. When the speed change point was moved in earlier works, it actually made it harder to cross, as a cyclist from Miramar to the bike path as the gaps closed up. So by reducing the speed overall this will be safer.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I think the Calabar Rd and Ruahine St sections are comparable - two way roads with minimal separation, and should both be 50km/hr. Speed of traffic coming off SH1 onto Cobham Dr into Miramar makes moving onto makes the turn at Shelly bay road less safe

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This crossing is much more critical for people on foot and on bikes. On a bike, from Miramar to Kilbirnie the detour via the wind needle is not so horrible, but I see people on foot crossing Cobham Dr all the time and it is so, so unsafe. (Looking at the map makes me realise quite how far out of my way I've been considering 'normal'.) The crossing needs to be as near to the roundabout as safe, and needs to cater to the desire line between the footpath on Evans bay and the path behind the ASB centre, as otherwise folks will still cut across the road. BTW, the proposal URL in the survey is wrong, it is: <https://lgwm.nz/our-plan/our-projects/cobham-drive-crossing-sh1-safer-speeds/sh1safety/the-crossing-proposal/> Thanks for raising the crossing, it will help ensure the speed is appropriate. Be aware that this is a bus route for the 30x and 31x (sometimes). I know there are rules about raised tables and bus route. Don't find this out after construction! A shared path link back to Rongotai Rd needs to be made, so that this can usefully 'cut the corner' for trips to Newtown and Kilbirnie. Please ensure the traffic lights are responsive to pedestrian and cyclist requests without in-built delays except as required for repeated activation. This may finally provide a safe route between Miramar and EBIS!

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The proposed traffic lights and crossing may be the cheapest solution, but given the money that has been poured into the cycle and walkways a bit extra to build a walk/cycle bridge would make much more sense in the long run given the significant traffic disruption this will add to the already congested traffic flows in this area - we can observe this from our home and see it at various times of the day.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Should be the same as Cobham drive.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

You need to consider the risks motorists have to take to get out of the road from the Hataitai Brundall courts, onto Ruahine St. 50 would be a big help.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I would much prefer an overbridge. It would be safer for all. A crossing will increase congestion on Cobham drive. It's already too congested at rush hours.

Cobham Drive 100m north of Calabar Road roundabout**

Should be streamlined as a semi-grade separated corridor. It should be an express route from roundabout to roundabout.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

As a key arterial route it should feature more safety devices and be semi-grade separated from pedestrians etc by barriers or similar.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

A pedestrian and cycling bridge should be the only viable option. There needs to be a rebalancing of priorities between to favour better infrastructure at the lower value end, rather than the huge investment in tracked rapid transit. This proposal will simply harm every other transport initiative including rapid transit.

Should be 70km/hr

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

You can lower the risk by dropping the speed limit to 1km/hr. Drop it to zero and the risk is zero. This risk at 70km/hr is fine. How many people get hurt on crossings on a 70km/hr road compared to a 50km/hr road with similar traffic flow etc?

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Cobham Drive 100m north of Calabar Road roundabout**

Short section could be 60kmh. No great effect.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Ruahine St - 60kmh is about right. 50kmh is painfully slow. Cobham Dr and Calabar Rd. Leave them at 70. It works. 60 is too slow, especially on Calabar Rd. (It used to work fine when it was 80kmh!)

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Don't build a traffic light pedestrian crossing. Build a pedestrian bridge instead of a traffic crossing half way along a busy highway. It makes far more sense to provide a safe pedestrian bridge, without causing traffic to stop, start and back up into a busy roundabout and to the lights. Think very carefully about the consequences. Building a bridge makes far more sense. There is no change on conflict with traffic flow including public transport. Cobham Drive already suffers from severe congestion especially when there are sporting events, airport flights, school runs etc. Learn from The Arras Tunnel, flyovers etc. Traffic flows smoothly, doesn't have to start and stop, burns less fuel, creates less emissions, lowers risk of nose-to-tail collisions. Traffic lights are the worst solution for traffic management. The bridge, if constructed robustly, should have a low maintenance life. This will met the objective of keeping pedestrians safely separated from traffic without conflict.

<b>NAME:</b> Mike Mellor	<b>SUBURB:</b> Seatoun	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> Yes
-----------------------------	---------------------------	------------------------------------	--------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

See my previous answer. It is entirely different in character from the rest of Cobham Drive, and should be treated as a normal urban road, i.e. 50km/h (as half of it already is). What follows is a general comment, not on this stretch of road - I can't see anywhere to make such a comment. The next question asks for my primary use of the area, with no option for a secondary use. Walking is often a secondary (but essential) use, but such use will not be captured. This underestimation of walking is a common trap (e.g. in the Census), and it is unfortunate that LGWM appears to have fallen into it - and with respect to a walking-related project!

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Overall the proposal is heading in the right direction, but it is alarming that: a) the proposed limit for Calabar Rd south of Caledonia St is still 10km/h above the safe and appropriate speed in Table 7 (p24); and b) no consideration appears to have b

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

1. For a single crossing this is the best place, but a better solution would be to signalise the Troy St intersection with pedestrian crossings on all legs, which would significantly improve accessibility for people on foot and on bikes. 2. Many opinions have been expressed by vehicle drivers but much fewer by potential users of the crossing - only to be expected, since the latter are much fewer in numbers than the former. But it's the latter for whom the facility is being provided, and, done right, it will be transformational while causing minimal inconvenience to the majority. "Done right" means that it is a facility that is easy to use, requires minimal extra effort, is as near as possible to desire lines and does not expose people to adverse weather any more than is necessary. An at-grade crossing, coupled with speed limit reductions, ticks all these boxes: a grade-separated crossing ticks none of them. This is particularly important for people with disabilities or who are elderly - it is just not acceptable to provide a facility that they will find difficult (or impossible) to use.

Roads are already not fit for the population needs. While most of would love to jump on a bus to airport and back, there is nothing available, without taking mix of car and multiple busses to get to the destination. Hence, stop putting road blocks on roads to give short term solutions to small %.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes, think alternative ways of road crossing, like a bridge.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Reducing the speed limit will not solve the problem of pedestrians and cyclists displaying stupid and entitled behaviour which is what gets them hurt. Leave the speed limit as is and put up barriers to discourage pedestrians from crossing at dangerous places. Build overbridges to allow pedestrians and cyclists to cross safely without any interruption to road traffic.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Cobham Drive 100m north of Calabar Road roundabout**

Reduce the speed to 30km/h. Don't need to talk to you unless need further details.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes. Reduce the speed. There is a direct relation between speed and severity of the injuries and death in an accident. Less speed more life. All Wellington should be 30 or max 40km/h

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

As a principle, the shortest and easiest route should be designed for cycling and walking and the longest and hardest for cars. One pedestrian crossing helps but its not enough, need a good continuity and flow for bikes and walkers. Also, give enough time in the traffic light timer, most of them are just a few seconds.

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Put an over bridge there. It worked in Plimmerton - it works in Auckland

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

New speed limits would be disastrous! Have you driven around there recently? I drive there daily. Have you asked the public what they want. No one and certainly not the majority would agree to this. Waka Kotahi? Never heard of them - stop spending money

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Who had agreed on a crossing here? The uproar from those I speak with ... ALL respond saying it's a terrible decision and should be an overbridge. Who's making these decisions? Are you so out of tune with Wellington? Do you understand the congestion already around the airport traffic? Shelly bay future increased traffic?....and you think by putting a crossing in to slow everyone even further is a good idea. I'm embarrassed to be living in this city - I've been here 15 years and over the last 5 years I've been thinking this more and more. Now I actually believe this which is sad. As my work is prominent within the community promoting our city I'm actually ashamed with the decision making that is made and the "improvements" which are not improvements. Spend the money on our infrastructure- wellington water employees have been saying for years our plumbing/drainage/pipes need attention - finally - we're starting to see implications of this with burst pipes around the place and massive flooding - is this not evident enough - stop hindering the city by making it a worse place to live - by slowing everything - look after it

Public opinion needs to be heard, as we from the eastern suburbs travel these roads daily, frequently.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Speed limits should apply to conditions. Obviously ie weather which are not consistent anywhere in the country. However it could be monitored re peek times. Stupid to have a speed limit when there is little traffic on the road for certain periods of time.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Consider other options rather than traffic lights. Bridge is a better option, as one has to question the numbers you are catering for. The traffic to and from the city is of prime importance, already at peek times it is a struggle. Traffic lights will create further huge frustrations and total loss of faith in Wgtn City Council and their lack of being realistic.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Proposed traffic lights so near a roundabout will cause problems

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Speed limit ok as during the day it's usually slower than that.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The traffic build up in that area morning and evening is intense , a crossing will only add to that chaos .

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Important

<b>NAME:</b> Raewyn	<b>SUBURB:</b> Hataitai	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
------------------------	----------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Please put an over ridge here. Make it safe for people to be on the walkway and add an interesting structure/sculpture to the area. I have driven and walked this road for 30 years and this is not a safe idea. The amount of cars on this road and the weather conditions at most times are not conducive to mixing people or bikes, buggies and children crossing the road here. Accessing ASB is beat from Kilbirnie. An overbridge is needed.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Even reducing the speed here does not make a crossing for pedestrians a safe idea. This is a very high traffic area and adding pedestrians is not going to help this. Mistakes happen in cars.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is a stretch of state highway one. You are stopping traffic heading to the airport quickly. It is very exposed. I walk along here with my dog on rare occasions when it is not windy and it is an enjoyable walk. I would not cross here on this road even if traffic speed was reduced to 60. The best way to access Kilbirnie is at the lights by St Pats not in the middle of a moving line of traffic. She. A pedestrian crossing was added by the Greta Cafe I saw many near misses of pedestrians when cars failed to stop. Please put a cool over ridge over Cobham Drive if people are needing to cross over. The tyre bridge on the new SH1 expressway breaks up the boredom of the road and connects the two sides. The City to Sea bridge on the quay does the same. This would add a cool structure to the very vast landscape and help people safely over the road.

Please make this 50km/h to prevent unnecessary deaths  
([https://www.who.int/violence\\_injury\\_prevention/publications/road\\_traffic/world\\_report/speed\\_en.pdf](https://www.who.int/violence_injury_prevention/publications/road_traffic/world_report/speed_en.pdf)).

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

60km/h is still too fast. The whole section of SH1 through Wellington city should be 50km/h - this would hardly increase travel times (especially in traffic, which is already most of the time). The WHO has shown that the probability of a pedestrian dy

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Is one crossing sufficient? What about cyclists and pedestrians going to the residential areas near the airport? The two sets of crossing lights should be phased so that pedestrians and cyclists can cross the entirety of the road without waiting in the middle for the next crossing phase. This will reduce wait times and improve safety (users will be otherwise tempted to run across the 2nd set of lights out of impatience). It should have no impact on vehicle traffic, given that the cars will need to stop regardless...

Please drop it to 50km

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Drop the speed limit to a consistent 50 km/hr - you are confusing things having variable speeds. Also make the roads appear narrower, so that cars don't travel over the 50km speed limit. Given its only a handful of seconds you'll add to travel time

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Looks like it will take a long to time to cross the new crossing. Can the signal be set that you can walk across both sets of lanes in one go (I'm concerned that otherwise you'll wait too long for lights to change, and attempt to dart across ther road). The traffic light must turn to red quickly, after a pedestrian has pressed the button - pedestrians can't wait for ages before they cross the road.

**What is the primary way you travel through and around the area?**

<b>NAME:</b> Meghan Pomeroy	<b>SUBURB:</b> Kilbirnie	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> Yes
--------------------------------	-----------------------------	------------------------------------	--------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Please dont block the state highway, a shallow tunnel which could be a feature will be functional, it wont slow traffic. Buses will need to stop each side of the tunnel. Which can be made of the waterproof concrete technolgy like many other areas it will be a more permanent attractive solution. Please read my contribution. This is a main highway we can use technology and our clever minds and have a solution that is a win win, not jumbling who loses who waits ... the shallow ramp steps paralell to the rd on each side of cobham drive which then turns 90degrees and goes under the road keeping traffic moving and pedestrians and cyclists safe... So many people are scared that wellington is being slowed to the point we are looking at a ghost town. We are scared. People need to take their transport to where they shop, and travel needs to be streamlined not slowed to and from the airport where they come and go from the city. This is huge. Please dont make a temporary bandaid which wont work ...a shallow pedestrian tunnel with beautiful lights and other features would be fantastic.. a credit to those who approve it.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I think we need to remember its a main state highway route to the airport, the speed limit is ok, once we have a beautiful underpass the traffic wont be affected or blocked and pedestrians will be safe... cars need to get through..and not be stopped and s

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Please dont make a crossing here, it will cause huge problems with the traffic flow... A better idea is to use waterproof concrete and make an underpass, much like the arras tunnel, the technology is there, it would mean ppl could cross the rd any time safely without having traffic on stste highway 1 stop time and time again, that button to cross will be pushed so much it really will clog up our town even more. Its easy you could have a ramp and steps paralell to the rd, then a 90 degree turn under the road, a sea wall on the evans bay side if nec..it could be a feature with curves or lights... please council listen to the people who live there, a shallow

tunnel would make a wonderful functional crossing area... the lights and crossing idea is ill considered and will need to be changed. We have the technology lets do it properly.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Please do not change them. Please do not put the crossing in.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Please don't! It's unnecessary and will create more congestion. I commute by bike everyday but think your roaring changes across the city / region are poorly informed by a minority vocal group. Focus on a second tunnel, more park and ride options, faster shuttle buses, more secure bike racks in the city etc. People need to use cars. You keep talking about how other cities manage congestion issues but fail to grasp they have credible decent alternate transportation options. Public transport in Wellington is a joke.

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Please do not install lights here which will slow traffic and actually entice more people to dash between stationary cars. This road is a key route not just to ASB stadium but also to several schools and kindergartens. You could actually make a bridge at the corner next to ASB stadium not only a safety feature but an art feature for Wellington. Please consider the thousands of children and their parents affected by this.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Drop it to 50kph if you want - it's mostly that now anyway because of the volume of traffic.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly agree

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Once again speed is not an issue on this stretch of road. It may become an issue with the absurd/narrow minded proposal to impede traffic with traffic light controlled crossings.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Your accident statistics do not address the rationale for the proposal, that speed is an issue. Cars and drivers were also involved, why aren't you taking issue with them? The real issue is the state of the road in that it is not fit for purpose. If you g

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Why aren't you consulting on different options? A crossing that impedes traffic appears to be very narrow minded, especially when consulted on as part of slowing down a major traffic route. Further the options above make no reference to road users. It almost appears to be a foregone conclusion with consultation a token attempt to tick a required legislated checkbox. Which is a very dangerous route to take. Stop wasting taxpayer money, do your job properly. Build a bridge to let all modes of traffic move freely.

Not good. Zero practical thought has been put into this. You need some normal people on the council not only green agenda hardcores. People with kids and stuff to do in a timely fashion.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Should make it 90 k. Get people off the roads quickly

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes.. so much . It appears you might not actually live in Wellington. This is a main artery to your only airport that is already clogged up and slow. And this will slow it down more equating in people sitting in cars longer increasing carbon outputs. For the benefit of the five walkers who use it on a 120 kilometre windy 🌬️ day.

**What is the primary way you travel through and around the area?**

Car

----------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

No speed change is needed. Traffic congestion already limits speed in peak times.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The current speed limits are not an issue. The last fatality on Chiba Drive was a stolen car. That driver had no respect for speed limits. The reality is, traffic congestion already limits speed in peak times. No speed change is needed.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The crossing is a stupid idea. It will hold up traffic on a busy and necessary State Highway, that is already contested, creating increased emissions and cost. If a crossing is necessary, it should be a bridge like the one near the Mt Vic tunnel.

**What is the primary way you travel through and around the area?**

Walk

no problem with slow speed limits and creating safe place to cross is a great idea. congestion is very bad on cobham drive so my concern is that lights for the crossing will further increase congestion. even with more ppl cycling the congestion will not decrease significantly. congestion impacts our lives everyday even though we try to use public transport regularly.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

No one ever crosses there. You're inconveniencing the people who actually pay to use the roads for the sake of those who don't pay anything.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The speed proposal link doesn't work.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes, I've never in my 8 years in Wellington attempt to try and cross along SH1 near the airport. There's already heavy motorway traffic along that area, adding this will congest it further. People often run late trying to catch their flights and slowing the speed limit and adding crosswalks would be a huge inconvenience. Motorists who pay to use the roads are being further backed into a corner with all these changes. It seems a lot of the recent changes are being made at the expense of the motorists who ironically are indirectly funding these projects through fees and taxes. More street lights? Sure Crosswalks and slower speed limit: NO!

**What is the primary way you travel through and around the area?**

No need to change the current speed limits - there is a clear need however fir LGWM to actually do the job you set up to do

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes, Cobham drive is an arterial route between the city and the eastern suburbs and the airport. By definition the function of arterial road is to move people, good and services , as efficiently as possible. The less intersections, lights and potential chokes points the better. What LGWM is proposing is the antithesis of getting Wellington moving. The proposal puts the interests of a few against the interests of many

No issues there and no changes required

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes, leave the speed limit as is - it is efficient and there are no material safety issues

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I think the proposal is hugely misconceived. Putting traffic lights for pedestrians on a major arterial traffic route, is a stupid idea. If anything, you should build an overpass. This proposal is consistent with most if not all others of LGWM, namely it will have the opposite effect - a handful of pedestrians will benefit but the majority of Wellingtonians will have an experience best described as Lets Not Get Wellington Moving

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Never knew what the speed was there anyway, it's always been poorly sign posted and most people only seem to do 50kms along there, partly because the stupid wellywood sign, partly because of fishermen, or because of people parking along the left hand side. Not much gain between 50kms and 70kms on that short bit, and makes exiting shelly bay slightly easier if 50kms possibly.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

What difference does 70 vs 60 really make? It just confuses people, and encourages vehicles that shouldn't be on the road, e.g. e scooters to be in harms way. Safer to leave it at 70kms at least at the Cobham drive bit. Ruahine street drop to 50kms makes

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Over bridge or bridges. A bridge for each side of the round about by the fire station would allow anyone coming from any direction to get to any side of Cobham drive that they require without impeding a heavy traffic area. Or a bridge over the eastern side of the harbour to complete a circuit so that less traffic has to use Cobham drive in General to get to the air port. May be move the air port so that 60+% of traffic wouldn't have to be on that road resulting in both a reduction in risk, and carbon emissions.

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Most people cross the road where the Wellington sign is and try get pictures on the road would you believe so it makes sense to put a medium crossing barrier there. Also cut your trees at the roundabout coming from Miramar to Cobram drive almost have accidents cos no clear visibility cars coming around the wider bend to airport.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Keep it consistent 60k all the way

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The time of day most people walk is usually in the early mornings or after peak hour traffic. If you put in lights you're only going to create more congestion & delay traffic so it won't be free flowing. This stretch of road to change from 70 to 60 for both streets keep it consistent.

**What is the primary way you travel through and around the area?**

Cobham Drive 100m north of Calabar Road roundabout**

More signs regarding speed changing soon would be beneficial.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Again bad idea. The road is fine at current speed limits. The new pedestrian upgrades are very good for foot and bike traffic. Slowly the speed of travel from the airport and miramar to the city doesn't support future growth.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It's extremely shortsighted and a bad idea. A pedestrian overpass bridge would be a far better idea. Traffic in the area is already very bad and i don't see how this plan is in line with connecting the airport to the city. This does the opposite.

**What is the primary way you travel through and around the area?**

More congestion coming with changes to Miramar & Bays road. Keep it flowing, it works well at moment. Pedestrians, bike, buses & cars share it well. No to lights.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

It's not the speed that's the problem. Most of the time people can only drive between 40-60km/h anyway. It's the only route from the eastern suburbs out & airport access. Lights create congestion. Bridge is safe, stunning and allows free flow. I wouldn't

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It makes no sense it's a crossing connecting nowhere to a sports centre. 1 side of the road literally has a windswept path on it people either cycle fast on to get to Miramar or recreationally on one of the few decent days in Wellington. It's not the route I would take to go from Lyall bay, Rongotai or Kilbirnie to town, going from the ASB I'd use Kemp street. Much quieter and pleasanter and safer. It's completely counterintuitive to stick traffic lights over SH1 there. How many accidents is it going to prevent? (more likely to cause them I would have thought) there are other areas in way more need of something. Take the Melling interchange I break out into a cold sweat at thinking about having to queue along the fast lane of that road to wait for lights to turn green so I can turn right. The real issue locally is allowing traffic to turn left and right out of the sports facilities on Ruahine road (the side road to tennis/velodrome/gym etc. I've waited 12 minutes to turn right there before! You really need an on demand traffic light there

Make this 50 as previously stated. Add informal crossing points - consider the junctions with regard to pedestrians, cyclists and new pedestrian/cycling infrastructure.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Make it 50 off the roundabout into Miramar. 60 seems reasonable for Cobham Drive and to the airport, but given the short distance, does making it 50 really impact the travel time? I'm a fan of 'pedestrian islands' in the central median to make areas wh

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Don't know

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Crossing point seems fairly logical but difficult to tell how the crossing connects to other cycling and walking infrastructure in the area and to places people want to go - Kilbirnie Centre, Lyall Bay beachfront, WRAC, Miramar, Airport etc. Connections should be as direct as possible, and pedestrians, cyclists and public transport connections and infrastructure prioritised over motor vehicles, with proper separated paths. Is there any scope for a connection through the ASB Arena / Arena car park for example? Why is the crossing staggered? If you need the space to accommodate people waiting then extend the waiting areas, but crossing points should be aligned as much as possible. Making pedestrians walk 20m in the central median is annoying. What is the point of this? Reduce as much as possible. If it is a safety thing because they are two separate crossing points, then make the crossings both come on at the same time. Make the crossings wider and more visible. Make it so that pedestrian / cyclists crossing times take priority. Crossing at the existing junction on the corner of Kilbirnie Park is so slow to change for pedestrians / cyclists many cross before the lights change. Same true for many crossings across the city - Kent/Cambridge / Basin Reserve, Hospital etc. Otherwise crossing looks good with change in road markings / materials making it clear for vehicle drivers etc

Cobham Drive 100m north of Calabar Road roundabout**

**Make sure the walking/cycling area is kept separate.**

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes - why reduce the speed? It is great as it is. This is state highway one - and the proposed crossing should be an overbridge. In Auckland on Tamaki Drive just passed the port heading east there is an overbridge - and that is a 50km an hour zone. Th

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Do an overbridge - this is state highway one - there is a crossing with lights further back.

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Make sure that the signage is clear that the driver is coming into a new speed zone. Ideal if it is a variable speed zone to cater for all times of the day (24/7)!

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Instead of reducing the speed permanently. Put in variable speed zones. There are times when the current speeds are okay, as there is no traffic. E.g. 5AM or 9:30AM or 10pm. Temporary reduction of speed during peak times is good, but not all the time.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Perhaps put either a foot bridge with ramps & steps that goes over the road or a pedestrian tunnel that goes under the road so that it improves the safety of those walking, running, on a scooter or bike. Also, does not interrupt the flow of traffic. Non-car/bus/truck people shouldn't be interacting with drivers, especially on SH1. Overseas don't do this, we shouldn't either & the population in the area is only going to increase over the coming years. Do it right first time, don't build a crossing. Build a pedestrian bridge or tunnel.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I only travel through the area when I'm going to the airport

------------------------	------------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Make sure cycling and walking is properly separated here, people are still driving 50kmh here and that's no good if a car hits a bike. I'm sceptical about traffic calming here, because it could result in traffic backing up past the roundabout, affecting people travelling to the airport, but I'm not sure about the traffic volume going into Miramar.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Is 60 slow enough? Why not make it all one speed? Easier to remember for drivers and easier to slow down if someone crosses without looking.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Walking/cycling infrastructure on the other side of the crossing

Cobham Drive 100m north of Calabar Road roundabout**

Make it 50km limit

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Make it all 50km limit. Visitors and non locals (Hutt and west/North wellington residents) won't notice the different speed limit signs,they'll be busy negotiating the intersections and which lane to be in. So keep it simple. All 50km also keeps it safer

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

Make it 50 K as it has been that for most of the last year with the roadworks etc

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

50km on Ruahine Street makes sense anyway so no problems with that, it would also make it easier for cars to enter and exit the Hataitai sports field.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes, the big question for me is the impact that the queue of cars will have on the roundabout and road leading up to it. For the cars coming from the airport I feel there is insufficient road capacity between the roundabout and the lights. Traffic will back up on to the roundabout impacting the flow of cars in to Kilbirnie even more than it is now in the morning. Thus the impact of this crossing will be to stop Wellington moving, quite the opposite of the intention. This will happen at peak times , exactly when the foot traffic will be at its peak. It would be smarter to build an overpass or best an underpass.(although global warming may impact an underpass. a ramp and underpass will be best for cyclists, and I believe they will not wait for the traffic lights anyway

**What is the primary way you travel through and around the area?**

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I think people are so accustomed to driving fast on Cobham Dr, and rip around that ASB arena roundabout with such speed that they can't see and wouldn't be wanting to slow down for lights/pedestrians. I would be much more keen for a pedestrian overbridge, and would be much more likely to want my family using a separate structure rather than crossing on the road.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

Let people sell their cars there again.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Pointless

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Do not build this. We do not need this. It is completely unnecessary and a waste of money. I live in Miramar and use the underpass under the airport to easily access ASB Sports Centre if I want to walk there. This will negatively affect traffic. Who even came up with this idea? Put the money into fixing the sewers. Please, please, do not do this. At least do something that more than a few people will use each day. People going to ASB are generally not coming from Miramar. I can't believe someone was paid to come up with this.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Let NZTA make decision on both stretches of road.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Due to congestion, cars rarely go at 70 on this stretch of road so in principle this is probably ok. However your backing data is presented without any indication of where the accidents have happened and if they are to do with speed or other factors like

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

An additional crossing here in is likely to slow down this stretch of road even further. It is a very suitable location for the building of an underpass or an overpass/pedestrian footbridge etc.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I only travel through the area when I'm going to the airport

Leave well enough alone.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

So how many pedestrians have died as a percentage of traffic movements? The current speed is perfectly fine as cyclists have already been removed. This is a solution looking for a problem.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

You are absolutely nuts. This is a State Highway. The solution is obvious but expensive. You need to build a large overbridge with glass lifts with room for bikes such as there is in Auckland. Anything else is inviting chaos and dead people. The idea that painted lines on a surface predicate people's safety is naive and very 50's thinking.

Leave them as they are

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Building a crossing on highway connecting to the airport is cheap but the opposite of "getting Wellington moving" as it actually is stopping then causing build ups that are currently not there. Looking at the comments in the facebook link clearly gives the feedback that a crossing is not desired and either under or over the road options are preferred. Look forward to the next council elections... 2 lanes to the planes (without traffic light crossings)

**What is the primary way you travel through and around the area?**

Leave the speed limits the same!! It is ridiculous to slow the traffic on these roads. It is the gateway to the airport. It won't encourage more people to use Bikes and walk. Have you checked the weather lately! Hardly any bikes use that anyway. People won't be using the cycle way at night!! People are going and coming from the airport they aren't going to put their suitcases on the back of their bikes. PC gone stupid!!

Leave the speed limit at 70kms, no real evidence why it should be changed

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

An over bridge is a much better option, the traffic will continue to flow, this is better for emergency services as it is for daily commutes. A crossing is pointless. Drivers will race the lights as they do at all the other traffic light crossings around Wellington. Someone will get killed on a crossing. Over bridge safer option

**What is the primary way you travel through and around the area?**

Leave the speed limit alone. This is a busy area around an airport! Don't make us an ever more backwards city

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Reducing speed and stopping the traffic is not the answer and will just cause more congestion. We need an alternative route for pedestrians or an overpass.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Why can't a proper overpass be built? Rather than stopping and slowing traffic to the airport, let's divert pedestrians away from walking and crossing next to the road with some kind of alternative route. Look at how these things are done in Holland.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Leave the damn speed limits alone and stop wasting everyone's time and money.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes. Don't. It's already slow enough getting around Wellington.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

People can cross at the Zephyrometer; why not put a crossing closer to the Miramar / Airport roundabout, near the end of Jean Batten Street?

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Leave the 70 km/h limit as is. It's fine. We don't need nanny state rule changes just for the sake of it.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

We should raise the limit on Cobham Drive to 80km/h as it's a big wide highway. Please stop slowing everything down.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Please don't do this. Build a bridge, it's safer for pedestrians and motorists.

**What is the primary way you travel through and around the area?**

Car

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I think this idea is ridiculous.this is state highway 1.not an area for cyclists.not heard of any cyclists being killed in this stretch of road as your information implies.this is the main route from the airport to the cbd.and as such classed state highway 1.i ask you to provide me details of those cyclists and walkers killed on this area of road in the past 5 years.as a state highway do when then have to build bridges over every stretch of state highways to accommodate a few number of cyclists.by doing what you are imposing is only going to add to the congestion within the eastern suburbs.you have already made a mess of island bay.learn from your mistakes.fix them before you ask rate payers to pay for more stuff ups.when was the last reported death of a cyclist around oriently bay.seems to me your facts and figures are soo wrong.stop putting cycles ahead of getting people from the airport to the cbd.i hear all the stuff about growing the city.but it's not the people on bikes growing the city.its the people landing at the airport going into the cbd for business.then spending money in restaurants bars taxis.them saying takes too long from airport to city.i say stop these stupid cycle ways.lets get Wellington moving with a second mt Victoria tunnel and terrace tunnel and basin reserve flyover.do it now.this whole wcc needs to approve this or back their bags and leave it to way more compent people.

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Leave speed limit as it is.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

This is state highway 1. I honestly don't think the proposed speed changes will eliminate accidents. As it stands, there are hardly any accidents that cause serious harm. Let's not slow down things even further.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I don't think there should be any crossing on state highway 1. The safest option for pedestrians is an over bridge. People will still use their cars so let's get everyone moving. It will add to already heavy vehicle congestion and make it longer to get to the CBD. How about we spend the money on some decent infrastructure.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

Cobham Drive 100m north of Calabar Road roundabout**

Leave our roads alone, you've stuffed traffic in the cutting, stuffed the cycle lanes all over the city. You took 2 years of coned off shoulders and works to do the Cobham Drive cycle path and I have no faith in the WCC/NZTA to be able to deliver this project at a reasonable cost or timeframe. Fix our infrastructure before meddling with near pointless projects

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

please review the number and seriousness any of accidents in the area and use fact based decision making to review the speed limit. I feel it is a perfectly safe piece of road at 70kph and any crashes that do occur on this piece of road are generally low

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Pedestrian over bridge and leaving the speed limit alone

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Impact on traffic given this is around the corner from our capitals airport, near schools and on the main route to town. Surely a bridge would be more beneficial. Honestly wonder what you lot get paid for sometimes.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I only travel through the area when I'm going to the airport

Cobham Drive/SH1 Speeds – September 2021

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Provide some actual stats to prove you have a problem. Just saying it will be safer it bs, if you don't back it with why. Smacks of someone determined to make change, even where none is needed

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

How about instead of ruining traffic flow by dragging it all to a halt in a busy trunk one so a few people can cross a road in an undesirable location., Just put a pedestrian bridge? You solve this non existent problem, without making traffic worse than it already is. Slowing traffic will never stop people using cars, they will just take longer and therefore worsen both congestion and emissions. Add a bridge if you must be seen to be doing something, and leave this road alone. It's slow enough as it is

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Cobham Drive 100m north of Calabar Road roundabout**

Leave as is.

**Is there anything we need to consider before we make a decision on new speed limits  
on these roads?**

Yes. Leave them at 70 and be done with it.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter  
for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the  
area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

People getting around in cars is important. Don't jam up the roads for the sake of a few people walking or riding bikes. This won't encourage more people to walk/cycle. Unless you can change the Wellington weather you won't get people out of cars.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Overbridge better option ... Dont slow down traffic, we already cannot get through cobham drive 6days a week to get to other parts of Wellington. Qnother option is make it easier on the other side of the airport. We are in Wellington ... majority of the time the weather isnt good enough to bike or walk around the area as its too cold by the sea.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Build a pedestrian overbridge instead. Or better yet move the crossing point to the airport road at the roundabout. Pedestrians wanting to go to ASB arena can get to that side of the road already. This plan will only slow down traffic and increase congestion.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Keep the whole road at 70. No point mucking around with a short piece of road and confusing things with a short speed change. The idea of a crossing rather than bridge further to the north is flawed, so there's no point in reducing this area of road.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There is no need to reduce the speeds Cobham Drv or Calabar rd. The crossing proposal on Cobram Drv should be replaced with a pedestrian/cycle bridge, not using a traffic light controlled crossing that will cause massive traffic delays. The road is a hig

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Don't know

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

A road level crossing on this major traffic route is short sighted and a poor compromise. Do the right thing and put a high quality pedestrian bridge in place.

**What is the primary way you travel through and around the area?**

Keep the speeds as they are. There's nothing wrong with them. Been like that forever, and we've lived with it. Why change now? Coz of some useless idiots that deserve Darwin awards? Stop wasting ratepayers money on this crap! Sort out the roading infrastructure in and around Wellington. Four lanes to the f'ing planes!

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

It's safe enough as it is. Don't slow things down even more. So many slow drivers that obviously don't have their drivers license already clogging up that stretch. Most the time it's so bumper to bumper down there that you can't even go past 30kph anyways

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Why not install an overhead bridge instead? Let's get Wellington moving! not slowed down to wait for foot/bike traffic. Especially along that stretch of busy road, where quick access to the airport is needed. It's already busy as it is right now without a silly crossing in the middle!

**What is the primary way you travel through and around the area?**

Keep the speed the same and do not change this - build a second tunnel and an overpass for pedestrians and bikes to cross the road and all parties can then move freely

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Speed is not the issue and should not be changed as this will make congestion worse. Do not put a crossing in, put an over bridge in and then all parties remain safe and able to move freely without interruption - keep the speeds the same

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes - this should be an over pass bridge rather than a crossing - a crossing will stop traffic and increase congestion whereas a bridge allows everything to co-exist without interruption

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

Cobham Drive 100m north of Calabar Road roundabout**

Keep the speed the same

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Crazy. Don't reduce the speed. It is fine now

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Location. It should be near the round about that goes to Kilbirnie not in the middle

**What is the primary way you travel through and around the area?**

Bus

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

Cobham Drive/SH1 Speeds – September 2021

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Keep the speed limit to the same from the cbd to the airport at 50 kph.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

What's the point of a road crossing. This will slow the traffic even more that currently which grinds to a stand still. The only method of making a safe crossing is by a bridge of both roads. This should be located at the end of the north/south midway cycle track. It can be used by runners, walker's, cycling.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

<b>NAME:</b> Rakesh	<b>SUBURB:</b> Miramar	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Keep the speed limit the same on this road as it takes too long to get to the airport to catch a flight. Stop slowing traffic down and build more roads where there are no cyclists or pedestrians on them.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Wellington roads are the worst and continues to get worse as more money is spent on it. It's takes 45 minutes to travel a 15 min journey. Build more roads.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This will cause more delays on an already congested road network leading to increased costs and a reduced competitiveness. Stop slowing traffic down and build crossings above or below the road. That keeps pedestrians safe and keeps traffic moving. What are doing about cyclists slowing traffic down weaving in between cars in the city?

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

Cobham Drive 100m north of Calabar Road roundabout**

Keep the speed limit at 70km/h

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Don't drop the speed levels. Limit access to Ruahine Street and get on with double laneing - you already own most of the land.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Don't build it - construct an underpass instead - lift the road so you stay above the water level and minimise the ramp for pedestrians.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Keep the existing speed limit. Adding traffic lights to one of wellington few long, straight stretches of road (regardless of speed limit change) is only going to add to the current Mt vic tunnel congestion issue at peak times. I drive this road every day and the road works where the new boardwalk is being built already causes enough confusion and poor decision making by wellingtons notoriously incompetent drivers.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Just noting it is extremely difficult to cross this road on foot when walking my dog due to traffic levels and having to cross 3 lanes on the southbound side.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I believe for consistency the limit on Ruahine St should also be 60 kmh so that vehicle users need be keep in mind just one non-standard urban speed limit instead of two.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

For cyclists and pedestrians coming from the eastern suburbs e.g. Miramar south use the airport tunnel can LGWM please also consider connectivity to the proposed crossing from Rongotai Road, Coutts St and the airport tunnel. I assume it is envisaged that cyclists and walkers can connect by going around the ASB Indoor Sports Centre but can a proper lane be put in for this? Also I feel the pedestrian crossing of Rongotai Rd near Salek St is dangerous as vehicle drivers entering the intersection have to be monitoring several hazards at once. It would be great if this crossing can be upgraded to a proper controlled crossing..

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

Just make it the same as the rest I.e just work with NZTA. You can't immediately slow down off a roundabout

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

60 makes very little difference. The road is safe at 70 if there is a safe crossing.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

There needs to be an overbridge located at the asb sports center corner. Slowing traffic and more lights might be the cheapest, but it's is not the best solution. Also, the lights at evens bay pde do not provide safe crossing. Should be a zebra crossing across the slip lane from oriental to the airport.

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

**How important is it to make changes to improve safety on State Highway 1?**

Important

Cobham Drive 100m north of Calabar Road roundabout**

It's working at the moment. There's no reason to reduce the limit. How many people have actually been hurt and killed on this road? I feel like you are making change for the sake of it, not because anything is wrong. Put a pedestrian bridge over the road and allow the traffic to flow as it does today

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Keep Wellington moving! Isn't this the purpose of your proposal? Slowing down parts of Wellington isn't going to help. Put a pedestrian bridge in over the road instead of stopping traffic.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It's half way along the road on a 70 stretch. That's the only stretch between the airport and mount Vic tunnel that isn't contested badly at the moment. This proposal is going to cause major backlog between the lights and the roundabout by ASB arena. In my 10 years living on the peninsula, I've only ever seen 2 people try and cross that road so who are you doing this for? Who has asked for this? Everyone using the walkway/cycle way goes around the bays or crosses at the lights by st Pats.

Cobham Drive 100m north of Calabar Road roundabout**

It's the last free flowing bit of the reading network in my entire commute daily. I don't cycle to commute because children, and where they're educated. It's not practical. Lights will end this and speed restrictions will just redirect traffic onto rongotai road. I avoid rongotai road and the unnecessary sets of lights and slower speed by taking cobham drive. The cycle lanes are already separate (and awesome) so why restrict the speed? It already runs at 50km most nights from the basin and through the tunnel until the needle anyway.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

-----------------------------	--------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It's SH 1 and furthermore the main arterial route to the airport. I am a pedestrian advocate but in this stretch the vehicular traffic for one else needs to take precedence, and foot traffic is very low. Construct a pedestrian over bridge or underpass.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

For starters, complete the road works on Wellington Road which have been creating traffic disruption for months.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Don't know

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes, it will make the traffic delays worse then ever. Put a pedestrian tunnel underneath the road.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

------------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It's good that this is a 50km zone. It's the only part of that road I feel safe riding 50cc scooter on.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I sometimes ride my 50cc scooter home from/to Seatoun. The scooter's max speed limit is 50km per hour. I have to ride on the side of the road in the 70km zones so that cars can overtake me, otherwise they get frustrated being held up behind me. This isn't

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It's a long stretch of road. There probably needs to be two crossings or a multi-crossing/pedestrian overpass on the round about next to ASB. Consideration also needs to be given to the intersection at the Miramar end/near the Pacific Grass sculpture ie how do people cross from the footpath next to the runway to the other side of the road, as the footpath near the runway ends with no way to safely cross over.

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It's fine as is. There is no evidence to suggest that this area is unsafe at current speeds - it is not a common site for pedestrian injury.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Ruahine - people are mostly stuck around that speed anyway due to traffic so I'm indifferent. Calabar - this makes sense as it will make it easier for people driving to cross the intersection from Caledonia more safely. Cobham drive - I disagree in line

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I'll start by saying that I live in Miramar and run to ASB every weekend. We already have the subway under the airport which I would continue to use even if this pedestrian crossing was set up because I imagine the wait times at the lights will be significant. That aside, putting the lights in that location will cause even more gridlock at the roundabout there than there is currently and that this will likely increase the risk of accidents as people impatient with waiting try to squeeze into gaps that they shouldn't. Realistically much of the traffic in that area is people commuting to work (on a weekday) or people going to ASB (on the weekend). The people going to work won't be walking to Kilbirnie. The people coming to ASB come from across the Wellington region therefore the number of people that will be able to walk and benefit from the crossing will be a very small proportion. You will therefore still get a significant volume of vehicles coming into the area and the changing of lights will lock traffic at a roundabout that is already difficult and at times dangerous to navigate as a driver. I agree that it's currently dangerous for pedestrians wanting to cross to Kilbirnie halfway along Cobham Drive but the solution is not a crossing, it's an overbridge. I appreciate this is more expensive however Wellington Council needs to learn to actually do infrastructure right and see that the cheap solution often isn't the right solution and will lead to more problems and, over time, spend than it would if we just invested in the right solution at the outset.

<b>NAME:</b> Zong Chen	<b>SUBURB:</b> Kelburn	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
---------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It would make sense to lower the speed limit here further down to 50km/h. The reason is that the road conditions are drastically more complex here compared to the middle section of Cobham Drive (between the two big roundabouts): there is curb-side parking, there are give-way intersections, there is also a vehicle-priority (i.e. not zebra lines) pedestrian crossing point, and this road directly connects to the busy Miramar center area.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Lowering the speed limit is good, but people would still speed, because the street is very wide. Measures to narrow (at least visually) the street should be considered, e.g. by using plants, moving the curb (maybe), or protected cycle lanes.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

We should really introduce a small pedestrian/cyclist pathway from the southern-side footpath on Cobham Drive into the Tacy Street stores area. If no official paths are introduced, people would be walking over the grass/bush to get there. There are people calling for an overpass (pedestrian and cyclist bridge). An overpass could also do the job nicely (so long as the bridge has enough "legs" (e.g. 4 legs) so that pedestrians won't need to walk extra distance no matter where they're going), but a signal-controlled crossing seems to be a much cheaper option for now. The overpass can be considered after pedestrian and cyclist activity increases as a result of building the proposed signal-controlled crossing.

**What is the primary way you travel through and around the area?**

Bicycle

Cobham Drive 100m north of Calabar Road roundabout**

It works well as is!

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The flow on effects in relation to traffic around the area

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The impacts on road users and traffic. This will further congest the areas roads will consequences outweighing the benefits. There is risk in everything. A bridge would appear to be a much better solution

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I only travel through the area when I'm going to the airport

Cobham Drive 100m north of Calabar Road roundabout**

It works currently so why change it?

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Why change it. It's a very busy road and you will just create more chocking points -

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes the slowing down of the traffic along that road. It's a very busy road and the traffic will just build up in both directions making clocking points at kilbirnie crescent and Evans bay intersection No matter what anyone says you'll just go ahead and put the crossing in with no respect to what people have to say anyway Total lack of planning - it should have been considered as part of that horrendously expensive cobham path redevelopment - a bridge with no impact on traffic would have been an ideal Solution

**What is the primary way you travel through and around the area?**

Cobham Drive 100m north of Calabar Road roundabout**

It should be 50 km/h right from the roundabout.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The speed reductions are an excellent idea and long overdue. Ruahine St is unsuitable as a 70 km/h area and many cars are already doing around 55-60 km/h even when there is no congestion, showing that it is a more suitable "natural" speed. For such a sho

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It is the wrong type of crossing. In this area, an overbridge should be built with ramps from both sides leading to it. There is plenty of room. On your website you have focussed on the fact that car trips will be little affected by lights (slight increase in travel times) but completely ignored the pedestrians and cyclists who will (hopefully) be using it. Having to wait for two light changes will result in many people "jumping the lights" and crossing before they get the green man to cross. Also, even with a 60 km/h speed limit, many cars will see pedestrians waiting to cross and speed up to get through the lights before they change. In many cases they will speed through the amber light as it is changing to red or even after it has changed to red. The above points are based on what I already see happening at other crossing points in town.

**What is the primary way you travel through and around the area?**

Cobham Drive 100m north of Calabar Road roundabout**

It needs a pedestrian crossing! And of course, slowed speed.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

60 seems fast for what will be a relatively short stretch between the Wellington Rd/Evans Bay Rd light to the new light. Traffic will speed up then possibly have to stop quite soon after. Feels like quite a fast speed to approach a pedestrian crossing, ev

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Building the crossing is absolutely necessary! However, it will allow more people to use the new Te Ara walkway - exactly what we want - but there's no amenities on the walkway ie toilets, water and rubbish/recycling bins. Are those coming? Without them it feels like this whole thing was built for Miramar cyclists and runners... We want to really use this new and beautiful space, but humans need amenities, and our natural environment needs us to have places for our rubbish other than the shore...

**What is the primary way you travel through and around the area?**

-----------------------------	--------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It is the main arterial route from Wellington, Porirua, Hutt Valley and Kapiti Coast to and from the airport. Any decision to reduce flow on this section of road is most unwise. Already the hold ups are bad. Yes, it's part of the suburb and pedestrians need better access, but do this by way of an over ridge or tunnel. Not by creating more traffic obstructions and suggesting pedestrians walk across a 4 lane road, even with reduced vehicular speeds and traffic lights, is simply dangerous. Someone will get killed. NB: sun strike on traffic lights is bad on this stretch, a motorist was killed there so some years ago due to sun strike on the traffic lights. Pedestrian crossing on this stretch is an accident waiting to happen.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes, it's location on SH 1 and main arterial route to the airport, already the subject of major traffic hold ups. A pedestrian crossing will make this worse, so Hildebrand an over ridge or tunnel for pedestrians, who do need somewhere safe to get across this four lane road.

**What is the primary way you travel through and around the area?**

Cobham Drive/SH1 Speeds – September 2021

**Feedback****614**

<b>NAME:</b> E	<b>SUBURB:</b> Northland	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
-------------------	-----------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It is justified to reduce the speed limit here because the Wellington Sign attracts tourists who might be crossing the road for photos. Also, this is not SH1 or the road to the airport, so it has less traffic.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There is no need to reduce the speed limit. There is a walkway and cycle lane along SH1 and thus the pedestrians and cyclists are safe.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

With the risk of stating the obvious, the proposed crossing will intersect SH1 and the major artery to the airport, and create unnecessary traffic jams and delays. It needs to be placed somewhere else.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It is fine how it was. You've built your cycle lane, cut it out.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

What's the point, you're going to do it anyway. 70, 60. Makes no difference except at night when you're going to slow down traffic. I work for the police and do speed work along Cobham drive but because I don't agree with this, I'm going to stop now.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Don't do it. You guys are ruining Wellington. For god sakes, there is a crossing about 600m down the road at St Pat's. You're going to hold up traffic more. Wellington is not designed to reduce traffic to a bare minimum. In winter do you expect people to walk, scooter and cycle to work or school!? You're going to make children sick. In the cold and rainy months which is about 8 months of the year, traffic is going to be so much worse because people will still be using vehicles.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It is already congested now quite badly at peak times and a crossing will impact it seriously and negatively. See my last answer.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I am ok with lowering the speed limits now and do not support the proposed crossing thus creating queues of cars that will back up to the airport and Miramar Avenue. The current situation has caused queues back to the airport on some days now.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes it should be in bridge form. If there is a crossing there will be serious delays to car traffic. WCC has not done anything about decreasing car traffic, in fact it is has increased 100% since airport developments (hotel & car parking building) & now Maupuia/Shelly Bay developments. Cobham Drive cannot handle now at peak times the traffic and traffic lights and a crossing will multiply the problem. I am against the proposal in this form. A pedestrian footbridge is the only sensible solution. To lower Cobham Drive vehicles more shuttles to the airport and Hutt Valley and Porirua needed to lower car use.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It is a good stretch of road but is subject to high traffic flow during peak hours. Unsure why reducing will help when a crossing will affect speed and create additional delays during heavy periods.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

An overpass walkway. Keeping Wellington moving isn't going to be done with more stop lights. Stationary vehicles also add more emissions as they idle, and accelerate from standstill, more than will be saved by the few people who would walk instead of drive if the crossing was there as proposed I'd wager.

**What is the primary way you travel through and around the area?**

<b>NAME:</b> HMB	<b>SUBURB:</b> Miramar	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
---------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It doesn't show what speed you're proposing it to be. It's already dropped to 50 along this section so what actually needs changing? There's already separation between road and pedestrians. Do not support this. Why bother talking to councillors who don't listen and don't stick with their word. Only 7% supported what's happening with this stupid overpriced cycleway but you did it anyway. No one wants the Shelly Bay development either and still voted for that horrific plan.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Unnecessary and I doubt it will change the accident rate. People have accidents due to poor choices and distractions. You were supposed to give us a wider road and separate out walking and cycling from that.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is not consultation. Your questions are all tailored for supporting your design and moving forward with this very unnecessary change. This is a state highway. People need to stop being lazy and stupid. It is not a great distance to go and use the crossing at Evans Bay. Where is the picture showing the roundabout? This is an intersection with a lot of traffic. People are still going to use their cars to get around Wellington. You quite obviously don't live in our area. It's bad enough trying to get to and from town, now you want to do this. The difference between real life and policy with ideas. And if it's really necessary, why isn't it an over bridge design?

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

It doesn't need changing. There will be consequences to the flow of traffic, on a stretch that already gets busy. You've stuffed up traffic in the cbd with 30km/hour - one can't even make a set of lights at that speed safely. Clearly counsellors haven't attempted to drive 30km around the CBD to see if it's feasible. 40km would have been more practicable. Don't screw up congas drive now as well

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Don't change the speed limit, again it will hinder traffic flow.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Lights will impact traffic flow (it's already very congested on this stretch of road and will be more with new housing). suggest building an overbridge for crossing rather than lights

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Important

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Is that the yellow section? It's fine the way it is. If you want to protect pedestrians and cyclists, physically separate them from the road via safety barriers (some people call them fences) or overhead crossovers, like at railway stations. The other idea is leave it alone. People will make their own decisions about where to cross safely.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Everything you seem to be proposing will be adding to congestion and commuter frustration. Business travellers will be thinking you are stupid slowing down the arterial route more than the current restrictions. Leave the speed limits alone. They are good

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This SH1. It is a major arterial route transporting thousands of people every day to and from Wellington city from Eastern suburbs and airport. It is ludicrous to place a pedestrian crossing at road level! If you want safe access you should install a pedestrian overpass as is located at many railway stations. For the comparatively small percentage of Wellingtonians walking or cycling this route you will be penalising many commuters, business and tourist visitors to Wellington. It is an illogical choice.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Increase the speed limit to 80. Create a bridge for crossing as an alternative if it's actually needed. Hardly anyone walks on either side of the road. Might as well put a footpath on the motorway. Note my answer to the section about road safety is in relation to driving in this area.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

It's a wide, straight road, the current speed limit is enough. Any less will create far more hold ups.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Cobham Drive 100m north of Calabar Road roundabout**

Imagine if you guys could actually get the cycle lanes and footpaths finished!?!? Get the wharf open so there is a place for park and ride? Get the shelly bay intersection sorted with a roundabout so the Mapuia Rd and Tuahina rd intersections are improved by having traffic slow coming inot the curring.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

How many accidents which have resulted in death or serious injury have occurred on these roads in the last 1, 5 and 10 years? Fekn get the second tunnel done to fix ruahine street. Get an underpass for pedestraians and other personal mobility users on Co

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is possibly the worst proposal from LGWM yet! Please provide data on how many deaths or serious injuries have occurred in the last 1, 5 and 10 years which can be attributed to the 70km speed limit. Have you even driven that stretch in peak traffic? The traffic flow is horrendous as it is, and this crossing will back up buses to east of the airport (as they sometimes are already) making public transport even more shit. Build a fekn underpass - spend decent money for a decent solution!

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

If you are to change speed limits of any portion of road highlighted, this is the only one that could be reasonable. This is the bit of road before reaching the massive cycle/pedestrian walkway.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There is no reason to lower the speed limit. There is already an off road cycle lane. All you're doing is slowing traffic unnecessarily.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Do an over or under pass. A stop with traffic lights will only increase congestion, which is already abysmal at certain times of day

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I regularly travel through the area to get to work or school

Cobham Drive/SH1 Speeds – September 2021

If it's gets reduced to 60 people are still going to drive at 70. So can it not just be reduced to the same 50kph of all the roads around and leading into it? The seconds gain in trip time vs reduced speed for collisions to me doesn't seem worth it.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The new pathway along Cobham drive is a really great thing. What we have found with a young family is though is away from the road. The only protection is a few grasses. With unpredictable young children navigating the use of scooters and push bikes it actually doesn't make this area any more desirable to actually use as the consequences are still too high with the traffic moving so quickly with only some grass to stop a collision.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

If anything, the speed should be raised to 80. This area is already a bottleneck. With the developments planned, things will be worse. People need to move through there as quickly as possible. There should be no private driveways emptying out onto SH1. Highways are access limited roads to quickly move people through an area.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

I've explained my comments on the previous questions. I think it is a waste of time and money. This is not needed and the council should focus on real issues like the water lines or deteriorating roads

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Lowering the speed limit on an already congested road is just going to increase congestion. People already drive slow and cause traffic jams lowering the speed limit is just going to make it worse. We have the safest cars to date yet Wellington is moving

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The construction of these traffic lights is just going to increase congestion in an already congested area. Which is going to slow people down even more and take longer for people to get where they need to go. Also lowering the speed limit to 50kph is going to increase traffic. 70kph is perfectly suitable for that stretch of road. In a time of evolution and having the safest cars to date, Wellington is moving back into the past.

**What is the primary way you travel through and around the area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes! The focus is on walk, ride, run or scooter; how about cars? There is serious congestion along Cobham Dr now; a crossing will add to the problem. An overbridge or a subway would be preferable - has this been considered? Also this is State Highway 1, and an introduction to the Capital City, so being greeted by a crawl into the CBD is not a good look. We need to get Wellington moving, not slow it down with a crossing.

**What is the primary way you travel through and around the area?**

I would like to use this area more to walk the dog and cycle to the supermarket. It is the most direct route from my home (near burger King). Can it be made friendlier? The cars rush past at 70kph and the wind gets funnelled, it is dangerous can the air currents can knock over my child.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

50 would be fine. I live and work in Strathmore and I drive this road several times a day and being a tiny bit slower is all good. I know I'm driving thru the shore access of someone's home neighbourhood and I want to be respectful. The current 70kph desi

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Can it be closer to Miramar? Can we have an Iver bridge?

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I regularly travel through the area to get to work or school

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

I would be happy to see a pedestrian crossing where the current crossing spot is. Very hard to cross here.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There should be no need to reduce speeds if you do a suitable crossing. The road is wide and clear viewing. To get Wellymoving, stop trying to slow it.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Don't do a crossing. Don't slow traffic. Think sensibly and build an over or underpass. Keep traffic moving and don't try to stop it more.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

I think the current speed limit is fine.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I do not believe you need to change the speed limit along Cobram drive if you make appropriate OVERPASSES for bikes and pedestrians. This is the main road to the airport with no houses along it. Please do not do this.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I think a crossing is a good idea, it just needs to be an OVERPASS. Perth (aust) is a great example of how overpasses have helped cyclist/walkers/runners get to cycle paths without interrupting the flow of traffic or trains etc on main traffic thoroughfares. Don't slow the traffic to the airport down by putting in lights - that will not 'get our city moving'

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

I think dropping them is unnecessary. Especially if you build the overbridge for crossing. With the new paths, there's no pedestrian traffic on the roads. What WCC could also do, is set the limit to variable, so that in rain conditions, for instance, the limit is lower (like the motorway).

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

It's a big change from 70 to 50. It might impact traffic negatively. I don't see an issue currently but if want to drop, then 60 is better. Otherwise I'm opposed.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Seems like that will provide unnecessary traffic disruption. Spending the money properly and investing on a overbridge seems like the best option. WCC can even take advantage of the sculptures we already have, and build a real lie nice overbridge, like the civis square one. It will be. A great opportunity to then really encourage people to walk more on the area.

I support keeping the current maximums. I have lived in Miramar for over 30 years and believe the existing speed limits are appropriate and work well for the vast majority of people.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I support keeping the current maximums. I have lived in Miramar for over 30 years and believe the existing speed limits are appropriate and work well for the vast majority of people. The proposed change to speed limits are low and inefficient for such a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

An overbridge could be an alternative so traffic is not affected. Traffic is already a big issue which has only gotten worse over the years. A bridge would also mean people would not be walking across a main road.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

I suggest this too is 60km/h.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Just keep it simple and make it all 60km/h.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I think the crossing will help slow the flow to the lights at Cobham Dr/Evans Bay Pde, so this may help traffic flow and the merge heading into the city. The crossing lights should be phased to meet the Cobham Dr/Evans Bay Pde lights airport bound traffic to help flow in this area and not cause a backlog of traffic by being out of synchronisation.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I only travel through the area when I'm going to the airport

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

I strongly disagree with the change of speed limit on these roads. We are going backwards as a city by constantly reducing speed limits. Car technology is constantly becoming safer for both passengers and pedestrians. There are good arguments to raise speed limits considering how much safer car technology is than it used to be.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I strongly disagree with the change of speed limit on these roads. We are going backwards as a city by constantly reducing speed limits. Car technology is constantly becoming safer for both passengers and pedestrians. There are good arguments to raise spe

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is going to create a lot of traffic jams on a currently free flowing road, traffic jams are unsafe and cause accidents.

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

Cobham Drive 100m north of Calabar Road roundabout**

I don't like it. Would prefer an overbridge. Traffic already banks up from two sets of lights after exiting Basin Reserve tunnel. Third set is road rage, hair-pulling-out scenario. Wldnt like to be a pedestrian trying to get across that crossing on a drivers "bad day" or trying to catch a plane! People aren't always nice when they are late or frustrated. Always separate cars from bikes and pedestrians, especially on a state highway. LGWM is in no position to get precious about this crossing at the moment. Freight is vital, people getting to and from work is vital. Build an overbridge and save everyone's life.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

How does this help eliviate peak time congestion? Sounds like it will add to it. The location is not ideal. End of the day despite an ideology, its still most people that don't want to walk or ride. This would mean 2 sets of lights in a very short space, to the wind needle. Why not change the current roundabout to lights which can control cars and pedestrians or of course a bridge or tunnel for consideration?

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Honestly, this section is only going to get worse - I hear that council is going to add traffic lights there too - the work being done right now is indicative - when the construction stops traffic for even a moment, traffic backs up right to the Calabar Road roundabout.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Honest to god, the speed limits don't need to change. Why is it that that the only thing LGWM does is slow us down?

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Why are you adding yet another traffic light? I thought LGWM was supposed to make the city work better, not slow us down?

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Having spent huge amounts of money on the new path, you are now proposing a crossing that requires cars to stop for pedestrians. Safety on that road requires a separation of cars and pedestrians. Rolls royce path, poor persons crossing.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Make it an under or overbridge so that we don't have to trust cars to stop.

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Has been 100kph in the past with no issues. If there was an overbridge for the occasional pedestrians/ cyclist then it wouldnt need a reduction in speed limit. Given current congestion it is rare to be able to do more than 30kph now so waste of money on signage or need to reduce it

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

From a speed zone of 70 to 50 and then back to 70 will only create more traffic problems..

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

An over bridge is the best solution..People travelling to the city and coming to the airport will have big traffic delays. As of now the Mt.victoria tunnel is a nuisance causing big delays with another traffic stop it will only increase travelers woes...

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Having a crossing is not the solution...It will only create traffic jams. People wanting to get to the airport want free access ways not a traffic stop...why can't we have an over bridge crossing over...waste of tax payers money..

**What is the primary way you travel through and around the area?**

Car

Flyover solution

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I like the flyover idea. It doesn't impede traffic to the airport. Why is it you think Wellington could nor be vastly improved with a train connection to the airport?

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Getting to the airport— your proposal ignores the hundreds of people going to and from airport. In truth we need a train to the airport. You took away the the Flyer bus — the only public transportation. No one walks or rides their bike to the airport. I don't think they have bike racks at the airport. Now you're slowing down vehicle traffic on a road that I don't recall any accidents on. I implore— get a train of some sort (small- electric- frequent- from Wellington Train station to the airport)

**What is the primary way you travel through and around the area?**

Walk

Cobham Drive 100m north of Calabar Road roundabout**

Fine for this bit to reduce to 50. It is so short that there will be no impact on congestion

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The impact that this will have on congestion. Having cars moving quicker in 'clear' areas surely reduces congestion behind them.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The crossing will be used extremely rarely relative to the number of cars that use the road. Please don't have it "raised" such that cars need to slow down to drive over it. Also, vehicles frequently change lanes throughout the entire stretch of Cobham drive - a raised crossing would make lane changes more dangerous because (i) changing lanes around the crossing area would be dangerous and (ii) some people's reluctance to change lanes around that part of the road will force them to change lanes at other parts which will be dangerous and/or add to congestion.

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Dumb idea. Again, it's on the road to the motorway and is not exactly an appealing or necessary spot to be walking

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Completely unnecessary. Build a bridge.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is the main route to the airport. Why don't you build a crossing bridge over it instead of making road congestion (which will increase car emissions with the cars idling)

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

**Cobham Drive 100m north of Calabar Road roundabout**

**Drop to 50km/hr at North end of the Calabar Road section.**

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Ruahine Street should be 60km/hr. One similar speed - keep things simple. It is very rare that you can get as fast as 50kn/hr anyway.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I and my family are totally opposed to the proposed crossing. The main reason is that traffic is already very slow at getting from Miramar, Seatoun, Strathmore and the airport into the Wellington CBD. At peak times the traffic is already backed up almost back to the airport. It is becoming worse as time goes by and as the airport opens up, and more and more taxis are on the road, it will back up to the airport. Have you done any survey or assessment of the number of people who would use the proposed crossing ? My estimation is very few. The crossing will stop traffic in both directions and this will cause much more disruption to travel into and from the CBD. It will affect thousands of people daily. If you must provide some crossing then it should be either over or under the road to avoid the major disruption to traffic. I cannot understand why you people are so driven to frustrate motorists and those on public transport in the interests of a few. I regularly travel by car along Cobham Drive and I can't imagine the anger of people at this proposal if it is implemented. It is being done under the banner of Let's get Wellington Moving when you are actually doing the opposite. This will frustrate bus passengers as well - again in the interest of a few. There is no need for this proposal when people from Miramar etc have a perfectly good crossing already a couple of hundred metres down Cobham Drive at St Patrick's College. Please do not proceed with this proposal in the interests of by far the majority. While expressing my views I would also like to suggest you set about communicating your vision for moving traffic more efficiently along SH1 from the airport to the North. There are two fundamental requirements for this Eastern area of Wellington. Firstly, a direct route from the airport through the city with as few interruptions as possible. Secondly, a means of carrying passengers efficiently on public transport as quickly as possible into the CBD.

Only when this can happen will people switch and utilise public transport more. Have you considered a ferry service from Miramar wharf into the CBD ? If not I would like to see that considered. Passengers could be taken quickly between the airport and the ferry which would divert traffic from the roads. I can't understand why this is not being considered. We have lived in Wellington for over 30 years and the tension regarding the blockages in the transport system and no clear action plan for fixing it is now at its highest level. Your proposal for traffic lights and crossing is just inflaming that tension. Please consider the majority view and thoroughly understand the frustration we have in the Eastern suburbs with the single traffic lanes through MT Vic tunnel and holdups around the Basin Reserve.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Drivers speed aggressively here, as part of Cobham racer mentality to overtake each other, or get past slower vehicles eg. Buses. Very hard to cross road here using pedestrian Island as cars so fast.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Might as well be 50 all the way because raising the speed limit for such a short distance will make negligible difference to travel times. Also drivers accelerate sharply on Cobham: it feels like the Fast and the Furious as they race to overtake each other

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

People normally cross Cobham Drive at the end of the airport runway. It's fastest & shortest route to Kilbirnie for shopping, which is the more likely goal of locals, apart from exercise down to Iyall Bay Beach. I see a range of people crossing here: with shopping bags (eg. a known pensioner who uses a gold card on my bus), exercise walkers (I arrived shortly after a young woman wearing headphones had been hit by a car) cyclists (lifting their bikes over median strip). A crossing that lines up with Jean Batten St, next to the runway would be a more direct route for people. They will still cross here even after you put in the ASB one (by the way - ever noticed the number of people who drive to an exercise centre?). To be honest you really need 2 crossings if you want to stop people jaywalking across Cobham. And don't listen to the airport or truckers: people don't like climbing overpasses. Evans Bay is lovely to walk by, but often you just want to walk to Kilbirnie quickly, and get away from the loud heavy traffic environment too, into the quieter neighborhoods.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

People who drive cars, which is clearly the majority. Introducing a crossing halfway down Cobham Drive will not encourage more people walking/cycling. It will only cause more traffic congestion backed up to both major roundabouts which is already an obvious issue in the area.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

Don't touch it

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Leave it as is and if you're going to do something, double lane Ruahine Street and sort out the Vic Tunnel and Basin Reserve as a priority instead of meddling with cycle ways. You've already ruined Island Bay and the Brooklyn Hill

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Slowing up traffic. Come on Wellington, this is yet another case of how you are destroying our city for the minority. Getting around Wellington is absolutely painful. You guys need to pull finger and start building roads or coming up with ways to ease the congestion not pandering to the cyclists. Look at the shambles you have created, Island Bay, Brooklyn Hill etc. The sooner we have a clear out the better. Please don't ruin our city even more!

Don't decrease the speed limit here - its safe for cyclists as the cycle path is seperate, decreasing the speed will piss off drivers and then endanger cyclists because of some drivers' poor attitudes.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

It will be too slow and it will piss off those car drivers - it will have a negative impact on the already poor attitude some drivers have towards me as a cyclist. I REALLY think the road should stay at 70 kmh. I have not seen any sensible reason why it i

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The proposed crossing doesn't impact my biking routes (so 'no change') as I live in Seatoun and I go under airport to get to Kilbirnie or around bays to go to town. If I want to do both Kilbirnie then Miramar (e.g. for shopping) I go from Kilbirnie to Miramar by crossing at the zephometre and go back along the bays to Miramar. LOCATION: It should be closer to Miramar between the middle roundabout and the most eastern roundabout. This is the location that I see lots of people crossing on bikes and on foot doing a very dangerous crossing. I have once been knocked off my bike (years ago) by a cyclist and again just a few months ago I nearly had a crash with another cyclist. In both instances they made a crazy manoeuvre in front of me at this location - they went to the far right of the footpath (now new bike path) and they swerved back across my route to cross all four lanes of traffic and the traffic island - they were going from Miramar to Kilbirnie / Lyall bay area - neither thought about checking for a cyclist right behind them.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This is folly. A flow of traffic to and from the airport is important for a 21st century capital city. The flow is already hampered by some short sighted road planning. If anything you should be thinking about how to improve the flow not slow it down even further. A bridge or underpass would be the safest option if a crossing really is necessary

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I would retain the speed limit at 70. If the time delay of the orange light is increased to allow cars to slow down then I see no reason to slow the traffic down. The crossing won't be used that much so keeping the speed limit the same is really important. The road is designed for at least 70kph as there are no driveways, etc on the side of the road. Lets not under utilise our nice road. You can't miss traffic lights so the risk is no different to any other 70kph road with traffic lights. There is no legitimate reason to slow cars down more, except ass covering which is pathetic.

Cobham Drive 100m north of Calabar Road roundabout**

Consistent speed limits please. That is the same speed across the lot. Then no one causes any frustration by getting it wrong (too fast or too slow). Make it 60kmph all the way.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

No. Should have been done a long time ago. It's been confusing having them at the speed they have been for so long. I understand the State Highway designation but the residents and awful intersections along Ruahine in particular are enough justification t

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes, provide all airport passengers with running shoes and/or scooters. More importantly however, the traffic from Miramar and Strathmore/Airport is major issue during peak hours. The proposed crossing only assists with Kilbirnie/Rongotai residents. You need a second crossing to handle foot/scooter traffic from Strathmore/Kilbirnie. Perhaps if the runway extension was built it could deal with this but that fell over in environmental court some years ago. Pity. I think the crossing would be better situated closer to the airport on the other side of the roundabout on Cobham Drive. You only have to drive this route every day to see the number of cyclists and pedestrians making dangerous crossing in this area to realise they want better access to the airport and Rongotai/Lyall Bay's commercial area. There are also already well formed cycle lanes and a network of quiet back streets for cyclists etc to make their way to the Cobham Dr and Evans Bay Parade at the south side of the sports arena. So it make little sense to benefit a small block of potential residential users. I strongly suggest moving the crossing closer to the airport, that's where the trapped users are or people who want to go to the airport/Lyall Bay commercial area are. Do not put traffic lights in. Surely we can all learn from our mistakes as a nation rather than a region. Just look at what Auckland Airport and Chch airport have had to go through to fix congestion and dangerous crossings there. Putting lights for crossings anywhere along Cobham Drive will only push congestion into our residential suburbs! The safety of our children going to school, elderly using community amenities and cyclists commuting will then be in serious question and there is little to no physical separation/

delineation in these areas. Recently the congestion in Miramar and Strathmore can be observed by all the road works in the areas of Wellington Road and Miramar Ave. The best solution, and yet more expensive would be to build underpasses or bridges or both. Imagine a gateway bridge into Wellington beside all the wind sculptures! How awesome would that be?? I'd be proud of something like that. Something that could be culturally enhanced too! No one will like the hassle of the lights. Not even the pedestrians and scooters users who have to wait for them to change. And cyclist won't want to stop and wait for their turn to cross. They'll continue to jump the kerb and the centre island. I'd bike to Lyall Bay and the south coast all the time if you put the bridge/underpass in the right place!

Consistent speed limits are helpful, I can see the reasonableness of a short section of 60km/hr before reaching the roundabout and after leaving it.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

These speed limit reductions are a great idea as having two consistent speed limits (50 and 60) rather than a series of changes 70-50-70 means they are more likely to be obeyed. This will also make movement across Ruahine St safer.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Shelter in the centre and while waiting - while this might sound odd given the exposed nature of the coastline - it feels much worse to be dumped on by wind and rain while waiting than it does while moving. You also need to consider shelter in the centre from vehicle spray, especially from trucks travelling in the faster lane, which is also closer to the centre. Cycle crossing, Ideally there will be time for people on cycles at least to cross in one go. Otherwise you risk annoying both people in cars and people using active modes, which will lead to red-light running by people on bikes. For me personally, this leave unaddressed the connection between Rongotai and the coast, however I do accept that this crossing is a good first step.

CONSISTENT 50 all on this map. So much time is spent to educate drivers who are not locals to zone changes, the fewer changes the safer, especially if Shelley Bay goes ahead.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Because of the short distances Wellington/Evans Bay Parade to crossing and roundabout to crossing, extend 50 zone all the way from to the roundabout. With the impact of the lights this discourages 'flat out to make it' behaviour. Speed camera it too. In

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Consider a future pedestrian crossing here

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Make it 50kph all the way. It'll be safer with the pedestrian crossing put in. Also less confusing for drivers if there are fewer changes. The route is already dotted with roundabouts and traffic lights that it's pointless letting people go faster for suc

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Ensure phasing prioritises pedestrians - make it quicker for them to cross. Think about putting in pedestrian shelters - it's an exposed area to have to wait at. The 'zig zag' path should be the other way around - ensures pedestrians approach oncoming traffic when making their way to the middle. Put a red light camera to help compliance - there's already issues with people blocking intersections along the SH route during busy periods, which is a safety risk.

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Confirmation it is very dangerous. I tried biking from kilbirnie to miramar a few weeks ago. It has got a lot worse than it was 4 yrs ago. Had to wait 10mins, even then I was running to miss the oncoming traffic in the lane furthest from me

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Not really except an over pass or under pass might negate this

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes putting lights/a level crossing is insufficient, it is state highway 1 for goodness sake. You already have 1 set of lights. Put in a over bridge (even if its a wooden structure similar to the Ruahine St Mt Vic area or a concrete footbridge by Frank Kitts park). Dont stop traffic flow further. Or an underpass like under the airport

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Cobham should be 70 kph. Miramar Avenue should be 50 kph. The connecting transition area should be 60kph

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes! DON" T DO IT!

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Its a public road and Stare Highway, built with funds extorted from motorists over the last century. Its patently unfair and unjust to build the crossing at all. It won't contribute to safety and there is no compelling accident history. If you must waste money on loonie greenie policies, build an overbridge and don't obstruct the tarffic!

**What is the primary way you travel through and around the area?**

Car

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Cobham Drive is a safe and efficient piece of roading that would be damaged by an unnecessary crossing for pedestrians and cyclists. For pedestrians the obvious answer is an over bridge. For cyclists from Miramar the logical route to the ASB Centre is the sam as for cars and trucks.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

You need to have regard for the needs of motorists who would like to get to their destinations ASAP. Safety is a big issue but decision makers should be aware of vehicles becoming increasingly safer for drivers as well as pedestrians. Sadly many Well

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The needs of motorists, truck drivers and other forms of transport who would all be seriously disadvantaged by the proposed crossing. LGWM is about a safer more liveable city and cost efficient transport . The proposal will advantage pedestrians at the expense of people using route 1 who actually pay for the road.

By deliberately trying to create congestion you are hurting the environment a motor vehicle not travelling at an efficient engine speed increases the pollution into the air , An overhead walkway would be a solution that is most efficient and practical. Punishing motorist into submission is not how to make a vibrant and dynamic city, it is what the communists did and its proven not to work.

<b>NAME:</b> Jenny McDougall	<b>SUBURB:</b> Melrose	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
---------------------------------	---------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Both of these roundabouts are quite tricky even if you use them often and would be confusing for those not familiar with Wellington roads. When entering the Calabar Road roundabout from Miramar cars on the roundabout routinely change lanes meaning that both lanes must be clear before it is safe to enter. These roundabouts are stressful for older and new/younger drivers and obviously difficult for pedestrians.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I don't think this is a problem

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

I think a crossing is a bad idea in this location. Motorists, many of them visitors are trying to get to the airport. This will hinder the traffic flow and be more dangerous if people aren't expecting to stop at a crossing. I would have thought an overpass would be better perhaps using the traffic island by the sports centre. Although I am interested in biking I never do it in this location and often travel from Melrose to the sports centre or to Miramar/strathmore by car as I feel the risk of death is too great to cycle at present.

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Bike and walking path connection to Miramar Ave/Shelley Bay Rd is rough and ends abruptly in gravel.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Variable speed limits may be confusing for drivers who are used to 70-70-70. Need ample signage.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Consider installing pressure plates or sensors to confirm if pedestrians are still waiting to cross before stopping traffic

**What is the primary way you travel through and around the area?**

Walk

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Basically what I've already said. Plenty of motorists already shoot through Kilbirnie when the traffic piles up. This crossing will just force more into Kilbirnie thus increasing the chances of an incident. An overbridge would reduce that.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I have not seen one person agree with the grind level crossing proposal but plenty saying an overbridge option is the best (& only way) forward. The traffic is already bad enough on Cobham Drive. You throw a crossing on top of it & you'll find more driv

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

You have only let us vote based on the proposed crossing. I would only consider walking/cycling if there were a footbridge. The fact that GWM & WCC are considering a ground crossing has me concerned for the future of our city. Whoever came up with this needs to seriously consider their ability to competently make decisions on behalf on Wellington ratepayers. The fact that the proposed (illegal) Shelly Bay development will be bringing hundreds of cars to our region means that we'll have even more gridlock than ever.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

<b>NAME:</b> Steve Gilbert	<b>SUBURB:</b> Other - Lower Hutt	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
-------------------------------	--------------------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

As this section of road only serves the Mirimar area, and is not on the airport route, I would be comfortable reducing the speed limit on only this section to 50km/h. Lowering the limit here also seems likely to lead to reduced speeding through the initial Mirimar intersections, as it provides a longer slow-down area before reaching them.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I would prefer to see safety fencing, rather than a lower speed limit. This is a major transport corridor which is already congested; dropping the speed limit simply makes the problem worse.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This crossing should be grade-separated as an overbridge or underpass. Adding another set of lights into this section of SH1 is ludicrous; it's already congested, and will only become more so as the region continues to grow. As this is a major road transport corridor, I do not support \*adding\* any impediments to traffic flow, which an additional set of lights would do. I am aware that a bridge or underpass would be more expensive. However, it is significantly safer than lights, and is much more future-proof. Too many of NZ's infrastructure problems come from trying to do things on the cheap rather than doing it properly the first time around. This is one of those decisions.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

As stated previously, this is state highway 1, you MUST keep traffic flowing. Currently people living in the Eastern suburbs are frustrated over how they cannot drive to the city without being backed up to the airport. Even though money has been spent on upgrading the footpath to accommodate bike lanes etc, this hasn't impacted on the number of road users. We need roads with free flowing lanes, not reduced speed limits and traffic lights.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes, THIS IS STATE HIGHWAY 1! Everywhere else in the world that means reasonable speed limit, NO traffic lights. You cannot stop the flow of traffic which is already a nightmare any further, it is already impossible for emergency service vehicles to get

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Slowing and stopping traffic even further will only cause even more traffic delays and build up of emissions in the area.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

As previous, there is no problem with the current speed limit.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There is no problem with the current speed limits. Much of the time vehicles travel at well below the speed limit anyway, due to the congestion on this major route between the city and eastern peninsula

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

- that an overbridge would be a better option; that cost shouldn't be the major deciding factor; that we should be looking to do something innovative; that pedestrians and cyclists already have crossing options not much further along the road; that this will completely disrupt what little traffic flow there is on this congested piece of road; that traffic will divert through Kilbirnie and through the airport to avoid the hold-ups this will cause. This survey is designed to get the results LGWM are looking for, not genuine feedback. The notion of 'consultation' is laughable - it is evident from LGWM responses on social media and at community meetings that there is no intention to consult and that decisions have already been made

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

As per previous comment, there is no problem here that needs to be solved. There are two tunnels under the airport, and if you want further crossings for use of pedestrians and cyclists, build bridges for them. As there hardly are any pedestrians and cyclists - owing to the fact that this is one of the windiest and most unpleasant locations in the city - the is insufficient reason to make detrimental change to all other road users - most of whom drive cars

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Make no change. Not required. There is no problem here that needs solving - there's no epidemic of people getting run over and cars crashing into each other, the issue is that NZTA have failed to build overpasses / underpasses where needed across the full

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Don't build it. It's a State Highway not a local road, if a crossing is needed build a pedestrian overbridge. There are already too many sets of lights and roundabouts on SH1 east of the tunnel, they need to be removed rather than more added. The trip into the city is already too slow outside of rush hour, and atrocious during rush hour. This won't make the slightest difference to use of public transport, and as for pedestrians and cyclists - THERE ARN'T ANY! I go up and down Cobham Drive each day, there are hardly any users of your new cycle lane and pedestrian path, and of the few who do use it none - NONE - show any desire to cross the road. If you won't a crossing, build a bridge.

As I mentioned before, commuting to the Eastern Suburbs is becoming increasingly difficult and slowing down the speed is going to exacerbate this. Keep the speed limit at 70 and add an overbridge

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I think 70 remains the best speed here - decreasing this to 60km is only going to make the Eastern suburbs feel further away and make commuting harder.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It's pretty obvious that this should be an overbridge - this could be done beautifully, and become another eye-catching sculpture that is part of Cobham Drive. I totally agree that a safe way to cross the road is needed. Adding a pedestrian crossing to an already congested and backed-up area is really not a great idea and may be dangerous for motorists and pedestrians

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

need to consider a subway under the road v doing the above ground crossing as this would be more fuel efficient for vehicles and would also reduce the stop start for vehicle movements esp given the closeness to the roundabout - ideally the same layout as the underairport subway with separate cycle/walk paths of the subway so the various modes can proceed at the speed they need v have to moderate speed for slower modes. where the sbway come out you will need to point this directly at the walkway (assume will be developed better than it is now) so that the pathway link each other to aid traffic flows

**Cobham Drive 100m north of Calabar Road roundabout**

already banked up in the morning and on weekends. This will make it worse

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

creation of traffic in an area that already has traffic. Noone will want to leave Miramar or eastern suburbs to go to town. You wont see people biking to kilbirnie as they will currently use the airport underpass.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes. Slowing cars down around the area is not the answer. The proposed solution will be a fix for a small amount of pedestrians. People can cross at St Pats which is 5min walk away from the proposed site.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

My home or business is accessed directly from the SH1 route

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

All these roads should have a speed limit of 50km/hr. They are now in a built environment with other road users in close proximity. Reducing to 50km/hr will make little difference to travel times and a huge different to safety and perceived safety.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Agree with the proposal to reduce the speed to 60km through tot the cutting as part of the transition before going to 50km at Miramar

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

I travel this road every day day. We need to get a standardised speed limit so drivers are not worried what speed limit area they are in - in reality people travel to Ruahine St should be lowered to 60km, not 70kph.slow on some parts and then too fast o

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This automatically assumes there will be a pedestrian crossing, so why are you consulting on it! No options are provided such that pedestrians & cyclists can cross whenever they want to (without having to wait) and vice versa for traffic. Why is there no bridge option like there is from Hataitai to the netball courts - that works really well. And its on the same piece of road. The numbers of pedestrians and cyclists is so few, this is going to be an expensive piece of work. They have just been given a 'state highway' themselves which looks great, but putting a barrier in the middle of SH1 is not a wise choice.

**What is the primary way you travel through and around the area?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Again, this is treacherous at 70, or 60, and probably 50km an hour too, because of people trying to cross, and cyclists and drivers trying to turn in and out of the road going around the peninsular (on the bend). It's a nightmare - every single attempt at negotiating this turn, with the speed of traffic, is hectic in my view. This whole area is difficult to navigate and negotiate for drivers, cyclist and pedestrians and needs slowing down. I can see very few benefits to the 70 speed limit, let alone the 60, compared to the benefits of changing it to 50km/hr. I cycle everywhere in Wellington, except when I am going into this area - which I consciously drive to, because it is harrowing even in a car.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There's a huge sport centre here, and a coastline, and schools, and children making use of the facilities in the area. Yes - if you have a pedestrian crossing, 60kmh is too fast: I notice some vehicles having difficulty stopping for a 30 or 50 speed

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Again this is a systems issue. Delay it her, delays the portions before the speed changes. look at any area of road works where there is a speed reduction - there are always delays, tail backs, nose to tail crashes. crazy idea.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

The system impacts. If you slow there, does that delay people getting onto the roads ass the traffic takes longer to clear.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

You need to look at the system impacts. The delays at Otaki relate not to time time the crossing is utilised but the delay of each car reacting to starting again. 100 cars react taking 1 to 5 seconds to get moving creates minutes of a queue. This adds to the tailback. Otaki this is often 10km - where would that start in Wellington. The tailback can be many kms long and would. The impacts on SH1 where there are minor stops to traffic- Paekakariki when closed on fridays, significant changes to delays, cars stopping to let cars onto SH1 at Pukerua bay create a huge tailback. What you are trying to achieve could be done with an overpass. Have you done any realtime flow modelling - this software is used throughout industry, airports etc

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

Add a cycle ramp on the East side of Calabar road so cyclist can once rounding the roundabout heading south can easily move to the footpath allowing vehicles on the narrow section uninterrupted flow to Miramar and the airport. The current speed limits are ok which are currently governed by the high traffic flow which naturally reduces the speeds anyway. The traffic flow from the airport to railway station needs to be uninterrupted. 4 lanes no roundabouts, traffic lights and junctions etc.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Leave the road as is and the speeds are ok for traffic flow. If its busy then it reduces to often below 50 but if clear its better that 70 or even increase to 90. Maybe put a bridge over the road

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Less likely

A lower speed limit here of 30 or 40km/h is far more appropriate and would make next to no difference to traffic travel times but being massive benefits

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

A pedestrian or cyclist getting hit by a car at 60km/h will likely die or be severely injured, a 30 or 40km/h is more appropriate here. Motor vehicle traffic times would barely change, but would make a world of difference to everyone else through safer s

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes, is just one crossing sufficient? That's a long stretch of road without any other crossings even if this goes ahead, a single place to cross is pretty unacceptable in 2021. A severe road narrowing and speed reduction would be very appropriate, one lane each way with crossings at every roundabout would be appropriate for this urban street which currently severs the waterfront from the people who live nearby

A crossing exists. If people like myself want to ride and walk- ride or walk to the existing crossing. As a cyclist for over 30 years this is a pointless waste of money a much like the bridge in Auckland. You are tasked with speeding up traffic flow on this highway. Not chocking it.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Offer proper choices to ratepayers. To be transparent you should be offering a series of options; overbridge, underpass, crossing, nothing. This is rigged. I ride a lot- 1000s of km every year. I use the lights by street paths- it embarrasses me that you'd block up road traffic for a handful of cyclists and walkers/ who can simply use the existing crossing. Your goal of reducing emissions is foolish. Cars won't be going anywhere. They'll all be electric in 2/3 years making your illogical efforts pointless. All you're doing is choking up our state highway. Dumb.

Cobham Drive 100m north of Calabar Road roundabout**

A crossing at ground level will create more issues than it will resolve.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

These particular roads are heavily congested now so it's infrequent that vehicles reach the current speed limits. You are trying to limit speeds on roads most try to avoid now due to congestion.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Considering the ridiculous costs that will blow out, why did you not consider a crossing bridge with walkway access minimal incline removing the need to both drop speed limits and pedestrian vehicular interactions.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Build a damn bridge, millions of dollars of taxpayer and ratepayer money is being wasted to appease less than 5 % of the population. I see these cycle lanes that are hardly ever used, but cost millions , let the cyclists use the sidewalk on one side of the road and the pedestrians use the other and stop wasting money on this crap whilst the citys waste water, storm water and fresh water systems that everyone uses or needs fall into disrepair. Stop bending over for a minority or resign. If you wonder i am a regular pedestrian and cyclist, but the traffic congestion you have caused with your unwanted personal agendas is rediculous, why dont you save money and have all council employees ride bicycles instead of driving evil hydrocarbon sucking co belching vehicles. including councillors, ie practice what you preach and stop wasting our money !!!!

60kmh is more appropriate for this stretch of road, as there are a number of turn off points.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Don't slow traffic down on this main arterial SH1 route. There are no uncontrolled intersections or driveways so there isn't a need to dumb down the speed limit.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Build an over pass or an under pass instead, not a crossing. A crossing adversely affects many thousands of motorists, but benefits only a small number of pedestrians or cyclists. It is a simplistic and inelegant solution to getting across a main arterial route.

50 kph please, with design intervention.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

There may need to be some design changes to remind people of the lower speed limits. I support sticking to 50kph all the way from the Terrace exit to the Eastern suburbs.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Please think of the wider community as well as today's users of SH1. Consider the benefits of the at-grade crossing to the suburban centres of Miramar and Kilbirnie, the health benefits from more students able to run or cycle or scoot to Evans Bay Intermediate School as well as the improved accessibility for more people to reach the indoor sports stadium and Indian Cultural Centre by active travel. SH1 is a classic example of community severance. Getting from Miramar to Kilbirnie is made harder and more dangerous by the lack of any safe crossing, children more dependent. Why can't employees at businesses like Tilley's, Tulsi and Envirogroup go for a lunchtime walk or cycle along the harbourside? "Desire lines" made by people's feet show there is demand to cross. If we are to reach our New Zealand emissions targets, every opportunity should be taken for mode shift. An underpass would be subject to sea level rise and storms; it's very windy, exposed and indirect for people on foot or bike to have an overbridge. People who work in the many businesses south of SH1 should have the opportunity to run, cycle or walk to work. The vehicle delays are relatively minor and could be minimised by a stronger mode shift for those who do have choices. The Great Harbour Way, Te Aranui o Pōneke, is becoming a glorious spine for walking, running and cycling but its benefits will only be fully realised when it's connected well to adjacent suburbs. I support Living Streets Aotearoa's views and I support the at-grade crossing proposed. Recent retail research: [https://www.iass-potsdam.de/en/news/shoppers-mobility-habits-retailers-overestimate-car-use?utm\\_source=miragenews&utm\\_medium=miragenews&utm\\_campaign=news](https://www.iass-potsdam.de/en/news/shoppers-mobility-habits-retailers-overestimate-car-use?utm_source=miragenews&utm_medium=miragenews&utm_campaign=news)

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

100m of 60km/h, then turning to 50km/h is not only confusing for motorists but unnecessary and unsafe for pedestrians in the area. From the perspective of consistency with the local road it connects to, the 100m stretch of Cobham Drive north of Calabar Road roundabout should be 50km/h.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Making the layout two separate crossings with a waiting area in the middle gives too much priority to cars. It will take far too long to cross just a single road. This should be made into a single large pedestrian crossing with an extended pedestrian phase.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This proposal is preposterous. Traffic congestion on this arterial route has been worsening over the past five years or so and is now at unacceptable levels. Adding lights will tip the congestion even further. The rationale that a crossing will take people out of their cars does not appear to be evidence based. The proposal clearly hasn't been informed by expert traffic engineers. It doesn't take an expert to know the only feasible option would involve a bridge crossing.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

n/a

Cobham Drive/SH1 Speeds – September 2021

**Feedback****860**

<b>NAME:</b> Julie Anne Genter	<b>SUBURB:</b> Berhampore	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
-----------------------------------	------------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

100 is way to high, please bring the speed down and adjust the design of the road so it doesn't encourage reckless speeding and driving.

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

To be honest, 60 seems to fast given this is a road in an urban area, that separates residential areas from a walking and cycle path on the waterfront. But the road is also clearly designed for high speeds and probably needs narrowing plus other design fe

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Getting from the airport to town, this would be useful because after using the underpass, there isn't a clear way to access to new cycleway along the waterfront.

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

<b>NAME:</b> Jason Rumney	<b>SUBURB:</b> Brooklyn	<b>ON BEHALF OF:</b> Individual	<b>ORAL SUBMISSION:</b> No
------------------------------	----------------------------	------------------------------------	-------------------------------

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Changing speed limits for short distances place an unnecessary cognitive load on drivers, it is difficult to see any benefit of having the 60km/h section given that the roundabouts and crossing will be limiting the speed of vehicles anyway.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The crossing is not really conveniently located for pedestrians and cyclists, but the more convenient locations likely have safety issues. A cycle path on the other side of the road connecting to routes inland, until a suitable crossing point on the connecting roads will also be required.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I am flabbergasted at this opportunity. When there were public consultations about 9-10 years ago we were told that the building of an overbridge was out of the question as there were too many authorities involved and the insertion of a crossing was impossible on this No 1 highway at this point and therefore not to be discussed. Some months ago when the cycleway almost appeared completed I noticed a cycle offshoot at the Northwest area of the traffic roundabout near the fire station. There was an ending with no offramp, but an abrupt footpath drop of approx 10 cm. I suggested to the Dompost at that time that a 'lemmingsign' be placed there and that the designer of that drop-off be required to attend the funeral of every death occurring at that point where the cyclist would have to cross 2 traffic lanes in the middle of the roundabout. The only thing that happened was that within a few days barriers were put up again and the edge was changed into a cycle offramp making my suggestion of the 'lemmingsign' invalid but the apparent crossing more dangerous still.

Why is there not / has there been the ideal being floated to build a ramp that goes over the top of the current roads, meaning there would not need to be a need to change speed limits and stop traffic in an area that is heavily used and already gets backup with with traffic as it currently is during peak times and after multiple flights have arrived at the airport in succession

The crossing proposal seems backwards. The walk between the traffic should be reversed so you are looking towards the oncoming traffic as you approach the crossing. The proposal puts the oncoming traffic to your back as you approach the crossing.

The crossing need to be the east of the round about. For traffic coming to or going from the west they can already use the Evans Bay crossing. Most pedestrians and cyclists cross the road to the east of the roundabout and probably still will because you are making them go past their intended destination. I can't believe this needs to be pointed out. Just draw a line for any foot/bike traffic coming from the west and they already have traffic light controlled crossing. From the east there is nothing. You really need a overbridge exactly at the round about with 3 ramps. 1 by the fire station. 1 by the event centre and q by the light up chimney sulpture. Just sit in the morning and see where people are crossing. It's all directly Infront of the runway on the shorter stretch of Cobham drive between the 2 round abouts where it is also most dangerous. The solution you are proposing is easy but will not make it any safer because Noone will use it. It is in the wrong place. Go walk along the median between the east and west lanes. Notice where all the makeshift paths are across the median. The buses and grasses are all trampled. Everyone is crossing right in front of the airport.

Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Yes the impact on travel times on cobham drive. If there is a raised crossing which doesn't impact traffic and is safer for pedestrians then there is no need to reduce the speed limit

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The congestion it will cause on State Highway One. It already backs up at a number of times during the day. These lights will add considerable time to any journeys in the area. How about a crossing which is raised? No impact on traffic and is the solution used in NZ and around the world to ensure safe pedestrians, less emissions from stopping and accelerating and less congestion and delays to vehicles.

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I regularly walk from Miramar to my work in town and back as well as to the ASB Sports Centre for myself and the whanau's sports. We need another crossing near the northern end of the airport. Going through the airport underpass adds another 15 minutes on to the walk to get to the ASB so we regularly take the risk and run across 8 lanes of traffic to get there. Even with the proposed crossing it will still mean running across 4 lanes of traffic to get onto the walkway that leads to the crossing!

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

The crossing should consider how to integrate the new waterfront cycle path with the rongotai road path. Thought should be given to a significant increase in the number of pedestrians and cyclists using this corridor and the crossing should be sized appropriately. A waiting area for cyclists and pedestrians that does not block cycling through traffic is essential, and the cycle lane on the waterfront should also be signalized to ensure conflicts with pedestrians are minimized. The cycle lane **MUST** be painted green extending at least 10m either side of the pedestrian crossing to ensure conflicts with pedestrians are minimised.

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Why reduce the speed limit? It's a key arterial route. More pertinent is the question, what are you doing to speed up my journey, in my car, to and from the airport? Making the trip increasingly unpleasant (which you seem intent on doing) will not reduce

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

These new limits sound much safer for everyone

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Make sure that every kind of user has enough time to cross each section

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)

Cobham Drive/SH1 Speeds – September 2021

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Reducing the speed is ridiculous. I have lived in the eastern suburbs for many years and have never seen issues with the current speed on these roads. The only issues I have ever seen is people from time to time failing to give way correctly at the roundabout

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

This should be a pedestrian bridge not a road crossing so it does not affect the flow of traffic. Traffic is terribly slow already to get anywhere around Wellington let alone making yet another stop. With cars having to stop this also could cause congestion to build up very quickly with the amount of cars that travel through this route

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

My home or business is accessed directly from the SH1 route

Cobham Drive/SH1 Speeds – September 2021

n/a

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Crossing could be closer to the roundabout, so walkers heading between Miramar and Kilbirnie/Rongotai aren't doubling back on their route so much. Crossing in the rendering is oriented so that the people in the central island have their backs to the traffic that they are going to be crossing. Orientation should be reversed, so that when you are in the central reservation you're walking between the two crossings facing the traffic that you will be crossing, giving greater awareness of oncoming traffic and increasing safety for the users.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Neutral

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Walking and cycling paths are already separated from traffic on Cobham drive as of the most recent renovations. Why deliberately slow traffic down when given a proper overhead crossing, vehicles and people never need to directly interact.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Absolutely. Instead of traffic lights, build an accessible overhead walkway. Traffic in Wellington is already awful given the distinct lack of a train to the airport. Adding a set of lights will just create another choke for traffic when there is functionally no need.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Neutral

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

I actually think we need an overbridge here, with a ramp (not stairs) so that cyclists and people with disabilities can use it too. That would be much safer. On this busy road I am sure many drivers will be tempted to speed up to get through changing lights, thus endangering those on foot or bikes/scooters when crossing.

**What is the primary way you travel through and around the area?**

Bicycle

**How important is it to make changes to improve safety on State Highway 1?**

Important

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Keep it at 70, it works now, it's fine. Build an overbridge please

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

More likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Build an overbridge just like over to the hataitai netball courts! Please don't slow drivers down along this stretch, it will cause so much more traffic backup. If you have a crossing, more people will come, which means way more people crossing and red lights to slow traffic down. PLEASE DONT DO THIS!! BUILD AN OVERBRIDGE

**What is the primary way you travel through and around the area?**

Bicycle

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Agree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

It needs to be a raised crossing - A road level crossing, with traffic lights is the wrong design considering it is SH1 and a main thoroughfare. A raised crossing will allow people to cross far more safely without having to interact with 4 lanes of busy traffic. A raised crossing would need to be a ramp based design for accessibility

**What is the primary way you travel through and around the area?**

Bicycle

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Leave it at 70km doesn't make any difference. Atleast clears back log.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

n/a

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Yes if you provide a crossing for public it doesn't matter they will cross from anywhere they want like you provided cycling way but still using road for cycling n it's dangerous change the law first before changing the road or change the councilor n mayor. Public should think as well before crossing. I totally disagree with the plan. Tell cyclists to obey the rules or use cycle make some rules for them.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Low importance

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I regularly travel through the area to get to work or school

That road is far to busy for a crossing. There is heavy traffic flow every day of the week. This will be a mistake that will cause further delays. An over ridge is an obvious solution. Please please please consider this as an alternative! Keep Wellington moving!!!!

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Plenty to consider, like how about a bridge utilizing the central traffic Island. Allowing safe crossing across multiple roads. Instead of a cheap option that is NOT going to get Wellington moving, but in fact slow it down more and on one of the busiest roads in Wellington. It's shameful that a crossing is even considered.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

If you're putting a crossing in the proposed location then suggest you drop the speed limit on this section of cobham drive to 50

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much more likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Having traffic lights would cause even greater at delays on an already congested Cobram drive. Why can a bridge not be proposed? I've lived on the peninsula on and off for 43 years and have thought a bridge would make the most sense for most of this time!

**What is the primary way you travel through and around the area?**

You're going to do it anyway. Don't know why you bother saying to have your say!! The year long cycle way spruce up was the perfect opportunity to do a stylish S shape or similar overpass from well west of the airport flight path, to asb roundabout and over again. A pedestrian crossing when there are major route issues leading to the tunnel anyway!? Ridiculous. Can't even make a longer lane for oriental bay traffic. It's a disaster and there is never anyone brave enough to do something bold and useful.

The traffic is already very backed up at all times of the day. More people are living out this way = more cars. There needs to be further lanes (e.g. double lanes) going up through to Mt Vic tunnel. In the 10+ years we have lived in Miramar, traffic is getting worse and worse. This could risk bottle me long it even further.

Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

A speed limit that feels too low will have worse compliance, leading to more variation in vehicle speeds, which increases crash risk. As a pedestrian, I find the new 30 km/h limit in the CBD makes it harder to cross than before, because yeah, some cars go

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Don't know

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Don't know

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

For better visibility of traffic by pedestrians, an offset two-stage crossing should have pedestrians in the central reservation walking \*toward\* the traffic they're about to cross, not away from it. That is, from the perspective of a car, the crossing on the opposite carriageway should be further away, not nearer, and from the perspective of a pedestrian who hasn't started crossing, the near-side crossing should be to the right of the far-side crossing.

**What is the primary way you travel through and around the area?**

Motorcycle/scooter

**How important is it to make changes to improve safety on State Highway 1?**

Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Why are you not considering an overbridge? Introducing another choke point in and out of eastern suburbs?

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

Much less likely

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Congratulations on adding more traffic to the general public, in the last 2 weeks communiting to town during terrible weather I have come across 8 cyclists in the middle of peak traffic. WE LIVE IN THE WINDIEST CITY IN THE WORLD. Do you guys have any common sense? Or are we virtue singlalling to the minority group of Green's that have Hijacked WCC. FIX INFRASTRUCTURE stop slowing down the city. Build a second tunnel and if you really want build a light tram tunnel under kilbirnie through to newtown otherwise stop forcing cycling down our throats. I have a 5 week old and a 2 year old, i'm not putting them on the back of a bike to cycle to town in 120km winds on a Saturday.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

**My home or business is accessed directly from the SH1 route**

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Build a footbridge.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Build a foot bridge instead. A crossing will cause more congestion and is more unsafe than a foot bridge.

**What is the primary way you travel through and around the area?**

E scooter, skateboard etc

**How important is it to make changes to improve safety on State Highway 1?**

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Fully support. I daily commute on a 50cc scooter from Strathmore and go along all these roads. Reduced speeds would make it much safer for me on this commute, and makes me more likely to use the scooter over the car. I would also be more willing to invest

Why not build an over bridge instead? With ramps either side for cyclists. This will enable a much safe crossing at all times. As much as the council wants to make Wellington less polluted with cars on the road, most people will still drive due to the unpredictable weather we have. If the council can make it sunny more than 2 days in a row, this would be a good initiative but I can already predict in the future the amount of congestion this will cause at both ends.

The amount of airport traffic on this road. At the moment it already takes between 20 and 40 mins some mornings and most weekends to get into the city. A crossing here will just make traffic congestion even worse!! It wont get Wellington moving. Plus add in the projected new traffic going to Shelly Bay, we will be grid locked right back into town from this. Please , please consider a bridge or another location!

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Keep it 70 such a long way to mirimar or Seatoun and the main route shouldn't be slowed down

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Terrible idea. Already such a slow and busy road. Over bridge like in hataitai maybe but still don't feel the need to have any crossing at all, hardly a primarily pedestrian area.

**What is the primary way you travel through and around the area?**

Walk

Have a level difference between traffic and crossing. Bridge or tunnel (probably less likely) option instead to reduce congestion from more traffic lights. The proposed site is part of state highway 1. More resistance to flow won't help. Congestion is only going to worsen with in fill and increasing population in the eastern suburbs. By removing interaction with traffic and pedestrians at the crossing (bridge) there will be a safer outcome.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Very important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

**Please provide your comments on the short section of local road:  
Cobham Drive 100m north of Calabar Road roundabout**

n/a

**Is there anything we need to consider before we make a decision on new speed limits on these roads?**

Don't. There is no need to lower the speeds there.

**Would the proposed crossing make you more likely to walk, run, bike or use a scooter for trips around the Miramar, Kilbirnie and Rongotai area?**

No change

**The crossing is located in the right spot to help you get to where you want to go in the area:**

Strongly disagree

**Is there anything else we need to consider before we build the Cobham Drive crossing?**

Don't. It will slow down traffic and cause an even backlog back through the tunnel and into Kent Tce - this is already horrendous. Build an over bridge.

**What is the primary way you travel through and around the area?**

Car

**How important is it to make changes to improve safety on State Highway 1?**

Not important

**What is your main relationship to State Highway 1 from the Mount Victoria Tunnel to the Airport?**

I visit the area (e.g. to shop or visit friends)
